On resuming open Meeting the Hon'ble Mr. ACWORTH said:—GENTLEMEN—I think that before we part we ought to express our sympathy with the relatives and friends of our brother planters who have fallen in the war. Many were our personal friends, and I am sure we all feel deeply with their relatives. One of our most popular members is Mr. Romilly, and his

father-in-law has suffered very deeply indeed; I would like to include his name specially in the vote of condolence, which runs as follows:—"That this Association desires to express its deep sympathy with the relatives and friends of their brother planters who have fallen in the Transvaal War, and that a special letter of condolence be sent to Colonel Campbell, on whom family misfortunes have fallen so severely."

Carried.

OFFICE-BEARERS.

The balloting for office-bearers for the ensuing year was then proceeded with, with the following result.—

Chairman.—Mr. R. Gompertz.

Vice-Chairman.—Mr. J. A. Harris.

Member of Council.—The Hon'ble Mr. Acworth.

COMPLIMENTARY.

Mr. LAMBERT (Coorg) said:—GENTLEMEN,—I have been asked to propose a vote of thanks to the Hon'ble Mr. Acworth for the able manner in which he has filled the office of Member of Council and the great interest he has always shown in furthering planting interests. Personally, I am extremely glad, and I am quite sure the feeling of all the delegates is the same, that Mr. Acworth has been able again to accept office. We are strongly of opinion that as long as our affairs are in the hands of a gentleman of Mr. Acworth's notable abilities we can never be in a wrong position with the Government.

The Hon'ble Mr. ACWORTH, in replying, said:—Mr. CHAIRMAN and GENTLEMEN,—I am very much obliged to Mr. Lambert for the handsome way in which he has proposed the vote of thanks and to you for endorsing it. I am afraid I have not been able to do much yet, because there has been nothing to do beyond travelling about. But I can assure you that I do take an interest in the Association and will continue to do so. I am sure that it is only by standing together like this that we can make our concerns go thoroughly well with Government. There is, however, one thing I would like to say before we part, and that is that I think that the Association, as a body, is a little too suspicious of Government. The members seem to think that Government is always looking after us and trying to trap us, and that it takes so much interest in us that it studies our proceedings carefully. I really think that this Meeting on the present occasion has said too much in Committee. Our brother planters, I know, take a great interest in what appears in the *Madras Mail*, and they would be bitterly disappointed if nothing appeared of the proceedings of these meetings. It is a mistake to suppose that the Government watches these proceedings for what we say. What is said here, after all, is only an individual opinion and not the wisdom of crowned heads, so that we cannot expect Government to look upon our individual opinions as an expression of the collective wisdom of Lycurgus and Solon.

Mr. R. GOMPERTZ (Shevaroys) in acknowledging his election to the chair for the ensuing year said:—Mr. CHAIRMAN and GENTLEMEN,—Whilst feeling deeply flattered, I thank you very much for electing me Chairman. I trust I shall not be misunderstood if I say that I received the announcement with mingled feelings. Had I been 20 years younger, I should have received your decision with unqualified satisfaction, though even in his prime a better man could not help feeling nervous at having to succeed so able a Chairman as Mr. Hodgson. But at my age I feel great diffidence in accepting so great a responsibility. It has been well said that to grow old gracefully one must grow old betimes, and I would fain be allowed to do so. In Europe, nature does not give way so soon, but in this country the greatest age the Government allows its servants to attain before they are obliged to retire is 55 years, and, in some Departments, for instance the Commissariat, they are shunted even earlier. I have long passed the extreme limit Government has fixed as that at which a man is no longer fit for useful work. I feel the physical infirmities of advancing age to be a very serious handicap; but as, in spite of all these defects, you have been kind enough to elect me, I can only say that I will do my best (Cheers). Relying on your kindly criticism and loyal support, I gratefully accept the honour you have offered me; but I must beg you to remember that, however willing the spirit may be, at 65 the flesh is very weak (Cheers).

Mr. SCOT-SKIRVING (North Mysore):—I have been asked to propose a vote of thanks of which I am sure you will all approve, and that is the vote of thanks to our Secretary, Mr. Ormerod. I don't think it is possible to say much on such a subject, and I am quite sure that Mr. Ormerod's modesty would lead him to wish that I said very little. I shall therefore bow to what I conceive to be Mr. Ormerod's own feelings in the matter, and say very little. Since Mr. Ormerod has taken charge of the portfolio—if I may use the expression—the work has vastly increased, and during this last year it has been something terrific. I think that the best return we can make to Mr. Ormerod in the coming year is by all answering his communications with promptitude and doing all in our power to help him to get through his arduous duties in the forthcoming year. I propose a very cordial vote of thanks to Mr. Ormerod for his services in the past year.

Mr. ORMEROD replied briefly, acknowledging the compliment.

The CHAIRMAN after proposing a vote of thanks to the Resident for the use of the Court room, proposed a vote of thanks to the Press for its continuance of the kindly manner in which it had taken notice of planters' proceedings both now and during the year. He would specially mention the *Madras Mail* as continuing its kindness in this direction, and at the same time, as the native gentleman would say, he would beg for a continuance of such favours. He hoped the *Madras Mail* would print their proceedings as much *in extenso* as possible, because it circulated among planters of every District and was the quickest and perhaps the best means of arriving at a real knowledge of what was taking place. The book of proceedings was the only other way, and that did not come out for some months, so that the dissemination of knowledge with regard to what has taken place at Meetings, etc., was largely due to the *Madras Mail*.

VOTE OF THANKS TO THE CHAIR.

The Hon'ble Mr. ACWORTH said:—I think I have a most difficult duty to perform—a duty that becomes the harder, because for the past four or five years I have had to do it, and that is to propose a cordial vote of thanks to your Chairman Mr. Hodgson (Cheers). I say it is a difficult thing to do, because it is difficult to eulogise the Chairman without repeating oneself, so often have I had to eulogise the Chairmen who have conducted the deliberations here. As a matter of fact, we are singularly fortunate in that they have all been men of great ability and all have taken a great interest in the work, and Mr. Hodgson is certainly behind none of them. You know that Mr. Hodgson is not merely a very active-bodied, but a very active-minded man, and that his mind generally moves in the right direction. I can assure you that he has been of the greatest assistance to me whenever I have had to refer to him for any advice. One great advantage is that he does not let two or three posts go by, but answers right off the nail and always to the point. As he has helped me, so I feel he will help the Secretary and the new Chairman. His power is not confined to helping the Member of Council and the Secretary. Indeed he is untiring, for he not merely conducts the business but thinks of means of improving it and bringing the Association more into notice, of making its power more felt, and bringing its products before the world. I really cannot adequately express how much we are indebted to Mr. Hodgson, and I hope that you will accord him a very heart vote of thanks (Cheers).

The CHAIRMAN:—GENTLEMEN,—I thank you most sincerely for the kind manner in which you have received the vote of thanks

which Mr. Acworth has moved in such a flattering manner. I can only say that it must always be to any Chairman a great pleasure to work for those who are willing and ready to accord such hearty thanks for anything that he has done for them. When I looked round the meeting when it was opened, I missed several familiar faces that I have usually seen here, and we all regret their absence from our counsels. But, at the same time, we are glad to see a good many new faces, and I take that as evincing an extending interest in the work of the Association. Now that is really what we want. We want to see the interests of the planter extend, we want to see the District Associations taking an interest in the work of our Association, because to work together, to work in combination, is the only thing to do. In these days of combination, unless we do combine, I am quite sure that we shall fall to the ground. We want to stand together, to pull together, and, if necessary, to fall together; but I don't think that last is at all likely if we stand well together. Another thing I want to impress upon you very strongly is the necessity for advertising your produce. Unless your produce is properly advertised the sales always fall off. In fact, I may say that the only road to a good market is by advertising. If you throw your products on the market without any advertisement, it is like drift wood on the water, which is collected and used by others who advertise with much profit. I know what I am asking, it means that you must put your hands in your pockets to provide money. Now no one knows better than I do that at the present time the planter finds it difficult to provide money. But I must remind you that as for the working of your estates you must provide a certain amount of money per acre, and to do so you must draw up your estimates. In drawing up these estimates I would ask you to insert an item for advertising your produce, say, at 4 as. per acre. I am quite convinced that if you can do that it will be probably the smallest and the most profitable item in your accounts. I think, gentlemen, that we may say that we have had had a useful and an interesting Meeting. We have arranged plans for pushing, to some extent, the sale both of our coffee and tea, plans chiefly directed to pushing the sales in India and also on a small scale we have started to push the sales in Paris. As I said in Committee Meeting just now, it is my intention to go Home next year. I shall then be in Paris and I will visit the shop with the greatest interest, and I hope that I shall be able to report before next Meeting whether I really think that good work is being done. At the same time, I shall be pleased to look about and see if I can find any other agency or means of advertising and selling our produce in England or abroad. Among interesting items that we have had before us I think Dr. Lehmann's lecture on manures of different sorts was perhaps as interesting as anything else; also the practical questions he was able to answer must be of great use to us all. I should refer again also to the paper read by Mr. Gompertz on Mr. Leeming's system, and I must say the figures to me were astounding. I think that is a question that every coffee planter should take up and reflect upon. Last year many promised to go back and try the system, but I am not aware that anybody, except Mr. Parton, has tried it. But I really think that every estate should make an experiment by putting a few acres under the system; because the figures we have heard—I know they are given by a reliable planter—are, as I have said, perfectly astounding. The amount of work done by this Association during the past year has been considerable as you all know. I have had the honour of holding office of different sorts for this Association since 1896, so that most of the work in some form has passed through my hands, and I must say that every year I have been glad to see its power and influence extending in every direction. I hope, therefore, that the support accorded this Association in the past will be continued, and that when I come back—I am sorry I shall not be here next year—I shall find it more flourishing and in a prosperous condition. We have seen the accounts to-day, and we know that it is in a good financial position, and that, after all, is a strong point. If we have money we can use it for different purposes, and money is always a good thing to have. I would refer again to the hard times which have overtaken tea and coffee planters, but I have no doubt that with economy and careful cultivation, British pluck and intelligence will carry us through, and that we will once more come out on top. And this I sincerely hope will be the case, and that when I next meet you I will find that the tide has really turned. Gentlemen, I now declare this Meeting closed (Cheers).

GENERAL ARTICLES.

THE TEA TRADE IN THE U. S.

At last Wednesday's tea auction, says the *American Grocer* of the 31st ultimo, Blacks sold off. India and Ceylon sold as low as $6\frac{3}{4}$ cents in bond—the lowest price ever made on this market. Congou sold at 7 cents in bond; Formosa Oolong at $10\frac{3}{4}$ cents. Greens were easier. The tea trade is in a very discouraging position. Details of the sale in the regular market report.

Here are some percentage consumption straws, showing which way the tea leaf blows in Great Britain:

	India.	China.	Ceylon.	Total.
1888	46·50	43·50	10·00	100
1889	51·70	33·00	15·30	100
1890	52·50	30·00	17·50	100
1891	48·90	25·80	25·30	100
1892	52·75	16·75	30·50	100
1893	52·00	17·10	30·90	100
1894	54·60	12·00	33·40	100
1895	52·50	14·10	33·40	100
1896	54·00	10·80	35·20	100
1897	53·80	9·20	37·00	100
1898	56·70	8·30	35·00	100
1899	55·25	9·75	35·00	100
1900	55·25	7·75	37·00	100

The tea-taster must have a ticklish tasting outfit, or infit. His mouth becomes a chemical proving station. He mixes drinks with a consecutiveness that is tea-diousness itself, yet must recognize the individual tea-leaf and diagnose its properties. He tastes only, yet has a surfeit. We are told by a handsome man of thirty-two or so, who knows what he is talking about, that tea-tasting is not injurious, if done right. The weight of tea in hand; style of leaf; cleanness (showing lack of dust and stem); colouring—all go to make up the general verdict, as well as sipping the decoction. We take off our hat to a competent tea-taster, for he is a man of so keen a discernment in the mouth, his words should be steeped wisdom.

If reports are correct, the supply of basket-fired or uncoloured Japans is short-legged. Chinese tea of the Gunpowder variety has also a case of shrinkage. Strict Moyune leaves are commanding 2 or 3 cents a pound more or lower grades, with a corresponding increase on higher varieties. Paterfamilias had better lay in his "gunpowder" early, as his temper might explode if he doesn't.

THE SALE OF MANURES IN CEYLON.

In the Legislative Council of Ceylon on the 31st ultimo the Hon. the Planting Member moved the first reading of:—"An Ordinance for regulating the Sale of Manures or Fertilisers of the Soil." He said:—When I brought forward the motion for leave to introduce this bill, Sir, I went over the chief features of the proposed Ordinance, and it is not necessary therefore that I should go over them again on this occasion; but I may say that the principal grounds and reasons for this Ordinance are these. When agriculturists make their calculations with regard to the purchase of manures for certain purposes they rely upon getting certain ingredients in the artificial fertilisers which they use, and if those ingredients are not present a great deal of their labour and a great deal of their money may be wasted for no purpose. Instances have already occurred in which manures have been sold which did not contain the ingredients which they were supposed to contain. Hitherto the only remedy has been to bring the matter to the notice of the seller and get some compensation from him; but such compensation is really no compensation because the manures have probably been already applied and the loss sustained. It is of the

greatest importance that these manures should contain the ingredients that they are supposed to contain, and if this bill is passed the seller will have to take care that the manures do contain what they are supposed to contain, because he will render himself liable to a penalty if it is proved that they do not contain what he states in the invoice to be their contents. Those, Sir, are the grounds and reasons for introducing this bill. I may say that it is almost word for word a copy of the English Act which was introduced in 1893 except that it has been slightly adapted to Ceylon and that it omits altogether the reference to feeding stuffs which was included in the English Act. I beg, Sir, to move the first reading of the proposed Ordinance.

The Hon. the Mercantile Member seconded, and the bill was read a first time.

The Hon the Planting Member:—I beg to give notice that I will take the second reading at the next meeting of Council.

INDIAN TEA ASSOCIATION (LONDON).

REPORT FOR THE YEAR ENDING 31ST MAY, 1901.

The Committee have now the pleasure to lay before members of the Association a report of the work that has been done during the period that has elapsed since the last annual meeting held in July, 1900, together with their recommendations for the continuance of the work.

Funds.—The amount collected in Calcutta from the levy of 1900 for exploiting new markets was Rs.1,00,983 according to the latest statement received, this being a little short of what has been received during each of the preceding three years.

The planters in Southern India have, as on previous occasions, contributed to the fund.

America.—Throughout the year the joint advertising of Indian and Ceylon teas in the public journals of the United States has been continued under the able management of Mr. Wm Mackenzie. During the later part of the year India has also joined in the advertisements in the Canadian newspapers, the Committee having been informed by firms engaged in the trade that it was advisable that Indian tea should be advertised along with Ceylon in Canada as well as in the United States. In addition to these advertisements the sum of £1,000 was spent in subsidies for the encouragement of advertisements by importers.

So far the business in Indians has been almost entirely confined to black teas, but owing to the extensive advertising of Ceylon greens, a trade has at last been opened for green or unfermented teas. Several Ceylon gardens have succeeded in manufacturing a class of green tea which appears to suit the demand, and according to the last accounts large quantities would be taken, if regular supplies in uniform and attractive packages were put on the market. Hitherto the Indian greens which have been sent to America have not given satisfactory results, but it is probable that by a careful study of the requirements of the American market suitable Indian teas might be manufactured, which would be taken in place of Japans, and efforts to produce these will, no doubt, be encouraged by the bonus which is offered by the Association for green teas shipped to America.

Continent.—As stated in the last report of the Association's Committee, Mr. J. E. M. Haringtion was sent on a mission of enquiry and reported as to the position and prospects of the Indian tea trade in several countries in Europe. This report has been circulated amongst the members. The information obtained, though to some extent valuable, did not lead to any great results, as the report showed that in most of the countries visited, the early prospect of a large demand for tea being created was not very satisfactory, except at an expenditure beyond the funds at present at the disposal of the Association.

The Committee on Mr. Harington's recommendation decided to grant a small subsidy to the proprietors of tea rooms in Rome, and the result, though dealing in small figures, show that in time a considerable demand for good tea may be expected. Although the quantity of tea consumed in these rooms was small, the help given to them, during the first quarter of 1901, brought an increase of 40 per cent. in the cup sales and of 400 per cent. in the sales of dry tea. The proprietors of these tea rooms were so encouraged by the results attained that they have arranged to establish agencies in Florencé and Naples, without requiring any further assistance from the Association.

Constantinople.—Was also visited by Mr. Harington, but the Committee were of opinion that the trade with Turkey, and through Constantinople with ports in the Black Sea, is being well exploited commercial firms, and they therefore did not think it advisable spend much money there. They have, however, agreed to mak grant to Mr. Gatheral, the representative of the Indian Tea Association in Constantinople, to enable him to draw up a pamph giving information about Indian tea, for wide distribution in Turk

Belgium.—Negotiations are now in progress between the Committee and a firm of tea importers in Antwerp, for assistance opening an establishment, not merely for the sale of tea in Belgiu but for the purpose of forming a central depôt from which tea c be distributed to all parts of the Continent.

Germany.—Proposals have been made to the Committee assistance in opening tea rooms in Berlin and Frankfort. Spec reports have been obtained from people acquainted with t market, and the Committee propose taking action as soon as t necessary funds are available.

Paris.—The Tea Courts at the Exhibition last year proved a d tinct success and were attended by large numbers of visitors fr all countries in Europe. In continuance of the work at the E hibition handsomely fitted tea rooms have been opened at 48, R Faubourg St. Honoré, under the auspices of the Association, a with assistance in the shape of payments towards rent, etc., t arrangements being under the superintendence of Mr. H. Skerr Rogers. These tea rooms have been extensively patronised by t better classes of French people, and in addition to the direct inf ence which is being exercised by the sale of good tea at reasonab prices, there is a distinct indirect influence being exerted in t direction of inducing others to open tea rooms and shops throug out Paris. Anyone who visits Paris at the present time, cann but be astonished at the large number of shops over which a placed signs of "tea rooms," "Five o'clock tea," etc., indicati that a distinct taste for tea drinking has sprung up among the Frenc

India.—The members of the Association will have seen in t Indian newspapers a good deal of correspondence on the subject the opening out of the markets in India itself, and at the reque of the Calcutta Committee, it has been arranged to place at the disposal the sum of Rs.40,000, out of the 1900 levy, towards effor to be made to push the sale of Indian tea among the native pop lation. The working of the scheme is in the hands of the Calcut Committee, and it is hoped that success may attend their efforts encourage the consumption of tea by natives of India.

Russia.—The Committee have come to the conclusion that now the time to make a strong effort to establish a market in Russ for Indian teas. Messrs. W. J. & H. Thompson in their last annu report point out that Russia is a most hopeful market "because requires black tea, appreciates quality, and is taking more from every year by direct importation, or from London; it, too, is callin for better tea." Already Ceylon has begun to benefit by the e penditure which it incurred in Russia a few years ago. The dire shipments from Ceylon during the past three years being follows:—

1898-99	... ...	2,750,000 lbs.
1899-00	... ...	4,750,000 „
1900-01	... ...	9,500,000 „

The Committee are now in negotiation with a suitable agent, wh has been in the tea business for many years, and who, it is though will prove a good medium for spending funds to the best advantag It will require, however, a very vigorous effort to make an appre able increase in the demand for Indian Tea in Russia, a if funds are available, they think that £5,000 or more might spent there during the next year with very great advantage Indian producers.

New Levy.—A proposal has been put forward to levy a small ce on all teas exported from India, as is now done in Ceylon, in ord to obtain larger funds for exploiting foreign markets, but even the scheme should obtain sufficient support from the plantin community to induce the Government to take it up and collect th money, it cannot be put into operation for sometime, and the Co mittee, therefore, *strongly urge* on all connected with the tea indust to subscribe to the 1901 levy, which they consider should be rais at once at the usual rate of four annas per acre of cultivation, a half anna per maund of tea manufactured, to be paid to the Associ tion in Calcutta.

It is scarcely necessary for the Committee to support the recommendation at any length by reference to the large additio

ade in recent years to the area of tea cultivation throughout ıdia, and which will increase the production during the next two three years by many millions of pounds. With an extension of ıe market in the United States, especially in green teas, and by ıe opening up of a large market in Russia, which they believe is ow possible, together with smaller additions to the shipments to rance and other countries on the Continent, the Committee hope ıat a large portion of the increase in production may be taken by reign countries. But to push these markets *ample funds are quired*, and the Committee earnestly beg that *all interested in the a industry*, whether they belong to the Association or not, or hether they have previouly subscribed to the levy or not, should ow contribute to the fund.

(Signed) ERNEST TYE,
Secretary.

SISAL HEMP INDUSTRY.

Dr. Morris [in a letter dated Barbados, January 28th] has esti- ated that under favourable conditions the cost of cultivating and xtracting the fibre should not exceed about £10 or £12 per ton. he market price, however, is very variable. It has been as low as out £13 per ton; on the other hand, it has, for one or two years ntinuously, been as high as £30 to £40 per ton, or even higher. he plant will undoubtedly grow in Trinidad and Tobago. There re already a large number of plants running wild in the latter land. It is to be remembered that it is not a cultivation for small roprietors. It is carried on on very much the same lines as cane ltivation. I estimate that it requires a capital of about £7,000 £10,000 to start and maintain a plantation, say, of 1,000 acres in gular working. Anything less than the area above given would ot keep the scutching machines in full working, and thus add to ıe cost of management and the up-keep of the plantations. As nly about three per cent. of the weight of leaves is returned in bre, there is a heavy cartage of these to the factory. On an estate rning out, say, 500 tons of fibre, not less than about 15,000 tons leaves have to be brought to the mill. This necessarily involves nsiderable expenditure in carts and stock, or in estate tramways. is stated that in very rich soils the fibre is not so strong and undant as in comparatively poor soils in dry climates. Again, the Bahamas, it was found that absolutely barren land was quite seless and led to disappointment and loss.—*Proceedings of the maica Agricultural Society.*

ROPOSED GREEN TEA SYNDICATE IN CEYLON.

Mr. Edward Rosling writes to the Colombo papers :—

In view of the large amount of correspondence on green tea and e green tea trade generally, which has appeared during the last onth or two, it will perhaps be as well to put the position before u as concisely as possible. In the first instance a bonus of 10 cts r lb. was offered on 300,000 lbs. with a view to induce estates to mmence manufacturing. This vote though made in 1898 did not pire till October 1900. In other words in two years we made 0,000 lbs. At the expiry of this vote, the then manufacturers nclusively proved that they could not continue manufacture thout the aid of a further bonus and it was then decided to vote st 7 cts. on a million lb. then 5 cts. on the second million, hoping at has the bonus was reduced on this side, prices would corres- ndingly rise on the other. Unfortunately through indiscriminate mpetition prices have not risen, and it is feared that, unless some her means are found to protect the industry in its infancy, when e present bonus is finished, manufacture will fall off if not cease together. I propose that a Company or Syndicate or an Associa- on be formed, amongst the green tea producers, the objects of ich will be to increase and cultivate the trade in Ceylon Green as, primarily with a view to relieve the black tea market of some its surplus supplies. The points to be aimed at to obtain the ove object are:—(*a*) Control and regulation of supplies so as to oid a glut of green tea one month and a scarcity the next. (*b*) ıe blending of different estates' teas into a certain number of andard blends so that the purchaser may be sure of repeating s order for the same quality and any quantity. (*c*) To control d regulate prices with a view to do away with the cut-throat mpetition at present obtaining in the United States. A certain rcentage of any profit accruing to the Company, from its trading to be reserved to the Company, the balance to go to the growers of the tea. I would suggest the "Thirty Committee" be asked to support such an Association or Syndicate or Company, by either continuing a bonus on green teas sold to them or else by devoting a portion of their funds towards administrating the business of the Association. Arrangements could be made by which Colombo Exporters could purchase from the Association on favourable terms. By a scheme on these lines, if supported by the producers, all green teas would be controlled by the Association on a mutual system by which the growers would participate in a share of any profit.

The other side of the matter is shown in the following extract from the *Ceylon Observer*:—

As a result of enquiries made we have been told in some quarters that not enough particulars of the scheme have been given yet for a definite opinion to be offered, while elsewhere even from green tea makers we can find for it no cordial support. With a full desire that the position of the industry should be improved, we think it would be well if the leading Colombo Agents and dealers had been consulted before Mr. Rosling's green tea scheme had been promulgated. In a matter of this kind, we cannot help thinking that the judgment of men with large business experience must tell.

We have made special enquires in Colombo as to the feeling with regard to Mr. Rosling's letter proposing a Green Tea Syndicate. One firm expresses the following opinion:-

"We cannot see that Mr. Rosling's scheme is workable. A few growers standing out and working for a smart firm of buyers would upset the whole thing."

Another expression of opinion runs:—

"I hardly think that a Green Tea Syndicate or combine is necessary now. Green tea has caught on in Canada and the States very decidedly, and the manufacture is being taken up in Ceylon with a will. So much so is this the case that I think it may safely be left to individual enterprise without fear of a continuance of the conditions Mr. Rosling deplores, and which existed for a time. I would not like to discourage a Green Tea Syndicate but I have no faith in such combination working successfully"

Elsewhere it was pointed out to us that the total outturn of Ceylon Green teas this year to date has been about 800,000 lbs. Had a combination, such as is suggested by Mr. Rosling, been in existence, to maintain or raise prices, the quantity disposed of would unquestionably have been less. Low prices have stimulated the demand for this new article. Any increase in rates, until the market for it has been firmly established, will doubtless interfere with consumption. The expenditure necessary to introduce special Green tea machines into factories is small and so long as planters find it profitable to manufacture Green teas, they will do so. It would be unfair for the "Thirty Committee" to refuse the bounty to any one who turned out standard quality merely because he was not a member of the "Union." On the lines proposed by Mr. Rosling a Company or Syndicate is not desirable. Ceylon Green tea liquors appear to be liked in the United States and Canada and if these can be given along with leaf, similar in appearance to Japan or China greens, there seems no reason to suppose that our cousins will not be found eager to purchase large quantities of Ceylon instead of inferior liquoring Japanese and Chinese. What have the "Thirty Committee" done in the way of informing planters as to the makes of Green teas which are suitable for the American market?

COCOA CULTIVATION IN B. C. AFRICA.

Mr. J. C. De Jossselin De Jong writes to the *Central African Times*:—

About seven years ago I imported some cocoa seeds from the Dutch West Indies (Guyana), but they unfortunately got wet on the way up the river, and were quite spoiled when they arrived here. A few months ago Mr. F. W. Moir, through the African Lakes Corporation, imported some cocoa seeds, which, however, also arrived in a bad condition, due to having fermented on the way out. I have taken a great interest in these experiments, and although we have had bad luck up till now, I am of the opinion that sooner or later we will be more successful. As I have had some experience in cocoa culture the following may be of interest to planters here.

There is, perhaps, no other product of agriculture, the acquisition of which requires more care, trouble, difficulty, and perseverance than cocoa, but on the other hand, when success is obtained, there is no other product which gives more profit, and those profits increase every year. It is a well-known fact that there are many plantations which after many, many years (having been continually well looked after) have lost nothing of their original value, but have increased in value. I myself have seen, and worked on, plantations in Dutch Guyana, which were over 30 years old, and which every year gave a very heavy and good crop, and are doing so up to the present day.

The soil in which the cocoa was planted was a very heavy soil, much heavier than we are accustomed to find in many districts of B. C. A. However, marls and alluvial soils have proved to be a great success, especially those of an undulated nature.

Both the systems, of making nurseries and of putting out 2 or 3 seeds in the pits directly, are used. Also seeds are put in little loosely-made baskets and planted out in that way. The nursery system, however, is much preferred. The seeds before being put into the soil are first well washed to take the saccharine matter away, and they are then dipped in chalk: this is to prevent the seeds being attacked by insects. The seeds germinate in 10 or 14 days after planting, and appear above the soil. After 6 to 7 months they are large enough to be planted out. On one acre are planted 200 cacao, trees being 15 ft. by 15 ft. As a shade bananas are planted with the cocoa, and that there may be shade while the bananas are growing up, cotton and cassava are planted, the latter plants growing quickly, and not to too great a height. The best shade tree that is used is the Erythrina Indica, of which there are two species, the white and the red, the former being considered the better. This is a very quick-growing tree and soft-wooded, and when grown up gives a beautiful, large, spread-out shade. The trees are raised from cuttings, for if raised from seed they take too long to be of any use. The cuttings are about 6 to 9 feet long. These shade trees are planted at a distance of from 20 to 25 yards apart. Cacao does not grow useless under shade. Little or no shade, little or no fruit, the saying goes. Not only must cocoa be protected by shade against heat, but it must also be well protected against winds, as wind is one of its greatest enemies. Other great enemies of the trees are the climbing plants, the caterpillars, beetles and lice, and, more especially, weeds. The plantations, as well as the trees, must always be kept scrupulously clean. In Dutch Guyana there are two rainy seasons. The smaller rainy season begins about May and lasts till July, while the proper rainy season begins in November and lasts till the middle of February. They therefore have a heavier rainfall than we have here in most districts. The heat in the dry season, from the beginning of August till the end of November, is often very great. To prevent the soil drying too much and thus doing great harm to the trees, every plantation is so laid out that it can be irrigated, most of the plantations having fine streams or even rivers near at hand: others have proper reservoirs where the water is gathered in the rainy seasons. Plantations near the coast have to be careful of the salt water coming up the rivers with the tides, and keep their sluices well guarded and closed at such times. The cacao trees exposed to the sea winds are never very bright, the salt air having a very harmful effect. For this, however, we have no fear here. The cacao tree grows up pretty quickly, and begins to give fruit about the 4th year, afterwards bearing regularly. The trees are kept at a height of from 15 to 20 feet, this height being the best for keeping the trees clean, pruning, and picking. As an average each tree gives about 25 fruits every year, although there are trees which have been known to give 200 to 300 fruits. 10 to 15 fruits produce one pound of dry beans. The trees blossom nearly the whole year round, and the fruit ripens in 5 to 6 months. The cocoa when ripe has a deep orange colour. After being picked it is brought to the station (often in small canoes which go through the ditches made for irrigation purposes) where it is put in large wooden boxes to sweat and ferment for 48 hours. It must be often stirred up to get proper and regular fermentation. Afterwards it is put out to dry on brick or cemented drying places: the first two days only for a couple of hours. When properly dry the cocoa is stored, sifted, etc., then put into bags and sent to the European markets.

I am afraid that most districts of B. C. A. are not well suited for cocoa cultivation, some being too high, not having enough rainfall, and not well suited for irrigation; and here where the rainfall is not very great, and the dry season of too long duration we must irrigate, while to irrigate in districts not well suited for that p pose would require great expense in the formation of reservo As far as I have heard (not having been there myself) I should that the Ruo and Tuchilla districts and the south side of Mla especially at the base of the mountain where the land is of a flat nature and the temperature greater, might be the best suited cocoa cultivation for several good reasons. First of all there much heavier rainfall than in any other district of B. C. A. Nea all the land has large streams coming down from the mountai and therefore gives greater facilities for irrigation. soil is much heavier and looser than anywhere else and the plan tions could be laid out at a much lower elevation than anywh else under the afore-mentioned good circumstances. With rega to the Zomba district I hear it is well suited for irrigation, bu is on too high an elevation for cocoa.

With regard to the outlay of a cocoa plantation, a great d depends on the aspect of the land, and the facilities for irrigati and on the experience of the planter; as a well laid-out estate v cost much less to keep up, and will be more profitable, than planned by a planter of no experience.

In many places in Dutch Guyana coffee proved to be m or less of a failure, and planters then turned their attention cocoa cultivation. Most of these estates are now of a pay nature, although many of the original planters failed by their experience.

From what I have heard of Mr. Moir's cocoa plant in Mlanj am of the opinion that if the plant was carefully lifted with a b and planted on the lower part of his estate, especially on his irri tion stream, in about two years the plant would be in a condit to bear fruit for the extension of the industry in this country.

TEA AND THE CURRENCY.

Major E. F. Marriott writes in *Capital*—

I have just seen an article by "X" in reference to a letter mine on the above subject. "X" writes: "It is not a little amus to find your correspondent, Major E. F. Marriott, writing *Capital* of the 9th ultimo that 'no one interested has fully gras the fact that the currency legislation does act as a crushing tax the industries of India.'"

During the years I have been writing on the currency quest I have had some hard things said of me, but to be considered am ing on this dreary subject is the hardest cut of all. But wa really so funny?

To begin with, "X" has failed to notice that I was not a corr pondent of *Capital;* the letter in question was written some ti ago to the *Statist*, and the editor of *Capital* did me the honour reproduce it. I am considered amusing because at that time I never heard what Mr. Elliot and Mr. Wadia had said on the subj nor Mr. Acworth and Mr. Forbes-Mitchell, and "besides this have Major Marriott himself." When I wrote Messrs. Elliot a Wadia had not arisen as opponents of the legislation, it is o lately their letters have appeared in the leading Calcutta financ paper. Mr. Acworth's opinions I know well, having had man currency conversation with him at the time of the 1898 Commissi I have reason to think that he had not fully grasped what a cru ing tax the legislation was. Mr. Forbes-Mitchell wrote, i mistake not, some time before the rupee reached its present hi level, and could not have grasped a position which did not th exist. There remains myself; I have fully grasped the fact question, but then I am not interested in the tea industry.

I recognise that Mr. Elliot and Mr. Wadia have now grasped situation, but even so what are they among so many. Mr. Wadi letters seem to me to be full of good sense and to the point, whom have they convinced? "There are plenty of people gra ing the fact; but unfortunately there are other facts to be gras too," writes "X." I deny both statements. That practically of those interested fail to grasp the situation is evidenced by fact that the Associations cite over-production, want of combinati lack of enterprise, etc., to account for the failing industry; and they do touch on the legislation at all, it is only to shy off ag in alarm at having raised this dreadful problem. And there no other facts that need be grasped. If the legislation were rep ed the industry would flourish, and there would then be no talk over-production. To treat this sick industry for over-product

nd to ignore the over-taxation is on a par with treating a man vith a broken leg, and consequent high temperature, for fever, nd to ignore the broken leg, leaving it unset.

The tea industry is suffering from over-taxation; a cent per ent. *ad valorem* duty in England, and a 25 per cent. export duty in ndia. The import duty is of small importance; people will have ea whatever the duty is, and the consumer bears the tax, for all ea-producing conntries suffer equally. But the export tax falls on he Indian industry, other countries being free from it. Practically ll the symptoms of disease in the tea industry are due to the ex- ort tax; set this broken leg and the industry will recover. When his is generally understood the currency legislation, if it has not a the meanwhile died a natural death through the fall in the alue of gold, will be swept away.

I do not now attack the legislation on the ground of its general norality, I take the far higher ground that it does not and cannot ay, for history has taught us so much. I propse to close with an xtract as a text for a sermon by "X," for I recognise that, if he ould, he could be a very vigorous opponent of the legislation. he extract is from the article on "Money" in the Encyclopædia ritannica (the Italics are mine).

"It is proper to observe that coins may be debased in three ifferent ways: (1) by diminishing the quantity or weight of the etal; (2) by raising the nominal value of coins of a given weight; 3) by lowering the standard or fineness of the metal." The overnment of India has debased its coin in the second way.

"Until coinage became a state function a continued debasement as impossible.....When, however, coinage became a function of overnment strong motives for debasement soon presented them- elves. ..... The position of most Governments was hat of debtors, and as a debasement favoured all debtors at the xpense of all creditors it was only natural that rulers, ignorant of he ultimately ruinous effects of a series of debasements, should eek to relieve themselves *without exciting the odium incurred by he levy of heavy taxes.* ..... Whatever may be the inducements to enter on the perilous course f tampering with the monetary standard, *a long experience has ncontestably proved its disastrous effects.* ..... So anifest are the evils that result from debasement that it may be easonably hoped that all civilised Governments have abandoned he practice for ever."

What would be said in England if the Government were to egislate so as to make the sale of sovereigns a monopoly, and were o charge, say, twenty-five shillings for every sovereign, such egislation is inconceivable in England; and it only took place in ndia because in some way a general superstition held men's inds that the rupee itself was falling in value, and a general elief arose that making a monopoly of coinage was the only way o prevent a further fall in value. This superstition has led nglishmen into passing, with the best possible intentions, legisla- ion in India, the adoption of which in their own country is practi- lly inconceivable.

THE COFFEE TRADE IN THE U. S.

THE COFFEE FOR NEW YORKERS.

The consumers of New York, says an experienced coffee distri- uter, demand a high-grade bean. Efforts, strong and persistent, ave within two or three years, been made to inject into the public tomach a low grade of the inspiring drink. Expansion, to some xtent, of the demand, or, rather, the sale, of the inferior article ucceeded the struggle.

Recently there are strong indications that the demand for the etter grades is regaining its supremacy. We hope so. Good oods have much to do with human happiness. The stomach will tand much abuse, yet it is quick to respond blessedly to genuinely ood food and drink, properly prepared for a passage down the uman throat. The horse that eats straw when he could have oats a near relative to a man or woman who drinks "screening" coffee hen he or she might have the best.

The best thing in coffee is wanted for the best thing in humanity. he best thing in humanity is the stomach. Give it the right kind f treatment, and it gives the giver the right kind of a treat elight it with good coffee, and the coffee will be a great delight.

The delightsome bean, where its flavour is more than skin-deep, ay be found in many a New York house.—*American Grocer.*

THE DISTRIBUTION OF FUNGI SPORES.

The following extract from the *Ceylon Observer* refers to a very interesting experiment that is being tried in that island :—

The following schedule of observations to be taken by the co-observers in the tabernacle experiments, planned to gain information as to the distribution by wind, insects and other agencies of spores of parasitic fungi, has been issued from the Scientific Department at Peradeniya Gardens :—

The mycologist, while wishing to reduce the amount of trouble taken by each observer, will be glad to receive as complete answers as possible. If the terms suggested in the footnotes only are used the comparisons of the observations at the different stations will be simplified. When convenient the returns should be sent to Peradeniya next day, so that the diseased leaves can be examined with little delay. All the diseased leaves should be sent unless too bulky, when they should be weighed and the weight sent, with as many of the leaves as possible. The tabernacle should be kept closed and only the kangany or cooly who is to pluck the bushes admitted.

Name of Estate; Date of Plucking; Weather Conditions (very wet, rainy, no rain, no sun, sunny, hot sun); Wind (no wind, little wind, variable, constant wind, strong wind); Weight of leaf plucked from enclosed bushes (green); Approximate number of bushes from which the diseased leaves came; Conditions of nearest bushes on north side of tabernacle; Condition of nearest bushes on south side of tabernacle; Does the flush on enclosed bushes fairly agree with the rest of the field? Remarks or Observations.

[The tabernacles are all erected or will be by the end of September. They are at various heights from 50 to 5,000 feet above sea-level and in various districts in which the areas over which the wind has passed is different. Nothing has been done to solve some of the knotty questions as to spore distribution by wind, heretofore, and as this has a most important bearing on the spread of diseases caused by parasitic fungi, all knowledge gained by these experimental screens will be valuable.—Ed.—*C.O.*]

INDIAN TEA ASSOCIATION.

British Import Duty upon Tea.

In answer to the memorial of the Indian Tea Association on this subject, the Secretary of State has, through the Government of India, forwarded the following extract from a report by the Commissioners of Customs :—

"The extra tax has in no way diminished the consumption of tea, or its importation from India and Ceylon. Every evidence of ability to bear its burden of taxation that a customable article can give, is given by tea now. Tea never was cheaper or more plentiful in the London market, notwithstanding the tax. The trouble in which the Indian and Cingalese tea trade is in does not arise in any degree from high taxation, but from over-production, and careless cultivation, preparing, and packing. The Local Governments must interfere to check the suicidal policy of planters, by establishing a control over the area of cultivation, and the character of the ground devoted to cultivation, and an inspection over the tea before it is packed and exported. This will necessarily increase the cost of production; and, of course, it is desired to obtain a set-off in a reduction of taxation, which would be tantamount to a grant from the Exchequer. Is a mistake to suppose that tea is more highly taxed than coffee and cocoa, if allowance be made for the larger number of cups that can be produced from a pound of tea at 6d. than from a pound of coffee or cocoa at 2d. When tea was reduced from 6d. to 4d. a pound in 1890, coffee and cocoa remained unchanged at 2d., therefore when tea was restored to 6d. in 1900, there was no reason for increasing the duty on the two other articles."

To this the Indian Tea Association reply :—"Judging from the terms of Sir E. Hamilton's letter, the report by the Commissioners of Customs is in the nature of a reply to the representatious which were made to Government by this Association in the early part of the current year. It therefore reflects, presumably with accuracy, the views held by the advisers of His Majesty's Ministers in regard to the enhancement of the duty. For this reason the statements and opinions set forth in the extract have justly claimed the attentive

consideration of the General Committee. It will be within the recollection of Government that it was contended by the Association, in the representations in question, that the burden of the higher duty fell primarily upon the producer rather than upon the consumer of tea It was also held that the enhancement would tend to reduce consumption or at least to check any further development. The Commissioners of Customs state that the extra tax has in no way diminished the consumption of tea;" but they advanced no satistics in support of this statement. They go on to remark that "every evidence of ability to bear its burden of taxation that a customable article can give is given by tea now. Tea never was cheaper or more plentiful in the London market, notwithstanding the tax." That is to say, that the consumer pays no more now for his tea than he did when the duty stood at 4d. But clearly the additional 2d. must be paid by somebody; and as it is not paid by the consumer, it must be by the producer. This is precisely the point which the Committee endeavoured to make in their representations to Government; and they are glad to observe that it is admitted by His Majesty's Commissioners. But they scarcely understand how it can be regarded—as it seemingly is—as a reply to their representations.

In the second paragraph of the extract, there appears a statement to the effect that the difficulties of the industry do "not arise in any degree from high taxation but from over-production, and careless cultivation, preparing, and packing" This statement hardly seems to be consistent with that in the first paragraph. For if the producer has to bear—as the Commissioners really admit he does have to bear—the burden of the present exceptionally heavy tax, it cannot be maintained that his difficulties are not thereby increased. With regard to the latter part of the quotation, the Committee do not deny that the quantity of Indian and Ceylon tea supplied to the British market is in excess of the demand. But they fail to see how the difficulties of the industry can be due to "careless cultivation, preparing, and packing." And they are not clear as to the meaning of this assertion. The statements already alluded to appear to need some elucidation But it is to the third paragraph of the extract that the Committee desire to draw the particular attention of the Government of India. It is there stated that the Local Governments must introduce a control over the operations of cultivation, manufacture, packing, and exporting; that this will necessarily increase the cost of production; and that "of course it is desired to obtain a set-off in a reduction of taxation." The Committee are entirely at a loss to understand what is intended by the concluding portion of this statement. To their knowledge it has never before been suggested by anyone that the Local Governments should establish such a system of control. It cannot therefore be said that a reduction of taxation is asked for as a set-off against expenditure which has not been incurred, and which probably never will be incurred. The only measure of State assistance which has been suggested by the Association is the collection by Government of an Indian export tax, the proceeds of which would be devoted to the work of developing new markets. And the General Committee venture to hope that when the time comes—as they trust it shortly will—for them, in behalf of the industry, to ask the Government of India to adopt this very moderate measure of State intervention, His Excellency the Viceroy will see his way to consent to do so. They do not desire, and do not for a moment anticipate, that Government will propose any system of control over the methods of cultivation, manufacture and exportation; as such a control would be alike uncalled for and unnecessary. But they are distinctly of opinion that if the consumption of Indian tea in foreign countries is to be properly fostered, a permanent source of revenue (such as an export tax can alone provide) is absolutely indispensable.

Lastly, the Committee desire to remark upon the final paragraph of the extract, in which a somewhat novel basis of taxation is suggested. The argument is that "it is a mistake to suppose that tea is more highly taxed than coffee and cocoa, if allowance be made for the far larger number of cups that can be produced from a pound of tea at 6d. than from a pound of coffee or cocoa at 2d." This is really a contention in favour of an *ad valorem* duty on tea tea. For if a pound of coffee or cocoa ought to be taxed on a lower scale than a pound of tea because it produces fewer cups, then it clearly follows that because a pound of tea which costs 4d. produces fewer cups than a pound of tea which costs 1s., it ought likewise to pay less duty. But the argument does not appear to the Committee to be sound; and they notice that the Chancellor the Exchequer did not allude to it. He plainly admitted that duty was maintained for 'financial reasons' "I confess," he sa "that although I sympathise with the great industry of India a Ceylon, yet I think in dealing with this question we must fi consider the interests of our own tax-payers. If I could reduce tea duty, I should be glad to do so, but to talk of a reduction t year is to my mind simply impossible" Clearly therefore the d was enhanced, and is maintained, for the sole purpose of augme ing the national revenues. And if that were a sufficient reason the case of tea, it ought to have been an equallly sufficient rea in the case of coffee and cocoa. It will be understood from foregoing comments that the Committee do not regard the extr in question as a conclusive answer to the arguments adduced the representations made by the Association. And they wo venture to ask that this expression of their views may be tra mitted to the Secretary of State for submission to the Comm sioners of Customs.

INDIAN TEA FOR RUSSIA.

Apropos of the Hon'ble Mr. G. L. Acworth's remarks the Annual Meeting of the U. P. A. S. I. regarding t expediency of capturing the Russian market for Indian t we take the following from the *Pioneer* :—

The cost of conveying one pound of tea from the factory in Ch to Nijni Novgorod is 1s. 4⅞d. The cost of the same quantity water carriage *viâ* the Suez Canal and Odessa, and thence by to the same market, is only 4⅓d. The great commerce thefore Kiakhta is purely artificial, owing to the enormous difference tween the customs house duties at Odessa and those at Irku At the former the duty is 1s. 8d per pound; at Kiakhta the d on leaf tea is 1s. 1⅓d. per pound, and on brick tea, 1⅔d. The hig tax at Odessa forces the bulk of the tea trade through Siberia. greatly increases in value as it advances from Irkutsk. Fr calculations made, it is stated that tea, costing ten roubles whe grew and was first purchased, increases in value nearly five ti ere it reaches its market. The total amount of customs duty p at Irkutsk in 1896 exceeded one million pounds sterling. Th facts and figures plainly demonstrate Russia's methods of cont ling trade. Notwithstanding the length of the journey, the en mous physical difficulties to be overcome, and the increasing va of every pound of tea as it passes over each mile of the route, Russian Government, by the simple device of counterbalanc tariffs, is enabled to force the bulk of the tea trade from its natu route over the seas to one across which nature has thrown most stupendous difficulties. Three years hence these difficult will have vanished. From Hankow *viâ* Pekin to Newchang then across the Manchurian Province to Irkutsk, over the U Mountains, China tea will travel without transhipment once breaking bulk at any point before it reaches the Nijni Novgo fair. The year taken up by the present journey across deserts frozen mountains will be reduced to one-twelfth of that peri The cost of transport will be lessened in an equal degree. The c of tea to the Russian consumer will be reduced to a very appr able extent, and, in the same proportion, the consumption wil increased.

The tea supplied to the Central Asian markets, including Per is at present conveyed by sea as far as Batoum in the Black Sea thence forwarded by rail across the Caucasus, transhipped acr the Caspian, and again railed to Bokhara, and other depôts, by Trans-Caspian Railway along the northern frontiers of R sia. This roundabout route also will cease to exist three ye hence. Before the Trans-Siberian Railway come into existe a scheme was formulated for joining Bokhara to Europ Russia by a connecting link, 1,200 miles in length, tween that city and Orenburg. This scheme has been dela by the larger undertaking now in hand. The political imp tance of this missing link, however, is so great, that it may taken for granted its completion will be contemporary with opening of through communication across Siberia. When th projects are accomplished facts, it will be seen, among ot developments, that Russia will have absolutely at her command the markets of Central Asia for tea as well as for other comm ties. By way of Irbit, or even *viâ* Nijni Novgorod, tea will the sent from the Chinese emporium on the Yangtsze to every mar

Persia and the Khanates without interruption at any point and thout a mile of water carriage over all the distance.

The tea planters of India, through their Associations, are at the esent moment using every endeavour to push their teas in urope. The outlook in that quarter, in the light of coming ents, is not reassuring. When Russia has her long-distance ilway communications in good working order, her enterprising aders will certainly spread China tea over the European Conti-nt. Even now most of the tea drunk in Germany and European ssia, is probably China tea, supplied by Russia, though India nt 5½ million pounds there last year; but with the greater facili-s that the Trans-Siberian Railway will offer, the Russian trade ll become more firmly established than ever. Chinese cheap bour, machinery in the Chinese factories, continuous railway nsport to all the markets in Europe and Asia, will produce a mbination hard to beat Official Russian enterprise, though not, course, for trading purposes only, has supplied the railway. hen Russia's political projects in China have been forced to fru-on and her aggressive designs in that direction are satisfied, ssian capital (the new phrase for French money) will be forth-ming for commercial enterprises on an enormous scale, and the gantic tea industries of the Flowery Land will be taken in hand d organised. All this ought to be realised and considered betimes the Indian planter. It is doubtful, in view of the enormous vantages which China tea will enjoy when imported *viâ* the berian Railway, whether the Indian leaf will be able to compete Russia and Northren Europe: and perhaps the planters would well to concentrate their efforts on the fields where Russian aders cannot be their rivals.

CEYLON TEA IN AMERICA.

The Secretary of the Planters' Associon of Ceylon has sent the Press the following article extracted from the *Journal Commerce and Commercial Bulletin of New York.*

TEA PROBLEMS REQUIRE NATIONAL ACTION.

NO IMPROVEMENT IN GENERAL BUYING OF TEA EXPECTED UNTIL THE DUTY QUESTION HAS BEEN SETTLED—TRADE SENTIMENT SEEMS TO FAVOUR THE REMOVAL OF THE DUTY—VIEWS IN NEW YORK.

It is an acknowledged fact that the tea trade of the country has years been in a particularly unsatisfactory condition. Various ore or less concerted but to a large extent local efforts have been ade to secure relief; but the situation to-day is as bad as ever, ot worse than ever, and the trade, importer, jobber, and retailer, ems to be getting into a position where it will be inclined to cast de jealousies and unite upon measures that shall have at heart t the amelioration of conditions particularly affecting the importer r particularly affecting the jobber, but the well-being of the tire trade.

The recent efforts that have been made to secure improvement ve been, first, the enactment of the law establishing tea standards epared by a board of tea experts; and, second, the imposition of luty on tea. Both of these measures were advocated as a means keeping out unwholesome teas, the first because such teas could t pass the "standards," and the second because it would not be ofitable to pay duties on unwholesome teas. So far as excluding e importation of low-grade teas is concerned both measures have doubtedly had the effect that was desired. But in the meantime lders of teas which were virtually unsaleable before either law nt into operation have benefited. They have been able to meet e demand for the low-grades and have had the benefit not only of e duty but of the absence of competition for low grades, and have us been able to market teas they had previously been carrying years. This class of dealers has undoubtedly benefited, but e trade at large has not, and the trade at large seems now in a sition where it can be expected to unite on the question of secur-g a repeal of the duty. There has already been a petition by embers of the local tea trade to the District Supreme Court at ashington for a writ of certiorari against the Treasury Depart-ent, and the Board of Tea Experts, asking for a more liberal and oader-minded interpretation of the Tea Act.

As the New York tea import trade were so urgent in securing e imposition of the duty they feel much diffidence in initiating a movement for its repeal; and they feel, moreover, that any such advocacy by them would be detrimental if not fatal to such repeal. This is a condition of affairs seeming to promise the hearty support of the New York importers, as an influential element of the country's tea trade, in the plan which has recently been receiving discussion in the trade for the formation of a national tea importers' and dealers' association. With such an organization, in which it is expected the wholesale grocers of the country would participate through their various State associations, the demand for a repeal of the duty could be shown to be widespread; and, furthermore, the tea trade of the country would than have an organization through which broad-minded action could be promptly taken on the important problems that from time to time confront the trade. . . . .

Extract from letter by Mr. John B. Brown, tea importer of New York :—

"There is no reasonable form of a protective policy in maintaining a duty on tea, as the South Carolina industry is of small proportion, and by reason of soil and climate cannot satisfy the demand for varied kinds of tea. A duty on tea is simply tariff for revenue only, and with the Treasury surplus so enormous what is to be gained by any political party in keeping the duty in force, depriving some two hundred thousand retailers and the millions of consumers from the benefit of reduced prices? It does not seem possible that any industry can for ever be taxed beyond all reason, showing to so many a loss.

"The day for class legislation has gone by. It will exist for a time, but will never be silently submitted to, and the movement of any individual or association to rule for their sole benefit to the exclusion of the great majority will, in time, prove reactionary. The few whose interests the duty temporarily benefits should look ahead and foresee the narrow and still narrower market which will be the result of a continued duty. All elasticity gone, the market a stagnant, 'in-bond' condition and a brokers' market a thing of the past. If duty is continued in force importers will be compelled to carry even smaller stocks at a convenient point in the West, where storage rates will be one-half at present existing in Chicago and Eastern points, and as teas will be needed, with the newly-proposed freight advantages, they will be shipped East to fill requirement.

"It did not seem possible Congress would ever adopt a duty on tea, otherwise considerable opposition would have been offered to prove it unjust. As one always opposed to duty you may add my name to any petition if circulated, asking for its removal."

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

The Course of Exchange.—Referring to the reaction in Brazilian Bonds, the *Moniteur des Interéts Materiels*, of Brussels, of the 26th May, writes as follows:—

"Following exchange, which has fallen to 12d. Brazilian 4 per cents have weakened again. This reaction of exchange is a regular thing at Rio. Unless influenced by special causes such as Treasury operations, speculation or politics, exchange should always fall about May, rise again in June to attain its maximum in August and fall again in the Autumn in sympathy with coffee shipments. This year, exchange starting from 10d. in January was pushed rapidly up to 12d by the end of March and $13\frac{7}{16}$ on 1st May. Since then it has commenced to fall again, coffe shippers, doubtless, wishing by forced sales to ensure favourable exchange (*sic*). If however shipments continue there will be a new rise next month. In 190 , on the contrary, the state of the market was less normal; from January to the end of May maximum monthly rates leaped from $7\frac{7}{8}$ to $9\frac{1}{4}$ and at the end of June or beginning of July were pushed to $14\frac{3}{8}$ falling afterwards to 10d. in December. Evidently rates were vitiated in 1900 by the speculation of June, the whole truth of which was never known. This year the course has been more regular, and that is why we maintain that up to the present there is nothing to be alarmed at, rather the contrary."

Note of Ed of "The Brazilian Review."—The *Moniteur* is certainly the most intelligent of all the foreign critics of Brazilian Exchange, and has already evolved a theory that, if too rigid to

account for variations such as we are now experiencing, is at least intelligible. As we pointed out some time ago, the tendency of exchange has altered of late and instead of a single great swing of the pendulum up and down, such as the *Moniteur* describes, the natural course is towards a rise in January to March, accompanying the culmination of the rubber movement, with a reaction from March to June, when both the rubber and coffee seasons are over and bills are scarcest. This of course may be modified by speculative selling, as it was this year and last, and not only counteract the reaction that should arrive in March or April, but even drive rates continuously upwards; but if, as is certain to be the case, the market oversells itself, the final reaction will then be all the more violent and prolonged when it arrive. That is precisely what is now occurring; an unusual accession of rubber and coffee bills in March raised exports to the unusual figure of £4,000,000 and so stimulated speculation that by the end of May the markets were already £2½ millions oversold. In April the supply of bills fell off to only £2,800,000 and in May and June were still less, and insufficient to simultaneously furnish the current requirements of the markets and cover for speculative sales. Had coffee been sold heavily ahead, as it usually is about this time, the cover would have been forthcoming and the rise perhaps, have been carried over to July or August without relapse. As it is, the low prices ruling abroad for coffee are not sufficiently encouraging and the market has to get along as best as it can with the few ready bills there are. Naturally, as the Banks are the only sources where cover can be got for the present, they are masters of the situation and can squeeze the "bulls" as they choose. As soon, however, as coffee is shipped in large quantities, which will be about July, bills will be plentiful once more and rates commence to improve. It is probable that, as soon as the present oversale based on the surplus of exports about March is liquidated in August or September, another "bull" movement will commence and that the market will again oversell itself, driving rates up in October or November, to fall again in December or January, when the oversale has to be liquidated, thus completing the double swing of the exchange pendulum, the motive power of which is derived from Rubber and Coffee respectively.

Exchange, 22*nd June,* 1901.—Ninety days' Bank rate on London opened on the 17th at 11 7/16d. and closed this evening at 11 1/8d. There is little to add to what we wrote last week. The liquidation is following its inevitable course and in the absence of sufficient ready bills to supply the day-to-day requirements of the markets and cover for "bull" operations, in spite of every effort to maintain it, the rate gets weaker and weaker. Nor with a large account yet uncovered does there appear to be much hope of improvement until coffee bills begin again to flood the market and allow speculators to liquidate. Up to the present little real liquidation has been done, but the "bull" account not only disinclines Banks to be ventursome but inclines them to force on outstanding liquidations. The persistent fall of coffee prices is likewise a feature that if utilized to "bear" exchange methodically, might be extremely dangerous and perhaps irresistible.

The value of coffee shipments during the past week was ag small £276,000 as against £291,000 the previous week and £90 last year. Declared sales were also smaller, 123,000 as aga 131,000 the previous week, indicating smaller shipments ag during the current week.

Rubber shipments at Pará and Manaos were somewhat n active, giving a value of about £148,000 as compared with £49 the previous week. But at present it seems likely that the v of imports reaches, if it do not exceed that of exports, leav little or nothing for Government or private remittances.

The tendency of exchange for the present and immediate fu is, in our opinion, weak if not deliberately downwards. In s of unfavourable appearances however, we maintain our opinio regards an improvement later on, should the natural cours exchange not be perturbed by political or other extraneous influe

Coffee.—Entries during the week ended June 21 show increase of 11,:87 bags compared with the previous week an 49,193 or 53.4% compared with the corresponding week last y This increase is chiefly in Rio arrivals, those at Santos being very slightly over the previous week's. Since the 1st July the t entries at Rio and Santos amounted on 21st instant to 10,822 bags as against 8,838,935 last year.

Shipments (*embarques*) at the, two ports were slightly under previous weeks, being 184,154 as against 195,151 and 69,085 for corresponding week last year. Stocks, however, are smaller ag being 581,012 at the two ports as against 624,349 the previous w and 392,189 on the corresponding date last year.

Entries in this market comprise about 30% new season co quality being still below average, whilst the old coffee now com in is very badly dried and almost unmarketable.

The weather is now all that could be desired, sharp and and the trees look strong and well, promising a good crop for 1 1903. Planters, especially in S. Paulo, are experiencing g difficulties in meeting their engagements to there men and the a general feeling that, unless prices improve shortly, however he the coming crop may be on the trees a great deal of it will re unpicked and never come to market.

Prices during the week ruled somewhat firmer, the firm of I isohn being said to be in the market again. We quote 7$100 "regular" and 7$300 for colory coffees, washed being practic without premium; and c. f. and com. for No. 7. New York typ 28s. 9d. to 29s.

At Santos the market was steady with fairly large business d during the week, but was easier at the close, as neither Europe the States maintained the advance. Dealers met buyers freel the higher quotations. "We quote:— 4$500 to 4$700 for "superi "goods" 4$200 to 4$400, "regular" 3$900 to 4$200 and "prim 4$800 to 5$500; these prices indicate a special demand for fine qu ties, 6$200 to 6$500 having been paid for exceptionally fancy go

Lower grades like Nos. 8 and 9 are neglected by the St buyers, but Europe has taken a fair amount of these quali "Peaberries" met also with a little demand. Whatever new coffee is offered, although better than last week, is not very att

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98—t.f.c.]

ve, apart from the washed coffees, which show good colour and are ow freer from imperfections, but are unfortunately difficult to ove, as importers still fight shy of them.

European demand was mostly for "superior" at 28s. 6d. to 30s.; good average" 27s. 6d. to 29s.; at the first mentioned price hardly ny orders can have been executed, but we have heard of sales 29s. for "superior". The States sent large orders for Nos. 3 and at $6\frac{9}{16}$c. to $6\frac{5}{8}$c. and No. 5 at $6\frac{1}{4}$c. which are much below prices. urope is still willing to pay. We, therefore, think that little or business has been done. The quality of receipts is improving nd the weather is fine but cold at nights; frost has fallen in some istricts but without doing harm.

Labour Laws.—Dr. Bernardino de Campos introduced a bill in he Senate intended to give greater security to planters' labourers r their wages and earnings, the clauses of which are as follows:—) All debts due for plantation wages shall have a preferential right payment from the proceeds of respective crop. (2) The preference hall embrace the whole of the debt shown to be due for wages by the uplicate entry to each labourer's account current, one of which, ly initialled and entered by the planter, shall be delivered to the bourer. In case of divergencies, other proofs may be admitted.) For recovery of such debts labourers will have the right of mmary action and embargo or of preventative arrest.

In the Senate a bill was introduced to regulate the payment of bourers' wages and that to tax deposits in exchange banks post-oned *sine die*.

Railway Freights. The Secretary of Agriculture has ordered he district Inspector to report whether the financial conditions of he Itatibense line are such as to admit of a reduction of coffee tes.

Riots.—Riots are reported at Casa Branca in consequence of non-yment of wages by planters. These incidents are getting sagreeably common and something must soon give way, either ffee prices, exchange or wages; probably exchange.

THE "SHOT-HOLE" BORER.

At a recent meeting of the Pussellawa Planters' Association, r. E. Ernest Green, the Government Entomologist, attended and ve the members some valuable information regarding the "shot-le" borer, a beetle which does damage to tea plants.

The Chairman (Mr. G. C. Bliss) said Mr. Green had been making tensive enquiries regarding the "shot-hole" borer, and his in-rmation would be valuable to planters. The pest was undoubtedly e of the most serious that attacked the tea plant, and he had fered Mr. Green opportunities of studying it on the Atgalla estate. Mr. Green said the insect was a minute beetle known to scientists the name of *xyleborus fornicatus*, and belonged to the family of olytidæ. It was popularly known as the "shot-hole" borer. He d known the pest in question for about twelve years in the walapitiya district, and probably all those present were well quainted with it. They would see from the specimens of tea ees that were on the table that the beetle bored holes in the wood, hich very much resembled a single shot. It seemed to affect the ee from the top to the bottom practically. Its *modus operandi* s to commence from the base and go on to one of the branches; almost went through the branch, and then took a spiral turn und which girdled the branch, just above where it went in. It en went back and made another girdle below the original circle. e object of the beetle was to choke the flow of sap and enable it go on breeding without having too much moisture. The way t it had affected whole fields showed that it had been going on a very large number of years. It was very difficult to do ything with it when it had got to that stage. If it was noticed the beginning, the way to treat it was by cutting and burning e prunings. Where the beetle had affected the whole field, of urse, to prune would not be worth while, as it would be necessary practically hack the bush away; he thought the best thing to be ne under such circumstances was to leave as much bearing ight as possible and to stimulate the tree by manuring, produc-g more sap to counteract the effect of the beetle. In fields where e beetle had only just appeared it certainly should be possible to ntrol it by cutting down below the place wherever the beetle had en, and carefully collecting and burning the clippings. It would a great pity in young clearings to let the thing get a hold from the commencement. It was absolutely necessary to burn the clippings. Their Chairman had very kindly consented to undertake any experiments that he (Mr Green) might suggest; it was, however, more or less working in the dark, excepting that they would have to try all sorts of things, likely and unlikely. Probably they would have to try and find some deterrent which would render the bushes more or less obnoxious if attacked after pruning, and he proposed experimenting in that way. He would put the result of what would be done in black and white for the benefit of the planters, and he hoped to be able to himself find the time to supervise the experiments and see how they were going on. His main object at present was to point out the gravity of the pest. When it had got to the stage in which it was at present on many fields they never knew where it would stop. After pruning, they would find that a certain number of the branches did not throw out any shoots, or at any rate they were very much retarded and might appear a month or six weeks after the main part of the bush. That was because of the beetle, and they could easily see that there was no limit to its ravages. It had thoroughly infected the estates around Nawalapitiya and Gampola, and it had also appeared sporadically on one or two estates up-country. Many people had an idea that it had got into the estates from the grevillea trees; he (Mr Green) had examined those trees and came to the conclusion that it was much more probable that it had got into the grevillea trees from the tea. With the assistance their Chairman had been good enough to offer, he hoped to be able to do something. (Hear, hear.)

Mr. Green produced specimens of the male and female beetles, which were examined with interest. The beetle was allied to the true weevil, but it had not the long snout. The weevils were very dangerous, but, as a rule, they preferred dead wood to any other. The shot-hole borer unfortunately, preferred the half-living wood, for as soon as the branch was absolutely dead, it seemed to desert it, or at all events did not continue to breed in the dead wood.

Mr. Christie enquired whether the beetle was able to fly and whether it did fly.

Mr. Green said the female insect flew about, but the male insect had no wings. The male insect was very much smaller than the female.

Mr. Christie asked whether Mr. Green would recommend the prunings to be burned green, or would it be sufficient to burn them afterwards, as there was, of course, a difficulty in burning the green prunings.

Mr Green said it was most important that the prunings should be burned as soon after being cut as possible. It would be a great mistake to let the branches dry, and if the branches were only scorched when green and not entirely consumed, it might be enough. He had made experiments to try and attract the beetle by light and also with a preparation of alcohol, but the only result was the inebriation of ants. (Laughter.) It was a very bad night for the experiment, as there was a very bright moon and few insects were flying about, and as he did not consider it by any means conclusive, he meant trying again under more favourable circumstances.

The Chairman thanked Mr Green for the information he had given the meeting. There was no doubt that the shot-hole borer was a very serious pest; he would say the most serious pest that they had. The best return they could make to Mr Green for his kindness in attending the meeting and giving them information as he had done, was to thoroughly try every suggestion that he made, and thus co-operate in the attempt to exterminate the pest. —*Times of Ceylon.*

MARKET REPORT.

[*Per Mail advices of 19th July* 1901.]

COFFEE.

The London Commercial Record says:—There has been practically no change in this market, the tone continuing very quiet, while the auctions drag considerably. Supplies have been fairly large and chiefly of undesirable qualities, but there has been no material change in values, although the tendency is to rather easier rates. The small proportion of fine grades realised fancy prices. A parcel of East India, Ceylon cured, received low bids and was mostly bought in. East India has been extremely dull, and for the A sizes there has been scarcely any bidding. The continued very large receipts in Brazil and a decline of $\frac{5}{32}$d in the Brazilian exchange have combined to further depress the market for futures, and

at the close September Santos shows a decline of 9d for the week; yesterday September sold at 27s 6d, December at 28s 1½d to 28s, and March 27s 7½d to 27s 6d per cwt. We quote:—

London	Santos ...	Sept. delivery	... 27s 6d.
New York ...	No. 7 Rio...	,,	... 4·90 cents.
Hamburg	Santos ...	,,	... 27¾ pf.
Havre	Santos ...	,,	... 34 francs.

Auction supplies to-day consisted of 7 tierces 6 barrels 2 bags Plantation Ceylon, 412 bags East India, 38 bags Nyassaland, 50 barrels Jamaica, 2,804 bags Guatemala, 263 bags Colombian, 335 bags Salvador, 400 Nicaragua, 433 bags Ecuador, 350 bags Mexican, 813 bags Costa Rica, 152 bags Coban, 135 bags Vera Paz, and 53 bags New Granada. The sales went off quietly and a good deal bought in. Common qualities were much neglected, but the better grades brought former prices.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	22,121	19,622	34,678	26,486
	Home Consumption.		Export.

Tons ...	11,645	9,774	15,647	11,831

The preceding figures exhibit— Tons.

In the Imports an increase this year of	7,192
Home Consumption an increase of	1,871
Export an increase of	3,816
Stock an increase of	2,499

Auctions this week have passed off as under:—

Ceylon.—*Plantation.* 13 casks 3 tierces 1 barrel 1 bag offered but only 1 cask peaberry sold at 110s.

East India *cured in Ceylon.*— 33 casks 9 tierces 10 barrels 2 bags offered and partly sold—boldish to bold 50s to 70s, peaberry 50s to 52s.

East India.—2,153 bags partly sold as follows: *Coorg*, peaberry 42s; *Neilgherry*, smalls 31s to 38s 6d, low middling to middling 37s to 45s, bold 50s to 55s, peaberry 42s to 49s; *Wynaad*, find ordinary 37s 6d, peaberry 46s.

African.—13 bags *Liberian* partly sold at 20s for country damaged.

Nyassaland.—68 bags sold—smalls 25s, medium to bold 32s 6d to 36s 6d, peaberry 35s.

Jamaica.—165 barrels 1 tierce 5 bags offered and 2 packages peaberry sold at 44s.

Costa Rica.—Of 3,910 bags catalogued about 2,350 bags sold—smalls 24s 6d to 37s, ordinary to fine ordinary 32s 6d to 38s, low middling to middling 40s to 47s 6d, good middling 50s 6d to 51s 6d, bold 58s to 67s, peaberry 41s to 59s.

Guatemala.—2,148 bags offered and 750 bags sold—smalls 34s to 35s, good to fine ordinary 37s 6d to 39s, low middling 40s, middling 46s to 47s 6d, bold 54s to 70s 6d, peaberry 44s 6d to 50s.

Vera Paz.—104 bags partly sold, smalls 39s.

Salvador.—Of 1,562 bags catalogued about 500 bags sold—smalls 30s 6d, good to fine ordinary 36s 6d to 38s 6d, peaberry 36s to 51s.

Nicaragua.—767 bags partly sold—smalls 30s 6d to 33s 6d, good to fine ordinary 32s to 38s, low middling to middling 39s to 43s, good middling 48s, peaberry 34s to 51s.

Colombian.—Of 3,123 bags partly damaged offered 1,950 bags sold—smalls 24s to 30s, good to fine ordinary 34s 6d to 38s, low middling 38s 6d to 40s, bold 40s to 46s, peaberry 34s to 42s.

Mexican.—Of 811 bags offered 590 bags sold—smalls 29s 6d to 33s 6d, good ordinary to low middling 37s to 39s 6d, middling 44s 6d, bold 53s 6d, peaberry 37s 6d to 45s.

Brazil.—554 bags Santos partly sold—bold pale 36s 6d to 37s quay terms.

TEA.

Indian.—Catalogues comprised 6,200 packages, of which 1 packages were New Season's, contrasted with 7,500 packs (2,800 New Season's) on the 8th instant and 2,400 packages (1 New Season's) at this time last year, when labour troubles at Docks interfered with the working of arrivals.

All useful and good liquoring teas were to strong demand an the majority of cases sold in favour of importers, among th offered being several invoices just to hand from Assam, of wh 104 packages from the Taluq Estate (A.F.T.Co.) brought 1¼d per lb. There was also more enquiry for common leafy gra which hardened fully ¼d per lb.

Ceylon.—Supplies were heavier, totalling 31,000 package 19,600 packages on Tuesday and 11,400 packages on Thursda compared with 15,500 packages in the previous week, and 20 packages in the foregoing year.

Much irregularity was again noticeable in the bidding, an considerable quantity was withdrawn, though the greater part disposed of privately afterwards. Where sales ware effected, p quotations were maintained for medium and fine descripti except when flavour was inferior, while common Pekoe Soucho and Pekoes were wanted and often ¼d per lb. dearer, closing stro The few finest lines available went off fairly well, without mate change.

The average is barely 6½d per lb. On the 11th instant it 6½d per lb., and 7⅛d per lb. on the 19th July, 1900.

Java.—Nearly 900 packages of direct import passed the hamı former values being quite upheld.

Deliveries.—The clearances of all tea (on which duty has b paid) from the London warehouses, as per official returns are, *viz*

The use of China Tea in this country is now so small that it i little importance in dealing with figures relating to consump and producing of Tea. However, now that British grown Te finding a firm footing in markets in other parts of the world, th is some interest in watching the shipments of China Tea countries outside the United Kingdom. The latest advices p to a considerable falling off in the amount of China Tea avail for export, and although it is as yet early to hazard a figur

ay be safely said that the coming season's exports of Tea from ina will be 10 to 15 million pounds short of last year. This ortage we understand is brought about by the unremunerative ices which have been offered to the Chinese merchants. The ason's crop is also reported to show exceptionally poor quality. is therefore probable that the foreign markets will require larger pplies of Teas from India and Ceylon, and if such should prove be the case, the home market may feel relief sooner than had en anticipated.

INDIAN.—New Season's Teas were again in limited supply, and r any parcels which possessed strong and useful liquors an vance of ½d. to 1d. per lb. was freely paid. Low priced descrip-ons were also beneficially affected by the improved market to the tent of ¼d. to ½d. per lb.

The official wire gives exports to United Kingdom for the first lf of July as 7,780,000 lbs, against 6,920,000 lbs. last year; aking the total from 1st April to 15th inst., 15,898,000 lbs., against ,530,000 lbs. same period 1900.

Week's average of New Season's Tea sold on Garden Account 1901, 293 pkgs., av. 7·33d. 1900, 861 pkgs., av. 6·89d.

New Season's Tea sold on Garden Account 1st June to date 1901, ,000 pkgs., av. 6·81d. 1900, 16,578 pkgs., av. 6·83d.

CEYLON.—Of the total supplies 20,000 packages were offered in e Public auction on Tuesday, and 11,000 at the Trade auction sterday. There was much irregularity in prices at the former these sales, not due to any inherent weakness in the market, but the fact some buyers were not operating. On Thursday the rade operated freely at prices well up to valuations. During the st few weeks the market has been a hardening one, and useful edium Tea can now be quoted ½d. to 1d. per lb. dearer than a onth ago, whilst low priced Tea shows an advance of from ¼d. to . per lb. in the same period.

The official telegram from Colombo gives shipments to United ingdom for first half of July as 5,000,000 lbs., against 5,500,000 s. same period last year; and estimates the quantity available r the month at 9,750,000 lbs., against 8,750,000 lbs. actual ship-ents in July, 1900.

Average for week 6·23d., against 7·10d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 687,071 pkgs., . 6·57d. 1900, 692,005 pkgs., av. 7·24d.

JAVA.—The Teas were all on garden account and sold with fair mpetition.

Bank Rate 3 per cent. Exchange on London three months' sight:—lcutta 1/4 1/16. Colombo 1/4 3/32.

COCOA.

At a fire in the West India Docks on Friday last some 12,000 gs stored there were nearly all destroyed, only obout 1,500 bags ing saved, and these were all more or less damaged. Strange say this had not the slightest effect on the market.

Tuesday's auctions offered only 4,015 bags, for which there was rdly any demand, barely 350 bags selling. Of 1758 bags Trinidad talogued 150 bags sold at 69s 6d to 71s for good to fine red, ing 1s easier. Of 243 bags colombian 70 bags were placed at 71s r good bold. Of 938 bags Guayaquil 35 bags sold at 58s to 60s r Esmeraldas. 90 bags Ceylon sold, out of 165 bags brought rward, at 60s per cwt. for good collected. All the following ere bought in:—291 bags Jamaica, 3 bags St. Vincent, 100 bags orto Plata, 5 bags Bahia, 435 bags Haiti, and 80 bags African. rivate sales include 500 bags Trinidad at 68s to 71s, and 50 bags ir to good fermented Jamaica at 62s 6d to 64s per cwt.

PEPPER.

BLACK.—The market is dull and values lower. Singapore on the ot has been sold as 6d for fair, near at hand at 6d down to 5 31/32d, d July-September shipment 6d; about 50 tons reported sold.

Nothing was offered at Wednesday's auctions.

The shipments of Black Pepper for the first half of July mpare as follows:—

	1901.		1900.	
. K.—Singapore	150	170	150	150
„ Penang	20		*nil*	
ntinent		190		*nil*
. S.		220		*nil*
Total tons ...		580		150

Black quiet to-day Singapore September-November shipment 6d minal.

WHITE is dull of sale; fair Singapore on the spot has changed hands at 9¼d, and fair Penang at 8⅝d. For arrival no sales mentioned.

Offerings at public sale on the 17th instant were confined to 83 bags Singapore, which retired at 9⅜d per lb.

The shipments of White Pepper for the first half of July compare as follows:—

	1901.		1900.	
U. K.—Singapore	90	130	60	90
„ Penang	40		30	
Continent		10		*nil*
Total tons ...		140		90

GINGER.

COCHIN.—Is a very unsatisfactory market. There is really no demand, but holders will not give way further to induce operations. Catalogues embraced 60 cases 580 bags, but the only lots that sold were 13 bags see-damaged washed rough which brought 33s. A bid of 83s was made for bold and medium roughly cut and scraped, slightly limed, for which the buying in price was 95s, less perferable passing the hammer at 92s, medium cut at 60s to 68s, small at 50s, small to bold branchy rough at 47s 6d, and washed rough at 38s to 40s per cwt.

JAPAN.—12 bags dull plump limed sold at 32s per cwt.

JAMAICA.—Was in fair request, 185 barrels selling out of 295 barrels catalogued, and here and there holders had the advantage. Good bright washed realised 51s to 57s, low middling to middling 39s 6d to 44s 6d, and ordinary to good ordinary 37s to 38s per cwt.

CINCHONA.

The shipments from Java for the first half of July amount to 691,000 Amsterdam lbs. against 180,000 at the same time last year.

The exports from British India during the twelve months ended March amounted to:—

	1900-01.	1899-00.	1898-99.
Lbs.	2,753,858	3,290,236	1,361,539

The Exports from Maracaibo during 1900 amounted to 95 packages, weighing 4,099 kilos., against 250 packages, weighing 10,241 kilos., in 1899.

In auction 4 bales of hard, flat, yellow bark sold at 9½d to 10d per lb. for damaged, and for 5 bales of fair broken Lima bark 2d was refused.

The Amsterdam correspondent of the *Chemist and Druggist* cabled on 18th ultimo: The auctions of cinchona held here to-day consisted of 4,715 bales and 259 cases, weighing together 450,752 kilos. and containing 24,508 kilos. (857,780 oz.) quinine sulphate. The manufacturing-bark contained a percentage of 5·91 per cent. quinine sulphate, against 5·55 per cent. in the previous auction, and an average of 5·26 per cent. for the previous ten auctions of 1900. Of the above 4,974 packages, 4,584 packages sold, at an average unit of 9c. per half-kilo., against 10-45c. per half-kilo. paid at the auction on June 13. The following were the proximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 9,314 kilos.; the Brunswick factory, 3,648 kilos.; the Mannheim and Amsterdam factories, 3,958 kilos; the Frankfort-on-Main and Stuttgart factories, 3,039 kilos.; and various buyers, 2,360 kilos. The prices paid for the manufacturing-bark ranged from 13½c. to 77¾c. per half-kilo., and druggists' bark from 13¼c. to 68c.

QUININE.

A very quiet tone has again prevailed in this market, and prices have declined still further. The small business done has been principally for October delivery at from 1s 1¾d to 1s 2d per oz. The spot price for the leading German brands is now 1s 1¾d, and August delivery has been sold at 1s 2d. Buyers to-day are awaiting the result of the Amsterdam bark-auctions.

CARDAMOMS.

Cardamoms appear to be coming in abundantly, owing, it is said, to the lessened consumption in India due to the plague. Consequently there has been a succession of declines in value, and at to-day's auction, another drop of 1d to 2d had to be recorded, although only a small business was done. The following were the sales:—Ceylon Mysore, medium and bold pale 3s 2d; medium long pale 2s to 2s 2d; small and medium ditto 1s 7d to 1s 9d, small

pale 1s 6d; medium splits 1s 5d, very small pale 1s 4d, ordinary brown splits and pickings 1s 4d to 1s 5d. Native wild 3d to 6d.

Bold palish Ceylon-Malabars were bought at 2s 6d per lb Seeds sold at from 1s 11d to 2s 1d per lb.

INDIA-RUBBER.

The market has further declined owing to cheap offers of forward delivery, particularly of soft fine Pará. Business has been done in hard cure fine, July-August 3s 8½d to 3s 8d, ditto ditto Aug September down to 3s 8¼d, ditto entrefine at 3s 7d to 3s 6¾d; cure, fine down to 3s 7d, closing with sellers at this. There sellers of scrappy Negroheads at 2s 7½d. Peruvian. There been small sales of fair ball at 2s 4½d, and slab at 1s 10½d pre wheighing. Mollendo.—Sales privately of fine at 3s 7¼d, entrefine at 3s 6½d.

There were no auctions to-day.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 23rd instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *August 12th.*—*Weather*—Last week there was rain every day, the showers however were light, and very favourable for the supplies. *Works*—Handling, borer, supplying and weeding. *Plant disease*—Coffee remarkably healthy. *Health*—Good. *Labour*—Abundant.

Coorg. Polli Betta, *14th August.*—*Weather*—Average about 20 cents *per diem* last week. It is gloomy and rains at times; and at intervals there is fine bright sunshine. Borer campaign coming to a close. Coffee looking well. All seasonable works show good progress. Coolies beginning to come in from Mysore. *Labour*—Ample. *Health*—Fair. Rumours that one case of imported plague occurred on one estate.

PLANTERS AND MARKETS.

In giving adhesion to the scheme for pushing sales of tea in India through Messrs. Andrew Yule & Co., of Calcutta, South Indian planters have manifested their desire to stand in line with their brethren farther North. The business to be run by Messrs. Yule is, by the way, to be known as the "Indian Tea Markets' Expansion Commission," and Messrs. Andrew Yule & Co are to be the "Commissioners" although it should be noted that they are not to draw any commission. The scheme has the warm approval of the Viceroy, and this will probably be even warmer if Messrs. Yule can see their way to pushing the sale of Indian coffee as well as Indian tea. An inquiry about this has been addressed to them by the U. P. A. S. I. Referring to this Association, our sprightly contemporary, the *I. P. G.* displays some little doubt lest there should be *trop de zéle* among South Indian planters. On this point the sporting-planting organ of India may be

re-assured. We are very pleased to read in his columns :— "The reported speeches and discussions at the Annual Meeting of the United Planters' Association of Southern India clearly indicate that the Southern Indian planters are a very go-ahead, energetic body of men, and are fully alive to their own interests —if anything, they are, perhaps, a trifle too over-zealous. They certainly compare most favourably with their Ceylon brethren, on whom they are keeping an eye." When the *I. P. G.* proceeds to refer to the Indian Tea Association, however, it is not so just. It remarks that South Indian planters "complain of 'slackness' on the part of our Indian Tea Association, but if they lived in the sweltering muggy, super-heated atmosphere of Calcutta, they would themselves feel pretty limp, and not much inclined for long-winded, heated debates in the Committee room. In this part of the world we move slow, it is the custom, and the rule of *dustoor* cannot be broken through." Now, in the first place, the complaint referred to was not a general one, as the above remarks would imply, nor is there ground for the second implication that the South Indian planters treat themselves and his friends to long-winded, heated debates either in the Committee room or elsewhere.

Other remarks that reach us from Calcutta are deserving of the most careful study down South. They proceed from the lips of Mr. DAVID YULE, who is in chief charge of the business of Messrs. ANDREW YULE & Co., and whose opinions are of great interest not merely because of his firm's connection with the Indian Tea for Indians scheme, but because he has established a high reputation as a shrewd, sound and go-ahead man of business, and one whose touch has a marvellous way of turning things into gold. Speaking as Chairman of the Bank of Calcutta, at the Annual Meeting of shareholders, Mr. DAVID YULE referred to Indian tea gardens as still under a cloud, and said that the large capital locked up in the tea industry in this country gives hardly any return on the average. He thinks, however, that the cloud is breaking up, for buyers of tea are willing to pay good prices for quality, although they decline to give anything like covering rates for common descriptions. It has often been pointed out that Indian gardens should endeavour to make their manufacture distinct from the coarse and badly made teas which are produced by Ceylon and China. This is far and away a better policy than throwing a percentage of the bushes out of cultivation. Nature this year has come to their assistance in reducing outturn and the gardens are fully 20 per cent. behind last year. By the 15th of this month gardens would have made half their crop, but "as we are now having September weather in August, there is not much hope of the deficit being made up, an early cold weather being expected." Such being the prospects of the crop, Mr. YULE considers present prices too low, and says that unless garden proprietors bestir themselves to get some advance in values, they will find the balance of their Profit and Loss Accounts on the wrong side at the close of the season. Referring to the new scheme for pushing sales in India, he uses these words :—"I am glad to say that at last there is some prospect of planters working up a demand for their produce among the millions of Indian people, who so far have not enjoyed the taste or the health-giving properties of the fragrant cup. I say fragrant cup, for recently I have made it my business to get samples of tea sent to me from the bazaars in Calcutta and other towns in India. The stuff our native friends know as tea would, I think, be called by you slow death. The majority of the samples showed decayed leaf, mix with mud and other matter. Some samples held a visi percentage of shellac and mica sweepings, and others w doctored with some pungent scent apparently for the use "high life." The commission which has now been form is the outcome of a suggestion made by His Excelleney t Viceroy in the debate on the Assam Labour Bill, and . . the practical effort now being made has his greatest sympath This should be sufficient to induce every well-wisher of struggling Indian industry to say a good word for tea to t people they are in touch with. I am quite sure the Indi people will become a hardier and more thoughtful nation instead of drinking the fiery juice of the palm and unboi tank water, they drink pure Indian tea direct from t gardens. The tea industry of India employs many thousa Indian people, as well as hundreds of our own countryme this is only one reason why it deserves the sympathy a help of every thoughtful person in the Empire." Our exce is somewhat long, but the importance of the subject justif this.

Various reports from the United States and Canada go show that efforts made to develop demand for Indian bla teas in those markets have been very successful. It n remains not merely to hold the ground occupied, but extend it, and also to enter into active competition with Chi and Japan in regard to the America and Canadian dema for Green Teas. It will never to do to relax efforts just no when Japan dealers are pushing energetically. Nor shou it be overlooked that although China teas have largely l their hold in Europe they have greatly increased it in t United States and Canada. The following figures showi the destination of China teas during the last ten years spe for themselves :—

Destination.	1890. Pounds.	1900. Pounds.
Europe	25,661,017	11,299,703
Australia	15,250,730	6,514,722
United States and Canada ...	3,404,957	11,855,217
South Africa	1,543,652	1,378,864
North China	8,884,480	5,033,569
South China	4,713,889	4,260,213
Total ...	59,458,739	40,342,288

From 1899 to 1900 the shipments to Europe fell 5,000,000 pounds from that of the previous year, while th to Australia increased about 1,000,000 pounds. The read made Russian tea market undoubtedly deserves the earn attention of Indian planters, so does the undeveloped field India itself. But the above figures prove to demonstrati the need for bestowing continuous care also upon the mark of the United States, Canada, and Australia.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S.

Trade with Persia.

The Bengal Chamber of Commerce has issued the followi Circular, dated 9th instant, for the information of members the Chamber and of the Indian Tea Association :—

No. 838, *dated* Quetta, 1*st August*, 1901.

From

Captain J. Webb Ware, I.S.C., Political Assistant, Charg

To

The Secretary, Bengal Chamber of Commerce.

I beg to forward, attached, a notice which has been issued by Traffic Superintendent, N.-W. Railway, on the subject of the reba

ranted on the carriage of goods exported, etc., to Persia, through uetta and Nushki, with a request that you will favour me by cir-ılating its contents as widely as possible.

North-Western Railway.

NOTICE.

Rebate on Goods booked to or from Quetta for traffic to or from Persia *viâ* Seistan.

A rebate equal to $\frac{1}{3}$rd of the actual freight paid (N.-W. Ry. pro-ortion only) will be allowed on all goods booked and carried *from* urrachee City or Kiamari to Quetta for export *to* Persia or eceived at Quetta *from* Persia by the Seistan route, and despatched ience *to* Kurrachee City or Kiamari or *to* N.-W. Railway stations the Punjab and N -W. P. or stations on connected lines, under a rtificate from the Agency office at Quetta that the goods in uestion have actually been booked to Persia or have come from ersia *viâ* Seistan.

2. A similar rebate will be granted on the goods specified below hen booked and carried *from* the stations named *to* Quetta for port *to* Persia by the Seistan route, *viz.*:—

OTE.—In through booking with Foreign Lines the above arrangement will have effect from 1st June, 1901.

3. In case of goods received *from* Persia, the consignor will declare on the consignment-note, and produce at the time of book-ng a certificate of the Agency office at Quetta to the effect that the goods tendered have actually been received there *from* Persia *viâ* Seistan for despatch *to* Kurrachee or Kiamari or to stations in the Punjab, N-W. P. and stations on Foreign Lines. The Station Master at Quetta will make a similar note on the original invoice and Railway receipt, and will also forward the original certificate of the Agency office tendered by the consignor to Station Master at destination, where the rebate referred to above will be granted by the District Traffic Superintendent concerned as early as possible. But in the case of goods booked *to* Quetta *for* Persia, the consignor will declare on the consignment-note that the goods tendered are for export *to* Persia *viâ* Seistan, and subsequently, on production of a certificate issued by the Agency office at Quetta that the goods have *actually* been despatched to Persia *viâ* Seistan. the rebate referred to above will be granted as early as possible by the District Traffic Superintendent, Quetta.

By Order,
C. J. KEENE,
Offg. Traffic Superintendent.

TRAFFIC SUPDT.'S OFFICE,
Lahore, dated 20th May, 1901.

RAINFALL.

The Deputy Director of Agriculture has issued supplementary tables showing The Normal Distribution of the Rainfall of the Madras Presidency, showing, generally speaking, the averages for 30 years ending 1899, but in some cases the averages during shorter periods. We give the following extracts, relating to various planting centres and a few stations on the plains :—

Years.	District.	Station.	Average Rainfall. January to March.	April and May.	June to September.	October to December.	Total.	Maximum. Year.	Maximum. Amount.	Minimum. Year.	Minimum. Amount.

THE HAMBURG COFFEE MARKET.

According to a report by Consul-General Sir W. Ward, the Hamburg coffee market in 1900 was subject to considerable fluctuations, and the hopes entertained at the close of the preceding year as to an improvement of the market were not realised. Though during the first six months of 1900 business was fairly satisfactory and prices advanced, reaching their highest point about the middle of July, the latter part of the year was marked by a decline in prices owing to the arrival of very large cargoes from Brazil and consequent over-stocking of this and other markets. Quotations at the end of the year were lower than at its opening, in fact, almost as low as the minimum reached in 1899. The total im-

portations of coffee to Hamburg, in 1900 were 379,900,000 lbs., as against 318,500,000 lbs. in 1899; the total sales, 355,000,000 lbs., as against 337,000,000 lbs. The respective quantities of the various kinds of coffee imported here last year were as follows, *viz.*:—

SORTS.	QUANTITY.
	Lbs.
Santos	154,800,000
Rio	17,800,000
Bahia	1,900,000
La Guayra	11,600,000
Domingo	7,400,000
Maracaibo	3,800,000
Central America	80,100,000
Porto Rico	800,000
East Indies	1,000,000
Africa	5,800,000
Various	33,900,000

Here we have a nation of Coffee drinkers needing to be "educated" according to Mr. Robert Gompertz' curriculum. The heavy consumption of Brazil Coffee shows that there is room for the schoolmaster; but, on the other hand, the figures for Central America would seem to denote that there is already a very large demand in Hamburg for "mild" coffees. This should make the work of conversion to a taste and preference for the East India berry so much the easier. The chief enemy to be conquered is, in fact, vested interests. Throughout the continent of South America and in all the chief towns in Central America German mercantile firms abound, and it is but natural that they should lean towards shipments of produce to the Vaterland, rather than to other consuming markets.

NOTES.

The Indian Tea Crop. The Indian tea crop is estimated to be about nine millions short of last year's crop.

Brazilian Coffee. It is estimated that 1,000,000 bags of coffee will come into sight at Rio and Santos in July.

Coffee in the U. S. The June deliveries were 543,058 bags; total for year 5,843,883 bags, against 6,035,623 the previous year.

A Consumers' Millennium. The *American Grocer* remarks:—"It is a great thing for consumers to have low cost sugar, coffee, flour, and fruits. It is in reality a consumers' millennium." Truly what is one man's meat is another man's poison!

A Correction. "An Enquirer" writes:—In my letter signed in "Enquirer" in your issue of the 3rd, I see a number of printer's errors, *viz.*, on p. 511, line three *mesh* should read *burst*. Line nine *scab* should read *scale*. This error occurs twice again. Line 27, *applies* should read *aphis*.

Tea in the U. S. Imports at all ports in May were 1,251,515 pounds, against 980,662 pounds in May, 1900; for eleven months ending May 31, 85,783,647 pounds, against 80,967,542 pounds for same t in 1900, and 70,720,415 pounds in 1900. Exports in M 146,893 pounds; for eleven months ending May 31, 1,176, pounds.

Java Quinine in 1900. Mr. Vice-Consul Dowie rep that the quantity of sulphate of quin produced by the Bandong Manufactory, and sold at auct at Batavia during 1900 was 1,040,800 ounces. The aver price paid was equivalent to 1⅞d. per unit. The bulk of quinine found its way to London and the United Sta Small consignments of the article were made to Austra British India, Japan, China, and the Straits Settlements.

Amsterdam Bark Market. Further particulars of the b auctions which were held in Ams dam last week have come to hand, says the *British Colonial Druggist*, and show that the bark was divided follows: *Succirubra*, 63,406 kilos.; *Ledgeriana*, 331, kilos.; *Officinalis*, 1,443 kilos.; *Calisaya*, 2,290 kilos.; Hyb and other kinds, 39,015 kilos. Of the total thus formed r bark formed 29,231 kilos.

Indian Green Teas. A Sub-Committee of the Ind Tea Association has been appoin to consider and report on the feasibility of inducing grow to manufacture green teas resembling Japans, without a mineral facing, and to make arrangements for such be bulked in Calcutta to ensure greater uniformity and to ena orders to be duplicated. It seems to us that Mr. H. Dru mond Deane has, singly, answered the very question that t Sub-Committee is to consider!

Tea Crop Prospects. From the telegraphic weather rainfall report for week ended August 1900, we gather that crop prospects are not satisf tory in Hailakandi (Cachar), satisfactory in Kathicher favourable in Kumbhis, and good in Barkola. Assam repo say:—Chawa, and Diburgarh moderately favourable; Pana hat Nelli and slightly improved, Bindukuri, considera improved. In parts of Sylhet more rain is wanted. Leaf Darjeeling is coming on better and crop prospects are grea improved in the Dooars.

Calcutta Tea Sales. At the auctions on Friday 16,400 packages were offered. Th was a representative lot of invoices from the Dooars a Terais, quality being good, and in most cases much improv Cachars and Sylhets are hardly up to previous offerin though still good for the time of year, and much better th the last two seasons. Darjeelings still retain rather r flavour, but are going off. Assams were conspicuous by th absence, only 700 packages in all being catalogued. Th was little change to note in prices, common kinds genera being a point or two dearer. Bombay and Gulf buyers w more inclined to operate. Statistically the position of industry is sound and the outlook more encouraging than many months past.

Coffee in London. Supplies have again been brou forward in larger quantities than warranted by the demand, and, in consequence, says *Produce Markets' Review* of July 20, 1901, the t has continued quiet, and in many cases, to effect sa

me reduction has had to be accepted. As is usual uring the hot season, business in the country is very trifling, ut the Continental demand, though not large, is quite equal the average trade at this time of year, and the remarkably w prices for good medium Guatemala and Colombian have tracted orders. There has also been some inquiry for fine osta Rica, resulting in resales of several parcels out of auction o months ago at higher prices than were then obtained. the terminal market the heavy receipts and a further ecline in the exchange have caused a very dull tone, and uotations have steadily given way a further 1s. 3d., which akes the price within 2s. of the previous lowest record.

rinkage of Supplies of Tea.

Messrs. W. S. Cresswell & Co., Calcutta report :—Up to the end of July the amount of tea made was to 12 million lbs. less than the same period of last year. eylon has shipped to the United Kingdom 6,906,000 lbs. d China 7 million lbs. less than last year. Calcutta Export gures do not show the actual shortage for the reason that as are coming down much quicker than last year. Competition between the River Services and the Assam-Bengal ailway affecting Assam, Cachar and Sylhet, and the non-anshipping are Jalpaiguri quickening despatch from the oars, teas from this district now being run over the new esta Bridge. Another thing in favour of the industry is e excellence of crop come forward caused by *finer and more reful plucking*, and we cannot too forcibly impress upon gents and Planters the great importance of continuing this ise policy. Ceylon telegraphs that only 69,360,000 lbs. ve been shipped to Great Britain to date against 76,266,000 s. to same date last year. Outturn for July poor.

dian Teas in London.

Rather more business has been done in this market, says the *Produce Markets' Review* of July 20, 1901, the medium grades articularly having been inquired for. At the public sales eld on Monday the amount brought forward was again very mited, only 7,683 packages being printed ; the majority of ese were well competed for and no good useful liquoring rades were allowed to pass the hammer except at full valuions. A few invoices of new season's Assams commanded ttention, and although last week's prices were firm, yet a istinct advance can be recorded, and in some cases attractive escriptions realised fully ½d. per lb. advance. Teas "for rice" and the lower grades were also in demand at full rates, nd now and then an occasional extra ¼d. was paid. New easons's Darjeelings remain about in the same position as st week, no improvement in quality or price being noticeble. At the last sale held in Calcutta we learn that the wer grades sold at firm rates, while good kinds generally emained unchanged.

offee cultivation in Reserved Forests.

We learn from the Administration Report of the Madras Forest Department, 1900, of the three blocks advertised for sale last year in South Coimbatore, two were sold for he upset price of Rs.5 per acre owing to absence of competition. The other block was sold at Rs.9-8-0 per acre but he sale had to be cancelled as the purchaser failed to pay the urchase money. Agreeably to the instructions of Government restricting the grant of any more blocks it was not again ut up to auction. The total number of coffee estates sold lready is twenty, covering an extent of 18,494 acres and the rent and cesses due on them up to end of March, 1900, are reported to have been collected. The owners of six of the estates have executed lease agreements, while in respect of three other estates the execution of the agreements are pending the payment of the stamp duty by the owners. The agreements in the case of the eleven remaining estates have been sent to the owners for execution. In Salem two lease deeds were issued during the year for two blocks of 74 and 110 acres respectively, the grant of which was decided in previous years, and the total number of lease deeds issued was twenty-nine ; the aggregate area covered by the leases was 3,389 acres and the annual demand Rs.2,946.

Cacao in Trinidad.

Several trees of *Theobroma bicolor* introduced from Nicaragua in 1893, have fruited successively during the past three years, and seed has been distributed to other West Indian Stations. The species may now be considered as fairly acclimatized, and there is little fear of its being lost to our flora. The produce is of no use as commercial Cacao, and is chiefly of botanical interest. Several trees of Theobroma pentagona introduced at the same time have also fruited, enabling us to raise a goodly number of plants for distribution. The permanent plot of this kind at the Experiment Station, has made good growth during 1900, and the Department will soon be in a position to offer in quantity both plants and seeds. The beans produced here are quite equal in size to those produced in Nicaragua, and are nearly double the size of high class Trinidad Cacao. They are white in colour in the interior, take little fermenting and of excellent flavour. Another strain brought from Nicaragua with the preceding kinds is what is known as "Nicaraguan Creole." The trees planted by us have not as yet borne fruit, but from trees distributed to planters, I lately received a pod which was quite true to the type. The pods are not large, but the beans are very large, and of superior colour and flavour.

Indian Tea for Persia.

Observer writes to the *Pioneer* :—Will you kindly allow me to correct a little misapprehension in the *Pioneer* of Saturday, the 3rd instant. It is there stated, "that the advice of Captain Webb Ware, Political Agent at Nushki," *viz.*, "That samples, merely, of tea and merchandise, should not be taken by any European agent exploiting the new market" but that "actual consignments ought to be sent" and the writer goes on to say "*but his advice was neglected and now it is seen too late in the day how sound it was.*" This, however, is *not* the fact. On the contrary, Captain Webb Ware's advice has been acted on and acted on *in its entirety!* The initiative was taken long before Mr. E. G. Foley ever thought of starting for Seistan with his 800 lbs. of samples (a fact, unfortunately, not known to the Indian Tea Association which sent him) and a Syndicate of planters now exists which has two active European agents established, the one in Persia, and the other at Quetta. Two large caravans of tea have already reached Birjand, another is about to start from Quetta, and others will follow in due course. You will thus see that Captain Webb Ware's excellent advice has been fully carried out, which has been recognised by the Indian Tea Association as may be noted from the resolution of that body, in response to "an application for the extension of the mission of Mr. Foley." This appeared in your issue of June 26th and was as follows :—"The Indian Tea Association consider that as two caravans

of Indian tea are shortly going through to Meshed it is not necessary that Mr. Foley's mission be extended."

Foreign Markets for Tea.

The following figures of exports to outside markets are interesting :—

Tea sold in Calcutta from 18th May 1901 to 8th August 1901	lbs. 10,025,300	
Tea sold in Calcutta from 18th May 1900 to 8th August 1900	10,915,200	
1901.	lbs.	
of which Australia has taken	1,740,077	= 17·37%
do. America do.	209.111	= 2·09%
do. Bombay do.	1,191,371	= 11·89%
do. Sundry Ports do.	1,718,878	= 17·15%
		48½%
against 1900.	lbs.	
of which Australia has taken	2,140,607	= 19·63%
do. America do.	952.424	= 8·74%
do. Bombay do.	476,695	= 4·38%
do. Sundry Ports do.	1,335,184	= 12·25%
		45%

Exchange—Closes at 1s. 4⅛d.

Exports of Indian Tea from 1st April to 9th instant.

	London.	Australia.	America.
1901	*31,714,157	1,740,877	209,111
1900	36,090,523	2,140,607	952,424

	Bombay.	Sundry Ports.	Total.
1901	1,191,371	1,718,878	35,291,214
1900	476,695	1,335,142	40,995,433

From the above it will seen that 150% more Tea has been shipped to Bombay this season, 28½% more to Sundry ports, while America shows a decrease of 78%, Australia 18½%, and London 12¼%.

* This includes 1,282,380 lbs. shipped *viâ* Chittagong.

LETTERS TO THE EDITOR.

THAT PEST.

Sir,—In your issue of August 3rd, I noticed a letter signed "Enquirer", dated Santaveri, July 28th. I should be glad if your correspondent would kindly send me a sample of the pest, or pests, he refers to. For, judging from his letter, I fear he speaks of three entirely different insects, one of which is harmless and two others injurious. Lately I have received a specimen of an insect attacking coffee trees in the Santaveri district which was identified by Mr. Lionel de Niceville, the lately appointed Entomologist to the Government of India, as "Green Bug." For this pest he recommends kerosene emulsion. This is prepared, as some of your readers may know, by dissolving ½ pound of good ordinary soap in one gallon of *rain* water, adding two gallons of kerosene oil and churning the entire mass to a good emulsion of the consistency of soft butter, or at *least* to that of thick cream. Another test is, that when cold, it must adhere to glass without oiliness. This emulsion is diluted just before using with nine to twelve times its volume of water and applied to the trees with a spray pump. But as I know, to my cost, this emulsion must be well made not to kill the trees as well ; but when properly made, it is quite harmless to the trees and very effective.

In conclusion, permit me to say that all forms of insect pests are easiest dealt with as soon as they appear, and that I c not urge too strongly that every one noticing any insect have it identified as soon as possible, by sending a speci to a competent person, and vigorously applying such re dies as may be recommended, even if they appear expens or difficult to apply. Neglecting to do so will only spr the pest, and what this may sometimes imply may be jud from the fact that the Massachusetts State Government sp Rs.50,00,000 to fight the Gypsy Mothing, which had spr over an area of only 200 square miles of this State, and t are not rid of this moth yet.

Bangalore, *August 14th*, 1901. } A. Lehmann, *Agricultural Chemist to the Govt. of My*

GENERAL ARTICLES.

NOTES ON THE VALUE OF THE INCIDENTA INCREMENT OF PLANT FOOD IN SOILS.

A Bulletin issued by the Trinidad Botanical Departm states :—

The value of the incidental increment of plant food in soils cov with certain crops, is hard to estimate. One difficulty has b that the cultivator who depended solely on analysis of the soil, guide to its fertility, has often found a certain amount of avail food in his land unaccounted for, *i e.*, the plant has obtained in some way which the analysis of the soil did not show It favourite maxim of the Agricultural Chemist since Liebig expoun his mineral theory of manures that there is so much avail plant food in the soil, and if a plant takes up and uses a cer amount of this, that there must be so much left. This has s been modified by Ville and others. While allowing that the b is one which necessarily must always be a guide to the cultiva it is known to the experienced that the theory is unsound, and plants uncultivated, or cultivated, as a rule, get more food t could possibly be afforded by the soil alone, the fertility of wh may have been determined by careful analysis. In tempe climates the incidental increment of plant food is not so larg in the tropics, where it is an element in cultivation which ha be taken into account by every planter. Soils, which on anal show themselves to be poor and barren and which would indeed poor and barren soils in a tempere climate where there is incidental increment, prove in the tropics to be soils on wh excellent crops can be grown, in fact, the soil appears merely to as a medium for the absorption of food by the roots, and not regular storehouse of nutriment from which the plant can at o take up the full of its requirements. I well remember an emi chemist remarking to me on the excessively barren characte the soils of the interior in certain parts of the mainland, as sh by analysis—and yet these same lands had grown large tract forest and the trees were giants. There can be no doubt whate that such growth is due, not to the natural or contained fertilit the soil, but to the incidental increment which is continously be added in the course of seasons by natural accumulations. T leaves and flowers have long been known as fertilizers of no m kind by practical men goes without saying, but the exact manne which nutriment is taken up and the exact quantity of plant f which is annually derived from this source, is yet to be fully de mined. In a recent paper on the flowers of the "Bois Immortel Erythrina sp. The large proportion of nitrogen which t contain was pointed out and an argument was based u it of the continued use for this tree for shading cacao pla tions. It has long been known, however, that the flowers of kinds of trees contain large amounts of nitrogen, and that it is q as probable that the flowers of any trees that might be substitute shade for cacao would contain as much nitrogen as the "Immor a matter which must form the subject of full enquiry before advantages of the "Immortel" are finally decided. The Nic guan cacao shade tree—Gliricidia maculata—is a prolific flo

bearer, and covers the ground with as great a profusion of flowers as the "Immortel." There can be no doubt whatever that this incidental increment is valuable, as are many others as yet undiscovered or unrecognised; especially so the amounts of nitrogen distributed by the crops of seed from leguminous trees, which fall and rot, for the most part upon the ground. The incidental increment deposited in the form of the excreta of birds, reptiles, and insects, any by the death and decay of their bodies is as yet an uncalculated item, and yet it will be found on examination that it is sufficient to account for the supply of certain plant food which would be otherwise absent. The lime and phosphates in the bones of an animal or reptile is comparatively small, but still their bodies give to the soil constituents, which it requires for nourishing certain kinds of plants. It is often argued that as so many thousand bushels or bags of cacao are sent out of Trinidad that the soil must in time become exhausted, and the argument follows this line when supply of nitrogen from the flowers of the "Immortel" is spoken of. We find however cacao plantations in full bearing which have been under cultivation 50 or 60 years and producing to-day as much as in the first instance, and without artificial manure. We might be told that the supply of plant food naturally existed in the ground and was made available as required. If we accept this, then it is clear we ought to be able to ascertain exactly by analysis how much food the soil contains and how long the supply will last. But this has as yet never been done, for there has always been the "incidental increment" which daily and hourly accumulates to upset this addition and subtraction theory, which is so neatly propounded in many cases in the teachings of non-practical men. We are told that so many tons of plant food is removed, but we seldom get the amount per tree, as the amount would appear too insignificant. In some cases merely a pinch. It is insignificant in a sense and is readily replaced by incidental increments hitherto much, but not wholly disregarded. In Johnson's "Agricultural Chemistry," p. 3, the author says:—

"It is extremely difficult, nay impossible, to estimate exactly what quantity of plant food is present in a soil in a condition available for the plant's immediate needs. This is really best ascertained by experimenting with the plant itself." Professor Johnson also states it to be "one of the objects of the farmer to test the opinions of theoretical men "for" it is only on a basis of often repeated, skilfully conducted, and faithfully recorded experiments, made by instructed persons, that true theories can ever be successfully built up, hence, (he says) the importance of experiments in practical Agriculture."

What the incidental or natural increment of plant food on an acre of land in Trinidad is we do not know, but it is quite evident that it exists, and has to be counted on by the Agriculturist in cropping his land. A large amount of incidental plant food is evidently conveyed by rain water. How much we don't know as no regular analysis of our rain waters is available. It appears probable also that the fertility given by the deposited excreta of small animals, birds, insects and worms and reptiles and the decay of their bodies, upon the ground, and also the decay of vegetable matter, dust deposited by wind, leaves, flowers, seeds, and branches, etc., is largely in excess of what has been previously estimated, and in fact is, of as much importance as food obtained from the reserves held by the soil itself. This must be known as the "Incidental increment" and must be taken into full account in all Agricultural operations.

THE PHYSICAL PROPERTIES OF SOILS.

Investigations into the physical properties of soils have been pursued in the United States with a persistence and a degree of success that can hardly be paralleled elsewhere, and a paper on this subject by Mr. Lyman J. Briggs is full of instruction. The soil, as it exists under field conditions, may be regarded as comprising (1) the soil proper, consisting of the soil grains of various sizes, grouped in different ways and made up of insoluble or difficultly soluble materials; (2) the soil moisture, covering the soil grains, and containing in solution a varying amount of the soluble soil constituents, and (3) the soil atmosphere, differing to some extent from ordinary air in composition, and usually saturated with water vapour. Soil moisture and soil temperature are capable of being closely measured, and the composition of the former ascertained. As illustrative of other physical properties the flocculation of clay particles has a direct bearing upon the tilth of a soil, as well as upon the rate of the capillary movement of water, and a knowledge of the conditions governing flocculation is consequently of direct economic importance. Carbonate of lime, gypsum (sulphate of lime), and certain other salts, especially the alums, are particularly active in flocculating the clay. This is one reason why the application of lime is beneficial to some heavy soils, since the aggregates formed possess many of the characteristics of a solid particle of the same diameter, and the soil in drying possesses a loose crumbly structure. Anmonia and carbonate of soda or "black alkali," on the other hand, break down any aggregates which have been formed, and thus have the effect of "pudding" the soil, which dries into a hard compact mass. Concentrated solutions of all salts, however, produce more or less flocculation. Apart from the action of salts little is known as to the conditions controlling flocculation, and the subject will repay fuller investigation.

BRITISH GREEN TEAS IN CANADA.

A Toronto broker thus describes to Mr. Wm. Mackenzie the uphill work he has when trying to sell Ceylon green teas:—

I think the discouragement your friends feel is entirely due to their not appreciating the difficult position of these teas in our market. They evidently believe that when a broker, say myself, sells a jobber a line of Ceylon green, it is simply because that jobber *wants the tea*, and is looking for it, whereas the fact is that I have, perhaps, talked Ceylon greens to that man for weeks and at last get him to try, say, 20 or 40 packages. He has then to "enthuse" his travellers on the goods, and out they go to sell them. The jobber then buys a few more and repeats this until the travellers having sold every customer whom they can induce to handle them, the demand in that quarter stops, and you cannot place another package with that man until these customers begin to buy again. When this will be, is very uncertain—the country retailer here is not a pushing character; the Ceylon green has been squeezed on to him, and he had often neither the brains nor the energy to get it off his hands, in the same manner as it came on to them. His customers are likely Japan tea drinkers; no one asks for Ceylon greens; and he is not going to argue with them as to the better value of the Ceylon, and it goes off very, very gradually.

This occurs in hundreds of cases. In the meantime there is a lull all round, and reports go abroad that the demand has stopped; this reaches the growers, prices drop a little and they stop making, and the whole business feels upset. There will be for some time to come periodical spurts and periodical lulls in the demand, but each spurt will be a little larger than the previous one, like rings from a stone thrown in the water. The growers have got to recognize the fact that they have entered the lists against Japans, which have been in use here for 30 or 40 years, and it must necessarily be a hard fight with many discouragements, to all that are engaged in it. But I confidently feel that if the Ceylon green tea is persistently pushed, it will come to be a great business with us.

COFFEE AND SPICE.

"M" writes in *Capital*:—

The probable loss, practically, of the second best market for Indian coffee, if France finally decides not to prolong beyond the 23rd February, 1892, the application of the minimum tariff to British Colonial produce, will necessarily prove disastrous to the coffee industry in this country, wholly dependent as it is on the foreign demand—unless a new and as profitable market can be found. Although the trade has been steadily declining for some years past,—the average yearly exports for the 10 years ending 1897-98 amounted in value to Rs.1,83,21,526, and that of the last 3 years (ending 1900-01) to Rs.1,48,76,628, a fall of 19 per cent.—it is still a valuable trade. Exports to France for the same period show a greater proportionate decline, *viz.*, from Rs.60,17,361 to Rs.39,67,108, or about 33 per cent. But the loss of a market that still

absorbs 30 per cent. of this production, and the difficulty of finding another outlet offer an awkward problem. Other satistics in connection with the industry, says Mr. J. E. O'Conor, are unreliable owing to the reticence of those connected with it; and there seems to be no doubt on this point. For example, according to the latest edition of the "Agricultural Satistics of British India," the production, including Mysore, Travancore, and Cochin, had fallen from 35 million pounds in 1885 to about 17½ million pounds in 1899; in in the previous year (1898) the production is recorded as roughly 23¾ million pounds. And with these figures it is impossible to reconcile the total exports given for 1899-1900, *viz.*, 31½ million pounds. It is sufficiently clear, however, that the impending blow would fall heavily on the industry.

As to the trade in spices, which also come within the purview of the proposed change in the French tariff, it is some satisfaction that this trade can scarcely be much affected. Within the last ten years exports to France rose as high as 19 lakhs, but since then they have rapidly declined and last year amounted to something under a lakh-and-a half. The total value of our export trade in these commodities, during the 10 years ending 1898-99, averaged about 49 lakhs, and in each of the two succeeding years it exceeded 54 lakhs. The most important of these commodities is pepper. The history of the trade in pepper, which was one of the earliest articles of Indo-European commerce, is of considerable interest. According to one writer "it formed the very symbol of the spice trade to which Venice, Genoa, and the commercial cities of Central Europe were indebted for a large part of their wealth." Tribute was levied in pepper; the ransom demanded from Rome in the year 408 from Alaric, King of the Goths, included 3,000 lbs. of the condiment. The earliest reference to a trade in the article in England is in the statutes of Ethelred (978-1016), wherein it was enacted that traders bringing their ships to Billingsgate should pay, at Christmas and Easter, with other tribute, 10 lbs. of pepper. "The Pepperers" formed a fraternity mentioned as existing in London during the reign of Henry II. which subsequently became incorporated as the existing "Grocers Company." In England in the 13th and 14th centuries, the price of pepper averaged 1s. per pound, but that coin in these days was equivalent to about 8 shillings of our present money. It was this handsome price, amongst other reasons, that induced Portugal to seek for a sea passage to India, after which the value fell considerably, and the cultivation was extended to the western islands of the Malay Archipelago. The trade thus filched from Central Europe was retained as a monopoly by Portugal up till the 18th century. In more recent times the Malabar coast monopoly became gradually destroyed; more and more pepper was cultivated in and exported from the Malay Archipelago and localities further east, till the dawn of the last century found the Indian trade reduced to dimensions much smaller in proportion than that of other places. Thus, it is stated in a work on "Oriental Commerce," that in 1829 the produce of Sumatra was estimated at 168,000 piculs, that of the islands at the mouth of the Straits at 12,000 piculs, the Malay Peninsula and the Island of Borneo each 20,000 piculs, the coast of the Gulf of Siam 60,000 piculs, and the west coast of I only 30,000 piculs. Since then, it appears, the relative imports of Indian pepper has further declined. Still, although the trad India, as a source of supply which was once the centre whence whole world drew its requirements, became supplanted t very great extent by the development of the Malayan trade, th has been a remarkable revival within the last quarter of a cent Exports during the five years 1875-76 to 1879-80 were 5,420,963 valued at Rs.9,77,924, and rose steadily to an average of 11,151,469 valued at Rs. 23,74,124 in the quinquennial period 189[illegible]-96 to 1 1900. Last year there was a falling off in quantity to 8,280,372 but a high relative increase in value, *viz.*, Rs.28,91,835.

Pepper (*piper nigrum*) was extensively cultivated on the west coast of Southern India, probably as far back as 1600, and, altho grown from remote times in Sumatra, the Straits, Siam and Malay Peninsula generally, the product of Malabar has always b considered the best. It is also grown in the Bombay Presider but only to any great extent in one district, Kanara. In Mad the method of cultivation followed is very simple. Cuttings put down before the setting in of the rains in June, in rich soil subject to excessive accumulations of moisture. The spots selec for planting are at the foot of trees clad with rough or pric bark, such as the jack fruit, the cashew nut, mango and oth of similar description. The pepper vines shoot up, and allowed, will attain a height of from 20 to 30 feet, but their gro is generally kept down by cutting and pruning. In three ye the vine begins to bear, producing long clusters of 20 to 50 ber abundantly from all its branches. From the third to the seve year the plant improves, after which it remains in good condit for 3 or 4 years, then deteriorates for about the same period till longer worth keeping. It is then cut down and new shoots plant The berries are gathered as soon as those at the base of the sp begin to change colour from green to red, since if allowed to ri fully, they become less pungent and easily fall off. The day a they are gathered, the berries are separated from the stalks hand rubbing, and picked clean. They are then dried by expos to the sun, or more frequently by the heat of a gentle fire. "Wh pepper" is prepared by divesting the ripe berries of their sk by maceration in water, after which they are rubbed, and fina bleached in the sun. Occasionally they are bleached still furt by means of chlorine. White pepper is twice as expensive black, and it is in little demand.

The foreign trade in ginger is also fairly important. In 189 seems to have received a considerable impetus, and between t year and 1897 exports averaged about 18½ lakhs per annum. the last two years, however, there has been a decline to about h that amount. During the middle ages, like pepper, ginger wa valuable item in European commerce with the East. It is cu vated in all warmer and moister parts of India, but requi much care and attention, and, contrary to the rule applied to m crops, manure is freely used.

CELEBRATED OILMAN'S STORES.

[1-10-98—t.f.o.]

The only other item of consequence in the foreign spice trade are chillies. Exports during the last two years are valued at Rs.8,77,872 and Rs.12,07,349. This plant (*capsicum frutescens*), an annual supposed to have been introduced from South America in comparatively recent tmes, is freely cultivated all over India. In every bazaar throughout the country chillies are to be purchased, constituting an indispensable ingredient in native curries, and a relish which the poorest use with the humble chupatee or dish of pulse. Some authorities have asserted that it is this plant which affords the so-called cayenne pepper, others (including *The Kew Official Gazette*) that this distinction belongs to another variety of the same species.

The statistics relating to spices given in the foregoing do not include the foreign trade by land, which last year amounted to about 25 lakhs.

THE INDIAN TEA ASSOCIATION (LONDON).

EXTRACTS FROM THE ANNUAL REPORT.

GREEN TEA.

As mentioned in last year's report, a bonus of 1½ annas per lb. was offered to planters who were prepared to manufacture green tea for the American market, but the Committee regret to say that few applications were received for the same, and it is not, therefore, as yet definitely ascertained how far tea of this description can be made in India to take the place of the China and Japan greens, now so largely consumed in America. A misunderstanding also arose in Calcutta as to the terms on which the gardens applying for the bonus were entitled to receive it, and the proposed 200,000 lbs. were not made. The offer of a bonus at the same rate has been renewed for the present year, and it is hoped that in view of the great importance which attaches to the securing of this outlet for Indian teas, more advantage will be taken of the offer.

The terms of the Committee's resolution on the subject were as follows:—

"That 1½ annas per lb., up to a maximum of 200,000 lbs. to be manufactured this season, be allowed out of the funds of the levy on shipments of green tea to the American market sent there direct from India, such funds to be distributed as a bounty at the discretion of the Calcutta Committee, the definition of the term 'green tea' for the receipt of the bounty being taken to be tea made from the ordinary leaf plucked on the gardens such as would ordinarily be made into black tea, but which in its altered manufactured state would not compete with the sale of black tea in America or elsewhere. The bounty to be paid on the same quantity as before sanctioned, *viz.*, 200,000 lbs., until it is seen what success is attained in the manufacture of green tea.

"The Association in Calcutta to be requested to notify the Committee promptly if a larger quantity than 200,000 lbs. is likely to be specially prepared for shipment to America."

In a report furnished by Mr. William Mackenzie in connection with a recent visit to America, he says that of green teas and partly fermented Oolongs and Formosas the imports are about as follows:—

	lbs.
Green Japans	36,000,000
Green China	15,000,000
	51,000,000
Oolongs and Formosas	17,000,000
	68,000,000

"We have already got the market for 16,000,000 lbs. out of an average consumption of 28,000,000 lbs. of black teas. Not the taste of the consumer, but his indifference to quality of tea and the vested interests in the East of the old established importers prevent us from rapidly acquiring the greater part of the remaining 12,000,000 lbs.

"Now, as to green teas and partly fermented teas, where the field is 68,000,000 lbs. as against 28,000,000 lbs. of blacks, I am more confident to-day of the ultimate success of Ceylon and Indian greens than I have ever been.

"I have had numerous mentions of its quality and merits from dealers able to judge. Of course there are very strong obstacles —the strongest being the vested interests in China and Japan teas —of those who control the grocers as brewers do 'tied houses.'

"In New York I will only say that I was surprised by the favourable reception our green teas were receiving about the end of March, and I have had most encouraging news since I returned."

To attain success, however, Mr. Mackenzie recommends a Syndicate being formed in Calcutta and another in Colombo, to take over the green teas manufactured, and to blend and pack the same in uniform and attractive packages, making regular shipments to one or more firms in America, so as to ensure continuous supplies of teas of standard qualities. The Committee have advised that steps should be taken in Calcutta to carry out Mr. Mackenzie's re commendation.

It is essential also, the Committee consider, that Indian planters should make greater efforts to produce the class of tea required, which, so far, they do not generally appear to have succeeded in doing.

TEA SAMPLES BY POST.

Further correspondence has taken place between your Committee and the Postmaster-General on the subject of permitting samples of tea to be sent by the sample post in hermetically sealed tin boxes so as to fully preserve their condition. Unfortunately, it appears that the department is precluded under the conditions settled by the last Congress of the Postal Union, which met at Berne, and which will not reassemble until the year 1903, from allowing samples of tea to be sent at the sample-post rate of postage, except when packed in such a manner that the contents can be examined. The Postmaster-General has therefore been asked to take the earliest possible opportunity to get this particular rule amended.

DOCK TRUST FOR THE PORT OF LONDON.

As was mentioned in last year's report, it was considered advisable, in the interests of the tea industry, to support the opposition to the proposals of the Dock companies, and a donation of £10 10s. was given to the London Chamber of Commerce towards the necessary expenses. The Royal Commission appointed to consider the whole question of Dock accommodation for the Port of London is now engaged in taking evidence on the subject.

PRIVATE AUCTIONS.

Importers having been approached by the buyers with a view to the restriction of the publication of prices realized at auctions, a meeting was held on December 11th, 1900, to consider the question. It was then suggested that the printing of garden marks in the catalogues might be discontinued, but this proposal was not approved of by the Association.

Afterwards a proposal to establish a Tea Exchange was put forward, and a meeting of the Committee was held to discuss the matter on April 23rd last. Considerable divergence of opinion was found to exist on the subject, and no decision was come to.

As an outcome, however, of these proposals, some importers, with a view to meet the wishes of the tea buyers, expressed their willingness to try the experiment of offering their teas at private auctions, and the Tea Brokers' Association was asked to draw up rules for holding these. These rules have now been formulated, and the first sale under them took place on July 4th, when a quantity of Ceylon tea was catalogued.

BRAZILIAN NOTES.

(From the *Brazilian Review*.)

The End of Funding.—From the 1st July payments in specie on the interest of the foreign debt have been renewed. The President and Minister of Finance have received innumerable telegrams congratulating them on the manner in which the engagements have been kept with foreign creditors in face of the most serious and seemingly invincible difficulties.

Rubber and Cocoa.—Our correspondent at Pará with date of 10th June writes as follows:—In spite of news of weakness in consuming markets and of the reports spread by Exporters of lack of orders, the demand for Rubber has been active at improving prices. Transactions ruled from 5$400 to 6$000 for "Fina das Ilhas." and 2$500 to 3$100 for "Sernamby." For "Serãto" we quote 3$900 to 3$600 for "Cametá." At present "Ilhas" are quoted nominal at 5$700 and 2$800, and 3$700 for "Cametá.

There was likewise a good demand for Cocoa, of which 45 tons were disposed of between 1$000 and 1$200 per kilo. The demand for nuts has been very active, the whole supply of 788 hectolitres having been bought up at 22$000 for which 25$000 and even 26$000

are now offering. The Import market is fairly supplied and also that of national produce such as Farinha de Mandioca, Cachaca, Tobacco, etc., entries of Farinha de Mandioca and Tobacco having been particularly abundant. Prices for Farinha de Mandioca have ruled from 2$500 to 3$500 per alqueire of 50 litres and Tobacco 15$000 to 50$000 according to quality. The Associação Commercial has protested against the enormous "Consumption" duties levied by the Municipality on produce arriving from the other States, such as 100 reis per kilo. of Xarque, 30 reis per kilo. of Coffee, and 20 reis per kilo. of Sugar. Such taxes are very injurious to the trade o fPará and are to the advantage of Manáos; as if the law regulating the packing and export of Rubber from that State had not done us enough injury already. If, as seems likely, these taxes are maintained, the knell of our trade with Manáos will be sounded, and it is all the more to be regretted because the tax will fall entirely on national produce. About 90,000 bales of Xarque, for example, are imported yearly, of which during the present half year only 20,000 came from other Brazilian ports and the rest from the Plate, generally of very bad quality. Naturally, if these duties are maintained against entries from national ports, all the business will in future be done directly with the Plate to the prejudice of the national industry and the shipping.

Exchange, 29*th June*, 1901.—Ninety days' Bank rate on London opened on Tuesday 25th at $11\frac{1}{16}$, fell to $10\frac{15}{16}$ on the same day and closed this evening at 11d.

Exchange, as was anticipated, was throughout the week without any backbone to it. In view of the scarcity of ready bills and heavy bull account to be settled, it was almost impossible that rates should not have slumped, and that they did not fall more is owing to Santos having been a heavy seller towards the close of the week. Whether the market will now recover must depend chiefly on coffee. If shippers are inclined to sell coffee ahead they will have to sell exchange too, which in the present uncertain state of the coffee market we regard as highly improbable. It is true that coffee entries should show an increase in the course of this month; but reports from the interior are so gloomy that it is just possible that, although the coming crop is certainly a big one, a good deal of it may be left on the trees for want of means to pick. In that case we shall not have large early entries and there will be no considerable accession of bills, at least for some time to come.

The probabilities of an early recovery seem dependent for the time entirely on Santos' action, as unless bills are forthcoming from that source, it is difficult to see what is to put exchange up just at at present. Whether or no it will fall again towards the end of the month must depend on the state of the bull account, whether it has in reality been liquidated or merely passed over. It is certain that a good deal has been passed for August and probably for the end of July, and unless plenty of bills are forthcoming by that date it is quite possible that, even if rates improve a bit at present, there may be another slump. In a few days the balance sheets of the banks will show whether there has been any delivery of bills on a large scale or merely postponement. . . Imports have increased considerably, stimulated probably by high exchange, from £1,348,000 in February to £1,627,000 in March and £1,860,000 in April.

In spite of appearnces, the economic condition of the country is unchanged. With the balance of trade generally in our favour, the re-establishment of equilibrium between the supply of and demand for bills, temporarily disturbed by the excesses of speculation, is merely a matter of time, one, two or three months, as the case may be. It is as foolish to imagine, because things look uncomfortable just at present that they will never recover, as it was to suppose that exchange was never going to stop rising when it was in the neighbourhood of 13d. The market oversold itself, as usual, and must face the inevitable reaction, but even so is in a better position than probably ever before, with the whole coffee crop to sell and a comparatively small oversale to liquidate. Unless coffee should go to the devil altogether, there seems no reason why a favourable reaction should not take place, though when it will precisely come must depend a good deal on the amount of liquidation effected. Looking at the comparative scarcity of bills during the last two months and the simultaneous growth of imports, it seems somewhat improbable that there can have been many bills left over for liquidation purposes, but until the Banks' balance sheets for June are available, surmises are after all but premature.

The value of the Coffee shipped (embarques) at Rio and Santos during the past week amounted to £257,000 as against £276,000 for the previous week. Declared sales, however, amounted to 154,000 bags at the two ports, and were 31,000 more than the previous w and more than double those for the corresponding week last ye

At Pará no Rubber at all was cleared last week and only 145 t from Manáos. The stock of Rubber at Pará is now reduced to c 218 tons all of which is already despatched for shipment. Acre Rubber season may now be regarded closed with the arri of a small consignment of 30 tons that is expected. The Co crop from the Islands is increasing and promises to be abund having given 500 tons up to date.

The total value of Coffee Shipments at Rio and Santos during month of June amounted to £1,029,000 as against £1,20?,00 May, £1,495,000 in April, and £332,265 during June last year. July Coffee may be expected to give about £1,300,000 to £1,500, Rubber gave only £278,000 in June as against £524,000 in M £644,000 in April, and £1,589,000 in March.

Coffee.—Entries here and at Santos during the week ended 2 June were 1,959 less than for the previous week but 22,506 bag 192 %, larger than for the corresponding week last year.

Embarques, or shipments, were 171,669 as against 184,154 previous week, and declared Sales 154,000 as against 123,000 previous week and 74,099 during the corresponding week last y

In consequence, principally, of lower exchange, feeling in l market was better and prices maintained in spite of increas entries. Shipments, however, were still very limited, but Friday a little improvement was noticed and the market closed at 7$100 for No. 7 and 7$200 to 7$300 for colory coffees. Ent are increasing and expected to be heavy towards the end of month, possibly reaching 1,000,000 bags between Rio and Santo

THE COST OF PRODUCTION OF COFFEE.

In his circular of 16th June, Sr. Rezende Carvalho publishes following interesting table showing the cost of production, du the last five years, on a large Estate in S. Paulo, known as "Colonia Parnahyba" and owned by Sr. Luiz Fagundes.

Year.	Exchange Average.	Gold Quotations, No. 7, New York.	Cost of the Plantation.	Gross Receipts.	Expenditure.	Net Revenue.
1896 ...	9	...	395:428$	189:970$	105:180$	84:790$
1897 ...	7 11/16	7·68	443:620$	118:450$	79:523$	38:927$
1898 ...	7 5/32	6·36	475:863$	86:610$	76:511$	10:100$
1899 ...	7 27/64	6·19	515:494$	72:036$	60:619$	11:418$
1900 ...	9 27/64	8·27	574:503$	166:578$	103:821$	62:757$
				683:646$	425:654$	207:992$

Year	No. of Trees	Quantity sold Arrobas of 15 kilos.	Price per Arroba.	Cost per Arroba at Santos.	Production. Per 1,000 trees Arrobas.	Production. Per alqueire 2,000 pés.	Expense per al-
1896 ...	120·000	13·400	4$176	7$849	111·7	3:166$	1
1897 ...	153·000	10·087	11$742	7$883	65·8	1:548$	1
1898 ...	153·000	9·880	18$766	7$444	64·5	1:132$	1
1899 ...	153·000	11·240	6$408	5$393	77·8	942$	
1900 ...	153·000	19·275	8$642	5$387	125·9	2:177$	1
		63·882					

This estate comprised in addition to Coffee, considerable p tations of Cane, Tobacco, and Rice that gave a gross revenu 45,122$ in 1899 and 10,779$ in 1900. As no additions have made to the Coffee area since 1897, it is to be presumed that, al ing for the cost of maintenance of new trees, a large part of increase of Capital since that date must be debited to other ducts. But even if the whole be debited to Coffee, when th

ere at worst and prices had fallen to 6$408 per arroba in 1899, ufficient profit was realized to give 2·2% on the whole Capital em-loyed on the estate. Exchange then averaged 7 27/64d., and has ince risen to an average of over 10d. Though not proportionately, rices and the cost of production must have, therefore, fallen, and in 1899 with currency prices ruling on an average of 6$408 per rroba it was then possible to work an estate to such a profit, there eems no reason why it should not be done now at 6$000. This lantation is situated in one of the best districts, Jardinopolis, of he State of S. Paulo and it is not pretended that everyone could o as well, but merely, that on properly managed and well chosen states, far from leaving a loss, even at current prices Coffee leaves profit still.

Indeed, the reduction of the cost per arroba delivered at Santos rom 7$444 in 1897 when exchange ruled 7 45/64d., to only 5$393 in 899 and 5$387 in 1900, when exchange ruled at 7 27/64d., and 27/64d., respectively, is remarkable and would seem to confirm he conclusion that in spite of the resistance of labour, its prices, as hat of everything employed by the planter, must have fallen too.

The average cost of the production and delivery of Coffee from his estate, situated near to the Jardinopolis station of the Paulista ailway over 300 miles from Santos was for the five last years only $663 per arroba of 15 kilos., whilst in 1900 it was reduced to 5$387. Ve see, therefore, no reason to suppose that, even should Coffee rices fall still lower, cultivation will cease to be profitable except, erhaps, for a time until prices of labour and commodities have ad time to be adjusted to new conditions. In 1896, the planta-ion gave 111·7 arrobas per 1,000 trees; in 1897, in consequence of resh plantations, the yield fell to only 65.8 arrobas and to 64.4 in 898. In 1899 it rose to 77·8 arrobas and in 1900 to the very large verage of 125·9 arrobas per 1,000 trees! It is probably now almost t its best, and unless new trees be planted, would within two years ommence to show some reduction in its yield. The same must be he case all over the country, as since 1897 comparatively little new offee has been planted. Coffee trees come into full bearing with-n six years, so that in 1902 or 1903, at the latest, the *maximum* ield of existing plantations will have been reached and production nay be expected to decline generally. Smaller production will ntail higher prices abroad and after the cycle of seven or eight ears of depression a cycle of rising prices may be looked for, that ill be reflected in our whole economy.

The cost of working and delivery per 1,000 trees was as follows: 76$ in 1896; 519$ in 1897; 500$ in 1898; 396$ in 1899, and 679$ in 900, variations being almost in precisely inverse ratio to the yield; rom which it may be concluded that, apart from the cost of harvest-ng, which depends on the larger or smaller yield, the cost of main-enance has not altered materially since 1897.

The "Bulls."—A correspondent writes us from New York as follows: Lewisohns are on the "bull" side of Coffee and will probably ac-uire very large quantities for the next two years. Great curiosity s felt with regard to the coming crop whether it will be so large s is said and if so, how low prices will fall. The limit for the lanter must be about reached. There are all kinds of rumours bout Government's intention to buy up and destroy 20% of the oming crop, which would be simply a proclamation to the World hat Brazil has more Coffee than could be disposed of at any price. One thing seems certain: that the whole foreign Coffee interest is doing everything in its power to bolster up prices. There is bsolutely no disposition here to hammer prices though all admit vith regret that prices will probably fall even lower. The only eople who seem inclined to knock prices down are the Woolson Spice Company. The market here advocates the adoption of a ingle type of Coffee for both Rio and Santos and no doubt, if it ould be brought about, it would faciltitate dealings considerably.

Coffee Prices.—A good deal of discussion is now going on in American trade journals regarding the cost of coffee. A late umber of the *New York Journal of Commerce* has a long article eaded "*Is a low priced era of Coffee at hand?*" in which the well known theories of the "bear" element represented by Crossman Bro. are ventilated on the one hand, and those of the "bull" side, ead by Lewisohn Bros., on the other.

The ideas emitted by these rival authorities are too well known to be worth reproducing. In this connection the *Journal of Com-merce* makes the following remarks:—

The Coffee market has for some time been showing a decided in-linination towards lower prices. The spot quotation is now on the asis of 6⅜c for No. 7 Rio (the market standard), and prices are among the lowest on record. As a matter of fact, the lowest record is 5 7/16c. This was reached in September, 1899, at a time when the October option sold at 4·10c. The question which is receiving attention is whether the current figures should be accepted as indicating an era of low prices as a result of over-production and of the cheaper cost of production, or whether they of themselves constitute the basis for an advance, on the ground that they do not pay the cost of producing Coffee, and that the production will on that account naturally be curtailed. The discussion is much complicated by the recent gradual advance in sterling exchange in Rio, giving increased gold value to the Brazilian milreis but giving planters at the same time fewer milreis for their Coffee.

The marked leaders at the present time are on the one hand Lewisohn Brothers, representing according to general market acceptation the Rothschilds, who have recently taken a large financial interest in Coffee: and, on the other hand, Mr. Hermann Sielcken of W. H. Crossman & Bro., and manager of the Sugar Trust's coffee interests. The former are the leaders of those looking for higher prices, and the latter believes that current prices are justified by the law of supply and demand, and that the increased gold value of the milreis makes it possible to produce coffee at a profit on the present basis of values.

THE TEA TRADE AND SECRET SALES.

A representative of the *Financial Times* has interviewed some members of the tea trade on the question of secret sales. Beginning with the producers, he dropped in at No. 60, Gracechurch Street, where he saw Mr. William A Verner, who represents an output of some 12,000,000 lbs. of tea, being the Chairman of the Dooars Tea, the Empire of India and Ceylon, and the Singlo Tea Companies. If doubt prevails in some quarters as to the effect of the new scheme on the tea producers, there is none in the mind of Mr. Verner. He said:—

"It is a well settled axiom that an increase in the price of a commodity invariably results in a reduction of consumption, and this is bound to adversely affect the tea producers. The advocates of the scheme state that under the secret sales they will be able to get 2d a lb. more for their purchases, and that consequently they will be able to give better prices to the producers; but is it likely that they will do so? As a matter of fact, the present low prices are due to over-production, and until this difficulty is surmounted it is hopeless to expect to artificially raise values. The public is already paying an extra 2d per lb. on account of the duty put on last year, and any further increase, whether in duty or in price, must reduce the consumption. If higher prices are to be paid at the secret sales the extra amount must either come out of pockets of the grocers or of the consumers. Now, the grocers are not likely to lie down in the struggle. They know very well what will be the result if they charge the increase in price on to their customers, and they will insist on their tea being bought at the open sales."

"Then I take it that the three companies over which you preside are unanimous in objecting to the secret sales?" asked our representative.

"Yes, the three Boards are of the same mind, and you will see from this letter, written to the Secretary of the Tea Brokers' Association, the attitude we take."

The letter was written by the Secretary to the Singlo Tea Company, and read as follows:—

. . . "The Board favours the continuance of the system of public sales without secrecy which has been in force for many years past, rather than one which aims at concealing facts from the great body of grocers and vendors of tea. It is said that the arrangement to which your letter referred must inevitably result in weakening or superseding the existing system of open and unconcealed public sales, and my Board, being naturally alarmed at this suggestion, are prepared by the selection of their brokers and other means to guard against such a result.

"I regard the question as of serious importance to the tea companies," continued Mr. Verner, and am therefore glad of the opportunity to make the position public. In this instance the

interests of the producer, the grocer and consumer are practically identical, and in opposing the secret sales I am fighting the battles of the three classes. The dealers, I consider, are the only persons who benefit from the departure from open sales, and they are naturally desirous of accomplishing their object. So anxious, indeed, are they to carry out their scheme that the recent open sales were almost boycotted by the adherents of the new scheme."

Our representative next called at the offices of the Anglo-Ceylon and General Estates Company, which he had been informed had approved of the "secret" sales. He here saw Mr. A. W. Crichton, the managing director, who expressed the following views: —

"We have merely tried the private sales," he said, as an experiment. Dealers have stated that they will be able to give higher prices if the results are not published, and in the interests of our shareholders we have thought it only right to test the effect of the scheme."

"But if higher prices be paid at the sales," interposed our representative, "the increase must inevitably be passed on to the consumer, and will not this check consumption in view of the present over-production."

"I don't see why it should," replied Mr. Crichton; "tea has been unduly low before, but though the price subsequently increased considerably, it did not check consumption."

The next authority our representative came across was a broker. He regarded the question with easy indifference, as it did not affect his position. His views were, therefore, the more interesting. His opinion was that the dealers would do themselves very little good by the innovation.

"It is well known," he said, "that blenders have cut so badly into the dealers' businesses that they are ready to try any scheme which they think will help them. Now, the blenders' and dealers' interests are opposed to each other and the former have no reason to wish to keep prices dark. Yet some blenders are in favour of the scheme. Why? The only conclusion is that they think they can see their way to squeeze out the dealers."

"Do you think," asked our representative "that dealers will be ready to pay higher prices at the 'secret' sales and act as philanthropists to the tea companies, especically as there seems no probability that the open sales will be continued?"

"It would be only human nature," laughed the broker, "to buy cheap in the secret sales and dear in the open market."

Our representative next tried the "secret" camp, but here he found the members much less communicative. After several calls he managed to see a gentleman who, he understood, was one of the leaders, but he declined to throw any light on his side of the question. "The matter," he said, "was entirely a trade question;" thus conveniently forgetting that not only the interests of the shareholders in tea companies, but also of the public, were involved. It would thus appear that the advocates of the new system are desirous not only to extend secrecy to the tea sales, but to all matters connected with that product.—*Home and Colonial Mail.*

TELLICHERRY PEPPER.

A few weeks ago when speaking about Pepper we pointed out, says the *London Commercial Record* of the 26th ultimo, the important part East Indian descriptions, but principally black Tellicherry, seemed destined to play in the future of our market. We then suggested that we might have occasion to refer to Tellicherry black again. Nothing striking, however, occurred in either our market, or in the position of the article on the other side until now, when we hear that so far the monsoon has been very favourable to the development of the crop, and that unless anything unforeseen occurs a good yield may be looked forward to. This in itself is a serious factor in the position of the article, but it gains in importance when we consider that owing to an absence of demand from Calcutta—the principal distributing centre in India—stocks have been allowed to accumulate which in extent, exceed those of the last four years. In face of these facts, the price offered is a tempting one, as the supply seems to be inexhaustible. When, in spite of this, values in India have managed to remain fairly high we have only to thank the bullish opinion of the Indian dealers for it, as they strongly believe in Pepper and firmly anticipate a good demand towards the Autumn months, when in their opinion the Calcutta dealers will be forced to replenish their stocks. In this they appear to be confirmed by bullish reports emanating from Havre and London speculators, in whose interest it is to avoi collapse of the market in the East. Up to now Calcutta has bee sparing buyer, principally no doubt because sufficient Pepper still available to satisfy any demand; besides, operators th hardly share the optimistic view of the future entertained by planters and dealers in the Pepper growing districts of South India, and they therefore abstain from purchasing. Financ difficulties also appear greatly to handicap many would-be-bull the Calcutta bazaar. The fact remains that the deliveries to t port fall still considerably short of those of the last four yea amounting to about 1,000 tons only as against an average of ab 2,000 tons. This apathy on the part of Calcutta dealers is certai perplexing and well calculated to disturb the peace of mind Indian bulls. To see a buyer whom we consider good for at le one-third of the entire crop confining himself to a strictly indiffer hand to mouth policy, is apt to upset all our calculations. T exceptionally heavy shipments to Europe during May and Ju which probably will amount to no less than 1,300 tons, will o add to the difficulty in arriving at a correct solution of the Pep question. Heavy supplies from the Straits, coupled with la shipments from India, are hardly conducive to higher prices, and is difficult to follow the bullish arguments of Indian holders, pa cularly if we consider the depressed state of trade genera in Europe.

TEA SALES IN AUSTRALIA.

Messrs. Cyril Trower & Co. held a sale of tea yesterday, which they report as follows:—"We offered yesterday morning catalogue of Ceylon teas, covering 343 packages, under instructio from Messrs. Gerber, Michaut & Co. The trade was well rep sented. Bidding was brisk up to a point, and as the vendors, usual, elected to meet the market, the entire catalogue was cleare Rates generally showed a lowering tendency, but more particula for common leaf sorts; broken leaf must be quoted without mater change. The local market shows a 15 per cent. lower tone for co mon leaf, compared with Colombo, and should thus be good buyi as an investment, with all future benefits considered. We quo sales in bond as under:—Clean common to fair Pekoe Souchon 4½d. to 5¾d.; common clean to fair Pekoes, 5d. to 6d.; clean comm to fair Broken Pekoes, 6d. to 7½d; medium to fine Broken Oran Pekoes, 7¾d. to 1s."—Sydney *Daily Telegraph*, July 17th.

CINCHONA AND QUININE IN JAVA.

The following, from the *Chemist* and *Druggist*, is based an interview with and memoranda supplied by Mr. F. L. See St. Louis, Mis., in regard to his recent journey of investigati in India and Java.

Java is generally supposed to have come later into the cinchon field than Ceylon and India, and some say that Java started whe the British dependencies left off—not an uncommon thing wi Britain's trade-rivals. But this is scarcely the case. As early 1829 the cultivation of cinchona in Java was mooted, but it w not until 1852 that the Dutch Government sent Hasskarl, who h been Director of the Botanic Gardens at Buitenzorg, to Peru a Bolivia, where he got with much difficulty seedlings that he to to Java, but these did not come to much. In 1855, Dr. Fra Junghuhn, an eminent Dutch botanist, was sent to Java with number of seedlings, commissioned also in the following year superintend the cinchona culture. Junghuhn was one of the mo diligent workers in the field up to the sixties of the nineteenth ce tury, indeed, by the end of 1860 there were about a million ci chona plants in Java, but 939,809 were the comparatively valuele *Cinchona Pahudiana*, which had been propagated from the seeds *C. ovata* brought from South America by Hasskarl, and renam after Pahud, Governor-General of the Netherlands India. Dr. E. de Vrij was sent out to Java in 1857 as a chemist, but he w really the man who recognised that the future of cinchona-cul vation in Java depended upon the adoption of the particular ki of calisaya that Charles Ledger had obtained in South Americ and which is now known by the generic name of the man w risked his life to get the seed. Ceylon and India might still

e centres of profitable cinchona-cultivation had the British overnment realised that Ledger's work was the consummation of long and expensive inquiry; but the Dutch Government, thanks de Vrij, was sufficiently fortunate to try the new seed well, and thin twenty years planters had proved that *C. Ledgeriana* (at st regarded as a rich calisaya) is the tree best worth cultivating.

Vrij's great service to quinology was the early recognition of e necessity for cultivating plants with a high quinine yield.

The Island of Java is only 673 miles long and about 125 miles de. About 25,000 acres of the island, are under cinchonas. There e 25,000,000 natives in the island, and only two of them speak e English language. The first thing Mr. Seely did was to secure e services of one of these men, whom he kept through his visit. e was a very accomplished young man, and somewhat of an aris-crat as compared with his countrymen. His main accomplishment y in the fact that he had two wives, and he claimed that for a man be a sincere Mahomedan he should have four, if his means per-it. He explained to Mr. Seely, however, that one wife did not ow of the other's existence, and he was quite confident that mat-rs would run somewhat smoother if he maintained that ignorance their part. The day after Mr. and Mrs. Seely arrived they oceeded to Bandong, which is about eight hours' ride from atavia, at which port they landed. It is a delightful little town about 1,000 Europeans and probably 60,000 natives, and the otel was as comfortable as any one could hope for. Nearly all uses in Java are one storey high, and, in the case of hotels, only e room wide, and sometimes a mile long. This is to prevent rious injury in case of earthquakes, which are common out there.

After resting for a few days Mr. Seely made trips to the planta-ons, which lay in different directions around Bandong, ranging om 9 to 30 miles distant, all of which had to be covered by pony-rts, pony-back, or in mountain-chairs each carried by four natives. nchona was seen growing in all its stages, beginning with the ed and the little plants just above the ground, to immense forest ees which have been allowed to grow for nearly half a century, d some of which are 100 feet high, and could not be spanned ore than half-way round by the embrace of a full-grown man.

Over 20,000 trees grew from Ledger's seeds, and a large number the trees are still standing . . . These trees have been al-wed to go to seed, and are simply used for their seed, as they are w about 45 years old, and a tree is harvestable at six years.

The seed is planted in what is known as the nurseries. Both edger seed and succirubra seed are planted. When the latter edlings grow to a height of about 3 feet they are cut down ose to the root, and a Ledger shoot about 6 inches long is afted to each. This is covered up with wax and bound with a ece of banana-leaf, whereupon, after a short time, the wound als and the little Ledger shoot comes out in leaf; then the tall p of the little succirubra tree is cut off, and we have the complet-combination ready to be transplanted in the forests. This is e of the most important events in the life of the cinchona tree in va—the bit of scientific culture which has enabled Java to out-rip the world in cinchona supply. It is done because the Ledger ant does not grow well in the soil, while the red-bark tree ourishes exceedingly. It is a wise procedure to graft the rich edger top on the poor succirubra-root, for the Ledger bark is so ch in quinine that as much as a fourth of the weight of the dry rk has on rare occasions been quinine sulphate.

The so-called cinchona "forests" are clearings made from the ngle, and the ground is kept clean from weeds and rubbish by ligent gardening. The trees are planted in rows systematically, d the ground is so worked that the rains penetrate to a great pth. The trees are allowed to grow until the sixth year, when they e ready to be harvested. The old system of harvesting was to el the bark off the trees. This is no longer done, but each tree sawed off at the roots, divested of its bark, and a new tree plant-l near by. It has long been a familiar *canard* in commercial rcles that the Java planters had tired of their work, and were prooting the trees in order to put tea in their place. It will be en that Mr. Seely's observation proves exactly the opposite; they proot because it pays. The new trees grow to the harvesting age nearly as soon as the bark would grow on again, and the ees are much richer in quinine than renewed bark.

After the trees are hewn down and cut into short lengths native omen beat the bark off the pieces. The wood is dried and used heat the ovens in which the bark is dried. The drying, however, largely done in the sun before the bark is put into the ovens, and the quilled or pharmaceutical bark is usually dried entirely in the sun, the native women and children sitting in the drying-trays and tying the bark into pipes while it is green and pliable. After the bark has been thoroughly dried it is coarsely ground, usually by water-power, and it is then packed tightly in bags of 100 kilos. each; these bags are sent to Amsterdam (90 per cent. of the Java bark going there), and the remaining 10 per cent. is manufactured into quinine at Bandong. This 10 per cent. yields 1,000,000 ozs. of quinine per year, and will very soon be increased to 2,000,000 a year.

Mr. Seely found the Java quinine-factory to be particularly attractive, as his own business-interest in quinine is equal to the annual output of the factory. It was a surprise to him to find so finely equipped a laboratory, and especially to receive from managers and owners such courtesy as belied the current tales of mystery about the Bandong works. Most people know that the manufacture of quinine has always been treated as a very profound secret, and probably there is not a quinine-factory in the world, outside Java, where a stranger would be permitted to learn anything of the process of manufacture. For this reason it was naturally difficult for the Bandong works to secure chemists who were conversant with the manufacture of the article, particularly on account of their being so far removed from civilised countries where chemists usually are found. In the first instance, the Bandong factory was placed in the hands of a man who was not familiar with the manufacture of quinine, though he had had a large experience in sugar-making, and was otherwise a man of scientific attainments, so the quinine first produced was not up to commercial standard. The enterprise went through a trying experience for about three years, and, although it was a hard struggle, it continued to exist and to manufacture quinine—such as it was. The owners were fortunate, however, in securing the services of Dr. A. R. van Linge, who had studied under Dr. de Vrij, as Manager and head chemist for the Bandong factory. He is the moving spirit of the enterprise now, and not only has he perfected the processes of manufacture, but has invented and personally supervised the construction of the machinery and apparatus used in the works.

Mr. Seely says about 4,000 oz. of quinine are made per day, which he could not distinguish when placed among the best-known European brands, and, in addition to this, every lot of quinine the factory manufactures is tested by the Director of the Government plantations, and he was present at one of these examinations, where he saw for himself that the samples were above the requirement laid down in the Pharmacopœia. The quinine is sold at open auction.

A word as to the process of manufacture. When the bark reaches the factory every parcel is assayed, and the natives mix the various lots so that an average strength of alkaloid is represented in each day's work. Tons of bark are ground up every day and sifted by very improved machinery, after which it is moistened with an alkali and pumped into immense digesters containing hot crude petroleum. There are agitators inside the digesters, which mix the bark well with the oil, and the oil extracts the alkaloid which the alkali sets free from the bark. The bark is then allowed to settle out, and the oil is decanted off and washed with sulphuric-acid water, which again takes the alkaloid from the oil. The oil is returned to the storage-tanks to be used over again. The crude quinine sulphate crystallises from the hot solution as it cools, and is afterwards purified by recrystallisation, the mother-liquors, of course, being worked up too. It is a beautiful sight to see the immense rows of big porcelain crystallising-pans, hundreds in number, full of the crystallised sulphate, which looks like snow in water; and it was a delight to Mr. Seely to run his hand down through the solid crystals and squeeze the water out as one would in making a snowball.

After the crystals have formed in the pans and the solution is thoroughly cooled, their contents are dumped into centrifugal extractors, which throw the water out and leave the quinine sulphate nearly dry. The last crystallising solution (distilled water with a trace of quinine sulphate in it) is returned to the main building through underground pipes, sulphuric acid is added to it, and it becomes the first washing-solution as above described. The quinine is then taken out of the centrifugal machines and spread upon trays to dry. Nearly every druggist knows that quinine sulphate should contain between 14 and 16 per cent. water of crystallisation. One of the most delicate operations in the manufacture of quinine is to produce the article without too much or too little moisture in the finished product. The Bandong factory follows a

process, invented by Dr. van Linge, which enables the workers to regulate the air and other conditions in the drying-room, to the extent that the product exactly meets Pharmacopœia requirements.

After the quinine sulphate has been properly dried it is accurately weighed, under the supervision of a European chemist, like all other operations in the laboratory. . .

The crystallising building, in which all of this work is done and in which no manufacturing operations are carried on except the purifying and crystallising of the quinine sulphate, is the most perfect specimen of absolute cleanliness Mr. Seely has ever seen. The floors are covered with porcelain-finished tiles, which are kept as clean as dishes, and he noticed that if the smallest dripping of solution was spilt on the floor it had hardly landed before there was a native after it with a cloth. The machinery and apparatus are kept in perfect order, and even the porcelain-lined crystallising-pans are washed with soap and water every time the solutions are changed. Cloths are stretched over each row of pans to keep out the dust and light.

The quinine sulphate, after being put into tins, is sent to the stock-room, where it is put in cases, which are manufactured by natives on the ground. After the goods are placed in the cases, a sample is extracted from each lot that is represented in the finished product, and the Director of the Government cinchona-plantation, who has spent twenty-five years in the service and who is a disinterested party, comes to the laboratory and applies the pharmacopœial tests to every sample.

The quinine then goes to Batavia, the principal business-city and port of Java, where it is sold at public auction about once a month. The factory owners have no interest in the sales, as they do no business except with the planter himself, who pays the factory a stated sum (8*s*. for every 35 ozs. for manufacturing costs), for it must be borne in mind that the planter owns the bark, and sends it to the factory simply to have the quinine taken from it, which is done on a guarantee that he shall receive the quinine that the bark assays, and he is at liberty to have assays made on his own account before he sends the bark to the factory. The quinine which comes from the bark belongs to the planters until it is sold at public auction. The factory owners have agreed not to enter into the manufacture of quinine on their own account.

The auctions in Batavia are carried on by Messrs. Tiedeman & Van Kerchem, the oldest-established bankers in Java. The quinine is bid for by various brokers, who act for any one that wishes to emyloy them, and who charge a stated commission for their work, but do not speculate. So strict are they with the auctions that a broker must mention the names of the persons for whom he is purchasing. The quinine is then shipped to various parts of the world.—*Chemist and Druggist.*

PROPOSED TEA-GROWERS' ASSOCIATION IN LONDON.

The *Ceylon Observer* gives the following special report of the Meeting of Importers:—

LONDON, *July* 19.

There was a meeting of some 20 of the largest Tea importers at Winchester House on 17th instant to discuss a proposal to form an Association with a capital of £1,000,000 to protect Indian and Ceylon teas in the London and other markets.

Mr. Thomson, of Messrs. Whittall & Co., was in the chair and briefly explained the scheme, which was, he said, to regulate the quantity of tea for the Trade by purchasing any quantity in excess of actual requirements and holding the same—until required. Some discussion was begun by those present on the details of the scheme, when Mr. H. K Rutherford pointed out that it would be advisable, before they went on to discuss the details, that the meeting should come to a decision whether such a gigantic combination was necessary in the interests of growers at the present time. He said that, after giving the matter his most careful consideration, he regretted he did not see how he could support the scheme. The present state of affairs solely hinged on the question of supply and demand, and he firmly believed, with the influences now at work, that supply and demand would become more evenly balanced in a shorter time than most of them seemed to think. The proposed scheme did not strike at the root of the existing evil; as it would still leave the surplus tea in existence and act as a on the market, whereas he contended, if a remedy was necessar could only be found at the fountain head and that was eith the non-production of the tea or the opening out of new mark or a combination of both, and not in simply holding the tea off market for a given period. Poor lands going out of cultiva would, he thought, counterbalance the crops from new a coming into bearing; the unlikelihood of a favourable season tak place concurrently in India and Ceylon in 1900 and the expan of new markets coupled with the severe lesson planters learned from coarse plucking last year, would inevitably ten bring supply and demand into closer relationship, and prospe would return. This scheme, which was to protect the gro instead of diminishing the output would have the tendenc increase it, as the proprietor with a non-paying estate would m as much tea as he could if he were assured of protection to even per lb. over the cost of production. We were undoubtedly, as been pointed out by Mr. Thomson, at the present time in the ha of the buyers, as regards the price of our teas. This was the natural position, for, when there was an over-supply of a c modity, the purchaser had the seller under his control, but position becomes reversed when the supply is not in excess of demand. This altered situation was bound to come about in the industry in time, and we could not force that period by any s scheme as the one proposed as it did not permanently get rid of tea. He concluded by saying that, once this crisis of over-produc was over, which he ventured to predict was not far off, we wo gradually enter a period of remunerative prices, and he did think that in our time at least we would again suffer from o production.

Mr Alfred Brown said he regretted he could not share Mr. Rut ford's views, and he also had given this matter a great of thought, and willingly hailed the proposal for the promotio such an Association. The buyers had combined and were str and unless we also combined we would continue to be in their gr even if there was no over-production. It would require a great margin between supply and demand to make them com and pay up for our teas. He asked how it was that, before we h so much about over-production, indeed since 1890, the price of had gone steadily down, entirely in his opinion through the w ings of the dealers' combination to keep down prices, and we w never be right until we put combination against combination. certainly thought that some combination was necessary.

Mr. W. McKenzie pointed out that the gradual fall in the p of tea dated from the time of the packet-tea man, and that Lip Ltd., made nearly the entire profit of their business out of tea, ing most of their other commodities at cost, or under. He c not agree with Mr. Rutherford in his opinion that Ceylon practically reached its maximum production. Ceylon, if pr improved, could double its yield by manuring, so the question a wider one than that of excessive areas of new land coming bearing. With reference to green tea, there was an enormous for their energies in America and Canada; but he regretted to while they talked of combination between India and Ceylon, former had started to undersell the latter in green teas, and he understood, arose from India giving a higher bounty t Ceylon. This state of affairs should not be allowed to go on.

Mr. Jas. Sinclair said he would like to know if any one pre could authoritatively say there was a combination among dealer whether the low prices of our teas were solely due to exces supplies.

Mr. Magor (Williamson & Magor) gave it as his opinion what importers suffered from was the want of combination to the trade the quantity required at the proper time. At one tim the year we throw thousands of chests at them, and sell regard of price. At another time we have nothing on the market. thought if an Association could be formed to "carry" the te would be a good thing, and he also thought it was necessary to such an Association. He believed, if the great mass of impor came to this conclusion, then he was sure the money would forthcoming.

Messrs. Macleod, Bryans and others spoke in favour of so thing being done, if not exactly on the lines proposed, in some that would limit the offerings to the buyers.

It was finally decided to appoint a Committee of eight, representing India and four Ceylon, to consider the whole ques and report.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

The following is from an Abstract of Proceedings of a leeting of the General Committee held on 30*th July*, 1901.

PRESENT:—Messrs. H. S. Ashton (*Chairman*), A. Tocher (*Vice-hairman*), H. W. Boyd, W. Brown, D. A. Campbell, R. H. A. resson, A. C. Lawrie, and R. Magor.

Letters dated 5th and 12th July, from the Secretary, Indian Tea ssociation, London, were brought up for final consideration and sposal.

The principal question raised in these letters had reference to he bounty to be granted to Companies and Proprietors manufac-uring green teas suitable for the American market. With his tter dated 23rd May, Mr. Tye had sent a statement of the views f Mr. W. Mackenzie, the India and Ceylon Commissioner in merica, upon this question. This statement was summarised in he proceedings of the General Committee Meeting held on 18th une. In the letter dated 12th July, Mr. Tye stated, in reply to nquiries made by the Committee, that the opinion had been ex-ressed in London that "green" tea of the Ceylon type would no oubt in the long run take the place to some extent of the green ea now used in America. But the manufacture of a pure green ea resembling the Japan type, but without any mineral facing, ould be more likely to find a ready market. It was also suggest-d by the London Committee that a Sub-Committee should be ppointed in Calcutta to deal specially with the production and hipment of green teas.

After discussion it was decided to appoint a Sub-Committee as uggested. The Vice-Chairman consented to serve upon it; and Ir. L. C. Baines (Messrs. Moran & Co.) and Mr. H. B. Yuille Messrs. Balmer, Lawrie & Co.) were to be invited to act. The ub-Committee were to be asked to consider and to report upon he feasibility of inducing growers to manufacture green teas of imilar quality; and of making arrangements whereby such teas ight be bulked in Calcutta; the object being to ensure greater niformity and to enable orders to be duplicated without difficulty.

The files of papers dealing with the question were to be placed efore the Sub-Committee for their guidance.

Considered letters dated 16th and 24th July, from the Honorary ecretary, Central Travancore Planters' Association, respecting he proposal that steps should be taken to induce the Colonial uthorities, to abolish the import duty levied in Ceylon upon ndian Tea.

Reference was made to this proposal in the proceedings of the ast meeting. It was there recorded that the Committee had ecided to ask the Planters' Association for further information ith regard to a statement made by their Honorary Secretary that here would be no objection to an *ad valorem* duty of 5 per cent. eing levied in Ceylon as in India.

In replying to these enquiries the Honorary Secretary of the lanters' Association had stated that the members of that Associa-ion were quite agreeable to the suggestion that Government should e asked to move for the abolition of the Ceylon duty.

The Committee understood that the question generally had been onsidered at the Annual Meeting of the Assam Branch which was eld on the 20th July. They decided to await the report of the roceedings of that meeting before addressing the Government of ndia.

Considered a letter dated 5th July, from Captain R. L. Kennion, .S.C., British Joint Commissioner, Ladak, with reference to the uestion of the introduction of Indian tea into Tibet.

Captain Kennion pointed out that there were two obstacles in the ay of developing the trade. The first was political in its nature. he Tibetan authorities objected to having Indian tea in their ountry. They had, it was believed, the support of every local fficial in taking up this attitude; as all the latter were interested n the sale of China tea. The second obstacle was the fact that the ibetans had for centuries drunk brick tea imported from Szechuan. heir method of making tea included its prolonged stewing. And ndian Tea when subjected to that process was, they complained, ess palatable than China tea. It did not therefore find favour mong them. Captain Kennion had no suggestion to offer as to ow the political difficulties might be overcome. And he pointed out that if agents were sent from India they would not be allowed to sell tea in Tibet. A stream of trade flowed from Leh to Lhassa —through the chief marts of Western Tibet. But his experience did not lead him to think that any result would be attained by trying to induce the Ladakis and Afghans engaged in this trade to take Indian tea across the border. He was of opinion that, pending the solution of the political difficulties, Indian growers should prepare the way by placing in the frontier markets an article resembling the Chinese brick tea as closely as possible. Even under the existing adverse conditions Indian brick tea having the characteristics of the Chinese would (he believed) by its comparative cheapness, oust the latter on the British side. It would be smuggled across the border; and would gradually permeate into the interior. He also offered to watch the result if Indian made bricks were sent to Leh, which was a meeting place for traders from India, Chinese Turkestan and Tibet.

The General Committee decided to send a few samples of Indian brick tea to Captain Kennion for his opinion as to their suitability for the frontier markets. An expression of their thanks for the information contained in his letter, and for his offer of assistance was also to be conveyed to him.

In the proceedings of the meeting held on 2nd July, it was stated that enquiries were to be made from the Singapore Agents of the Russian Volunteer Fleet as to the rates of freight for tea from that port to Odessa.

These orders had been carried out, and from the reply received it appeared that the rate was 30s. per 900 lbs. net.

It had also been ascertained that the rate from Calcutta to Singapore was Rs.25 per ton of 50 c. ft. It was however understood that Messrs. Jardine, Skinner & Co., and Messrs. Apcar & Co., the owners of the two lines running to Singapore, were prepared to make a reduction. The Committee accordingly postponed the matter pending the receipt of further information, which Mr. Gresson undertook to obtain, upon this point.

THE INDIAN TEA ASSOCIATION.

THE GENERAL MEETING.

The twenty-first Annual Meeting of the Members of the Association was held at the offices of the Association, 14, St. Mary Axe, on Wednesday, the 17th ultimo. The chair was occupied by Mr. D. Cruickshank. PRESENT:—Messrs. A. Bryans, R. J. Boyle, G. W. Christison, F. H. Cumberlege, W. N. Clark, Surgeon-General De Renzy, H. Earnshaw, Robert Hart, G. Henderson, J. M. Hall, H. Luttman Johnson, C. C.McLeod, J. C. Maclean, R. B. Magor, G. F. Moore, J. N. Stuart, Arthur Thompson, and Edward Wahab.

In opening the proceedings the Chairman said: Gentlemen, in the absence of Sir Henry Seymour King, who is unable to be present to-day, it has devolved upon me to take the chair on this occasion, and I will now ask the Secretary to read the notice convening the meeting.

The Secretary (Mr. Ernest Tye) then read the notice.

THE OUTLOOK.

The Chairman continued: Before dealing with the formal business of the meeting, I believe I shall rightly interpret the feeling of those present and of the members generally, in giving expression to our regret at the loss which the nation has sustained by the death of the great and good Queen who ruled so long and so wisely and well over our vast English Empire. The report of the General Committee for the past year has been circulated to members, and if you will take the same as read, I shall proceed to propose that the proceedings of the General and Sub-Committees during the year be confirmed, that the report be adopted, and that the accounts as audited be passed as correct. Before putting the resolution formally to the meeting, however, I would wish to say a few words with reference to some of the matters which have occupied the attention of the Committee since we last met. And first in importance, I think, may be put the question of over-production, which was attracting serious attention more than a year ago, and the effects of which have since been brought home to all of us by

the fall in the price of our teas, and the reduction, and in many cases the extinction of profits shown in the working of estates which formerly yielded good returns. It is greatly to be regretted that the proposal put forward for restricting output, and which was framed on a basis affording a wide latitude to individual concerns as regards the methods by which reduction might be effected, should have fallen through. Although in India the yield this season has been affected by unfavourable weather, and finer plucking on many gardens will reduce outturns, we must bear in mind that we have not yet reached the limit in the increase of production which may be expected from the extensions made in recent years, and personally I had hoped that if India and Ceylon could have united to restrict output, the foundation might have been laid for future co-operation in the way of regulating production in accordance with the demands for consumption, and thus place the industries of both countries in a sounder and more prosperous position than they occupy at present. It is still hoped in some quarters that some combined action by Indian and Ceylon proprietors with the object of benefiting producers may be possible; but, while ready to welcome any practical efforts in this direction, our experience does not tend to encourage any sanguine expectations of their success. With the failure of the attempt to restrict output we are left to face the evil of over-production by efforts to find fresh outlets for our teas and to push their consumption wherever possible. The report deals with the work that is being done in this direction. In the United States and Canada we continue, in conjunction with Ceylon, and under the able guidance of Mr Mackenzie, to advertise freely, and you will note that out of a total consumption in these countries of 28,000,000 lbs,, of black teas, 16,000,000 lbs., or considerably more than half, are Indians and Ceylons. There would appear to be no insurmountable difficulties in the way of further increasing the consumption of British-grown black teas in America, but progress may be slower than in the past, and Mr. Mackenzie strongly recommends that vigorous efforts should be made to obtain a hold of the market for green teas, of which the consumption is much larger than that of black tea—68 million pounds, against 28 million. As every pound of green tea produced in India and Ceylon means a pound less of black, of which we have an over-supply, the importance of trying to secure this fresh outlet for our teas is apparent. The difficulty experienced has been in ascertaining exactly the description of green, or partly fermented, teas, which will be most readily taken in America, and I am not sure that this point has been quite settled yet. I may say, however, that I met Mr. Mackenzie a few minutes ago, and he mentioned having received a letter from Mr. Larkin, one of the largest importers of green teas in America, stating that he had purchased 200 packages (about 10,000 lbs.) of Indian greens which had just come over, and which he stated were the finest green teas he had seen. Mr. Larkin is coming to England to arrange for further supplies. It is very satisfactory to find from this that some Indian gardens have succeeded in producing the class of green tea suitable for the American market. Experiments in the making of green teas are being carried out on different gardens in India, and we have suggested to our friends in Calcutta that a special Commitee might be appointed there to deal with the whole matter, who could arrange for the manufacture of teas of a suitable class, and see to their shipment, so as to ensure the market being kept regularly supplied. It is to be hoped that success may ultimately attend the efforts that are being made. On the Continent of Europe all our advices go to show that the taste for tea is decidedly on the increase, and, in addition to the opening of tea rooms in Paris and Rome, where the results obtained are encouraging, the Committee have in contemplation—as funds permit—the establishment of an agency at Antwerp, through which Belgium, Holland, and Germany may be worked, and the adoption of measures for further pushing our teas in Russia, a country in which there is already a large consumption of tea, but mostly at present obtained from China. In Australia the consumption of British-grown tea shows a steady increase, the quantity taken last year amounting to 27 million lbs., and representing about 77 per cent. of the toal imports. Lastly I come to India itself, where I venture to think we may find in the future a very promising field for the consumption of our teas. There would seem to be no good reason why natives of India should not drink tea as freely as the Chinese and Japanese, and if they can only be induced to do so we should have here a large outlet for our excess in production. A strong effort is to be made to encourage the consumption of tea by natives, a sum of Rs.40,000 having been allotted by the Association to meet the necessary expenses. Committee appointed in Calcutta to deal with the matter cons ed it essential that in addition to the money grant they sh have contributions in tea, and, I believe, promises for the supp the minimum quantity required have now been secured, so tha work should soon be commenced.

All these efforts to push the sale of our teas require money, the Committee have been obliged to call for a new levy, and earnestly urge all interested in the welfare of the industr subscribe to the fund. I would especially appeal to those—a am sorry to say they amount to a large number—who have hitherto subscribed to the fund for opening out new market come in now and take their share in helping the industry at time of urgent need. A proposal has been put forward, as afford an equitable means of raising the funds required to exploit markets, for the imposition of a cess on all teas exported from In but to enable this to be carried out, the support of the great bul those interested in the tea iudustry is necessary, and even if were forthcoming, which I hope it will be in time, the scheme c not be put in force this season, and we must, therefore, go on the new levy in order to obtain the funds required for the wor be done. The only objection which I think I have seen to the posed cess is that although it may be imposed for the spe purpose of helping the industry, when no longer required for purpose the Government might be tempted to find some excuse continuing it for general revenue purposes. This I consider t an absolutely groundless fear, and hardly complimentary to Indian Government. Several other matters are dealt with in report, but the only one of these to which I think I need make special reference is the holding of private auctions. You will it is stated that the proposals for omitting garden marks from sale catalogues, and the formation of a tea exchange, not hav met with sufficient support, some importers, with a view to m the wishes of buyers in the matter of restricting the publicatio the prices realised for individual lots at the auctions, had agree try the experiment of offering their teas at private auctions c ducted under the control of the Tea Brokers' Association. I m explain that the Association is in no way committed to these priv auctions, with regard to which considerable difference of opin exists amongst members. Whether this method of selling is a g one or a bad one, the Association cannot interfere with the righ any importers to dispose of their teas by private auction if t choose to do so. In regard to the question of restricting the p lication of prices, the large dealers hold strongly that this absolutely necessary in the interests of their business, and th objection to their business being interfered with by an outs organisation only concerned in making money by the circulat as at present, of detailed particulars of all sales, is hardly surprisi Objections to the system of private auctions have been taken the country grocers, I understand, but they and the large deal may be left to fight the matter out between them. So far growers are concerned I do not see how they are likely to lose a thing by selling some of their teas in private auctions, but it is easy to discern where any direct benefit to them will come in. do not think I need detain you with any further remarks, will now propose that the proceedings of the general and spe Committees during the past year be confirmed, that the report adopted, and that the accounts as audited be passed as correct.

THE SECONDER'S VIEWS.—FOREIGN MARKETS.

Mr. A. Bryans: I rise to second Mr. Cruickshank's motion. Y will not, however, wish to be detained here unduly by me, therefore I propose to deal with what is practically one questi *i.e.*, the *levy* and *the means we have of raising funds* for pushing wares in other markets. It is most disappointing to the memb of the Committee who have this matter constantly before them see the half-hearted way in which producers subscribe to voluntary levy. It becomes more difficult each year to raise necessary funds, and I think this year will be the most difficult all. Many of the old subscribers are hanging back, and others attaching conditions to their subscriptions which may imperil success of the levy.

Now, gentlemen, this is not unnatural, seeing the large num of growers who subscribe nothing to these funds, and who are w ing to come in upon other people's backs, and to see oth subscribe whilst they pay not a half-penny themselves. Th people are willing to take advantage of the benefits gained by th subscriptions, and not to give a hand's turn to help matters. Th

a class of man who thinks this is clever. I think that most of us this room would give it another name. There is another class of on-subscriber who says he would subscribe if everyone else did so. urely it is time for this man to put his hand to the plough, or I ould say, into his pocket, and set an example.

I feel very strongly on this matter. Every member of the oreign Markets Committee must do so likewise, and my object -day is to bring this most important matter home to the minds of l growers. We, the members of the Committee, appreciate the ct that the very existence of the levy is hanging in the balance, d it is timethat the growing community, as a whole, understands is to be the case, and steps in to save the position. Now is the me, if there was ever one, that we require special efforts to be made develop the existing markets, and find new ones for our teas. If ur efforts are allowed to lapse what must be the result? It must absolutely clear to everyone who gives a thought to it that less we can increase the foreign consumption, which has in the st year made such satisfactory strides, we shall be in a worse sition than we are at present. The only other solution is by the ng-talked-of compulsory cess, or export tax. It is too late this ar to hope for any success with this, but I am one of those who ink that it is the proper solution of the difficulty, and I further ink that the objections raised to joining this movement have een frivolous objections, and should be put aside at once by growers. mean such objections as that the Government, if it could induced to collect this money for us, would hereafter appropriate for itself. I do not believe for a moment that such a course ould ever be adopted. The difficulty is, as you know, to get the overnment to assent to collect it for us, an almost insuperable fficulty, but one that might, I think, best be overcome by getting petition signed practically by the whole of the planting commu-ty. I, for one, see no reason why such a petition should not be afted at once, and signatures obtained to it. I think a well-orded petition to the Government of India should be sent in, inging out—

1. The depressed condition of the industry.
2. The importance of the development of outside markets, in-uding that of India.
3. The large area of tea that has still to come into bearing, and
4. The consequent results if some such steps are not taken.

A petition on these lines, asking the Government to take steps levy, say, quarter of a pie per lb. on every lb. of tea exported om India, to be applied for the special purpose of development foreign and Indian markets, signed, as I said before, by the lk of growers, must needs, at any rate, receive the earnest con-deration of the Governor-General, and I believe that if properly ndled might result in a successful issue, for how can we hope to ploit Russia or India, or anywhere, without funds?

I should like to hear the views of other members with reference this matter, which seems to me to be one of such very vital portance.

THE NEED OF A CESS.

Mr. Robert Hart: We have read from time to time, and we have eard to-day, of the useful work done by the Association during the ear. This work has been mainly in the direction of increasing e sale of Indian tea by the opening up of new markets. In so r as the limited funds have gone I feel sure it will be acknow-dged by everyone that your work has been a stand-out success. If u look at the most recent figures of the consumption of British-own teas in America and on the Continent, and compare them ith what these were five or six years ago, we cannot but confirm at has been said by those who are in the trade in America that he results are wonderful for the amount expended."

You, gentlemen, our London Committee, have largely contri-ted to this result, and we all, when we think of the smallness of e means, and the comparatively big result, feel that our thanks e due to you for the efforts you have made to secure it. By we all" I include not only the half of Indian tea growers who ntribute to the funds of the Association. but also the other half hich contributes nothing to the funds without which these results uld never have been reached.

The proprietors of half the Indian tea area who do not contri-te towards these funds are said to be mainly of two classes, the st who won't subscribe because they say that so many others do t bear their fair share; the others are those who give no reason because of some excuse which from the results we recognise to ve no foundation in fact.

It is reasonable to suppose that the first of these two classes of non-subscribers is the greater. If so, then over three-quarters of the industry would only be too glad to subscribe towards the opening up of new markets if everyone else could, by some means, be got to contribute.

We have found that Indian and Ceylon tea growers cannot combine, at least, Ceylon growers cannot combine, to reduce the excessive production, and we all realise that any such measure to artificially restrict the amount of tea produced could only be a relief of the most temporary character. We are one and all agreed, too, that not only the prosperity, for it has gone, but the very life of the tea industry depends on our opening out new outlets for our produce, and that such a state of crisis has come about that, to save us from disaster, this must be done quickly. We all know, further, that to do so, operations will have to be carried out on a scale and with a determination which we have not yet seen.

Are we making any preparations to do so? The answer to this is that while there has been a good deal of talking and writing we have unfortunately so far been unable, owing to want of funds, to do anything beyond following the comparatively slow methods that, so far from being adequate to meet the present situation, were not allowed to be good enough even for that of several years ago.

If the means at our disposal and the consequent rate of progress India has made, which progress has been, we observe, less than half and proportionately less than one-third, compared to that made by Ceylon in outside markets, how miserably inadequate this is in comparison to what even one large business house does to keep pace with the times, or in comparison to the measures we have seen recently advocated from America.

We are satisfied, gentlemen, that you have spent the funds at your disposal to our great advantage, and the question now is how to get more, so as, if not sufficient to do a great thing for tea, to do at least something substantial to relieve us from the position in which we now find ourselves of being able to make little or no profit, and in many cases a loss in working our estates.

A cess like the Ceylon cess is believed, as I understand, by your Committee, and by probably nine-tenths of those interested, to be the only way of attaining our object. This, indeed, is only too plain, as the voluntary contributions are falling off, owing to the feeling that it is not fair that half should bear the burden of saving the situation, which should be borne by all alike. Only one or two people have spoken against it, and they being, like the rest of us, strongly in favour of opening up the Indian market close to our doors, have, instead of this cess, proposed that voluntary contributions in the shape of tea should be also asked for. As far as we have seen, what most of us felt sure would happen, has happened—namely, that the great bulk of those who contributed to the fund have also promised donations of tea, which is money in another form, for opening the Indian tea market, and those who do not contribute do not give tea either. It is said that those very few gentlemen who say that they do not approve of the cess being levied in India, but suggest instead what really, when put in its true light, means that the burden on the 50 per cent. should be increased to further save the pockets of those who do not help at all—it is said that they do not contribute to the present funds. We can in this case understand their attitude, and it is perhaps only what might be expected. In relation to this matter I would like to express the opinion which one hears that the Committees of the Association have not done their full duty in not publishing the names of the concerns who do not subscribe to the funds, with the reasons which they give for not doing so opposite each. This would also be useful in letting us know how we stand. These, you will agree, are not the times for half-hearted measures.

Some time ago your Committee wrote out to Calcutta asking our friends there to make a representation to the Government of Bengal to suggest that it should collect the present very modest rate of contribution in the same manner as is done in Ceylon from everyone equally. This would bring up the annual amount available to only the comparatively small sum of about $2\frac{1}{2}$ lacs of rupees, or, say, £16,500, or to less than half the sum Messrs. Larkin and Hayter, of Toronto, state could be so profitably spent in America alone. Shortly after this was done we were informed that a Government Secretary was approached, who expressed the opinion that he didn't think it worth while for us to make such on

application to Government. Who sounded this Government official, who he was, and how it was done, we were not informed. It would be useful to know whether it was made through the one or two people in India who do not approve of the contribution being made a general one. Anyway, two or three years were allowed to pass and your Committee recently brought up the matter before the Calcutta Committee, who made another informal representation, and we were told that the Lieutenant-Governor himself had expressed his views to the effect that if there was a unanimous representation from all tea proprietors asking for this he would recommend the Government of India to grant our request and collect this small sum from everyone concerned, as is done in Ceylon. Well, our attitude in this matter being as it has been, and, so far as appearances go, still is, one of indifference, it is evident that however strongly the Lieutenant-Governor may be of opinion that something of the kind could be done and should be done to save the industry, he could not very well have said more than this until we had thoroughly made up our minds and put the matter before him in such a way as to make him believe we were in earnest, and that the big majority were convinced that this was a necessary measure and in the interests of all tea growers.

Although the Lieutenant-Governor's reply was passed on to us in this form, he knows as well as we know, that complete unanimity was never reached in Ceylon on this matter any more than it ever can be among Indian tea proprietors. We also know by recent events that in matters closely affecting our interests, we can stand together better than our friends in Ceylon. We have had evidence of this more than once recently, so if they obtained the required proportion of unanimity we can safely rely on it.

Gentlemen; if you display the same energy and ability you made use of in the pound draft agitation, yon will get this moderate cess contributed to by everyone Your case could not be stronger, and if you draw up a plainly put representation you can hardly fail to get three-fourths of those representing the area planted with tea in India to sign it and the Government to act upon it. The excuse that the Government in India is less willing to assist the tea industry to help itself than the Ceylon Government is, is not a fair way of speaking, and we have no grounds for assuming anything so unjust. I would suggest your asking for a moderate contribution, and making it for a terminable period of, say, five years, to be renewed again after that period on the reapplication of the large majority of tea-growers concerned (say two-thirds to three-fourths), which they would make if they found the result obtained by it a profitable one for them. A few years after you get it you will be able to buy at a low price and retail some millions of pounds annually to the people of India and also have introduced each year ten or fifteen million pounds of Indian green tea into America. We have already secured the supply of nearly the whole of the black tea there, but the introduction of green is more difficult and more expensive, and it is full time we had made a commencement It cannot be said we have done so yet. It was indeed hoped and preparations were made to do so last season by you, but the experts appointed in Calcutta were so hypercritical that practically no bounty was paid, and naturally, it not being a paying business at the best, next to no green tea was made.

This is a critical time, and time is passing. Too much has already been allowed to pass without anything at all adequate to meet the situation being done. I hope, therefore, that, as you are the only body which acts in the interests of Indian proprietors, you will make up your minds what is to be done, and will make a sustained effort to put this into full effect, and not be dissuaded from carrying out what you know should be done by allowing yourselves to be baffled or turned aside from it by some of the people there are in every community who invariably take up an attitude of objection and opposition however plain to the great majority the right course may be.

The Chairman then put the resolution, which was unanimously carried.

SIR SEYMOUR KING ELECTED CHAIRMAN.

The following motion was then proposed by the Chairman: "That a cordial vote of thanks be given to Sir H. Seymour King, M.P., for the valuable services he has rendered to the Association during the past year." The Chairman said that Sir H. King was always ready to give his advice and assistance in matters that were referred to him, and had taken a great deal of trouble in connection with the Labour Bill lately passed by the Indian Government, and the question of the tea duty. Only members of the Committee who were brought into contact with Sir H. King knew all the and attention he had given to these matters, and the Associa was fortunate in having him as their Chairman.

Mr. J. N. Stuart seconded this, and it was carried unanimo

The Chairman proposed that Sir H. Seymour King, M.P. elected as Chairman, and Messrs. Arthur Bryans and J. N. Stu Vice-Chairmen of the Association for the year 1901-1902.

In seconding the motion, Mr. R. B. Magor referred to the q tion of the proposed cess, and said that in his opinion the diffic of only having 50 per cent. of voluntary support would decide Government against taking the proposed action. If it were sible to get 85 per cent., or 90 per cent., things might be differ There were a great many persons who would contribute willi if it were made general; so that if that number were ascerta the Government could be approached with 50 per cent. alre subscribing and promises to willingly subscribe for anothe per cent.—the others did not matter. But to go to the author at present was, he thought, useless. He thought the Commi had done exceedingly well.

Mr. Hart pointed out what he considered a fallacy in Mr. Mag argument as to the compulsory cess. He stated that, roughly per cent. of the acreage under tea subscribed now, and that o 25 to 35 per cent. was represented by those who were willin subscribe if *all* did. These men would sign for a compulsory c and thus about 80 per cent. of the industry would, at any rate secured.

THE GENERAL COMMITTEE.

Surgeon-General De Renzy proposed, and Mr. Luttman John seconded, that the following gentlemen should form the Gen Committee during the current year:—

Messrs. D Cruickshank, G. W. Christison, J. S. Hulbert, Henderson, Robert Lyell, C. C. McLeod, F. A. Roberts, A Stanton, W. H. Verner, and C. W. Wallace.

The motion was carried.

Mr. C. C. McLeod proposed that a cordial vote of thanks sh be given to Mr. Cruickshank for presiding at the meeting and his able services during the year.

Mr Robert Hart seconded the motion, and it was supported Mr. Bryans, who, as one of the Committee, spoke as to the Ch man's untiring efforts for the Association.

The Chairman having briefly thanked the meeting, the ceedings terminated—*H. & C. Mail.*

COORG.

Proceedings of a Quarterly General Meeting held at Bamboo Club, on Wednesday, July 24th, 1901. PRESENT Messrs. E. Clarke, Geo. Davies, J. W. Finlayson, H. Grant, G. C. Garrett, A. H. Jackson, R. Kaundinya, J. Log F. Macrae, H. G. Parsons, H. T. Shaw, and A. Lamb *Honorary Secretary.*

Mr. Logan was voted to the chair.

The Minutes of the last Meeting being taken as read the Ba papers for the election of a second member of the Coorg Dist Fund Board were then opened, and Mr. Jackson was found have been elected.

U. P. A. S. I.—Mr. Lambert was appointed to attend the Ann Meeting as the delegate from South Coorg. The Agenda pa was then discussed, Messrs. Grant and Parsons being asked look through the Madras Labor Bill, and Mr. Hodgson's rema thereon and report any comments which they desired to mak the delegates.

Coffee-Stealing Prevention Act.—It was suggested that Peppe included under this Act.

Proposed Coffee Cess.—This question was strongly supported, the feeling was in favor of the cess being levied on the cwt., no the acreage of coffee as suggested by the Shevaroy Plant Association. Several other points of the Agenda paper were discussed, but nothing of importance was arrived at thereon.

It was proposed to bring forward the anomaly of the diver of the weights and measures at present in vogue throughout In and to ask the U. P. A. S. I. to take action and make enq thereon, with a view to the introduction of a uniform standar the same throughout the country.

Remission of Taxation.—This important question was brought forard, but as no formal resolution was forthcoming, it was allowed drop. This matter will again come up for consideration.

Railway.—A resolution to the effect that we hoped, when the final stimates and plans were rendered, our Government would strongly upport the early construction of a line through Coorg was carried nanimously. Proposed by Mr. Parsons, seconded by Mr. Lambert.

Financial State of the Association.—After a statement by the onorary Secretary and some discussion, it was decided to ontinue to pay the full subscription to the U. P. A. S. I., provided hat other Associations were prepared to do so.

General.—It was determined to ask Dr. Lehmann, Agricultural hemist to the Mysore State, to make his promised tour through oorg during September next.

The Honorary Secretary read correspondence from the Comissioner stating that the Government of India had sanctioned the ldition of an Entomologist to the present staff of the Imperial useum in Calcutta, to be employed in economic research work, ith special reference to insects injurious to agriculture, and lding that he would be glad to place any matter before the ntomologist they may desire.

A vote of thanks to the Chairman and Honorary Secretary rminated the Meeting.

The following papers were laid on the table :—

Proceedings of Annual General Meeting, Nilgiri Planters' Association.
" " Meeting of Nelliampathy Planters' Association.
" " " Wynaad Planters' Association.

BANGALORE, *th August*, 1901.

A. LAMBERT,
Honorary Secretary, C. P. A.

SHEVAROY.

Proceedings of the Monthly Committee Meeting of the hevaroy Planters' Association held in the Victoria Rooms, 1 p.m., on Monday, the 12th August, 1901. PRESENT :— lessrs. C. G. Lechler, E. Dickins, J. C. Large, Revs. J. M. empf, and M. Anderson, Messrs. C. Rahm, and R. Gomrtz, *Honorary Secretary*.

1. Read notice calling the Meeting.
2. Read letter from Mr. Foote (and accompaniments) enquiring nether any of the Planters here could find employment for r. Dalby, a Surveyor, who submits letters showing that he as employed by Government as Head Surveyor and was for me time in charge of the Survey of the Shevaroy Hills.
None of the Planters present knew of any suitable work for such man.
3. Read letter from Mr. Rhodes James forwarding a number of rculars setting forth the advantages of using refined saltpetre hich he wished distributed. Distributed them to those present.
4. Read Secretary's Circular, No. 58/01, forwarding letter from r. Sanderson asking him to send money to the Committee for tempting to stop the adulteration of coffee, and the Secretary's ply asking how much he wants and requesting him to incur no pense till further advice.
Resolved that this meeting approves of the proposal of the cretary.

The following letters were read and recorded :—

Circulars received from Secretary, U. P. A. S. I., during month of July, 1901 :—

No. 54/01. Correspondence between I. T. A. and Mr. Acworth about pushing sale of tea in India. Mr. Acworth suggests a Limited Company—capital Rs.50,000.

No. 56/01. Forwarding resolution of the U. P. A. S. I. "That the Report of the Sub-Committee appointed at the Annual General Meeting of the U. P. A. S. I. regarding (*a*) markets and the sale of coffee in India, and (*b*) Paris shop, be adopted."

No. 57/01. Government cannot spare the services of Dr. Watt and suggest employment of or reference to Dr. Nieville, Imperial Entomologist.

No. 53/R.U., dated 1st August, 1901. Report of Sub-Committee on pushing sales of coffee.

Books and papers received during the month.

Brazilian Review, dated June 4th, 11th, and 18th, 1901.
Proceedings of the Indian Tea Association, dated July 2nd, 16th, 25th, and 30th, 1901.
Planting Opinion, dated July 6th, 13th, 20th, and 27th and August 3rd, 1901.
Proceedings of the Wynaad and Central Travancore Planters' Association.
Copy of accounts of the U. P. A. S. I., Madras.
A few copies of leaflet *re* the value of refined saltpetre as a fertiliser.
Agricultural Ledgers, No. I. A new fodder grass for India.
Do. do. II. (Wheat).

YERCAUD, *13th August*, 1901.

ROBT. GOMPERTZ,
Honorary Secretary, S. P. A.

OLD "THREE-DECKERS."

H.M.S. "Rodney" ploughed the sea into two broad ribbons of white foam, as she gathered weigh on her journey out to the Cape of Good Hope, in days when the Boer War was undreamed of and ships like this old "three-decker" ruled the waves supreme.

Nine hundred men manned her, and prominent among them was Corporal Eccles, one of the "boys of the old brigade."

Corporal Eccles, who spins this yarn to me, is now hale and hearty at 65, and he has served Her Majesty 21 years as a Royal Marine—"soldier and sailor too."

"'Twould take me days to tell you all my experiences during the 21 years I spent on the old 'three-deckers,' H.M.S. 'Dragon,' 'Camellian,' and 'Rodney,'" said the bluff old Corporal, shifting his quid, "but that storm off the Cape in the 'Rodney' was the worst bit o' weather I ever experienced.

"Nine hundred men on board her, and 150 men disabled or wounded in the hurricane. Casks broke adrift from their lashings, thundering against the bulwarks until they started a plank. Sheep, caught by hills of incoming green seas, were swept down the hatches like corks in a mill-race.

"I carry a wound on my thigh to this day that was caused by a table hurled against me when scrambling into my hammock. Aye m' lad, a sailor-life is full of adventures and *tests of endurance*. During the whole 21 years of active service I never had a day's illness. That's a pretty good record!

"When my term was nearly completed, I was transferred to H.M.S. 'Pembroke.' She had just been taken off active service and was being fitted out for a work-ship. During the alterations, as she lay at her moorings dismantled, her ports wide open, I had to take my turn on sentry duty, rain or snow.

"Mid-winter it was, and the weather cold and raw.

"Pacing about 'tween decks," said the Corporal, "exposed to the worst of weathers, I caught a severe cold, and I couldn't shake it off. My record was broken.

"It settled on my chest, hard and fast, making my breathing awfully bad. I couldn't walk uphill. I was too wheezy. You could hear me breathing, like a tug, twenty yards off. I did manage to struggle through my work, though.

"Then indigestion set in. After eating, my stomach became swollen with wind, making *a disagreeable rumbling noise* and causing great pain. Several doctors tried to help me, but their medicine didn't hit the mark. I got worse and worse.

"The old 'Pembroke,' now lying at Chatham, is something like the hulk I then was. My cough shook my body through and through. For months I slept propped up with pillows. After a fit of coughing, perspiration rolled off me, soaking my linen. My body seemed on fire.

"Like the sharp stab of a cowardly knife did a long breath pain me. I got alarmed and nervous, for *things were looking ugly*.

"Though this day is the 20th of April, 1900," said the gallant Corporal, "I yet remember that aching pain that caught me in the back, on the right side, and that my bowels were very costive. Altogether, I was in a bad way. My wife, when the doctors had failed to help me—a sheer hulk—insisted on giving me Mother Seigel's Syrup, to pull me round.

"I had no faith in it, *because* it was an unprescribed medicine, but I *swear* by Seigel's *now*. My first bottle sharpened my appetite, improved my breathing, and loosened my cough.

"The improvement continued week by week until I was completly restored to health. Cough, pain, and weariness were *swept away like chaff before the wind.*"

"Corporal Eccles," of 9, Southill Road, Chatham, says Mr. H. Woolgar, "is personally known to me. Unquestionably, Seigel's Syrup saved his life. Now he is getting younger every day."

"Aye," continued the old seaman, who, by the way, is proud of his medal for "long service," "Mother Seigel's Syrup put life, power, and 'go' into my almost lifeless hulk. I am now sixty-five, still young and full of life and energy—all due, mark you, Sir, to Seigel's Syrup. If you think others will try its powers, you may publish this."

Such was the Corporal's stirring narrative, and its truth is vouched for by Mr. G. W. Philips, of the Chatham High Street, number 312, who writes: "I can verify every word that Mr. Eccles has said. Mother Seigel's Syrup has made a new man of him. *No man* acquainted with Mr. Eccles's case *could* doubt the efficacy of Mother Seigel's Syrup for all disorders of the stomach and liver."

H.M.S. "Rodney" no more ploughs the deep, but she lies in peace and quiet at Chatham; yet *you* who are sailing in stormy waters because there is trouble within you—mutiny among your digestive organs, in fact—can follow in the steps of the gallant Corporal, and can attain, in this way, to the same hale old age.

MARKET REPORT.

[*Per Mail advices of 26th July* 1901.]

COFFEE.

The London Commercial Record says:—The market since our last has been quiet, prices are generally about steady, while a little more has been paid for home trade Costa Ricas. The market has been well supplied, chiefly with Central American descriptions, and of these a good proportion found buyers, but the small quantity of East India offered met with scant attention and was mostly withdrawn. A further decline in the Brazilian exchange and continued heavy receipts in Rio and Santos have imparted a week tone to the market for "futures," and prices have given way a further 3d per cwt. At the close the tone is steadier. We quote:—

London ...	... Santos ...	Sept. delivery	... 27s 3d.
New York	... No. 7 Rio...	„	... 4·80 cents.
Hamburg...	... Santos ..	„	... 27 pf.
Havre ...	... Santos ...	„	... 33¾ francs.

The postponed sales of Coffee were held to-day, and passed off quietly without alteration in prices. A good deal bought in.

It is been decided to hold no auctions of Coffee from this day until Thursday, the 8th proximo.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ..	21,816	19,272	35,280	27,045
	Home Consumption.		Export.	
	1901.	1900	1901.	1900.
Tons ...	12,068	10,059	16.250	12,457

The preceding figures exhibit— Tons.

In the Imports an increase this year of ...	8,235
Home Consumption an increase of	2,009
Export an increase of	3,793
Stock an increase of	2,544

SALVADOR.—3,766 bags mostly sold, *viz.*, smalls 33s, ordi brownish 32s, good ordinary greenish 37s to 39s, low middlin middling 41s to 45s, peaberry 36s to 46s 6d.

NICARAGUA.—644 bags mostly sold, *viz.*, ordinary to good ordi foxy greenish 32s 6d to 34s, low middling to middling greenish to 45s, good middling greenish 53s, bold 70s to 97s, very fine l peaberry 34s to 66s.

COLOMBIAN.—1,228 bags mostly sold, *viz.*, smalls 24s to 35s, g ordinary to fine ordinary brownish 34s to 37s, low middling 38 39s 6d, good middling 45s 6d, bold 40s to 44s, fine smooth 63s peaberry 30s 6d to 30s 9d.

MEXICAN.—Of 105 bags offered 4 bags sold at 27s for pickings

HONDURAS.—44 bags mostly sold, pickings 20s, low middl brown 38s 6d, peaberry 40s.

GUAYAQUIL.—112 bags partly sold at 27s 6d for good ordi pale.

HAVRE, *July* 25.—Good average Santos July opened steady 33½f. and closed steady at 33¼f., September opened at 33¾f. closed at 33¾f., December opened at 34¼f. and closed at 3 March opened at 34¾f. and closed at 34¾f., May opened at 35 and closed at 35¼pf

HAMBURG, *July* 25.—Good average Santos July opened steady 26¾pf. and closed steady at 26¾pf., September opened at 27pf. closed at 27pf., December opened at 27¾pf. and closed at 27¾ March opened at 28½pf. and closed at 28¾pf., May opened at 2 and closed at 29pf.

NEW YORK, *July* 25.—Closing prices of No. 7 Rio were as follow

		July.	Aug.	Sept.	Oct.	N
July	24...	4·75	4·80	4·90	4·95	
July	23...	4·75	4·80	4·85	4·90	

TEA.

INDIAN.—Rather more was brought to auction, *viz.*, 9,600 packa of which 5,600 were New Season's, compared with 6,200 packa and 1,700 packages respectively on the 15th instant, and 10, packages, nearly all New Season's, last year.

Recent arrivals especially from Assam and the Dooars inclu some invoices of attractive character, which met with str competition, prices ruling in sellers' favour. There was on whole a better feeling apparent in which all descriptions partici ed, common leafy grades being wanted and saleable at a deci rise from the bottom point. Among the best results were Assam: Khobong Estate, A.F.T.Co., 210 packages, 1s 1¾d; Hok goorie Estate, A.F.T.C., 111 packages, and Samdang Est D.D.T.Co., 33 packages, 1s 1d; Budla Beta Estate, B.B.T. 65s packages, and Sookerating Estate, A.F.T.Co., 128 packa 1s 0¾d; Talup Estate, A.F.T.Co., 424 packages, 1s 0½d; Hi Estate, A.F.T.Co., 74 packages, and Beesakopi Estate, D.D.T. 47 packages, 1s per lb. Darjeeling: Thurbo Estate, B.D.T. 63 packages, 1s 0½d; Phoobsering Estate, Dar.T.Co., 97 packa 11¼d; Ging Estate, Dar.T.Co., 139 packages, and Thurzum Est 60 packages, 10½d per lb. Dooars: Bamandanga Estate, Doo T.Co., 74 packages, 10d per lb

For 8,200 packages on estate account 7⅞d per lb. was secu being the same as 8,400 packages realised at this time in 1900.

Telegrams from Calcutta state that 5a 8p per lb. was obtai there for 20,000 packages on the 19th instant. No mate change occurred, but the lower sorts tended upwards For to- a like quantity has been declared. Late cable advices indica considerable shortage in shipments to the United Kingdom

CEYLON.—Catalogues included 29,800 packages—12,900 packa on Tuesday and 16,900 packages on Thursday. In the week bef 31,000 packages were dealt with and 27,200 packages at corresponding date twelve months since.

Bidding was more general, and a larger proportion was dispo of under the hammer. Pekoe Souchongs and Pekoes up 5½d per lb. were again in request and generally dearer. Medi to fine kinds, particularly Broken Pekoes, showed a somew irregular market and quotations in many cases were maintained.

The average is 6½d per lb. On the 18th it was barely 6½d per and 7¼d per lb. in 1900.

JAVA.—In the absence of public sales there is nothing to rep

Deliveries.—The clearances of all tea (on which duty has b paid) from the London warehouses, as per official returns are, *viz.*

From 1st to 23rd July,	1901	...	...	11,515,620 lb
Do. do.	1900	...	...	11,315,010 „

During the week the following have been printed for sale by ublic auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.

00-1901	45,587	191,202	5,959

,819 *pkgs.* INDIAN
,509 ,, CEYLON
— ,, JAVA
} Total 41,328 packages were offered in public auction this week.

INDIAN.—The market passed with a strong tendency, Teas for ice being a trifle dearer, and all other grades selling very eadily. 6,199 packages of New Season's Tea were brought rward, and included some good invoices from Assam; these met th fair competition and sold well.

Week's average of New Season's Tea sold on Garden Account, 1901, 75 pkgs., av. 8·58d. 1900, 8·445 pkgs., av. 7·72d.

New Season's Tea sold on Garden Account, 1st June to date, 1901, 375 pkgs., av. 7·29d. 1900, 25,023 pkgs., av. 7·13d.

CEYLON.—Tuesday's Public Auction comprised 12,847 packages, ost of the Teas selling at steady rates. The proportion withdrawn s not so large as during the last fortnight, and many of the as taken out were sold after sale at better prices. Thursday's le passed with animated competition at very strong prices, the ght improvement noticed last week being fully maintained for grades.

Average for week 6·56d., against 7·29d. same week, 1900.

Ceylon Tea sold on Garden Account, 1st Jan. to date, 707,327 pkgs., 6·57d. 1900, 717,131 pkgs., av. 7·24d.

JAVA.—Was not represented. 10,066 packages are advertised for e in Amsterdam on the 25th instant.

Bank Rate 3 per cent. Exchange on London three months' sight:— cutta 1/4$\frac{1}{16}$. Colombo 1/4$\frac{3}{32}$.

COCOA.

There were no auctions on the 23rd instant and business privately been small, comprising 50 bags Bahia at 65s 6d, and 600 bags d red Arriba at 75s to 76s up to 77s 6d per cwt.

PEPPER.

BLACK.—A somewhat firmer feeling has been manifest this week, steady prices have been paid. Sales of fair Singapore have n made on the spot at 6d; for arrival 50 tons September-vember shipment have been sold at 6d to 6$\frac{7}{16}$d for September-vember shipment, closing with buyers at 6$\frac{1}{8}$d. At the auctions ags Tellicherry bought in at 6$\frac{1}{8}$d. Of 9 bags, etc., Ceylon ckets sold at 5$\frac{3}{8}$d for light shelly grayish.

epper firm to-day and dearer for Black; 50 tons Singapore , including September-November shipment at 6$\frac{3}{16}$d, an advance $\frac{1}{8}$d.

WHITE.—The market is quiet without alteration in values. On the spot small sales of fair Singapore at 9¼d, and fair Penang at 8⅝d. For arrival 50 tons have changed hands, *viz.*, Singapore April-June (s) at 9¼d. Penang July-September at 8$\frac{9}{16}$d, and August-October at 8½d to 8$\frac{9}{16}$d. None offered at auction this week.

GINGER.

Of *Jamaica*, 1,229 barrels, etc., offered and the bulk sold at 1s to 2s decline on qualities below 40s, whilst the better qualities were steady. The prices realised were as follows, *viz.*, fair to good at 45s 6d to 50s, middling to good middling 37s to 43s 6d. ordinary to good ordinary at 35s to 35s 6d, common shrivelled at 30s per cwt.

Of *African*, 38 bags offered and sold "without reserve" at 33s.

Cochin quiet 136 bags offered and bought in. Privately small sales have been made at 42s for bold bright rough Calicut and at 31s 6d for fair unassorted.

Of *Green*, 5 barrels offered and 2 sold at 7s per cwt.

CINCHONA.

At auction on Tuesday, says the *Chemist and Druggist*, the small supply of 2,125 packages was catalogued, and met with a fair demand, the buying being principally for America. About half of the above quantity changed hands at a decline of ¼d, the average unit being 1¾d, against 2d paid at the last London sale. Compared with the Amsterdam sale last week it is ⅛d better. The above offerings contained 4,500 kilos. quinine sulphate, against 24,000 kilos offered at Amsterdam last week.

The following were the quantities of bark offered and sold by the principal buyers:—

	Packages offered.	Packages sold.
East Indian Cinchona	1,003	745
South American (principally Soft Colombian)	628	39
Ceylon Cinchona	412	279
Java Cinchona	78	68
African Cinchona	4	4
	2,125	1,135

The approximate quantities of bark purchased by the principal buyers were as follows:—

	Lbs.
Agents for the American factories	101,500
Agents for the Brunswick factory	60,500
Agents for the Mannheim and Amsterdam factories ...	42,000
Agents for the Paris factory	32,500
Agents for the Frankfort and Stuttgart factories ...	9,700
Messrs. Howards & Sons	7,100
Agents for the Imperial factory	4,400
Druggists, Brokers, etc.	31,200
Total quantity sold ...	288,900
Bought in or withdrawn...	149,560
Total quantity offered ...	438,460

The prices paid were as follows:—

SOUTH AMERICAN.—Bolivian cultivated Calisaya fair quill, 9¾d to 10d. Soft Colombian, 557 packages, imported in 1882 and 1883, were bought in.

AFRICAN (WEST COAST).—Dull quill and chips, 4⅝d per lb.

JAVA.—Ledgeriana crushed stem, 10¼d; red original stem, 4½d per lb.

CEYLON.—Ledgeriana original stem chips and shavings, 7⅜d; hybrid original stem, 3¾d; hybrid root, 3⅝d. Officinalis, renewed chips and shavings, 7d to 9⅛d. Red stem chips and shavings, 1½d to 5⅜d per lb.

EAST INDIAN.—Ledgeriana chips and shavings, 4d to 6½d; stem and chips, 3¾d; broken quill and chips, 7d; and branch, at 2d to 3⅜d. Red chips and shavings, 2d to 7d; stem and chips, 2⅞d to 3⅞d; broken quill and chips, 3¼d to 3¾d. Crown original chips and shavings, 2¾d to 8⅝d; renewed, 8⅝d to 10½d; stem and chips, 2½d to 3¼d; broken quill and chips, 3d to 6½d; branch, 2d to 2⅛d per lb.

QUININE.

No alteration has been made in the maker's price, and it is not intended to make any change at present. In the second-hand market business has again been very quiet at about unchanged to steadier rates, small sales of good German sulphate having changed hands at 1s 1¾d. For December delivery 1s 2¼d has been paid, and there are sellers for October at 1s 2d.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 30th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad.

August 20th.—*Weather*—Rain continuous, but light; days generally overcast and gloomy. *Works*—Supplying about finished on most places. *Plant diseases*—Borer severe, but no leaf disease. *Crop prospects*—poor, a good many of the beans from the first blossom are falling. *Labour*—Abundant. *Health*—Good.

Coorg.

POLLI BETTA, 21*st August*.—*Weather*—Rainfall for week ended 17th 1·50 inch. Since monsoon very light. Benefiting coffee immensely, apparently, as it is looking fine. Growth of weeds tremendous. Borer campaign nearly over. Losses have been much larger than during recent years. *Labour*—Ample. All works making good progress. *Health*—Fair. Work on paddy-fields somewhat retarded.

FINANCIAL AND ECONOMIC SITUATION IN BRAZIL.

THE financial and economic situation in Brazil is very largely dependent upon coffee crops in that country and the prices realised for them in consuming markets. It is dependent also upon the course of Exchange, and this in its turn is intimately connected with the value of exports of the staple produce of the country. Brazilian coffee sways the coffee markets of the world, and in this manner the economic situation in Brazil has an interest for every producer of coffee in other parts of the world. Perhaps it was hardly necessary for us to preface thus a reference to a report on the financial and economic situation in Brazil by Mr. Acting Consul-General RHIND, yet it seemed desirable to give readers an explanation of the main reasons that have caused us to peruse this report with interest. It is by no means optimistic. We

must presume that it is fair and impartial. Of the Funding Loan it shows that the results achieved as a consequence of that loan are, in the main, that the decrease on previous responsibilities and the cash accumulated in London are stated to exceed in amount the new onus arising from the Funding Loan by £3,045,010. The country is said to have acquired the following immense advantages:—(1) an increase in value of paper currency to the amount of £16,000,000, in spite of a reduction of the paper in circulation from 786,000,000 milreis to 693,000,000 milreis; (2) average increase in value of 35 points in each gold bond of the foreign debt, representing an increase of assets to the holders of not less than £13,000,000; (3) the funding bonds quoted at 95 per cent.; (4) budgets showing surplus instead of the deficits that were formerly the rule. The improvement in the valuation of the fiduciary currency is incontestable, and Mr. RHIND remarks that the appreciation attained, in combination with the system applied in the collection of duties, more than balances, from the importer's point of view, the additional gold taxation now imposed.

The conditions referred to are naturally conducive to an extension of the import trade, but Mr. RHIND strikes a despondent note in his remark that "in contrast with the apparently flourishing condition of the public exchequer, it cannot be denied that there prevails a very general absence of prosperity among the community at large." This can only mean that there is a strong probability, if not a certain, that while the Government and a few among the public have benefited, the general community has suffered loss from the artificial buoying up of the milreis. Federal taxation has become very heavy; the system adopted by the Governments as well as the municipalities is described as not only exaggerated but irksome and discouraging to enterprise. Unfortunately, too, the necessity for increased taxation has shown itself simultaneously with a great local depreciation in the value of the national produce. Of this depreciation Mr. RHIND remarks that, strange as the statement may seem, it is in great measure due to the enhanced sterling value of the currency. As he says, it is not always realised that, although expenditure within the country has naturally to be liquidated in paper currency, the exports, which represent the marketable wealth of the community, are valued according to the sterling value on consuming markets. This is an elementary principle of currency economics, but it is often overlooked, and we might fairly question whether it was sufficiently appreciated by the Governments of Great Britain and India when the present currency policy of this country was first introduced. Indian producers of tea, coffee, etc., may find in their own experience of late years an imperfect parallel with the experience of the Brazilian coffee-planter, Mr. RHIND's account of which we are now about to summarise.

Writing in the Spring of the current year Mr. RHIND states:—"Coffee which at this period last year—was being sold at 15 milreis per 32 lbs. is now being sold at from 6 to 6½ milreis, while, at the same time, wages and other expenditure affecting cost of production naturally remain unchanged on a currency basis, which means that the producer finds his resources reduced by 50 per cent." The gravity of this, from the producer's outlook, is very apparent. Coffee is the vital element of Brazil's export trade, it is the commodity out of which the greater part of the population make their living. Even a large increase in outturn is no advantage, therefore, when prices fall so much that the total crop realises less than did previous smaller ones. The large stocks now on ha the abundant crop about to be harvested, and the opening of new land that is proceeding in Brazil and other countr preclude the hope of any permanent rise in values for s time to come. Mr. RHIND's remark about the stimulatio Brazilian import trade under the influence of the curre policy must not be lost sight of. In it we find a clue to w has puzzled many observers, *viz.*, the refusal of Brazi exchange to rise to 1s. 6d. when it has been mathematic demonstrated that that level *must* be reached. Whate course is eventually taken by the milreis—planters in I must not forget that their rivals in Brazil are pressing lower rail freights and various other reforms that would t to lessen the cost of placing their coffee on the consum markets of the world.

THE HOUSEHOLD PHYSICIAN.

In offering this useful work to our readers we offer th no "quack" guide to sure remedies for all diseases. book gives a comprehensive review of the anatomy and physiology of the human frame together with a vast amo of information regarding ailments and diseases, and the tr ment usually adopted. To planters, many of whom have medical aid near at hand, a book of this kind is invalua It is expressly written for "those so situated that medical will be remote," and its most prominent characteristic is thoroughness with which it describes the nature and working of the complex mechanism comprised in the hur frame. The advantage of this is that it facilitates a study causes, and the man who can discover these has alway better chance of curing disease than the man who can o note effects. From a minute description of the construct of the human ear to the management of a baby is a very w leap, but the book under notice covers very much wi ground than this, going even into the questions of ho drainage, clothing and bathing, exercise, etc. It dilates u the properties and uses of drugs, and is throughout writ in the simplest possible style so that it may be readily und standed of the people, even those that have no knowle of medicine. There are some fine plates in the book, many minor illustrations. At Rs.25 it is certainly as ch a bargain as any man could reasonably wish to have.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S.

Trade with Persia.

The following letter has been circulated by the Ben Chamber of Commerce, Calcutta, 14th August, 1901, for information of members of the Chamber and of the Ind Tea Association:—

To

THE SECRETARY,
Bengal Chamber of Commerce.

QUETTA, 16*th August*, 19

SIR,—The erection of a suitable building in Quetta for accommodation of merchants and others interested in the Nus Seistan trade route and the appointment of Khan Bahadur M Mohamed Taki Khan, an old and respected Government pensio with duties to safeguard the interests of traders arriving in Que and to aid them in disposing of their goods and making t purchases, has enabled me to put into practice a scheme I h

had under consideration, and to provide a small institute in tta where patterns of such goods as are in demand in Persia always, in future, be kept on view.

ne building selected is especially adapted to the purpose for ch it has been provided, as it is within the limits of the caravarai and is thus immediately in view of every trader arriving Quetta.

beg to request that you will favour me by requesting such mbers of your Chamber of Commerce as are interested in trade Persia to forward me, carriage paid, specimen patterns of goods they manufacture, taking care to label each pattern in glish, Urdu and Persian with the manufacturer's name in full, initial cost of each article per maund, bale, etc, as the case may the carriage to Quetta as well as any other incidental charges, such other information as can be compressed into a small e, and will prove of advantage to would-be purchasers

would request you to explain to the members of your Chamber ommerce that within a reasonable limit they cannot forward many patterns, as the requirements of Persian trade are as nerous as they are varied, and include such goods as tea, indigo, e-goods of every description and variety, iron-mongery, glass-e, cutlery, jewellery, watches, saddlery, leather goods of every cription, not excluding ladies' kid boots and shoes, glass-ware, er, cigarettes and tobacco, fancy goods, etc. In a caravan which ntly left Quetta were included, amongst other goods, iron steads, mincing machines, stained glass windows and bicycles.

would note that when calculating railway freights to Quetta, rebates on the freight of goods granted by the North-Western lway and other railway systems, should necessarily be duly sidered.

lessrs. McIver and McKenzie of Karachi and Mr. D McBean of Quetta Branch of the Punjab Bank are prepared to act as varding Agents.

would lastly beg you to give the widest possible circulation to letter.

J. WEBB WARE, Captain, I.S.C.,
Honorary Member, Karachi Chamber of Commerce,
Political Officer in charge of the Quetta-Seistan trade route.

COFFEE IN DISTANT LANDS.

XXXI.

Dutch Guiana.—The coffee crop in 1900 again showed a siderable falling-off. The Liberian variety is cultivated e, and the prices are so low, that on some plantations it is ng gradually replaced by cocoa. The crop for the year 196,431 kilos.

New Caledonia.—The cultivation and importation of fee is gradually increasing, the berry being of a superior lity already quoted in European markets. If local wers will only take more care with the preparation of the d, New Caledonian coffee will, says Mr. Consul Haggard, tainly soon rank high in the markets of the world.

North Borneo.—The Assistant Superintendent of Customs, rth Borneo, reports (1900) :—"Coffee, as in many other acent countries, seems to have seen its best days. It is to hoped for the sake of those now engaged in this production t good times may again come round." There was a decase of $10,195 in exports during the year.

Peru.—The low price of coffee is discouraging the cultiion of this product, and this is much to be regretted, as st of the coffee grown in Peru is of excellent quality. ny small estates in the Perene district have been abaned by the colonists and have reverted to the Peruvian rporation, from which the lands were held under certain ditions. The Peruvian Corporation have taken in hand managment of these estates with good results, as the crops now heavier. During 1899 only about 1,000 tons were orted. The exact quantity shipped during 1900 is not yet wn. According to data furnished by the manager of the ntral Railway, 1,324 tons of coffee were carried over that line during 1900, the greater part of which was, no doubt, exported. About 50 tons were also shipped from Salaverry.

Porto Rico.—Coffee, which in normal times is the principal of the three staples of the island, did not, owing to the great damage done to the plantations by the hurricane of August, 1899, yield, on an average of the whole island, one-fifth of an ordinary crop. Indeed many of the poorer plantations had no crop at all, through want of capital to clear up their smothered cultivations. The new tariff makes no change in coffee introduced into the United States, which was free before, therefore there has not been the stimulus of additional profit. The planters had not the means of raising money so easily as the sugar-growers to spend in clearing their wrecked gardens, and this inability, added to the damage to trees that nothing but time can cure, has resulted in the virtual failure of the crop, rendered doubly crushing by the growing descent in prices. Taking the medium of the years 1896 and 1897 as an average, the 1900 crop falls short to the extent of 46,868,000 lbs.

Java.—The coffee crop in 1900 suffered both in quantity and quality owing to the excessive and long-continued rainfall. In consequence of the enormous yield in Brazil, prices reached such a point that even where large production per acre was obtained, it was impossible to work profitably. Several lands have already been sold for merely nominal sums and others are being offered for sale. The prospects for 1901 are very gloomy as the majority of estates expect only a minimum outturn. The Government crop was small.

Costa Rica.—Coffee is still the staple product of Costa Rica and the most important article of export. The year 1900 was a good one for exporters, the average price paid by them to the growers for the berry in fruit being only £1 10s. per fanega (400 litres), as against £1 11s 2d. per fanega in 1899, while the prices realised abroad were higher by $1\frac{1}{4}$d. per lb., the actual figures being : 1899, net average value, $4\frac{1}{2}$d. per lb. ; 1900, net average value, $5\frac{3}{4}$d. per lb. It is true that, owing to the fall in exchange, the colon was worth more in 1900 than the peso in 1899, but the principal decline did not take place until April, by which time most of the coffee drafts had been negotiated. Growers complain, however, that at these prices coffee barely pays expenses, and it is possible that, if there is no improvement in the near future, many of the older farms and also those in inferior soil will be abandoned. This is even more probable now, as so far from any prospect of an advance in price appearances all point the other way. The improvement in the coffee markets abroad, mentioned above, was only temporary, and the prices so far obtained for this year's (1901) crop are, in many instances, as much as £1 per cwt. less than those of the preceding year. The latest British Consular Report contains the following tabular statements :—

Export during the year 1900.

Articles.		Quantity.	Value.
Coffee	... Kilos. ...	16,100,905	£760,038

Coffee exported of crop 1899-1900.

Country.	Number of Bags.	Weight. Kilos.
United Kingdom ...	202,367	9,562,334
United States ...	70,722	4,055,496
Germany	35,076	1,819,581
France	9,830	584,456
Other countries ...	3,249	193,024
Total ...	321,244	16,214,891

Note.—The difference between the weights of coffee in these tables is explained by the fact that the latter refers to the crop 1899-1900 and the former to the year 1900.

Colombia.—Exports of Coffee from Colombia during 1900 were valued at £270,876, as against £508,820 in 1899.* *Apropos* of this we may refer to the terrible fluctuations of Colombia Exchange. It appears from a British Consular Report that the rate of exchange on December 31, 1899, was 550 per cent., whilst on December 31, 1900, it was 2.000 per cent. for American gold, and 50 points less for British gold; thus in 1899 a dollar was worth 5 dol. 50c. paper, and £1 sterling 27 dol. 50c. paper, whilst in 1900 American dollars were worth 20 dol. paper, and £1 sterling 97 dol. 50c. paper. The depreciated rupee can still knock spots out of the depreciated Colombian currency unit known by courtesy as a "dollar."

The following table shows what leaps it is possible for the above currency to take along the easy road of Avernus :—

Rates of Exchange on British gold during the years 1900-1899.

MONTH.	Per Cent. 1900.	1899.
January	550	240
February	700	240
March	1,100	240
April	1,100	243
May	1,552	250
June	1,300	300
July	1,500	330
August	1,620	410
September	1,550	470
October	1,500	410
November	1,650	730
December	1,950	550

Reunion.—Exports are decreasing, though there is not room for a much greater falling off than occurred last year. Only 14½ tons were shipped in 1899, and but 10 tons in 1900. The following table of wages may interest some of our readers :—

DESCRIPTION.		From £ s. d.	To £ s. d.
Coolies or engaged labourers—			
Servants, cooks, etc.	Per month....	1 0 0	1 8 0
Skilled labour in mills, etc	„	1 4 0	2 8 0
Agricultural labourers	„	0 16 0	1 4 0
Boys and girls	„	0 8 0	0 16 0
Free labourers—			
Servants, cooks, etc.	„	1 4 0	2 0 0
Carpenters, tinsmiths, etc.	Per day	0 2 3	0 3 11
Agricultural labour	„	0 1 3	0 1 10
Unskilled labour	„	0 0 10	0 1 3

NOTES.

St. Petersburg Exhibition, 1902. The arrangements for the British Exhibition in St. Petersburg are said to be going on very leisurely.

Labour in Brazil. More trouble is reported at Casa Branca between Planters and "Colonists," and the Italian Consul has been called in to pacify his aggrieved compatriots.

The Indian Tea Crop. The Indian tea crop is believed, from statistics privately compiled, to have been ten million lbs. less than last year at the end of July, and the probabilities point to a still further deficiency.

Silk in Brazil. The *Brazilian Review* observes :—"A Syrian, named Solomon Bufarah, is doing wonders at Santa Rita in the silkworm line. He has already planted a large area with mulberry trees and is going to exhibit cocoons and silk from his estate at S. Paulo."

The London Tea Market. Telegraphic advices, dated the 1 instant, from London report that general tone of Ceylon tea is firm, and there is good comp tion for Broken Pekoe as well as Pekoe and Orange Pek prices being somewhat higher ; while Pekoe Souchongs firm and steady.

Amsterdam Bark Market. The exports of Java bark July were 1,228,000 Amsterdam l against 629,000 Amsterdam lbs. last year, and 940,000 A sterdam lbs. in 1899. The total for the seven months 6,376,000 Amsterdam lbs., against 4,729,000 Amsterdam l last year, and 6,034,000 Amsterdam lbs. in 1899.

Java Quinine. At the auction of quinine at Ba via on July 24 2,100 kilos. (73,3 oz.) Ed. II sold at an average of 21½fl. per kilo. (about eq to 8½c. Amsterdam unit). At the previous auction on June an average of 23½fl. per kilo. was paid for this quali The next auction to be held at Batavia will take place September 5.

Coffee Imports into Ceylon. The *Ceylon Observer* laments taste of some of the people on island in that over a million pou of coffee is still consumed there annually. "Why not dri tea instead," asks our contemporary. As Ceylon draws m of her coffee from India, we are rather pleased to see that is still a consumer of that commodity, are if only a small o

Calcutta Tea Sales. At Friday's auctions 14,400 pa ages were offered, the select being good and above average, although in same cases qual has fallen away from the best. Darjilings and Assams s irregularly at lower rates, other sorts remaining about same as last week with an easier tendency. The demand Bombay and Gulfs was better.

Coffee. According to the *Rio News*, David B. Reeder, of Chicago, c demns the habitual use of coffee as harmful, and his opini is supported by the *Journal of the American Medical Assoc tion.* Coffee is said to produce serious nervous disorde and is considered by some physicians to have a worse eff than alcohol. It is urged that Americans consume too mu coffee. They certainly consume too little *Indian* coffee, that is a curable complaint.

The London Tea Market. Cable advices state that 25,0 packages Indian teas were offer last week and sold 23,000 packages, average 8¾d. Comm steady, and fine qualities firm. Of Ceylon teas there w offered 31,000 packages, and sold 28,000 packages. Genera firm. Fine qualities very firm and in some cases rath higher. P. Souchong.—4½d. Average price.—6⅝d. Ceyl telegraphs that only 71,750,000 lbs. have been shipp to Great Britain to date, against 77,314,000 lbs. to same d last year.

The American Tea Campaign. The agenda paper of the n meeting of the Ceylon Chamber Commerce refers to a resolution

* The number of bags shipped in 1900 was 86,917, as against 254,410 in 1899.

ch notice has been given by Sir Wm. Mitchell and which o be seconded by Mr. F. M. Mackwood. It runs as ows :—"That in the opinion of this Chamber it is not irable to continue expenditure in America on the existing e by the 'Thirty Committee,' and they recommend that h expenditure be modified and a portion of the funds erted towards efforts being made in other directions."

Brazilian Paper urrency.

The *Brazilian Review* has a 'light' way of touching upon things. It says :—"There is in America an i-expansionist millionaire who smokes like a furnace and, how his principle, lights his cigars with 100 dollar notes ! only we had a few of his kind, or could induce him to end his practice to this country, there would be an end he crisis in no time. At the rate of only 50 cigars a , he would get through our paper money comfortably in years, and if he were in a hurry might take on assistants."

ee in the U. S.

Mild sorts are quiet and in buyers' favour, says the *American Grocer*. od Cucuta, 7¾@8c, and washed at 8@11c ; Padang Inte-, 15@18c, with fancy mats at 24@28c, and extra fine lots 2c higher ; Mocha, 15@19c, and very fancy higher ; gota, washed, 9@13 ; Bucaramanga, washed, 9@12½c ; tral American, best grades, 8@12½c for invoices. C. E. kford, San Francisco, Cal., reports stock of Central erican in first hands on July 6 of 93,640 bags, against 742 bags in 1900. Costa Rica, 11½@14c for prime to cy washed ; Guatemala and Mexican, good to fancy hed, 9¼@14½c ; Nicaragua, fair to fancy washed, 8½@14c.

in the U. S.

The *American Grocer* of 17th ultimo, says :—There is some little rest shown in new crop Japan, the best grades of which at 23 @ 25c in bond, and lower grades down to 17½c in d. New crop Congou, to arrive, offered at 10c in bond. v crop Formosa not here, but sales on sample reported private price to arrive. To-day at noon the Montgomery ction and Commission Company hold their regular auction of teas, comprising 6,534 packages, as follows: 301 pack-s Moyune, 155 boxes Pingsuey, 177 half-chests Japan, 388 -chests Congou, 267 packages India, Java, and Ceylon loe, 50 boxes scented Orange Pekoes, and 5,198 half-chests boxes Formosa.

ee and Brazilian xchange.

We read in a Home paper :—Coffee auctions have only been held on one day this week, when a very l demand was experienced for the somewhat limited plies offered ; prices of nearly all growths were 1s. to 2s. cwt. and privately more free buying is noticeable than of . "Futures" of Brazil rose 1s. per cwt. on an advance Exchange, but subsequently this improvement was almost lly lost through heavy receipts and declining Exchange, ough a slight recovery took place yesterday on Continental ing orders. This morning Santos August delivery is ted 27s. 9d, September 28s., and December 28s. 6s. per

Quality Indian eens.

Says the *Canadian Grocer* of the 18th ultimo, a feature of the tea trade in Toronto is the samples of Indian n teas that are being submitted to the trade this week. They are from the Dooars and Sylhet districts, and they are being offered at a most favourable price. But their chief recommendation is their quality. Those who have tested them say they are beautiful in style, and in cup quality exceptionally good. One dealer declares they are the finest he ever saw. Hitherto green teas of India shown here have not been properly made. But, however excellent the quality of the Indian teas may be, the attention of the public must be drawn to them if they are to become an important factor in the market, either in Canada or the United States.

Indian Tea Markets Expansion Commission.

Messrs. Andrew Yule & Co. state that they want subscription of tea fit for human consumption. They suggested a sound Pekoe Souchong, as more suitable for the purposes of the Commission than dust or Fannings. In trade parlance "Common" is a term applied to the lower grades. A common tea may at the same time be a good tea. It was not in their opinion, common tea which flooded the market last year, but coarse plucked badly made "rubbish," which, buyers said, was fit only for manure. They think the sooner such stuff becomes unsaleable the better for the industry, and they certainly would not attempt to distribute it among the Indian public. So far subscribers have sent them the class of tea asked for.

Coffee in London.

This week has most likely seen the last of the heavy auctions until next season, says the *Produce Markets' Review* of 27th ultimo, as, so far as can be ascertained, all the principal Central American crops have been received, and have at once been offered, so that the amount in importers' hands unsold is less than has been the case at this period for many years. The result of pressing supplies forward so rapidly has been to unduly depress prices, and now that the pressure to sell is over there should be a decided recovery in values. Already there are indications that dealers on the Continent are short of medium coffees, and orders have been more general than for a long time. Home trade sorts have also been more inquired for, and are often 1s. to 2s. dearer. In the terminal market quotations tended downwards until yesterday when a recovery of nearly 1s. took place, and the business transacted was larger than had been the case for many weeks past.

The Consumption of Coffee.

One-half of the world's production of coffee berries is brought to the United States, says *Bradstreets*. Americans are the greatest coffee drinkers on the face of the globe now, and every year the consumption of coffee is increasing here. Last year it was more than 80,000,000 pounds for the whole country, or more than 10½ pounds a head of the population. Germany and France together only consumed half as much coffee. Germany less than 6¼ pounds a head and France only 4½ pounds per capita. The United Kingdom used little more than half a pound of the berries per head of the population, but over there they made up for it by drinking more tea than any other nation. More than a million dollars is sent out of the United States every week in payment for coffee. South and Central American countries, which supply us with more than 6,000,000 pounds of coffee a year, get most of the money. Porto Rico, Java, and the Philippines get almost all the rest, but a little goes to Hawaii. Last year the total value of the coffee imported into the United States was about $60,000,000, and that was

less than for several years, because the import price of coffee has fallen about one-half.

Tea in Hamburg.

The season 1900 was, upon the whole, not favourable for the tea trade, and satisfactory relations between supply and demand could not be maintained for this article. The British Consul-General reports that the accumulation of large stocks of tea, arising partly from the increase in the import duty in the United Kingdom and partly also from a mistaken estimate of the probable effects of the troubles in China upon the trade in this article, had a depressing effect upon the tea market, and it was only in the superior sorts that it was possible to do a steady business. For Souchongs there was a fair demand, as well as for Congous, though large stocks remained on hand of some sorts of the latter at the end of the year. Canton and Macao teas are stated to have been of such miserable quality that only the very best sorts were able to find a market, whilst even for these, few orders were executed without complaints being made regarding quality. The disturbances in Northern China appear to have had practically no effect upon the gathering of last year's crop and its transport to the coast for shipment, though prices for green China teas from the district mentioned were rather higher than usual. The consumption of Indian and Ceylon teas is increasing in Germany, but only at a very slow rate.

Quality of Cardamoms.

Messrs. R. C. Cowley and J. P. Calford have made investigations into the quality of cardamoms and have aimed at the following results :—

	Malabar.	Mysore.	Mangalore.
Number of fruits in 10 gmes. ...	80	55	45
Percentage proportion of pericarp.	30	25	20
Percentage proportion of seed ...	70 { dark 57 / light 13 }	75	80
Percentage of ash from dark seed..	5	3·3	2·9
Percentage of ash from light seed.	8 5 to 9	4·5	—
Percentage of ash from pericarp...	13	7·1	7·6

They say that lime predominated in the pericarps of all varieties to such an extent that an admixture of 20 per cent. of pericarp with seed would be readily distinguished by precipitation as oxalate from acetic acid solution of ash. Two-thirds the ash of Malabar pericarps is soluble in acetic acid, but of the seed ash less than one-half is soluble, and this portion is mainly potassium salts. Manganese and iron are present in all varieties, but in Mysores the proportion is very small. Cobalt was not found. It is suggested that the yield of volatile oil might be a useful test. (1) The conclude that an ash determination of the seed is *per se* of questionable value as an index of quality. (2) The mineral constituents are not constant. (3) The large proportion of lime in pericarps is characteristic of all varieties. (4) The ash percentage of light-coloured seed is always higher than that of dark because of the imperfect development of organic matter. The reference to lime is somewhat astonishing in the face of the general deficiency of this ingredient in South Indian soils.

The Tea Service from Chittagong.

The Board of Directors of the Assam-Bengal Railway have now concluded arrangements with the Clan Line of steamers for a fortnightly service of steamers from the port of Chittagong in co-operation with the plan interested in the development of this route. An agreem has been concluded by which the planters guarantee a m mum fortnightly shipment of 500 tons of tea by each steam The first steamer to leave the port was the *Clan Menz* which took away over 13,000 chests of tea, and it has b arranged that two more steamers are to sail from the p during the present month, it is probable that this route be largely resorted to in future, as the tea is conveyed f the heart of the tea districts of Sylhet and Cachar right alo side the steamer, the Assam-Bengal Railway having c structed sidings from the Chittagong station to the port that the trains carrying the tea go direct to the port, and placed in commodious goods sheds on the jetty pending arrival of the steamer. The jetty is fitted with the la pattern of hydraulic cranes, so, that the cargo can be wor very rapidly. The great advantage of the Chittagong ro for tea to be shipped direct to London is that the te carried direct to the seaboard without any transhipment t minimising the risk of any damage in such a wet country Assam ; and there are no charges incurred for conveying tea from the terminal station to the docks, as in Calcu At present the rate of freight is five shillings per ton over Calcutta rates, but this is merely a temporary arrangem and subject to revision should the success of the route established.

GENERAL ARTICLES.

THE BRITISH EXHIBITION IN ST. PETERSBU

ITS VALUE TO THE TEA-GROWER.

This exhibition has not yet aroused the attention it deserve this country, and on that account it is fortunate that circumsta will probably prevent its being opened till next season. For t is no question of its importance to British producers and ma facturers as a means of bringing before the people of Ru commodities which we in Great Britain and the Colonies make they require. In particular the exhibition will be the most fav able occasion yet offered of bringing Indian and Ceylon teas to notice of Russian consumers. Already there is a rapidly incr ing trade done in tea between India, Ceylon, and Russia, but t is ample room for a large development of consumption of Brit grown teas in the Tzar's dominions, and it is to be hoped producers and merchants will bestir themselves to take advantage of the opportunities presented by the exhibition. scheme was originally orgainised by the Countess Schouvaloff, obtained the interest of the Tzarina from the very start in success. Count V. N. Lamsdorf, Minister of Foreign Affairs, up the project, and a strong Russian Committee was at once for with an Advisory Committee in London to assist. The Tzarin is understood, has a great desire to foster the developmen British trade in Russia, and hopes by means of this exhibitio draw the two nations into a close bond of commercial interest, so advance the interests of peace. Germany, Hungary, Fra and Switzerland are all steadily pushing their way in Russia, Russia is willing enough to increase her trade with us also, conclusively proved by the efforts of the Russian Governmen Glasgow this Summer, and the splendid display it is making at exhibition in that city. Mr. Renton has been instructed by Thirty Committee in Ceylon to make provision for the Colo representation in St. Petersburg, and a final agreement betw him on behalf of Ceylon on the one hand and the Russian C mittee on the other was sent off to St. Petersburg for signa a few days ago. If planters co-operate with him as they ou Ceylon should make a far better display of its staple produc the Tauride Palace in St. Petersburg next year than it did Summer at Paris. The Ceylon Court at the Paris Exhibi though very fine from an artistic point of view and an excel representation of the Colony's gems, natural history and picture

activeness, was not a good advertisement of its commerce. had not the prominence it ought to have had as the great ıstry of the island, and we venture to say that had the commer- aspect of Ceylon been more studied a much greater result as he consumption of Ceylon teas in France would have followed. he Tauride Palace, lent by the Tzarina for the exhibition, is a dsome building, surrounded with spacious grounds. It has been nd, however, that none of the entrances are large enough to it some of the British machinery, and consequently it has been ded to build two annexes in the grounds connected with the ace by covered ways. The main building will be kept for ibits other than machinery. By the time the annexes are ready, ever, it is expected the Baltic will be closed, and as Spring, n ships would be able to carry freight once more to Russia is dead season at St. Petersburg and everyone is out of town, it is ed the exhibition may have to be postponed till the early umn of 1902. The delay will not, however, be too long for in- ling exhibitors and will allow tea exhibitors in particular to ect some of the errors that weakened their success in Paris. example, all directions on tea packets ought to be in Russian well as in English. The failure to have the instructions for king tea on the sample tins at Paris printed in French as well as glish was a noticeable blunder at several of the tea stalls. It is e that tea making is understood in Russia while it is not in nce. Still attention to such small details spells success. A e display of photographs of tea estates and work at the factories ht be shown with advantage in Russia and tea served in the sian fashion ought to be a distinct feature at the Ceylon sec- of the St. Petersburg exhibition. Other suggestions will no bt occur to Mr. Renton and the Ceylon planters, ere the time sending in exhibits, and we trust that the exhibition in the ride Palace will prove an immense impetus to the growing trade ween Ceylon and Russia.—*Tea.*

HAT A PROTECTIVE TARIFF DOES FOR THE UNITED STATES.

Apropos of the current discussion anent Differential Duties quote the following from the *American Grocer:*—

he following table, from the annual report of the American n and Steel Association, shows the production of tinplate and neplate in the United States during each calendar year from 2 to 1900:

	Long tons.		Long tons.
2	18,303	1897	256,598
3	55,182	1898	326,915
4	74,260	1899	360,875
5	113,666	1900	302,655
6	160,362		

he following table shows the imports of tinplate into the United tes in each calendar year from 1890 to 1900:

	Tons.			Tons.	
0 ...	329,425	$23,670,158	1896 ...	119,171	$6,140,101
1 ...	327,882	25,900,305	1897 ...	83,351	4,366,828
2 ...	268,472	17,102,487	1898 ...	66,775	3,311,658
3 ...	253,155	15,559,423	1899 ...	58,915	3,738,567
4 ...	215,068	12,053,167	1900 ...	60,318	4,617,813
5 ...	219,545	11,482,380			

he following table shows the exports of tinplate from the ited States in the ten months ending with April, 1899, 1900, 1901, respectively:

	Quantity exported. Pounds.		Quantity exported. Pounds.
9	183,955	1901	1,306,100
0	275,900		

n 1890-92, the tariff-for-revenue advocates and apostles of free de ridiculed the attempt to establish a tinplate industry in this ntry. No end of ridicule was hurled against the infant industry l its advocates. The above record tells a wonderful story. The ne production in 1900 was within 26,780 tons as large as the al imports in 1890. The industry has given employment to an ny of men, and been one factor in making the present era of sperity. And now the United States begins to make a record exports of tinplate, and probably in a few years will sell the ited Kingdom a good part, if not all, its requirements.

CULTIVATION OF COCOA IN THE WEST INDIES.

To the active young man possessed of a limited amount of capital who is looking for an occupation as well as an investment, in the Lesser Antilles or in many parts of Venezuela, the cultivation of cocoa is at the present time the most inviting of the agricultural pursuits. The island of Trinidad, which is the one most familiar to the writer, produces cocoa of a quality second to none, and only equalled by that grown in the vicinity of Caracas, and always brings the highest price in the London market. Considerable patience is required to grow it from the seedlings, as it takes five or six years of cultivation before there is a harvest worth mentioning, and seven or eight years before a full crop can be realized, but when the trees are once full grown they will continue to bear fruit for an almost indefinite time.

Cocoa has been grown on this island as early as 1700, in considerable quantities, and there is so much of its area under cocoa cultivation that it is always possible to purchase bearing plantations at a price that would make a paying investment for the man who will give his own time to the management. Want of proper care seems to be the cause of more failures than the lack of the trees to produce paying quantities, or the market price of the product.

The cocoa tree seems to flourish best in the rich and well-watered soil along the banks of the many ravines that traverse the uplands of the island. where they are more or less protected from the violent storms. The small plants are reared in nursery grounds until they are ten or twelve inches high, when they are planted in rows like a northern fruit orchard. The cocoa tree must always be protected from the powerful rays of the tropical sun, that seems to blast the fruit. When young, they are shaded by growing bananas or plantains adjacent to the young tree; these grow very rapidly and furnish the required protection, as well as a source of some profit, while the cocoa is too small to bear. But it is necessary to provide for a future shade—for the cocoa after three or four years outgrows the banana—and for this purpose a tree known as the "Bois Immortel" (sometimes called the "Mother of the Cocoa") is planted at the same time as the cocoa tree; this is a tall tree with high and spreading branches that form a sort of canopy over the entire cocoa plantation and give it the required shade, making it resemble an open forest. The coffee tree, which is much smaller than the cocoa, is often grown in small quantities among the cocoa.

The cultivation of cocoa consists largely of draining the land, keeping down the undergrowth of bush and weeds, and trimming the trees. The flowers occur in clusters on the main branches and on the trunks of the trees, usually only one of each cluster reaching maturity. The fruit is a hard pod six or seven inches long, resembling a cucumber, growing from the trunk or large branches, and looks very much as though it were artificially attached. Buds, blossoms, and fruit, in all stages, occur side by side, and ripened fruit is harvested at all times of the year. The main crop, however, matures in the dry season and is usually harvested in February; only small quantities ripening during the remainder of the year.

The pods each contain five rows of seeds or beans, quite similar to a large, thick Lima bean, embedded in a pink, acid pulp. These seeds are the cocoa beans of commerce. The harvesting consists of cutting off the mature pods by means of a knife on a long bamboo pole, gathering them into heaps on the ground, where they are allowed to lie for about twenty-four hours. They are then cut open with a cutlass, the seeds and pulp coming out in a mass; these are carried to the dry-house. The dry-house consists of a smooth, tight floor, or platform, set on posts at a height of four or five feet above the ground to allow a free circulation. A light iron trail is spiked on each side near the edge and extending one-half the length of the floor beyond each end: a corrugated iron roof, with its eaves level with the floor, covers the platform. This is carried on a frame, divided in the middle of the floor, mounted on small car wheels travelling on the rails. The drying of the beans is accomplished on this floor by spreading them over it and exposing them to the sun. The roofs are to protect them from the rain and dews, and are kept wheeled back on the extended tracks when the sun is shining. As soon as the beans reach the dry-house, they are placed in the "sweat-box" or pit, where they are closed up tight and allowed to ferment for some time. This process requires very careful attention to prevent the temperature from getting too high and to stop the fermentation at the proper time to insure the proper flavor, as well as the fitness for the preservation of the beans.

The next process is the drying, which is accomplished by spreading the beans in a layer over the platform and drying them in the sun. Labourers are kept constantly stirring them, while exposed to the sun, with a wooden rake, so that they will dry evenly. Each morning, during the early stages of the drying process, the beans are gathered into a heap in the middle of the floor and given a thorough mixing. This is sometimes accomplished by the labourers mixing and kneading them by treading them with their bare feet. This is known as "dancing the cocoa" and renders the beans smooth and uniform in color. It usually requires ten days or two weeks to finish the drying, depending on the weather; a great many attempts have been made to dry the beans artificially with more or less satisfactory results, but no general satisfactory drier has yet been designed, and the open dry-houses are in general use throughout the island. It only remains, however, for some ingenious mind to make a careful study of the requirements. The most difficult problem seems to be to get an artificial drier that will give the proper color to the dried beans—the brick-red color, and the property of retaining it is a very important feature in the cocoa market. The dried beans, when ready for market, are put in canvas bags holding about 150 pounds, and the name of the plantation stenciled on the bags, these names or brands at times becoming very prominent in the market for the quality of cocoa the plantation is reputed to produce.

The manufacturing, which is invariably done in northern factories, consists of roasting the beans in a revolving cylinder; this develops the aroma and fits them for crushing. After the beans are crushed they are screened to separate the "nibs," or crushed nuts, from the shells. The nibs are then ground to a fine meal; this is put in sacks and put in a powerful press, where it is subjected to heat and pressure, and the fat, known as "cocoa butter," is squeezed out, and the hard substance left in the sack has only to be broken or powdered to become the pure chocolate, and this more or less adulterated is the chocolate of commerce.—*Scientific American.*

RUBBER PLANTATION ON THE SEKONG RIVER.

Mr. Henry Walker writes to the *British North Borneo Herald*:—

On the 28th May I accompanied Mr. W. E. Roberts the General Manager of the North Borneo Trading Co., to the Pará rubber plantation opened by Mr. Roberts for the above Company at the end of 1898 making the age of the oldest trees a little over 2½ years. Mr. Roberts has imported in all about 40,000 plants besides seed which last was a failure. About 30,000 plants are now living. The girth of the older ones at three feet above the ground average about 7½ inches and the height must be 20 to 25 feet. I walked round the whole plantation which lies on the right bank and extends up the river being rather longer than broad. The soil is a good free soil. remarkably friable when exposed to the sun. Some drains had to be cut but, generally speaking, the ground is free from wet. I remarked there were no vacancies among the older trees which Mr. Roberts said was to be accounted for by careful supplying from the outset. I did not see a single sickly tree. I noted trees without leaves but new branchlets were forming and the stem was quite healthy. Among the latter plantings I noted some cuttings which I was told do well. Very little damage has resulted from deer which are scared away at night by watchmen. Looking to the future this promises to be a valuable Estate from the rubber which will begin to be collected in a year or two and from the seed which may be expected in quantity in the seventh year and will probably find a ready market. There is a large extent of flat land on the Sekong belonging to the same Company and I should say it would be a good thing, having such soil, if the Company while extending their rubber plantings up stream, would plant cocoanuts down stream and thus have two good and valuable strings to their bow.

I saw some cuttings of native Borneo guttas which were doing very well and I was informed that a plantation of Kalapei gutta of 4,000 plants had been made by the same Company. We took some very successful photos of the Pará rubber which I shall be glad to show.

COFFEE–TEA.

A correspondent writes to the editor of the *Queensl Agricultural Journal*:—

As you invited experiences *re* coffee-tea in the *Queensl Agricultural Journal* of March last, I am very pleased to send mine. I acquired it when on a selection, on the road to Emu P from Rockhampton. Having then an experimental plot of ab twenty coffee-trees growing, and reading that tea made from co leaves dried was very highly esteemed in some coffee countri determined trying it for myself. First, I dried leaves in the but the product was disagreeably tasted when tried. Finall dried some leaves in a camp-oven, slung so as to swing over a keeping them constantly stirred until they were dry and fa crisp. Tea made from them was much enjoyed by all who ta it; and one who did was the editor of the Rockhampton Bull at that time, but dead now for years past. He greatly enjoyed and my wife and I liked it better than any tea we could purch I intend growing a few coffee-trees, for the leaves only, where I now, as I am sure if it be only dried properly we could dispe with tea, provided we had sufficient coffee leaves to make our tea from. To dry it properly is everything. It must be d quickly, and done to a turn; then it has an aroma, and flavour any lover of tea would enjoy.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *6th July,* 1901.—Ninety days' bank rate on Lon opened on Monday 1st inst. at 11⅛d. rose to 11½d. on Wednes and closed this evening at 11¼d.

Too many balance sheets are yet missing, especially for the Paulo and Santos branches, to be able to speak with certainty, so far as can be judged from those to hand, although no dou good deal of liquidation has been effected in the sense of payn of differences or contango, the bills have not been delivered the *descoberto* is as big as ever. It is possible that the São Pa and Santos balance sheets may modify matters somewhat, bu far as it is possible to judge at present there seems little cha of rates improving for some time to come. It is true that coffe now arriving in large quantities, but sterling prices are so and the amount of money in banks waiting to take so large, there does not seem to be much hope of a surplus. Rub shipments are almost nil and in fact, the only considerable sou of bills at present is Coffee, both Sugar and Tobacco bills be almost exhausted for the season. The question then arises coffee almost alone supply the requirements of Brazilian marke About 1,000,000 bags may be expected to be shipped this mo yielding £1,500.000. Supposing other exports to reach f £600.000 to £800,000 the total would be some £2,000,000 £2,300,000. Of this trade requirements absorb some £1,800 for payment of Imports and Government takes £300,000 m making £2,100,000 in all. So that on the best of hypotheses margin of £200,000 left over for private remittances must be v narrow.

Where the bills are to come from to cover the overdraft, i not easy to see Until the banks can get in some of the bills standing, it does not seem likely they will commence draw again on a large scale, and unless they do, however anxi speculators may be to work the oracle once more, they wil unable to do so.

The value of coffee shipments during the week ended July amounted to £234,000 as against £210.000 for the previous w and £236.000 for the corresponding week last year.

Rubber shipments at Pará and Manáos were to the value about £90,000, the stock at Pará being now reduced to 93 tons.

Entries at Rio and Santos during the week ended 5th J showed a decided advance, an indication that the new season commenced in earnest. Compared with the previous week, t show an increase of 60,453 bags and of 61,111, compared with corresponding week of last year.

The market was much more animated this week than it has b for sometime, there being a lively local demand for cover

rpose that kept prices well in advance of European quotations. e quote 6$700 to 6$900 for N. 7 and 6$800 to 7$000 for colory ffees. As far as export is concerned, however, these prices are rely nominal and out of all parity with orders. European rkets are very weak and indeed, refuse to buy at all except on ir own terms, which the weakness of exchange here allows them do without much reducing currency prices. It seems evident t consuming markets intend to regulate prices so as not to eed the minimum indispensable for coffee to come down.

The quality of entries of coffee continues poor with a large portion of badly dried coffees. The weather is reported to be cellent throughout the interior with sharp snaps of frost in eral districts.

THE HOMŒOPATHIC POOR DISPENSARY.

KANKANADY P. O., MANGALORE.

Rev. Aug. Muller, S.J., the Manager, has issued the follow- g notice to customers and patients :—

Whatever profit made by the sale of medicines in the H. P. Dis- sary, as you are probably well aware, is all applied to the intenance of the lepers. indigent sick, and aged and infirm in my pitals and asylums. The annual income, however, is barely ficient to cover all the expenses, hence there is no margin left to vide larger and better accommodation, of which there is urgent d. In this emergency I have resolved to throw myself on the rity of my friends, patients and customers to beg them to come my aid. There are over twelve thousand names of patients or tomers on the books of the Dispensary, and if each one would tribute the small sum of four annas the amount realised would sufficient to meet the present requirements. Those who are e and willing to contribute more liberally are free to do so. ey might ask also their friends and acquaintances to contribute ir mite, and send in their names and contributions with their i. A list will be printed at the end of the year, with the name l amount contributed or collected by each one, a copy of which l be sent to every subscriber. Contributions may be sent in tage stamps. "Blessed is he that understandeth concerning needy and the poor: the Lord will deliver him in the evil day." *alms*, XL: 2.)

LTIVATION OF SEEDS FOR OIL EXTRACTION.

Mr E. Wilson, Engineer to Messrs. Finlay, Muir & Co., Katugastota Estate, writes to the *Times of Ceylon* with erence to certain questions put by a correspondent of that per :—

eeing that there are some planters thinking of going in for the tivation of sunflower seed (for oil extraction) I thought it might be out of place to give a few particulars with reference to the wing and treatment of the seed to be converted into oil.

think a valuable vegetable oil industry might be carried on in lon if the planters would go in for the cultivation of the various ds of oil plants, such as castor oil, sunflower seed, pea nuts, stard, cotton seed, gingelly, and even olives, I think, might be wn to advantage.

have extracted a very large quantity of oil from the above iety of seeds, grown in Victoria by the Department of Agricul- e, in whose services I was for several years as manager of the artment's mills.

To encourage the oil seed industry the department gave a bonus 2 per acre to farmers to cultivate the seed for three years, and racted the oil for them at a nominal cost, refining and packing oil ready for the market.

f the Ceylon Government would do likewise, the planters would y be too glad to try some new industry to help them over the sent very hard times.

unflower seed 8 lbs. of seed per acre is enough to plant, the oil e is excellent as a food for horses, cattle, pigs, etc., and is worth nt £6 per ton for feeding purposes.

he best to grow for oil is the small black variety (grandiflora) t yields the larger percentage of oil, 20 to 25 per cent. of good almost equal to the best olive oil, it is a first class table oil and there is always a good market for it if properly refined. When in Colombo I could let you see samples of the above oils if you care to inspect them. I hope to be down in a week or so.

Since writing the above, I see another correspondent asks information about the castor oil plant. There are two kinds of this seed that I have manufactured into oil, the large and small variety. The small is the best, as it contains from 40 to 42 per cent. oil, the price of the seed varies from Rs.5 to Rs.6 per cwt. It can be obtained in Bombay, and is grown in the Gujarat district; castor cake is worth from Rs.40 to Rs.50 per ton, it is an excellent manure, as it contains a large percentage of nitrogen. It should find a ready market in Ceylon.

For "Palma Christi's" information:—

(1) In my opinion it is better to put in seed, say, 3′ x 3′—two seeds in a hole above 2.

(2) Bombay, that which is grown in Gujarat district is the best.

(3) After the seed is ripe enough, it is cut off in clusters, allowed to dry and then trampled on by bullocks, same as paddy, then collected and cleaned.

(4) About 40 bushels per acre, or more on good soil.

(5) There is a good market, both in England and France, for good castor seed, also oil, seed is worth, say, in Colombo from Rs.5 to Rs.6 per cwt. Castor cake should bring at least Rs.40 to Rs.50 per ton.

(6) By hydraulic pressure, a small plant could be got for £500 or £600, but this would depend on what power could be got on owner's property.

(7) In my opinion plants grown as an annual give best value. After seed is sown, there is little or no attention required until seed is ready for plucking.

(8) The plants would certainly crop best grown alone.

THE COFFEE CROP IN COORG.

An estimate of the coffee crop in Coorg for 1901 has been received from the local Administration, and the figures are appended, with the estimates of 1900, for comparison:

	1900. tons.	1901. tons.
Estimated yield (2 cwt. an acre for Europeans in 1900 and 1½ cwt. in 1901)	2,751	1,988
Estimated yield ½ cwt. an acre for natives in 1900 and ½ cwt. in 1901)	1,120	701
Total ...	3,871	2,689
Estimated average yield per acre of ordinarily well cultivated coffee in full bearing ...	2¾ cwt.	2 cwt.
Export of coffee taken from the toll gate returns	2,366 tons	3,665 tons
Average annual export of coffee in the ten preceding years	3,326 tons	3,358 tons

Taking the average crop to be about 4,560 tons, the estimate of 2,689 tons for the present season represents about 59 per cent. of the average against 76 per cent. in 1900.

TEA DUTIES IN THE OLDEN DAYS.

It may interest the planting community who are anxious to see the British tax on tea reduced if not abolished altogether to know that proposals that were made over a century ago with the same object. In those days the tax was very heavy, and in consequence there was a great deal of smuggling. The *London Chronicle* of May, 1784, published the "Third Report from the Committee appointed to enquire into the illicit practices used in defrauding the revenue." The Committee considered whether the entire abolition of the tax would not be compensated by resulting advantages. "Such a measure," they reported, "would undoubtedly deprive the smuggler of the chief inducement to his practices, so injurious to fair trade and regular commerce, so pernicious to the manners and morals of the people, and so destructive to all good government in its consequences, it would also prove an effective relief to the East India Company, and would be particularly well-timed as no less than twenty ships are expected to arrive within a short time from China; and as it is estimated that above twenty millions of

pounds of tea may be in the Company's warehouses, unsold, previous to the next September sale. The future and permanent advantages accruing from such a measure both to that Company and to the general navigation of these kingdoms; and also by retaining a very considerable sum which is now annually remitted to the Continent of Europe, are too obvious to be described." "It seems reasonable to presume," the Committee continued, "that under such a plan the tea legally consumed in Great Britain would not be less than 13 millions of pounds annually; at present it is rather less than six millions of pounds. The legal import of tea, upon such an alteration, would employ 38 large ships, and about 4,500 seamen constantly in the China trade, instead of 18 smaller ships and about 2,000 seamen." The way in which the Committee proposed to raise an alternative to the tea tax is very curious. "It has been suggested to your Committee that if an account were taken of all the houses in the kingdom liable to the window tax, which consume tea (and there are few of that description in which tea is not consumed), the present produce of the tea duties might be assessed and rated upon the windows of such houses." It was pointed out that this could be done with little extra trouble and expense, and the result would be that "the whole family within such houses would purchase their tea at about one-half the present legal price; and even those who smuggle it at present would, in that event, have it much cheaper and without fraud; servants and the lower class of people would have tea free of duty." Houses under seven windows each would be assessed at 10s. 6d.; seven to ten windows, 16s.; and so on up to houses of 20 windows and upwards, which might be assessed at 70s. It is curious to notice that the taste for different kinds of tea was assumed to be regulated by the number of windows in the tea-drinker's house. Persons having houses containing from seven to ten windows were supposed to drink Bohea, eleven to thirteen windows Congou, Singlo and Hyson; while those with fourteen windows, upwards could drink nothing but Hyson. It was also pointed out that a mere reduction of the tea duty might reduce the profits of smuggling and lead to increased consumption of tea, which would more than make up for the revenue lost by the reduced duty. It is, perhaps, unfortunate for modern tea-growers that they cannot plead extensive smuggling as justifying their demand for reduction of the duty.

THE YEAR'S COFFEE MOVEMENT IN THE U. S., 1900–1901.

The trade year ending June 30 is notable says the *American Grocer* for the heaviest Brazil crop on record; deliveries below those for 1899-00 and 1897-98; an increase in visible supply of 1,027,066 bags; enlarged sales on the New York Coffee Exchange; lower prices.

The actual deliveries of coffee in Europe and the United States have been as follows for the past ten years:

	United States. Bags.	Europe. Bags.	Total. Bags.
1891-92 ...	4,411,832	6,392,719	10 804,551
1892-93 ...	4,398,549	6,547,679	10,946,228
1893-94 ...	4,298,845	6,272,688	10,571.533
1894-95 ...	4,395,146	6,816,905	11,212,851
1895-96 ...	4,339,128	6,803,685	11 142,813
1896-97 ...	5,088,594	7,155,610	12,244,204
1897-98 ...	6,036.311	8,535,591	14,571.902
1898-99 ...	5,682,636	7,798,268	13,480,904
1899-00 ...	6,035,623	8,937.876	14,972,699
1900-01 ...	5,843,883	8,486,042	14.329,925
Grand total for ten years ...			124,277,610
Yearly average ...			12,427,761

The above figure show that during three years—1890-91 to 1892-93, inclusive—the yearly deliveries in Europe and the United States averaged 10,107,437 bags; and for the three years ending June 30, 1901, the annual average was 14,261,133 bags—a gain of 4,153,696 bags, representing an increase of 41 per cent. On July 1, 1890, at the beginning of the period, No. 7 Rio coffee sold at 17½ cents, and as high as 19¼ cents, or nearly three times the present price.

From 1890-91 up to 1896-97, coffee ruled high in cost, and if this fact is taken in connection with the above table of deliveries, we note that for five years—1891-92 to 1895-96, inclusive—the delive were practically stationary, and did not vary much from the ye average of 10,935,595 bags. At the commencement of the t year beginning July 1, 190-, No. 7 Rio sold at 815-16 cents up 9⅞ cents; at the close—June 30, 1901—at 6 1-16c. During past four years of low cost, deliveries increased greatly, hav averaged 14,333,825 bags annually, against 11,292,850 bags as yearly average for the previous four years of higher cost. Evide consumption rises and falls with the rise and fall of prices.

The exports from Rio and Santos for the past ten years, enc June 30, compare as follows:

		To U. S. Bags	To Europe, etc.—Bags.	Tot. exp Bags
1891-92	Rio ...	2,536,000	1,148,000	7,267,0
	Santos ...	997,000	2,556,000	
1892-93	Rio ...	1,972,000	953 000	6,295,0
	Santos ...	1,102,000	2,268,000	
1893-94	Rio ...	1,641,000	606,000	4,016,0
	Santos ...	797,000	972,000	
1894-95	Rio ...	1,816,000	687,000	6,401,0
	Santos ...	1,347,000	2,551,000	
1895-96	Rio ...	1,499,000	899,000	5,515,0
	Santos ...	1,050,000	2,067,000	
1896-97	Rio ...	2,342,000	1,084,000	8,360,0
	Santos ...	1,565,000	3,369,000	
1897-98	Rio ...	3,007.000	1,562,000	10,584,0
	Santos ...	1,356,000	4,659,000	
1898-99	Rio ...	2.364,000	874,000	8,754,0
	Santos ...	1,987,000	3,529,000	
1899-00	Rio ...	2,376,000	905.000	9,019,0
	Santos ...	1,619,000	4,119,000	
1900-01	Rio ...	1,840,000	832,000	10,504,0
	Santos ...	3.107,000	4,725,000	

The above shows a total export in ten years of 76,715,000 (4,512,647 tons), or a yearly average of 7,671,000 bags (451 tons).

Out of total deliveries in Europe and the United States for past ten years, the Empire of Brazil furnished 62 per cent. of total. During 1900-01 the shipments from Brazil were 75 per c of the total deliveries in the United States and Europe for same period, against 50 per cent. for the pervious ten-year per The figures show the tremendous increase in coffee productio Brazil, and how Rio and Santos dominate the coffee market the world.

Deliveries in the United States for the year ending June 1901, were 5,843,883 bags, of which Brazil supplied 4,722,919 b or 80·8 per cent.; all other countries, 1,120,964 bags, or 19·2 cent. Evidently a good deal of Santos coffee masquerades other sorts.

The Brazil crops for the past ten years compare as follows:

	Bags.
1891-92 ...	7.397,00
1892-93 ...	6,202,00
1893-94 ...	4,309,00
1894-95 ...	6,695,00
1895-96 ...	5,476,00
1896-97 ...	8,680,00
1897-98 ...	10,462,00
1898-99 ...	8,771,00
1899-00 ...	8,959,00
1900-01 ...	10,927,00
Total crop for ten years ...	77,878,00
Average per year ...	7,787,80

The map which accompanies this article shows the coffee-proc ing area of Brazil; the area of decaying plantations; those in bearing; new districts, and the territory capable of developm and which will insure a supply great enough to meet the wor wants for many years to come, subject to the influences which markets of the world exert in stimulating production by h prices and checking the development of the industry by price low as to render the industry unprofitable.

In 1840 Brazil exported 1,000,000 bags; in 1900-01 over 10,000, bags. That country has enough uncultivated coffee land not planted to produce 20,000,000 bags annually. It is probable t coffee-planting will continue to expand, even on the present b of cost. Low prices will force lower cost of production

sportation. They do not appear to be low enough to check industry in Brazil as yet. The *Brazilian Review* says:

At 5 or 6 cents per pound coffee may not leave much profit to planters, but before Brazilian coffees could be driven for the kets, there are wide margins yet to be reduced—not only in prime cost of production, but of freight and handling. Should ensive cultivation prove too costly, it must be made intensive, labour replace planters as proprietors, as was the case with on in the Southern States. But, come what may, coffee will er cease to be profitably produced, because Brazil possesses an ost unlimited area and climate suitable for growing coffee such o other country enjoys."

COFFEE EXCHANGE TRANSACTIONS.

he total sales in the New York Coffee Exchange for the year ing June 30, 1901, were 7,383,000 bags, against 5,879,500 bags 1899-00, 4,060,500 bags in 1898-99, 4,277,500 bags in 1897-98, 3,000 bags in 1896-97, 3,426,000 bags in 1895-96, 4,351,000 bags 1894-95, 3,963,500 bags in 1893-94, 7,911,500 bags in 1892-93, 9,000 bags in 1891-92, 7,700,750 bags in 1890-91, and 13,011,500 s in 1889-90.

he most active month in the year was July, 1900, when 4,500 bags were sold; the dullest, May, 1901, with sales of ,000 bags. The highest price paid was 9.20 cents in July for rch or May delivery; the lowest, 5 cents in June, 1901, for June July delivery.

he average monthly price of No. 7 Rio for the trade year ing June 30, 1901, and for the year, was as follows:

900.	Cents.	1901.	Cents.

DISTRICT ASSOCIATIONS.

ASSAM BRANCH INDIAN TEA ASSOCIATION.

ANNUAL MEETING.

The following are extracts from Minutes of the 12th Annual neral Meeting of the Assam Branch Indian Tea Associa- held at the Jorhat Club on the 20th ultimo :—

CHAIRMAN'S ADDRESS.

The Chairman (the Hon'ble Mr. J. Buckingham,) then addressed meeting as follows:—

GENTLEMEN,—I have looked forward to this meeting with much asure, hoping that it might be the most representative one we e ever had. I say this for the sake of the tea industry, for if r we have been in a position demanding unity of purpose, and ion it is the present. There are very many points combined ion can carry, and it is useless to say we have no power; that are worked from Calcutta, and that the Agents do just what y like, and if we vote against them, we stand a chance of losing billets. I tell you there is not a firm in Calcutta that does not nire a man for having views of his own, and we are met here lay for you to express them We cannot expect to be all of one nd, but what I say is this, if a resolution is passed, it is no use minority saying they will never agree, they will have their n sooner or later, in fact, unity is a matter of continually giving, taking, and if we adhere to these conditions, there will not be tronger body of men in India than planters. There are subjects ich will be introduced at this meeting, which I am exceedingly ry we have to touch on, but I have had so many communications he absolutely uncalled-for interference in the matter of inspec- of gardens, and the trouble and worry planters have been put to, that unless something is done, and that soon this systematic bullying (for I can call it nothing else) will become unbearable. (The above remarks were received with unanimous and prolonged applause and after quiet had been restored again the Chairman again rose first referring to the financial position of the Association as follows.)

As usual the first subject I must allude to, are the accounts. You will remember that last year we passed a resolution agreeing that they need not pass through the hands of an auditor, and I quite agree with this view, they are particularly simple, and can be well understood by all, in the form our Secretary submits them. On the 31st December, 1900, we had a balance at credit of Rs.10,968-14-1, and on the 31st May Rs.12,103-13-8. This is a somewhat smaller balance than the previous year, but our disbursements on some important items were higher, as the following summary will show:—American Market, 1899-1900, Rs.2,000, 1900-1901, Rs.2,500; Paris Exhibition, 1899-1900, Rs.1,000, 1900-1901, *nil*; Viceroy's Visit, 1899-1900, Rs.1,013-8-6, 1900-1901, *nil*; Scientific Officer, 1899-1900, Rs.400, 1900-1901, Rs.2,000; Models for Museum, 1899-1900, *nil*, 1900-1901, Rs.1,208-1-0; Total 1899-1900, Rs.4,413-8-6, 1900-1901, Rs.5,708-1-0.

or an excess in 1900-1901 of Rs.1,294-7-6. I am sorry to see there are still many subscriptions in arrears, the sum total of these amounted on the 1st July to Rs.1,349-10-0. Since our last meeting four gardens have withdrawn. To make up for the following gardens have joined. In Dibrugarh Singlijan, acres 250; in Mungledye Orangajuli, acres 571; in N. Lakhimpur Silonibari, acres 1,000; total acres 1,821; or a total gain of 596 acres.

After some discussion Mr. F. E. Hulbert rose and moved the accounts be passed; seconded by Mr. J. Henderson.—Carried *nem. con.*

WAGES OF TEA GARDEN COOLIES.

I have already addressed you on the subject of the above resolution, but I have still much more to say. The Tea Association, Calcutta, wrote asking for our opinion on bonuses not being included in wages, and also alluded to some strong, and extraordinary expressions in this resolution of our Chief Commissioner's. It is quite impossible, gentlemen, to disguise the fact that the resolution is couched in terms calculated to cause irritation, and it most certainly has done so. (Hear, hear.) I had expressed a sincere hope that we should leave the "somewhat stormy agitation" (the words used by His Honor the Chief Commissioner) behind us in Calcutta, and that, during the remainder of the period Mr. Cotton might be with us, we should live in harmony, and good understanding; the contest was over, and I saw no use in keeping up any ill-feeling, that might have arisen during the controversy. In fact, I sincerely hoped the hatchet was buried. We naturally resent suspicion, and we should be unworthy of the name of British subjects, if we did not do so. (Hear, hear.) From the threat Mr. Cotton holds up before us, he evidently contemplates that planters will take the law into their own hands, and refuse to submit the return called for, he says, "the return is prescribed under Section 122 (1) of Act VI. of 1901, and the failure to submit it will be punishable under Section 185 of the Act." I think there was no occasion whatever to make this threat, we are a law-abiding community, and there is no occasion for the Chief Commissioner to flourish his penal weapons in our faces. (Several members at this juncture again expressed strong feelings of resentment at the form and general tone of the resolution.) In 1883, when there was a certain amount of dissatisfaction expressed about statistics, and the number we had to send in, Sir Charles Elliot observed "that he felt quite confident such an enlightened body of men as the managers of gardens would readily assist him in collecting statistics; if they were to refuse, the only alternative would be to appoint a separate Government Agency to make enquiries on the Estates, and draw up the figures, and all managers whom Mr. Elliot has consulted have agreed that it is more convenient for them to do the work through their own agency." Would any former Chief Commissioner have introduced a new form of statistics without first of all getting the opinion of his District Officers, and asking them to consult representatives of the tea industry? I think not. (At this point again the Chairman's remarks were drowned in general expressions of agreement with his last remark, and resentment at the unnecessarily suspicious and irritating form of the resolution under discussion.) It seems to me that every Inspector is to proceed to a garden with a lurking suspicion of inaccuracies if not of falsification of returns, etc.:—Although the Chief Com-

missioner owns that "low wages may be due to a variety of causes, it may be due," he says, "to a large number of labourers being absent without leave, etc.," still, he continues, "that Inspectors should always have their suspicions aroused when the number of half haz : or of absentees is considerable," why should their suspicion be aroused when the number of absentees is considerable? How many of us would like to have a labour force, so as to be able to take no notice whatever of absentees, but let coolies work when they like, and do a half, or even quarter haz, : if they preferred it? It has been shown over and over again that the average rate of wages on any particular garden is not a criterion of the condition of coolies on that garden! A Chief Commissioner said in his report that many of the circumstances which lead to a low average rate of wage are such as tend to make a garden popular with coolies. Another Chief Commissioner in alluding to inspections said, "it is not intended that the Inspecting Officer should put the questions himself to coolies, and thus seem to invite complaints, but rather that he should state the results of his own observation," and I maintain this is the only way to arrive at any satisfactory conclusion regarding the real condition of labour. The "Outrageous Custom" (so called by the Chief Commissioner) of debiting against a cooly Rs.5 paid for deserters recovered is rather strong language, and, as for deducting it from his wages until the amount is paid, which the Chief Commissioner says is not uncommon, I may affirm that such a practice is most uncommon, the sum may nominally be against the man's name, but in many cases it is eventually debited to profit and loss account. I feel quite sure that if the Chief Commissioner had suggested to us in a friendly spirit that he thought it was hard on the new cooly to be debited with such a charge, there is not a planter in the Valley who would not have acceded to his wishes. Any impartial person reading the above mentioned resolution would undoubtedly say that it reflects discredit on tea planters generally. That there may be weak points in the tea industry, as in all other industries, we do not deny, but is it the right policy of an administration to publicly expose exceptionally solitary cases, which that administration is in itself all powerful to prevent? And thus to stigmatize an industry on account of the failings of the few, is neither just nor fair! Nor is it calculated to imbue us with the impartiality of the administration. (Cheers.) To a young inexperienced Officer encouragement is given to exact enquiries which do not bear on the working of the Emigration Act, and to facilitate vexatious complaints on the part of coolies, which not only disorganises labour, but weakens the authority of those in charge. (Prolonged cheers.)

Mr. J. Henderson, Chairman of the Nowgong Sub-Committee, after reading numerous letters (among others a most pertinent letter from Mr. Wood of Silghat) showing the unanimity of the Association on the uselessness of Statement A and the necessity of first having it amended so as to clearly show the wages and collateral means of livelihood of Act Labour, and pointing out that an amended statement on those lines submitted half-yearly would place the Local Administration in full possession of correct statistical data for the purposes of the Provincial Immigration report, moved the following resolution—

"That the Secretary of the Assam Branch Indian Tea Association be directed to write to the Secretary to the Chief Commissioner, and "clearly point out the grave objections to submitting a monthly statement in form A as prescribed in the Chief Commissioner's resolution No. 1165-73 R, dated 10th May, 1901; and that such statement if submitted in the prescribed form would be mischievous and misleading as it would not correctly show the wages and collateral earnings of Act Labour—apart from the fact that it will impose an excessive amount of clerical work on gardens, out of all proportion to the increased statistical accuracy aimed at—and that he do further submit that a half-yearly return showing the true wages and collateral earnings of Act Labour be substituted as meeting the exigencies of the case in the place of the monthly statement A not called for."

Seconded by Hon'ble Mr. J. Buckingham, C.I.E., and carried unanimously.

WAGES OF UNSKILLED LABOURERS IN ASSAM.

He said:—You will remember a short time ago I sent round a memorandum asking you to give me statistics regarding the wages of unskilled labour in your Districts in order that the statement made by His Honour the Chief Commissioner in Council *re* the above might be satisfactorily disproved, and the question set at rest. The Chief Commissioner gave great prominence to what he said was a "highly significant table" showing, as His Honour conte that "The average daily wage of an Act I labourer who doe tasks is 0-3-0. The daily average wage of an unskilled labo Assam is a little over 0-6-0 or more than twice as much T are facts, they speak for themselves, and comment on them is s fluous." Now, considering planters give employment to at lea per cent. of this rural unskilled labour, (a very small propo only going into the stations for employment on the Municipali I certainly think their dictum on wages is reliable. I have heard from every District in the Valley, and I am informed the rate of wages for unskilled labour is usually 0-3-0, but in or three Districts it is 0-4-0; where then does His Honour the C Commissioner get his statistics, from which he says: "These facts and comment is superfluous," he can hardly ask us to to "Prices and wages in India" for these statistics for Assam sent direct from the Chief Commissioner's own office. A Mr. Cotton can hardly take the temporary wage of unskilled la working on railway embankments for a few months in the year criterion. My colleague, Mr. Henderson, was very strong on point, and forcibly rejected the statement made by Mr. Cotto am condensing the replies sent to me, and when this is do should recommend that all the correspondence on the sub should be sent to Calcutta to be submitted to the Governmen India.

This was agreed to amidst considerable applause.

STATISTICS CALLED FOR BY GOVERNMENT OFFICERS.

The Chairman then continued:—

You are aware that we are continually having letters and cards from officials asking for various information and statis The frequency of these lately induced the Secretary of the Association, Calcutta, to address the Secretary to the C Commissioner on the subject, to which the following reply received.

"The Chief Commissioner regrets that the action taken unde circular by District Officers should have given rise to misun standing. Mr. Cotton is not aware of the object of the post- issued to Managers of Tea Estates in Cachar, and a report wi called for from the Deputy Commissioner of that District.

"The Chief Commissioner acknowledges the readiness with w requests for statistics, and information regarding the tea indu have been met by the Association, and by Managers, and Ag of tea gardens generally, and he is glad to accept the suggestio paragraph 4 of your letter, that requests for information, addre to the Managers of Tea Estates, should contain a statement the object for which the information is required, as to wh replies are compulsory or not, and, if compulsory, under what Instructions will be issued to District Officers accordingly."

THE TEA INDUSTRY AND THE PRESENT CRISIS.

Continuing the Chairman said:—His Honor the Chief Com sioner in his speech in Council appeared rather to ridicule the c we are now passing through, saying it could not be compared that of the sixties. He remarks that "the industry recovered that blow and it will recover from over-production also, as c industries have done, which have been stricken by the same ca the crisis from over-production will pass away as new market opened out, and the supply learns to adapt itself to the dema I would ask, and what are 50 per cent. of the Tea Gardens to the meantime while the "supply learns to adapt itself to demand?" I should rather have inverted it, and said until th mand adapts itself to the supply. It hardly looks like the su adapting itself to the demand when we see in Messrs. Gow, Wil report of the 7th June, that the imports of all teas into Lo during the season just closed, show an increase of 40 mi pounds over that of two years ago, in spite of the fact that C tea was five millions less. It is very easy for Mr. Cotton to sa industries have their ups and downs, but we know that the pr condition of tea has no precedent. The *Globe* informs us tha share capital of 45 of the principal companies having a face v of nine millions sterling on 1st January, 1901, had on 1st J 1901, an agregate market value of only Rs.71,75,000. Out o 61 Indian Tea Companies registered in England 20 pay no divi at all. Of those paying, Doom Dooma, heads the list with Lebong next with 7½, the rest pay from 2½ to 3½ per cent. T are 61 companies also registered in India, and the results are worse, only 24 pay a dividend for 1900, and the shareholders companies get nothing, and out of these, eight companies have nothing for eight years, and a large number no dividend for t

r, and five years, and now, gentlemen, I will ask you, is re a remedy for this state of things? I most undoubtedly say re is, and it is

A COMPULSORY CESS.

wont say it is exactly a panacea for all evils, but, as Messrs. eswell & Co. say, "none of us like to be taxed, but taxation has de the British Empire and it may save tea." I am very glad to ar that others beside myself are going to speak on this important ject, and I have no doubt, if there are still a few who do not our the cess, we shall be able to convert them to our way of nking. It is necessary for me to say a few words regarding the gin of the tax levied in Ceylon in 1892. The ordinance in that ar provided for a duty of 10 cents per 100 lbs. of tea exported, it swered so well, that in 1894 it was converted into a permanent , and was raised to 20 cents per 100 lbs., amounting in all to out 2½ lakhs of rupees yearly. With our voluntary levy insti- ed in 1893 we do not realise one half of what Ceylon does, and, the Tea Association inform us, the net result is that while Ceylon h a production of 130 millions of pounds sent 29 per cent. of ir teas to foreign markets, India with the 175 millions sent only per cent to foreign markets. Up to the 17th June this year, ylon has distributed outside the United Kingdom nearly 4 million . more than last year to the same date the imports to England ng just 3 millions less. She has actually sent more than 1¼ llion lbs. to China this year against ½ million last year His nour the Lieutenant-Governor has been written to on the subject a levy, and he suggests that before laying our case before the vernment of India it is absolutely necessary to show there is y one feeling in the matter, or in other words the industry must unanimous in voting for the tax. The proposed tax would only ount to ½ a pie per lb. of tea exported which would yield about lakhs of rupees or four times what the voluntary subscriptions ounted to. His Honour also remarked that no such legislation, as posed, has ever been undertaken in India, and the doubts whether Government of India would agree to an export duty, but surely. ere we have such a precedent as Ceylon, and such a long and ried experience of its practical benefit to the tea industry of that and, I cannot help thinking Government would come to our cue. It appears to me from what I have read that the planters in uthern India are nearly all in favour of a compulsory cess, the luntary subscriptions are dying a natural death, and unless I am staken, will dwindle down this year to a very low figure. The n'ble Mr. Greenville Acworth says in his letter to the *Madras il*, and "so disgusted are many in the south with the failure of foreign market fund, that from private information I know ere will be more abstainers therefrom in the current season, yet these gentlemen would welcome, and indeed have voted for a mpulsory cess." The *I. P. G.* says the non-flourishing planter wont oscribe, because, by the time the relief comes, he thinks he will ve ceased to exist: I don't believe this, because I maintain a com- lsory cess will give immediate relief, if, at the same time, we have import duty of 0-4-0 per lb. Again we are told, the opulent nter won't subscribe, because he does not want to prop up his ighbour, he says the sooner he is out of my way the better. Can ulent proprietors think for a moment that they are going to pe offthe face of the earth every tottering concern? I give em credit for better thoughts, but if there are a few who think let me tell them that gardens are not going to be wiped off easily, they will exist in a new form, which will be far more noxious than at present. Capital will be so reduced, that it quite possible they may be made to scrape through with a re existence, we have already seen some such cases, for with the most parsimony, gardens may give returns to native proprietors, ich would not be accepted as satisfactory by Europeans. No, I we must come to the assistance of the weak, and help them to utmost of our power. I have been thinking that if the Govern- nt of India would not consent to an imperial export tax, we ght persuade the provincial Governments to impose a cess on orts of tea from their several provinces. Our local rates are sed very much on the same principle as we now propose that s tea cess should be raised. Our local cess is virtually paid out one pocket into the other, none of it finding its way into the Im- rial coffers the money being expended entirely for the benefit of trict in which it was raised.

The resolution I have therefore to propose is, "that the Govern- nt of India be urged to impose a compulsory cess on all teas orted from India on very much the same principle as is now practised in Ceylon and that the proceeds be handed to the Indian Tea Association for the better exploitation of new markets."

Seconded by Mr. W. H. St. J. Mildmay and carried unanimoulsly.

IMPORT DUTY ON FOREIGN GROWN TEAS.

At a meeting of the Indian Tea Association held on the 7th May last a resolution from the Central Travancore Planters' Association was read, urging the necessity of imposing an Indian import duty, on all foreign grown teas. The Committee of the Calcutta Tea Association pointed out that there was an *ad valorem* duty of five per cent. on all foreign teas. The Travancore Planters' Association must have meant that a protective duty should be imposed, and I am going to ask you to-day to support their resolution. We are told that in 1899 ½ a million lbs. and in 1900 1½ million lbs. of tea found its way into India; and I see from the last statistics, in Circular No. 246 of the Chamber of Commerce, that up to the 1st July of the present year 054,918 lbs. have been imported into India from Ceylon against 299,505 lbs. to the same period last year, or more than double. Then we have the China tea to contend against. I see in Messrs. Cresswell's report that no less than 16,069 piculs of China tea were imported into India last year against 9,698 piculs in 1899, or nearly 2¼ million lbs. in 1900, against 1¼ in 1899. These facts speak for themselves. We don't want any inferior tea from China or elsewhere placed on our market, for we have sound teas of our own we should like to see disposed of first. The tea imported from Ceylon is mostly without Estate mark, and although in the old days we got a paying price for even "O. O." which our Calcutta Broker friends may remember, I am afraid we mostly now consign this class to the dust heap, or to the chemist, for the sake of coffeine only. I therefore shall propose the following resolution, *viz.*: That we entirely support the Central Travancore Association in urging the Calcutta Tea Association to take in hand, and petition the Government of India for a protective duty on all foreign grown teas. The *ad valorem* duty of five per cent. is of course not protective at all, we want a duty of 0-4-0 a lb. the same as is imposed on all teas imported into Ceylon.

The Chairman then moved the following resolution which was seconded by Mr. H. Miller.

"That this Association entirely support the resolution brought forward by the Central Travancore Planters' Association urging the necessity of imposing an Indian import duty on all foreign grown teas on the same terms as is imposed on all teas imported into Ceylon."—Carried unanimously.

DISTRIBUTION OF TEA IN INDIA.

It is satisfactory to see that this scheme has now made a start, and I doubt if it could have got into better hands than Messrs. Andrew Yule & Co., with Mr. Henson to superintend the business. A lamentably small amount of tea has been so far promised, but I have no doubt, now that it looks more like business, a large quantity will be added in the course of a month or so, and I am sure our Secretary will be very pleased to take down the names of any gentlemen, who have not as yet promised assistance but wish to do so now. I am a great believer in having public sales in many of the towns in India. There is nothing natives like better. The quality of tea required can be bought at the auction sales in Calcutta and made up into small lots to suit purchasers up country, and here again comes in the question of import duty on tea. Are we going to make a market for China teas in India? for they will surely pour in, if purchasers are to be had, and there is no duty to pay, in preference to where there is a heavy duty. Let us therefore take care we do not play into the hands of the heathen Chinee.

The Secretary then read extracts from a letter to the Chairman from Mr. H. S. Ashton setting out the basis on which Messrs. Andrew Yule & Co., were taking over the scheme of distribution of tea in India, which were generally approved.

GREEN TEAS.

The doubt which has existed whether our Indian "Green" teas will be accepted in American or not, has I think deterred many a good man from making such teas. The America and Ceylon representative, Mr. Mackenzie, has advised planters in India to make the same type of green tea as Ceylon, and the London Committee have now been asked to confirm this, and give us any further information they can. If it is true that America is taking all she can from Ceylon, it is a great pity India does not help to relieve the market as well, with a few million lbs., and I trust very shortly we shall hear from the Tea Association, Calcutta, definitely on the subject.

To give the characteristic colour to green tea, there is no doubt

deleterious matter, which has been condemned by many food experts, has to be introduced. This certainly can be done in India, but should we be right in adulterating tea in this way? Is it not far better even if the progress is slower, that we should allow unfaced green teas to force their way by their own merits, rather than by any adulteration which, happily to date, Indian teas have been guaranteed free from?

REFUSE TEA.

We have had various memoranda from the Tea Association as to the disposal of this tea, and I must say the importance of seeing that none of it gets into the hands of native dealers, cannot be too strongly urged. Many of us, no doubt, did in times past dispose of unsound teas to Marwaries, or any one who would give Rs.5 to 10 a maund for it, but I believe we all realize how unsound this practice was, and all sweepings, etc., are now sent to Calcutta for chemical purposes, a guarantee being given by Messrs Barlow & Co., that they will not be sold for consumption. These teas are now taken to Calcutta by the Steamer Companies at a reduced freight.

INDIAN TEA ASSOCIATION.

IMPORT DUTY ON TEA.

The following is from an abstract of the proceedings of a meeting of the General Committee held on the 15th August, when there were present Mr. H. S. Ashton (*Chairman*), Mr. A. Tocher (*Vice-Chairman*), Mr. H. W. Boyd, Mr. R. H. A. Gresson, Mr. A. C. Lawrie, and Mr. R. R. Toynbee. Mr. D. A. Campbell and Mr. R. Magor were out of town, and Mr W. Brown was unavoidably absent. Proceedings of the last meeting, which was held on the 30th July, having been approved in circulation, were confirmed. Considered a letter dated the 6th August, from the Secretary, Assam Branch, forwarding a copy of the following resolution which had been adopted at the Annual Meeting of the Branch on the 28th July, *viz.*:—"That this Association entirely support the resolution brought forward by the Central Travancore Planters' Association urging the necessity of imposing an import duty on all foreign-grown teas on the same terms as that imposed on all teas imported into Ceylon." The position of the General Committee in regard to this question was defined in the proceedings of the meetings held on the 7th May, 18th June, 2nd, 16th, and 30th July. In those proceedings it was shown that the object of the Southern Indian planters was to secure the abolition of the Ceylon import duty, rather than to obtain a protective tax in India. The General Committee had accordingly decided to approach the Government of India with a request that an attempt should be made to induce the Government of Ceylon to abolish the duty at present levied in the island. But they did not in the meantime propose to go beyond this, and to suggest the imposition of a protective duty in India. It was, in their opinion, more desirable that no duty should be levied in Ceylon upon Indian teas, and no duty in India upon Ceylon teas. But they thought that the existing duty in each country should be retained in the case of non-British teas. A reply in these terms was to be sent to the Assam Branch. The Committee also discussed a letter dated the 6th August, from the Secretary? United Planters' Association of Southern India, submitting the following resolution which had been adopted at the recent Annual Meeting of that Association, *viz.*:—"That this Association urge on the Indian Tea Association the necessity of approaching the Government of India with a view to its urging on the Government of Ceylon the advisability of abolishing the import duty on tea, and that that Association should point out to the Government of India the immense advantages that might thereby accrue both to British-grown tea and the Port of Colombo." The General Committee were entirely in accord with this resolution; and they decided to address the Government of India as soon as possible. The Secretary to the United Planters' Association was to be informed accordingly. Considered a letter dated the 6th August, from the Secretary, Assam Branch, forwarding a copy of the following resolution which had been adopted at the recent Annual Meeting of that Branch, *viz.*:—"That the Government of India be urged to impose a compulsory cess on all teas exported from India on very much the same principle as is now practised in Ceylon, and that the proceeds be handed to the Indian Tea Association for the better exploitation of new markets." The following resolution which had been adopted at the last Annual Meeting of the United Planters' Association of Southern India was also before the Committee, *viz.*:—"That this Association cord supports the movement for the imposition of a cess on tea. the Indian Tea Association be asked to regard the matter as urg so as to lose no time in ascertaining whether the Governme India will give effect to the wishes of the tea planters, shou large majority be in favour of the measure." The General C mittee were in agreement with these resolutions. And they dec to inform the Assam Branch and the United Planters' Associat that they proposed to approach the Government of India as as they were in possession of the views of the industry upon question, which they had for some time been endeavouring obtain. They desired, however, that it should be made clear it was no part of the scheme that the proceeds of the tax shoul handed over to this Association, but that a Special Committee which the whole Indian Industry would be fully represen should be constituted to administer the fund. The Commi further decided to telegraph to the London Committee, ask them to interview various firms who were unfavourable to proposal, or who had not expressed an opinion upon it. Chairman, the Vice-Chairman, and some of the members of Committee, also undertook to interview certain of the Calc Agency firms regarding the proposal.

TRADE WITH PERSIA.

A letter dated Birjand, July 8th, from Mr. E G. Foley, was t published for the information of members. In this letter, an some others which had been received from Mr. Foley, the Commi had noticed statements to the effect that the trade with Persia likely to be hampered by the fact that the Persian customs w practically controlled by the Russian Government. This p appeared to the Committee to be of such importance as to ne sitate a reference to the Government of India. But as the st ments in question were not sufficiently full to enable any represe tion to be made, they decided to defer the subject pending return of Mr. Foley.

SALE OF INDIAN TEA IN TIBET.

At the meeting held on the 2nd July, it had been decided invite the opinion of Mr. J. M. Korb, of Kalimpong, upo suggestion made by the Government of Bengal, that Miss A Taylor—a lady missionary at Yatung—might be able to assist Association in connection with the promotion of the sale of In tea in Tibet. This had been done; but the Committee had s learned that Mr. Korb had left for Europe. They now decide address Miss Taylor direct on the subject. Certain of the sam of Indian-made brick tea in the possession of Mr. Korb were necessary, to be sent to Miss Taylor later in the year. Sample Indian brick tea, manufactured on a Dooars garden, were to sent to Captain Kennion, I.S.C., British Joint-Commissione Ladak, in accordance with the decision come to at the last meet

BRITISH EXHIBITION AT ST. PETERSBURG.

Considered the report of a speech made by the Hon'ble Mr. G Acworth at the recent Annual Meeting of the United Planters' A ciation of Southern India. In this speech Mr. Acworth comm ed at some length upon the action taken by the Indian tea A ciation in connection with (*a*) the distribution of the funds ra by the voluntary levy; (*b*) the proposed tea cess, and (*c*) question of the manufacture of green teas. Certain of these c ments appeared to the Committee to call for some remark; they decided to address Mr. Acworth regarding them. The C mittee also discussed a letter, dated the 9th August, from Secretary, United Planters' Association of Southern India regard to the proposed British Exhibition at St. Petersb This letter contained a copy of a resolution which had been ad ed at the Annual Meeting of the Southern Indian Associat proposing that Indian tea should be adequately represented at Exhibition. Mr. Ormerod was to be informed in reply that latest information before the Committee was that the Exhibi had been postponded. The original intention had been to ho between the months of November and February next. Bu was now understood that this idea had been abandoned; the Committee did not know when the Exhibition would be hel

THE PARIS EXHIBITION.

Recorded a letter No. 2169-7-2 of the 5th August (with enclosu from the Government of India, Department of Revenue Agriculture, stating that the balance (£1,250) of the Governm grant on account of the Paris Exhibition had been paid by India Office to the London Committee. An unexpended bal of Rs.646-12-3 on the Calcutta account of the Paris Exhibi

nd was to be re-transferred to the American and Foreign rket Fund.

TEA EXPORTS FROM CHITTAGONG.

he Committee had arranged with the Collector of Customs at ttagong to telegraph to Calcutta the quantity of tea exported the fortnightly steamers which now leave that port. The gram would be sent as soon as the export manifest of the cargo received by the Collector from the Steamer Agents. A copy each telegram was to be posted in the Royal Exchange for eral information. The figures were also to be included in the nightly message sent to London.

MARKET REPORT.

[*Per Mail advices of 2nd August* 1901.]

COFFEE.

he London Commercial Record says:—Public sales have been l only once during the week, and they will not be resumed ll Tuesday the 13th instant. The demand has shown a distinct rovement, and a good proportion of the quantity offered at ion found buyers, while privately there has also been more re to do business. The small quantity of Ceylon brought ward met with competition and realised extreme prices, and advance of 1s to 2s per cwt. was paid on Costa Rica and tral American descriptions. On a rise in the Brazilian exge and better Continental advices, the market for "futures" one time advanced about 1s per cwt., but the improvement not been maintained, and with very large receipts a flat ensued and closing prices show little alteration on those ng a week ago. Yesterday September sold at 27s 3d to 9d, December 27s 9d to 28s 1½d, March at 28s 4½d to 28s 9d, May at 29s 3d.

TEA.

INDIAN.—Supplies were heavier 13,700 packages, of which 10,500 packages were new season's, being brought to auction, compared with 9,600 packages (5,600 packages new season's) in the week before, and 13,000 packages (mostly new season's) in 1900.

There was again a desirable selection, particularly from Assam and the improved tone noticed previously was well maintained for all grades. Competition was especially strong for leafy kinds which were wanted both for the home trade and also for abroad, resulting in an advance on these being often recorded. Darjeeling sold somewhat irregularly, but on the whole satisfactory results were obtained for early pickings from this district.

For 8,800 packages on Estate account 8¼d was obtained, against 8¼d per lb. for 9,300 packages in the foregoing season.

The amount printed on importer's account was:—

1901.	1900.	1899.
43,900 packages (22,600 New Season's.)	40,500 packages (Mostly New Season's.)	23,900 packages (Chiefly New Season's.)

Ceylon.—Sales comprised 28,200 packages—16,300 packages on Tuesday and 11,900 packages on Thursday—*versus* 29,800 packages on the 23rd and 25th instant, and 42,700 packages for the corresponding time of 1900.

The market is still rather unsettled, but not much change occurred in quotations, and although there were again some withdrawals, most of them were placed afterwards. Whole leaf descriptions under 6d per lb. received more attention, the recent rise being maintained. On the other hand, medium to fine Orange Pekoes were in less request, and Broken Pekoes except the few best lines, went in favour of buyers.

The average remains as on the 25th ultimo, when it stood at 6½d per lb., and 7¼d per lb. in 1900.

Catalogues included:—

1901.	1900.	1899.
124,500 pkgs.	138,200 pkgs.	40,300 pkgs.
(Avge. 6½d per lb.)	(Avge. 7⅛d per lb.)	(Avge. 7¼d per lb.)

Java.—Nearly 1,700 packages passed the hammer without material change occurring in rates

Offered during the month:—

1901.	1900.	1899.
5,700 pkgs.	4,400 pkgs.	4,200 pkgs.
(Avge. 5⅝d per lb.)	(Avge. 6⅜d per lb.)	(Avge. 7¼d per lb.)

China.—The *Glenshiels*, with a cargo from Shanghai and Foochow, docked on the 25th ultimo. A fair business has transpired, Black leaf selling from 5d to 1s 11d per lb., and Red leaf (Soomoos) from 8d to 11½d per lb., Souchongs from 1s 2d to 1s 9d per lb. The latter are considered good, but generally speaking the crop is looked upon as being decidedly inferior.

Shipments to this country are reported to be rather under those of 1900.

Statistical Position.—With the contraction in the totals afloat from the different producing countries as shown above, and improving deliveries, this will ere long become much stronger. Recent arrivals both from India and Ceylon indicate that quality is now being considered rather than quantity, which should beneficially influence prices.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 30th July,	1901	... ...	15,144,853 lbs.
Do. do.	1900	... ...	14,804,806 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	10,286	3,398	13,684
Ceylon	21,099	7,106	28,205
Java	1,333	346	1,679
Total ...	32,718	10,850	43,568

Also 1,459 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated August 2nd, 1901, says:—

Quantity brought to Auction in London from 1st June to date.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	94,234	245,977	11,458
1900-1901	60,413	235,821	7,633

15,430 *pkgs.* Indian
29,809 ,, Ceylon
1,679 ,, Java
} Total 46,918 packages were offered in public auction this week.

The total exports from Ceylon from the 1st January to the end of June were slightly above those to the same date last year. Australia and Russia both taken increased quantities.

In the six months ending June, 1901, 427,695 lbs. of Green Tea are included, of which 314,703 lbs. went to America, and 93,449 lbs. to the United Kingdom, part of this probably finding its way afterwards to the United States, and other Green Tea drinking countries.

Indian.—With good general bidding, the sale passed at prices fully up to rates current last week competition being stronger for all good Teas. New Season's Teas were represented by 10,313 packages, many of which being of fair quality were well competed for by the trade. The official wire gives shipments to U. K. for the second half of July as 9,200,000 lbs., against 11,130,000 lbs., and quantity from 1st April to 31st July as 25,098,000 lbs. aga 30,660,000 lbs. same period last year. The following averages worthy of note; Makum T Co. 1/8¼; Doom Dooma Co. "Hansu 1/3½; Jokai T Co. "Dikom" and "Panitola" 1/2½; and S kotee, 1/2¼.

Week's average of New Season's Tea sold on Garden Account, 1 7,796 pkgs., av. 8·77d. 1900, 9·316 pkgs., av 8·08d.

New Season's Tea sold on Garden Account, 1st June to date, 1 32,171 pkgs., av. 7·66d. 1900, 34,339 pkgs., av. 7·37d.

Ceylon.—Tuesday's auction comprised 16,657 packages. Bidd was again limited, and a large proportion was consequently w drawn Where sales were effected, prices were generally ab equal to last Tuesday's rates, although somewhat irregu Bidding in Thursday's sale was hardly as animated as on previous Thursday, and prices were here and there a trifle eas especially for medium brokens, common kinds, however, remain firm. The official telegram gives exports to U. K. during July 9,000,000 lbs., against 11,750,000 lbs. in July, 1900. Total Expo from 1st January to 31st July, 68,250,000 lbs., against 74,000,000 same period, 1900. Estimate for current month 7 to 7½ milli against 7,500,000 lbs. actually shipped last August.

Average for week 6·45d., against 7·29d. same week, 1900.

Ceylon Tea sold on Garden Account, 1st Jan. to date, 728,061 pk av. 6·56d. 1900, 757,168 pkgs., av. 7·25d.

Java.—Sold with good competition at firm prices, the be grades meeting with rather better attention.

Bank Rate 3 per cent. Exchange on London three months' sigh Calcutta 1/4 3/32. Colombo 1/4⅛.

COCOA.

A good supply was brought to the hammer on Tuesday, total summing to 8,536 bags; demand was for from act but about 3,050 bags changed hands, in some cases at 1s decl Of 1,938 bags Trinidad catalogued 980 bags sold—good to red 69s to 71s, middling 68s, smalls 65s to 66s 6d, showing depreciation of 1s. Of 1,716 bags Grenada, about 950 bags s at fairly steady prices—66s 6d for very fine, 63s to 66s for g to fine, and 60s to 61s 6d for common to fair. 143 bags Demer about half sold at 70s for fine. 190 bags Jamaica offered 80 bags sold at 60s 6d for fair fermented, being a decline 1s. 40 bags St. Vincent partly sold, at 65s for very fine and part of 20 bags Dominica brought 58s. Of 1,555 b Guayaquil, 480 bags found buyers at 75s to 78s for good to summer Arriba, being full up. 42 bags African bought 61s good defective, being 1s lower. Ceylon still very slow of s only 70 bags selling out of the 1,641 bags catalogued, at 57s per c for ordinary collected. The following passed the hammer unsold 3 bags St. Lucia, 240 bags Bahia, 254 bags Surinam, 163 b Samana, 33 bags Caracas, 163 bags Para, and 394 bags Ha Private transactions include 50 bags Trinidad, fine at 73s, g at 69s; 200 bags Grenada at auctions' rates; 200 bags Haiti 54s for fair ordinary; 80 bags Puerto Cabello, fine at 130s, g at 90s, and some Arriba Guayaquil at 78s 6d per cwt.

The next auctions will be held on the 13th instant.

The following are the amended stocks of Cocoa received fr the docks yesterday:—

	Actual Stock.	Stock July
	Bags.	Bags.

GINGER.

COCHIN was well represented, 158 cases 811 bags 25 bales being catalogued, but there was not much enquiry, only 19 cases 135 bags selling under the hammer. Bold with some medium rather roughly cut and scraped, limed, realised 85s 6d, medium and small ditto 53s, small ditto 45s, good bright cuttings 33s, medium and small some bold washed rough 37s 6d, small and medium ditto 36s per cwt., these prices showing no alteration from previous values.

JAMAICA.—Was in good request, and the whole of the 355 barrels brought forward sold at an advance of 1s to 2s per cwt.; 61s 6d was paid for fine bright washed, 46s to 52s for fair to good bright. 40s to 45s for middling to good middling, and 36s to 38s 6d per cwt, for ordinary to good ordinary.

CINCHONA.

The exports from Java during July amounted to 1,228,000 Amsterdam lbs., against 629,000 Amsterdam lbs. last year. The total for the seven months now amounts to 6,376,000 Amsterdam lbs., against 4,729,000 Amsterdam lbs. last year. In the drug-auction, 8 serons Crown bark were withdrawn, and 37 bales Yellow bark were bought in.

QUININE.

The market has remained in the same inanimate condition throughout the week, with retail sales only including December, at 1s 2d per oz. The spot-price is quite nominal, at from 1s 1½d to 1s 1¾d. The bark-shipments from Java, which are heavy, have had a depressing effect on the speculative market.

CARDAMOMS.

The meagre supply offered and the poor result obtained, were insufficient to test the market. The following were the sales :—Ceylon Mysore, bold pale long, 2s 4d (1 case); bold medium pale, 1s 8d (1 case); small and medium pale, 1s 5d. Cardamom-seeds were 1d dearer, 2s 1d being paid for the only case sold.

CELEBRATED OILMAN'S STORES.

JUST THE BOOK FOR PLANTERS.

We now supply your long-felt Need.

THE HOUSEHOLD PHYSICIAN,

SECOND EDITION, REVISED AND ENLARGED, WITH MANY NEW PLATES AND FIGURES IN THE TEXT.

A Family Guide to the Preservation of Health, and to the Domestic Treatment of Ailments and Disease, with chapters on Food and Drugs, on Sick-nursing, and on first aid in Accidents and Injuries.

BY

J. M'GREGOR-ROBERTSON, M.A., M.B., C.M. (HONOURS): F.F.P.S.G.,

Formerly Senior Assistant in the Physiological Department, Glasgow University, and Lecturer on Physiology to Queen Margaret College.

WITH AN INTRODUCTION BY

JOHN G. M'KENDRICK, M.D., LL.D., F.R.S.,

Professor of the Institutes of Medicine, Glasgow University.

Illustrated by about 400 Figures in the Text and a Series of Engraved Plates.

The Aim of the Book.

One aim of this book is to supply in as plain language as can be used some knowledge of what science has to say as to the body which we inhabit; the second aim is to give reliable assistance in the domestic treatment of simple ailments. The bodily ills to which young and old are liable are considered more fully than is usual in popular works, and not only have slight affections been explained but also more serious affections.

Arrangement of Subject.—Health and Disease.

The *first* portion of the book treats of the human body in health, and the various changes produced by disease. This part has been divided into sections, each section being devoted to one set of organs. For example, the bones and joints are considered in one section, the nervous system in another, the digestive organs in a third, and so on.

Hygiene, or the Science of Health.

The *second* portion of the book is devoted to Hygiene, or the conditions of health as regards food, drink, clothing, exercise, etc., and the rules to be observed for the promotion of health, both of individuals and communities. Details will be given of the requirements of a healthy house, in its construction, ventilation, water-supply, drainage, etc.

Drugs and other Remedial Agents.

In the *third* portion of the work the nature and mode of action of drugs and other remedial agents are explained. But this part includes more than mere drugs. Electricity, an agent as valuable in medicine as it is in commerce, and Massage, or medical rubbing, another new and formidable antagonist to ill-health will also be fully treated.

Accidents, Emergencies, etc.

In the *remaining* portion of the book the methods of dealing with Accidents and Emergencies find a place, and the commoner Surgical Instruments are described and their mode of use explained; Sick-nursing receives attention, and recipes for Invalid Cookery and Notes of Medical Prescriptions are given.

Illustrations.

These are very numerous, consisting of about four hundred figures printed in the text, and a series of thirty-one engraved plates, many of them in colours.

*** The Work is printed on fine paper, super-royal 8vo size, and is issued in one volume.

Price Rs.25 (Twenty-five).

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 6th proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

PESTS AND POISONS.

The destruction of pests can often be effected by other means than poisoning, but in very many instances poison is the cheapest and most efficient destroyer. Poisons may be divided into two classes "stomach-poisons" and "contact-poisons," these terms explaining the difference between the two. When an insect eats leaves, barks or fruit, a stomach-poison may be easily conveyed into its food, but this class of poisons is useless against sucking insects, which insert a tube into the plant and do not eat the outside. For these insects contact-poisons are necessary. The Imperial Department of Agriculture of the West Indies has published lists of these two classes of poisons, as follows :—

List A.—*Stomach-poisons. Arsenical Poisons.*

1. Paris Green, mixed with twice its weight of flour, dust or lime, both finely powdered.

2. Paris Green, 1 lb. with 2 lbs. of lime, dissolved in 200 gallons of water.

3. London Purple, mixed with twice its weight of flour, dust or lime, both finely powdered.

4. London Purple, 1 lb. with 2 lbs. of lime, dissolved in 180 gallons of water.

5. London Purple or Paris Green may be used with soap, by adding 1 lb. of soap to every 50 gallons of Nos. 2 or 4.

Other Poisons.

6. Hellebore, mixed with twice its weight of cheap flour, both finely powdered.

7. Hellebore, 1 oz. in 2 quarts of water.

8. Pyrethrum (Bulhach), mixed with twice its weight of cheap flour, both finely powdered.

9. Pyrethrum (Bulhach), 1 oz. in 1 gallon of water.

10. Tobacco (refuse), as dry powder.

11. Tobacco (refuse), 1 lb. steeped in 1 gallon of water for 24 hours.

LIST B.—*Contact-poisons.*

12. *Kerosene Emulsion (hard soap).*—Dissolve ½ lb. of hard soap in one gallon of boiling water; add two gallons of kerosene to the hot liquid and immediately churn, with a syringe or force pump, till the mixture becomes creamy. This is the stock of solution. Make up to 33 gallons. Use only rain water, or soft water (*i.e.*, without lime, etc.).

13. *Kerosene Emulsion (soft soap).*—Dissolve 1 quart of soft soap in 2 quarts of hot water; add 1 pint of kerosene to the hot mixture and immediately churn, with a syringe or force pump till the whole is creamy. Add an equal amount of water, and it is ready for use. Any water may be used.

14. *Rosin Wash.*—Mix 20 lbs. of rosin, 3½ lbs. of 98 per cent. caustic soda, and 3 pints of fish oil. The rosin and caustic soda must be pounded before mixing. Cover this with about 2 inches of water and boil. When the liquid is clear, slowly add water, still boiling the mixture, till the whole is made up to 15 gallons. This is the stock solution and can be made up to 100 gallons when cold, using only rain water or soft water.

15. *Rosin Compound.*—Mix 4 lbs. of powdered rosin, 3 lbs. of powdered washing soda, and 1 gallon of water. Boil, and when all is dissolved, slowly make up to 5 gallons. Boil the mixture till it becomes of a clear brown color. This is the stock solution. Make this up to 30 gallons.

16. *Whale Oil Soap.*—Dissolve 1 lb. of soap in one to two gallons of warm water.

17. *Rosin and Whale Oil Soap Compound.*—Mix 1 gallon of water with 3 lbs. of powdered washing soda and 4 lbs. of powdered rosin. Boil till dissolved and, while boiling, make up slowly to 5 gallons.

In a separate vessel boil 10 lbs. of whale oil soap with 5 gallons of water. These may be mixed while hot to make the stock solution or, when cold, mix these two with 35 gallons of cold water, pouring both into the water together while actively stirring the mixture. However mixed, the final amount must be 45 gallons.

18. *Tobacco and Soap.*—Dissolve 1 quart of soft soap, or ½ lb. of hard soap, in 5 gallons of water, and add 2 quarts of strong tobacco decoction (No. 11).

The poisons named in list A are suitable for application to plants that are eaten by caterpillars ('worms') and other biting insects. The arsenical poisons, such as London Purple or Paris Green, are of universal application against caterpillars and other pests that destroy foliage, but it must be remembered that arsenic is poisonous to man and does not quickly get entirely washed off by rain. Hellebore, on the other hand, very soon loses its poisonous properties, and becomes harmless after some exposure to air. Pyrethrum is harmless to higher animals, but has a powerful influence on insects. It may be applied without danger of poisoning human beings or cattle. Tobacco has a special value in a few cases only, and has less claim to be regarded as a general insecticide. Those in list B are the contact-poisons for application to plants infested with mealy bug, scale insects, etc.

It would, we think, be of great interest if planters who have experimented with any of the above poisons in Southern India would jot down for the benefit of their brethren a few notes as to the effects of application and its cost. On points of this kind it may be confidently said that "two heads are better than one." Men have something to gain by relating their experiences, for they will be pretty sure to have a chance of comparing those of other men with their own, and in this manner deriving some useful hints. Methods and time of application of poisons are points in regard to which local conditions need to be taken into account. There are constant complaints of "bug" from various quarters, and we feel sure that our readers generally would be interested if they could have placed before them a few notes of experimental warfare waged against this enemy (and others) in Southern India.

BOARD OF TRADE RETURNS.

JULY 1901.

The following figures are taken from tables showing the Imports, Consumption, and Exports of certain articles into the United Kingdom for the 7 months ending July 31 in the present and 2 previous years, compiled from the Board of Trade Returns, with stock in U. K. on July 31.

Coffee.—Figures are healthier, all round, than those of 1899 but not so satisfactory as those of 1900. Stocks continue bloated.

—		1899.	1900.	1901.
Imported ...	cwts.	831,880	620,057	772,328
Home Consumption	,,	157,417	171,889	206,252
Export	,,	341,919	316,518	403,029
Stock	,,	605,000	414,000	479,000

Cocoa (Raw).—The steady growth of this trade continues and a large increase is shown in home consumption.

—		1899.	1900.	1901.
Imported ...	lbs.	33,093,709	34,223,069	35,836,763
Home Consumption	,,	21,483,215	22,946,606	26,636,009
Export	,,	6,765,164	6,454,725	6,713,011
Stock	,,	20,143,000	16,583,000	19,278,000

Cocoa (Prepared).—Here also there has been improvement, and the falling off in stock is very noticeable. It would appear as if there were not even a week's supply on hand at the end of last month.

—		1899.	1900.	1901.
Imported ...	lbs.	3,029,915	4,126,443	4,889,420
Home Consumption	,,	3,249,579	3,600,932	4,563,558
Export	,,	465,130	565,897	512,424
Stock	,,	576,000	230,000	145,000

Tea.—Consumption shows but little increase last year, and stocks are fairly heavy.

—		1899.	1900.	1901.
Imported ...	lbs.	124,348,963	130,625,459	131,471,066
Home Consumption...	,,	138,155,779	153,102,166	154,230,148
Export	,,	16,272,570	24,344,532	25,112,100
Stock	,,	68,681,000	67,201,000	73,182,000

CEYLON TEA IN NORTH AMERICA.

Mr. P. C. Larkin, of Toronto, has been writing pretty freely to the Indian Ceylon Press of late anent Tea. In a recent letter to the *Ceylon Observer*, taking exception to some of our contemporary's editorial remarks, Mr. Larkin openly declares that he has an axe to grind. He says :—"I have the good of the Ceylon Tea Industry at heart, because whatever benefits that Industry—that is, whatever benefits it on this Continent—benefits me, as the "Salada" Ceylon Tea Company does by far the largest Ceylon Tea business in America, and if the consumption of Ceylon Tea is increased I get a good deal of the increase. But if no progress is made, why, I make no progress. Therefore, if I see things going well, that is, as well as they can be made to go with the means supplied to the Commissioner by the planters, I want them to continue in that path. I don't want you to start swopping horses, when you have got a sound one, and perhaps get a spavined one in exchange. What you want in America is not a change of method, but to better realize what can be effected with ten times the money now expended."

Now, when a man expresses himself like this he commands respect ; he is not preaching philanthropy but talking business. Mr. Larkin states that Ceylon has one-fifth of the trade on the North American Continent now, and the other four-fifths can be secured if a whole-souled vigorous campaign is carried on *by Ceylon and India combined* for the next few years. Instead of a consumption of twenty million pounds annually in America, there would then be a consumption of one hundred million pounds ; and all China and Japan tea would be displaced, *and the consumption per head per annum would go on increasing.* The planters would get the benefit at once for such a campaign as he suggests would take from ten to twelve million pounds of tea additional off the London market within a year. Mr. Larkin then submits his credentials as follows :—

I am the head of the "Salada" Ceylon Tea Company, that in Canada alone we spend twenty-five thousand dollars per year in advertising "Salada" Ceylon tea, that in Canada we have warehouses in Toronto and Montreal, that we have branches in the United States in Boston, Buffalo, Detroit, and Pittsburg, and therefore I know whereof I speak. That our business is not a small one I might mention the fact that while we purchase from dozens of firms there is one firm in Colombo, who have a connection in London, from whom we have purchased during the past *seven months* 5,600 chests of Ceylon tea ; and there is another Colombo firm, also with a connection in London, from whom we have purchased in the same time 2,400 *hf.* chests of green Ceylon. There is still another Colombo firm from whom we have purchased 1,500 chests of Ceylon in the same time.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Tea Seed Oil and Oil Cake.

The subjoined report by Mr. H. H. Mann, B.S.C., F.I.C., upon these products is published in an I. T. A. circular, dated 20th instant :—

On the 27th June I received from the Secretary of the Indian Tea Association samples of Tea Seed Oil and Tea Seed Oil Cake which had been sent, through Mr. H. St. J. Jackson, by Mr. H. Drummond Deane, of the Stagbrook Estate, South India, with a request that I should make an analysis of them and report to the Committee. This I have now done so far as is necessary for our purpose—and it is perhaps a convenient opportunity to lay before you my views as to the possible value and usefulness of both products, especially as a large amonst of seed is now produced, and must be utilised, if utilised at all, in some other way than for sowing.

The value of seed of this character almost entirely depends on the usefulness of the oil and on the possibility of getting good feeding or manurial material from the residual cake. It was attempted in 1885 to put tea seed, as such, on the London market under the name 'tanne.' Great interest, I understand, was manifested, but the seeds found no buyer, and the price asked sank quickly to a level far below the cost of importation. At the present day the seed does not come into commerce at all, except for the production of new bushes.

The following analysis by Mr. D. Hooper ("South of India Observer," 1894) of Tea Seed from the Nilgiris, previously dried, shows the composition of the material :—

	Per Cent.
Fixed Oil	22·9
Albuminoids	8·5
Saponin	9·1
Carbohydrates	19·9
Starch	32·5
Fibre	3·8
Mineral Matter	3·3
	100 0

Of these constituents, those of interest for our purpose are the fixed oil, the saponin, the albuminoids (*i.e.*, the nitrogen) and the mineral matter. Let us take these *seriatim.*

The Fixed Oil—is present in small amount compared with that in most other oil seeds, such as linseed, cotton, or castor. I am bound to say, however, that many samples appeared to contain much more oil than the seeds quoted above, but I should consider Mr. Deane's figure of 25 per cent. obtainable by hot pressure as an extreme one for practical working. If high quality oil is wished, the seed will have to be pressed cold, and not more than 20 per cent. may be anticipated. Even this, I fear, may be taken as higher than would on the average be obtained under commercial conditions.

The oil itself is a clear, light yellow, liquid, non-drying oil, approaching olive oil in character, but which always has a more or less acrid taste. The sample sent by Mr. Deane appears to be free from saponin—a poisonous substance (see below) which nearly always occurs in it, but in order to get this freedom great care has to be taken in pressing. Though when heated the poisonous properties of the saponin are destroyed, yet the small quantity which may be present would condemn it as an edible oil for use in western countries. The Chinese, it appears, have long used it for cooking purposes, and it might possibly be employed by the people of the tea districts in a similar manner if it were easily obtainable.

As a lamp oil it answers very well, and would seem to be quite capable of local introduction for this purpose. I say local introduction because burning oils are at present rather at a discount in the markets of the world compared with their former position—kerosene and petroleum products having largely taken the market in the great centres which was formerly theirs. At the same time the fact that it is satisfactory for this purpose should not be forgotten.

The oil produces an excellent soap, hard and white. For this purpose the presence of saponin would be no disadvantage, but would rather add to the lathering power of the soap. If the oil could be produced in quantity, and a supply guaranteed at a rate which would compete with the other vegetable oils, there is no doubt an opening for it in this direction.

The Saponin.—This poisonous constituent of the Tea Seed is all but entirely contained in the cake, after expression of the oil. It is a white solid, sweetish to the taste at first, but rapidly becoming bitter and acrid in the mouth, and it leaves a lasting sensation in the throat for some time. It is exceedingly poisonous, and its presence at once destroys any chance of using the cake or the seeds as a feeding stuff for animals.

The Albuminoids and Nitrogen.—To the nitrogen contained in the albuminoids the cake would owe the greatest part of its manurial value. In this respect, however, it does not for one moment compare with most other oil cakes. Compare for instance the following figures representing the average amount of nitrogen

in other manure cakes compared with that given by Tea Seed oil Cake :—

	Nitrogen per cent.
Mustard Cake	4 to 5
Linseed Cake	4 to 5·5
Castor Cake	5·5 to 6·5
Decorticated Cotton Cake	6·5 to 8
Undecorticated Cotton Cake	3·5 to 4·5
Tea Seed Cake	1·92

Thus, if castor cake were worth 2 rupees per maund in Calcutta, calculating on the basis of the nitrogen alone, the tea seed cake would only be worth about 12 annas per maund.

The Mineral Matter.—In other points the Tea Seed Cake is likewise inferior for manurial purposes. Comparing again the following figures for mineral matter and phosphoric acid in several manure cakes, this will be clearly seen :—

	Mineral Matter per cent.	Phosphoric Acid per cent.
Mustard Cake ...	8 to 10 ...	2 to 3
Linseed Cake ...	4 to 6 ...	1·5 to 3
Castor Cake ...	9 to 10 ...	2 to 3
Cotton Cake ...	7 to 8 ...	3 to 4
Tea Seed Cake ..	3·3 to 4·07 ...	0·58.

Taking these various points into consideration, it will at once be seen that as a manure the cake produced by pressing tea seed is of very inferior character, and would hardly pay for carriage over very long distances for this purpose,—nor can it compete in any market with cakes produced from other oil seeds. On the other hand it is quite good enough to use locally, provided the net cost does not exceed 8 to 12 annas per maund on the garden.

It (the cake) is however supposed to have insecticidal properties ; and might be useful for this purpose. In the paper above quoted, Mr. Hooper suggests spraying the bushes with a decoction of the seeds, or dusting the plants with a powder made by grinding them up. Such a decoction is likely to be serviceable against red spider, but exactly of what value it is can only be determined by trial. Spread on the ground round the bushes the cake would be likely to keep away some types of caterpillar, and other pests which spread by creeping from bush to bush, or which make their home in the ground during the day. A strip covered with the cake between the tea aud the jungle would probably keep out many of the pests which creep the surrounding land into the tea.

The utility of the cake itself as an efficient substitute for soap is very doubtful. Though it lathers well, on account of its saponin content, yet this does not necessarily mean that it has great cleansing properties. Nevertheless it has been used for many years in China instead of soap, and it would probably be of *some* value for this purpose. One more use is made of the cake in China. It is there stated to be very effective as a poison for fish.

On the whole, therefore, while I think there would be a market for the oil if it could be obtained in quantity and fairly cheaply, it must, for the present, be a local one, and the material could hardly compete with oils already in general commerce, unless it be for the production of superior soaps. As a lamp oil it has distinct advantages which should recommend it for local consumption. The press cake is useless for feeding, and forms an inferior manure, though one quite good enough to apply to the land and also to cart for some distance, provided the cost on the garden does not exceed 8 to 12 annas per maund. It would probably be useful as an insecticide—both as cake against certain caterpillars, and as a decoction which might replace that of a wild fern now used in Dibrugarh against Red Spider.

The analysis of the cake supplied by Mr. Deane was as follows :—

Moisture	11·99
Oil	10·48
* Albuminoids	12·00
Carbohydrates, etc.	58·80
Woody Fibre	2·66
† Phosphoric Acid	·58
Lime	·11
Alkaline Salts, etc.	2·78
Sand	·60
	100·00

* Containing nitrogen ... ... 1·92
† Phosphate of Lime ... ... 1·26

* * *

The General Committee of the Indian Tea Association (Calcutta) have issued under date 20th August, 1901, their Monthly Return of Sailings and Daily Customs Entries of Tea from Calcutta, and also a Return of Exports of Ceylon Tea for four years up to 5th August, 1901, as follows :—

Exports of Indian Tea from Calcutta.

* It is understood that the bulk of this tea consists of transhipments for the United States and Canada.

* * *

LETTER FROM MR. FOLEY.

The following letter from Mr. E. F. Foley, who is travelling in Persia, has been received by the Indian Tea Association. The letter is dated Birjand, July 6th :—

I have been to the bazaar here and have visited shops of both large and small dealers in tea, of which there are purchasers here, and obtained samples of the different kinds of both black and green teas. The best tea procurable here from the bigger merchants is a white-tipped Pekoe, similar to a good Orange Pekoe in leaf. The price at which it is sold is 30 *krans* per *man* of 3½ lbs., or 1¾ seers Indian, equal to Rs.2-5-6 per lb. When I showed our samples to our caravan leader at Quetta who afterwards had tea with me and who is a resident of this town), he, of his own accord, valued our Orange Pekoe at 30 *krans* per *man*. This was confirmed by an Afghan trader whom I met on the desert journey and who was on his way to Meshed *viâ* Herat with 22 camel-loads of black tea (Dehra Dun) purchased at Bombay, and 15 camel-loads of country (Punjab and Sind) indigo. I gave him samples of Orange Pekoe and Pekoe, one-lb. tins, each, with labels. He valued the samples at 30 and 25 *krans*, and pronounced them to be superior to his tea from Bombay, which he said would sell at 20 *krans* per *man*.

The white tip teas sold here are from Java. They are in high favour, and are preferred to the yellow tips. They come *viâ* Bunder Abbas in four-lb. tin canisters and ten and twenty-lb. wooden boxes covered with China oil paper with flower patterns on geometrical lines; and all are labelled, or rather have stencilled on them, "made in Java" or the "produce of Java." The plantation mark that I have met with is chiefly "Srinagar" and two or three others. Relatively, these teas are inferior to ours, but the excuse is that our teas have not white tips—though acknowledged good in flavour and aroma. The latter they test by breathing on the sample and then smelling it, a test which my samples have stood, and have been acknowledged to be "nosy" and "good." I have also been told that, in the course of time, as our teas become known, they will be adopted for general use, as the white tip teas now are and at as high a price. The black teas that come here are very poor, though fair in appearance. Leafy or "Tilai" teas are preferred, and sell at a better price than "Kalmi" or wiry, which are very often stalky. Persians as a rule don't care about green tea, and what is brought here goes on to Herat and the villages bordering on the Perso-Afghan frontier. My object has been to try to persuade the merchants here to take our teas from us at Quetta and offered to deliver it there on anyone taking 100 *mans*, Birsandi, or about 3401 bs. or say four chests at 9, 8, 7 and 6 annas, *kran* 7, 6, 5¼ and 4½ per *man* of 3½ lbs. For those taking less than 100 *mans*, the price would be one *kran* higher per *man*. The cost of carriage to this place will not exceed Rs.10 per 80 lbs., or 2 as. per lb., or about 1½ *kran* per *man* of 3½lbs. This still leaves an enormous margin of profit. I have tried my best to impress on them this, and the advantage of their taking the tea at Quetta. Failing that, the only other recourse would be for us to establish our agencies here, and to bring up the tea ourselves and to sell it direct, which would mean taking the tea trade entirely out of their hands; and that they could not possibly compete with us as we were the growers and producers—calling their attention to the pictures on the labels of the tea-garden and factory scenes. Besides, as our tea would be overland, it would be preferred to that from Bunder Abbas. which had to be brought by sea and subject to the sea air. The matter of white tips was one of manufacture only; and that it was as easy for us to turn out white tips as yellow. The reason why we did not make white tips was that, for the English, American and Australian markets, yellow tips were preferred, and that white tips were almost valueless there

I have no doubt that by the time I return, several of these merchants will make up their minds to take delivery of both tea and indigo at Quetta. These merchants have been awaiting the return of the caravan leader I started with, and are awaiting his verdict as to the facilities or otherwise of the new Nushki-Seistan route, as this is the first caravan from here that has gone through to Quetta and back. The man has returned and his verdict is favourable. He has reported the same to the Hushtal-ul-Mulk, or the Governor of the Province, with whom I have been accorded an interview, and whom I have tried to impress with the importance of allowing his subjects to trade with British India by the new route, which I said I had by experience found practically easy, with water and rest-houses, and with provisions for man and beast every 25 to 30 miles, and every protection from robbers, by having local levies to patrol the stages and to accompany caravans if necessary; but this was not necessary, the road being as safe, if not safer, than in Persian territory. The chief obstacle to increasing the trade by this new route is the Russian opposition to it, who, by holding the customs in their hands, can give endless worry and trouble and the general influence they have over the Persian Government, the latest being to try to get the Persian Government to establish quarantine stations at Seistan and on the Herat border. Unless the British Government can induce the Persian Government to accept clean bills of health with merchants and travellers from India, furnished at Quetta or Nushki, it will always be possible for the Persian Government or Russians to paralyse any trade by this route by keeping caravans and travellers unnecessarily long at any station before granting "pratique." A high (Persian) official from Teheran was down lately to see about establishing quarantine. I may add that the fact of the Persian Customs being collected by the Russians has given the Indian traders an idea that the Russian Government is all powerful here and that Persia is practically Russian, and British influence *nil*. They have experienced trouble in getting their goods through the customs, and some here were prepared to return to India rather than be subject to gross impositions, and their invoices looked upon as suspicious and not to be relied on. Then it is also insisted that all traders coming into Persian territory should give up their arms. This they flatly refused, and would prefer to return to India than to travel defenceless in a country where nearly every man goes armed, and where there is so little law and justice from the Persian Government. They were told that they or their relatives would get compensation for any loss of life. To this their reply was that no compensation would be of any use to them after they were killed; and that certainly they would not travel unarmed and so not be able to defend themselves, though they were prepared to guarantee these arms were purely for self-defence and not for sale and would, if necessary, take out passes for them from the Persian Government, or that the British Government should grant them passes which would be accepted in Persian territory. Here they wanted to stop my gun going any further though it had been passed by the Customs officer at Seistan

Birjand is a large town containing from 25,000 to 30,000 inhabitants, and has large and populous villages in its immediate vicinity, and right on to Meshed and the whole of the Western Afghan border the country is thickly populated. All of the people are tea drinkers, and most of them can afford to purchase it except the poorest. The samovar, or tea kettle, is continually in use; and wherever I have been, even to the shops of the merchants, I have been entertained with tea and very often with Russian cigarettes. The trade of Birjand is chiefly with Bundet Abbas, to which caravans go once a year only. The Persian merchants send their goods there, carpets, wool, dried fruits, etc., which are sold through Agents, and foreign goods purchased and sent up. In this business there is no credit, the Agents receive, I am informed, a remuneration of 2 per cent. In the local bazaars there is a system of six months' credit, for which, instead of interest, a higher rate is paid for the goods purchased. As far as I have seen, the people are well off, well dressed, and well fed, and seem to have sufficient to buy both necessities and luxuries. With regard to trade with foreigners, I was informed by our Consul at Seistan that a new Perso-European court has been established for adjudicating cases of breach of contract and indebtedness between foreigners and Persian subjects, the Persian Government undertaking to pay awards when decreed against their subjects, from whom they would recover it the best way they could. If so, the danger of credit would be minimised to a great extent. When I get to Meshed I shall learn more regarding this from our Consul-General. I shall also make it a point to see the Russian Consul-General at Meshed, to obtain from him all the information I can regarding the over land trade to Russia proper and trade with Russian Turkestan where, as in Afghanistan, green tea chiefly is used. To test the market here, I am leaving with our British representative or native Agent, Umardeen Khan of the firm of Mahomed Suleman of Seistan—the first British subjects to start business in these parts—samples of tea large enough to test the market here right up to the Afghan frontier and Herat itself, where I have arranged to send samples of both black and green tea to the native Agent of the British Government. At Herat, green tea is chiefly used, of which I have a fairly large quantity forwarded to me by the Manager of the Punjab Bank, Quetta, from

the Kangra Valley. The small quantity of tins of 4 oz., each sent to me by the Manager of the Kangra Valley Tea Co. (green tea) I am taking on to Meshed with me. Some of these as well as black tea samples have already preceded me from Seistan, being forwarded on by post by the Agent of the great Meshed merchant to his principal.

As far as I see, unless a few of the biggest merchants take up the business of buying at Quetta tea and indigo chiefly, and which would then be practically a monopoly in their hands—which is a great inducement to them—the only other recourse will be to send up the tea and indigo and to appoint agents or to establish agencies at all the chief places, Seistan, Birjand, Meshed, Kiman, Ispahan, and Teheran. The fact of the teas being land-borne to all those places will always be a great factor in their favour, and will give them a pull over Ceylon tea, which must come by sea till the Adams Bridge railway is completed. Here at Birjand, there is only one man (whom I have not been able to see) who could take up the entire Birjand and Kirman business. At Meshed there are at least three that I have heard of, all of whom I shall interview and obtain their views. The price we may look to at present for our teas will range from 10 *krans* to 25 per *man* according to quality, from Annas12-6 to Re.1-15-3 per lb. and for every superior Orange Pekoe as much as 30 *krans* per *man*, or Rs.2-5-6 per lb. Several people have been to me to buy small quantities of tea, but I have refused to sell, as I paid no duty or customs as the samples were not for sale; but I have never sent any one away without a small sample free. As every village and town that I stopped on my way to this—sixteen different places—I had either the landlord and his friends, and as many others as chose to come, to tea. I stayed at the houses of all sorts and conditions of people, from the Persian gentleman to the farmer and peasant, by all of whom I have been received courteously. From Seistan the whole way the fame of this tea has spread, and with a little push would soon establish itself in Persia, as it has always been liked and preferred to most of the teas hitherto used by them.

To-day, before leaving, I shall send twenty-one canisters of Orange Pekoe and Pekoe to the Governor here, same as given to his brother the Governor of Seistan, and which was so much liked that the Governor wanted to purchase the whole half chest—regardless of price, which at Seistan was 20 *krans*—for much inferior tea—Dehra Dun *viâ* Bombay. Seistan itself is not much of a business place; the population of the whole of Seistan is small and scarcely equal to the town of Birjand and its neighbouring villages. Any tea used in Seistan before was merely that brought by private individuals from Kirman of Birjand. No tea was sold in Seistan till two years ago, when it was introduced by Mahomed Suleman, the then subsidised traders of the British Government. The chief Government servants and some of the nobility have also received samples from me, and, on my return, I expect to hear their opinion.

NOTES.

India's Tea Exports. 18,750,378 lbs. of tea were shipped from Calcutta during July.

Indian Tea for India. A further 33,600 lbs. of tea have been given to the Tea Expansion Committee.

Vanilla in Reunion. In 1899 Réunion exported 81 tons of Vanilla, in 1900 the total reached 95 tons. This represents a value of about £150,000.

German Quinine, etc. The exports of "quinine, quinine-preparations, etc.," from Germany, during the five months ended May, amounted to :—

	1901.	1900.	1899.
Kilos.	88,700	89,500	102,300

Coffee in Constantinople. A large stock of Santos coffee remained in hand at the beginning of 1900 from the previous year, and fluctuation in price prevented speculation in this article. The ruling price wa £1-15-6 to £2-1s. per bag of 110 lbs.

Coffee in the U. S. The *American Grocer* says :—"Coffe on the basis of 4·70 to 4·75 cents fo No. 7 Rio is attractively cheap ;" also :—"A new coffee com pany has been formed in Toledo, Ohio, known as the Toled Coffee and Spice Company. Capital, $200,000."

Tea in the U. S. The last tea sale indicated, says th *American Grocer* of 24th July, strong market for British grown tea ; steady for greens The bulk of the offering was Formosa, which sold from 10 to 28 cents in bond. Next auction July 31.

The great Secret. A bold cross-heading in a Colombo contemporary tells us just what we wanted to know. It says "consumption is caused by expectoration." If we could but believe it to be true as regards Tea and Coffee, we should know what course to recommend to producers. But we have our doubts.

Tea in Turkey. The British Consul reports that attempts to import Indian tea which failed in 1899 as already reported, succeeded in the following year 300 chests and ½ chests were received in Turkey during 1900, received weighing each 40 to 80 lbs., at 7d. to 10d. per lb. 150 cases also of China tea were imported fetching 8d. to 1s. 10d. per lb.

Rubber in Mozambique. The British Consul reports that although but a small quantity of rubber is shown in the Mozambique returns for past years there can be no doubt but that there is a considerable rubber trade on the mainland. That this industry is not systematically worked, is owing to the unsettled condition of the natives on the mainland, and the little that is collected is obtained in such a crude manner that the value is greatly reduced.

Tea at Wenchow. Tea formed some 45 per cent. of the export of 1900. A falling-off noticeable is attributed not so much to failure in the crops (though these were affected by the floods) as to the lack of capital and reduced number of dealers, and to an increase in the liking. A great deal, however, left by junk for Hong-Kong and South China, and it appears that the area of cultivation continues, even if slowly, to increase.

Calcutta Tea Sale. The Calcutta Tea auction held last Friday was the largest held this season, 24,000 packages being offered. All districts were well represented. The quality with the exception of Dooars tea was not so good as at the previous sale. The sale passed off with a quiet tone, and prices were very irregular, weak medium teas being hard to sell, except at much lower rates. Common kinds closed easier. There was a good demand for Bombay and the Persian Gulf for suitable teas.

Chinese Currency. In his report on the trade of Swatow for the year 1900 Mr. Consul Scott remarks that the "tael" is not a coin at all, but merely a quantity of silver unalloyed, weighing 1⅓ oz. avoirdupois. Its sterling exchange has, he says, year by year been fluctuating and falling. In 1890 the "Haikwan tael"

stood at 5s., but in 1900 the value of silver had so depreciated that the same "tael" weight would only realise some 3s. Unfortunately, Mr. Scott says nothing of the fluctuations of the local copper currency during the same period.

Cocoa in Dutch Guiana. The production of cocoa in Dutch Guiana during 1900 was considerably below the average of the six previous years. Disease, which had not appeared to any extent in 1899, not only reappeared, but spread to other districts, but fortunately again disappeared towards the end of the year. So far neither the cause nor the cure has been discovered, but an expert whose duty it would be to enquire into the causes and life history of the disease was to visit the colony recently. The total production for the year was 2,183 tons; the average price in Paramaribo being 75c. (1s. 3d.) per kilo.

The Pan-American Exhibition. As a part of the food exhibit "Equatorial Pan-America" is a realized dream of tropical trees, plants, vines, foliage and flowers too gorgeous for adequate description, and must be seen to be appreciated—nestled as it is within decorated glass, ornate grills and sparkling waters, suggesting the "Dolce far Niente" of vacation time in Caribbean Seas. This educational exhibit extraordinary consists of live trees, plants, vines, and shrubs selected from plantations and botanical gardens of tropical Pan-America, including allspice, pepper, cinnamon, clove, nutmeg, ginger; a miniature coffee plantation; a miniature tea plantation; with kola, mate, vanilla, tonka, cacao (from which chocolate is made), sago and arrowroot. So says the *American Grocer*.

The Russian Tea Duty. The Imperial Russian Consul in Bombay explains that there has been a change in the duty imposed on green tea entering Russia. The customs duty for green tea imported into the Russian Trans-Caspian Province and to Bokhara used to be roubles 14-40, 10-20, or 6, according to its quality. A new order of the Russian Minister of Finance, dated the 24th March, 1901, old style, abolishes this difference, imposing a uniform duty of twelve roubles (about Rs. 19) per one pound (about 36 lb.) on all kinds of green tea imported into the Trans-Caspian Province or to Bokhara, irrespective of the country of produce of such tea, as also of the route chosen by the importer *i.e.*, either over the land frontier *viâ* Persia, Afghanistan and China, or by transit *viâ* Batoum, Baku and Krasnovodsk.

The London Tea Market. Reuter reports that the market for Ceylon tea is generally firm. Pekoe Souchongs are quoted at 4½d (same as last week) but the average for the week is 6¾d (an eighth of a penny up). 28,000 packages of Ceylon tea were offered for sale and 26,000 were disposed of; while of the 35,000 packages of Indian tea offered, 29,000 found purchasers, at an average of 9d per lb. (¼d up). Cabling to Colombo on 23rd instant, Messrs. Gow, Wilson & Stanton report that the market generally is steady and that for medium liquoring Pekoes and Broken Pekoes as well as for Common Pekoes and Boken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 5¼d (the same as last week) and the average price of Ceylon tea sold on garden account this week was 6¾d (an eighth of a penny up). The average of the corresponding week last year was 6⅞d.

The American Tea Campaign. At the half-yearly meeting of the Ceylon Chamber of Commerce on 23rd ultimo. Sir W. W. Mitchell proposed and Mr. F. M. Mackwood seconded:—"That in the opinion of this Chamber it is not desirable to continue expenditure in America on the existing scale by the 'XXX Committee,' and they recommend that such expenditure be modified and a portion of the funds diverted towards efforts being made in other directions." The Hon'ble Mr. Figg, Messrs. T. B. Campbell, A Lampard, D. Skrine, A. Forsyth, F. M. Mackwood, A. R. A. Heath, G. B. Leechman, and Sir W. W. Mitchell carried on an animated discussion on the matter and the motion was eventually lost by 11 to 5 votes. It was thought that sufficient had been said on the matter to draw the special attention of the Thirty Committee. We give a brief report of the discussion on another page.

Coffee in London. The *Produce Markets' Review* of 3rd instant says:—The week commenced with a very strong tone, a good demand from the Continent being helped by an advance in the Brazilian exchange and dearer prices on the terminal market. Since then, however, the position has somewhat altered, the exchange has again fallen, and, receipts being about double those of last year, quotations have given way, and are again almost at the lowest point of last month. This has, however, had little effect on actual Coffee, and a good general business has been done at decidedly higher prices. The demand has principally been for Central American sorts, and, as a consequence, there is little left in Costa Rica under 40s. Guatemala from 40s to 50s is also 1s to 2s dearer. Auctions were held on Tuesday only, and as there will be none next week there will probably be a quiet time which will allow new arrivals to accumulate before the market re-opens.

Tea Production a Success in the U. S. "We are now succeeding admirably in the production of tea in the United States," says Secretary of Agriculture Wilson. "It is only a question of a short time when we will be able to raise all the tea demanded for use in this country. The two tons of tea grown at Summerville, S. C., last year so well satisfied the New York investors interested in the industry that they immediately formed a syndicate and bought 6,000 acres of land in the State, upon which tea will be grown. The Department of Agriculture last year sent tea plants to every Gulf State in the Union, from the Carolinas to California, for experimental raising. We have just heard from South Carolina that imported machinery in use there is able to make green tea from the black product in one hour. We do not yet manufacture such machinery in this country, but we will get to that later. Then there is no question concerning the availability of labour when we get to growing our tea on a large scale. There is any number of young people who will seek employment as pickers of the leaves, as wages will be good. We are now importing plants from China, Ceylon, and Japan, and we purpose raising the highest grade of the product in this country."

Indian Tea in London. The market continues firm, says the *Produce Markets' Review* of 30th ultimo, and there was good competition for the larger quantity brought forward at the public sales. The medium and finer qualities, which are now getting more plentiful, have

been readily bought at firm to advanced prices; but, as the prospects are favourable to a more liberal supply in the near future, present rates are not likely to be long maintained. It would appear from the advices from Calcutta that the production of the finer Teas is likely to be largely in excess of last season. Should this be the case, coupled with a probable material curtailment in the quantity of the commoner kinds, the prospects of the owners of gardens generally are not likely to prove more favourable than last year. The principal aim should be, as far as practicable, not to produce an excessive supply of any particular grade, but as far as possible to furnish this market with Teas for which there is the largest demand, and by doing this the fluctuations in prices would be minimised and at steadier market would prevail. The statistics for the past month compared with July last year, as will be seen below, are somewhat more favourable. The imports were 4,707,000 lbs. against 5,005,000 lbs., while the stock is now only 9,400,000 lbs. larger, and in the previous month it was upwards of 12,000,000 lbs. in excess of the former year, while the deliveries were 8,292,000 lbs. and 7,529,000 lbs. respectively. The quantity brought forward at the public sales amounted to 15,430 packages, 3,894 being withdrawn, and for all grades excepting the common descriptions, which were occasionally weaker in price, a firm tendency prevailed.

GENERAL ARTICLES.

THE AMERICAN TEA CAMPAIGN.

INTERESTING DEBATE IN THE CEYLON CHAMBER OF COMMERCE.

On Friday last Sir W. W. Mitchell, in moving the motion—"That in the opinion of this Chamber it is not desirable to continue expenditure in America on the existing scale by the XXX Committee, and they recommend that such expenditure be modified and a portion of the funds diverted towards efforts being made in other directions,"—which stood in his name, said that he did not wish to complain about Mr. Mackenzie or the apparent want of success that had attended his efforts, but he objected more especially to the large expenditure involved. They may be told that a large sum was spent on advertising, but he thought that work could be done through an American resident advertising agent which would not cost much. They had to rely solely upon themselves for the monies that were required to push Ceylon tea in other countries. Useful work was being done on the Continent, but more money was needed and where was that to come from? It was also said that money was required for pushing tea in Russia. There was an important exhibition coming on next year and they should do their best to support the proposal to put forth a first-class effort to make Ceylon tea known through the usual means adopted. He understood that the question about expenditure in America would shortly come under the special consideration of the Thirty Committee. He was sure none of them there would attempt to dictate to the Thirty Committee or give offence in any way, but none the less it was their duty to give expression to their views on that subject. The present was a very opportune moment to refer to the matter, and he hoped what transpired there that afternoon would be of service to the Thirty Committee.

Mr. F. M. Mackwood seconded. He thought the business in America was costing them too much.

The Hon. Mr. W. H. Figg was opposed to the motion. He was of opinion that Mr. Mackenzie's policy was a right one, and that it was approved by the Thirty Committee.

Mr. D. W. H. Skrine was also against the proposal. He thought that if they took away Mr. Mackenzie they would have no one to put in his place.

Mr. Lampard, too, objected to the proposal for the reduction of expenditure. He thought that the money spent in advertising in America was, from a business point of view, extremely small. They had money and it stood to reason they should spend money largely, in the largest field which existed. With the judicious advertising, and a larger sum spent in advertising in America than was now spent, the island would benefit in an increased ratio.

Mr. A. Forsyth supported the motion. He held that the spending of such large sums in America had done no good.

Mr. A. R. Heath was neither for nor against the motion, but thought that the buyers should be consulted as regarded the best way of spending money in advertising, etc.

Mr. G. B. Leechman said he was glad so much light had been thrown on the subject. If the resolution was passed, he thought it would simply be regarded in a very, very general way, calling attention to the importance of the subject. The Thirty Committee would no doubt give their best attention, and he would leave the matter absolutley in the hands of the Thirty Committee, and especially the six members who represented the Chamber.

THE MOTION LOST.

Sir W. W. Mitchell having replied, the motion was put to the Meeting, and lost by five votes to eleven.

TEA-DRINKING IN GERMANY.

That the French will ever depart from their national beverage, coffee, seems impossible, but it is remarkable that in Germany a taste for tea is fast increasing. According to reliable accounts, tea-drinking is at present confined to the wealthy classes of the Fatherland.

Tea that is in any way palatable is extremely high in price, and is at present sold retail at from 6 to 10 marks (5s. 11d. to 9s. 10½d.) per lb These teas are mostly caravan teas imported from Russia. There is an opportunity for an enterprising British firm to make an opening for Indian and Ceylon teas in the markets of Germany.

The amount of tea consumed at present in Germany is not great, owing to the fact that the prices charged are beyond the pockets of most German families, but a tea with a reasonable price ought to command a ready sale. The difficulty would be to find a satisfactory agent. A good English commercial traveller who can speak German fluently is hard to find who would be willing to engineer what would be at first a small and somewhat uphill business.

The duty charged on teas is 50pf (6d.) per lb., and allowance per chest is made for wood and lead wrapper. Thus a good tea could well be introduced into Germany at a retail price of 3 marks (2s. 11½d.) per lb., or even less with a considerable profit to the merchant. The tea at present sold in Germany at 3 marks per lb. is not fit to drink, and it is doubtful whether it is tea at all.—*Home Paper*, August 16th.

THE INVESTIGATION OF PLANT DISEASES.

The importance of agriculture to the United States of America has led to the organisation in the various States of the Republic of special experimental stations devoted to the investigation of agricultural problems peculiar to the districts in which they are situated. From these stations bulletins giving an account of investigations undertaken, and the results obtained, are issued at irregular intervals, and are supplied to persons interested. In this way a great deal of useful information is placed at the disposal of farmers and others, and thus promotes profitable cultivation of land. The Ohio Experiment Station has devoted, during the last ten years, a considerable amount of time to the systematic investigation of various plant-diseases common in the State; a summary of this work was compiled by the Director as a part of the exhibit of the United States Department of Agriculture at the Paris Exposition of 1900, and has now been published as Bulletin No. III of the Station. The objects of these investigations were to obtain accurate information regarding various vegetable parasites, and the measures to be adopted to destroy them successfully on a commercial scale. Where possible the co-operation of farmers in the district was secured in experiments with fungicides, so that no doubt should exist as to the practical value of the remedies proposed.

The first enquiry undertaken was on the prevention of the destructive disease known as "apple scab." This fungus attacks both the leaf and the fruit of the apple tree, retarding the growth of the

latter and rendering it unsightly in appearance. Spraying with solutions of copper-salts was found to give good results, and the best preventive was found to be a mixture prepared by adding milk of lime to an aqueous solution of copper sulphate, and known technically as Bordeaux mixture. As instances of the efficacy of spraying with this liquid it may be mentioned that the market value of sprayed over unspray apples of the same variety, grown in the same orchard, varied from 50 to 100 per cent. Spraying experiments for this fungus have been undertaken at intervals since the investigation was first commenced and have been uniformly successful.

Similar results have been obtaining in the treatment of the "anthracnose" fungus which attacks raspberries and the "shot-hole" fungus of plums and cherries. Experiments on the "brown-rot" of the plum have not been so successful, although it was shown in this case also that the spread of the disease is to a large extent checked by spraying with copper-salt solutions. This disease, however, is favoured by wet weather, which also renders spraying useless, so that the eradication of this fungus is a particularly difficult matter.

The peach seems to be particularly liable to a variety of diseases and, as it is extensively grown in Ohio, it has naturally been the subject of experimental work by the staff of this station. The diseases of the plant may be grouped under four heads:

(1) Diseases due to unfavourable soil.
(2) Injuries due to atmospheric conditions.
(3) Fungoid diseases.
(4) Diseases caused by parasitic animals.

Of these the diseases under the third head are usually most serious and comprise those known as "yellows," "crown gall," "rot," and "leaf curl." The second of these has become very serious in recent years. It appears as small excrescences on the stem of the tree, which dies before it attains fruit-bearing age. So far no remedy has been found, and the only safe method for avoiding the infection of healthy trees is the destruction of all the affected plants. The other diseases mentioned have been successfully treated by spraying with Bordeaux mixture, although in some cases this treatment only begins to be really effective in the second year.

The destruction of the minute worms which attack plants grown in forcing houses has also been made the subjeet of special study, and the occurrence of excrescences on the roots of tomatoes, roses, cucumbers, violets, begonias, and other plants has been traced to these organisms. In such cases steaming or freezing of the soil used in the forcing house are the best remedies. The bulletin is profusely illu-trated with figures of the various parts of the plants attacked by disease, so that recognition of any form of fungus should not be difficult.—*Imperial Institute Journal.*

RETAILING PRICE OF COFFEE.

The following extract from an American paper shows how consumers are victimized :—

"Although for the last five years a period of depression in prices for green coffee has been experienced, resulting from over-production in Brazil, the cost of the better grades of coffee to the average consumer has not been reduced to any extent; in fact it will be found that the average consumer is paying his grocer the same price for his "Java and Mocha" as he paid five years ago, which is generally between 30 to 35c per lb.

In a vague way must consumers of the better grades of coffee know that the coffee sold them by most grocers as Java and Mocha is anything but what it is represented.

During the first year or so of depression in prices for green coffee many queries were received from the coffee consumers, asking for an explanation of the report of depression and lower prices for coffee, as they were unable to obtain coffee from their grocers at a cheaper cost. One subterfuge or another, however, was resorted to to quiet the inquisitive ones. The one most generally resorted to was the statement that the decline in prices was confined to Brazil grades of coffee, which the consumer informed was not the grade of coffee sold him and that Java and Mocha were bringing just as high prices as previously. For a time this was true, but for the past year or so the prices for Java coffees in the green have been gradually sagging; but the prices for coffee charged by the average retailer have not been reduced.

The fact that practically all retailers of coffee throughout the country sell only "Java and Mocha" to their customers who want the best grades of coffee calls to mind strongly the miracle of the multitude being fed from the five fish and twelve barley loaves.

The deliveries of all kinds of coffee in the United States for the past five crop years have been as follows: 1896-97, 5,088,594 bags; 1897-98, 6,036,311 bags; 1898-99, 5,682,636 bags; 1899-1900, 6,035,623 bags; this year, which ends June 30, 1$01, promises to show a slight falling off from last year, the deliveries to May 1 being about 450,000 bags smaller than for the same period last year. Of these deliveries Java and Mocha does not supply over 2½ per cent. and this is a liberal estimate. The fact of the matter is that the better grades of coffee sold by the average grocer are anything but what they are represented; they may claim to sell Java and Mocha, but it will be found that it is either West India growths, *i.e.*, Maracaibo, Central American, Bogota, Mexican, and Porto Rico, or the better grades of Brazil coffee, particularly Santos.

The margin of profit that is being made after the green coffee leaves first hands can be easily figured. As previously mentioned, the average retailing price for the better grades of coffee which are usually sold as "Java and Mocha" is anywhere from 30c to 35c per lb. The first cost of these coffees in the green at the present market runs principally from 8c to 12¾c. Coffee costing 8c green is equivalent to about 10c roasted and 12½c green it is equivalent to about 15½c roasted. The margin of profit in actual Java and Mocha coffee where prices are maintained above 30c per lb. is also large. The first cost of Interior Padang coffee, which is the standard grade of Java coffee, is at psesent from 17c to 19c green, which is equivalent to about 20 3/4c to 23c roasted. Mocha is quoted at 15c 17c green for the average run, and these prices are equal to about 18 1/4c to 20 3/4c roasted.

As to quality of coffees, exporters claim that there are no reasons why coffee should not be sold on a true basis. The better grades of West India growths and in fact of Santos, the state, are just at desirable in their cup qualities as Java and Mocha. With the average consumer, however, educated to believe that there is no coffee equal to Java and Mocha, and consequently pays an extreme price for coffee which, if purchased on its true basis, could be obtained at a much more reasonable figure."

BRAZILIAN "RUBBER FARMS" FOR SALE.

We have before us descriptions of several "rubber farms" in the Amazon river country that are for sale. Some of them are offered by the proprietors, and others by banks at Pará, which, having made advances to the owners of the "farms," have taken over the properties in default of payment. We do not know the merit of these particular opportunities for investment, but the fact that they exist suggests several points of interest.

In the first place, the rubber gathering business probably is better organized than most of us hitherto have supposed. It appears that the 50,000,000 pounds or more of rubber annually exported from the Amazon is not gathered mainly by half-savages, roaming in vast forests, tapping at random such rubber trees as they may chance to find. It would require more than such haphazard methods to form the basis for the business of the banks and mercantile houses of Pará and Manaos, the hundred or more steamers on the Amazon, and the rubber-carrying ships on the Atlantic which transport not infrequently a cargo of rubber worth $1,000,000 or more.

On the contrary, each of the "rubber farms" is described as consisting of a definite number of *estradas* (parth, or roads), marked out so as to give ready and certain access to the particular rubber trees to be tapped, the approximate number of trees also being

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

given. This preliminary work of road-making is not done for a single season, but is meant to be permanent, so that, when a plentiful supply of prolic trees is once located on a navigable stream, they may be visited season after season, with an assurance of a yield that will prove profitable. From one description we quote: "This farm was marked off five years ago, for which service was paid 40 contos of reis (equivalent to-day to $10,000)." The number of trees on this estate is estimated at 20,000. There are also said to be on the farm wooden buildings, cattle, etc., besides which four steam launches are owned. Doubtless on an estate where the business of rubber gathering has been prepared for with so much forethought and at such expense, we might to-day see a force of workers established all the year round, but for the fact that the annual rising of the rivers scatters the rubber hunters for a certain period. As it is, the crop season, during which the trees are tapped daily, is something more than six months in the year

It may be asked why, in the face of such preparations and the presence of rubber in paying quantities, the owners of these farms should want to sell. The reason given is the financial depression from which all Brazil is suffering. Any manufacturer who buys Pará rubber is prepared to believe that somewhere, between the forest and the factory, good profits are made on it. The owners of many of these farms have profited largely, but their money has been made too easily for any thought to have been taken for the morrow. Hence the beginning of each new season finds most of them with nothing but their *estradas*, waiting to be worked. They must send for workers, and provide for them until the proceeds of the year's crop come to hand, all of which makes necessary advances from merchants or bankers who are generally at a distance. Whatever may be the prime cause, money is now a scarce article in the rubber country, the rate of exchange is most unfavourable, and credits have become contracted to an extent which leaves the weaker operators helpless. It is quite possible that the number of persons in the rubber gathering business, and the number of estates, affected by the Brazilian financial crisis will be so great as to curtail seriously the production of rubber during the coming season.

All of which leads to the thought that, if the Pará rubber already produced has come to an important extent from systematically marked out farms, visited year after year by workers under the same control—albeit the general management of these estates may have been wasteful and improvident—there may be a good opportunity for the investment of capital by outsiders, on a basis of cash capital instead of advances of goods and credit, in very large tracts of rubber lands, to the profit of the investors, while rendering the supplies of rubber more stable and the ultimate cost to the manufacturer lower.—*India Rubber World.*

NEW TREATMENT FOR COCOA CANKER.

P. O. D. writes to the *Times of Ceylon*:—A friend writes me as follows:—"I have just seen a letter from a Ceylon Cocoa Planter describing a new method, which is very interesting. The whole of the *outer bark*, up to about 4 feet. from the ground, is shaved off. The tree then exudes a lot of sap. This dries up, and the canker is killed, and the new bark that forms is so hard and smooth that it is said to be canker-proof. 'The whole of the trees' (*diseased* trees, I presume, but this was not stated) have been treated in this way on—Estate. The name of the estate is given, but I don't know whether I am at liberty to quote it or not. The result has been so great a freedom from disease that the planter whose letter I saw has tried the method on a portion of his own cocoa, and so far with good effect. He says there may be danger of the trees becoming hide-bound. I suppose that, if so, some remedy may be used."

Now, sir, what more can cocoa-planters possibly want? We have at last discovered a man who has not only killed the canker, but has clothed his trees in bark he believes to be canker-proof. Yes, sir, their is one thing cocoa-planters would be interested to know. They would like that man to own up in order to erect a monument (say, close to the Borron Memorial Hall) in grateful recognition of his invaluable discovery. Modesty has, no doubt, withheld him hitherto from rushing into print. Now the recipe is out, it is no longer a trade secret, and modesty need no longer be out of place on Matale Common.

CEYLON AND ITS CHIEF PRODUCTS.

The following are extracts from the Report of the Ceylo Chamber of Commerce for the six months ended 30th Jun last, as follows:—

The Tea Industry and Over-production.—During the first s months of the year a determined attempt was made to improve th position of the Tea Industry by reducing the output. The sugge tion was first put forward here by the Chairman of the Planter Association, and almost simultaneously in London by Mr. Ruthe ford at a meeting of members of the Indian and Ceylon Associatio held at Winchester House, on Wednesday, 23rd January, when th report of a Select Joint Committee was adopted and the proposal t restrict the output of Tea in India and Ceylon during the curre season was approved. On the 14th February the Select Joi Committee issued their final proposals with a form of undertakin for signature, and the means to be adopted to secure the desire reduction in yield were the restriction of the plucking area, fine plucking, the manufacture of Green Teas and the appropriation Tea for the exploitation of the native markets in India and Burma together with a sliding scale whereby estates producing fine qualities of Tea were subject to a less restriction of output as com pared with those producing common Teas. The Committee furthe urged that no further Tea clearings be planted out either in Indi or Ceylon beyond those in hand that could not be stopped. Thi circular was systematically distributed to all estates in Ceylon, an the Chamber in Colombo did their part in bringing it to the notic of the various Estate Agencies and Companies, but in the seque it was not found possible to secure the promise of more than total reduction of 7,000,000 lbs. against India's 10,000,000 lbs., an the scheme accordingly fell through. The agitation, however cannot be looked upon as fruitless, for it is known that large num bers of Estates and Companies, although not willing to formall bind themselves to do so, are actually working on the lines indi cated, and had it not been for this and a somewhat less favourabl season, the export figures to 30th June last, *viz.*, 78,414,020 lbs would probably have exceeded the figures of the previous yea which amounted to 78,474,630 lbs.

Reduction of Tea Duty.—On the 14th December last the India and Ceylon Associations presented a Memorial on the subject o the tea duty to the Chancellor of the Exchequer which set out very strong case in favour of its early reduction, if not of its entir abolition, and there seems every hope that the Memorial will hav its due effect whenever a reduction in taxation in the Unite Kingdom is practicable.

Tea Trade in the United States of America.—An interestin report on this subject emanating from the Foreign Office, whic has reached us through the Ceylon Association in London, will b found in the Appendix.

During the past six months the direct trade between America and Canada with Ceylon has been disappointing, and shipments during the period under review, show a falling off of over on million lbs.; but, taking a fair proportion of the shipments t China, as being for the Eastern side of America, it will be foun that the figures are more encouraging, although too much import ance should not be attached to the exports to China, owing to th large quantities of dust teas that have been shipped there by bric tea manufacturers for the Russian trade *viâ* Siberia.

Further, the available figures of direct shipments to the Unite States of America and Canada are somewhat misleading, as it ha been found that much of the tea shipped *viâ* London has bee manifested as for the home trade.

To avoid these figures appearing as shipment to the Unite Kingdom, it is advisable to draw the attention of Shippers an Steamer Agents to the fact that greater care should be exercise in declaring on Bills of Lading and Manifests both the Ports o destination, and whether the teas shipped are Black or Green.

Another point which should not be lost sight of, and which bear directly on shipments of Ceylon Teas to the United States o

---

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant th appointment of "Purveyors to Her Majesty The Queen and Empres of India" from the year 1837 until the time of her death, have no had the honour of being appointed by Royal Warrant "Purveyors t The King."

America and Canada, is the gradually falling market experienced in London during the period under review, which, coupled with the closer proximity of that market to the American and Canadian markets, has enabled the London trade to offer teas at very low rates and thus capture much of the American business that might otherwise have passed through local channels.

Under these circumstances and without London figures available, it seems fair to presume, although direct shipments have fallen off, they have been amply increased from the United Kingdom—thus relieving the London market of surplus stocks to the ultimate benefit of the Ceylon producer.

Green Teas.—Reports generally point to a growing demand at a price, and for this trade there is evidently a great future both in the United States and Canada. The industry at present is undoubtedly in its infancy, but, with strict attention to manufacture and avoidance of indiscriminate consignments, the results of which invariably prove disastrous to shippers, there is no reason to doubt that this trade will in the near future be established on a firm and sound basis.

In connection with the above remarks regarding indiscriminate consignments, your Committee would draw attention to the various letters on the subject of Green Teas which have appeared from time to time during the last few months in the local, American and Canadian papers.

The inference to be drawn from these letters is that the supply of Green Teas has been insufficient, but it is also noticeable, that whilst raising this outcry for larger stocks there, is a total absence of any quotation of price. Though it is a well-known fact that at the time of this outcry Green Teas were available both in Ceylon and in countries of consumption, it was impossible to obtain remunerative prices owing undoubtedly to the apparent combination amongst buyers and the anxiety amongst sellers to quit consignments, which resulted in cutting prices

Such a policy, it is obvious, is suicidal to the prospects of successful trading and is calculated to throttle any industry in its infancy.

Shipments of Inferior Teas to U. K. and Australia, Inspection of Tea Exports.—Attention has been directed to certain shipments of very inferior teas which have gone forward to the U. K. and Australia, and there has been considerable discussion as to the best means of preventing such teas leaving the island. As a means to this end the appointment of Inspectors has been advocated, but, apart from the very serious obstacles in the way of any really complete and thorough examination of all teas exported, there is the difficulty which at present appears insuperable of deciding upon a standard, the shipment of teas below which should not be permitted, and meanwhile the matter can only be left to the natural laws of supply and demand, and the discretion of exporters. It has also been suggested that Government should be asked to assist with legislation, but those who advocate such a course appear to forget that it is most unlikely that steps would be taken calculated to interfere with the liberty of the individual.

TRADE : FIRST HALF, 1901.

Tea.—*Quality* at the commencement of the year was poor and some very low prices resulted. In March matters began to improve and have been fairly well maintained. During June, the month in which usually the poorest teas are offered in Colombo, the quality was better than at the same time in 1900.

Quantity.—Shipments in January were heavy, resulting from shipping space not being available earlier and thus displacing about 1½ million pounds, which should have gone forward in December, 1900. Since March shipments have fallen off, and the six months at the end of June close with a reduction of one million lb. exports to United Kingdom. The total exports show a slight decrease for the six months.

1901. .78,414,020 lbs. against 1900. .78,474,630 lbs.

The locally-offered quantities increased to 25,437,460 lbs. against 23,565,603 lbs. in first half of 1900. The buying for foreign markets is making satisfactory progress, chiefly for Russia, Australia and China (Brick Tea).

The average price for the first six months is 31·28 cents, as compared with 33·84 cents in 1900.

Cinnamon shows a falling-off both as regards exports of Quills and Chips, probably due to the over-supply during the previous year and consequent slackness of demand.

The figures are :—

	lbs.		lbs.	
Quill ...	789,822	against	1,073,963 in 1900	for the first six months.
Chips ...	649,845	„	822,972 „	

Prices have slightly receded, but must still be considered very fair for the producers.

Cocoa has come to the front by doubling last year's figures and figures and exceeding both 1899 and 1898:—

	cwt.	
1901	28,532	first six months.
1900	16,627	
1899	25,263	
1898	27,912	

and prices appear also to have been satisfactory.

Cardamom exports are somewhat reduced.

	lbs.
1901	248,252
1900	313,221
1899	261,562
1898	252,583

After the United Kingdom, India seems to be our best customer for the spice.

THE PROMOTER OF THE JAPAN TEA TRUST.

The *Japan Daily Herald* of the 23rd July has the following :—

We are indebted to one of our subscribers for some authentic and interesting particulars of Mr. Corbin's career, which are contained in a recent number of the *Chicago Tribune.* The fact of Mr. Corbin figuring as the principal promoter of the projected Tea Trust, which is proposed to be brought into being in connection with the Japanese and American tea trade, is, we think, a sufficient justification for finding room for the Chicago paper's narration. We accordingly subjoin it. We recommend to our readers interested in the tea trade to "read, mark, and inwardly digest it." We subjoin the account given in the paper in question of what it calls Mr. Corbin's "somewhat meteoric career."

MAN WITH VALET IN BANKRUPTCY.

ASSETS ARE PUT AT $150.—AGAINST THIS CLAIMANTS ASK HOW $70,000 WAS SPENT IN TWO AND A HALF YEARS.

A Japanese valet in attendance on him at his apartments in Fifth avenue, New York, an athletic trainer visiting him mornings while he occupies a parlor floor room at the Wellington in this city, and personal expenses of about $70,000 in two and a half years, are some side lights in the career of Edwin Corbin, promoter.

After a somewhat meteoric career, Mr. Corbin is seeking relief from his debts in the bankruptcy court, and it was in connection with his examination before Referee Frank L. Wean recently that most of the above interesting facts came to light. Mr. Corbin stated before the master that his assets amounted to $150 worth of clothing.

Although he admitted in his testimony that his time for the last ten years had been spent about equally between Chicago, New York, and London, Mr. Corbin claims Chicago as his residence. This is the reason he gives for filing his petition here. He did this early last February. That Chicago is his home is being contested, however, by certain men who are anxious to learn what became of the $70,000 which, together with $17,500, was spent by Mr. Corbin in endeavouring to promote the lake fisheries' trust, which was subsequently organised under the name of the A. Booth Packing Company.

TELLS OF MONEY ADVANCED.

Concerning the money handled by him Mr. Corbin testified that $10,000 had been advanced by Americans and $50,000 by Englishmen interested in the deal. His evidence also showed that these people were out the sums they advanced because of a failure to carry the deal through. This was due, he says, to the refusal of Americans interested to grant an extension of the option held by Mr. Corbin when it expired June 1st, 1898. It also appears in his evidence that he secured $20,000 from one of these Americans. He gave his note for this sum, but the note was subsequently returned to him. In addition to this Mr. Corbin received $7,500.

Altogether Mr. Corbin received $87,500, and of this sum it is said that all but $15,000 was spent for personal expenses. When pressed by the attorneys for details he said it had been used for

living expenses including hotel bills and travelling expenses for himself and others interested in the combination. The $15,000 was expended, he said, in paying the expense for examination of books of the various concerns which were to be included in the deal.

Mr. Corbin's discharge is being contested for two reasons, that he has not a residence here such as is required under the law to give the courts jurisdiction, and for the additional reason that he is charged with having property concealed which was not scheduled in his list of assets. George W. Plummer, attorney for one of the contestants, is working on the latter proposition.

Mr. Corbin at the Wellington yesterday admitted his identity. He was anxious that nothing should be said in the papers regarding the bankruptcy proceedings and declared they were entirely regular. He said in explanation of his heavy expense account that it included expenses incident on crossing the ocean seven or eight times, bringing appraisers and expert accountants over here, and other necessary and heavy expenses in connection with the promotion of the deal.

Mr. Corbin's connection with the lake fisheries deal, which came in for considerable newspaper mention at the time, began in November, 1895, in an effort to consolidate all the prominent lake fishery establishments. He secured options on the properties and gave his time to the work in hand until June 1st, 1898, when his options expired as stated before.

In his testimony, Mr. Corbin stated that he had no money, stock, or bonds, and that his only property consisted of $150 worth of clothes. He said he was admitted to the Cook Country bar in 1887 and always considered himself a resident here, but admitted that he had had no office in this city for the last seven years, or that he had practiced his profession anywhere during that time.

OTHER CLAIMS IN THE CASE.

There were other claims besides the $60,000 of the Americans and Englishmen referred to, one for $9,000 by Charles Hodge of Houghton, Mich, a friend and business associate of Mr. Corbin. Through George W. Plummer he secured judgment against Mr. Corbin here and was preparing to do the same in New York when Mr. Corbin came to Chicago early in the present year and filed his petition in bankruptcy. He has been examined twice by the attorneys for the contestants, and in addition to the points already indicated he swore that although about 40 years of age he had never voted but once, and then for Grover Cleveland.

Mr. Corbin is a man of fine appearance, a good dresser, good talker, and thorough man of the world.

TEAS, COFFEES, SPICES.

The coffee plantation consisting of assorted trees from Ayautla plantation at Oaxaca, Mexico, is at the Pan-American Exposition. This, in connection with the tea plantation, which is housed in the greenhouse at the Horticulture Building, forms one of the most unique exhibits ever made.

The tea plants vary in appearance of both the stalks and leaves to a greater extent than the ordinary uninitiated visitor will be prepared to see. This is accounted for in a great measure by a system of hybridizing conducted by Dr. Shepard at the Agricultural Experiment Station in South Carolina. This work has made the cultivation of a tea plant in North America possible, as existing varieties were found to be so difficult of cultivation as to render practical tea culture out of the question by using known varieties.

Another exhibit directly connected with this one of teas and coffees is the collection of spicy flavor-bearing shrubs that Mr. Fuller has gathered from the West Indies; consisting of black pepper, cinnamon, nutmeg, cloves, vanilla, mate, betel, pimento, tonks, turmeric, kola, cassia, sago, and cassava; the last named being a root that is grown extensively in Brazil, the West Indies and even Florida, from which we get tapioca and similar starchy food preparations. It is extremely interesting to see the originals of these productions that we have been accustomed to so long, and to know how they are grown, the mode of preparation, etc.

What Mr. Fuller calls his hottest proposition is his red pepper corner, a collection that consists of a good many varieties of different odd shapes, sizes, and colours, though Mr. Fuller says they are all red peppers.

A handsome picture representing the South Carolina tea plantation is a feature of the tea exhibit; this is the only tea plantation in North America and represents the first successful attempt at tea growing within the borders of the United States. The plants on exhibition in this garden represent nine different kinds that are all hybrids of the following varieties: Darjeeling, Kangra, Ceylon, Dragon's Pool, Amoy, Assam, Japanese, and Formosa.

The Vanilla vines look more like house plants of the Elastica varieties which are seen tied to supports in urns, flower pots, etc. They grow to a considerable height in their native soil and climate, where they are trained to climb over trees, stumps, posts, etc. These plants, with the crop of beans here shown, give a very good idea of the manner in which our vanilla flavouring is produced.

Cassava is a new starchy proposition in the southern parts of the United States, the products of which are very little known beyond the finer preparations of arrowroot and the ordinary tapioca, though it is extensively used in South American countries, both as food and drink; the drink part being considerably the stronger of the two; in fact, when it is properly fermented, it is altogether too strong for indulgence on the part of any one except the natives who are accustomed to its use; probably nothing in the bill-of-fare in Brazil will send a Northern man to the hospital any quicker than indiscreet indulgence in this peculiar liquor. In this respect though the Pan-American has drawn the line and visitors will hardly be subjected to an influence of this nature. The aromatic and flavor-bearing miniature plantation consists of thirty large and over one hundred small trees, shrubs, and characteristic growths representing these different, and to us very odd products in addition to the tea and coffee plantations.—*American Grocer.*

AMERICAN AND CANADIAN TEA MARKET.

Mr. P. C. Larkin, of Toronto, when in London recently, favoured the *Home and Colonial Mail* with a call, and frankly spoke his mind on the subject of the American and Canadian markets for Indian and Ceylon tea, and the course to be adopted if business is to be rapidly developed.

Mr. Larkin, who is evidently enterprising to his finger-tips, related briefly his experiences in introducing Indian and Ceylon teas to the notice of the American and Canadian consumer, who are reached through the branches of the Salada Tea Company, which he controls in both countries. He told how the work was slow at first, but he quickened it by giving publicity in all kinds of ways to the merits of these teas. How the sales increased, and how he caused them to increase more rapidly by spending more and more on advertising. Having built up a business in "black," Mr. Larkin tried his hand with "greens," and partly at his suggestion planters have manufactured green teas, which, in his opinion and that of all experts, entirely eclipse the Chinese and Japanese makes, and bid fair, if planters will only maintain the standard of excellence, to hold the market and entirely rout the enemy. "But it is slow work this capturing a market," and here Mr. Larkin was most emphatic; "it means enterprise and the expenditure of money. The money will all come back many times over through the enhanced price of tea in London if planters and their representatives will set about the work of securing and developing trade on the North American continent, not by mild spurts, but by quick, systematic, and sustained effort, which will achieve lasting results and open up a large, steady, and continuous demand." Of Indian and Ceylon greens Mr. Larkin spoke enthusiastically. "They are simply splendid, and nothing can stand against them, but how on earth are people to learn of their merits unless they are informed by newspaper and other forms of advertisement? Publicity is the requirement. India and Ceylon have, since the introduction of green tea, the very article that is wanted to suit the consumer, but rapid development is necessary, and that rapid development can only take place if planters recognise the difficulties those who are pushing their teas have to contend with, and the only effective way of overcoming them." We asked Mr. Larkin, *apropos* of the statement of the United States Secretary of Agriculture, that the Gulf States would soon supply the entire American market, what he thought of the home-grown tea. He smiled a sarcastic sort of smile which expressed much, but then said quickly, "All the more reason for speed in pushing the trade in Indian and Ceylon teas, so that immediate and tangible results follow. Do the work thoroughly, speedily, and cleverly, and there is a sure and safe market." And Mr. Larkin took his leave.

BRAZILIAN NOTES.

(From the *Brazilian Review*.)

Exchange, *July 13th*, 1901.—Ninety days' Bank rate on London opened on Monday the 8th, at 11$\frac{3}{16}$d., declined to 10$\frac{15}{16}$d. on the 9th, and closed this evening steady at 11d.

Entries at Rio and Santos took a big jump last week, being 80,685 bags over those of the preceding week and 131,242 bags more than for the corresponding week last year. It is not, however, to be concluded that entries will be maintained in the same ratio to last year's, because at present peculiar circumstances are in action to stimulate arrivals, which last year were unusually tardy. Not only is the crop itself much earlier than last year's, but the weather is excellent, the roads in capital condition and, above all, the scarcity of money and credit such that planters have no choice but to hurry their produce to market almost anyhow to obtain funds for current expenses. We have lately returned from a visit to one of the largest plantations in Minas and have been deeply impressed by the innumerable difficulties with which even wealthy planters are now struggling. Not only is money to move the crop practically unobtainable at any price, but planters are almost all in arrears with their workmen and with the greatest difficulty keep things going at all. Disputes are of daily occurrence and more than one planter has already handed over his property to his plantation hands in despair. Under such circumstances it is not to be wondered at that even on the larger estates the coffee is badly picked, badly dried, hurried to market anyhow, and sold for what it will fetch. If this is the case even with the larger and wealthier planters what must be the state of the smaller fry who constitute the majority?

Still, somehow or other, the coffee will come down. If the planters have no money to pick, it will be picked and dried by the "colonos" themselves and sold on the plantation to shippers' agents, who are buying freely and are said to pay better prices than can be got from *commissarios*.

Shipments (embarques) were also much larger, being 21,871 over the previous week's and 77,612 more than last year. Declared sales at Rio and Santos aggregated 130,000 bags as against 89,000 the previous week and 133,000 last year. During the past week a fair business was doing in this market on the basis of 6$800 to 6$900 for No. 7. The quality of receipts has also improved, the coffee being better dried and of higher grades. Prices here are still over New York parity, being about 5$\frac{1}{2}$ cents c.f. and comm., whilst sales at New York are reported as low as 5$\frac{3}{8}$ cents.

CACAO-GROWING IN THE SOUTH PACIFIC ISLANDS.

22 CWT. CACAO PER ACRE IN SAMOA.

Mr. H. J. Moors writes to the *Ceylon Observer* under date :—

APIA, SAMOA, *May 21st*, 1901.

In your issue of March 1st this year and on page 615 is an article styled "Cacao: Pollination and 10 cwt. to the acre."

I regret to say that none of us in Samoa have sufficiently followed your valuable Journal to understand properly what the term "Pollination" means. We suppose it means that the pollen from the male flowers is to be introduced into the female flowers by hand, in a manner somewhat similar to that employed in fertilising. Vanilla. Would you be so kind as to explain the term to us? [Yes: to apply pollen to a stigma.—ED. *C.O.*]

The culture of cacao has but begun in these islands and less than 500 acres are now planted. Within the next six months we look to get in an additional 200 acres and such arrangements are being made that we believe a very large area will be set out in 1902, probably over 1,000 acres for that year.

Next year about 150 acres will be in full bearing—that is lands cultivated by foreigners. It is also likely that an additional 100 acres of native cultivation may also be in good bearing as well. As we are cultivating cacao quite differently from the manner stated in "Pods'" article, I have thought it might be of some interest to recount for you our experiences, and the results so far obtained.

Mr. "Pod" speaks of cultivating trees so close that 300 may be set out on a single acre. And he fears that the Ceylon soil will not stand such a drain as 5 cwt. of cacao per acre per annum. And he calculates that 15,000 pods will produce about 5 cwt. of cacao—about 30 pods to the lb. In Samoa we are planting our trees spaced so that we get from 120 to 150 trees to the acre, and some people think this too close. Last year they averaged 6 lbs. per tree of cured merchantable cacao of the highest quality, and this year's first crop has already averaged close upon 6 lbs. per tree, so that, with the October crop yet to come, it is pretty safe to say we will get from 8 to 10 lbs. cacao per tree. Mr. "Pod" seems to be well satisfied with a yield of from 2$\frac{1}{2}$ to 3 cwt. per acre, per annum, but thinks that pollination may double this yield. We are not resorting to this expedient here to get still more favourable results.

We have both the Criollo and the Forastero varieties, and their crosses, in all our fields and all thrive equally well. So far we have had no disease or post to fight, and we hope we may escape such difficulties. Manuring is not thought of yet, but in time we may have to resort to it, though we see no present signs of so doing.

As this enterprise is of a comparatively recent date in Samoa—the life of the cacao tree in these islands is as yet undetermined; but with our trees spaced 18 feet apart, we think they should last reasonably well. When the seasons have been particularly dry, we have noticed that a good few pods turn black just before maturing. No one here has been able to account for this. This year we have had showers quite constantly and the percentage of black pods is very low. Some have said that our trees were not able to mature so many pods as were being produced, and nature, in order to relieve the tree, destroyed in this way a part of the produce. Possibly in Ceylon the same phenomenon has been observed and most likely you can tell us its cause; may be you can also name its cure. [Is it not evident that drought in Samoa is to blame?—ED. *C.O.*]

I have seen very many trees this year with from 150 to 200 well-matured cacao pods on them *for the April crop*—and it is to be noted that the tree will keep right along, bearing slowly till October—when another sizable crop will be harvested, probably about one half as large as that produced in April.

On a tree just four years old, within a mile and a half of Apia, I have this April personally counted 270 fine well-matured cacao pods, and the cacao from this orchard, being cured, distinctly showed that 16 pods were sufficient to make a pound of merchantable cocoa.

We have here cacao trees but two years and five months old which are now full of young cacao pods, but it is my belief that, although many cacao trees will bear soon after they are three years old, a paying crop cannot be counted on until the fourth year.

As to the price we have had for our cocoa I may say that, though the buyers have found some fault with our methods of curing it, still what we have sent away has brought, in San Francisco, from 16 to 18 cts. per lb. and the bulk of it, which has gone to Hamburg, has realized of late 93/6 per cwt., with the promise of a better price as soon as we could deliver in quantities sufficiently large to induce the manufacturer to make up our variety of cacao by itself. Mixed with other cocoas it loses its identity.

We see no reason to apprehend that the price will fall—in fact all of our information leads us to believe we may even get more before long. We cultivate either variety indifferently. If one raises the Forastero cacao he gets larger pods, but not so many as if he attempted the Criollo. There is no difference in the cost of cultivation and little in the gathering and curing.

If we are raising from 8 to 11 cwt. here in Samoa per acre against your 2$\frac{1}{2}$ and 3 cwt. in Ceylon, the conditions here must be infinitely better than with you

I may say that very many people believe we have here the most perfect cacao conditions in the whole world. Others say that "Mr. Pod" is surely under-estimating the usual yield in Ceylon. Will you, Mr. Editor, kindly inform us which opinion is right? [Samoa has undoubtedly far richer soil than Ceylon.—ED. *C. O.*]

The Cacao outlook has been such as to attract a great deal of notice here in Samoa, and nearly every storekeeper, and trader, is getting into it for all he is worth.

Previous to the discovery of our capacity for production, lands back from the sea—no matter how good—were almost unsaleable.

Four years ago, 3,000 acres, almost adjoining Apia, were sold to the French Catholic Mission for $2 per acre U. S. gold.

Similar land farther away was sold during the early part of this year for from $2·50 to $4 per acre. Just now this land could be easily resold at from $6 to $20, and to my mind is still remarkably low. We have here to pay our labourers much more than you pay to your coolies, but we expect, I think, more work out of them.

Just now we are paying $8 per month and feeding the people at a cost of $4 more per man:—$12 in all. You will please understand that we are up till now using English money, and that we reckon 4 shillings to the dollar, and therefore our dollars are about twice as expensive as those mostly in the East Indies. [Rupees in East Indies at 1s 4d each, and 10 rupees a month is high for a working coolie.—ED. *C.O.*]

Still with the high rate we are paying we expect to make profits up to, and in fact much past, 20 pounds sterling per acre, per annum, after our cacao trees are past their fourth year.

All of our land is covered with dense forest which has to be cleared out, and this expense runs into about 8 or 10 pounds per acre, including seed and planting. Some retain part of the forest for shade and so get their land in cheaper. I am using both methods myself and cannot yet say which I prefer. All readers of your esteemed Journal who reside here will be glad if you will kindly comment upon these statements and if you will answer the few questions propounded.

The British Consul at Apia is well versed in the culture of cacao as practised here—and he will cheerfully corroborate any of the above statements I have made.

APIA, *July 6th*, 1901.—Somehow the above letter, dated away back in May, has remained here unsent. Since it was written we have got our April cacao cured and away before this. On the 4th instant at the usual jollification held at the U. S. Consulate, Mr. R. H. Carruthers of this place announced that his cacao for the earlier part of the year had turned out 17 cwt. to the acre. Now there is no more reliable man in the world that this gentleman, an accomplished British Barrister.

The October crop is yet to come and I make no sort of doubt but that Mr. Carruthers will be able to harvest, at the very least 5 cwt. more per acre, thus making 22 cwt. for the year for each acre. The trees are seven years old, planted 15 feet apart at an elevation of 450 feet and just two miles from the sea shore. A little breadfruit shade has been left. No disease has so far attacked any trees here: a little trouble we have had with white ants, and with a sort of fungus. Borers also in rare cases attack the tree, but do not seem to be able to kill it.

The only difficulty so far as I can see is that we have at times a number of black pods, and we do not rightly know why they get so.

The bees probably assist at the pollination in some way.

Land seems every month to enhance upon older values. Shortly, I expect, when we begin handling easy cacao moneys, there will be a little excitement over our prospects.

IF SMITH HAD EXPLAINED.

My wife says, and she says it with a snap, that never, *never* again will the Smiths get an invitation to eat at our house. And when she once makes up her mind to anything, she sticks to it like shoemaker's wax to a bit of woollen cloth.

You see the Smith's, man and wife, were old and intimate friends of ours. We lived within a stone's throw of each other for many years, and were as thick as treacle. As to our worldly estate, we were about on a level, in very moderate circumstances.

Between two and three years ago Smith's employers sent him to America on some business errand; he would not tell us what. A fortnight since he turned up at home and gave out that he had made a trifle of money for himself while he was away.

Last Tuesday we had them to dinner; the best dinner my wife could get up. And it was a good one, if I do say it myself. Yet, socially, it was a failure. In the old times Smith had the appetite of a cab-horse. Now he picked and winced over the very dishes that used to be his favourites. As my wife pressed him to taste this or that, he thanked her politely, but he dindn't eat. Mrs. Smith apologised for her husband, and said he had been ailing somewhat since his return from America. So the dinner ended in disappointment, and the Smiths went home early.

"Poor Smith is ill," said I. "No" said my wife, "he isn't ill. He's proud. He thinks his old friends aren't good enough for him; that's where it is. He's rich, and we are poor, and——." The worried woman here broke down and cried, and I went out for consolation smoke.

And yet bless your soul!—wait a moment, however. If Smith had been perfectly frank and said, "I am not the man I was. I lived high in America, and I'm all gone to pieces with inflammatory dyspepsia, and this splendid dinner will half kill me if I eat it." If he had said that we should have pulled through without a break. Why didn't he say it?

Here is a lady who does not hesitate to tell us her experience with that wretched ailment. Miss M. J. Barton is her name, and her home, 56, Sorby Street, Sheffield. In a written statement dated September 19th, 1900, of which the following is the sum and substance, she says that it is now rather more than two years since her health began to fail. At first, she thought it was only some trivial ailment that would soon pass away, for beyond loss of appetite and a feeling of langour and weariness, there did not seem to be much the matter with her.

So she struggled on with her work as do countless thousands of brave women every day, hoping to be right again in a short time.

But alas! her hope was short lived, for Indigestion, that demon health-destroyer, had got her in its iron grasp and would not set her free. Instead of getting better, she became worse.

Her tongue was now always foul and nasty, and after taking food—no matter how little—she experienced such a sense of fulness and tightness in the chest that she could scarcely breathe. "It seemed," she says, "as if some heavy weight was resting on my chest and pressing in my ribs." Indeed her chest became so sore and painful that she could scarcely bear anything to touch it, and was almost afraid to walk about, the slightest jolting hurt her so.

This feeling of weight and oppression in the chest is one of the most distressing and common symptoms of Indigestion. Like the red flag of the railway signalman it counsels caution and warns of danger ahead What untold pain and misery might be avoided if only we heeded these danger signals of nature, but there, what's the good of moralising. We *don't* take warning, therefore suffer in consequence. Miss Barton did for she goes on to say:—

"At times, I suffered intensely from wind spasms, and was constantly vomiting sour water. Sleep no longer refreshed me, for it only came in smatches and was disturbed by horrible dreams. Deprived of proper rest at nights, and afraid to eat much because of the fearful pains that were sure to follow, small wonder I got so weak and thin, that at last I was forced to give in and take to my bed, where I stayed for six weeks. During that time I vomited a quantity of blood.

"The doctor said I was suffering from Indigestion and an ulcerated stomach. His medicine enabled me to get down stairs again, but did not cure me, for I still suffered great pain after eating, and was always tired and weary.

"In this condition I remained for several months, despairing of ever being well again, but providentially I was led to try Seigel's Syrup, and to that medicine alone is due my present good health. Now I can eat heartily and enjoy my meals without fear of pain, and feel brighter and better in every way than I have done for over two years."

Why Mr. Smith didn't mention his illness at our dinner, I don't know. He admitted it afterwards to me. Still my wife hasn't forgiven him. "Happy," says Homer, "are those who died under the high walls of Troy." Happier yet, say I, are those who live and can eat what is set before them.

MARKET REPORT.

[*Per Mail advices of 9th August* 1901.]

COFFEE.

The London Commercial Record says:—No auctions have been held this week, but privately some fair sales have been made at quite late rates. "Futures" of Brazil have fluctuated, but close a trifle dearer than last week; yesterday September delivery sold at 27s 9d, December at 28s 3d, March at 28s 9d and May at 29s 6d per cwt.

London ...	... Santos ...	Sept. delivery	... 27s 9d.
New York	... No. 7 Rio...	,,	... 4·95 cents.
Hamburg...	... Santos ...	,,	... 28 pf.
Havre ...	... Santos ...	,,	... 34¼ francs.

Auctions are still suspended; privately not much doing. Brazil futures opened 3d to 6d per cwt. up and continued firm all day. New York 5 to 10 points up.

Receipts in Rio and Santos.

Since July 1	1901-2. Bags.	1900-1. Bags	1899-00. Bags.	1898-99. Bags.
Rio ...	724,000	256,000	479,000	359,000
Santos ...	1,124,000	851,000	1,047,000	720,000
Total...	1,848,000	1,107,000	1,526,000	1,079,000
Crop ...	—	10,900,000	8,971,000	8,772,000

Rio Exchange $10\frac{3}{16}$d, previous day $10\frac{7}{32}$d.

Havre, *August* 8.—Good average Santos August opened firm at 34f. and closed steady at 34f., September opened at $34\frac{1}{4}$f. and closed at $34\frac{1}{4}$f., December opened at $34\frac{3}{4}$f. and closed at $34\frac{3}{4}$f., March opened at $35\frac{1}{2}$f. and closed at $35\frac{1}{2}$f., May opened at 36pf. and closed at 36pf.

Hamburg, *August* 8.—Good average Santos August opened steady at $27\frac{1}{4}$pf. and closed steady at $27\frac{3}{4}$pf., September opened at $27\frac{3}{4}$pf. and closed at 28pf., December opened at $28\frac{1}{2}$pf. and closed at $28\frac{3}{4}$pf., March opened at $29\frac{1}{4}$pf. and closed at $29\frac{1}{2}$pf., May opened at $29\frac{5}{8}$pf. and closed at 30pf.

New York, *August* 8.—Closing prices of No. 7 Rio were as follow:—

	Aug.	Sept.	Oct.	Nov.	Dec.
August 8...	4·90	4·95	5·05	5·10	5·20
August 7...	4·90	4·90	4·95	5·00	5·15

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	20,401	18,161	36,230	7,639
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	12,772	10,551	17,601	15,671

The preceding figures exhibit—	Tons.
In the Imports an increase this year of ..	8,591
Home Consumption an increase of	2,221
Export an increase of	1,930
Stock an increase of	2,240

COCOA.

No public sales have been held this week and the transactions reported privately are of very little moment. For next Tuesday's auctions the supply so far advertised is very small—3,400 bags.

PEPPER.

Black.—On the spot very little business has been done; the value of fair Singapore is 6d per lb. For arrival sales are limited to 15 tons Singapore, September-October (s.) at 6d per lb. at which there are further buyers.

To-day Pepper very quiet. 6d per lb. is about the value of Singapore in any position.

White.—Quotations are nominal in the absence of business. Singapore on the spot is quoted at $9\frac{1}{8}$d, and Penang at $8\frac{1}{2}$d per lb., the arrival value being $9\frac{1}{8}$d and $8\frac{5}{8}$d respectively for September-November (s.)

CINNAMON.

For arrival several hundred bales of Ceylon usual assortment, have been sold to arrive at 9d and $8\frac{3}{4}$d per lb. c.i.f., also some No. 2 at $9\frac{1}{8}$d per lb. c.i.f. all August-October (s.) to London.

CINCHONA.

The exports from British India for the month of April amounted to—

	1901	1900.	1899.
Lbs.	318,593	529,278	307,309.

The auctions to be held at Amsterdam on August 29 will consist of 5,232 packages Ledgeriana, hybrid, officinalis, and calisaya, and 112 packages succirubra, weighing 567,809 kilos. The stock in first hands at Amsterdam on July 31 consisted of 2,173 packages Government bark and 7,667 packages private bark, including the above quantity. A supplementary catalogue will be published in a couple of days.

QUININE.

On August 2 the German makers reduced the price of sulphate by $\frac{1}{2}$d per oz. to 1s $4\frac{1}{2}$d for 1,000-oz. lots. Howards' quotation for quinine remains unaltered, but there price for salts has been reduced in conjunction with that of other makers. Whiffen's quotation for quinine has also been reduced to 1s $4\frac{1}{2}$d. Previous to the holiday, a large spot transaction took place in second hands at 1s $1\frac{1}{2}$d. without guarantee of make or condition. Since then, however, the market has been considerably firmer, and to-day there are buyers at 1s $2\frac{1}{4}$d, but no sellers under 1s $2\frac{1}{2}$d for spot for favourite brands, and 1s 3d for December. October delivery is not inquired for at the moment.

INDIA-RUBBER.

There has been a good business in fine Pará, with sales of hard cure spot at 3s 7d, and forward at 3s $7\frac{1}{4}$d to 3s $7\frac{1}{2}$d, soft cure spot at 3s $6\frac{1}{4}$d. Negroheads are quiet; Cametas sold at 2s 1d to 2s $1\frac{1}{2}$d. Peruvian ball and slab in demand; sales of good ball at 2s $4\frac{3}{4}$d to 2s 5d, and buyers forward, slap 1s $10\frac{3}{4}$d to 1s 11d and buyers.

Only small auctions to-day and little demand.

Pará 24 packages, Mollendo 20 cases retired.

Peruvian.—20 packages offered and 8 sold, scrappy negroheads rather poor 2s 5d, fair ball (1 case only) 2s $4\frac{3}{4}$d, slap 1s $10\frac{3}{4}$d per lb.

Colombian.—37 packages sold, scrap, part white and softish 2s $2\frac{1}{2}$d. scrap and strip heated and mixed 1s $9\frac{1}{4}$d, ditto very heated 1s 8d.

Central American, etc.—12 packages sold, good scrap 2s $4\frac{1}{2}$d, pressed strip part clean some mixed 1s $7\frac{1}{2}$d.

Mozambique.—52 bags offered and 10 sold—Lamu ball, greenish middling 2s $0\frac{3}{4}$d, ditto rather mixed sandy 2s.

Assam 72 packages, and Penang 25 packages retired.

CELEBRATED OILMAN'S STORES.

WHAT YOU NEED

is a book of full and varied information which you can make your own in every sense of that word. Such a book is

The Modern Cyclopedia.

You can make it your own by consulting it every day, and if you think you have no need of this daily consultation you are greatly mistaken. You cannot read a single page of your newspaper without finding something that needs explanation. You will pass on in your ignorance, unless you have

THE MODERN CYCLOPEDIA

at your elbow, ready for immediate reference. It will not fail you. Whatever you want to know—

IN COMMERCE ❖ IN BIOGRAPHY ❖ IN LITERATURE ❖ IN LAW
IN POLITICS ❖ IN HISTORY ❖ IN SCIENCE ❖ IN ARTS

will be found by you in the 8 volumes of this comprehensive and invaluable work. It is possible that you read this advertisement, night after night, and yet do not realise what we are offering you.

JUST LOOK AT THIS!

THE MODERN CYCLOPEDIA contains:

VOL.	I.—3,684	Articles,	217	Wood	Engravings,	4	Maps.
,,	II.—3,515	,,	194	,,	,,	3	,,
,,	III.—3,671	,,	228	,,	,,	2	,,
,,	IV.—3,109	,,	242	,,	,,	2	,,
,,	V.—3,613	,,	215	,,	,,	4	,,
,,	VI.—3,226	,,	201	,,	,,	3	,,
,,	VII.—3,148	,,	229	,,	,,	2	,,
,,	VIII.—3,108	,,	203	,,	,,	2	,,

Just Think of It!

A total of 27,074 Articles—1,729 Wood Engravings—22 Maps—and many Full-Page Plates, coloured and otherwise. And all this you can have *at once* if you send us Rs.36. This small sum is not a first instalment but a complete payment.

☞ *There is a Rush for this Bargain. Make Sure You are Not Left Behind.*

Price Rs.36 (Thirty-six).

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 13th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad. *September 2nd.—Weather*—56 days with no glimpse of sunshine and temperature 62° to 70° was the record till last Wednesday, when the sun put in an appearance, and has been shining brightly ever since. *Works*—Weeding, handling and borer. *Plant diseases*—Coffee looking grand. *Labour*—Abundant. *Health*—Good. *Interesting item*—The mail service seems in an almost disorganized condition throughout all the Hassan district.

Coorg. POLLI BETTA, *3rd Sept.—Weather*—With the exception of ·20 inch of rain last Thursday the whole of last week was rainless; and previously from the 14th ultimo the aqueous precipitations were very light, sunshine preponderating. This weather has put quite a gloss on the coffee leaves. Signs of leaf disease are not wanting, orange coloured specks are showing up here and there, and, although it will not be severe, owing to light crops, it will be fairly general a little later. *Labour*—Abundant. *Health*—Fair.

THE TEA CAMPAIGN.

THERE has been a very interesting discussion in the Ceylon Chamber of Commerce. The result was briefly stated in our last issue, but the real interest of the proceedings lies in the remarks that were made, not in the resolution that was rejected. In India, as well as in Ceylon, there are men who are sceptical as to the wisdom of a continuance of the American campaign on present lines. There are some who think that the States have been conquered, there are others who would attack Russia, and reserve almost every unit of force for that purpose. Yet, again, there are men who, like Mr. STANLEY BOIS, the Chairman of the Ceylon Chamber of Commerce, urge that no

effort should be spared—that efforts should not in any way be relaxed—to push and exploit in foreign countries in order to correspondingly relieve the London market. It will be noted that there is a double object in campaigns of this kind : (1) to open up new markets, (2) to relieve a congested market in London and try, by creating a scarcity, to run prices up to scarcity level. There is not one man, we think, who fails to see the desirability of this course. It is necessary, however, that each man should judge for himself how far the game is worth the candle. Unless, for instance the benefits derived by tea planters in Ceylon, greatly exceed the amount of cess collected year by year, the imposition of the cess cannot but be regarded as a blunder. Obviously a great deal depends upon the manner in which the funds raised are employed, and those who criticise the operations of the American campaign hold chiefly that methods are wrong and that expenditure is out of proportion to results, rather than that the market has really been captured and may now be left to make its purchases without further persuasion.

It is but fair to state that during the last two or three years there has been some little want of unanimity on the part of the "Thirty Committee" in reference to annual expenditure in America for the purpose of pushing teas. There was at one time a strong feeling that the annual allotment of £10,000 should be cut down to £6,000 ; but eventually the larger amount was allowed to stand. Sir W. W. MITCHELL, who caused the question to be re-opened, took special exception to payments made to persons or firms not disclosed to those who provide the funds. This money is in reality paid to dealers on proof that they have spent so much on advertising Indian tea. Sir W. W. MITCHELL objects to these subsidies yet proceeds to say that he thinks that all the good that has been done has been done through advertising. By all possible means continue that, he remarks ; but in his opinion it can be most effectually done through an American resident advertising agent, who might be paid by commission for carrying out the work adequately according to American methods which required to be thoroughly understood, because advertising there is practically a science. On the other hand, planters have always desired to be represented by one of their own number acquainted with processes of manufacture, etc., because they have felt that such a man is best fitted to push British-made teas in rivalry with China and Japan leaf. Sir W. W. MITCHELL appears to think that Mr. RENTON is doing excellent work on the Continent of Europe and ought to have more funds placed at his disposal, while in the United States the return upon outlay is disappointing. He has not put forward a single figure in support of this view. Mr. F. M. MACKWOOD, his seconder, has given some figures about the States, but it is probably too early for any to be given to show the result of Mr. RENTON'S work. What Mr. MACKWOOD says is this : that two years ago they shipped from Ceylon, either direct or through London, 7,600,000 odd lbs. of tea ; but up to that time the cost of exploiting the American market was Rs.8,11,000 odd, which had been voted out of the cess. In 1899 they increased their exports by 600,000 lbs., and last year there was another increase of about 900,000 lbs., so that, in two years, their exports to America had increased 1,500,000 lbs. and the machinery cost them Rs.3,00,000. In other words, the whole of the increase cost Ceylon, through the cess, 20 cents per lb., and he did not think that even the most rabid supporter of the present expenditure would claim that the one million-and-a-half lb. was due entirely to the efforts of their Commissioner.

If matters are to be criticised on this basis, a lot of Ceylon tea must have been 'golden tips' in the matter of cost to the producer during the earliest years of the campaign in America, when money was being poured out freely to sell teas, and teas were sold only to a small extent. Certainly 20 cents expended on each pound of tea is too large a sum, but it seems to us that Mr. MACKWOOD'S own figures show a reduction from 25 cents in one year to 16·6 the following year, and are not, therefore, so discouraging as he thinks. In the absence of any suggestion that the levy of the tea cess should be discontinued the point really at issue is how best to expend the money. This needs careful consideration. While not advocating constant changes of plan, to the detriment of experiments started, we would certainly urge that circumstances change year after year, developments take place, facts come to light. Every year, therefore, the position in respect to every market attacked ought to be thoroughly considered. The chief aim at the present time should be to decide how far the Russian market is worth special attack. Sir W. MITCHELL advocates advertising in the States and leaving the Russians to send their own representatives to Colombo to buy teas. Why he thinks the one market should be treated so differently from the other, he does not explain. Now that the Ceylon Chamber of Commerce has discussed the subject of the employment of tea cess funds, the "Thirty Committee," will, no doubt, go into it with renewed zeal and energy. The result will be awaited with no little interest.

TEA AT CANTON.

The British Consul-General reports regarding the year 1900 that not only was there again a heavy falling-off in quantity, but the Tea trade was unprofitable, and the outlook for the future can only be described as dismal in the extreme. He says he can only hope for the sake of those engaged in this once great trade that the views of those to whom he applied for information are too pessimistic, although it must be admitted that ample justification is found in the figures supplied. In the case of tea the returns of the Imperial Maritime Customs do not represent the trade at all, as most of the tea leaves the district for transhipment to sea-going steamers in Hong-Kong by native craft. The figures supplied by his informants for comparison are as follows :—

YEAR.	QUANTITY. Congous. Lbs.	Scented Caper. Lbs.
1891-92	1,883,957	8,979,238
1893-94	1,308,880	5,926,547
1899-1900	214,316	3,653,803

Such figures, they justly remark, do not need much comment. Much as the gradual disappearance of the Canton tea trade is to be deplored, there seems to be no mystery about it. Canton Congous and Scented Capers are not now wanted : few people drink them, and foreigners cannot offer remunerative prices to the native producers. These latter now, instead of making Congous for consumption by foreigners, unless Congous are actually ordered, manufacture Pouchong tea instead. The trade in Pouchong tea is entirely in native hands, and it goes to all countries to which Chinese have emigrated, and is consumed by them only. As in this Pouchong tea business so it is in other trades, and

where there are Chinese at both ends of a trade route there is little or no chance for traders of any other nationality; they thrive where other merchants could not pay expenses.

The Canton scented teas are essentially teas for blending. They are being driven out of the market by Indian and Ceylon teas, and no one would be surprised if the demand for those teas ceased altogether. It seems very probable that this may be so; meantime it does not appear that anything can be done to save the trade. It is understood that it is divided between three or four firms, and that there really is not profitable business enough for one.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

The Indian Tea Association (Calcutta) has issued, under date 29th August, 1901, the following particulars with respect to the present season's crop of Indian tea, *viz.*:—

	Manufactured to 15th August, 1901.	Balance to be made to end of season 1901.	Total.
	lbs.	lbs.	lbs.
Assam ...	29,549,019	40,775,333	70,324,352
Cachar ...	9,996,256	14,292,421	24,288,677
Sylhet ...	11,581,497	19,839,723	31,421,220
Darjeeling ...	4,330,034	3,178,390	7,508,424
Terai ...	1,525,254	1,605,040	3,130,294
Dooars ...	11,430,509	18,524,426	29,954,935
Chota Nagpore	80,600	73,000	153,600
Chittagong ...	319,562	551,837	871,399
Kangra Valley ...	2,200,000	820,000	3,020,000
Dehra Dun ...	1,153,794	670,000	1,823,794

2. To this total of ... ... 172,496,695 lbs. must be added:—

1. Kumaon (Estimate) ... ... 300,000 „
2. Gardens from which no returns have been received, including private and native gardens (Estimate) ... 11,500,000 „

Total ... 184,296,695 lbs.

3. Shipments to America, the Colonies, and other Ports are estimated at 25,000,000 lbs., and local and trans-frontier consumption at 9,000,000 lbs. There will, therefore, remain on this basis about 150,000,000 lbs. for export to Great Britain.

A GOLD CURRENCY FOR BRAZIL.

It was announced a couple of months ago that the Brazilian Government proposed to ask Congress for authorization to reduce the par of exchange to 24d. per milreis, and, if this were granted, to issue coins for ten milreis, equivalent to £1 sterling. The gold to be purchased with the guarantee fund in London. A Brazilian correspondent now writes optimistically as follows:—

Steady progress has been made with this scheme, and the President will, before long, be in a position to announce that it has been carried to a successful issue. What this will mean for Brazil is almost beyond conception, as the rapid fluctuations in the exchange only have prevented European capital from flowing freely into Brazil for the development of the country's almost unlimited resources, and engineers from Belgium, Holland, Germany, and this country are even now in Brazil, studying the questions of all sorts of works from railways downward, which their employers wish to execute.

The present Government has done much already to steady the rate of exchange by its crusade against gambling transactions, and the creation practically of a gold currency will be the culmination of the Campos Salis present highly successful Presidential administration. The finances of the Government were never in a better position, in spite of the low prices for coffee, the chief article of export of the country. Though the rise in the price of coffee, which is certain to follow a restricted cultivation, must by itself improve the exchange in the near future, the Government scheme (referred to above) will once for all keep the exchange at the price on which this scheme is based.

NOTES.

No Cacao in Sumatra. A correspondent of the *Ceylon Observer* writes from Sumatra that, with ideal soil and ideal climate, nobody will look at Cacao there.

Amsterdam Bark Market. The principal catalogue for the Dutch cinchona auctions of August 29th. It shows that 5,918 packages were to be offered, containing 525,898 kilogrammes of bark.

Secret Sales. The London correspondent of the *Times of Ceylon* considers that the Secret Sales scheme is only scotched, not killed, and will come up again, sooner or later, in some other form.

Ramie. The Selangor Ramie Estate has practically discontinued cultivating that product for the present, on account of want of demand for the fibre. Ramie is indigenous in the Peninsula.

Coffee in the Federated Malay States, 1900. Owing to the continued large supplies of coffee from South America, the price for this product rules so low in the European markets that none but the best situated and best cultivated estates can even earn sufficient to cover working expenses.

No Middlemen. The planters of the Juiz de Fóra district are about to start an agency in Europe for the sale of their coffee direct to consumers and do away with intermediaries altogether. We wish them luck, says the *Brazilian Review*, but doubt if, in these hard times, without money or credit they will be able to wait.

No Middlemen again. An Aberdeenshire correspondent writes to the *Observer*:—I still think planters starting shops themselves the best game. I know of two planters, both hard nuts, who have done so, and their tea goes straight from their estates to their shops, and, although you are all crying out about low prices, they are quite pleased with their profit, *and live up to it*.

The London Tea Market. Reuter reports under date 29th ultimo that the market for Ceylon tea is generally firm, fine teas being very firm and in some cases rather higher. Fair Pekoe Souchongs are quoted at 4¾d. (a farthing up) and the average for the week is 6⅞d. (an eighth of a penny up). 26,000 packages of Ceylon tea were offered for sale and 25,000 were disposed of; while of the 26,000 packages of Indian tea offered, 23,000 found purchasers, at an average of 8⅜d. per lb. (⅝d. down).

Coffee in Sumatra.

Thus a correspondent of the *Ceylon Observer*, writing under date O. K. Sumatra, August 11th :—We are just now picking two crops here, coffee and caterpillars. We have the same pest that Selangor suffered from two or three years ago, but I am not nervous about it, as I think we have taken it in time. One estate was eaten to besoms before any one knew that caterpillars were in the district ; but this gave the alarm, and no ragged bushes are to be seen.

Japan Tea in the U. S. and Canada.

The *Hong-Kong Weekly Press* of 17th July gives the following figures showing export of Japan tea to United States and Canada :

	1900-1901. lbs.	1899-00. lbs.
Yokohama	13,240,755	13,099,668
Kobe	—	—
Hiogo	6,498,079	7,154,042
	19,738,834	20,253,716

Tea Growing in Louisiana.

From the thirteenth Annual Report of the Agricultural Experiment Stations of the Louisiana State University and A and M College, for 1900, we learn :—*Tea Plants.*—In co-operation with the United States Department of Agriculture, this Station is growing over six hundred tea plants, with a view of testing practically the raising and curing of tea leaves. The success of the industry in South Carolina has stimulated the Department of Agriculture to try it elsewhere in the South.

Tea in Norway.

A correspondent writes to the *Ceylon Observer*:—Is making its way here, and is regularly drunk by Norwegians at 8 o'clock supper daily, everywhere. I saw plenty of Ceylon tea in the Bergen shops. As I was only one day in passing through Bergen, I had not time to inquire for Palliser (Radella) if he is still there. I think he got a grant to push Ceylon tea in Bergen. The Norwegian housekeepers are excellent makers of *coffee*, but the rising generation, when they find it takes more trouble in the preparation, may take more to tea.

Indian Tea Crop Prospects.

The following telegram, with reference to the tea crop in the various districts, has been despatched by the General Committee of the Indian Tea Association here to the Committee of the Association in London, *viz.* :—Assam—Outturn last month good. Cachar—Outturn last month about normal. Deficiency remains. Sylhet—Outturn last month about normal. Deficiency remains. Dooars—Outturn last month about normal. Terai—Outturn last month very poor. Darjeeling—Season will probably close early. Deficiency remains.

Indian Tea Exports.

The following figures of tea exports taken from the Culcutta Customs daily entries are issued by the Indian Tea Association :—Quantity of tea entered for export to the United Kingdom for the second half of August, 1901, 12,058,066 lbs ; quantity entered during the corresponding period of last year 13,708,420 lbs.; total from 1st April, 1901, to 31st August, 1901, 47,015,337 lbs. ; total from 1st April, 1900, to 31st August, 1900, 55,807,059 lbs. ; quantity shipped from Chittagong, second half of August, 1901, 2,055,650 lbs. ; total shipment from Chittagong to 31st August, 1901, 3,021,330 lbs.

The Calcutta Tea Market.

The Calcutta tea sale on Friday comprised about 20,000 packages, or 5,000 less than at the corresponding auction of last season. The issue of the crop estimate, as usual, had a depressing effect on the market, and prices declined all round, Broken Pekoes particularly being affected. About 3,500 packages were withdrawn owing to sellers' limits not being reached. The *Indian Daily News* observes :—"Why growers continue annually to issue crop estimates, which can have no effect but to spoil their market, is a mystery to us. We have raised our protest frequently against this custom, and do so again. The tea industry has surely enough difficulties to contend against without planters putting this rod in pickle for their own backs."

Indian Tea manufactured.

The following has been issued by the Indian Tea Association :—"The tea manufactured to August 15th is :

	lbs.
Assam	29,549,019
Cachar	9,996,256
Sylhet	11,581,497
Darjeeling	4,330,034
Terai	1,525,254
Dooars	11,435,109
Chota Nagpore	80,600
Chittagong	319,562
Kangra Valley	2,200,000
Dehra Dun	1,153,794
Total ...	72,171,125"

Indian Tea in London.

In consequence of the holiday the market has been practically closed for the greater part of the week, says the *Produce Markets Review* of 10th ultimo, and but moderate transactions have taken place. The inquiry generally continues quiet, due in a great measure to the comparatively small and poor selection, and this is mainly attributable to the slowness with which the new teas are coming forward. Although the report of the crop is more favourable, there is a considerable deficit in the export from Calcutta compared with last season, which will probably soon be reduced, should the improved conditions of weather continue. This decrease, however, may be partially attributable to the finer plucking of the leaf, but as the increased area of cultivation is yearly coming into full bearing it is by no means improbable that the aggregate outturn will be quite equal to that of last season.

Cocoa in Costa Rica.

Some progress has been made in the cultivation of cocoa in Costa Rica. In order to encourage the industry, a law was passed in 1894, offering a premium of 26c a tree for plantations containing upwards of 500 trees, of at least three years growth, provided that they were in good condition. In virtue of this law, applications for the premium have been made to the Minister of Public Works representing 400,000 trees, but the report of the Commission appointed to inspect the plantations and count the trees has not yet been published. In order to protect this industry, the import duties were raised in April to 30c per kilo., for coffee in bean and 50c per kilo. on ground cocoa. Those who have embarked in

this industry are well satisfied with the results so far obtained; the production is already, most sufficient to supply the Home consumption, and when the existing plantations come into full bearing it is probable that cocoa will figure conspicuously among the exports.

Rubber in the Federated Malay States.

During 1900, the European planters, with the pluck and determination which characterised the planters of Ceylon in former days, under somewhat similar adverse circumstances, have manfully turned to other forms of cultivation, rubber (Pará and Ficus Elasticus) and coconuts being most in favour, while still maintaining, in the greater number of cases, the upkeep of their coffee etates and waiting for better times. A large area has been planted with Pará Rubber, which thrives well. Three years hence we should know what will be the result. The climate and rainfall of the Federated Malay States is all that can be desired for tropical agriculture, Indian labour is becoming cheap, fairly abundant and good, and the policy of the Government in investing its large mining receipts in the construction of roads and railways has afforded facilities to planters which probably are not to be found in most tropical Colonies. An expert in the subject of gutta percha and rubber has been obtained from Kew, and his knowledge will doubtless prove of great value to the planters. Amongst other things he will superintend a Government experimental garden.

Coffee in London.

As there have been no auctions during this week it is difficult, says the *Produce Markets' Review* of the 10th ultimo, to fix the actual alteration that has taken place in values, as the business transacted privately is not always reported. The Continental demand has continued good for the lowest and medium grades of Central American, and virtually everything under 43s has now been cleared off the market. Dealers' stocks must have been so considerably reduced during the last fortnight that it is highly probable that when the auctions recommence on Tuesday there will be keen competition and higher prices will be paid. In the terminal market heavy receipts have checked any rapid upward movement, but quotations have daily hardened The statistics on the 1st instant are much what were expected; the increase in the world's visible supply of 42,000 tons is no doubt due to the early arrival of the New Santos and Rio crops, and the large total of 445,000 tons must act as a check on any considerable upward movement in these descriptions, but may not be able to stop an advance in mild kinds, which are unreasonably low and not too plentiful.

Bulgarian Exports of Attar, etc.

In 1900 Bulgaria exported £32,794 worth of attar of roses to the United Kingdom. £2,545 worth to Austria-Hungary, £15,135 worth to Germany, £40,987 worth to France, £26,924 worth to Turkey, £5,226 worth to Russia, and £23,993 worth to the United States, the total quantity covered by these values being about 459 metric tons, against 49 in 1899, and 58 in 1898. Reporting on the Vice-Consulate of Eastern Roumelia, Mr. McGregor says:—"The rose harvest was excellent and abundant, yielding about 900,000 meticals, or 4,300 kilos. (9,460 lbs.). Prices varied from £27 to £32 per kilo. (2⅕ lbs.) for the best qualities, while inferior oil fetched from £20 to £22. About 5,346 kilos. were exported, of which 1,174 went to the United Kingdom, 1,548 to France, 568 to Germany, 849 to the United States, and 886 to Constantinople. There can be no doubt, as the figures above quoted prove, that notwithstanding all regulations to the contrary, the introduction of geranium oil and palma rosa for purposes of adulteration is still carried on to a great extent, and this is the more to be regretted as the 'synthetic attar of roses' now produced in Europe, although inferior to the pure, natural oil, may prove a serious rival to the adulterated article now so largely exported. This ought, in their own interest, to be borne in mind by the Bulgarian rose distillers."

Quinine in London.

In their circular dated August 12, Messrs. C. M. & C. Woodhouse remark that the stocks of quinine are in excess of last year, but when the stocks of bark and quinine in London are taken together and reduced to equivalent of ounces quinine the total is rather below last year, *viz.*:—

1901	1900	1899
oz.	oz.	oz.
4,436,000	4,456,000	4,183,000

The shipments from Java for first seven months show an excess of 1,710,000 Amsterdam lbs. over 1900, but only of 426,200 Amsterdam lbs. over 1899; whilst exports from British India for only four months show a decrease of nearly 900,000 lbs. But the chief feature of interest in the statistics appears to be the large increase in consumption in the United States—assuming for proximate purposes of comparison 1 lb. of bark as equal to 1 oz. quinine (in bark analysing 6¼ per cent. this would be accurate). The imports of bark and quinine into U. S. A. for year ending June 30 were as follows:—

	1900-1901 (11 months)	1899-1900 (12 months)	1898-1899 (12 months)
	oz.	oz.	oz.
Total ...	7,960,000	7,421,000	7,260,000

The returns for June are not yet published, but assuming them to be only equivalent to 500,000 oz. they would show an increase of 1,000,000 oz., and if the assumption (as stated previously by Messrs. Woodhouse) is correct that the total production of bark in the world was equivalent to about 12,500,000 oz. quinine, only 4,000,000 oz. to 5,000,000 oz. would be left for consumption of the rest of the world without again drawing on stocks.

Cinchonine Derivatives.

The *Chemist & Druggist* says:—In 1867 Caventon and Willm obtained a base by the action of potassium permanganate on cinchonine, which they termed hydrocinchonine. They considered that this base was already existent in the cinchonine used for the experiments, and that it had resisted the action of the oxidising agent. Much discussion arose over the point, and different views have been held in regard to the matter. At all events, the base was looked upon as of great rarity. According to Jungfleish and Léger (*Jour. de Pharm. et de Chim.*, 1901, 313), by the action of dilute sulphuric acid on the alkaloid cinchonine, they have obtained, together with other products, a base presenting great resemblances to the old compound, hydrocinchonine. They have called this body cinchonifine, and regard it as an isomer of cinchonine. Except that the combustions do not agree well enough, the resemblances to cinchonine are sufficiently strong to have warranted the assumption that the two bases are identical. The following details will accentuate the points of resem-

balance and difference between the two compounds. They are both alike in crystalline appearance, forming fine prismatic needles; and they behave quite similarly towards the usual organic solvents. The melting-point of both compounds is 278°C. The specific rotatory power of hydrocinchonine is 198·6°, and for cinchonifine 199·5°. The optical rotations of the sulphates are almost identical in the two cases. A difference, however, is observed in the behaviour towards potassium permanganate. Hydrocinchonine is only oxidised very slowly by this compound, but cinchonifine reduces it even at the ordinary temperature. Another marked difference lies in the fact that cinchonifine sulphate crystallises with two molecules of water, whilst hydrocinchonine forms crystals with either three or twelve molecules of water.

GENERAL ARTICLES.

A GREAT TEA FIRM.

R. TWINING AND COMPANY.

In what may fittingly be called "the aristocracy of trade, Messrs. Twinings hold a high and honoured place. Established so long ago as 1710, in the reign of Queen Anne, by Mr. Thomas Twining, the business has ever since remained in the hands of his family and descendants. Not only so, but the premises occupy the identical ground which, with wise forethought, was purchased by the founder of the firm a hundred and ninety years ago. We question if any other firm in London can show such a record. For very many years Messrs. Twining combined the business of bankers with that of tea merchants, but, in 1893, the banking department was taken over by Messrs. Lloyds, two of the partners transferring their services at the same time, and the remaining partners, four in number, applied their undivided attention to the further development of the tea business. With what success they have done so, all the world knows. Not only have they fully maintained the high renown of the firm, but they have immensely enlarged the sphere of their operations, and it can now be said without exaggeration that they command the bulk of the high-class tea trade in this country. There are but few West-end hotels and clubs that are not supplied by Messrs. Twinings, and the list of their private patrons reads like the roll of the British aristocracy. It would be out of place to mention names, but we have been privileged to look over the old books of the firm, and we can state from our own personal knowledge that many titled families have been on their books continuously from the early years of the eighteenth century up to the present day. At the same time Messrs. Twinings supply tea at prices suited to every class of the community, ranging in value from 1s. 4d. to 6s. 2d. per lb.

These old ledgers, by the way, are interesting reading. Engrossed in a beautiful clear handwriting, they speak of days long past, when the beverage that is now in universal use in palace and cottage was the luxury of the rich. Referring to the year 1718 we found that the price of hyson was then forty shillings, and of bohea eighteen shillings, while cowslip tea was invoiced at twenty shillings per pound. After this, coffee at five shillings per pound seems cheap by comparison. Snuff is a frequently recurring item, and cost our ancestors five shillings per pound, which is rather cheaper than nowadays. Arrack, which we take to be Jamaica rum, was also a favourite article of consumption, and could not be considered dear at sixteen shillings per gallon.

When Mr. Thomas Twining, whose portrait, painted by Hogarth, hangs over the mantlepiece of the firm's private office, started business in the Strand, the tea trade was quite in its infancy. Although introduced into this country in small quantities about fifty years previously, it seems to have been regarded at first as a medicine rather than as a beverage. Mr. Samuel Pepys in his "Diary" recorded that he went home and found his wife "Making of Tea, which Mr. Pelling, the apothecary, tells her is good for her cold." In the reign of Charles II. its rarity and costliness may be judged from the fact that two pounds of Tea was considered by the East India Company a sufficiently handsome present to offer His Majesty. Even in 1708, or twenty-eight years after the firm was established, no more than six vessels were employed in the t trade between England and China. It may fairly be said, ther fore, that the history of the firm is the history of the tea trade this country.

According to the custom of the day, when Thomas Twinin opened his tea-shop near Temple Bar, he hung his sign ov the door. He chose for that purpose "Ye Golden Lyon," which name the house soon became known. The sign now hol an honoured place in the warehouse, and is treasured as a valu heirloom. "Ye Golden Lyon" speedily became a noted rendezvo of wits and men of *belles lettres*, and ladies of fashion came here their sedan chairs to sip the enlivening beverage.

The history of the firm since its earliest days has, in a wor been one of continuous progress and prosperity, and it never he a higher position than it does at present. The firm supply som thing like a score of Royal and Imperial households in this countr and the Continent and we are glad to note that they have just bee appointed teamen to His Majesty the King. In this connection is interesting to note that Edward VII. is the fifth consecutiv monarch of England from whom they have held this appointmen and they also supplied the Court in days prior to the issue of Roya Warrants.

The portraits which adorn the walls of the private office sho the features of eight generations of partners, and it is impossibl in looking upon their life like faces to doubt that the indomitabl spirit of enterprise and integrity that animated all their action and built up the prosperity of the firm inspires the ninth genera tion with the same motives and resolves. The present partner have shown that they are worthy of such an ancestry, and whe the time comes for their portraits to take their place side by sid with those that have preceded them, they likewise will take thei part in inspiring future generations of partners with the sam feelings of honour, fair-dealing, and laudable ambition.—*Cour Circular*.

THE ROMANCE OF TEA.

Let us deal first with some of the uncouth names to be found i our grocer's list. Hyson will probably be found to figure amon them. This is a corruption of two Chinese words, one of whic signifies "before the rains;" while the other, Hi-chun, is the nam of a young girl, which, being translated, signifies Flourshin Spring. About two hundred years ago this girl suggested to he father an improved method of sorting his tea. He adopted it, muc to his advantage, and his tea having become famous, he gratefull called it after his daughter. To this day members of the sam family are selling this same tea, and the "chop" or brand of thi particular kind of Hyson is Li Yihhing—*i.e.*, Li's Extra Perfume But this is a name which we must not look for in the grocer's lis until the public knowledge of tea and its various qualities becom very much greater than it is at present. Oolong is a name we ma look for with more confidence. This word means Black Dragon owing to the fact, that one Su was the first to bring to notice th peculiar excellence of a tea plant in which he had discovered black snake coiled up. Congou is a name commonly applied to tea suitable for breakfast. It simply means "well-worked. Applied to Ceylon tea it used to mean tea made from the lower an coarser leaves of the plant, as opposed to the Golden Tips, whic sufficiently indicate the young buds growing higher on the mai stem. This Golden Tip tea is most allotted to the Court and t high Chinese officials. The writer was once favoured with a cu of a very special brand of the Ceylon variety. After first being handed round to be inspected and admired in its dry form, it wa infused with the aid of a sand glass, and then poured off to b drunk, it is needless to say, with no allaying milk. Comet Por could not have been produced with more ceremony, and th feeling of respectful awe with which the golden beverage wa imbibed has survived the memory of its exquisite flavour It is not perhaps generally known that the flower petals o roses, olea fragrans, tuberose, orange, jessamine, gardenia, an azalea are largely used to perfume the teas we drink, thoug the name Orange Pekoe might, perhaps, have suggested thi fact. The Chinese call this tea by a name meaning superio perfume, while the pure Pekoe is called Lau-tsze's eyebrows. I should be explained that Pekoe means "white hair," and is applie

to the young tea-leaves, owing to the fact that they are covered with a fine white down. Most of this tea is sent to England or Russia, where it constitutes the bulk of the famous caravan tea sent overland. Lau-tsze was the founder of the Taoist religion, but as he was born about a thousand years before the earliest mention of tea, we may presume he never realised the virtue of his own eyebrows as a beverage. . . . . It is not, perhaps, generally known that no less a person than one of the Chinese Emperors has laid down instructions for the proper infusiou of it. You are to take, he says, clear spring water, and heat it to the extent that would be sufficient to turn a cray-fish red. You pour this on the leaves and forthwith drink it. Whether these directions are generally observed in China we are not aware. The native-made tea that one gets in the Far East generally seems slightly insipid until the palate has grown used to its delicate gradations of flavour. Stewing and the abominable habit of "cosying" are, of course, unknown; though in Thibet tea of a coarse quality is literally made into soup with milk and butter, vinegar and pepper being added when procurable.—*Evening Standard.*

RUBBER ON THE NILGIRIS.

In his latest Administration Report of the Government Gardens, Nilgiris, Mr. Proudlock says :—

RUBBER.—The Pará rubber trees (*Hevea brasiliensis*, Muell. Arg.) which were planted in November, 1898, are growing rapidly. The tallest tree was measured on the 22nd March, 1901; it was 18′8″ in height and had a girth of 7½ inches at one foot above the ground. This species yields the most valuable kind of rubber hitherto discovered.

The Central American rubber trees (*Castilloa elastica?*), which were planted in September, 1898, are doing well. The tallest tree, measured on the 22nd March, 1901, was found to be 12 feet in height and the stem was 14 inches in circumference at one foot from the ground

Of the plants of *Kickxia Africana?* (one of the most valuable species of West African rubber trees) that were planted in December, 1899, the best tree was found to be 8′10″ in height on the 22nd March, 1901. This may be considered as very satisfactory growth.

The Ceara Rubber.—*Manihot Glaziovii*, Muell. Arg.—Much attention was given to this species during the year at Kullyar, at Burliyar, and also at Nellacotta and at Pandalur in the Wynaad. It may be mentioned here that the practical study of this rubber tree has been carried on by the Curator for several years now as opportunities occurred, but chiefly in the intervals between his official duties.

One of the main outcomes of these observations is that trees of the same age and size have been found to differ from one another remarkably in their yield of rubber. A large tree, girthing 3′ 10″ at four feet from the ground, was tapped at Pundalur in February 1901, and it yielded only about a tea-spoonful of latex. This tree was cut down and brought to Ootacamund as a specimen of a perfectly useless ceara rubber-yielding tree. On the other hand, a few good rubber-yielding trees have been met with and noted at Kullyar, at Nellacotta and at Pundalur. Cuttings of one of the best rubber-yielding trees at Kullyar were taken and planted in Burliyar in January, 1900; and a few of the plants raised from them are now over 14 feet in height.

In February, 1901, cuttings were taken from the best latex-yielding tree at Nellacotta, and also from the best tree at Pundalur, and have been placed in one of the glass houses in the Ootacamund garden in order to get them to grow. Later on, it is intended to plant them out at Burliyar or elsewhere, with the object of testing them, and to propagate them if they are found to be as good rubber-yielders as the parent trees.

What has been accomplished by the Dutch in Java in connection with the selection, propagation and improvement of cinchona trees, which now yield surprisingly high percentages of alkaloids, and also by the Vilmorins of Paris in connection with the production of new varieties of the sugar beet-root which yield high percentages of sugar, might also be done in connection with rubber trees with probably equally encouraging results in course of time.

It will be observed that only a small beginning has been made to discover the best rubber-yielding tree or trees in each of the plantations named, and to propagate them by cuttings. This should, however, also be done in the case of all plantations or groups of the trees in the district or even beyond it. The yield of latex by the progeny of the best trees, planted in order in one garden, would, in turn, have to be compared; and by working on the lines of intentive selection, propagation and cultivation of only the very best latex-yielding trees it is reasonable to hope that, in course of time, a variety of the tree yielding a really paying percentage of rubber may be evolved.

These principles will no doubt also apply to all other species of rubber-yielding trees.

For the sake of convenience it may here be mentioned that, in February, 1901, the Curator tapped a tree of *Plumeria acutifolia, Poiret*, at Gadbrook, Nellacotta, Wynaad, and obtained a small cake of rubber from it. A report on the quality and value of this rubber will be obtained in due course.

THE TEAPOT IN INDIA.

BY SIR EDWIN ARNOLD.

(*Daily Telegraph*, Aug. 3rd.)

In a recent speech upon the Assam labour question Lord Curzon made a suggestion which may prove to be the beginning of a new social era in India. Full of ideas as is the accomplished Viceroy, I am inclined to think that the most brilliant and fruitful of them all was set on foot when his Excellency asked why India could not be induced to drink her own tea. Why not, indeed? we may well inquire. It is known that she grows the best tea in the world, and Assam, indeed, is the original mother-country of the little bush which has become so famous and necessary. Yet, as a matter of fact, hardly an ounce of tea, black or green, is consumed by Indian natives; it is still as strange and foreign to them as it was to Mr. Pepys when, on Sept. 28, 1660, he wrote in his diary: "I did send for a cup of tea, a China drink, of which I had never drank before." That was the beginning of the "cup that cheers" in England, and it was about the same time when the chairman of the East India Company, writing to Calcutta, added the famous postscript to his letter, "Tell our agent to buy and send hither six pounds of the best tay he can gette." And now what a business it is! India and Ceylon between them do an enormous trade, which has quite outpaced the tea-gardens of China, and could and will be greatly extended. Japan and the Celestial Empire are her principal rivals; but Japan drinks a great deal of her own and sends all the surplus to the United States, the world in general, which in this case really means Russia, America and England, being supplied, the first-named entirely from China and the others from the general market. Now it would be an excellent thing if India would take to the drinking of tea. That it may become

A UNIVERSAL AND POPULAR BEVERAGE

is proved by Japan, where, taken without milk or sugar, its use is constant and pervading. Many other nations have special drinks. The South American takes his "maté"; the African his "pombe"; the Polynesian "kava," and so on. But the Hindoo has always been contented with simpler water. I hardly know of any other potable among them except the liquid in which rice has been boiled, which has they call "conjee," and sometimes, perhaps, milk and water, with a little spice in it. The Hindoo housewife does not make stews nor soups—forbidden these things by her creed and very rarely does she provide anything like a vegetable broth. Most of the household food, such as chupattis, grain, etc., is cooked on sheets of iron, the saucepan coming very little into the domestic cuisine. The Hindoo housewife knows nothing of cocoa or chocolate, and has never even tasted that coffee of which her Mohammedan sister partakes. But what an excellent thing it would be if Lord Curzon's idea should make her a tea-drinker! Taken as the Japanese take it, pure and simple, without cumbrous paraphernalia, tea-drinking would well suit the population. First of all it would, as in Japan and China, lead to the general habit of boiling all the drinking water. That one custom would save lives by hundreds of thousands, for the peasants, once habituated, would take cold tea with them to the fields, and avoid for themselves and their children the terrible evils of the village tank. Next, tea, though only slightly nourishing, prevnts waste of tissue, and helps food to assimilate; so that the trifle spent in a cheap but good leaf would be well repaid. Thirdly, it is a social cup, conducing to conversation and family peace, and would

be a great boon to the patient, gentle womanfolk who have such few pleasures.

Of course, there must be no question of five o'clock fashions and elaborate tea equipages. A kettle, a teapot, and some cups should comprise all the machinery necessary. Milk and sugar are innovations introduced by the West; and spoons, plates, and cream-jugs are not in popular knowledge. Every morning the Hindoo household sends forth a mother, an aunt, or a sister to the village-well, where the chatty of copper, brass, or baked clay is filled to the brim, corked with a tuft of convolvulus or lemon-grass, and carried back to the hut for the day's consumption. The cooking stove is a hole in the ground with a few stones, the fuel charcoal or cow-dung cakes. Everything is primitive, and will remain so. Yet, if once Lord Curzon's good idea should strike root into the soil, I hardly know what boon could prove greater than tea-drinking established as

A HABIT AMONG THE HINDOOS.

Beside the countless lives saved by boiling the water, the homes made pleasant by the little social graces which cluster round the teapot, and the pride and comfort of a little luxury embellishing daily life, it would be a stupendous lift for the tea industry of the land. Accordingly the Viceroy's suggestion has been intelligently taken up. An official crusade for the propagation of the tea-kettle has actually been started. We learn from a high Indian authority: 'A tea distributing agency has been formed, and Messrs. Andrew Yule & Co., have undertaken the work of distribution for three years without remuneration except out-of-pocket expenses. The Tea Association has given a grant of 40,000 rupees. The large agency houses, headed by Messrs. Finlay, Messrs. Muir, Messrs. Yule, Messrs. MacNeill, Messrs. Octavius Steel and others, have agreed to contribute three-quarters of a million pounds of tea annually. With the present low prices, the native consumption is expected to reach 15,000,000, or 20,000,000 pounds. If this is achieved, nothing more is likely to be heard of over-production. Special efforts will be made to cultivate a taste for tea-drinking among the native passengers on the railways, who exceed 160,000,000 annually. An average consumption of one ounce would give 10,00',000 pounds consumed in a year on the railways alone, without counting the consumption of the general population."

Mark how splendid is the outlook of all this! Talk of storms in a teacup; here is promise and potency of golden profits for the planters, enhanced revenue for the Government, and health and pleasure for population of 250,000,000,

ALL ENSHRINED IN A TEA-CHEST.

If the notion took root, Assam and Cachar might safely double their tea-gardens; the Indian potters might make a little fortune in each district by turning out such utensils as native taste would demand, and although sobriety is a virtue which few Hindoos have to learn, the use of tea is everywhere seen, and above all in Japan, to be the greatest friend of temperance and gentle manners. There is a whole gold-mine in the idea of supplying Indian railway travellers with hot and cold tea in place of the untempting and rather perilous water jars now on offer at all stopping stations. Cold weak tea is probably the best and safest beverage for thirsty throats; and if Lord Curzon's suggestion led to nothing more than a growing habit of boiling drinking-water, it would be a result worth any efforts. Only too much must not be hoped for. The Hindoo is beyond all men cautious, conservative, and caste-ridden. The tea he uses would have to be specially grown, prepared, and guaranteed, and the Brahmans and higher classes must first be won to the teapot. Perhaps something classical might be found in the scrolls of Hindoo mythology which would sanctify and recommend the tea-leaf, as has happened in the case of the sweet basil. In front of almost every Hindoo door will be seen a square earthenware pot remarked with rude figures in coloured chalk, and containing a dwarf shrub. This is the holy Tulsi—the plant consecrated to the protecting deity; and the Indian housewife would as soon forget to grind the day's grain in the little stone-mill as to pour the morning water over the Tulsi plant on her doorstep. My good friend,

SIR MOUNTSTUART GRANT-DUFF,

who, like King Solomon, knows the Eastern flora from the cedar to the hyssop, could find, I am sure, something charming and authoritative about that plant which, indigenous in Assam, has borrowed its name of "Tcha" from China, and is least of all known in the land where it grows best and most naturally. If, then, Lord Curzon can teach India to drink tea he would, in my judgment, deserve for ever to rank among her greatest benefactors, and it is a policy which I am sure all English women will appreciate and support.

THE PROSPECTS OF COFFEE.

The accounts of the Dumont Company for the past year conclu sively prove two points, says the *Brazilian Review*—that whe properly managed, coffee estates can yet be made to yield handsom profits, and the advantage of efficient over the careless and un scientific methods that have generally prevailed. By strict atten tion to economy and the introduction of the most modern machiner the quality of the output of the Dumont has been so improved a to command an average price of 40s. 2d. per cwt., more than 12½ % better than the average quotation for "Santos, good average" fo the same period.

After paying all working expenses, including the maintenanc and renewal of road, buildings and machinery, difference o exchange, and every item incidental to a great plantation, a ne profit of Rs.1.390:687$ remained over sufficient to pay a dividen of 10 % on a capital of nearly Rs.14.000:000$ for which, if no less, a similar estate could probably be bought to-day. No doub there is the problem of possible higher exchange to be faced wit the corresponding increase of cost and simultaneous fall of sterlin prices. But such conditions can be but transitory, whilst th returns of the Dumont Company show that with exchange abou 10d. sterling prices might go to 20s. per cwt., or half what the were in 1900, without leaving loss on efficiently managed estates.

However planters may grumble, the future of coffee is all right If the present owners cannot work at a profit there will not b wanting others with more energy and more capital to put th industry into shape and make it pay once more.

The future of coffee lies in co-operation and the introduction o more economical methods, the improvement of quality and mor attention to grading. By the concentration of a dozen or so smal plantations into one property the present wasteful and inefficien administration must be economised and replaced by scientific treat ment and every advantage taken of the hydraulic power so abund antly provided in many districts by Nature, by which the cost o handling and transport on the estate might be reduced at least t half. The slow and costly "terreiro" process will have to be give up and the coffee be dried mechanically, probably also by electricity In fact coffee planting is yet in an almost primitive state. Th creaking wooden-axled bullock cart is still the common means o conveyance, and drying as primitive as in the year 1. Somethin has been done in the way of pulping and hulling machinery, but a far as cultivation itself is concerned everything is primitive.

At present plantations are going almost for the asking in som districts and offer a splendid opportunity to men of energy imbue with modern notions of the superiority of machinery and science t brute force and rule of thumb, for lucrative investment of capita

GLAZED COFFEE IN OHIO!

After a long and wearisome trial, in which considerable exper testimony was produced on both sides, the jury in the case of th Food Commissioner of Ohio against Arbuckle Brothers, to preven the sale of glazed coffee within the State, brought in a verdict i favour of the prosecution, thus sustaining the Food Commissioner The case will be appealed.

It seems strange that while the Supreme Court of Ohio hold that the duties of the Dairy and Food Commissioner are mandatory the present Commissioner served two terms and his predecessor through their respective terms without discovering that glaze coffee was an adulterated article within the meaning of the statute During all that period, no consumer in Ohio ever complained of th quality or price of "Ariosa" coffee; ever doubted that they receive full value for their money. Fourteen million pounds were sold i Ohio last year, and it is fair to presume that had it been in an way unwholesome or its sale in the slightest degree tainted wit fraud, complaints would have been general, whereas popularit and general excellence is certified by its great sale.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant th appointment of "Purveyors to Her Majesty The Queen and Empres of India" from the year 1837 until the time of her death, have no had the honour of being appointed by Royal Warrant "Purveyors t The King."

In February last Dairy and Food Commissioner J. E. Blackburn notified Arbuckle Brothers that "'Ariosa' coffee, as now prepared, is, in my opinion, an adulteration under the laws of Ohio;" and that "it is not a compliance with the law to simply label the article 'Compound' when coffees are filled, coated, and glazed to make them appear better or of greater value than they really are, and to retain water that has been added to increase weight."

While Commissioner Blackburn's action may be defensible under an extreme technical interpretation of the laws of Ohio, nevertheless it seems unjust and calculated to bring food laws in general into contempt.

The coffee in question is a low-priced article coated with a substance which preserves aroma and acts as a clarifying agent. It has been unrestrictedly sold in Ohio ever since the food law was passed sixteen years ago. No complaint has ever been made that glazed coffee is unwholesome.

In a report on coffee prepared by Chief Chemist Wiley, of the United States Department of Agriculture, and a witness for the defence (Bulletin No. 13, p. 913-914), he says: "The glazing of coffee, according to König, is objectionable, not that the glazing material is unwholesome, but because coffees so treated retain an excess of moisture in the roasting process." Analyses presented led to the conclusion that "the large percentage of moisture retained by the glazed coffee and the decided increase in the soluble matter adhering to the beans must certainly prove of considerable profit to the roaster, without advantage to the consumer."

The price at which "Ariosa" coffee has been sold is proof that there was no fraud in its sale, and that any advantage gained by the use of water was given to the consumer. Competition, always a safeguard of the people against the sale of fraudulent or unwholesome foods, may safely be relied upon to prevent extortion.

If the sale of coffee roasted by the use of water is contrary to the Ohio law, and Commissioner Blackburn enforces the act, it would drive nearly all coffee out of the State, or compel the adoption of the dry roast process, which is not regarded with favour by coffee roasters.

The Ohio law, as it now stands, is defective; lacks elasticity, in that it makes no provision for exceptions to a statute that is exacting in its requirements; and therefore it may, as in the Arbuckle case, be made a vehicle of persecution.

A rigid compliance with the law may, in many cases, work injustice to the people as well as those charged with its violation. Many wholesome articles of food are, technically, adulterated when tested scientifically, but their sale is permissible, as they are in no way detrimental to health. For instance, ground mustard, French peas colored with salts of copper, mixed mollasses, syrups, cheap jams and jellies.

Under the laws of New York these articles can be freely sold. The State Board of Health may, with the approval of the Governor, from time to time declare certain articles or preparations to be exempt from the provisions of the act, provided they are not unwholesome. No such proviso is contained in the Ohio law, and hence such suits as that against the sale of glazed coffee.—*American Grocer.*

"TEA" AS A MEAL.

An earlier suggestion, says *Notes and Queries*, of the use of the word "tea" as descriptive of a meal than its employment in "The Vicar of Wakefield" (1776) is to be found in "Moll Flanders," published in 1722 (though solemnly declared by Defoe to have been "written in the year 1683"), the heroine severely blaming a female friend for spreading a story "when she had not the least ground other than a little tea-table chat." Congreve, moreover, in 1700 had employed a similar phrase, Mirabell, in "The Way of the World" (IV., i.), defining "genuine and authorized tea-table talk" as "mending of fashions, spoiling reputations, railing at absent friends, and so forth," Mrs. Millamant in the same scene declaring her intention to be "sole empress of my tea-table." This would indicate a separate meal, though it might cover only what the same author had six years previously declared in "The Double Dealer" (I., i.), when the ladies were described by Mellefont as "at the end of the gallery, retired to their tea and scandal, according to their ancient custom after dinner."

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *July 22nd*, 1901.—Ninety days' Bank rate on London opened on Monday, 15th instant, at 11d. and closed on Saturday, 20th instant, at 10 5/16d.

The market is getting used to surprises, but a slump of a penny in 11 days just when there seemed some reason to expect, at any rate, greater firmess, has completely demoralised it and given rise to a spirit of hopeless pessimism that will be difficult to conquer.

In our last number we foresaw the possibility of renewed weakness on occasion of the monthly liquidation, which, however, came much earlier than expected and in a much more violent form than there seemed any reason to anticipate. As far as can be judged, the violent slump that commenced on the 8th instant originated in urgent orders from Europe to remit, not unconnected with late bank failures and the monetary stringency in Germany. Fantastic reports were current as usual regarding the amount thus taken, but whatever it was, it proved enough to set the ball rolling in a most perilous manner. At one time, indeed, the market was prey to a regular and somewhat ridiculous panic, because if indeed, as we point out elsewhere, there is good reason for serious misgivings, at the moment, with coffee pouring in at an almost unprecedented rate and bills beginning to be more abundant, the prospect seemed more hopeful than for some time past. It is true the market was heavily oversold, but so it was this time last year and to a much greater extent, and yet after the big initial fall there was no such panic as is now witnessed. It is possible that a great deal of the money lying in the banks is for European account, and on the prudence of its holders, in all likelihood, depends the immediate course that exchange will now take. Should they, too, take fright and demand immediate remittance, there is no knowing how low rates may drop because although the supply of ready bills is improving, it is yet

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to The Queen AND Empress of India.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98 —t.f.o.]

very far from sufficient to meet any extraordinary demand or to do more than supply the day to day wants of the market for the present.

The value of *embarques* or shipments at Rio and Santos during the past week was very large, £412,000 as against £260,000 the previous week and £300,000 last year, whilst declared sales were also considerable, 193,000 bags as against 130,000 the previous week and 129,000 last year.

Since 1st July the value of the coffee sailed was £737,228 as against an almost identical amount £737,927 last year.

Coffee.—Entries during the week showed an increase of 57,412 bags compared with the previous week and of 179,800, or 114 %, compared with the corresponding week last year. Entries since 1st January at Rio and Santos were up to 19th instant, 790,695 bags as against 445,936 last year, an increase of 77 %.

Embarques or shipments were also large 284,010 as against 177,940 the previous week and 125,149 last year, whilst declared sales were 193,000 bags as against, 130,000 the previous week and 129,000 last year.

In spite, however, of the very heavy entries, stocks have increased very slightly from 743,515 bags at Rio and Santos on the 12th to 766,408 on the 19th instant compared with 551,671 bags on the corresponding date, 20th July, 1900.

The 5th number of the *Boletim da Agricultura* to hand says that during the month of May the average temperature at São Paulo was 16° ·1 as compared with the general previous average 16° ·3; the maximum having been 27° ·4 on the 7th and minimum 7° ·5 on the 26th of that month. The prevailing winds were somewhat unusual, being E. or N. instead of from S.-E. or N.-W. as usual. The quantity of rain fallen during the month did not exceed 64 m/m, being 18 m/m less than normal and 101 m/m less than in May, 1888, but 61 m/m more than in May, 1899. Nearly half the rain fell during a single day, the 14th, between 11 A.M. and 1 P.M. In the course of the month there were only 6 wet days, the normal being 12; but there were 18 cloudy against the normal of 22.

At Campinas average temperature was 17º ·18C or 0° ·29 less than normal. The highest temperature was 29° ·6 on the 9th and the lowest 12° ·8 on the 15th. The prevailing wind was N. N.-W. whereas 63°E is the usual during May. Only 31· 8 m/m rain fell, being less than half the normal quantity. Rain fell only on 3 days against the normal of 5, and 1 day was cloudy as against previous average of 4. The Inspector of the first district reports that harvesting has been generally commenced though somewhat delayed in some districts by irregular ripening. A good deal of *café chocho* or hollow berries is noticeable, especially on the older plantations. At S. Antonio da Cachoeira the crop will be smaller than last year's on account of the damage done by the heavy hailstorm that fell in this district.

From the 4th district the Inspector reports harvesting to have commenced in May on most of the plantations A good deal of *café chocho* is noted in trees in the São Carlos and Ribeirão Bonito sections. On some plantations picking was delayed by lack of hands.

From the 5th district (Sorocabana) the Inspector reports the conditions to be generally good. At Botucatú the trees are very loaded; at São Manoel some of the trees seem so overloaded as to be unable to support the weight of the fruit. At Tieté the trees also look very well, but a good deal of *café chocho* is to be reckoned on. The appearance of *café chocho* is attributed to the weakening influence of successive heavy crops whereby the trees are unable to supply the necessary nourishment to all the fruit. The production of the Botucatú, Avaré, São Manoel, and Pirajú districts will exceed last year's because a large number of new trees come into full bearing this year.

Blight.—It is reported that *Requiema*, a kind of blight that leaves the trees leafless and with a scorched appearance is common in S. Paulo. After the *requiema*, trees are very weak and bear poorly for two or three years after. The report goes on somewhat suspiciously to add that taken in conjunction with the Chôcho or hollow coffee, this is likely to seriously affect the volume of the current crop!

Direct Trading.—Another Association, this time at Cataguazes in the State of Rio, has been organised amongst the planters of the district to start an agency at Hamburg or some other city for direct consignment of coffee by associates and sale of same. All the capital is to be paid in coffee at the rate of 10s. per 15 kilos. According to the agreement, each planter undertakes to subscribe 20 % of his crop and consign another 20 % to the Society's agents; the remaining 60 % he may dispose of as he please. This Society is called the *Sociedade Agricola e Commercial de Minas*.

THE AMERICAN TEA CAMPAIGN.

Mr. R. V. Webster writes to the Colombo Press :—

Mr. Mackenzie in his report to the "Thirty Committee" date New York, March 20th, 1901, writes:—"I did not go to Chicago thi time, because I met down here all the men I wished to see." Wha more proof can be required to show the absurdity of continuing th tea campaign in America on present lines. That the funds from th Tea Cess, spent in America, have been devoted to our Advertisin Agent's chosen disciples, to the detriment of the unfortunate cess payer, (who is anxious to see Ceylon tea throughout the length an breadth of the land, not merely confined to the few stores controlle by our Advertising Agent's chosen disciples), must be clear to thos who have the privilege of reading our Advertising Agent's privat reports. It is little wonder that nine-tenths of the tea merchant in the United States of America have a bitter feeling against th Ceylon Tea Planters in general, and take no interest in the sale o the teas they grow; and so long as our advertising funds ar restricted to the chosen friends of our Advertising Agent they ar not likely to change. No doubt our Advertising Agent will cr poverty, but then why does he continue to pay a third of th advertising? If funds are limited, and over applied for in th United States on the one-third basis, why not offer to pay a fourth and so on from time to time, reducing the assistance as firms com forward.

Mr. Mackenzie has been working the tea campaign in Americ for about seven years; it would be very interesting to those wh perforce have to contribute to the Cess fund to know how man cities in the United States and Canada Mr. Mackenzie has visite during the seven years? If, during the seven years, he has eve visited the Western States, or any cities in the West of Canada?— which I have been informed he has not. How many firms he ha honored with a call, (I don't think that would be a difficult matter) and last but not the least important, how many months—durin the seven years he has been our paid Advertising Agent fo America—has he resided in that country?

THE WORLD'S TEA AND COFFEE CONSUMPTION.

[From the *Journal of the Society of Arts.*]

Nearly half a billion lbs. of tea were consumed in the year 190 in countries other than the sources of production. The Unite Kingdom is the world's greatest importer, having taken for con sumption during the year 1900, in round numbers, 250,000,000 lbs of tea, as against 116,500,000 lbs. imported for consumption b Russia, 83·3 million lbs. by the United States, 7,500,000 lbs. b the Netherlands, about 6,500,000 lbs. by Germany, and nearl 2,500,000 lbs. by France. A comparison of the tea consumption o the past year with that of earlier periods discloses the fact that te is becoming more popular as a beverage in European countries though little more than holding its own in the United States where coffee is the favourite beverage. The five Europea countries—United Kingdom, Russia, Netherlands, Germany, an France—took for consumption in 1890, 274,000,000 lbs. of tea, an in 1900, 383,000,000 lbs., an increase of 40 per cent. The Unite States, on the other hand, has not materially increased her con sumption of tea during that period, 83,000,000 lbs., according to recent United States report, being the consumption for both th initial and final dates of the period under consideration. Th relative popularity of tea and coffee in the United States and th United Kingdom may be seen from the *per capita* consumption o those articles in the two countries. For the year 1900 the relativ *per capita* consumption in the United States was 9·8 lbs. of coffe and 1·1 lb. of tea; in the United Kingdom, 6 lbs. of tea and ·71 lb of coffee. The net imports of tea into the United States hav remained almost stationary since 1890, having been 83,494,956 lbs. i that year, and 83,303,177 lbs. in 1900, and for the fiscal year 190 are expected to be approximately 90,000,000 lbs. Into the Unite Kingdom the imports of tea for consumption have increasd fro 194,000,000 lbs. in 1890 to 250,000,000 lbs. in 1900. The net import of coffee into the United States have increased from 490,000,00 lbs. in 1890 to 749,000,000 lbs. in 1900, while into the United King dom 28,000,000 lbs. were imported for consumption in 1890, an 29,000,000 lbs. in 1900, the growth being almost imperceptible

The following table shows the exports of tea from the four principal countries of production in 1898, 1899, and 1900:—

COUNTRIES.	1898. 1,000,000 lbs.	1899 1,000,000 lbs.	1900. 1,000,000 lbs.
China	205	217	184
*India	157	175	189
*Ceylon	119	138	149
Japan	41	46	43

The following table shows the relative consumption of tea and coffee during the year 1900, in each of the countries named:—

COUNTRIES.	Tea. 1,000,000 lbs.	Coffee. 1,000,000 lbs.
United Kingdom	250	29
Russia	117	18
United States	13	749
Netherlands	8	86
Germany	7	352
France	2	180

The relative consumption of tea in the United Kingdom and the United States is shown in the following table, which compares the imports for consumption in the United Kingdom, with those in the United States, in each of the years from 1890 to 1900 inclusive:—

Year.	*Imports of Tea for Consumption into* United Kingdom. 1 000,000 lbs.	United States. 1,000,000 lbs.
1890	194	83
1891	202	82
1892	207	90
1893	208	88
1894	214	92
1895	222	96
1896	228	93
1897	231	113
1898	235	68
1899	242	73
1900	250	83

An interesting feature of the development of the tea trade, so far as the United States is concerned, is the increasing proportion which India and Ceylon supply of the imports into that country. The exports of tea from India to the United States increased from 228,000 lbs. in 1895 to 1,414,000 lbs. in 1899, and those from Ceylon increased from 183,000 lbs. in 1895 to 2,060,000 lbs. in 1899.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

At a meeting of the General Committee held on the 27th August, the following gentlemen were present:—Messrs. H. S. Ashton (*Chairman*), A. Tocher (*Vice-Chairman*), H. C. Begg, H. W. Boyd, W. Brown, A. C. Lawrie, R. Magor, and R. R. Toynbee. Mr. R. H. A. Gresson was unavoidably absent.

Considered a letter, dated the 15th August, from Mr. H. Drummond Deene, Stagbrook Tea Estate, Peermaad, Travancore, with reference to the manufacture of green teas. With the letter was forwarded a summary of Mr. Deane's process of manufacture. The Committee were asked to give a copy of this summary to any planter who seriously proposed to take up the business of green tea making. It was also stated in the letter that Mr. Deane would willingly afford further advice to any purchaser of one of his steaming machines. The Committee had read the summary with interest, and they agreed to comply with Mr. Deane's wishes respecting it. Considered a letter, dated the 20th August, from Mr. T. Kinney, Editor of the *Journal*, forwarding a sample of brick tea bought in Thibet. The brick was packed in sheepskin, and was sold at the rate of Rs.2-5 per seer, or about Re.1-2 per lb. Mr. Kinney enquired if it resembled the bricks made by Indian planters. The Committee examined the sample, which—with the exception of its covering—closely resembled the bricks manufactured for Thibet on gardens in the Darjeeling District. Mr. Kinney was to be informed accordingly.

REGULATION OF SUPPLIES FOR LONDON.

The attention of the Committee had been drawn by members of the Association to the question of regulating supplies for the London market. It was, the Committee believed, recognised that the tendency to concentrate supplies upon the London market, during a few months in each season, had greatly developed during the last two or three years. This concentration was, in their opinion, mainly due to improvements in communications between the producing districts and the sea-board. The extension of the Dooars Railway, and the opening of new bridges on the Northern Bengal Railway, had considerably accelerated the passage of teas from the Dooars. And the keen competition between the Assam-Bengal Railway and the Inland Steamer Companies (in consequence of which tea was carried in mail boats at cargo-steamer rates), together with the establishment of a direct service from Chittagong, had sensibly diminished the time formerly occupied in the transit of teas from Cachar and Sylhet. There could be, the Committee thought, no doubt that if, during the present season, the effect of these improved transport facilities was in no way restricted, the London auctions would be over-burdened at an early date. The questions therefore arose (1) as to whether it was desirable, by regulating supplies, to avoid or to diminish this risk; and (2) if such regulation were deemed to be desirable, as to the form which it should take. In the course of the discussion which ensued, it became evident that the majority of the firms represented on the Committee were of opinion that regulation here would have a good effect upon prices. But a minority were not convinced of this. They held that it was questionable whether the news of tea being held back would not have a more depressing effect upon the market than would be caused by permitting shipments to go forward in the usual course. In these circumstances it seemed to be clear that no system of regulation in India was practicable. The Committee consequently decided to submit to the London Branch of the Association a statement of the position, and to enquire if any scheme of regulation in London was contemplated.

DECLARED VALUE OF TEA EXPORTED FROM CALCUTTA.

Considered a letter, No. 4297, of the 24th August, from the Collector of Customs, Calcutta, with reference to the values declared by shippers for tea exported from Calcutta. Figures were quoted in this letter with the object of showing that the declared values were higher than the average price realised in London or Calcutta. And an enquiry was made as to whether it was the general practice to include in the declared value the equivalent of the charges incurred up to time of sale in London. The Association was also asked to suggest some feasible methods by which greater accuracy could be secured in future. The Committee were of opinion, judging by the figures given in the letter, that the declared values were somewhat high. And they decided to circulate copies of the letter to the members of the Association with a recommendation that greater care should be exercised in future. The permission of the Collector was, however, to be obtained before publication. They believed that it was not the custom to include in the values the charges incurred up to time of sale in London and they agreed to inform the Collector accordingly.

POSITION OF INDIAN TEAS IN CEYLON.

Considered information received from Colombo in reply to an enquiry which was made by the Committee as to what would be the position of Indian teas in Colombo if the duty were reduced to 5 per cent. *ad valorem*. The information was to the effect that so long as a duty was levied, at however low a rate, Indian teas could never rank in Colombo on equal terms with Ceylon teas. The reason for this was that dutiable teas were stored in the bonded warehouse, and could not be removed except by the payment of duty, or on their being shipped. This prohibited the dealers from using such teas for blending purposes; and prevented their sharing to a full extent in the general competition. The only possible means of putting all teas on equal terms would be to abolish the import duty. And if Indian teas were admitted free it was thought locally that teas from China, Japan, and Java should receive similar treatment. Any proposal to remove the duty would not be favourably received in Ceylon. This information coincided with the opinion previously formed by the Committee, and they agreed to address the Government of India on the general question as early as possible. The letter was to follow the lines prescribed in the proceedings of the meetings held on the 16th July and the 13th August, 1901.

* Year ended 31st March.

MARKET REPORT.

[*Per Mail advices of 16th August* 1901.]

COFFEE.

The London Commercial Record says:—Auction sales were resumed on Tuesday, and a moderate quantity has been brought forward. A steady trade demand has been experienced and prices for the most part shew an advance of 1s to 2s per cwt., and for fancy colory qualities of Central American extreme rates have been paid. There have been some fluctuations in the market for "futures," but the closing prices show little variation from those current at the date of our last report. We quote:—

London ...	... Santos ...	Sept. delivery	... 27s 9d.
New York	... No. 7 Rio...	,,	... 4·85 cents.
Hamburg...	... Santos ...	,,	... 27¾ pf.
Havre ...	... Santos ...	,,	... 34 francs.

The public sales went off at steady prices for all descriptions. A good supply was offered and mostly sold.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	19,935	17,702	36,577	27,953
	Home Consumption.		**Export.**	
	1901.	1900.	1901.	1900.
Tons ...	13,048	10,767	18,138	16,228

The preceding figures exhibit— Tons.

In the Imports an increase this year of	8,624
Home Consumption an increase of	2,281
Export an increase of	1,910
Stock an increase of	2,233

CEYLON.—*Plantation.*—70 casks 3 tierces 11 barrels and 30 bags partly sold, bold common to extra bold brownish 92s to 111s, low middling brownish 46s, middling 54s, peaberry 48s.

EAST INDIA.—869 bags were offered and mostly sold: *Mysore*, small common grayish 33s, middling dull greenish and grayish 48s to 52s 6d, common bold to good ditto 53s to 64s, peaberry 57s; *Coorg*, small common faded greenish 34s, low middling to middling dull ditto 40s to 45s, bold ditto 50s, peaberry 49s 6d; *Neilgherry*, small common dull greenish 34s to 34s 6d, small fair grayish 36s 6d to 37s, low middling 39s to 40s, middling 43s to 44s 6d, peaberry 45s 6d to 49s 6d; *Nelliampathy*, fair bold dull grayish 53s; *Wynaad*, good colory peaberry 55s.

NYASSALAND.—39 bags offered and mostly sold, pickings 22s to 37s 6d.

JAMAICA.—Of 160 barrels and 13 bags about half sold, low middling to middling bright greenish 40s 6d to 48s 6s, peaberry 42s.

COSTA RICA.—504 bags offered and sold, small common brownish to good greenish 36s 6d to 44s, ordinary rough grayish 35s to 36s 6d, fine ordinary brownish to low middling dull colory 42s to 44s 6d, middling to good middling dull greenish colory 52s to 63s, good bold ditto 73s 6d, peaberry 53 to 55s.

GUATEMALA.—Of 3,400 bags, and about two-thirds sold, small common brownish mixed to fair dull colory 32s to 36s 6d, middling dull greenish to colory 44s to 45s 6d, bold fair colory 52s 6d to 56s 6d, peaberry 50s 6d to 56s 6d.

VERA PAZ.—780 bags offered, and 770 bags sold, middling bright gray 47s, good middling to fine middling hard gray and blue 60s to 72s 6d, bold good to fine ditto 76s 6d to 96s, peaberry 51s to 91s.

NICARAGUA.—1,266 bags offered and mostly sold, ordinary to good ordinary dull foxy pale and greenish 33s to 33s 6d, low middling to middling dull pale and greenish 41s 6d to 48s, good middling dull greenish 52s to 53s, fine middling blue 67s to 69s 6d, bold good to fine ditto 72s 6d to 85s 6d, very fine 102s to 102s 6d, peaberry foxy to very fine blue 37s to 92s 6d.

SALVADOR.—850 bags offered and 678 bags were disposed of, small fair dull colory 36s 6d to 37s, good ordinary to fine ordinary bright foxy pale 35s to 38s, middling dull colory 44s to 46s, bold fair to good ditto 50s to 55s 6d, peaberry 47s to 50s.

MEXICAN.—1,230 bags offered and about a third found buyers, small common faded greenish to good colory 32s 6d to 40s 6d, fine ordinary to low middling faded greenish 38s to 43s, middling colory 47s to 48s, good bold ditto 60s, peaberry 43s to 55s.

COLOMBIAN.—3,267 bags offered 2,631 bags partly damaged sold, small fair greenish 30s to 32s, fine ordinary dull greenish 38s 6d to 39s 6d, low middling dull brownish to middling bright pale greenish 41s to 46s, bold common brownish green to good greenish 45s 6d to 53s 6d, peaberry 37s to 45s.

HONDURAS.—18 bags sold, middling dull green 46s.

GUAYAQUIL.—104 bags were bought in.

VENEZUELA.—110 bags taken out.

ECUADOR.—67 bags sold, bold bright pale 29s 6d.

HAWAII.—193 bags sold, fine ordinary dull mottled greenish 38s to 38s 6d.

DUMONT SANTOS.—Of 1,678 bags washed 1,439 sold, small pale greenish 27s 6d to 28s, medium ditto to brownish green 31s to 32s, bold to extra bold ditto 36s to 39s 6d, peaberry 32s to 40s.

RIO.—50 bags, quay terms, were bought in.

SANTOS.—50 bags washed, quay terms, sold, good pale greenish 36s.

Receipts in Rio and Santos.

TEA.

INDIAN—Shipments are coming to hand more freely, the total offered at auction aggregating 25,100 packages, against 13,700 packages in the week preceding the holidays, and 30,400 packages a year ago.

The market re-opened with a fair demand, chiefly concentrated on good liquoring leafy parcels suitable for outside quarters, which brought quite up to prior rates. For the less desirable lots, however, considerable irregularity prevailed, and valuations were not always obtainable. Quality of many of the early made Dooars was of a useful description, and they were taken up readily, while high prices were paid for the best Assams and Darjeelings, notable:—Assam; Suddia Road Co., BOP 2s 8¼d; Hansura and Samdang, BP 2s 6½d, BOPs 2s 2½d; Beesakobi, BOP 2s 2½d, BP 2s 1¼d; Makum Co., OP 2s 1½d, BOP 2s; Hapjan, BOP 2s per lb. Darjeeling: Rungmook, OP 2s 2⅓d, BP 1s 10d; Dooteriah, BOP 2s 0¾d, OP 1s 11d; Ging, OP 1s 9⅓d per lb.

For 22,000 packages on Estate account 8¾d per lb. was obtained, opposed to 8⅞d per lb. for 25,700 packages, and 7¾d per lb. for 40,300 packages in the two preceding seasons respectively.

CEYLON.—Catalogues comprised 29,900 packages—18,800 packages for Tuesday and 11,100 packages for Thursday—contrasted with 28,200 packages on the 30th ultimo and 1st instant, and 44,700 packages twelve months since

There was a better tone and more general bidding. Common to medium Pekoe Souchongs and Pekoes being wanted, both by dealers and shippers, often showed a rise of ¼d per lb., in some cases ½d per lb. Broken Pekoes also received more attention and were steadier, while the attractive lines tended upwards. Full liquoring Broken Orange Pekoes at time registered a distinct advance on previous sales of the same mark, partly due to superior flavour.

The average is 6⅝d per lb. On the 1st instant it was 6½d per lb. and 7⅛d per lb. for the corresponding time in 1900.

JAVA.—About 1,200 packages of direct import passed the hammer with good spirit, quotations being well upheld.

Deliveries.—The clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 13th August, 1901	5,665,388	lbs.
Do. do. 1900	5,847,955	,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	20,616	4,515	25,131
Ceylon	26,764	3,118	29,882
Java	1,134	50	1,184
Total ...	48,514	7,683	56,197

Also 900 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated August 16th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	120,996	276,591	12,642
1900-1901	91,568	279,799	10,145

26,702 *pkgs.* INDIAN
30,614 ,, CEYLON
1,184 ,, JAVA
} Total 58,500 packages were offered in public auction this week.

It will be seen from the figures given at foot that the imports of Tea for the first two months of the season year, *viz*: June and July, are nearly five million lbs. less than those of last year, and as much as 14 millions less than those for the same two months in 1899. These figures only confirm the news which has already been received from the producing countries.

INDIAN.—Auctions were resumed on the 12th instant after an interval of a fortnight. Bidding was a trifle irregular, and at times lacked animation, with the result that some parcels had to be withdrawn. Good usual Teas from 6d. to 10d were the kinds which met with strongest competition.

Thursday auctions will be resumed next week.

Week's average of New Season's Tea sold on Garden Account, 1901, 20,816 pkgs., av. 8·90d. 1900, 26,138 pkgs., av 8·74d.

New Season's Tea sold on Garden Account, 1st June to date, 1901, 32,171 pkgs., av. 7·66d. 1900, 54,018 pkgs., av. 7·99d.

CEYLON.—Tuesday's public auction, comprised some 19,000 packages for which competition was more general than of late, and prices showed firmness for all descriptions; this firmness was again noticeable in Thursday's auctions.

Average for week 6·63d., against 7·03d. same week, 1900.

Ceylon Tea sold on Garden Account, 1st Jan. to date, 756,601 pkgs., av. 6·56d. 1900, 792,295 pkgs., av. 7·24d.

JAVA.—These kinds met with fair demand and fully maintained previous values. Many of the Teas possessed strong useful liquors for which buyers showed their appreciation.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 3/32. Colombo 1/4⅛.

COCOA.

Auctions were resumed on Tuesday after the August vacation, the catalogues embracing 3,428 bags Colonial and 1,551 bags Foreign growth. Notwithstanding the material reduction in the London stock by fire, the value of all grades continue to fall away, prices on the 13th instant being generally 1s lower. Of 2,457 bags Trinidad offered 780 bags found buyers at 69s to 71s for good to fine and 67s to 68s for fair, being about 1s easier. Of 379 bags Grenada 250 bags sold at 1s decline—at 61s to 64s 6d for fair to fine. 70 bags Demerara about half sold at 65s to 68s for good to fine, being about 1s below valuations. 6 bags Dominica realised 59s and 14 bags good St. Lucia 61s. 97 bags Jamaica partly sold at 58s to 61s for ordinary to good. Of 682 bags Guayaquil about 50 bags sold at 56s to 57s for Esmeralda. 5 bags Maracaibo brought 50s 6d. Of 173 bags Colombia 60 bags damaged sold, the remainder being bought in, as were 53 bags Surinam, 4 bags St. Vincent, 220 bags Samana, 200 bags Puerto Cabello, 188 bags Haiti and 30 bags African. Ceylon is very difficult to move, only 30 bags chips selling at 57s 6d per cwt.

PEPPER.

BLACK.—The market is very quite and business has been of small importance. Fair Singapore is quoted at 6d on the spot and at 6 1/16d for September-November shipments.

At auction on the 14th instant 227 bags Singapore were offered, and 117 bags fair sold at 6d per lb. 1 bag good clean Ceylon sold at 5¾d.

WHITE.—There has been no improvement in the demand, which remains very slow. Fair Singapere on the spot is quoted at 9d, and fair Penang at 8⅝d.

At public sale on Wednesday 120 bags Singapore bought in at 7d to 10d. 5 bags Ceylon sold at 9d for good white, and 8¼d to 8½d per lb. for mixed with brown.

Pepper steady; not much business done. 50 tons Singapore September-November sold at 6d and buyers.

The shipments of Black Pepper for the first half of July compare as follows:—

		1901.		1900.	
U. K.—Singapore	130	170	400	420	
,, Penang	40		20		
Continent		140		370	

The shipments of White Pepper for the first half of July compare as follows:—

		1901.		1900.	
U. K.—Singapore	80	150	100	270	
,, Penang	70		170		
Continent		100		10	
Total tons ...		250		280	

GINGER.

COCHIN.—The tendency is towards lower prices for rough Ginger but cut kinds are very firm, being in small supply. 50 cases 296 bags offered, and 6 cases sold under the hammer—good bold, some medium, cut and scraped at 87s 6d. Privately fair washed rough sold at 37s to 38s, and Calicut sorts at 38s 6d per cwt.

JAMAICA.—continues in good request, and practically the whole of the 920 barrels offered sold at 1s to 2s rise—low middling to middling washed 42s to 44s 6d, ordinary to good ordinary 36s to 40s 6d per cwt.

QUININE.

The improvement noted last week in the second-hand market has continued, the spot price, since our last report, having advanced quite ½d per oz.—from 1s 2½d to 1s 3d There has been a fair demand throughout the week, the business being chiefly for December delivery, which has risen from 1s 2⅞d to 1s 3½d per oz. the outside figure being paid on Wednesday. To-day, on receipt of the bark shipments from Java for the first half of the month (620,000 Amst. lbs.), the market has declined ¼d, there being rather sellers than buyers at the moment.

CARDAMOMS.

The supply at to-day's auctions was unusually small, the bulk consisting of Ceylon-Malabars, which were not in demand. For medium to bold pale Ceylon-Mysore 2s 8d was paid; small to medium palish sold at 2s, small splits at 1s 0d, and brown splits and pickings 1s 5d per lb. There has been a good inquiry for cardamom seed, of which supplies have been very scarce, nothing being offered to-day; in second-hands up to 2s 4d is wanted.

CINCHONA BARK.

Offered, 23 packages. Sold, 0. *Calisaya* bark was offered and found no bidders.

MOVEMENTS OF TEA IN LONDON FROM 1ST JUNE TO END OF JULY.

	Imports.			Deliveries.			Stock.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 20th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad.

September 10th.—*Weather*—A long continued break, bright sun and little wind, ground getting very hard. *Works*—Few works are pressing now, weeding and digging are the principal. *Crop*—Prospects poor. *Coffee*—Healthy. *Health*—Good. *Labour*—Abundant.

Coorg.

POLLI BETTA, *11th September.*—*Weather*—A very local shower out East last Saturday, measuring upwards of an inch-and-a-half. Out West nothing. On Monday night there was some general rain, otherwise the weather has been uniformly bright. Coffee, on the whole, looking very fine, but individual trees are to be noticed with leaf disease bad upon them. All seasonable works well advanced. *Labour*—Plentiful. *General Health*—Fair.

SOME NOTES ABOUT COFFEE.

THERE has been a good deal of despondency about the future of Coffee, and the future of Indian Coffee especially has been the subject of the most gloomy forebodings. We do not wish to be over-sanguine, but we would remind our readers that Coffee is not the only product that has had to face a crisis, indeed to meet crisis after crisis. Other products have won through. Why should not Coffee? The general view appears to be that nothing but a recovery of prices can save Indian Coffee. In the fact that this view is so widely taken we see the chief danger that threatens the industry. Years ago sugar-planters had a very rough time. It was statistically and mathematically demonstrated that sugar which they could not sell at more than £10 or £12 cost them £16 at least. They, too, had an idea that prices must rise, but competition became keener and keener, and eventually it was shown that under favourable circumstances

sugar could be produced at a cost of about £6, odd, per ton. Probably it will yet be produced at a still lower rate. The moral to be drawn from this by Coffee-planters is clear. The aim should be to produce a good article at a low price. It is idle for Coffee-planters in India to think that any action or efforts of theirs will bring about an important change in selling prices ; but the cost of production is largely under their control, and the quality of crops is not entirely beyond it. We have urged this previously, and we are glad now to be able to quote some remarks by an expert in the West Indies which are identical in sense with what we have repeatedly urged upon our readers : aim high (as to quality), aim at placing produce on the markets of the world at the very lowest price.

Addressing teachers undergoing a course of agricultural training at Hope, Jamaica, last year Mr. CHARLES DE MERCADO said that though the commercial world was constantly disturbed by over-production, very seldom indeed did it witness over-production of the best qualities of goods. If a man had a specialty that was really good, he could readily find a good market for it. He specially instanced Coffee : "when the price of the product dropped it affected the inferior qualities very seriously indeed, but the price of Blue Mountain Coffee had practically not been affected at all." Again, Mr. DE MERCADO remarked that in the case of Coffee, the peasant proprietor was in the same position as the largest proprietor ; nay, he was even in a better position, for on account of the smaller extent of his operations he could give much closer personal supervision to the details. One of the essential features of good Coffee was to secure a large bean. That was to be arrived at by attention to proper pruning and manuring. It might be urged that the rich man could buy manures and the poor man could not, but his hearers were being taught by their instructors that proper manures lay ready to the hand of the small settler, and were to be had for a little time and trouble. Here some interesting remarks were made about systems of curing. Mr. DE MERCADO observed that the system of curing Coffee followed for the most part in the lowlands of Jamaica—which produced what was known as "double-husk" Coffee—was quite wrong, and ought to be improved without delay if Jamaica was to successfully compete with her rivals. A very important point was only to pick each day such berries as were quite fit. The plantation should be gone through constantly, for this purpose ; people should not through pure laziness, want to pick a lot of berries at once, whether fit or not. After a start had been made to dry the Coffee, it should never be allowed to get wet again under any circumstances. The "double-husk" method was to dry the Coffee in the berry. That was a bad system, because it produced Coffee which was poor in quality, discoloured, and deficient in aroma. It was much better to pulp the berries, but of course many settlers had no pulper and could not afford to buy one, and therefore had to dry the Coffee in the husk. Coffee was a product which very quickly took up any external odour, dirt or impurity. If it was to be cured in the double-husk, it should never be allowed to lie on the ground, as was very often the case. Frequently care was not even taken to sweep the place clean, and the Coffee consequently soaked up all the manifold impurities of the soil, and was ruined. They must remember that the buyer abroad not only inspected the Coffee he bought and judged of its aroma but actually ground, roasted, and tasted it.

Some of our readers may be inclined to think that all this has nothing to do with them. They are not peasant proprietors, they are not small holders who can conduct a species of garden cultivation of Coffee, and they know how to prepare their coffee for the curing works. Nevertheless it has a great deal to do with them. The point is that "mild" Coffee can be produced in Jamaica and various other places as well as in India ; and that unless Indian planters steadily try to improve they must eventually go to the wall. Here is Jamaica, a small island, with more than one expert advising agriculturists and ready to be consulted by them. Madras can boast nothing to compare with this. The greater reason why every hint that comes from other countries should be seized upon, reflected upon, and adapted as far as possible to local requirements. So important do we consider this matter indeed, that we shall say more upon it at an early date.

TEA AT KIUKIANG.

Mr. Acting Consul Clennell says in the course of notes on the Kiukiang tea trade during 1900 that in black teas, Keemuns were a better crop than in 1899. Of 67,000 half-chests, 50,000 were brought by Russians. Prices for the best were 50 taels, the lowest figure being 15 taels. They mostly did well in Europe. Ningchows, the other principal variety grown in the district, were inferior to the previous year. In the Wuning district nearly the whole crop was lost by drought. An authority says :—"The best parcels realised 57 taels, the next grade 35 to 41 taels, nearly all for Russia. British buyers got some wonderful value at about 18 taels, but, on the whole, they lost money in Europe." Nevertheless, the decline on all kinds of black tea was only from 156,158 cwts., valued at 482,349 l., to 146,688 cwts. at 414,974 l. It is stated that for the first time on record that no teas were settled in Kiukiang in 1900, the natives being now aware that Hankow is their best market, but that as the season advanced a few teas were settled, though natives would scarcely ever sell in any quantity unless they got better prices than in Hankow.

The green tea harvest was considered good, though here again the volume and value of trade show a decline. Prices, inland, for the first crop ruled at 20 to 30 per cent. less than in 1899, but, as the selling price in Shanghai remained about the same, a fair profit was made. Hohows were of good average quality and were freely taken at 15 taels for the best. Kutoans were poor in make and liquor, but easily found buyers at 16 to 18½ taels. In brick tea the export shows an advance from 51,610 to 60,794 cwts., but this is partly accounted for by the fact that whereas the figures for 1900 include a portion of the 1899 crop, none of the 1900 crop was left over to be dealt with in 1901. The same remark applies to tablet tea, of which the output has, however, slightly fallen off. These articles are prepared from tea-dust for the Russian market at the factories of Messrs. Tokmakoff, Molotkoff & Co. and Molchanoff, Petchatnoff & Co. Both worked busily, night and day, during several months of the Summer and Autumn, making an effort to dispose of their entire stock some two months earlier than usual in view of the chance of untoward events occurring on the Yangtze. Consequently they closed their active season before the end of the year. As it was impossible to obtain transport to Tientsin, the cargo was diverted to Russian ports direct. Expensive hydraulic engines for making tablet tea are now in use in the factories, and the old wooden presses for making the bricks are being, or have been, replaced by steel moulds of an improved

pattern. At the beginning of the season the price of the dust used for brick tea ruled at about 11 to 12 taels per picul, against 7 to 8 taels in 1899. The Chinese dealers combined to demand 13 taels, but the outbreak of the northern troubles compelled them to accept a reduction, and before the season closed they were selling at about 6 taels. For tablet tea a better quality of dust, at considerably higher price, is required. For the manufacture of brick tea the dust is moistened by steam. It is then subjected to a pressure, applied by steam power, of 12 tons to the whole surface of each brick. The pressure is only applied for a second or two, but the mould is immediately locked with wedges and kept so for about two hours. The bricks are about $8\frac{1}{2}$ by 6 by 1 inch in size, and vary in weight from 1 to $2\frac{1}{2}$ lbs. for different grades. The tablets are made by means of a hydraulic press. The dust is used dry and a very high pressure is required, as it is only applied for a fraction of a second. When made they somewhat resemble cakes of chocolate, weighing about 4 ozs. each. They are then tastefully wrapped in paper covers and packed in baskets suitable for camel transport.

The following table, in piculs and taels, shows the immediate destination of the tea exported during the year :—

Kind of Tea.	To Hankow. Quantity Piculs.	To Hankow. Value Hk. Taels.	To Shanghai. Quantity Piculs.	To Shanghai. Value Hk. Taels.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Bounty on Green Teas.

The Indian Tea Association (Calcutta) has issued the following circular, dated 9th September, 1901 :—

At the meeting of the General Committee held on the 30th July last, a Sub-Committee was appointed to consider and to report upon the feasibility of inducing growers to manufacture green teas of like qualities, and of making arrangements for bulking them in Calcutta.

2. I am now directed to subjoin for your information a copy of a Memo., dated 26th August, containing the outlines of a scheme which the Sub-Committee have suggested. For the reasons stated in the concluding paragraph of the Memo., the scheme cannot be put into practice until next season. And before definitely accepting it, the General Committee desire to ascertain the views regarding it of those members of the Association who are interested in the manufacture of green teas. The scheme is based upon the assumption that the money required will be forthcoming, but this will depend upon the measure of support given to the new levy for the Foreign Market Fund. I am however instructed to suggest that members should now submit samples of the green teas which they will be able to manufacture next season ; and should also state the quantity which they will be prepared to offer, and the time when it will be delivered in Calcutta. As will be understood from clause 7 of the Memo., it is proposed that the bounty should be paid at the present rate, *i.e.*, $1\frac{1}{2}$ annas per lb.

3. The whole question is one of great importance, and the General Committee are most anxious that any scheme which may be ultimately adopted should first be thoroughly approved of by the industry. They trust therefore that if you have any criticisms to offer upon the Memo. you will kindly submit them without delay.

MEMORANDUM.

Green Teas.

At a meeting of the General Committee held on the 30th July, 1901, it was decided to appoint a Sub-Committee in connection with the production and distribution of green teas.

The instructions to the Sub-Committee were stated in the following terms:—

"The Sub-Committee were to be asked to consider and to report upon the feasibility of inducing growers to manufacture green teas of similar quality; and of making arrangements whereby such teas might be bulked in Calcutta; the object being to ensure greater uniformity, and to enable orders to be duplicated without difficulty."

The following gentlemen consented to serve on the Sub-Committee, *viz.*:—

Messrs. A. Tocher (*Vice-Chairman of the Association*), L. C. Baines, Norman McLeod, and H. B. Yuille.

A meeting of the Sub-Committee was held on the 20th August, when all the members were present. The various points in question were discussed; and the following conclusions were arrived at:—

(1) That the unfermented type of teas now being manufactured by Indian growers would, it was believed, find a market in America if a regular supply were available.

(2) That in order to obtain a regular supply, the Association should make arrangements with a limited number of producers for certain quantities of such teas to be sent to Calcutta at regular intervals throughout the season.

(3) That the tea should be packed in half chests of uniform description and dimension, say, 16" × 16" × 16" outside measurement.

(4) That on the arrival of the teas in Calcutta a relative value should be placed upon them by experts to be appointed and remunerated by the Association.

(5) That thereafter the teas should be bulked in Calcutta and shipped to the United States or Canada on the joint account of producers. The agents in Calcutta and America to be appointed by the Association, who would fix their remuneration, which would be deducted from the proceeds of the teas.

(6) That the net proceeds of the sale of the teas in America should be divided among the producers in relative proportion to the values determined in Calcutta.

(7) That the present bounty of $1\frac{1}{2}$ annas per lb. be continued as an inducement to producers to take up the business.

(8) That the total quantity to be manufactured should be fixed at, say, 200,000 lbs. as at present.

The Sub-Committee presumed that the arrangements detailed in the Association's Circular No. 37, dated 6th May, 1901, would continue in force for the current season. Their proposals, if adopted, would not therefore be put into practice until the season of 1902. But they were of opinion that it would be advisable at once to invite producers to submit preliminary samples, and to indicate the quantity of tea which they would be prepared to manufacture.

Calcutta, 25*th August*, 1901.

INDIAN TEA FOR INDIANS.

In connection with the scheme for developing a taste for tea among people in India, various Indian journals have viewed the matter as if an attempt were to be made to train the Indian peoples to extravagance, and others have even represented tea as quite as dangerous a drink as alcoholic liquors. Now, the abstemiousness of the native of India is, speaking generally, beyond a doubt. The first impression it causes as one of appreciativeness ; but the fact remains that, as Mr. Meredith Townsend has observed, it produces little result of a beneficial kind. Character does not seem to be strengthened by it. Mr. Townsend notes as a curious fact that

"the Indians, who do not drink, who avoid meat, and who save cash with persistent care, have not made India, which is in the main a fertile continent, very rich, nor raised the average of wages very high, nor developed the wants which generate what we call comfort. To all appearance, the grand results of their splendid abstemiousness are that the minimum rate of wages is the lowest, prices being considered, in the world, and that the continent contains perhaps a hundred millions more people than is quite good for it." He then proceeds to the very subject that is interesting Indian tea-planters at the present time and observes:—"There are signs, for instance, we are told, as yet faint, that native abstemiousness and thrift may yield to one strong temptation now pressing very closely upon them. They all like tea, and may by degrees, like English sempstresses, like it enough to crave it, though its consumption—now confined to medicine—would greatly disturb the economy of their households. If that ever happened, Indian Chancellors of the Exchequer would jump for joy, and we feel by no means sure that the wealth of the people would not be greater. Tea is as much pure waste, except in the pleasure it gives, as alcohol, perhaps it is even more so; but then, the desire for tea produces the energy necessary to obtain it, and so far as appears, the countervailing consequence of abstemiousness is deficient energy." These are words that some of our Indian contemporaries would do well to ponder over.

NOTES.

Colombia Coffee. In Colombia cleaned coffee pays an export tax of 40 cents. per hundred pounds; hulled, 30 cents.

Coffee in Fiji. Fiji coffee planters have given up all hopes of making coffee pay at present prices and have abandoned their plantations.

Norway. During the year 1900, Norway imported about 10,415 tons of coffee, as against 9,330 tons in 1899; and about 121 tons of tea, as against 117.

Coffee in Barcelona. The year 1899 was considered rather exceptionally good as regards the importation of coffee into Barcelona and district, but last year the quantity has diminished by one-half to the loss of the Porto Rico market.

India-rubber in Colombia. In 1899 the value of india-rubber exported was £34,665 whilst in 1900 it dropped to £14,063, this being due to the enforced detention of the rubber in the interior, through lack of facilities to bring it to the Coast. The quantity shipped fell off by about one-half.

Amsterdam Bark Market. A supplementary catalogue issued for the Amsterdam auctions of August 29th increases the offerings by 930 packages, comprising 78,953 lbs. of cinchona bark. The shipments from Java for the first half of August were 590,000 Amsterdam lbs., against 450,000 Amsterdam lbs. last year.

Brazilian Exchange. The monthly averages of Brazilian Exchange during the first half of the current year are as follows:—

January	$9\frac{7}{8}$	February	$10\frac{3}{64}$	March	$11\frac{3}{4}$
April ...	$12\frac{9}{32}$	May	$12\frac{21}{64}$	June	$11\frac{3}{8}$

Ceylon Tea. The total Exports of Ceylon Te are as follows:—

	lbs.
From 1st January to 19th August, 1901 ...	94,210,169
Do. do. do. 1900 ...	97,571,557
Do. do. do. 1899 ...	80,178,132

Otto of Roses. A circular published by the Asso ciation of Oil-of-rose Producers i Bulgaria states that Herr Hermann Bredemeier, of Bremen has been appointed representative of the Association i Germany, in order that otto of rose may reach German whole sale buyers direct from the producers without the interventio of the middleman. The price is, however, not yet fixed.

No Middlemen. The *American Grocer* writes:—Wit the beginning of the new crop yea (July 1), Arbuckle Brothers and Hard & Rand began t import coffee in vessels chartered by themselves. Prior t that date, these firms brought coffee here under contract wit the Brazil Steamship Company. The first steamer, th *Gottardo*, brings 44,000 bags to Arbuckle Brothers.

Tea and Coffee in Sweden. During 1899 and 1900 imports a Gothenburg were as follows:—

	1899.	1900.
Coffee, tons.	7,619	7,520
Tea, cwts.	1,460	1,541

In bulk, therefore, tea is to coffee in Sweden as abou 1 : 100, and as most of the coffee is imported from Hambur we fear there is but very little of the Indian berry consume in Sweden.

Brazilian Exports. The following figures show Export of Coffee etc., from all ports of th Brazilian Union during the first six months of 1901.

	1st Quarter.	2nd Quarter.	First half 190
Coffee paper ...	91.691:289	76.331:287	168.022:576
Cocoa	3.521:834	1.994:404	5.516:238
Maté	3 488:362	4.304:520	7.792:882
Rubber (seringa) ...	70.480:145	31.085:448	101.565:593
Do. (mangabeira and manicoba)	852:237	203:212	1.055:449

Pepper in Hamburg. Of pepper 69,100 bags were im ported into Hamburg in 1900, as against 65,000 bags in 1899, and 49,900 bags in 1898 Trade was animated during the first six months of last year but a period of calm then followed up to the end of December buyers being kept back by the high quotations for Singapore pepper. We read that "the importations of Tellicherry peppers were larger than in previous years; those of Aleppey sorts were about equal in quantity."

Calcutta Tea Sales. At the Calcutta Tea Auction on the 6th only 16,600 packages were offered, against 21,000 at the corresponding sale of last year. Common teas were a point easier, but otherwise there was little change from last week's rates. Quality was made scarcely as good, but is above that of last year, and teas now appear to show very good value, especially Broken Pekoe kinds. There was good bidding for suitable teas for outside markets, and a fair quantity was thus diverted from London.

Indian Tea Prospects. The following telegram with re ference to the tea crop in the various districts has been despatched by the General Committee of

the Indian Tea Association here to the Committee of the Association in London :—*Assam*—Outturn last month good. *Cachar*—Outturn last month about normal ; deficiency remains. *Sylhet*—Outturn last month about normal ; deficiency remains. *Dooars*—Outturn last month about normal. *Terai*—Outturn last month very poor. *Darjeeling*—Season will probably close early ; deficiency remains.

The Private Tea Sale-Room.

Special cables to the *Times* of *Ceylon* state that in the private sale-room last week, 7,000 packages Indian tea were offered ; and 6,000 packages are catalogued for next week. Of Ceylon tea, 2,000 packages were offered, and 2,000 are in sale next week. All that is offered in the private sale-room now is practically confined to teas controlled by Messrs. Buchanan & Co. The private tea sale-room has been decorated with a placard in the shape of a tomb with the following inscription :—"In memory of the ticket sales, which died after a sickly existence, August 22nd. Damned for ever. Regretted by few."

The Planting Community in Ceylon.

The *Ceylon Observer* gives the following figures to show how many European planters there are in Ceylon :—

European Tea, Cacao, Cardamom, etc., planters in Ceylon	...	1,261
,, Out of billets (say)	... .	39
		1,300
,, On Cocoanut and Cinnamon plantations	...	25
		1,325
Connected with Ceylon, but out of the island just now	...	235
		1,560

Coffee in London.

Since the resumption of the auctions on Tuesday only a moderate amount has been brought forward, says the *Produce Markets' Review* of 17th ultimo, and as was anticipated the demand was strong and prices showed an advance of from 2s to 3s above those ruling before the holidays. The reports of a fresh revolutionary outbreak in Colombia, which were current a few weeks back, have since been confirmed, and in consequence supplies, which were beginning to come forward more freely, have been checked, and judging by the information from the most reliable sources no heavy quantity can be expected for some time. This has given strength to other Central American growths and merchants are not willing to sell at anything like the prices of last month. In the terminal market continued heavy receipts have put prices down about 6d, but this has led to more buying and the tone is firmer at the close.

Rubber in Bolivia.

Two items of interest are chronicled in *The India Rubber World*—the starting of a scientific expedition to study the rubber-yielding species in that country, and the reorganization of the largest company yet formed to exploit the natural rubber resources there. It will be observed that both the botanists now on the way, and the rubber-importing house interested in the company referred to, are American. It may be recalled here that the navigation of the river Beni, in the Bolivian rubber centre, dates from the explorations made by Dr. Heath, an American. American enterprise is largely interested in mining in Bolivia, the development of which will open the way for further undertakings in that country by American capital. Bolivia possesses rich rubber resources, and it would seem to be a natural field for development for capital from the United States, since this country ranks first in the consumption of rubber.

The London Tea Market.

Cabling to Colombo on the 5th instant Messrs. Gow, Wilson & Stanton report that the market generally is steady, that for medium liquoring Pekoes and Broken Pekoes showing a fractional advance ; while the market for Common pekoes and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is $5\frac{1}{4}$d and the average price of Ceylon tea sold on garden account this week was $6\frac{7}{8}$d (both same as last week). The average of the corresponding week last year was 7d. Reuter reports that common qualities of Ceylon tea are steady and others firm, while fine qualities are active and a farthing higher. Fair Pekoe Souchongs are quoted at $4\frac{3}{4}$d (same as last week) but the average for the week is 7d. ($\frac{1}{8}$. up) 25,000 packages of Ceylon tea were offered for sale and 23,000 were disposed of ; while of the 30,000 packages of Indian tea offered, 26,000 found purchasers, at an average of $8\frac{1}{2}$d per lb. ($\frac{1}{8}$d up).

Big Theft of Tea at Adelaide.

The *Adelaide Register* of August 21st reports that some time between Saturday evening and Monday morning the new premises of Griffith Brothers, the well-known tea merchants in Rundle street, were entered by burglars, and a quantity of tea was removed. The premises were left securely fastened on Saturday evening, but when the employees arrived on Monday morning one of the windows at the rear of the building leading to the basement was found to have been broken, and on further investigation it was seen that several canisters containing about 1 cwt. of tea had been stolen from the first floor. It is suspected that more than one person was implicated in the burglary, and so much tea was taken that it is quite evident that the burglars removed their spoil by the aid of a horse and cart. After the experience of the firm in Sydney some time ago special precautions are taken, and no money is left on the premises.

Indian Tea in London.

The public sales were resumed on Monday, when 26,700 packages were brought forward, including a good assortment, mainly consisting of the new crop. The *Produce Markets' Review* says :—The quality of many of the Teas, particularly the Assams and some of the Darjeelings, shows an improvement on last season, and as the market has been but poorly supplied with the better grades for some time past, there was brisk competition. Prices were firm for the finer descriptions while for some of the finest parcels of exceptional quality high rates were paid. Although present values may continue until the trade have replenished their stocks, the future course of prices will probably be downward, as from all accounts the available supply of these kinds is likely to form a liberal proportion of the imports. The medium sorts, ranging from 7d to 9d, are less plentiful at the moment, and very firm prices have been paid as is frequently the case in the early part of the season, but as the arrivals will now be on a much larger scale there is a prospect of easier rates. For the common descriptions the tendency has been to a lower range of values, and a larger quantity of new Teas has been obtainable at 5d.

GENERAL ARTICLES.

VARIETIES OF COCOA.

Cocoa buyers state that a low price is frequently given because the beans are not all from the same variety of tree, that the good and inferior kinds are mixed, when naturally the inferior rules the price.

On many estates the pods are of all kinds, and it is impossible to say to what variety any particular tree belongs.

There are three chief varieties of cocoa grown in the West Indies, *viz.*, the Calabash, Criollo, and Forastero.

The Calabash pod of typical form is small and round with a smooth skin; the beans are flat, bitter, and of a dark purple colour inside

The Criollo pod is thin-skinned, and has a "bottle-neck" near the stalk; the beans are rounded, sweet, and white inside.

The Forastero has a thick skin, deeply furrowed; the beans are somewhat rounded, slightly bitter and pinkish within.

The Criollo cured cocoa gets the highest price. but the tree is the most delicate of all, and liable to disease. It can only be grown on the very best soils.

The Calabash cocoa takes twice the time and attention to ferment it as the Criollo, and fetches a very low price. The tree is, however, very hardy, and will thrive on poor soil where other kinds would not grow.

The Forastero is intermediate in character between the other two. The quality of the cured cocoa is good but not as fine as Criollo. The tree, however, is not subject to disease, and bears largs crops This is the variety recommended for planting in Jamaica, and is the one distributed from Hope Gardens.

It is of great importance to planters to have as nearly as possible only one kind on his estate. For instance, if an estate has some trees of the Calabash variety and some Forastero, the beans must be separately cured, or the fermentation will be too long for some and too short for others, resulting in a badly cured sample.

In planting out an estate for the first time, the choice should be made of one variety and nothing else should be grown. Many estates get a low price for the cocoa, simply because the trees are not even in character. The colour of pod does not matter.

As regards situation for growing cocoa, it should not be planted on dry ridges, but in moist sheltered valleys, and this is essential in districts where the rainfall is small and uncertain.

SISAL HEMP AND OTHER FIBRE PLANT CULTIVATION IN TRINIDAD.

BY MR. QUESNEL, 11TH JUNE, 1901.

I have seen, with a deep regret, some persons rejecting at first the idea of cultivating fibre plants in Trinidad as requiring too much capital and too costly machinery.

This is a great mistake. Yukatan is there as a proof of it, because the Indians of that country export now more than 100,000 tons, prepared with a very rough machine called "Raspador," a wheel of four feet diameter, working at 160 revolutions a minute. The cost of it cannot be, with horse gear, above $150. That machine is easy to move from one place to another. It wastes a certain amount of material, and is slow at work; but it is not the first time that the primitive appliance of the peasantry has succeeded better than costly machines and big capital, with their heavy interests and annuities. The Raspador gives net 333 lbs. in ten hours A machine for working three quarters of a ton would cost, with steam engine and the buildings to correspond. £1,200 at least, when five Raspadores, would not cost more than £150.

A steam engine would not be moveable and could not be economically established where the area under cultivation would be less than 1,000 acres.

I take my data from various reports from Dr. Morris, Imperial Commissioner of Agriculture, Barbados, and from Mr. Richard Dodge, of the Washington Fibre Investigation Committee on account of the Government of the United states.

From them I come to the conclusion that the fibre plant gives a hemp of a value of £30 a ton in London, which I reduce to £14 a ton after allowing for discount, commission and freight, and also for cultivation and packing. This is less than the amount given i the reports referred to.

I take for planting five rows in 36 feet, that is to say, four at si feet distance and the fifth at twelve. I put the plants six fe apart in the rows. This gives me more than 1,000 plants to an acr Each plant at four years gives forty leaves a year of a weight 50 lbs. of which four per cent. turns into fibre, dried and white, two lbs. of fibre to a plant, or 2,000 lbs. an acre. £14 a ton is mor than three cents a pound. I allow only 2½ cents a pound to mak $50 an acre. Thus an acre producing net $50 yields double th results of 200 cacao trees on an acre, at ten bags per 1,000 trees $12 net (when 65s. the London market quotation) or two bag $12 = $24. It is a great deal more than 20 tons of sugar canes to a acre at 9s. a ton, leaving probably not more than 1s. a ton to th cane farmer, or £1 an acre.

If an acre gives 2,000 lbs. a year. and a Raspador prepares som 330 lbs. a day—100,000 lbs. a year of 300 days—it will require 50 acre to produce sufficient fibre for one Raspador's work in one year; fiv Raspadores for 250 acres; 20 for 1,000 acres.

But what strikes me more is that I noticed that on all the suga plantations, all the cacao estates, everywhere on Crown land there is a large extent of useless land, when not first class. Wel the fibre plants grow nearly everywhere except on absolutel barren lands. And immediately every one can foresee what is th future of Trinidad when all lands, unless barren, will be cultivate with plants yielding double what cacao gives. 1,000 acres of lan for sugar canes giving 1,500 tons of sugar, will require (if I do no make a mistake) £37,000 worth of machinery, at least: and 1,00 acres of land for fibre plants will require only 20 Raspadore costing £600, and will give yearly at $50 or £10 per acre, £10,00 sterling to repay cost of land and of contracts.

But no industry can be established with safety if it is not starte with economy and perseverance or if any one is discouraged becaus purchasers do not come from abroad to buy the first pound befor it is ready. I believe that this, and five or six years' gambling i the London Exchange, have stopped the first attempt made i Tobago and in Bahamas some ten years ago. But the machine have been greatly improved during the last four years, the price after fluctuating during the time of speculation between £13 an £75 have become steady at £30, and the plants, ten years old nov are everywhere giving sprouts from their roots, and seeds fro their poles.

The Agricultural Society is being called upon to decide regard ing the introduction of hard-working immigrants from Teneriff Can we find a better basis for settlement by free companies these free people, in a free country? Profitable contracts could b offered to them on landing at the Quay at a rate of $25 an acr five after brushing, $5 after planting, $15 on delivery on fourt year. Each contractor would not receive more than 12 acres to b planted in three years—four acres a year. As there is very litt trouble in cultivating the fibre plant when it is a year and a ha old. every year each contractor could receive some four acres mor In five years he would have planted 20 acres and from the fourt to the ninth year he would receive $500, whereas, 12 acres in caca or. 2,400 trees, would give him only $480 in the same tim —*Journal of the Jamaica Agricultural Society.*

THE KANAN DEVAN HILLS PRODUCE CO., LIMITED.

Report of the Directors for the year ending 30th Novembe 1900, to be submitted to the fourth annual ordinary gener meeting of shareholders of the Kanan Devan Hills Produc Company, Limited:—

The Directors have now to submit their report for the yea ending 30th November, 1900. The crop gathered during the seaso from the tea estates amounted to 1,444,695 lbs, and realized a average of 7·27d. per lb. The coffee amounted to 1,400 cwts., an cinchona to 555,089 lbs. The amount at credit of profit and los account, after providing for commission on profits to tea estat Managers, Agents in Calcutta, and Secretaries, interest an discount on bills, etc.; and dividend on preference shares, £10,037 7s. 8d. Out of this the Directors propose to pay a dividend the rate of 3½ per cent. on the ordinary shares, payable on 30th Augus 1901. This will absorb £9,100, leaving a balance of £937 7s. 8d.

be carried forward to the following year. Considering the unprecedented crisis which has prevailed in the tea market during the past six months, the result is satisfactory. In Assam the properties are all in good order. In Travancore the progress in the important works in hand has not been so rapid as was anticipated. Communications have been much improved by the completion of the wire ropeway, which is now working satisfactorily. The cart road of 10 miles from Bodinayakanur to the foot of the hills, constructed by the Company's officers, has been inspected, approved, and taken over by Government, and it is believed that a Steam Tramway will be laid down on this road, and on to Ammayanayakanur, the station of the South India Railway where the Company's produce is despatched. The cart road from the top of the ropeway to the Company's head-quarters at Munaar is now being metalled, and it is hoped this work will be finished by the end of the year, when permanent cart traffic will be established Meantime, the one line tramway is working fairly well. Three new factories for the manufacture of the Company's tea were under construction during the year under review. These have been opened for manufacture during 1901, and are now fully equipped. Another factory is being erected, and three more are on order. Owing to want of accommodation and a defective water-course, full justice could not be done to the tea in 1900, but it is hoped, with the new factories mentioned above, a marked improvement in the quality will be effected during the year. Some of the 1901 invoices have been sold in the London market at a considerable improvement in price, and samples recently to hand show good valuations. An area of 2,763 acres new tea was added to the cultivation during the past year. The result of this planting was generally satisfactory, but the vacancies are being carefully supplied.

As the shareholders are aware, the Company's concession in Travancore is considered one of the finest fields for cinchona in the East, and the Directors, finding the product to be profitable, are doing all they can to judiciously develop it. The cinchona tree yields the bark from which quinine, so much valued in medicine, is obtained. It has been arranged that 2½ millions cinchona seedlings reared from specially selected seed, will be planted during 1901, and a similar quantity will be planted in 1902. These seedlings will be planted througout the existing tea cultivation; and, as the growing and puting out of the plants will be practically the only expense incurred, the outlay will be small. The up-keep will cost little extra; and it is anticipated that a valuable crop of bark will thus be secured cheaply. With a view of obtaining the fullest information in regard to cinchona, the Directors recently sent one of their managers on a visit to the cinchona plantations of Java, and his report is both useful and encouraging. The Directors feel that, with its large holding in cinchona, the prospects of this Company are more assured than if they rested on tea and coffee alone. The greatest care will be taken to make the cinchona planting a thorough success. The season in Assam, although a bad one generally, did not materially affect the Noakacharee Group of estates, the yield both in quantity and quality being fairly satisfactory, namely—898,128 lbs. against an estimate of 827,600 lbs., while the average price realized was 7·88d. per lb.

During the year under review, the following extensions, arranged for shortly after the formation of the Company, have been made:—19 acres tea in Assam, 2,744 acres tea and 60 acres cinchona in Travancore. The total area under cultivation at 30th November last was 16,086 acres, namely, 14,441 acres tea, 944 acres coffee, and 701 acres cinchona. The estimated crops for the current year are 2,217,225 lbs. of tea, 942 cwts. of coffee, and 248,500 lbs. of cinchona bark. As explained in the circular letter of 7th August, addressed to the shareholders, Mr. P. R. Buchanan the special adviser to and visitor for the Board proceeded to India by mail of 4th January last, and he, along with the managing agents in Calcutta and Colombo, and the Company's visiting superintendents, has been able to effect considerable economies in working without impairing the efficient up-keep of the estates, which should help the results of 1901 and subsequent years. In the circular of 7th August, above referred to, and in the circular of 9th ultimo, the Directors gave information regarding the position of the tea industry and the prospects of the Company.

In terms of the articles of Association one of the Directors, Sir Robert D. Moncreiffe, *Bart.*, retires at this time, and is eligible for re-election.

The auditors, Messrs. Alexander Sloan & Co., C.A., retire, and offer themselves for re-election.

CEYLON TEA ON THE CONTINENT OF EUROPE.

Mr. Renton has sent extracts from German Customs Returns of teas cleared for home consumption as at 30th June; also cutting from a French newspaper with translation of the opening paragraphs.

EXTRACTS FROM GERMAN CUSTOMS RETURNS.

Teas cleared for home consumption in month of June:—

	1900.	1901.
	Kilos.	Kilos.
From Great Britain...	18,500	36,300
,, Holland	6,600	3,400
,, British East India } ...	9,100	14,400
,, Ceylon } ...		28,100
,, China	52,300	53,800
,, Netherlands India	30,700	24,200

Totals for six months ending 30th June:—

	1900	1901.
	Kilos.	Kilos.
From Great Britain... ...	203,200	281,400
,, Holland ...	51,400	32,900
,, British East India } ..	139,900	179,100
,, Ceylon }		116,400
,, China	995,400	1,010,600
,, Netherlands India ...	201,700	194,800
,, Elsewhere	92,700	65,600
	1,689,300	1,880,800

Total increase for six months 191,500 kilos., of which British grown imported directs are 155,600 kilos., say 342,320 lbs.

(*Translation of an article in "Courrier d'Haiphong," July,* 1900.)

The general agricultural show has been held at the Grand Palais. With the exception of Algeria and Tunis the colonies have been conspicuous by their absence. For all that, it is a splendid opportunity to make an annual show of what our colonies can produce. In addition all facilities should be given for the despatches of our colonies, by agricultnral communications, planters, syndicates, etc., and in Paris by the ministeries of agriculture and colonies and by the colonial office. Why do the colonies wait before taking part in these shows? As they are French, they ardently await an order from the authorities. Such an order was given in 1888 to Annam; why has it not been renewed for all our colonies and for annual consignments?

An exhibition of food products has just been held at the Tuileries. An Annamite Van Hai had a boutique there. He sold Ceylon tea!! Another stall for sale of Ceylon tea was kept by a Sinhalese. The tea Company of Ceylon continues its propaganda. The visitors might have demanded Annam tea as much and often as possible, they received instead an advertisement of Ceylon tea of which the following is the text:—

"OUR TEAS,

"After having obtained a brilliant success in the countries where tea is a national drink, have been introduced for the first time, thanks to the exhibition, into France. Owing to their purity and exquisite flavour they have not waited long to be adopted by the French salons, which are opposed more than any other to all changes. So much is this the case that to-day certain qualities of inferior tea find it advantageous to be labelled 'Ceylon Tea,' etc." [Here follow quotations on its merits from Mr. Bamber's books.]

We recommed the above to our planters in Indo-China to give them food for thought and to clear their understanding. In addition the Ceylon Pavilion has been reconstituted at 4, Reu Caumartin, and herewith its advertisement a little charlatanesque, but profitable for the English. * * * *"

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

THE INFLUENCE OF COFFEE PRICES ON EXCHANGE.

In an interesting brochure Mr. Laneuville alludes to the absurdity of the theory that maintains that low exchange favours production by the following reduction *ad absurdum:*

Suppose that for one cause or another, a fall of exchange, for example to 1d. (in France and Colombia it fell lower) and that Santos good average cost 15$ with a production of 8,000,000 bags and 5,000,000 at Rio. The price would doubtless be remunerative enough. But what would the sale price be in Europe? 7s. 6d. PER CWT. COST AND FREIGHT! taking freight at 1s. 3d. The planter could then produce and deliver his coffee at Santos at 5s. per cwt. and still earn a profit in milreis. On the one side the producer would obtain a so-called remunerative price and on the other consumers would be provided almost gratis and all that thanks to exchange. A theory that asserts such probabilities is evidently false and absurd.

Suppose again that a big fall of exchange is simultaneous with a rise of currency prices and fall of gold prices abroad (in case of heavy production) as has often happened, and that currency prices do not rise as rapidly as exchange falls. The profit on the side of consumers would then be incontrovertible, but is it equally true that producers would realize a profit in selling his coffee dearer? That would be a regular panacea were it not an absurdity.

The *Brazilian Review* remarks:—The truth is that Brazilian money could buy less as exchange fell and that although a nominal profit in reis may have been realized, there is in reality a loss.

Mr. Laneuville concludes that consumption during the last 5 years has increased certainly 25%, not only on account of lower prices, but in consequence of the immense economical progress of the two chief consuming countries—the United States and Germany. The fall of prices below 40 to 45 francs must provoke a crisis in the producing countries as has already occurred.

Mr. Laneuville in common with ourselves is an advocate of the reduction of par. In this connection he says "We know only of two examples in History of countries which have renewed specie payments on the basis of original parity—Great Britain and the United States. On the other hand six countries have endeavoured and some succeeded in regulating the value of their currency by consolidating part of the depreciation of their monetary unit, *viz.*:—

Russia	which reduced the	4 fr.	Rouble	to	2f. 66.
Austria Hungaria ...	,,	,,	Florin	from	2f. 50 to 2f. 10.
Japan	,,	,,	Yen	,,	5f. 40 to 2f. 58.
Chili	,,	,,	Peso	,,	— to 1f. 90.
Argentina ...	,,	,,		,,	5f. 00 to 2f. 20.
India	,,	,,	Rupee	,,	2f. 38 to 1f. 68.

JAPAN TEA TRADE COMBINE NOT YET COMPLETED.

SOME INTERESTS HAVE NOT YET CONSENTED TO JOIN.

In May last an account appeared in these columns of a plan to organize a central company which should have full control of the trade of Japan teas. The United States is virtually the exclusive market for these teas, and the proposition is to induce all interests in this country acting as first hands and all Japanese concerns exporting to this country directly or indirectly to form a central company and give over their business to such company on proper compensation. It may be stated on authority that while some progress has been made since the original publication of the plans already referred to, some interests are still standing aloof, and the new company is not yet ready for incorporation. Among those who have not yet joined, are, it is understood, Messrs. Hunt & Co. and Messrs. Hellyer & Co.

One of the objects of the combination, it is said, is to do away with the ruinous competition which the trade has recently been undergoing and which has placed Japan tea at a distinct disadvantage with the China and other teas which are fired and packed by natives. Members of the trade argue that under current conditions they are forced by the exigences of competition to buy from the Japanese at high prices and to sell at low prices. This is particularly the case during the month of May—the opening of the new season—when it is necessary to duplicate the exceeding choice samples, which can only be secured very early in the seaso The extremely active competition for these grades enables th Japanese to fix fancy prices, and the buyers have the added induc ment to take all the choice grades of the early supplies for th reason that the Japanese will then consign any surplus of the grades to this market to be sold in competition with the regul importers. That the Japanese freely pursue this policy of sendi supplies direct is shown by the following list of settlement (virtually shipments to this country) for the season 1900-1901 :—

LIST OF JAPAN TEA SETTLEMENTS FOR SEASON 1900-1901.

	Piculs.
Mourilyan, Heimann & Co.	23,493
Smith, Baker & Co.	43,418
Hunt & Co.	39,390
Hellyer & Co.	38,848
Jardine, Matheson & Co.	16,843
Fraser, Farley and Varnum	9,756
Middleton and Smith	5,226
Nitto Boyeki Hwaisha	8,434
Averill & Co.	15,807
M. J. Brandenstein & Co.	5,505
C. B. Bernard & Co.	10,180
J. C. Siegfried & Co.	23,660
G. H. Macy & Co.	46,040
Japanese	25,772
Total ...	312,372
Same date last season ...	335,280

The active competition in securing supplies of Japan teas resul from the fact that the offerings must be accepted with virtually n delay. The teas are in perishable shape and must be immediatel fired and packed by the purchaser. As the supplies of the "cream of Japanese teas may be purchased only at the beginning of th season, and as the various buyers have customers for special line of teas which can be obtained only at that period, it will be readil seen that the Japanese have excellent facilities at hand to secur favourable first prices. The tea trade in Japan, like other branche of business and industry there, is largely controlled by guild which operate for the benefit of home interests. While the opera tion of these guilds seems to produce favourable results early in th season, it does not, it is claimed, work permanently for the good o the trade. In fact, the growers of India and Ceylon teas are jus now promising increased competition as a result of the offerings o blends resembling the Japanese article very closely.—*Journal o Commerce*, New York.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, 29*th July*, 1901.—Ninety days' Bank rate on Londo opened on Monday, 22nd, at $10\frac{5}{16}$d and closed to-day at $10\frac{2}{32}$. Th average Bank 90 d/s counter-drawing rate for the week comes ou at $10\frac{1}{64}$d, the corresponding sight rate being $9\frac{61}{64}$d against $10\frac{1}{64}$ the average sight rate of the *Camara Syndical.*

It is impossible to advance any opinion as regards the immediat future of exchange. The factors in play are so complex as to def calculation, but it is satisfactory to observe that the rise of 1d. ha checked the fall of coffee in the foreign markets. For a short tim one of the foreign banks suffered a kind of run, and it was publicl reported that two foreign banks were about to close their door There was, of course, no reason in such a panic, but at such time anything finds credence. On Friday, without previous warning, th scene changed completely and within 5 days rates rocketed u once more to $10\frac{1}{2}$d. The rise is attributed by some to greate firmness at Santos, and by others to Government assistance. How ever it may have been there can be no doubt it was very timel and checked a fall that might have developed into disaster.

During the past week the value of coffee shipments (embarque at Rio and Santos was £429,000 as against £412,000 for the previou week and £338,000 for the same period last year. Since the 1 July the total value of coffee sailed from Rio and Santos up to th 26th instant was £1,030,688 as against £1,014,737 last year. Rubbe meanwhile, scarcely yielded anything, £79,000 last week and £72,0 the week before, nor will it be until November or December tha rubber entries will greately affect the market.

Coffee.—Entries at Rio and Santos during the week ended 26th July were 45,665 in excess of the previous week's and 170,999 more than those for the corresponding week last year. Since the first July entries aggregated 1,174,235 or nearly 80 % more than during the same period last year.

Sales were active, 2[illegible]6,000 as against 193,000 for the previous week and 181,000 last year, whilst embarques were likewise very active, 303,352 bags as against 284,010 the previous week and 131,176 bags last year. Stocks however are commencing to rise again, being 883,912 at Rio and Santos on the 26th instant, as against 766,408 on the 19th instant and 628,758 on 27th July last year.

Reports of "requiema" are common in the São Paulo coffee districts and a smaller crop for 1902-1903 is anticipated in consequence. For two years past new buds always made their appearance between June and July, which, though they are practically useless, were always considered the forerunners of an abundant flowering later on. This year not a bud has made its appearance so far.

At Itatinga coffee picking is well advanced and indicates a yield ⅓ less than last year. The "colonos" are grumbling at the low rate of 400 reis paid per alqueire of coffee and threatening strike.

Labour.—A son of the Marquis of Rudini, the head of the Syndicate for promoting emigration to São Paulo, arrived at Santos in the *Centro America* on the 25th July. The Syndicate propose to take up the low lands about Iguape to begin with.

The careful way in which the statistics of the coffee movement are kept by the Associação Commercial of Santos, in such contrast with the slipshod methods here, is proved by the fact that the difference between the Associação figures for shipments and those of the Estatistica Commercial for the 1900-1901 crop is only 198 bags, the Associação showing 7,821,541 and the Estatistica 7,821,343 bags exported to foreign countries from that port. Even this slight difference is probably due to some coast coffee having been included in the Associação figures.

DISTRICT ASSOCIATIONS.

WYNAAD.

Proceedings of a General Meeting held at Meppadi Club, on Wednesday, 4th September, 1901. PRESENT:—Messrs. Atzenwiler, Mackenzie, Nicolls, Lance, Powell, Trollope, and G. Romily, *Honorary Secretary*. *Visitors:* Dr. Beley, and Mr. Gillatt. Mr. Atzenwiler *in the chair*.

1. Proceedings of the last General Meeting, 3rd July, and of the Special Labour Meeting of 24th July were taken as read.

2. **U. P. A. S. I. Meeting at Bangalore.**—Mr. D. Mackenzie reported that the Labour Bill had been discussed in Committee and that he had brought up the points raised by this Association and had left the matter in the hands of the Planting member. Mr. Mackenzie suggested that the Honorary Secretary be instructed to correspond with the Planting member through the U. P. A. S. I. when the Bill comes up for discussion. Mr. Mackenzie gave further information about the schemes for distributing Tea and Coffee and urged that they should receive unanimous support from members of this Association.

3. **Tea cess and contributions to the Foreign Market Fund.**—Read circulars from the I. T. A. and U. P. A. S. I. on the subject. Resolved that the Honorary Secretary when forwarding the circular on the New Levy to Tea growers should request them to forward their subscriptions direct to the Secretary, I. T. A., and at the same time notify the fact to the Secretary, U. P. A. S. I.

Read circulars on the sale of Tea in India.

4. **Coffee.**—Read U. P. A. S. I. circular giving the report of the Sub-Committee on the proposed sale of Coffee in India.

Proposed by Mr. Mackenzie and seconded by Mr. Trollope, that this Association should support the scheme by donations. A certain sum having been promised by members in the room the Honorary Secretary was instructed to address the other Coffee growers in the district on the subject.

Adulteration of Coffee.—Read circular No. 58. Recorded.

5. **Pepper robberies.**—Read the Honorary Secretary's letter to the Collector of Malabar; and the Collector's answer declining to reconsider his previously expressed opinion. Recorded with regret.

6. **Encashment of notes at the Vayitri Treasury.**—Read letter from the Accountant-General to the Collector of Malabar, dated 21st August, 1901, saying that the arrangements sanctioned in the letter of 5th June, 1894, No. 1536, may be considered to be still in force. That is that no notes can be cashed unless there is a balance of Rs. 3,000 over and above the undrawn portions of letters of credit issued on the Treasury in favour of any public officers.

7. **Differential duties.**—Read U. P. A. S. I. circular giving the correspondence between the Chairman and Secretary. Considerable dissatisfaction was expressed that so little information was forthcoming on so important a subject and the Honorary Secretary was instructed to address the Chairman of the U. P. A. S. I.

8. The following U. P. A. S. I. circulars were read and recorded:—

No. 57. Dr. Watt's services refused.
„ 60. Letter from Col. Campbell.
„ 63. On the French Import Tariff.
„ 64. Import duty on Tea in Ceylon.
„ 66. Abbott's pest.
„ 68. Complaints as to inaccuracy of statistics.
„ 69. On Freights.
„ 71. St. Petersburg Exhibition.
„ 72. Investment of U. P. A. S. I. Funds.

9. The following papers were laid on the table:—

I. T A. circulars.
Proceedings of Coorg Planters' Association.
Do. Central Travancore Planters' Association.
Notice of sales of estates.
Bulletin No. 44. Notes of Cattle in Madras Presidency.
Agricultural Ledger, No. 1. Paspalum dilatum.
„ 2. Triticum Vulgare.
Administration Report, Government Botanical Gardens. Nilgiris.
Planting Opinion.
Indian Planting and Gardening.

A vote of thanks to the chair terminated the proceedings.

(Signed) H. ATZENWILER,
Chairman.
(„) GEORGE ROMILLY,
Honorary Secretary.

SHEVAROY.

Proceedings of the Annual General Meeting of the Shevaroy Planters' Association held in the Victoria Rooms, Yercaud, on Monday, the 2nd September, 1901, at 1 p.m.

PRESENT:

Mr. W. J. Lechler.
„ C. G. Lechler.
„ S. Campbell.
„ C. Rahm.
„ W. Rahm.
Revd. J. M. Kempff.
Mr. Bruce Short.
„ C. Dickins.
„ E. Dickins.
„ J. C. Large.
„ H. Dickins.

Mr. Newton, *visitor*.
Mr. Gompertz, *Chairman and Honorary Secretary*.

1. Notice calling the meeting was taken as read.

2. Confirmed Proceedings of Committee Meetings held on the 8th July and 12th August, 1901.

3. Read and passed accounts for past year showing a balance in hand, on the 31st ultimo, of (Rs.568-6-11) five hundred and sixty-eight rupees, six annas and eleven pies.

4. The Honorary Secretary here read his report as follows:—

Report of the Honorary Secretary, Shevaroy Planters' Association, for the year ending 31st August, 1901.

GENTLEMEN,—I come before you once more with the inevitable Annual Report and Balance-sheet.

2. I regret to say that, during the past year, four of our members have withdrawn, whilst only two new ones have joined; so that we close the year with only 37 members, instead of 39.

3. On the 31st August, 1900, we had a balance in hand of Rs.466-11-0, while to-day it is Rs.568-6-11. We must not congratulate ourselves much on the improvement however, for it was caused by a payment made by Messrs. Duff & Co.; and was for coffee which we had sent them for transmission to our troops in the Transvaal, but which by some mistake was never shipped, so it had to be sold for what it would fetch in Madras, *viz.*, Rs.134-7-4. Deducting this payment we are not so well off as we were

last year, though our expenses have been much less; and as the subscription has just been reduced, to which I shall presently refer again, our income in future will only be $\frac{3}{5}$ of what it has been until now—unless we can secure a large influx of new members.

4. Prices, I am sorry to say, have gone from bad to worse; and to meet the wishes of a good many members, the subcription to the Association was reduced last June, as a temporary measure, from Rs.5 to Rs.3 per quarter. Personally I think that this was a great mistake. I know—none better—that, in the present state of the market, it is difficult to raise a rupee; but to argue that, because the fall in prices has brought us to the verge of ruin we cannot *afford* to do anything to avert it, is not like planters and is alien to the British character. Desperate conditions require heroic remedies. No one will contend that five rupees a quarter could make or break our poorest member; but "a straw shows how the wind blows;" and if men are unwilling to do so little to support the District Association, they are unlikely—voluntarily—to make the greater sacrifices which are absolutely necessary to avert the ruin of the industry, and to retrieve the position of Indian coffee in the markets of the world. I showed last year the good work done by the U. P. A. S. I., such as recognition of the planting community by Government, the appoinment of a planting member on the Legislative Council, more than Rs.12,000 subscribed by Governments and merchants to advertize our coffee at the Paris Exhibition, the duty removed from imported manures which reduces their price by one-twentieth, improved communications such as our new Ghaut Road, etc., etc., etc. The United Planters' Association owes its existence to, and is supported by the District Associations; and I begged you all to use your influence to obtain recruits amongst your friends, that we might get rid of the anomaly of a planter in our midst, who shares in the benefits conferred, but who refuses to contribute his mite to the expenses of procuring them:—but alas! our number does not increase. Men make all sorts of excuses to avoid joining, or to cover their retreat—any absurdity seems good enough. Some say they are leaving the District—forgetting that their estates, and their interests, remain; some that in these hard times they cannot afford unnecessary (!) expenditure; and one man told me he withdrew because the Association did not repair the road through his estate (!); forgetting the impossibility of undertaking such works in return for a subscription of one rupee a month. We pay, besides the Government kist, a local cess of two annas per acre. Estate roads must, of course, be maintained by their owners; but District roads, hospitals and the like are kept up out of the local cess, as far as it will go. The Association is represented on the District Boards, and our representative takes care that all that can be done locally is done, to the full extent of the local cess, and even more. It is difficult to see what more can be reasonably expected. But, by far the commonest excuse is that they would join if others would, but they don't see why they should keep up an Association for the benefit of Tom, Dick or Harry, who will give nothing towards its support.

5. This, of course, brings us face to face with the difficulties of a compulsory cess. Our Association is unanimous in favour of it; and in accordance with your instructions, I brought up the question at the late Conference. But, as you know, we are about to ask Government to impose it upon tea; and it was thought we should have a better chance of obtaining it hereafter, if we proved successful in getting it for tea. Consequently the sense of the meeting was opposed to pressing the point at present, and I had to withdraw my motion. But though a compulsory cess on coffee is, for the moment, dropped, the delegates were unanimous in thinking that it was absolutely necessary that every coffee planter should, voluntarily, subscribe for the purpose of advertising and pushing the sale of our coffee, as the tea planters are doing with their tea. The Chairman, Mr. Hodgson, in a very able speech, proposed a most admirable and practical method for raising these subscriptions in a way that would scarcely be felt. He said "another thing I want to impress upon you very strongly is the necessity for advertising your produce. Unless your produce is properly advertised the sales always fall off. In fact, I may say that the only road to a good market is by advertising. If you throw your products on the market without any advertisement, it is like drift wood on the water, which is collected and used by others who advertise, with much profit. I know what I am asking, it means that you must put your hands in your pockets to provide money. Now no one knows better than I do that at the present time the planter finds it difficult to provide money. But I must remind you that for the working of your estates you must provide a certain amount of money per acre, and, to do so you must draw up your estimates. In drawing up these estimates I would ask you to insert an item for advertising your produce, say, at four annas per acre. I am quite convinced that, if you can do that, it will probably be the smallest and the most profitable item in your accounts." I have quoted his *words;* but there was something in the way in which he said them that came home to every one of us; and, though it was not reported, he was interrupted at this point by vociferous applause; for we felt that he had struck the right nail on the head, and had shown us a way of raising the subscription which was likely to be more favourably received than any that had been propounded before. If the delegates had had the power of binding their Associations, I have little doubt that his proposal would have been carried by acclamation, then and there.

6. There still remains the question of how the money thus raised i be utilized. This was also discussed at the late Conference; and it agreed to support the Paris shop in Europe from the funds already at disposal of the U. P. A. S. I.; and, under certain conditions, the Uni Coffee Growers Co. in India, for the present, from subscriptions to collected here; as this was thought to be the best beginning we could m I hope at our next Quarterly General Meeting to be able to tell you t the U. C. G. Co. have agreed to comply with the wishes of the l Conference, in which case I shall propose an elaboration of Mr. Hodgso scheme; but, after all, the Agency we employ is merely a matter detail. What I want to urge on you now, as forcibly as I can, is that y should accept Mr. Hodgson's suggestion; and that, in making out yo estimates of expenditure, you should insert an item of four annas an a for advertising and pushing the sale of your coffee. Eventually we c employ the U. C. G. Co.; or, if you do not like that, any other Agency that is a matter for future consideration. But send the four annas acre without delay to the Honorary Secretary for the coming year, to presently elected, with a *proviso*, if you please, that he is not to disp of it except in accordance with the wishes of the majority at the ne Quarterly General Meeting. But do it, I beg of you, gentlemen, do *at once.*

7. As Mr. Leeming's estates are in our midst, I need not say mu about his system here. Allthough "a prophet is not without honour s in his own country and in his own house" most of you have eith adopted his system, or at least are experimenting with it; but as whe at the Conference, the Chairman said that he was not aware that any o but Mr. Parton had tried it, several men got up and said that they h which was not reported in the papers, it may not be out of place i inform you that men from all parts of Southern India have visited estates, and have gone away well pleased with what they saw, and th experiments are being made with it in every coffee-growing Distri Considering the great saving in the cost of production, its importan particularly in these times of ruinously low prices, can scarcely be ov estimated.

8. Very fair progress has been made on our new Ghaut Road, duri the past year. When completed it cannot fail to increase the importan of our charming little Hills, and to enhance the value of land and hou property.

9. The Labour Bill, I regret to say, has not yet been passed; owing the constant alterations in it, insisted on by the Supreme Governmen but it has not been lost sight of, and will, I hope, soon become law.

10. I have unfortunately heard nothing about experiments amongst with new staples. Though I am a firm believer in the future of our coff I think it is much to be regretted that those of our number who ha facilities for doing so, do not endeavour to introduce new produc Amongst others I may draw attention to fibre, rubber, pepper and fr culture on a large scale, as likely to yield a handsome return to the m who will undertake their cultivation systematically; whilst perhaps t most promising of all is the raising of plantains, both for fruit and fibr though it is doubtful if they could be grown here as successfuly as the plains.

11. Apologizing for the length of my report—or address—I will conclu The Committee and myself now place their resignations in your hands, a request you will be so good as to elect office-bearers for the coming year.

(Signed) ROBT. GOMPERTZ,
Chairman and Honorary Secretary, S. P.

5. Proposed by Mr. C. Lechler and seconded by Mr. Larg Carried unanimously:—

That the Honorary Secretary's report, including the accoun be adopted and printed, and a copy of it be circulated to all membe and to any others that the Honorary Secretary thinks would be inte ested in it.

The balloting for the office-bearers for the coming year was th proceeded with, and the following gentlemen were elected—

COMMITTEE:

Mr. C. Rahm.	Mr. J. C. Large.
,, E. Dickins.	Revd. M. Andersen.
,, C. G. Lechler.	,, J. M. Kempff.
,, W. J. Lechler.	Mr. C. Dickins.

Mr. R. Gompertz, *Chairman and Honorary Secretary.*

Read letter from Messrs. Willocks & Co. describing a certain ne kind of blood manure called "Ufertas." Their representativ Mr. Newton, was present at the meeting, and offered to send a sm quantity free of cost to any gentleman present, who would give it fair trial, and report the results.

Resolved that Mr. Newton's offer be accepted and that he requested to send the samples to the Honorary Secretary who und took to see that they should receive a fair trial.

Resolved that a very cordial vote of thanks be tendered Mr. Gompertz for his services during the year, and for the al

manner in which he had represented this Association at the late Conference in Bangalore.

The following letters were read and recorded :—

Circulars received from the Secretary, U. P. A. S. I., during the month of August, 1901.

No. 60/01. Col. Campbell thanks us for vote of sympathy.

No. 61/01. The St. Petersburg Exhibition postponed to November, 1901.

No. 62/01. The I. T. A. are doing all they can in favour of compulsory Tea Cess.

No. 63/01. The Bombay Chamber of Commerce does not think it would be any use to address Government *re* possible enhancement of French import tariff.

No. 64/01. The I. T. A. are about to address the Government of India with a view to getting Ceylon import duty on tea removed.

No. 65/01. Mr. J. A. Harris accepts vice-chairman ship of the Association, regrets inability to attend late annual meeting.

No. 66/01. J. C. Abbott forwards description of Ceylon Government Entomologist of a new species of bug.

No. 67/01. Messrs. A. Yule & Co. do not see their way to selling coffee at present.

No. 68/01. Secretary of the I. T. A. forwards correspondence complaining of the very imperfect returns submitted by the S. I. Tea planters, rendering reliable statistics impossible.

No. 69/01. Hon'ble Mr. Acworth thinks it would be useless to get steamer freights from Cochin reduced till the Shoranur-Cochin extension is opened for traffic.

No. 70/01. Forwarding correspondence between Chairman and Secretary *re* precis of replies received to circular on Differential Duties.

No. 71/01. The I. T. A. thinks tea ought to be adequately represented at the St. Petersburg Exhibition, but is short of funds.

No. 72/01. Secretary has purchased Rs.5,000 of Government paper as instructed to at late Conference.

G. O., Madras, No. 693, of 9th August, 1901, regarding mule-breeding.

Correspondence with Collector about the Treasury being closed on days on which notice had been given that it would be open.

The following books and papers received during the month were laid on the table.

Brazilian Review, June 25th, July 2nd, 9th, 16th, and 23rd.

Planting Opinion, August 10th, 17th, 24th, and 31st.

Proceedings of the Indian Tea Association, dated August 13th, 20th, 23rd, and 29th.

Proceedings of the Coorg Planters' Associations, dated July 24th, 1901.

Circulars from the Bengal Chamber of Commerce, No. 321/01, dated August 9th, 1901, and No. 332/01, dated 14th August, 1901.

INDIAN TEA ASSOCIATION

Abstract of the proceedings of a meeting of the General Committee held at Calcutta on 27th August, 1901. Mr. H. S. ASHTON (*Chairman*), presiding.

The attention of the Committee had been drawn by members of the Association to the question of regulating supplies for the London market.

It was, the Committee believed, recognised that the tendency to concentrate supplies upon the London market during a few months in each season, had greatly developed during the last two or three years. This concentration was, in their opinion, mainly due to improvements in communications between the producing districts and the sea-board. The extension of the Dooars Railway, and the opening of new bridges on the Northern Bengal Railway, had considerably accelerated the passage of teas from the Dooars. And the keen competition between the Assam-Bengal Railway and the Inland Steamer Companies (in consequence of which tea was carried in mail boats at cargo-steamer rates,) together with the establishment of a direct service from Chittagong, had sensibly diminished the time formerly occupied in the transit of teas from Cachar and Sylhet. There could be, the Committee thought, no doubt that if, during the present season, the effect of these improved transport facilities was in no way restricted, the London auctions would be overburdened at an early date. The questions therefore arose (1) as to whether it was desirable, by regulating supplies, to avoid or to diminish this risk; and (2) if such regulation were deemed to be desirable, as to the form which it should take.

In the course of the discussion which ensued, it became evident that the majority of the firms represented on the Committee were of opinion that regulation here would have a good effect upon prices. But a minority were not convinced of this. They held that it was questionable whether the news of tea being held back would not have a more depressing effect upon the market than would be caused by permitting shipments to go forward in the usual course. In these circumstances it seemed to be clear that no system of regulation in India was practicable. The Committee consequently decided to submit to the London branch of the Association a statement of the position, and to enquire if any scheme of regulation in London was contemplated.

Considered a letter, No. 4297, of 24th August, from the Collector of Customs, Calcutta, with reference to the values declared by shippers for tea exported from Calcutta. Figures were quoted in this letter with the object of showing that the declared values were higher than the average prices realised in London or Calcutta. And an enquiry was made as to whether it was the general practice to include in the declared value the equivalent of the charges incurred up to time of sale in London. The Association was also asked to suggest some feasible methods by which greater accuracy could be secured in future.

The Committee were of opinion (judging by the figures given in the letter) that the declared values were somewhat high. And they decided to circulate copies of the letter to the members of the Association with a recommendation that greater care should be exercised in future. The permission of the Collector was, however, to be obtained before publication. They believed that it was not the custom to include in the values the charges incurred up to time of sale in London; and they agreed to inform the Collector accordingly.

Considered information received from Colombo in reply to an enquiry which was made by the Committee, as to what would be the position of Indian teas in Colombo if the duty were reduced to 5 per cent. *ad valorem*.

The information was to the effect that so long as a duty was levied, at however low a rate, Indian teas could never rank in Colombo on equal terms with Ceylon teas. The reason for this was that dutiable teas were stored in the Bonded Warehouse and could not be removed except by the payment of duty, or on their being shipped. This prohibited the dealers from using such teas for blending purposes; and prevented their sharing to a full extent in the general competition. The only possible means of putting all teas on equal terms would be to abolish the import duty. And if Indian teas were admitted free, it was thought locally that teas from China, Japan, and Java, should receive similar treatment. Any proposal to remove the duty would not be favourably received in Ceylon.

This information coincided with the opinion previously formed by the Committee; and they agreed to address the Government of India on the general question as early as possible. The letter was to follow the lines prescribed in the proceedings of the meetings held on 16th July and 13th August, 1901.

NORTH MYSORE NATIVE P. A.

At the Annual General Meeting of the North Mysore Native Planters' Association held at Chikmagalur Club on the 30th July, 1901.

PRESENT: Messrs. B. Gundappa, T. Puppannasetty, Abdul Rahiman Kader, Mohamed Khan Saheb, B. Runga Rao, K. Hanumantha Rao, M. Siddanna, C. Srinivasa Rao, A. Shama Rao, G. Abdulkhader, Pir Kasim Saheb, Janardaniah, N. Gundappa, C. Vasudeva Rao, D. Srinivasa Rao, Mahomed Alli Kader, B. Budan Saheb, S. Mohadeen Saheb, T. Narsing Rao, A. Davood Saheb, and G. Abdulkhalek.

The President, Mr. C. Veeratha Gowda, being absent Mr. B. Gundappa was voted to the chair.

The Secretary's Report.

GENTLEMEN,—Before we commence the business of the day I regret to inform you that we have lost two members from the planting community, *viz.*, Mr. Courpalais and Mr. Budandeen Saheb. Mr Courpalais is not only an old but also a successful planter. He was a great helping hand to many around him in the Native Community. I need not mention his charities to you as they are well known.

The coffee industry seems almost to have collapsed. But comparing our prices now to that of 1885 and 1886 I find no reason to fear. The chief difficulties we have to contend against now are the increased expenditure on coffee cultivation at the present day, the abnormally bad seasons and an over-stocked Market. In the old days almost all the Native planters cultivated coffee on the Arabian system I mean allowing coffee plants to grow into large bushy trees which covered the land. By this means the expenditure on weeding was greatly saved and no expenses on pruning and handling were incurred. The crops picked were usually heavy. The only mistake then made was, I think, not attending to manuring the estates and supplying vacancies. I am glad to tell you that many amongst us are now seriously thinking of going back to our old system, and cutting down our expenditure by half, to pull us through till better times come round again.

Brazil has again produced a large crop this year estimated at 12 million bags. Papers show that she too has got great financial difficulties and has to depend on foreign capital for her cultivation just as we do. Brazil cannot go on producing this large crop, year after year with the small return she gets for it.

Mysore coffee has headed the list this year also amongst the East Indian coffees excepting Ceylon. A few lots of Central American have fetched better prices than Mysore lots. There have been complaints of late that our berry has deteriorated and this is a serious matter which requires our greatest attention.

I am glad to tell you that coffee consumption in Southern India is slowly on the increase.

Now I bring before you a question which may appear to you, a dream, but it is well worth your deliberation. I mean the establishment of a Native agency in France and in England. I am sure of success. The novelty itself will create a demand for our produce much more so when it is found to be of the best quality and not mixed with indifferent kinds.

I place the accounts on the table for your perusal and request the members to pay their subscriptions due to the Association promptly.

Resolutions.

1. *Office-bearers :*—Mr. C. Veeratha Gowda and Mr. C. Vasudeva Rau were re-elected as President and Honorary Secretary.
2. Resolved that Mr. A Shama Rao be elected to represent the Association in the coming Dussara Assembly.
3. Resolved that the Association deeply regrets the death of Mr. Courpalais and that of the rising planter, Mr. Budandeen Saheb.
4. *Game law.*—Resolved (after a great discussion) that the Government be requested at the ensuing Dussara Assembly to reduce the fee charged on shooting licenses. To shoot in the village grounds to 1 rupee and to 2 rupees for shooting in the District and to rupees 5 for all Mysore. Further request be made to allow the shooting of Monkeys and Parrots when they are destructive to crops.
5. Resolved that the Government be requested to allow planters to cart fire-wood from their estates on their own passes.
6. Resolved that Government be requested to consider the question of connecting Chikmagalur with Kadur by rail and from Chikmagalur the line be connected with Arsikere-Mangalore line.
7. Resolved that the rule of leaving a margin of 50 yards on both sides of the streams entails great hardships on the planters and does not help in keeping the springs alive and to represent that as coffee is always cultivated under shade and hundreds of trees are planted for every one cut down, the springs are protected; and request Government to re-consider the matter.
8. Resolved that Government be requested that the minimum acreage granted for coffee cultivation be reduced to 5 acres, as it is found that the present minimum of 15 acres is a great hardship on the poorer ryots.
9. Resolved that Government be again requested that Bagani toddy be given for *bonâ fide* purposes for the use of the planter and his Jetagars.
10. Resolved that a requisition be made to Government for c tinuing the Baba Booden Road towards Punderwalli side a joining it to Chikmagalur Yedehully Road
11. Resolved to ask Government to allow applicants to t Bagani trees if they are not marked within 7 days from the date Durkast and payment.

With a vote of thanks to the Chairman the meeting terminate

C. VASUDEVA RAO,
Honorary Secreta

THE COST OF WAR.

From the day when Achilles fasted three days and nights ov the body of Patroclus, slain in the ten years' siege before the sto walls of Troy, have we learned of war's sorrows.

The Duke of Wellington wept like a child when he surveyed t bloody, hard-won field of Waterloo. Methuen, it is said, bro down at the ghastly sight of Magersfontein, and returned to h tent that the men might not witness his grief.

"Who dead is must be buried," says Homer, and, we might ad "who ill is must die."

So thought Private John Smith, living now at 19, South Uxbrid Street, Burton-on-Trent. The *Aurania* steamed out to the Ca on December 27th, 1899. with this soldier aboard her (that was b fore she steamed back with the gallant C. I. V.'s) and in telling r of his trials, on August 29th, 1900, Private Smith says that *th* part of his duty was pleasant enough.

"Shortly after Earl Roberts' famous march into Kronstadt, were stationed between that town and Jacobsdal to guard the li of communication. Towards the end of April I was laid low wi that fell disease enteric fever.

There were hundreds of men down with it. It has laid l more men than all the shot and shell that was ever fired by Bo Artillery. For several weeks I was in the fever hospital. M stomach was converted into a manufactory of torturing pains a I grew as weak and helpless as a new-born babe.

"I was for *days unconscious*, but gradually recovered sufficient to be invalided home."

Yet the suffering of Private Smith was not over. "I we aboard the Hospital Ship *Nineveh* in June," he says, "and short afterwards sailed for home. During my short stay in Sou Africa, I lost over 20 lbs. in weight. Nothing that I took relieve the constant vomiting, or increased my strength."

"After," he says, "I had been home a few days, my brother, w is an engine driver on the Midland Railway—not of *an armour train*—advised me to try Mother Seigel's Syrup. I got a bottle. found it was doing me good. The vomiting *ceased*, and I was ab to enjoy all kinds of food. My appetite is now enormous."

"Altogether I have taken four bottles of Mother Seigel's Syru and gladly give you permission to use and publish my statemer This Syrup is a fine tonic and a great medicine for the stomach. can especially recommend it *to soldiers returning from South Afri* in feeble health."

Wellington knew the bitter cost of war in 1815.

Methuen in 1899 and 1900.

And the hero of this narrative in 1900, too. His was a perso cost. "Green vomit." Charles Reade writes, "laid her sickly ha on him."

A BROKEN MAN.—Until the kindly offices of Seigel's Curative Syr put him on the stepping-stone of "first wealth," which is health.

MARKET REPORT.

[*Per Mail advices of* 23*rd August* 1901.]

COFFEE.

The London Commercial Record says:—A steady demand h prevailed during the week, and the moderate supplies at aucti have met with good competition at firm prices to a further advan of 1s per cwt for most descriptions, and a greater improvement f all desirable colory qualities. Washed Santos found ready buye at the recent improvement in prices. Privately there has be more enquiry, and a fair amount of business has been transact at public sale rates. The market for futures has been steadier covering by bears, and, although receipts at the shipping po have been very large, the latest quotations show a slight advan for the week. Yesterday September delivery of Santos was dealt

it at 28s to 28s 3d, December at 28s 7½d, March at 29s 1½d to 29s 4½d, and May at 29s 9d to 30s per cwt.

TEA.

INDIAN.—Auctions were heavier, totalling 33,400 packages, compared with 25,100 packages during the week before. In the corresponding period last year 35,000 packages were offered.

Business throughout the country has, as is usual in August, been quiet, and the quantity brought forward proved ample for immediate requirements. Dealers having recently made moderate purchases of the new crop seemed inclined to pause before adding further to stock, and although the best invoices sold fairly well, bidding for the less attractive ones was not so lively and withdrawals were consequently more numerous. Common leafy sorts tended in favour of buyers.

Quality generally was barely maintained, though many of the arrivals from Assam, Darjeeling, and the Dooars continued to be of a useful kind.

For 29,600 packages on estates account 9d per lb. was obtained, against $8\frac{5}{8}$d per lb. for 29,000 packages and $8\frac{3}{8}$d per lb. for 35,400 packages in the two preceding seasons respectively.

It is satisfactory to note that while total clearances for home consumption are above those at this date in the foregoing year, the figures indicate a considerable expansion in the amount sent from this country to outside quarters in the seven months ending 31st ultimo.

CEYLON.—Public sales aggregated 27,600 packages, contrasted with 29,900 packages in the antecedent week and 40,600 packages in 1900.

Arrivals were well up to the average, here and there making an improvement, and competition was good for most descriptions, though prices were a little irregular, especially for the medium grades. Pekoe Souchongs and Pekoes below $5\frac{1}{4}$d per lb., as a rule, remained steady. Flavoury Pekoes and Orange Pekoes, particularly when suitable for export purposes, were occasionally dearer. Not much change occurred in Broken Pekoes with inferior cup, but those with either full liquor or briskness were in demand and quotations in some cases rose $\frac{1}{2}$d per lb. Finest lines fetched about former rates.

The average is almost $6\frac{3}{4}$d per lb. On the 15th instant it was $6\frac{5}{8}$d per lb. and $6\frac{7}{8}$ per lb. twelve months ago.

The statistics record a further increase in the movement of these Teas from here to the Continent of Europe, America, etc., from January to the end of July, and this growing trade should help to strengthen our market.

JAVA.—Nearly 3,800 packages of direct import passed the hammer, not much change being apparent in quotations for desirable lots, but the tone was not so strong for others.

Deliveries.—Clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 20th August, 1901	... ...	9,819,275 lbs.
Do. do. 1900	... ...	9,339,840 ,,

During the week the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	26,317	7,110	33,427
Ceylon	25,116	2,480	27,596
Java	3,125	638	3,763
Total ...	54,558	10,228	64,786

Also 1,744 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated August 23rd, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	156,091	304,766	16,405
1900-1901	127,186	321,129	10,145

35,095 *pkgs.* INDIAN
28,175 ,, CEYLON
3,763 ,, JAVA
} Total 67,033 packages were offered in public auction this week.

An increase of over eleven million lbs. took place in the quantity of Indian and Ceylon Tea sent to foreign and colonial markets during the first six months of the present year, as compared with the same period of 1900.

1901.	1900.	1899.	1898.
42,423,250 lbs.	31,700,517 lbs.	23,913,661 lbs.	24,427,654 lbs.

Low prices are doubtless responsible for the largely increased quantity thus disposed of.

In spite of the relief thus afforded to the market and of the reductions in output—not only from India and Ceylon, but also from China—prices still continue on an unsatisfactory basis, owing doubtless to the large amount of accumulated stock which has to be worked off, much of which is probably duty paid.

INDIAN.—Teas of good quality sold well, but common and medium kinds showed a fall of $\frac{1}{4}$d. to $\frac{1}{2}$d. per lb. Some good invoices were sold from Assam and Darjeeling, but the quality from the Dooars was poor. The official wire gives exports to U.K. for the first half of August as 10,805,680 lbs, including 965,680 lbs. from Chittagong against 11,480,000 lbs. last year, making the total from 1st April to 15th instant 35,903,680 lbs. against 42,141,000 lbs. in 1900.

The following averages are worthy of note:—"Jungpunnah" 1/$7\frac{1}{4}$; "Poobong," 1/$6\frac{1}{4}$; "Beheating," 1/$5\frac{1}{4}$; "Margarets Hope" 1/$4\frac{3}{4}$; "Ass. Co. Deopani" and "Tara T Co.," 1/$3\frac{3}{4}$.

Week's average of New Season's Tea sold on Garden Account, 1901 29,952 pkgs., av. 8·81d. 1900, 29,614 pkgs., av 7·46d.

New Season's Tea sold on Garden Account, 1st June to date, 1901 82,939 pkgs., av. 8·41d. 1900, 90,091 pkgs., av. 8·14d.

CEYLON.— In Tuesday's Public Auction prices were on the whole fairly steady, although some irregularity was occasionally noticeable, and a few Teas were in consequence withdrawn. A corrected official telegram gives exports from Colombo to United Kingdom during July as 8,500,000 lbs. against 11,750,000 lbs. in 1900, making the total exports from January to that date 67,750,000 lbs., against 74,000,000 lbs. during the same period 1900. Thursday's unrecorded auction of 4,099 packages passed at about Tuesday's rates.

A private wire states that only 3 million lbs. were exported to the United Kingdom during the first fortnight in August, against 4 million during same period in 1900.

Average for week 6·70d., against 6·90d. same week, 1900.

Ceylon Tea sold on Garden Account, 1st Jan. to date, 783,470 pkgs. av. 6·57d. 1900, 828,470 pkgs., av. 7·22d.

JAVA.—The large selection comprised a varied assortment amongst which were some Teas of good quality. 432 packages from "Goalpara" averaged 10d. per lb. The Teas were mostly sold in the room at steady prices.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/$4\frac{3}{32}$. Colombo 1/$4\frac{1}{8}$.

COCOA.

Public sales on Tuesday offered 5,349 bags, but there was very little animation in the bidding, and only 1,200 bags, all Trinidad, were quitted, prices generally showing no change from the previous week's level. Trinidad growth comprised 3,219 bags of the total and 1,200 bags found buyers at 70s to 73s 6d for fine to very fine, 67s to 69s for middilng to good, and 66s for small. Of 38 bags Grenada a few lots of good sold at 63s per cwt. The remainder of the offerings all passed the hammer unsold—*viz.*, 45 bags Demerara etc., 154 bags Surinam, 37 bags Venezuelan, 47 bags Colombian, 81 bags Caracas, 1,115 bags Guayaquil, 235 bags Haiti, and 37 bags Ceylon. The limited business transacted privately has generally been at lower prices, the sales including 500 bags Trinidad at 68s to 72s. 150 bags fair Grenada at 64s to 64s 6d, 6 bags Haiti at 53s to 55s, 400 bags grey Caraquez Guayaquil at 61 to 62s, and a few lots of Ceylon at 63s for fair estate, and 52s per cwt for ordinary collected.

PEPPER.

BLACK.—The market is quiet and only small sales are reported at former prices. Singapore, of fair quality, has been sold at 6d spot, also some parcels near at hand at same price. For arrival there are sellers of distant shipment (s) at $6\frac{1}{16}$d.

There were no offerings at Wednesday's auctions.

WHITE is also slow of sale. For arrival the only business reported is a sale to the Continent, *viz.*, 25 tons Singapore August-September, and September-October shipment at $8\frac{11}{16}$d c.i.f. Sales of Singapore have been made on the spot at 9d, and of Penang at $8\frac{5}{8}$d.

Only 100 bags fair limed Penang were brought to the hammer on the 21st instant, and they retired at $8\frac{3}{4}$d per lb.

GINGER.

Cohin in very poor request. 51 cases 114 bags were offered, of which 34 bags slightly mouldy brown rough Calicut sold at 36s 6d, 38s being required for the sound, 65s for medium cut, and 50s per cwt for small cut. Privately business in medium and small washed rough at 37s 6d to 38s 6d per cwt. as in quality.

Jamaica.—With some difficulty holders were able to quit 28 barrels of the 463 barrels catalogued; prices were without material alteration for the commoner lots, but 1s per cwt. dearer for the better qualities, and embraced 42s 6d to 46s for middling to middling bold, 40s to 42s for low middling, and 37s to 39s per cwt. for dark part lean.

Mace was not represented at the auctions. Privately good pickings of Penang have been sold at 1s 4d per lb., being firm.

CINCHONA.

Although small supplies were catalogued for auction on Tuesday, only a languid interest was shown in them, owing to the heavy auctions at Amsterdam next week. Importers, however, were anxious to meet the market, and the average unit declined to 1½d, against 1¾d paid at the last London auctions.

The following table shows the quantity of bark offered and sold:—

	Packages offered.	Packages sold.
South American cinchona	940	910
East Indian cinchona	336	288
Java cinchona	236	44
Ceylon cinchona	228	155
	1,740	1,397

The following were the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
Agents for the American factories ...	59,332
Agents for the Brunswick factory	28,933
Messrs. Howards & Sons	26,770
Agents for the Imperial factory...	26,179
Agents for the Mannheim and Amsterdam factories ...	9,270
Agents for the Paris factory	9,046
Agents for the Frankfort and Stuttgart factories ...	8,660
Druggists, etc.	29,603
Total quantity sold ...	197,793
Bought in or withdrawn	74,584
Total quantity offered ...	272,377

The prices paid were as follows:—

SOUTH AMERICAN.—About 900 bales Bolivian cultivated Calisaya quill offered and sold at from 6½d to 10⅞d, and broken quill at from 7⅛d to 8½d; 7 bales of flat cultivated Calisaya sold at 1s 3½d for sound.

JAVA.—Ledgeriana chips, 6d per lb.

CEYLON.—Ledgeriana original stem-chips, 5⅝d; branch, 2⅛d; hybrid original stem-chips and shavings, 3¾d to 4⅛d. Red, original stem, 3⅝d per lb.

EAST INDIAN.—Ledgeriana stem-chips, 2d to 5⅓d; branch, 4¾d; and root, 3d to 7d. Succirubra, original stems, 1¾d to 3⅝d; branch, 2d; and root, 2¼d to 3⅓d. Officinalis, stem-chips and shavings, 2½d to 5⅝d; branch, 3¼d to 5⅝d; renewed chips, 3¼d to 9⅛d; and root, 8½d per lb.

To the Amsterdam auctions to be held on August 29, 1,629 bales and 46 cases Java bark, totalling 139,864 kilos., have been added, so that the total amount to be offered is now 7,740 bales 293 cases, weighing 707,644 kilos. The manufacturing bark contains an average of 5·68 per cent. quinine sulphate, against 5·91 per cent. for the July auction, and an average of 5·26 per cent. for the ten auctions held in 1900. The bark contains 37,192 kilos. (1,300,000 oz.) of quinine sulphate. The stock in first hands at Amsterdam on August 14 consisted of 2,173 packages Government and 10,170 packages private bark, including the quantity to be offered at auction.

QUININE.

On Saturday last the "official" price of German sulphate was reduced a further ½d, now 1s 4d per oz. in bulk. Howards' price was also reduced 1d, and they now quote 1s 5d for bulk, and 1s 7d for not less than 1,000 oz. in vials. Quinine salts have also been reduced. The relapse which we noted last week in second hands has continued and with a very dull market, the spot price has dropped by fractions to 1s 1½d, with a small business thereat. October delivery has sold at from 1s 1⅞d down to 1s 1½d, and December at 1s 2d, but there were sellers to-day at 1s 1¾d in this position. The market closes quiet.

(AVERAGE FOR ALL INDIA 8·81d., AUGUST 23RD.)

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 27th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, 17*th September*.—*Weather*—There has been some rain during the past week—1·40 inch on Monday. Coffee looking very fine. *Labour*—Abundant. *General Health*—Good.

THE MARKETING OF COFFEE.

Coffee is a crop that has to undergo a process of preparation after being grown before it can be placed on the market. It is not enough to grow the berry. To know how to grow this, is one thing; to know what to do with it after the crops are grown, is another. We take it that every coffee-planter in South India is capable of seeing that his crop is properly prepared for the curer; but it may be well to remark that mistakes on the Estate cannot always be rectified at the curing mill; and that every bad sample of coffee sent out as "Mysore," "Coorg," "Nilgiri," etc., damages the reputation of a whole district, perhaps even of "East India" coffee generally. Indian coffee should command a much high average than Brazilian, because of its general superiority. There is little room for doubt however, that the margin between prices of East India descriptions and Brazilian is growing narrower. Either Brazilian is winning a better reputation or Indian is losing prestige. Every planter who, by carelessness, or neglect, or ignorance, helps to bring such a loss of prestige about is doing irreparable harm to his neighbours. We do not for a moment suppose that things happen here such as

are said on excellent authority to have occurred in Jamaica, but the fact that such ridiculous things should happen in that island ought to make planters here extra careful to see what it is that is really sent to market. The small settler system in Jamaica appears to lead to strange results when the coffee is packed. Mr. DE MERCADO recently stated there, in public, that he had in his office a museum of foreign substances found in bags of coffee sent to his firm. Among them were such things as pumpkins, a pair of baby's shoes, a chisel, a hammer-head, empty tins, several boots, and, in fact, pretty nearly every known article in the world. This was the result of gross carelessness. The people who packed the bags at the country shops were not dishonest; they simply let them lie about open, and when they emptied, say, a tin of condensed milk, it was the most natural thing in the world to throw it into the coffee bag, and perhaps the opener as well. Things are so bad in Jamaica that Mr. DE MERCADO states that experience has taught him that he dare not send away coffee without repacking it, or the people with whom he did business abroad would think he was not an honest man, and would write to tell him that when they wanted to buy hammers and chisels they would prefer to go to the hardware store.

We have no fear of this sort of thing here, but have referred to the above in order to give force to an exhortation to coffee-planters in India to see that their crop is dealt with in a cleanly manner, from beginning to end. Absolute cleanliness is the first essential in handling a crop. Barbecues, store-house, packages—all must be kept scrupulously clean. The result will be that the expense of placing the coffee on the market will be reduced. Railage will not have to be paid on dirt. The curers will not have to handle a large percentage of "foreign matter" with the coffee. Moreover, if the curers constantly receive coffee in a very clean condition their own inclination towards doing clean work and sending forward bags of clean coffee will be encouraged; and even the most enterprising firm is none the worse for receiving a little encouragement occasionally. What we have been urging is that planter and curer should both so work as to make the very best of the quality of coffee raised, so that the coffee may be put on the market in the best possible condition and the most attractive form, with a minimum percentage of extraneous substances included in each bag.

Another important point in the marketing of coffee is the cost of transport. Some little progress may be said to have been made, quite recently, towards a reduction of railage charges on coffee in Southern India; but a good deal remains to be done. In regard to steamer freights there is much greater room for improvement. Brazil gets a great advantage because of the immensity of her production and the fact that almost the whole crop is shipped at two ports. This concentration of cargo at two ports cheapens freights and expedites loading. In Southern India we cannot very well make up whole cargoes of coffee, and, as a result, a much higher rate of freight has to be paid. The matter is not one that can be put off, however. To a great extent the future of Indian coffee turns upon the solution of the problem of lowering the cost. Brazil has succeeded in lowering the cost, Mexico is producing at a very low cost. Everywhere there has been a downward tendency, and India must adapt herself to the situation. Rail and steamer freights should receive the closest possible attention, and every effort should be made to bring down to the very lowest point the cost of producing coffee and placing it on the market.

THE COMMISSIONER OF ASSAM AND THE PLANTERS.

In our U. P. A. S. I. section we publish a letter from t Hon'ble Mr. G. L. Acworth to the Secretary, U. P. A. S. (Incorporated). It seems to us that what Mr. Acworth writ is sound common sense. The facts to which he alludes ar no doubt, well known to his hearers. Mr. Cotton, Chief Co missioner of Assam, recently wrote about Assam planters if they were, as a class, brutal, barbarous slave-drivers "sweaters." He made the astounding statement that the prese average rate of wages paid to unskilled labour in Assam more than double that of the wage prescribed by law for A Coolies. He gave figures to support this statement, and wa no doubt, led by them into the diatribe in which he indulge The Hon'ble Mr. Buckingham challenges every figure, app rently with excellent reason. He shows that Mr. Cotton figures are entirely wrong, and incidentally remarks :—

"For any comparison to be drawn from the pay of rural labou conditions must be equal; permanent work, and family earnin are the back-bone of garden labour. If 0-6-0 a day or Rs.1 month is so easily procurable by unskilled free labour, why do n coolies leave gardens for this enhanced rate? No direct answ has been given to this pertinent query, although the point w raised by me in Council; still a most damaging admission appea in the Assam Police Administration Report for 1900, submitted the Inspector-General of Police, completely upsetting Mr. Cotto statements."

Mr. Buckingham adds :—

"Until therefore the Hon'ble Mr. Cotton informs the public as where he got his figures, as quoted at the commencement of th letter, and is prepared to vouch them otherwise than by me assertion, we must come to the conclusion that he has been misle and as his statement was made with the greatest publicity t least we can claim is, that they should be as publicly withdraw or substantiated up to the hilt."

In the meantime planters in Southern India might we adopt the Hon'ble Mr. Acworth's suggestion and show the sympathy with their brethren in the North.

SOME BRAZILIAN STATISTICS.

From various tabular statements that appeared in th *Brazilian Review* we obtain certain information, whic is retabulated, below for convenience of reference. In th first place we find a note of comparative entries in bags 60 kilos. (official figures) at Rio and Santos :—

—	1897-98.	1898-99.	1899-00.	1900-01
July	966,467	698,540	1,075,766	788,9
August	1,667,396	1,227,530	1,575,678	1,319,5
September	1,402,003	1,263,255	1,460,986	1,536,3
October	1,277,623	1,045,757	1,086,472	1,668,2
November	1,001,813	627,713	903,663	1,030,2
December	821,504	691,018	613,570	750,5
January	693,455	743,012	525,276	680,0
February	595,407	565,141	510,444	750,6
March	725,134	610,053	417,055	892,7
April	499,661	369,554	239,640	559,3
May	449,847	366,975	176,303	468,7
June	356,668	537,349	332,023	543,5
Total Entries for the Crop-year.	10,457,368	8,745,897	8,987,416	10,989,1
Transit	...	...	...	...
Total including transit ...	10,690,309	8,893,976	9,107,088	10,988,1

Towards the above totals the contributions of Rio and Santos separately in each year were :—

	1897-98.	1898-99.	1899-00.	1900-01.
Rio	4,537,716	3,320,161	395,337	3,015,968
Santos	6,152,593	5,572,816	5,711,751	7,473,118

We have given the above at length in order that every planter interested in the development of consumption of *Indian* coffee may see where the chief attack should be directed. A glance over the above figures will show, not merely to what markets Brazil coffee goes, but also those in which it is gaining and there in which it is losing ground. These are points that should be studied.

THE CEYLON TEA CAMPAIGN.

Recent remarks on the conduct of the Ceylon Tea Campaign in America appear to have exercised considerable influence upon the minds of the members of the "Thirty Committee." At a meeting held at Kandy last Saturday, when twenty-six members were present, it was resolved in the first case that in the opinion of the Committee the tea cess should be increased; on the other hand, only £4,000 was voted to Mr. Wm. Mackenzie for the purpose of pushing and advertising Ceylon Tea in America during the year 1901. This is a very big drop from the £10,000 previously voted. As regards the Cess, the Planters' Association will be requested to ascertain the opinion of tea producers as to increasing the cess, in view to giving further assistance to the Green Tea industry. It was further resolved that on the grant for green teas at 5 cents per lb. ceasing under the present scheme, the grant be fixed at 5 cents per lb. on a further 2,000,000 lbs. ; (II) that an estimated probable balance of £6,000 sterling, remain in abeyance with a view to further assistance to the Green Tea industry at a later date. In reference to the Brokers' Certificate for green teas, it was resolved that, in view of the increasing trade in Ceylon green teas, the four Brokers' firms —Messrs. Forbes & Walker, Somerville & Co., E. Benham & Co., and E. John & Co.—be requested to arrange among themselves for a Committee to pass green teas for the standard.

For the work of pushing and advertising Ceylon Tea on the Continent of Europe £2,500 was voted, which will include Mr. Renton's salary.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Trade with Persia.

Mr. E. G. Foley, who is travelling in Persia on behalf of the Indian Tea Association, has written as follows, under date Meshed, Persia, 2nd August 1901 :—

I met the leading merchants here last evening at tea about, 150 of them, at the house of Shaik Faiz Mahomed, the third biggest merchant here, and a British subject. Besides myself, our Consul-General and his Private Secretary, the Manager of the Imperial Bank of Persia and his assistant were also present. The samples of tea and indigo were shown round and examined, and the tea used was from the Orange Pekoe I have brought up. The Orange Pekoe and

the two kinds of green tea were very much approved. On their enquiring prices I quoted Quetta prices, *viz.*, 9 annas, 8 annas, and 7 annas for Orange Pekoe, Pekoe and Pekoe Souchong, and for the green tea the price marked 10 annas. Then I was asked if I would bring the tea up to them and what credit would be allowed. To this my reply was that we would undertake to deliver the tea at Seistan on their paying cost of carriage and duty. As regards credit we were not prepared to do that, as our prices were for cash and wholesale, but no doubt there would be no difficulty about payment, as the Bank here would advance them the money on the lien of their goods. As the Bank Manager was present, he was asked if the Bank would do this. His reply was that it could be arranged with approved customers, and that he would write to head-quarters for instructions. If sanctioned, which no doubt it will be, there will be no necessity for any credit, which runs here from three months to three years, prices varying according to length of credit. As regards wholesale prices, tea similar to the Orange Pekoe, but not quite so good, sells at 18 *Krans* per *man* of 6½ lbs. (3½ *Krans* equal Re.1), which is retailed at from 22 to 24 *Krans*. Pekoe at 15 to 16 *Krans* per *man* wholesale, over retailed at 18 *Krans*. What these people require is a cheap but pretty tea to look at, their liquors being of no consequence ; as, for example, the white tipped Java teas which sell here at 24 to 25 *Krans* wholesale and 30 *Krans* retail. The general opinion here is that our Orange Pekoe is a better tea than the white tipped expensive Java tea at its value, and that it would oust the Javas from the market ; besides, our teas, Orange Pekoe and Pekoe, would also do for the Russian market, where the white tipped Java teas are not used or liked. Samples are being distributed to these merchants, and I hope to see them individually soon and hear what they have to say. Some of these people have Agents in Bombay, where they buy Dehra Dun teas cheap at about 5 annas per lb. and think our teas expensive.

With regard to the Russian market, I will obtain information to-morrow from the Jews and Armenians who deal with Russia, European and Asiatic, more than either Persians or Afghans and Pathans. The duty on tea in Asiatic Russia has been raised from 25 roubles per pood of 36 lbs. to the same standard as in Russia for black tea, *viz.*, 31½ roubles per pood, and as regards green tea and some tea called spring tea which I have not yet seen, from 14 and 6 roubles per pood to one uniform duty of 12 roubles.

An enormous quantity of tea is used here. There is a large covered-in bazár where nearly every fourth or fifth shop sells tea, either as leaf or made for drinking. Asiatics of all kinds and from different countries are found here, Pathans, Afghans, Turkomans, Armenians, Jews, and Hindus—goods of all descriptions and from different countries are sold here. From what I have seen of the people and learnt from our Consul-General and Indian Traders, it appears to me that goods will have to be brought to the Persians. They are not adventurous, and any trade with Russia would have to be carried up through native agents, as though there would be no direct opposition, yet owing to Russian jealousy and wish to see as much trade as possible diverted into their own country and to be brought by their railway, there would always be a passive opposition in the way of delaying goods or in suddenly, without warning, raising the duty. Those Persians and others who trade with Russia when necessary become Russian subjects and so escape the extra duties. Regarding the Russian trade, I have still a great deal to find out, which I will learn from the Jews and Armenians. The Russian officials are very reticent as regards any information to British subjects and traders. The Russians would like to see the new Nushki route closed and will try to put every obstacle in the way of increasing the trade by that route with Persia, and more so with Russia.

The great Pathan merchant, Shaik Faiz Mahomed of Dehra Ismail Khan, is very much taken with the samples of *compressed tea that I showed to him, and is sanguine that it will sell well in Afghanistan, with which place he trades largely (Heerat and Kandahar), and in his own Pathan country. He would like 40 lbs. sent to him for trial. He valued it at 15 *Krans* per 6½ lbs. or 10 annas per lb. Should any of this have been sent from home, please send two ½ chests or boxes (four if possible) of 40 lbs. each for Faiz Mahomed and Captain Webb Ware to distribute in the Pathan and Baluchi country—to Quetta to await my arrival.

Regarding the peculiarity of prices for tea being nearly the same at Birjand as at Meshed, though the unit of weight or *man* here is double that of Birjand, the only explanation I can get is that the quantity sold at Birjand is not nearly so large as that here, and that it is done with a view to profit. Market prices here are ruled by the quantity of the article available in the market. Our Consul-General tells me that if there is a delay in caravans arriving, prices may go up 50 % with a jump. No cornering is allowed by the Persian Government, *i.e.*, were a caravan to be delayed and any merchants were to combine and buy up all of any article and try to sell it at a prohibitive price, the Government would step in and make them reduce the price.

* * * *

The *Fort St. George Gazette* contains a draft of the rules it is proposed to make under Section 16 of the Madras Coffee-stealing Prevention Act, and notice is given that any objections should be submitted to Government before the 7th September, 1901. This is obviously a blunder, as the notification was not then published.

* * * *

The rules are much what the U. P. A. S. I. asked for, the sole difference apparently being the addition in the tabular forms of returns of a few columns : In the Estimate (1) "Name of the Police Station within the limits of which the plantation is situate" and (2) "Actual quantity harvested in previous year." In the return of Production (1) Name of Police Station as above, quantity harvested as above, and a Remarks column.

* * * *

Government has been asked to supply a few copies of the G. O. on the above subject for circulation to the Council of the U. P. A. S. I. Some interesting correspondence is attached but the paper has not been "laid on the Editors' table," so cannot be reprinted here.

* * * *

Assam Planters and the Chief Commissioner.

The Hon'ble Mr. G. L. Acworth writes :—I do not know if District Associations have followed the accounts in the Press of the systematic oppression the Assam Tea Planters are undergoing at the hands of the Hon'ble the Chief Commissioner of Assam. In any event it seems to me that it would only be right and proper, that each District Association

* These samples were tablets of tea compressed by machinery.

should at its next General Meeting pass a vote of sympathy with the Assam Planters to be forwarded to that body through the Indian Tea Association. I am strongly of opinion, that this is an occasion when all planters should stand by each other, whether they come from the North or the South, whether their product is tea or coffee.

This is not a question of legislation, in which our interference would be uncalled for and impertinent, knowing as we do nothing of the local conditions. It is an opportunity of protesting against the stirring up of labour against capital, against exciting racial feeling, and against an exasperating policy of pin-pricks on a body of men, who already have enormous difficulties to contend with, and who have exhibited much pluck and a determination of overcoming them, which in any other man but the Chief Commissioner would have extorted admiration in lieu of hostility.

Messrs. Binny and Co. have kindly sent a copy of the following report by Mr. A. M. Elder on

The Leeming System

of Coffee Cultivation, copies of which have been circulated to the Councillors of the Association :—

(*Report.*)

MESSRS. BINNY & CO.,
Madras.

THE LEEMING SYSTEM.

MADRAS, 22*nd August*, 1901.

DEAR SIRS,—As requested by you in your letter of the 9th instant I went to the Shevaroy Hills and visited Scotforth, Mr. Leeming's Estate, on the 12th and Kooderay Panjan Estate of which he is manager on the following day, and beg to report as follows:

The system of cultivation carried out on these properties has, for the sake of convenience, been called the Leeming System, but Mr. Leeming does not claim to have discovered anything new, he says he has merely thought out and applied to coffee growing the principles carried out by practical and scientific growers of fruit trees in various parts of the world, and his system, as it stands at present, is the result of careful observation and experiment carried on over several years. I was taken over every field in these two estates so that I might see for myself the effect of the system on both good and poor soils, Mr. Leeming answering all my questions without any reserve whatever.

The system may be said to have been instituted seven years ago when he ceased to either prune or handle and allowed suckers to grow, the trees being left to nature, but he continued to cultivate and manure the soil more carefully than ever. The result was that his crops increased and his trees suffered less from leaf disease, but it was apparent that they were so crowded that they could not give nearly as good crops as they might. In 1898—only three years ago—he began cutting out in field No. 10 of Scotforth reducing the number of trees from 27,000 to 13,500, just half, and giving them a space of 12 x 12 feet in which to spread, *i.e.*, about 600 trees per acre. In 1899-1900 he picked 1,500 struck bushels of ripe cherry from this field, equal to nearly 7 cwts. per acre. Last season he picked 1,700 bushels, nearly a ton more than in the previous year, and in April he again thinned out the field to 10,200 trees and the estimate for the coming crop is nearly 10 cwts. per acre. These figures I took from the estate books myself and are unquestionable, and a better record than this can hardly be imagined. The other fields were similarly treated in 1899 and 1900 and now his object is to finally get about 300 trees per acre and no more. In field No. 3 of Scotforth this has been done.

No sooner had the trees got root and air space then they at once began to fill out laterally and the long branches came sweeping down to the ground, thereby increasing the bearing area enormously and suckers grew very slowly. What suckers there are were grown before the thinning out process began. These trees are now 10 to 12 feet high and the branches have a spread of over 15 feet and I agree with Mr. Leeming in thinking it will take another five years to see them at their full development. I merely give the figures of field No. 10 because it was the first to be cut out, but those relating to the other portions are equally good. When thinning out from 600 to 300 trees per acre, he first cuts off the primaries leaving the suckers for a couple of years, thus giving air and some root space to the trees that remain, but he is not certain that it would not pay better to take them out at once.

When going over Kooderay Panjan be took the same trouble in order that I might see part of each field. I remember seeing this estate some eight are nine years ago, when although it grew very fine oranges and silver oaks the coffee was very poor indeed, now, under this system, there is a complete transformation, oranges, etc., have disappeared and avenues of great coffee shrubs healthy and vigorous, with dark glossy leaves and laden with crop have taken there place. When Mr. Leeming took charge of it eight years ago its crop was 1½ ton off 65 acres, last year off the same area with some little assistance from the young coffee he picked 25 tons. For seven years he never pruned and in 1898 he cut out to 600 trees per acre, and there is a good deal of it now thinned to 300 trees per acre. The coming crop is estimated at 11 tons and, judging from the wood now making, it should easily be followed by 30 tons. The way trees that were a mass of sticks from over bearing both here and at Scotforth are making new wood is simply marvellous.

The new clearings on both estates are planted 7 x 7 and 8 x 8 feet apart and beyond topping the trees that are intended to be permanent, they have never been touched with a knife. Those trees that are to be cut out eventually will have their primaries cut off and a crop or two taken from the suckers. I have never seen finer clearings, soil, climate, and deep cultivation being all in their favour.

Regarding cultivation Mr. Leeming believes in deep drains (3 to 4 feet deep) and 40 feet apart to enable those large trees to send their feeding roots deep into the soil; a six-inch digging with quintanies once a year; and ¾ lb. bone meal, poonac and nitrate of potash scattered evenly over the surface and dibbled in. The supervision of applying the manure has been very greatly simplified under the new system and each individual tree can be studied and manured according to its needs.

He is also growing a legume (a creeping pea) in the middle of the rows, one to each tree, which, when growing, will cover the ground and act as a mulch in preventing wash and loss of moisture and induce the earth worms to come up and make casts. I was shown examples of these casts as we went along. Just before flowering the legumes will be dug into the soil and will enrich it with a cheap store of nitrogen. He very kindly gave me a supply of the beans to try in our district.

The advantages of the Leeming system as compared with our present method are:—Economy in that no pruning or handling are required and only half the quantity of manure is necessary. (Mr. Leeming believes in manuring at *least* once a year.) *Improved quality of bean* as leaf disease is not nearly so virulent now that none of the leaves, which are the lungs of the tree, are sacrificed in pruning and the crops are not only more regular but are much better. These large trees are not nearly so easily affected by a bad blossoming season although they will always do best in a good one. Mr. Leeming's figures speak for themselves, the results are, as Mr. Hodgson remarked at the Conference of the U. P. A. S. I., "simply astounding." Whether we in Mysore are ever likely to achieve such results is doubtful, as the Shevaroys are, generally speaking, much more favourably situated as regards soil, climate and rainfall, but even if we only receive a third of Mr. Leeming's success we will improve our position enormously.

The system has been objected to on the score of "borer" but I find Mr. Leeming has had worse "borer" than we ever get and yet he has no fears on that score. He says it is only destructive on the clearings and that old trees are rarely attacked as the branches are close and come down to the ground thus protecting the stem; and this is borne out by the fact that those trees that have suffered have been bored near the top when the damage amounts to very little. It has been alleged that if trees are neither pruned nor handled they will lose their primaries, but this is not the case if they get room to spread. In fact the tree seems to change character and to adapt itself very readily to its new conditions. Mr. Leeming is in favour of the system on poor soils even although the trees do not crowd each other, for although there may be plenty of air space the roots want much more room in which to search for

nourishment than in rich soils. I do not anticipate that the results from cutting out will show themselves nearly so quickly on our estates where the trees have been pruned and handled, as on Mr. Leeming's that had been untouched for several years, and this is a fact that must be borne in mind.

Deep cultivation, fairly liberal manuring with earth mulching (if nothing else is available) in the shape of light diggings are absolutely indispensable to the success of the system and, if possible, small doses of nitrate of potash in March or April; and the growing of leguminous plants as green manure should also be tried.

Mr. Leeming took Dr. Watts, the Reporter on Economic Products for the Government of India, over Scotforth when he visited the Shevaroys and had the satisfaction of being told by that great authority on agriculture that *scientifically* his system of cultivation is the correct one. That it is a success from a commercial point of view the figures given above amply prove.

He has done the pioneering ably and well and it is a satisfaction to his friends that, unlike some pioneers, he is reaping his reward.

From the Shevaroys I went with Mr. Leeming to Coimbatore to see the works of the United Coffee Growers' Company, of which he is manager. There he showed me the whole process of roasting, grinding, and tinning coffee and during the whole process the product is not once touched by hand. The machinery is of the most up-to-date kind obtainable, the roaster being a German invention which roasts beans of all shapes and sizes evenly and thoroughly and, it being possible to do this, now accounts in a great measure for the falling off in the price of "peaberry."

The tin for the cans is imported in sheets and by means of three separate machines is manufactured into cans of various sizes in a very short time.

Considering that with the exception of Mr. Leeming and his assistant the whole process of manufacture is carried out by local native labour that had to be trained after the works were built and the machinery set up, *i.e.*, within the last few months, the smoothness and celerity with which the manufacture is carried out speaks volumes for the management and augurs well for the future of the Company.

What was perhaps of most interest to me from a planter's point of view was Mr. Leeming's method of testing the samples of the various coffees and learning their values from a Roaster's point of view before buying on the open market. He spent the greater part of one morning showing me how he performed these tests. Four cyclinders heated by gas and driven by a little hot air engine can each roast ¼ lb. of raw coffee. Having selected samples of cherry and parchment coffee and laid them out on his table he carefully roasted a small quantity of each and we then compared the roasted beans and I was shown how the finer samples differed from the others, the low grade cherry containing a considerable proportion of pale looking beans:—"pales"—that are useless and almost tasteless, while those of a parchment sample were "shelly" and containing more woody fibre had less "body" than the finer grades. He then weighed out equal quantities of the roasted beans and having ground them in a hand-mill, put them into cups each of which were exactly of the same capacity. He then filled them with boiling water, stirred the contents and allowed them to stand for a few minutes, then skimming off the froth the liquid was found perfectly clear. The tasting process consists of using a clean spoon each time and taking a sip of the liquid drawing it well over the palate and spitting it out, each sample being tried over and over again. Even to an outsider like myself the variations between some of the samples was very marked, the most distinctive one being in the flavour of a high-grown Nilgiri coffee, which Mr. Leeming informed me was very valuable for blending purposes. He says good Mysores contain these properties which accounts for the high price they receive on the home markets. When the low grade sample was tried the liquor was distinctly inferior and lacking in "body" and one could easily understand how unprofitable such coffees must be where the proportion of "pales" is large. However, with an added quantity of Liberian to give it "body" he hopes later on to produce a cheap coffee that will suit the pockets of the poorer classes and thus secure the great market that lies at our doors, and I hope the District Associations will see their way to assist the United Coffee Growers' Company, to develop this market and enable us to dispose of our low grade coffees in this country.

One experiment that Mr. Leeming has carried out here has solved what has been a vexed question to many planters, *viz.*, whether or not it is necessary to pick absolutely ripe cherry. He finds th the bean is fully developed when the cherry turns colour and th it should be picked as soon as it can be pulped as the "foxines so often complained of is frequently the colouring matter of t cherry going through the parchment skin.

The other advantages of being able to pick three parts ripe cher are obvious to all planters.

He also advises us not to pick any white fruit "billi hunnoo as it is from this that so many "pales" come and what so destro the value in the dealer's eyes of otherwise good parchment coffe Another piece of information he gave me and which he illustrate from samples, was that garbling ought to be more carefully don now than ever before and that all beans however slightly discoloure or irregular in shape ought to be put into "triage." He learne this from the dealers when going round the London market wit them. This past season he got his curers to treat his Scotfort coffee in this way and although it suffered equally with othe Shevaroy estates from drought the fact remains that it toppd th prices by several shillings per cwt. He says that it is possible tha his system may have had not a little to do with this improvemer the trees being stronger and better able to resist leaf disease, bu the more careful curing no doubt assisted.

In conclusion, I wish to express my obligations to Mr. Leemin for the trouble he took in showing me his estates and over the work for the admirable way in which he explained his reasons for every thing he did, and for the great kindness and hospitality he showe me.

The trip has been most pleasant and instructive.

I am, dear Sirs,

Yours faithfully,

(Signed) A. M. ELDE

NOTES.

"Ceylon Tea" in New South Wales.

A Ceylon planter, now visitin Australia, writes to the *Times* *Ceylon* from Sydney on the 24t August as follows:—"I have a sample of tea (Ceylon!) sol here for 4d. a lb. the other day. You never saw such dis graceful stuff in your life! The duty in New South Wale is 1d. per lb."

Cinchona in the U. S.

The imports into the Unite States for the twelve months ende June 29, 1901, amounted to 4,860,304 lbs., against 4,107,35 lbs. in 190 0. In auction 72 serons Huanoco quill sold a from 5¾d. to 6¼d. for fair to good and 3½d. for damaged from another catalogue 42 serons were bought in at 7d. pe lb., the limit being 6d.; for this parcel a bid of 5½d. wa refused.

Indian Tea Prospects.

The South Sylhet correspondent o the *Englishman* writing on the 10t says:—"Awful weather. Have not seen the sun for day and days. Quality must suffer in consequence; as for quan tity, how can it be good with a temperature below 80 degree and everything reeking with damp? and yet it's not heav rain; drizzle, drizzle, and heavy squalls of wind every no and again."

Indian Tea Exports.

The following figures of tea Ex ports taken from the Calcutta Cu toms daily entries are issued by the Indian Tea Association:— Quantity of Tea entered for export to the United Kingdo for the first half of September, 1901, £9,732,545; quantit entered during the corresponding period of last yea £9,147,367; total from 1st April, 1901, to 15th Septembe 1901, £56,747,882; total from 1st April, 1900, to 15t September, 1900, £64,954,426.

Calcutta Tea Sale. The shortage of the tea crop was again apparent at Friday's sale, when only 15,800 packages were offered, as against 22,600 same date last year. There was a good selection of Assam and Dooars teas, the latter District showing an improvement in quality, in many cases over previous invoices. Quality from other Districts is about the same. There was a good demand throughout the sale, and prices for all descriptions closed firmer. Australia, Bombay, and the Gulf buyers secured a good quantity.

Rubber in Paraguay. Rubber is not found in the wild state to any great extent in Paraguay, but attempts are being made to cultivate it, and it is thought that the most suitable species for artificial cultivation will be the Manicoba, of Brazil, owing to its rapid growth and general hardiness. The Manicoba is said to have given excellent results in Brazil and in Central America, and it is stated that the Paraguayan Government intends to offer special inducements to agriculturists in order to develop this industry.

Brazilian Coffee. The long spell of fine, dry weather which we have lately enjoyed has been highly advantageous to the coffee planter, says the *Rio News,* for it has been just what he needed for drying coffee. The season has been a favourable one, and the crop this year will not only be unprecedentedly large, but will be of exceptional good quality. Perhaps the planter will never have a better opportunity than the present one for making a modification in the method of marketing his coffee. The quality this year will be exceptionally good, and it is just the time for him to send it to market on its merits. Reducing all coffees to a few common grades, and destroying all individuality as to quality, is certainly detrimental to the industry.

London Tea Sales. The weekly special telegram, dated 12th instant, from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally shows a fractional advance, that for medium liquoring Pekoes and Broken Pekoes as well as for Common Pekoes and Broken Pekoes also showing a fractional advance. The price of fair liquoring Ceylon Pekoe Souchong is 5½d (a farthing up) and the average price of Ceylon tea sold on garden account this week was 7¼d (three-eighths of a penny up). The average of the corresponding week last year was 7d. Reuter reports that common and fine qualities of Ceylon tea realised full rates, being par to ¼ per cent. higher. Fair Pekoe Souchongs are quoted at 4¾d (same as last week) but the average for the week is 7¼d (a farthing up), 23,000 packages of Ceylon tea were offered for sale and 22,000 were disposed of; while of the 33,000 packages of Indian tea offered, 31,000 found purchasers, at an average of 8¼d per lb. (¼d down).

Plants and Electricity. M. Berthelot announces he has proved that the development of plants is affected by electricity. He has been carrying out the experiments at his country seat at Meudon, near Paris. A tower nearly 90 feet high is erected in the grounds, which M. Berthelot has been using for experimenting on the influence of natural electricity in transferring to plants free nitrogen from the atmosphere, and also for studying the variations produced on plants by altitude. One of M. Berthelot's experiments was directed to proving that a plant submitted to the influence of electric waves absorbs more nitrogen than another plant placed under the same conditions, but not influenced by electricity. M. Berthelot considers he is justified in supposing that he has fully demonstrated that free nitrogen in the atmosphere plays an important part in the life of plants, on the ground that crops of vegetables are obtained in high altitudes without the use of artificial manure, owing to the greater tension of the electricity.

Coffee in London. The short stock of all kinds, with the exception of Brazil, is beginning to tell upon values, says the *Produce Markets' Review* of 24th ultimo, and the trade generally both here and on the Continent have begun to realise that the heavy supplies, which were passed for auction immediately on arrival during the past two or three months, have either gone into consumption, or are being held firmly by dealers who understand values better than the importing merchants. As a consequence those who have not secured sufficient for their Winter trade are now trying to do so at the prices of last month, and find that there is an advance of from 2s to 5s, while the finest home trade sorts are so scarce that holders can obtain almost any price for such coffees. In the terminal market, in spite of very heavy receipts, the opinion gains ground that prices have dropped too low, and an advance of nearly 1s has taken place, while there is a much more general desire to operate than has been apparent for some months or more.

Indian Tea in London. The *Produce Markets' Review* of 24th ultimo says:—The quantity brought forward was larger than for some weeks past, and, as the market was easier in most cases, an improved business has been transacted. Most of the teas consisted of the finer sorts, mainly Assam growths, which continue to show desirable quality, but owing to the increased quantity values generally were distinctly lower than in the preceding sales. The trade appears to be operating cautiously by practically buying for immediate requirements in anticipation of the large supplies of this class reported to be coming forward. These teas will undoubtedly be in excess of last season, at any rate for a time, but the later shipments are reported to be inferior, and therefore at the recent decline in prices they are not likely to show much, if any, better value than the present supplies. There is still a comparatively limited quantity of the good medium descriptions, and consequently the small supplies offered have fetched extreme prices; this will no doubt be shortly remedied as the imports increase. For the common teas an easier tendency has prevailed and some of the new import sold as low as 4¼d, while a considerable quantity was withdrawn from auction, the market closing weak at the lower range of prices established. The latest reports put the export from Calcutta for this season as being still about 5,000,000 lbs. smaller than last year and no mention is made as to the probability of the deficiency being made up. This, however, has not affected the market as generally anticipated, which is in a great measure attributable to the excess of the stock here being larger than the falling off in the new crop. There were 34,969 packages catalogued for public sale and 8,601 withdrawn; the bidding was fairly active, especially for the more useful grades.

Mate Leaves. Cador, in an interesting paper on this subject (*Jour. de Pharm. et de Chim.*, 1901, ii. 162) points out that various observers have established the fact that not only the leaves of *Ilex paraguaiensis*, but also leaves of other species and even of plants not belonging to this genus, go to make up what is known as maté. Cador has examined twenty-five species histologically in order to determine differences in the structure of the leaves, and also the relative amounts of caffeine in the various portions of the leaf. Nineteen of the species belonged to the genus *Ilex*, two were of *Villarezia*, and four were of *Symplocos*. All these plants grow in South America, in the basin of the Rio de la Plata and its tributaries, in the basin of the Rio Uruguay, and in those of the Rio Paraguay, and the Rio Parana. All the ilex leaves have a bifacial structure. The upper epidermis is usually a single layer, is doubled in *Ilex affinis*, and partially doubled in certain varieties of *I. Theezans*. The cells of the mesophyll enclose corpuscles of a fatty nature and crystals of oxalate of calcium. Numerous peculiarities are noted in certain species, which enable one to differentiate between many of them. Such, for example, are cuticular striations on the lower epidermis, and sphero-crystals of hesperidine found in certain parts of the leaves. In the two species of *Villarezia* which are utilised, the cells of the lower epidermis are characterised by very thick walls, and in *V. Conghonga* very large isolated crystals are observed. Species of *Symplocos* are distinguished by the brownish-green contents of the cells of the upper epidermis, and by the disposition of the cells annexed to the respiratory apparatus. These are so placed as to have their long axis parallel to the ostiole. Of the various reagents suggested for the histologico-chemical examination of maté, Cador prefers concentrated hydrochloric acid and a 3-per-cent. solution of gold chloride By means of these reagents well-defined groups of crystals of the double chloride of gold and caffeine are obtained. The reaction is particularly marked in the case of *Ilex paraguaiensis*.

GENERAL ARTICLES.

JULY COFFEE MOVEMENT IN THE U. S.

The July deliveries were heavy in the United States, but light in Europe. The combined movement was smaller than for the same month in 1900, and was below the monthly average for the year ending June 30, 1901. The market was quite steady, with fluctuations within three-eighths of a cent. The speculation was more active than in May and June, but much lighter than in March and April.

The visible supply shows a heavy increase, and the month's receipts at Rio and Santos surpass any former record by 347,000 bags.

The following statement shows the July movement and general position of the article:

	Bags.	Bags.
Stocks, July 1, 1901—		
United States	1,196,628	
Europe	4,054,359—	5,250,987
Receipts during July—		
United States	475,613	
Europe	666,121—	1,141,734
Total supply, August 1 ...		6,392,721
Less stocks, August 1, 1901—		
United States	1,191,798	
Europe	4,063,991—	5,255,789
Deliveries, July—		
United States	480,083	
Europe	656,489 —	1,136,572
Deliveries, July, 1900 —		
United States	364,883	
Europe	854,175—	1,219,058
Decrease as compared with July, 1900 ...		82,486

The July deliveries in the United States consisted of 391,816 bag of Brazil; 88,267 bags of all other sorts.

The visible supply of the world, August 1, 1901, was 7,534,78 bags, against 6,867,627 bags on July 1 (an increase of 667,162 bags visible supply on August 1, 1901, was 1,717,030 bags smaller.

Receipts at Rio and Santos during July foot up 1,413,000 bag exceeding the previous July receipts by 633,000 bags, and Jul 1899, by 347,000 bags.

These figures indicate the importance of Brazil as a coff producer, and the rapid extention of coffee planting. During t past four years an average of 9 per cent. of the crop came to mark during the first month of the crop year. If such proves the ca this year, it indicates a total crop of 15,700,000 bags, or more tha the consumption ever reached in one year.

If, as in 19 0, the July receipts at Rio and Santos represent per cent. of the total crop, then we are face to face with a tot crop of 11,775,000 bags, which seems the more reasonable propos tion. We have then a Rio and Santos crop, and a visible supp aggregating 19,309,789 bags. Add to this 4,500,000 to 5,000,0 bags of coffee from other countries, and there looms up the coloss supply of about 24,000,000 bags of coffee to meet average annu requirements of less than 15,000,000 bags. It is no wonder th coffee is low in price; the burden of supply too large to permit a successful bull movement, and that there is little encouragme to carry a liberal stock.—*American Grocer.*

TEA STANDARDS IN AMERICA:

TEA DUTIES IN RUSSIA.

Samples of Standards under the American Tea Act were receiv here some time back and as a Colombo exporter writes:—"Th are very strict in America and there is no passing in rubbish the Indeed it is much easier to send such teas to London, than America! It would be an excellent thing if we had a similar A with Standards, and Inspectors, in England. It would lessen t supply of cheap rubbishy teas, and help to keep prices at a f level. The big blenders would not like it!" It now appears Mr. R. V. Webster's authority that the Standard fixed for t entering at San Francisco is much inferior to that fixed for te coming in at New York. How strange that the Customs regu tions should not be uniform in a civilised progressive country li America! A representation should certainly be made to t Colonial Office to take up the matter, and if the Planters' Assoc tion represented the case to H. E. the Governor, we have no dou Mr. Chamberlain would be induced to get Lord Salisbury to a for uniformity in the Standards. Our contemporary is, howev quite wrong in supposing that the inequality in duties on t entering Russia has been rectified. As the result of representatio arising out of Mr. T. N Christie's reference to the matter, t tariff on teas "Overland" was raised, but by no means equalis with that levied at Odessa, etc. Here is our latest information:

APPROXIMATE DUTY IN PENCE PER ENGLISH POUND.

Russia—Brick tea, black and green tea	8d *
Do. Other tea	1s 10d

* The following duties are also leviable:—Tea, imported over t Siberian frontier and the frontier of the Government of the Steppes:—

Black (Baicha) tea, flower tea, green, and yellow tea imported across the frontiers of the Steppes, Irkutsk, and the Amour	1s 4d
Other black, green, or yellow tea	1s 1¾d
Brick tea	2¾d
Tea in tablets, if bearing the marks of Russian Manufacturers on each tablet	10½d

COFFEE CULTURE IN QUEENSLAND.

Under the heading of No. 9 –The Treatment of Young Plants in the Field, Mr. Howard Newport, Instructor in Coffee Culture writes in the *Queensland Agricultural Journal*:—The young plants having been planted out in the field, a few notes about their treatment there, and the enemies or diseases they meet with, will be of use to the grower.

Not much actual work is required in connection with the plants themselves, still they need an occasional looking to. The principal work that lies before the coffee-grower, from the time of planting out, is the weeding of the clearing, and this is not only the heaviest but the most disagreeable work. Weeding itself is a big subject, and will be dealt with separately, but I wish to put in here a word of warning against allowing weeds to grow up among young coffee plants just put out. If the planting has been done carefully, and the clearing been at all clean at that time, the young plant will have "struck," *e.g.*, have sent out rootlets into the new soil round it before the weeds can do much harm to it. But after this it has to acclimatise itself and adapt itself to conditions very different to those of the nursery bed from which it came. At this stage a comparatively small growth of weeds will not only seriously handicap the plant, but possibly choke it, both above and below ground, by covering it and shutting out light and air or matting its roots.

It is hopeless to expect a young clearing to come into bearing in a minimum of time, unless kept scrupulously clean from the commencement.

When very young a plant may be easily bent or broken by sticks, twigs, weeds, or rubbish falling, being blown, or carelessly turned over on to them by weeders. This should be looked to, and every chance given the young plant. Occasionally suckers will appear on the stems, especially after a check at the time of planting, and sometimes double heads, grow, or have not been nipped off when planted. These should be carefully nipped off as soon as notice. In the case of double heads, the weaker or smaller is of course taken off.

If the pits have been narrow ones, as described in article No. 8, *Queensland Agricultural Journal*, May, 1901, p. 372, the ground round the plants should be dug or forked up for a foot or so at least, and stones removed, care being taken not to hurt or turn out the plant itself when the soil is hard and comes away in clods.

At first no mulching is required, but just before the end of the rains, or at any rate before the regular dry and hot weather sets in, weeds, etc., may be heaped round the plant for a foot or so.

This serves to conserve the moisture for the use of the plant during the hot months and prevents the caking of the ground. In mulching the ground should be first loosened, then the weeds, etc., laid lightly round, well covering the top of the pit. Sticks or rubbish likely to encourage grubs should be avoided, and grass, especially couch, is best avoided, for even if not growing readily, itself, it seeds so freely. Seeding weeds of any kind should not be used in a mulch, and the mulching never made deep at any time, but light and flat, and as broad, *e.g.*, covering as much ground round the plant as the grower has material or time to spend on the work.

Should the clearing be troubled with grubs, of which I shall speak later on, mulching with weeds or green stuff had better be avoided in favour of a mulching of loose earth about 2 inches deep applied in the same way. Mulching with weeds should not be done during the heavy rains, and if done with earth will have to be done again later on, as the earth mulch soon cakes and ceases to be of any benefit in rain. See remarks *re* "Mulching," *Queensland Agricultural Journal*, March, 1900, p. 214.

Within two or three weeks of planting out the field should be very carefully gone over, and any plants that are still drooping, or have faded or died, promptly replaced. This is called vacancy or supply planting. However good a planting, there will always be a few that will have to be replaced, and it will be specially good plants and good planting that will have less than 1 per cent. of failures by the third year. In a quite new clearing, the earth in the pits will still be soft enough to allow of its being turned over with the hand, and the plants put in as at first. Such supplies should be specially and carefully shaded, and every effort made to allow the new plants to catch up to the others. In the second year, the pits will have to be forked up, or the earth at least well loosened with the hoe before the plants are put in; and in old coffee, *i.e.*, three years or more—the pits will have to be re-opened entirely.

The supplies in old coffee will also be dealt with separately, but all vacancies should, when re-planted, have greater care, if possible, bestowed on them than at the first planting.

Remember that it is very much easier to get supplies to come on in young coffee than in coffee that has begun to cover the ground.

The first of what may be called the ailments that a young plant will be subject to, though not necessarily suffer from, is "sunburn." This shows as a brown or withered appearance on a soft young leaf, generally the top leaves, of young plants when first put out. It is exactly the effect that frost will produce, but, of course, much milder. It is due to the sudden exposure to the sun, of a plant that has not been properly hardened in the nursery before planting out, or was not shaded when put into the field. When noticed, the plant should be at once shaded as described in last article. If badly burnt, the leaves will fall off, and the plant should then be replaced by a good one, as the eyes from which leaves fall before primaries are formed, very often become blind, and an "umbrella" tree, or one that is all leg and head and no body, results. If not too far gone, light shading will save them. Sunburn may be experienced in a field of young plants that has been covered by weeds on their being suddenly removed; to plants once a year old, sunburn will do no harm, however. A plant that looks yellow, shrunken, drooping, or faded, should at once be examined. It may be found to be suffering from "ring-rot." This is mostly due to excessive dampness, but may be due to exposure to the sun of a little more of the stem than when in the nursery. The cuticles of the bark wither in the unaccustomed heat and light, and the plant becomes hide-bound between wind and water. The effect can be realised if one rolls up one's shirt sleeves a little higher than usual, and works a day or two in the sun. If the ring is complete, the plant is doomed, or at best is not worth waiting for, so replace promptly; if only on one side –and this is ascertained by making a small scratch through the bark with finger-nail or penknife and noting the colour—mulch up with loose earth, and the plant may recover.

If not suffering from "ring-rot," the plant may be "ring-barked" by grubs. This is done by a variety of grubs and is generally a little lower down than ring-rotting. So dig a little deeper and see. If ring-barked, it will be between the first lateral roots and the mature bark above ground, generally about an inch below the surface. If recently cut, try and find the grub; it is seldom far off. If quite, or even three-fourths ringed, pull up and replace; if only a little barked, it may recover if mulched up with earth, and any green or dry mulch there may have been is removed.

Grubs are a great trouble in clearings sometimes. A little ring of slaked lime round the stems of plants an inch or so below the surface has been found useful, also soot or ashes, but all these have to be renewed from time to time, especially after wet weather.

Sometimes young plants are ring-barked by grubs just above ground in which case they must be cut back to the ring and allowed to sucker; in the same way, in older trees, grubs will sometimes ring-bark them two or three feet above ground. When this occurs, the tree must be cut back to wherever the ring-barking is, and raised again to the normal height by means of a sucker. Ring-barking by grubs in old trees is not so troublesome or so frequent, as a rule, as in young plants.

If neither of these are apparent, something wrong with the root may be expected, such as a twisted or bent taproot. To find this dig deeper, on one side only, so that if anything removable or remediable appears the hole can be filled in again and the plant allowed to recover. If it proves to be a twisted taproot put out and replace at once. For effect, etc., *see* article on "Coffee Root Growth" (*Queensland Agricultural Journal*, March, 1900, page 214). A twisted taproot may occur by accident in spite of all care.

A great pest that is occasionally experienced in young clearings is grasshoppers and caterpillars. These eat down the tops and young buds of both stem and branches, occasioning a lot of work and handling. These pests are not very common, though exceedingly troublesome when they do occur. They are generally very local; one estate may be troubled with them, while its near neighbour is quite free. Caterpillars and grasshoppers may be bad one season and never appear again, or one field in an estate may be attacked perhaps for two or more seasons in succession and no others touched. The caterpillars would seem to be mostly the larvæ of moths of various kinds, and the grasshoppers of several varieties.

To remedy such plagues it is necessary to understand the life history of the special insect; occasionally, however, the application

of ashes will have good effect, and with caterpillars sometimes a ring of lime on the ground round the tree will keep many off. About the surest remedy for grasshoppers in young coffee is a flock of domestic fowls; but it would always be advisable in the event of any such trouble, as in diseases of any kind that are noticed, to send specimens at once to the Government Entomologist, either direct through the Department of Agriculture or the Instructor in coffee culture The Entomologist would probably be able to suggest remedial measures from his knowledge of the life history of the special insect or disease. An estate kept clean from the commencement is not so likely to suffer as much in this way as a weedy and ill-kept one.

A young plant of any age up to three or four years may suffer by being "wind-rung." The effect is much the same as in "ring-rot," but is caused by the swaying of the tree in the wind, which, forming a funnel-shaped hole round the stem of the tree by pressing back the soil, destroys the bark by friction. This funnel is easily formed in loose, soft soils in wet weather, and should hot, dry weather follow, the sides cake and very soon rub the bark off if the tree sways again. Even in wet weather continued chafing against the surrounding soil while swaying in the wind will ring-bark the tree, and this must be stopped as soon as noticed. The tree must be staked, and thus prevented from being further shaken in the wind. and the earth pressed back against the stem. If the plants are small, the stake previously used for lining, etc., will be sufficient if put in upright and close alongside the plant, but if older, proper staking will have to be resorted to, which will be described in another article.

A young plant badly rung, especially, if drooping, had better be replaced, for the lateral roots will probably be strained, if not rung also. The hole caused by this motion of the plant in wind is often the cause of damage to the roots by water. In the rains the hole is often filled with water which, not being able to get away owing to the caking of the sides, induces ring-rot. In heavy and moist soils, more especially, perhaps, in little hollows in otherwise good fields, an excess of moisture is retained a few feet below the surface. It may occur 1, 2 or 3 feet under ground, but the nature of the soil will change there and be sour and cold. The tap-root of a young plant may reach a point where this exists any time up to four years of age, and on reaching it will rot. This rotting once commenced will proceed from the bottom upwards, even into the drier and more aerated top soil, and is fatal to young coffee. The ailment is known as "wet feet." The lateral roots are often not affected, and so the plant may sometimes live on for some time after being attacked. The effect of wet feet is more often evidenced in dry than in wet weather. When this is observed, and the condition of the lower-stratum of soil ascertained by digging, the plants in that patch had best be taken out, and the patch either abandoned or deep-drained, and re-planted later on.

In any case, when young plants do not come on and the soil seems to be cold or sour, the pits must be entirely re-opened and left open for some time before being refilled and supplies planted. Situations where plants are likely to suffer from wet feet, have frequently, though not always, some indications that point to the necessity for draining before planting at all.

In a few instances I have observed coffee that has been eaten down by wallabies, though in several instances damage has been done by their breaking branches, or even young trees. In the instances observed, only young trees of six to eighteen months old were eaten, and then not to any extent. In many cases the wallabies did more good than harm by topping trees, and showing in a very marked way the advantages of so doing the grower. The trees thus accidentally topped were in every way better than the tall, over-grown trees left by the coffee grower. Wallabies should be kept out if possible, but fencing with wire netting is expensive on large areas. A stray cow will frequently do more harm in a few hours than any number of wallabies. Horses and cattle t some time to get accustomed to coffee leaves, and often not eat them, but once the liking is confirmed, stock prove v troublesome.

As a general rule, however, stock will turn away in disgust fr a well weeded, clean estate, but will seemingly take intelligent a deliberate pains to break down not only the fence, but the coff trees themselves, in getting at the grass, etc.. in a weedy garden

Young plants will stand a considerable amount of drought, as much as old coffee, of course, but still considerably more th many people imagine. In most of the soils on the coast of Quee land, several months of dry weather will not harm coffee, but i very dry situation young coffee, before it is old enough to co the ground, may droop and suffer from excessive evaporation of moisture from the soil. If this goes too far, the plants may seriously damaged. The effect of drought is to stop the grow and stunt the plant, and sometimes make it bark-bound. T lower primaries die back, and though the plant may reco during the next rains, the check will always be apparent. Wat ing large areas is out of the question in coffee culture, but if surface of the clearing is kept loosely chipped or harrowed, a the plants mulched up with loose soil, it will take a very unus drought to harm them.

Should they be so far gone as to lose lower primaries, th should be stumped, *i.e.*, cut back to within 6 inches or so of ground, and allowed to sucker again. In the case of sickly tr that are not suffering from any of the abovementioned ailmen trees damaged by weed growth, broken trees, or trees that ha over-borne in the third year (*see* article on "Disbudding," *Quee land Agricultural Journal*, February, 1901, p. 112), this stampi in the field may be resorted to with success.

The next shoot will grow quickly and prove healthy, and so lo as the root and stock are healthy, will take less time to grow a be safer than re-planting.

The planting being done in the rainy season, the loose ea round the young plant will sometimes get washed away in a hea shower in spite of all care. Any washing away of soil should once be remedied and the earth replaced. Should a plant happ to be washed right out of the pit, it is better, as a general rule, replace it with another plant from the nursery than re-plant t washed out one.

It does not necessarily follow that all the troubles detailed abo will beset a young clearing; but it is as well to know what to in any case, and the young trees will amply repay the attention.

Beyond this the trees will need very little attention till enough to require topping and handling. Topping, suckering, a staking will be dealt with next.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

MR. WEBSTER ON THE AMERICAN CAMPAIGN

Writing to the *Times of Ceylon* off Mt Stephen, in a Canadi Pacific railway car, under date the 9th August, Mr. R. Valenti Webster sent us the following notes:—

I arrived at San Francisco on the 23rd July, and remained that city seven days, then I took train to Portland (36 hours' ru from there to Tacoma, Seattle, Victoria, and Vancouver. Gre excitement in the two latter cities. The salmon packing is now full swing, and the run of salmon is the largest ever known; th together with the abnormal wheat harvest of sixty million bush in the North-West, means a prosperous time for all, and a fortu for many.

Through a friend in the Apprizers' Office at San Francisco, was allowed to copy from the Government books the figures showi teas cleared at San Francisco during the past four and half yea Notwithstanding that the teas cleared in San Francisco each ye run to eight figures, our Tea Commissioner has not once visited t Pacific coast of America; besides San Francisco, considera quantities of teas are cleared at Portland, Tacoma. and Seattle, say nothing of the imports into Victoria and Vancouver.

Amount of tea cleared at the port of San Francisco during t past four and half years (this does not include teas in transit):—

1897, total lbs. 14,277,503.

1898, total lbs. 9,728,771, of which 160,719 was Ceylon, 104,3 Indian.

1899, total lbs. 11,561,922, of which 118,504 was Ceylon, 106,7 Indian.

1900, total lbs. 14,590,265, of which 391,149 was Ceylon and Indian.

1901, total for first six months 2,016,436, of which 221,615 was Ceylon and Indian.

Most of the tea—China and Japan—comes in during the last six months of the year. That accounts for the small total for first six months of 1901. Last year the Government fixed one standard for Ceylon and Indian teas, so now both these teas come in under the one class.

The standard fixed for Indian and Ceylon teas is an Indian tea, clean leaf Pekoe Suchong, worth to-day about 5¼d., including cost, freight, and insurance San Francisco; the standard for China tea (Congou) is very much inferior, merchants showed me China Congou that they were importing, costing 3¾d. (cost, freigh, and insurance San Francisco). At a glance is seen the great disadvantage Ceylon, and Indian, exporters are under, as compared to the China exporter.

Had we a Tea Commissioner who took some interest in his work, these standards would be very different, and the Ceylon exporter would be on equal footing with the China exporter.

On arrival at San Francisco I received a letter from my Continental representative, informing me that the Co-operative Tea Gardens Co.'s Quaker brand Ceylon tea had been awarded the Grand Prix at the Exposition Cuilinaire, Paris, 1901; Mr. Van Allen also informed me that he had the honor of presenting Madame Loubet (wife of the French President) with a cut-glass casket, with heavy plain silver lid, on which was engraved two branches of a tea bush with flowers meeting in a half circle, and under the words, "Quaker Ceylon Tea." The presentation took place in the Exposition Petit Palais, when all the Ceylonese boys (that I sent over in the early part of the year), were present. The following day a letter of thanks was sent from the Presidency. The ex-Queen of Madagascar was much pleased with the Tea Pavilion at the Petit Palais, and often went there for tea. Next month I hope to hear how my teas have done at the Medical Exposition, where Mr. Van Allen has arranged a very attractive exhibit.

I hope to send Mr. E. Rosling samples of the U. S. Government standards, as also a full range of Japan green teas; those interested might write Mr. Rosling, who I know will be pleased to forward them any samples they might require.

THE PRESENT CRISIS IN TEA.

J. writes in *Capital*:— A very great number of nostrums are being propounded to cure the present depression, or rather endeavour to secure to the investor some return for his money, and, no doubt, a great many economies that have been introduced are in the right direction; but, we think, and, we feel sure all our readers (at any rate those who have any practical knowledge) will agree with us that the inordinate reduction of European establishment on tea estates is one to be deprecated, and one which will bring ruin in its track. A tea planter's anxieties and worries are by no means "beer and skittles" in these bad times, and they tell more on the physique than anything else, and a sleepless night is worse than two or three days on the tila as it is expressively called. There are, we are glad to say, but one or two agency houses by whom the reduction is being introduced, and if the history of tea had been written, and the diary of the various companies, who have tried this economy, had seen the light of day, they would bear out our statement, that the so-called economy is a false one, even in bad times. We believe, and are prepared to prove, by figures and dividends that the reduction, below par of the European establishment, has invariably led to gardens being ruined; far better had they been shut up, instead of being allowed by the substitution of the native for the European to drag on a miserable existence, neither making a profit, nor a loss, but, hampering the market by supplying a quantity of tea giving a profit to no one connected therewith, which had better have disappeared, either into jungle, or, somewhere else! It is impossible, in an article like this, to quote names without causing heart burnings, and we, therefore, refrain from doing so, but any one who cares to, can scan the share list, pick out some of the non-paying companies, and enquire what the European establishment is now and what it was ten years ago. During an experience of considerably more than a quarter of a century, the writer of this has never come across more than a couple of natives capable of taking the European's place. We by no means advocate extravagance in European establishments, far from it, but what we do contend is that one man is incapable of managing a 1,000 acre garden with one assistant if he is to do justice to it. Every 6,000 maunds of tea require at least one manager, one assistant, and a tea house man; over this is extravagance, under it false economy. Any one who has been on a tea estate, knows quite well how a Baboo can manipulate figures, and if he is told that expenditure must not exceed so and so it won't be done; but, this is where the false economy comes in. A man managing a thousand acre garden with one assistant cannot possibly be after the Baboo continually, he has not the time to do it; he may on some very specially energetic morning go over every nook and corner, but this is exceptional, and the Baboo knows it, and is quite equal to the occasion. In a year or two, when the coolies find out how the Baboo is allowed full swing, they gradually become discontented, and drop away to the villages, or other estates one or two at a time, and in a few short years the labour of the estate gets depleted. In addition to this, when the state of cultivation is looked into, it is found that the bushes have suffered immensely, and like every other decay that sets in—be it in human, or vegetable life—it makes rapid strides, and what a short time ago was considered a first class property has to be relegated to the lowest grade, wound up, and sold for an old song. If the history of many of our oldest companies ever comes to be written it will fully bear out all we have said above. One company, in our mind's eye as we write, some ten years ago had six Europeans on its staff; now it rejoices in two, the area under cultivation in that period has decreased 25 per cent. and the dividend for the decade, was one year, four per cent., we cannot say the losses in the other time. A European can only do a certain amount of work in this climate. It is not the same as in a non-tropical country, where a man by extra exertion may last out a season of long hours, but in India a European cannot treat himself as he would at home, and the long hours that at present exist are very trying even to men in robust health. So how do proprietors expect their employés already but poorly paid to overwork themselves, if they have nothing to look forward to, if they do; and how are they to take a change which over-worked nature might call for, if there is no one to leave in charge but a native? A 600 acre garden we consider requires one assistant and a manager, and these might run to managing 800 acres, but beyond that, and up to 1,200, two assistants are absolutely necessary if the full amount is to be taken out of the estate, and the value of the same kept up, and it should be one of the enquiries of those who are not dealing in shares speculatively, but, as an investment before concluding any purchase, *viz.*, what is the European establishment? Given a fairly decent garden (not even first class of the acreage we have given above, and a European establishment on the same lines, and there are worse investments than tea; but, let the investor carefully examine into this, and beware of purchasing shares in any concern where natives have been substituted for Europeans, for this is the first sign of a decay that eats into the very heart of an estate.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Poland.—Messrs. R. Krowikowsky & Co., of Warsow, who are said to be the largest importers of colonial produce in Poland and N. Roumania, have made a proposal for a propaganda in favour of Brazilian coffee in those countries.

Exchange.—Extremes during the week ending August 2nd were 10⅛d—10⅞d. for 90 d/s Bank paper and 10¼d—10$\frac{29}{32}$d for private.

The average Bank 90 d/s counter-drawing rate for the week comes out at 10$\frac{7}{16}$d., the corresponding sight rate being 10⅜d. against 10$\frac{7}{16}$d., the average sight rate of the *Camara Syndical.*

August 3rd, 1901.—Ninety days' rate on London opened on Monday, 29th ultimo, at 10½, rose to 10$\frac{13}{16}$ on the 2nd instant, and closed this evening undecided at 10$\frac{15}{32}$d.

The liquidations that were so troubling the market have, it is said, been "reported" or postponed to the end of September or October, so the market has meanwhile a little breathing time, but, sooner or later, the *mauvais quart d'heure* must be faced.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

Coffee shipments (embarques) are about the same as the previous week, £292,945 as against £172,366 last year, but it is doubtful if, at present, when rubber, sugar, and Cotton are all exhausted for the moment, they are sufficient to supply the market demand much less cover for previous sales. From 1st July to 2nd August the value of coffee cleared was £1,492,494, whilst imports alone amount to about £1,800,000. Of course there are other exports besides coffee, but not of much account just at present, so that should the balance sheets of the Banks for July show that there has yet been no real liquidation that is to say remittances, it would scarcely be surprising. In October or November, rubber will probably add a considerable sum to the supply of bills, and it is possible that something will remain over from the marks, requirements for covering purposes. Anyhow, it was unquestionably a wise thing to postpone the liquidation, because at present the requisite quantity of bills could not be found at any price.

Shipments of rubber from Pará and Manáos last week were a little more active, aggregating about £200,000. Stocks, however, are very small, being reduced on 2nd August to only 55 tons at Pará and Manáos.

Coffee.—Entries at Rio and Santos during the week ended August 2nd were 25,950 bags more than the previous week and 140,569 more than for the corresponding week last year. From 1st July to 2nd August entries at the two ports aggregated 1,583,725 bags as against 927,425 last year.

In spite of heavy shipments stocks are steadily accumulating and on the 2nd August were already over the million, as against 883,912 last Friday and 709,013 on the 3rd August, 1900.

Declared sales at Rio and Santos were 221,000 as against 226,000 the previous week and 154,000 for the corresponding week in 1900. A great deal of the coffee coming down to this market is said to have been bought and paid for by exporters up country on the plantation.

MARKET REPORT.

[*Per Mail advices of 30th August* 1901.]

COFFEE.

The London Commercial Record says:—The supplies at auction since our last have been unusually light, and with a steady demand from the trade the greater part was disposed of with good competition at a further advance of 2s per cwt. for nearly all growths. Ceylon Plantation brought very satisfactory prices and experienced active competition. East India did not show much change. The market for "futures" was stronger at the opening, and September Santos advanced to 28s 7½d per cwt., but subsequently heavy receipts in the Brazils had an adverse influence upon the prices, and September was sold at 27s 7½d; there has, however, been a little recovery at the close; yesterday September was done at 27s 9d to 28s, December at 28s 4½d to 28s 9d, March at 29s to 29s 3d, May at 29s 4½d to 29s 7½d, and July at 30s per cwt.

TEA.

INDIAN.—A reduced amount was catalogued, *viz.*:—25,600 pack ages, contrasted with 33,400 packages in the previous week, an 36,400 packages a year ago.

Late arrivals, particularly those from Assam and the Dooars did not maintain their early promise as to quality, and buyer were less eager to purchase. The demand for really stand out Tea continued good, although former prices were not always secured while for all missing this qualification a smart shrinkage in valu was apparent, and Pekoe Souchongs with poor liquor were to b had at 4d per lb.

A fair assortment of 1,500 packages from South India, including some parcels with colory infusions from Travancore, commanded good competition.

For 21,700 packages on Estate Account 8⅜d per lb. was realised against 8⅛d per lb. for 30,700 packages, and 8¼d per lb. for 35,80 packages in the two preceding seasons respectively.

The number of packages printed for importers in August is:—

1901.	1900.	1899.
84,200 packages	101,700 packages	129,800 packages

CEYLON.—Auctions aggregated 25.400 packages compared with 27,600 packages as advised on the 22nd instant, and 30,600 packages twelve months since.

Inferior grades barely maintained their position, but for others, after allowing for improvement in cup, a firmer tone prevailed, Broken Pekoes over 8d per lb. in most instances showing a further upward tendency. Finest and choice lines were still rather scarce, but the few available sold well.

The average is 6 7/8d per lb. against 6 3/4d per lb. as recorded in our last, and 6 7/8d per lb. in 1900.

Total during the month :—

1901.	1900.	1899.
94,800 pkgs.	116,000 pkgs.	147,600 pkgs.
(Avge. 6 3/4d per lb.)	(Avge. 7d per lb.)	(Avge. 7 1/8d per lb.)

JAVA.—Nearly 2,000 packages of direct import passed the hammer which on the whole went off with spirit at prior rates.

August public sales embraced :—

1901.	1900.	1899.
6,900 pkgs.	5,500 pkgs.	7,500 pkgs.
(Avge. 6d per lb.)	(Avge. 6 3/4d per lb.)	(Avge. 6 3/4d per lb.)

Deliveries.—Clearances of all Tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.* :—

From 1st to 27th August, 1901 ... ... 13,840,962 lbs.
Do. do. 1900 ... ... 12,862,350 ,,

During the week the following have been printed for sale by public auction :—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	20,152	5,461	25,613
Ceylon	23,664	1,757	25,421
Java	1,739	214	1,953
Total ...	45,555	7,432	52,987

Also 418 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated August 30th, 1901, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	181,848	330,746	18,358
1900-1901	163,841	352,085	13,095

25,757 *pkgs.* INDIAN
25,980 ,, CEYLON
1,953 ,, JAVA
} Total 53,690 packages were offered in public auction this week.

A substantial increase took place in the quantity of Indian and Ceylon Tea shipped to North America during the first half of 1901, compared with the same period of 1900.

	1901.	1900.	1899.	1898.	1897.	1896.	1895.
Lbs. ..	9,446,997	7,087,476	5,134,914	6,245,443	6,580,336	3,850,735	2,972,575

The prolonged efforts made to capture the Black Tea market in that continent have at length borne tangible fruit.

If planters will only turn their attention with equal vigour and determination to the production of suitable Green and Unfermented Tea, there exists a far larger and more encouraging outlet than was ever the case with Black Tea in North America. The necessity for doing this has been rendered more pressing than ever by the over-supply of Black Tea and its consequent depreciation in value.

INDIAN AND CEYLON TEA TAKEN IN NORTH AMERICA FROM 1ST JANUARY TO 30TH JUNE.

INDIAN.—Although the quantity brought forward was much smaller, the market showed little disposition to purchase at current prices. The auction consequently passed slowly with a further slight decline, even good Teas meeting with rather less competition.

Catalogues are issued for 6,196 packages to be sold in an "un-reported" auction on Wednesday, the 4th proximo. The following averages are worthy of note :—"Pabbojan T Co.," 1/5 1/4; "Suddia Rd. T Co.," 1/3 1/4; "Darj. Co. Ging," 1/3; "Ass. Co.'s garden Khoomtai," 1/2 3/4.

Week's average of New Season's Tea sold on Garden Account, 1901, 21,189 pkgs., av. 8·23d. 1900, 31,485 pkgs., av. 7·94d.

New Season's Tea sold on Garden Account, 1st June to date, 1901, 104,128 pkgs., av. 8·37d. 1900, 121,576 pkgs., av. 8·09d.

CEYLON.—Rather more animation was noticeable in the market, and all Teas sold at firm prices, especially the higher grades. This improvement is doubtless partly due to the better quality of many of the arrivals. Average for week 6·88d, against 6·84d same week, 1900.

Ceylon Tea sold on Garden Account, 1st Jan. to date, 808,529 pkgs., av. 6·58d. 1900, 857,594 pkgs., av. 7·21d.

JAVA.—With a firm market and good bidding, the Teas were mostly sold in the auction room, very little being withdrawn.

Bank Rate 3 per cent. Exchange on London three months' sight :—Calcutta 1/4 3/32. Colombo 1/4 1/8.

COCOA.

Auctions on the 27th instant presented 2,522 bags, which again experienced but little demand notwithstanding the reduced stocks; barely 1,000 bags sold in the room, prices, with the exception of African (which growth went cheaper), being unchanged. Of 1,040 bags Trinidad catalogued 450 bags sold at about valuations :—very fine red 73s, middling to good 66s to 68s 6d. 78 bags Grenada half sold at 64s to 64s 6d for fine, being steady. 12 bags good Demerara realised 63s to 64s 6d, and 3 bags St. Vincent 56s to 60s. 120 bags African found buyers at lower prices—55s to 55s 6d for small red mixed. 12 bags Seychelles sold at 60s to 62s 6d. Ceylon was a little more enquired for than of late, and holders succeeded in quitting 350 bags, out of the 1,015 bags offered, at generally steady prices; fine bold and medium red brought 82s 6d to 87s 6d, good ditto 74s to 75s, dull brownish 60s to 60s 6d, fair to good smalls 54s 6d to 61s 6d, and blacks 46s 6d to 49s 6d per cwt. The bought in lots comprised 27 bags Jamaica, 32 bags Esmeralda, and 152 bags Guayaquil. The private sales during the week include—200 bags Trinidad at 67s to 68s, 100 bags Jamaica at 62 6d for fermented and 57s for ordinary, 200 bags fine African at 65s, 250 bags Ceylon at 71s to 75s, 100 bags Venezuelan at 65s, and 200 bags Guayaquil —good summer Arriba at 78s per cwt.

PEPPER.

BLACK.—The market remains very quiet. For arrival there are sellers at 6d for parcels of Singapore near at hand at 6 1/16d for distant shipments. On the spot sales of fair Singapore at 6d.

Nothing offered at auction on Wednesday.

WHITE.—Business has been on a small scale. Singapore on the spot has been done at 9d, and fair Penang at 8 1/2d. For arrival no sales reported.

At public sale on the 28th instant 50 bags Siam retired at 9 1/8d, and 112 bags Penang at 8 5/8d per lb.

GINGER.

COCHIN.—There is practically no demand but holders will not give way in price. Offering were restricted to 38 cases 150 bags

which were bought in—bold limed cut at 100s, medium ditto at 75, and good brown Calicut rough Sorts at 40s per cwt. (a bid of 37s refused).

JAMAICA.—Well held, and of the 412 barrels catalogued 250 barrels sold at very full rates for the better lots at 1s per cwt advance on the commoner. Fair bright washed realised 48s to 50s, low middling to middling 42s to 45s, common to ordinary 37s 6d to 41s, and mouldy at 38s to 40s per cwt.

CINCHONA.

The auctions of cinchona-bark held at Amsterdam, on August 29, amounted to 8,033 packages, weighing 707,644 kilos. Of the above quantity, 7,595 packages were disposed of at an average unit of 7·60c. per half-kilo., against 9c. paid at the auction on July 18. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 11,417 kilos.; the Brunswick factory, 6,146 kilos.; the Mannheim and Amsterdam factories, 6,561 kilos.; the Frankfort-on-Main and Stuttgart factories, 5,239 kilos.; and various buyers, 5,366 kilos. The prices paid for the manufacturing-bark ranged from 3½c. to 82c. per half-kilo., and druggists' bark from 9½c. to 42c.

QUININE.

Before last week closed the spot price in the "outside" market dropped still further to 1s 1d and December to 1s 1½d, but this week there has been a slight recovery and prices of good German sulphate are steadier, spot having advanced to 1s 1⅜d, and December delivery to 1s 1⅝d to 1s 1¾d. Only a small business has been done, however, and to-day operators are waiting the result of the Amsterdam bark sale, where a 15 per cent. decline is anticipated. A reduction of at least 2d per oz. is expected in the "official" price.

CARDAMOMS.

A much better demand was shown to-day, and nearly all the catalogues were cleared at irregular prices, fine being easier, and the medium and lower grades bringing full rates. Good seed was 2d to 3d dearer. The following prices were paid:—Ceylon-Mysores, medium to bold pale, 3s 5d; bold medium pale, 2s 4d to 2s 8d; small and medium pale, 2s 2d to 2s 3d; ditto brownish, 1s 11d; small pale, 1s 5d to 1s 9d; very small pale, 1s 4d to 1s 5d; brown splits and pickings, 1s 4d to 1s 5d; bold pale splits, 3s; medium ditto, 2s 1d to 2d 2d, and small 1s 6d, with common at 1s 2d. Good dark seed sold at 2s 2d to 2s 4d, and pale at 1s 7d to 1s 9d per lb.

(AVERAGE FOR ALL INDIA 8·23d., AUGUST 30TH.)

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 4th proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *September 24th.—Weather*—A continuous break since August 29th. It is doing good to the old coffee, but supplies would be better with rain. *Crop*—ripening up rapidly on several properties, it will however be very short. *Works*—Handling has been omitted on several places this year. The least cultivation possible has been the general order. One proprietor has given instructions for 25% of his property to be treated according to the Leeming system. *Health*—Generally good. *Labour*—Abundant.

Coorg. Polli Betta, *24th September —Weather*—Ever since the 15th—on which day there was a heavy shower in the afternoon measuring 1·50 inches—it has been wet and gloomy, though the daily average has not been large. *Plant diseases*—This weather will foster leaf disease which is showing up badly in parts, especially west where crop is ripening. *Crop*—Fly picking will begin in the western parts of the district, where the blossom rains fell early, very soon. *Works*—Attention is being given to supplies and cleaning up, and some knife handling is being done. *Labour*—Plentiful. *Health*—Fair. This rain is in time to save a lot of paddy.

A PERNICIOUS SCALE PEST.

We have not heard that what is known as the San José Scale—*Aspidiotus perniciosus*—has been identified in Southern India. There is, however, a general similarity in the ways and methods of the scale pests that attack fruit trees, and the planter in this part of the world can derive useful information by noting what is done by scientists in the North American Continent with a view to the extermination of one of the most destructive pests that has yet been seen. It has been found in Queensland as well as in the United States, and it may be lurking amongst us, here, unidentified. It was first seen in Queensland and is believed to have been introduced

from California, where it has been known to exist for many years. It is a pest that has a taste for fruits of any kind. It attacks many kinds of deciduous fruit trees, such as almonds, apples, cherries, Japanese plums *(Prunus triflora)*, nectarines, pears, peaches, plums, and quinces. Apricots, though attacked, suffer comparatively little injury as a rule. Also it attacks roses and other plants of the same natural order, and has been reported in America as having been found on loquats, walnuts, pecans, persimmons, the grape vine, the elm, and other trees. It is not known to have been found on citrus trees or fruit in any part of the world. It breeds with alarming rapidity, and is the most active enemy of deciduous fruit trees yet discovered. As it is by no means a conspicuous insect, and is therefore not readily detected on its first appearance, it often obtains a complete hold on the tree before the grower notices that there is anything wrong, and even then the generally sickly and unhealthy appearance of the tree is often ascribed to other.

Mr. ALBUT H. BENSON wrote about it in the *Queensland Agricultural Journal* some time ago. He said that the San José Scale attacks every part of the tree, from the ground to the tips of the smallest twigs. It is seldom found on the leaves, excepting the leaf stalk, but is commonly met with on the fruit. Mr. BENSON points out how its presence may be detected. He says that in the early stage of infestation, it is sometimes difficult to distinguish the insects on the bark of the trunk or older limbs, as the colour of the insect and the bark are very much alike. However, if carefully examined, small, round, blackish scales of the size of a medium pin's head, and having a raised, round point in the centre of the scale will be seen, but there will be no discolouration of the bark. On young wood of the current season's growth the insects are much more easily seen, because, the bark being thinner, smoother, and of a lighter colour than that on the older parts of the tree, the dark colour of the scale is more conspicuous, and not only that, but on the young wood of pears, apples, peaches, and other fruit trees the scale insect is usually surrounded by a circle of red or brownish-red colour, producing an effect which is very characteristic of this particular scale, and by which it can often be definitely distinguished.

As the scale becomes more numerous, the effects are more intensified, the older bark becoming of a slatey-black colour, and the younger bark a brownish-red more or less spotted. In cases of complete infestation, the older bark takes on a very scaly or cankerous appearance and begins to crack; there is often an exudation of gum in the case of stone fruits; the younger branches begin to die back, and if a strip of bark is cut off it will be found to be thickened and discoloured right through. The leaves fall, the wood becomes completely rotten, and finally the tree dies. The presence of the insect on the fruit is, as a rule, easily determined, owing to the characteristic discolourations surrounding the scale which occurs in most fruits but not always on apples or pears having a russety or dark-green skin. The insects may occur on any part of the fruit, being often pretty evenly distributed over it; but in the case of pomaceous fruits, there is usually a larger number of scales round the eye of the fruit than on any other part. We trust that Mr. BENSON will forgive us for quoting him freely in the interests of a large body of planters. Indeed, we intend to make further quotations from his remarks at a future opportunity, to show the methods of treatment that he recommends for the extermination of the pest under reference.

INDIAN COFFEE AND PEPPER.

Messrs. Arbuthnot & Co's Agent at Tellicherry writes:—

I have the pleasure to furnish you with my Annual Statement of Exports of Coffee and Pepper for the year ending 30th June, 1901, the total figures of which approximately represent what the crops of these products in India, for the year in question, amounted to. As usual, I further show the distribution of shipments to various ports, and have added the figures relating to exports for the three previous years for the purpose of comparison.

Coffee.—The crop for the past year was some 74% in excess of that of 1899-1900, by far the larger proportion of which was shipped from the port of Mangalore. Of the total quantity shipped Cwts. 2,55,046 may be regarded as Plantation, and the balance Cwts. 1,07,137 as Native Coffee. The prices fluctuated to such an extent that I find it impossible to arrive at an accurate average value of the Coffee exported, but if the average value of both Plantation and Native Coffee be taken at, say, Rs.650 per ton, f.o.b., the total value of Coffee exported during the year amounts to Rs.1,17,70,947-8-0.

Pepper.—The total exports of this spice amounted to Cwts. 2,11,987, or some 26% more than was shipped last year, the value of which at an average of Rs.37-8-0 per cwt. amounts to Rs.79,49,512-8-0. Tellicherry is still the chief port of export for this spice.

Exports of Coffee and Pepper from Southern India during the Season ending 30th June, 1901.

THE MADRAS GOVERNMENT CINCHONA DEPARTMENT.

Reviewing the report on the administrstion of the Government Cinchona Department during 1900-01, the Madras Government observes:—Mr. Standen's report has been prepared as usual with care and has been submitted punctually.

The Plantations.—Excepting the damage done on the Nadivattam and Hooker estates at the beginning of the monsoon, the plantations did well: in particular it is satisfactory to receive continued good reports about the recent extensions. The experiments in grassing the bark and in heavy manuring go to show that the former process will be profitable if the unit be valued at a fraction over a farthing, and that the latter will prove remunerative, if the unit value be about three farthings. The director will doubtless wait till these results are confirmed by more extended experiments before generally adopting either process in the cultivation of the plantations.

The Factory.—The introduction of a new plant and new system of manufacture somewhat hindered the work at the factory; and the bark worked up proved to be of a comparatively low alkaloidal value. The total output of quinine and febrifuge was in consequence considerably less than that of recent years. The cost of the bark, moreover, was relatively high. These circumstances combined to make the cost of the manufactured quinine Rs.16-7-0·96 per pound and of the febrifuge Rs.3-4-1·48 per pound. The short work of the factory was unavoidable in the circumstances. The high market price (As.1-10·24) per unit paid for the purchased bark was also a factor beyond control, and a factor which connot be eliminated until the new extensions come to maturity.

As regards the cost per pound of estate bark, this is calculated with reference to each year's crop by dividing the total expenditure on the old plantations and the head office by the number of pounds of bark cropped. If, therefore, a small crop is gathered on the estate when bark is cheap in the market, the cost of such a crop is compensated for by the relatively low cost of larger crops taken in years when the market price of bark is high. In the year under review, the small crops of recent years were worked up with the expensive bark purchased in the year. To minimise variations from year to year in the cost price of the quinine manufactured, the Director proposes to reserve the bark of small crops for manufacture with cheap purchased bark and the bark of large crops for manufacture together with more expensive purchased bark. It would, perhaps, be more convenient and serve the end in view equally well if all the bark in stock and gathered each year were valued together and a fresh uniform average rate struck each year. The Director should consider and report on this suggestion.

Besides the interference caused to the work in the factory by the inauguration of the new machinery, and the relatively high cost of the bark worked up the low alkaloidal value of the bark contributed in great measure to the comparatively high cost of the manufactured product. It costs as much to work up poor bark as rich bark: and the question, therefore, suggests itself whether it is not feasible to deal more exclusively with rich barks. On this question a separate communication will be made to the Director.

Issues of Quinine and Febrifuge.—The total amount of quinine issued was not only the largest on record but it also exceeded the quantity estimated as the normal output of the factory, which is 10,000 lbs. It becomes a matter for consideration, therefore, whether the issues from the factory should not be restricted and regulated. This is a difficult question which will be discussed separately. Among the items of issue is a quantity of $254\frac{3}{16}$ lbs. of quinine sold to the public in bulk. Having regard to the prior demands of Government institutions and the "pice-packet" system, sales in bulk to the public, which are objectionable on other grounds also, have been stopped.

Financial.—The balance sheet shows a profit on the year of Rs.41,815-13-7 and is satisfactory.

The Government is indebted to Mr. Standen for the great pains and attention he has bestowed on every detail of the work.

COFFEE IN DISTANT LANDS.

XXXII.

The Congo.—A Belgian correspondent, who has served in the agriculture and forestry department in the Congo Free State, writes to the *Times* to explain the means by which the Congo authorities have created the shadow rather than the reality of a great industry in coffee. In their haste to fill the country with extensive plantations they gave rewards for every area planted with more than a certain number of trees, the trees to be no less than 75 centimétres in height. The sum of money awarded was to be shared between the magistrate and the planters of the district. The result has been that trees have been planted everywhere and anywhere, in all kinds of soil and without any kind of care. Enormous numbers of trees have reached the requisite height for the reward, but either from subsequent neglect or conditions unfavourable to further development they have stopped short of fruitful maturity. The correspondent alleges that the planting of cocoa has not been in any degree more careful, and that the whole policy of the Congo authorities towards cultivation is compounded of a foolish lavishness—as in the case of these rewards—and a very short-sighted economy.

New South Wales.—Coffee planting possesses, says the *H. & C. Mail*, a fascination of its own, and the desire to grow coffee takes hold on people like an epidemic. In Australia an enterprising gentleman has for some years past been experimenting on the Clarence River, about 350 miles north of Sydney, in the direction of coffee planting. The idea is to not only produce coffee in this state, but to roast, grind, and pack it on the plantation ready for consumption. The coffee trees at Mr. Bale's experimental farm are over twenty-four years old, and measure 4 in. in diameter near the ground. The bush spreads 5 ft. or 6 ft., and is kept at a height of about 6 ft. by nipping off the centre of the tree when that growth is attained. Collecting the berries for use was first commenced about fifteen years ago, and since then the crop has attained more interesting developments each year. At the present time Mr. Bale says he finds that coffee is largely planted in the North and at the South Sea Islands. He is just in receipt of a communication from the proprietor of a large estate where 12,000 plants are growing. At this estate there are trees fourteen years old producing as high as 12 lbs. of pure coffee per tree per annum.

NOTES.

A Book on "Cocoa" Planting.

The King has graciously accepted a copy of Mr. Harold Hamel-Smith's book entitled "Some Notes on Cocoa Planting in the West Indies."

Quinine in the U. S.

The imports of "quinine and salts of" into the United States for the twelve months ended June 29, 1901, amounted to 3,660,022 ozs., against 3,113,749 ozs. during 1900.

Obituary.

Mr. William West, Biologist, Behar Indigo Planters' Association, died at Mozafferpur a few days ago from cholera. Mr. West, who was only twenty-six years old, had been only three weeks in India.

German Quinine.

The exports from Germany during the six months ended June amounted to :—

	1901.	1900.	1899.
Kilos. ...	... 111,800	100,900	128,100
Marks ...	... 5,031,000	4,541,000	4,868,000

Tea in Java.

The falling quotations for tea have had a bad effect on enterprise in that staple in Java. Tea planters there had of late larger outputs than in 1900, but their dividends are much smaller. Some of the planters talk of curtailing production as a remedy for the evil.

Brazilian Coffee Crops.

A late estimate places the Brazil coffee crop at 8,750,000 to 9,500,000 bags of Santos, 3,500,000 bags of Rio, and 1,000,000 bags of Minas—a total of 13,250,000 to 14,000,000 bags. Add the world's visible supply and the crops of mild coffee, and we have a grand total nearly double the world's requirements.

Coffee Exchange Statistics.

The figures published by the New York Coffee Exchange show a very large increase of sales in 1900-1901, which aggregated 7,333,000 bags against 5,879,500 in 1899-1900; the sales for 1898-1899 were 4,060,500 bags. The transactions for the past year exceeded those of 1899-1900 by 1,503,500 bags; the gain being partially due, it is said, to the large crops abroad.

Indian Tea Prospects.

Latest advices from the tea districts continue to report unfavourable weather for yield. No doubt that the deficiency in outturn has increased since the actual figures to 15th August were published. Similar figures to the 15th instant has been collected by the Association. They will be very interesting and will go a long way to support the impression that the crop this year is likely to be considerably less than last year.

The Flavour of Tea.

Mr. H. H. Mann, Scientific Officer to the Indian Tea Association, is investigating the scientific aspect of the flavour of tea, the variations of which may possibly admit of scientific explanation. Mr. Mann is taking the matter up during his tour in the Darjeeling district, where there are special advantages for the prosecution of such an inquiry, as the flavour in Darjeeling teas is so marked and unique, and yet so difficult to fix.

Indian Tea for Indians.

Messrs. Andrew Yule & Co. a selling tea at one pice per c through the medium of Brahmin hawkers. Swiss milk a sugar are used in the brew. This has caused some little sens tion, chiefly because of tea being offered for sale in packe at one pice each, containing about an ounce, each stamped —"Read monogram." Messrs. Yule's announcement on ea cover in English, Bengali, and Hindi is calculated to fix t native :—"Keep this cover. It may be worth Rs.50 you." Each cover bears a serial number.

Quinine.

A reduction of 2d per oz. in t "official" price of quinine is t principal feature since our last report, says the *Chem & Druggist*, writing on 5th instant and the outside market lower in sympathy. Among the speculators there a evidently "bear" sellers for distant delivery, whose idea to depress the market further, with the ultimate object covering later at a lower figure. In these circumstanc there is likely to be no immediate improvement in prices this policy should be successful, and especially if the Ja bark shipments are maintained at the present high level.

Tea in the U. S.

A Home paper writes :—"Wh is the best way to make people thi of a subject and become interested in it? That is a questi to which many persons would be glad of an answer. Obv ously reliance is placed upon two methods, those of talki and printing. If you want to disseminate views, of cours you must go to all parts of the country, and address crow at public meetings; or you must get pamphlets printed, a sow them broadcast." These remarks have been quoted offering hints for the prosecution of the Tea Campaign America.

Rubbish.

A correspondent of the *Ceyl Observer*, writing from Westrali says :—The grocers in Fremantle often supply your corre pondent with samples. Only this morning a packet of pu Ceylon tea was broken and a sample handed to me. Th tea is retailing at 1s 2d (no duty *yet*) and of all the mixtur of vile refuse, sweepings and coarse and under-fired leaf ever saw, it is an easy first. It was simply "shocking We cannot expect Ceylon tea to go ahead here or anywhe else as it should and could while such stuff as this is on t market to retard progress.

Cinchona.

The shipments from Java Europe have been as follows :—

—	1901.	1900.	1899.	1898.
August (Amsterdam lbs.)	1,067,000	977,000	1,200,000	1,047,00
January to August ,,	7,524,000	5,724,000	7,230,800	7,136,00

The exports from British India during the two months end May amounted to 528,459 lbs., against 1,201,659 lbs. for t corresponding period of 1900.

Liberian Coffee.

Liberian coffee appears to have generally realised about 20 to 26 cents per ½ kilo. in the Amsterdam market lately, but Messrs. Heijbrok & Co., of that place, refer to a lot of 15 bales, which were valued at 45 cents, as having sold well above valuation. Mean rates at Rotterdam during July last were as follows :—

Arabica ...	Java, good ordinary ...	...	31 to 32 cents.
	Santos „ ...	...	18 „ 19 „
Liberia ...	Java ...	...	20 „ 24 „
	Africa ...	...	16 „ 16½ „

The Dutch florin may be assessed at ⅛d.

Calcutta Tea Sales.

At Friday's sale 19,800 packages of tea were offered, as against 20,700 on the same date last year. All districts were well represented, and the quality in most cases showed improvement. The tone of the market was decidedly firmer, though some teas still seem to be sailing much under their value. The trade both here and at home do not yet apparently appreciate the shortness in the crop, and the prospect of an early close to the season. Advices from all districts, specially the Terai, Dooars, and Darjeeling, are that the nights are now becoming very cold indeed, which will have the effect of retarding the bushes from flushing. Advance musters have a decidedly cold-weather flavour.

Cinchona-assay.

Van Ketel recommends the following method for the estimation of the alkaloids in cinchona-bark : Four grammes of the powdered bark is mixed with 2 grammes of powdered lime and 5 c.c. of solution of ammonia, and boiled on a water-bath under a reflux condenser for half an hour with 100 c.c of ether. The solution is then filtered, and the insoluble matter washed with 80 c.c. of ether, and the filtrate shaken well with 10 c.c. of 10-per-cent. hydrochloric acid. The acid liquid is separated, and the ethereal solution well washed with water, which is added to the acid. The acid solution is then shaken with excess of solution of caustic soda and ether ; the extraction with ether is repeated, the ether evaporated, and the alkaloids weighed. The alkaloids left on evaporating the ether may also be titrated.

"Ceylon" Teas in Canada.

The Ross Tea Co. writes to the *Ceylon Observer* from Toronto :— Some packers use, in some of their packets, nothing but India teas, but still label them Ceylon. Again large quantities of China Greens are used for mixing purposes, and are put out with the Ceylon label on them. We make the above assertion, and there is no prominent packer of tea in Canada, who can successfully contradict it. There may be some dealers putting up a straight Ceylon tea. If there are, we don't know them, but if their goods were selling, or advertised, we would know their tea. We inaugurated the mixing of Green Ceylon teas instead of China Green, and no doubt many will follow us, but the complaint is chiefly against the great quantity of Indias that are put out under Ceylon labels.

Test for exhausted Tea.

Dr. Nestler, in the *Journal de Pharmacie d'Alsace-Lorraine*, puts forward a test to determine whether tea leaf has been previously used or not. Professor Tickhominow's test is said to be untrustworthy. This depends on the production of a greenish tint by unused tea after two days' standing in a solution of acetate of copper. Tea which has been twice infused, however, will sometimes give this colour. Dr. Nestler's test is as follows : A little of the tea is crushed between the fingers and placed on a watch-glass. This is covered with another watch-glass, and heated gently. On the upper glass there is soon an appearance of small drops, and after ten minutes' heating crystals of theine are visible to the naked eye. The identity of these crystals can be shown by hydrochloric acid and a solution of chloride of gold, which gives more or less yellowish prisms of a silky, long, slender character.

The World's Production and Consumption of Potash Fertilizers.

Mr. L. Grandeau in a French Agricultural Journal notes briefly the source of potash, the discovery of the Stassfurt deposits, the extraction, preparation, and production of the Stassfurt salts ; and gives tables showing the composition, production, and consumption of the different products. It is stated that the total production of crude, Stassfurt salts in 1899 was 2,737,965·38 tons (of 2,000 lbs.). This includes 64,679·877 tons of carnalite and kieserite used for agricultural purposes in Germany. and 5,082·37 tons exported to other countries for the same purpose, besides 1,385,293·041 tons converted into concentrated potash salts ; and 791,051·485 tons of kainit and sylvinite used for agricultural purposes in Germany, and 347,080·319 tons exported to foreign countries for the same purpose, besides 144,778·286 tons converted into concentrated salts.

The London Tea Market.

Cabling on the 19th instant to Colombo Messrs. Gow, Wilson & Stanton report that the market generally shows a fractional advance, that for fine teas generally being dearer, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 5½d (same as last week), but the average price of Ceylon tea sold on garden account this week was 7½d (a farthing up). The average of the corresponding week last year was 6⅞d. Reuter reports that generally there is a brisk demand for Ceylon tea at full prices, while common Broken Pekoe is irregular. Fair Pekoe Souchongs are quoted at 4¾d (same as last week) but the average for the week is 7½d (a farthing up). 21,000 packages of Ceylon tea were offered for sale and 20,000 were disposed of ; while of the 41,000 packages of Indian tea offered, 38,000 found purchasers, at an average of 8¾d per lb. (½d up).

Colombo *vs.* London Tea Sales.

The attention of the *Times of Ceylon* has been drawn by a local expert to the difference in price ruling between the Colombo and the London market at the present time. He quotes the case of Pekoe Souchong, of which the lowest grade at Colombo is being sold at 24 cents, equal to, say, 5d to 5⅛d in London ; similar tea is being sold to-day there at 4¼d. With regard to Pekoes, it is difficult to buy this class of tea, he says, under 28 cents, which is equal to 5⅞d to 6d ; in London it is being sold at 5d to 5¼d. In Broken Pekoe there is hardly anything to be had at Colombo with clean liquor under 35 cents, equal to 7d, while similar quality is selling at home at 6¼d to ½d. This, worked on an

average, shows an advantage in favour of the Colombo market of about 12½ per cent. Our contemporary maintains that, even should local prices decline to the London equivalent, it would still be in the interests of the majority of planters to sell locally, as by this means outside markets are opened and kept supplied.

Coffee in London.

The *Produce Markets' Review* of 31st ultimo says:—The Central American and East Indian crops having practically come to an end, supplies of these sorts are now very limited, and the auctions this week have been comparatively insignificant and contained only a small quantity of desirable quality. There was keen competition for nearly all kinds, and prices were in most cases higher, occasionally to the extent of several shillings per cwt. In the dearth of first hand supplies there has been a good business done from second hands; desirable qualities are eagerly sought and more particularly for fine Costa Rica good rates are being paid. As we have still four months of this year and probably two of next to wait before the new crop arrives in any quantity, we have presumably before us a long period of great scarcity, and still higher prices would seem to be inevitable. Receipts in Brazil continue heavy, and are, in fact, larger than ever known before, but these have very little effect on the markets, owing partly to the general scarcity of other descriptions, and partly, no doubt, to the prevalent idea that the following Brazil crop may not be a large one. As compared with a week ago, prices of Santos are about 3d lower.

Indian Teas in London.

Although the quantity offered was considerably smaller than in the preceding week, prices in most cases were easier, says the *Produce Markets' Review* of the 31st ultimo, and several of the same marks that were previously offered brought less satisfactory rates. This was mainly due to the falling off in quality, which was especially noticeable in the Assam growths, thus confirming the reports from Calcutta of inferior quality by the later shipments. From this it would appear that those who have secured teas from the earlier sales will have no cause to regret their purchases, as it is doubtful if they will be able to follow them even at enhanced rates. This, of course, applies to the fine and finest descriptions, while the next lower grades, which continue somewhat scarce at the moment and comparatively dear, will, no doubt, be in more liberal supply when buyers will be able to meet their requirements on more favourable terms. Common descriptions meet with but a moderate demand, and as there was a fairly large quantity brought forward values depreciated, and these teas are now obtainable at a lower level of prices than for some time past. From a telegram just received from Calcutta the season's crop is estimated to yield 184,250,000 lbs., being practically the same as last year, and the total available for this market is put down at 150,000,000 lbs. against 160,000,000 lbs. in 1900. At the public sales 25,750 packages were catalogued, and about 6,000 withdrawn.

Early Coffee.

The *Singapore Free Press* some while ago advanced an interesting opinion on the subject of the inferior sale of coffee as compared with that of tea giving as a reason the greater facility for making good tea in the early morning as compared with the somewhat prolonged and complex operation for makin good coffee, and suggesting as a remedy the sale of coffee a prepared form which would only require the addition hot water to make the beverage. There is another importa factor in the enhanced sale of coffee and that is the ear coffee stall on the virtues of which someone waxes eloquen

A CHARACTER.

The man wot keeps a early coffee-stall
And sells good stuff, and always is perlite,
Is wot I call the neighbour of us all,
And well I know the truth of wot I write.

You 'aven't got no baccy, and the dawn,
Though late is 'ardly showing up at all.
W'y all your bloomin' pleasures would be gawn,
If 'twasn't for the early coffee-stall.

And 'im wot keeps it—wot a lot 'e knows
From them as do not get it second 'and!
Wot nice illuminatin' 'ints 'e throws
On little things you could not understand!

A egg, a cup of coffee, and a slice,
A chat with 'im w'en things is goin' slow:
My brother, take and 'ark to my advice—
These are as good as aught that you may know.

I talk impartial, as a family man,
That do not walk nocturnal now at all:
Find me a chap more useful if you can
Than 'im as keeps a early coffee-stall.

THE IMPENITENT.

Cocoa in Hamburg.

The importation of cocoa an stocks remaining on hand at the en of last year were respectively as follows as compared with th figures for 1899, *viz.*:—

Countries whence Imported.	1899.		1900.	
	Imports.	Stock, Dec. 31.	Imports.	Stock Dec. 3
	Bags.	Bags.	Bags.	Bags.
Guayaquil	143,105	3,831	100,952	5,42
Bahia	45,070	1,075	64,102	3,14
Cape Hayti	12,004	894	11,458	65
Samana	51,447	323	52,566	34
Trinidad	8,395	219	9,687	1,37
Caracas	17,514	2,563	25,085	7,44
St. Thome and Africa ...	70,820	2,195	70,522	2,37
Ceylon and Java	12,974	472	12,169	14
Jamaica	2,750	...	2,300	...
Other kinds	13,385	1,518	13,188	1,87
Total ...	378,464	13,090	362,029	22,76

It will be seen, observes the British Consul General, that th imports of cocoa in 1900 were 16,435 bags less than in th previous year, this being due rather to smaller crops in th countries of production than to decrease in consumption her It is, indeed, the opinion that it will soon be very difficult meet the increasing demands for cocoa in Germany, unle planters are able to increase their supplies. The larg decrease in the importations of Guayaquil sorts, which wa due to the poor crop in Ecuador, was to some extent made u for last year by larger importations of Bahia and Caracas cocoa. Of Samana large quantities were again imported, an of fair quality, this sort being a special favourite in th Hamburg market.

Brazilian Coffee and Exchange.

The following remarks, extracted from an American circular, regarding the milreis price of coffee are significant:—*New Crop Prospects.*—We are entering the new crop this time at low values. The milreis price in Brazil is now much lower than it was at any time in 1890. This in itself is a very good feature. It is in the interest of the trade to keep the milreis price at the present low level until some months of the new crop season have elapsed. Then it can be seen to what extent the planters can afford to pick their crop, bring it to market and take care of their plantations in freeing the trees from under-growth while these low prices prevail. It is reported from the Rio and Santos districts, that small planters have already abandoned their plantations, probably owing to lack of funds or borrowing capacity. There is also said to be a scarcity of labour, probably caused by a considerable reduction in the scale of wages formerly paid. Other countries are suffering similarly on account of the low prices. One indication we have in a report from the German Settlement in East Africa, which reads: "The price obtained at Hamburg for Liberian coffee, of which 500,000 shrubs have been planted, is, however, not sufficient to pay for the cost of transport and the gardens are for the most part being allowed to go to weed." That plantations are being neglected in other countries is shown by the reduced crops of Java, Venezuela, Mexico, San Salvador, and Nicaragua. From everywhere comes the cry of disastrously low prices, and it seems that over-production will at last work out its own cure. A short crop in Rio and Santos would be a blessing to Brazil, as well as all other coffee-producing countries.

GENERAL ARTICLES.

TEA IN AMERICA:

WHY THE AMERICANS HAVE NOT TAKEN TO OUR TEAS.

(*Extract from last Annual Report of Messrs. W. J. & H. Thompson & Co.*)

Canada takes about 45 per cent. of its import from us, leaving some 13 or 14 millions of Japan and China tea to be displaced. There remain the great markets of Russia and the United States, using annually some 180 million lbs. Of other markets, the Russian is the more hopeful, because it requires black tea, appreciates quality, and is taking more from us every year, by direct importation or from London; it, too, is calling for better tea. Our trade with America continues to disappoint some who had not grasped the difficulty of persuading people who prefer tea uncoloured or green to drink our strong black sorts. The attempt to manufacture tea to suit their tastes is enterprising, but we fear lest it be made in a way which will give trouble and bring disappointment to a number of individual growers, without substantial benefit to anyone. It will take a decade to create a trade worth anything to us by means of specimens, unlike in make or flavour; for large distributors hesitate to introduce a new kind of tea to their customers unless they can rely upon a regular, uniform and free supply. We think that if Americans had this matter in hand on their own account they would rent for a term of years estates capable of producing, at the lowest possible cost, millions of pounds per annum, have it all made uniformly into two or three grades, procure men and materials from China for packing it in the way Americans like, give a constant supply, and undersell their rivals until the trade was made. It would cost money, but it might prove the cheapest and most effectual way of making a market—assuming, of course, that we can make unfermented tea that Americans will drink. Seeing that we have obtained less than 10 per cent. of a trade amounting to 84 million lbs. per annum, after twenty years of heavy expenditure by planters and strenuous effort by the Agents of London dealers, it is obvious that other means must be tried. It has been said that tea is not likely to become in America the popular beverage that it is here and in the Colonies; but it may be that the small and declining consumption in the United States—now only $1\frac{1}{8}$ lbs. per head per annum—is due to the astringent and unsatisfying nature of the Japan and China teas principally used, as compared with the softer and richer tea of India and Ceylon which other races of Anglo-Saxon origin find such a cheap and wholesome article of diet that their annual consumption has reached the rate of nearly 6 lbs. per head. It should be noted how largely the use of tea here has increased since the introduction of our own in place of Chinese growths.

COFFEE IN OLDEN TIMES.

Of coffee, a writer in the *Post* says:—"The introduction of coffee into England was bitterly opposed. In 1675 Charles II. attempted to suppress coffee-houses by a royal declaration, which declared that they were the resort of disaffected persons 'who devised and spread abroad divers false, malicious, and scandalous reports to the defamation of His Majesty's Government, and to the disturbance of the peace and quiet of the nation.' When the opinion of the Crown lawyers was taken as to the legality of his step, the reply was 'that the retailing of coffee might be an innocent trade, but as it was used to nourish sedition, spread lies, and scandalise great men, it might also be a common nuisance.' Down to 1690 all the coffee used and abused in Europe came from Arabia, but in that year the Governor-General of the Dutch East Indies received a few coffee seeds from merchants trading between Arabia and Java, and planted them at Batavia, where they grew luxuriantly. One of the first plants grown in that island, remote in space and time during the epoch of sailing-vessels, was sent to Amsterdam and planted in the Botanic Garden; from which place seeds were distributed at the beginning of the eighteenth century throughout the West Indian Islands. The story of the migrations of the coffee plant throws light on a curious question of natural preferences. The Dutch are a coffee-drinking race; the British, as well as the inhabitants of Greater Britain, seem to strongly prefer tea; but the people of the United States, most of whom have a drop of Duch blood in their veins, regard the rival drinks with equal affection. From one point of view the South African War is really a contest between tea and coffee. Canadians and Australians, and, in a less marked degree, the home-grown British soldier, are inveterate tea drinkers; on the other hand, the Boers are fanatic lovers of coffee. Let the historian get a firm grip of the principle suggested, and it may be that he will see yet another reason for the inevitable result of the attempt to establish Dutch supremacy in South Africa. The quantity of coffee, including both roast and ground, imported into the United Kingdom last year was 764,823 cwt., of which the value was £2,528,465. Roughly speaking, the amount annually consumed per head of population is $2\frac{1}{4}$ lbs.; a very small fraction of the weight annually used by a native of Holland or even Belgium. The British supply is largely derived from the East Indies and Central America, particularly Costa Rica. As is the case with tea, it is sold by auction in Mincing Lane. It is possible to retail coffee at a shilling a pound, but the better varieties cost from sixteen to eighteen pence. The principal wholesale firms generally employ a competent 'coffee expert,' and it is hardly necessary to say that their purchases are selected with the greatest care. Though the demand in this country for pure coffee has grown in recent years—in 1873 little

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

more than a pound per head of population was consumed—the public is still prejudiced in favour of mixtures, in which chicory is, next to coffee, the chief ingredient. In 1900 no less than 97,779 cwt. of chicory were imported into the United Kingdom. The use of chicory in connection with coffee is said by some authorities to be due to the fact that it yields a large amount of soluble matter when boiled, and thus gives an appearance of strength to what may be in reality a very weak infusion of coffee. But, though it contains no trace of the characteristic alkaloid of coffee, and has not the aromatic odour of that substance, there must be some other reason for its popularity. For more than a century it has held its own as a substitute or addition to coffee, and in Belgium and other parts of the world its pure infusion is often consumed with every appearance of gratification on the part of the consumer. In the United Kingdom the working classes will not touch coffee unless chicory is present as a 'vehicle.' The truth is that technical education has not gone so far as to teach them how to make coffee properly."

COFFEE.

To the bull clique operating in coffee the ever-increasing supplies of Rio and Santos must, says the *London Commercial Record*, have been a source of great anxiety and care, and as in spite of the heaviest supplies on record, the market has not collapsed, but, on the contrary, has steadily advanced, these operators for an advance must have congratulated themselves upon their good fortune. An increase of about 60,000 tons in the world's visible supply would, under ordinary circumstances, more than suffice to disturb the equilibrium of any market, to say nothing of coffee, which is generally regulated by figures only. But the saying invented by a well-known London coffee broker, "The bigger the receipts, the better the market," has proved correct once more, although it seems contrary to common sense that heavy supplies should form an impetus to values. No doubt the custom to discount big figures has become pretty general in every trade whose basis is speculation; bulls perceive in extraordinarily heavy receipts a quick and short road to unusually small supplies, and therefore buy. It is the same in cotton, sugar, and also in tea and many other speculative articles as well. People look ahead and operate accordingly. Yet people wonder what becomes of these enormous quantities of coffee grown every year—11 to 12 million bags alone in Brazil—and are astonished that, in spite of the increased consumption of tea and cocoa, a steady extension of coffee planting should be possible. If we look at the gigantic strides teetotalism is making in almost every country, we find an explanation of the increase in consumption of beverages belonging to this movement. People, particularly so in our island, are quickly being educated to appreciate coffee as a pleasant and stimulating beverage, as is clearly evident by the endless number of coffee palaces established everywhere. With the increased demand and the improved taste for coffee, the old-fashioned and obnoxious method of preparing the drink is quickly vanishing and with it the objectionable practice of adulteration. The black, thick, boiled concoction, largely adulterated with ground Indian corn, broad beans, rice, chicory, etc., called coffee, is almost a thing of the past, even in private houses in England, and a tasteful blend of pure coffees has taken its place. That means an increased consumption of the real article here, there, and everywhere, and with it a steady decrease of the enormous supplies. Following the ordinary course of events, every year will produce a greater request for fine coffees, the palates get spoilt and long for something better. Then the fine, colonry sorts of India will become favourites once more, and people will gladly pay the premium demanded for them over and above other descriptions. In the meantime, Indian planters have to contend against many adversities, short crops, inferior quality, and low prices, which have greatly, and, we fear, in the immediate future will still try their vitality severely, but matters at last promise to turn in their favour.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

THE U. S. TEA TRADE.

It appears, from the reports of the United States Bureau Statistics, that the total imports of tea for the fiscal year endi June 30, 1901. were 90,381,270 pounds, received from the followi countries:

	Pounds.
Chinese Empire	46,867,436
Japan...	33,493,312
United Kingdom	3,491,720
East Indies	2,893,864
Other Asia and Oceanica	2,347,038
British North America	1,256,543
Other countries	31,357
Total ...	90,381,270

China furnished about 52 per cent. of the total supply; Japan, per cent.; all other countries, 11 per cent. The imports from t United Kingdom, East Indies, and other parts of Asia and Oceani (other than China and Japan) were 8,732,622 pounds, again 3,988,789 pounds two years previous. As this is mostly Britis grown tea, it is apparent that its consumption is increasing rapidl or imports would not show a gain of over 118 per cent.

The following statement shows the position of the article:

		Pounds.
In warehouses, June 30, 1900 ...	...	29,425,381
Imports, June 30, 1900, to June 30, 1901	...	90,381,270
Total supply...		119,806,651
Less exports	... 1,296.323	
Stock in warehouses, June 30, 1901	...36,753,264 =	38,049,587
Deliveries ...		81,757,064

The above represents a per capita consumption of 1·08 pound against 1·09 pounds in 1900. Ever since the 10 cents per pou duty was levied, the consumption has decreased. From 188 1897 (inclusive) the per capita consumption varied from a minimu of 1·09 pounds to a maximum of 1·58 pounds. The average for th period was 1·26 pounds, against 1·02 pounds for the last four yea Here is a serious falling off, and reason enough why the tea tra is so unsatisfactory. Evidently a higher average quality is not factor in increasing the use of tea, although it should be.—*Americ Grocer.*

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exhange, *August 10th*, 1901.—Ninety days' Bank rate on Lond opened on Monday 5th at $10\frac{3}{8}$ and closed this evening at $10\frac{1}{4}$d.

Extremes during the week ending August 9th were 10d $10\frac{23}{32}$d for 90 d/s Bank paper and $10\frac{1}{16}$d—$10\frac{3}{4}$d for private.

The average Bank 90 d/s counter-drawing rate for the we comes out at $10\frac{19}{64}$d the corresponding sight rate being $10\frac{1}{6}$ against $10\frac{17}{64}$d, the average sight rate of the *Camara Syndical*.

At Pará entries of rubber are yet small, shipments from bo Pará and Manáos during the week ending 9th instant amountin to only £85,000.

Coffee.—Compared with the previous week, entries at Rio a Santos show a falling off of 2,577 bags, owing entirely to the b weather reigning up country, which has greatly interfered with t harvesting and especially with the drying of the coffee. So far t current crop has given 1,990,638 bags or about 63% more than la season.

Declared sales were 243,000 as against 221,000 the previous we and 188,000 last year.

In spite of heavy shipments stocks are rapidly accumulating a still exceed a million bags as against only 784,398 this time la year.

The report of the *Boletim de Agricultura* of the State S. Paulo for the month of June states that at S. Paulo the temper ture was abnormal, the average having been only 13°7 as compar with 14°5 the previous average, though in 1889 the average fell low as 12°9 and 12°2 in 1894, the lowest average in June for years. The maximum temperature during June was 26° on t 30th, and the minimum 2°4 on the 17th. The quantity of ra

fallen was small, only 13·6 mm. as against the previous average of 64 mm. There, rain fell on 3 days as against the normal of 9, whilst 17 days were clear and the rest cloudy. No frost fell.

At Campinas the average temperature was 14°99 c. or 0°86 under normal, the maximum being 18°38 on the 30th, and the minimum 10° c. on the 17th.

The Inspector of the first district reports that harvesting during the month of June was well advanced and that the yield will be as great or greater than last year.

The Inspector of the 2nd district (Campinas) states that frost fell on the 11th, 17th, 18th, and 19th on low lying lands without injury to the coffee.

The Inspector of the 3rd district confirms his former prediction that this crop would be less than last, a good deal of the fruit that seemed so promising having in many instances failed to ripen or fallen off the trees.

The Inspector of the 4th district reports that harvesting commenced from April to June for which the weather was very favourable. Of the coffee already milled it was found that 75 litres produced only about 1 arroba in consequence of the large percentage of hollow berries (*chochos*).

From the 5th district the Inspector reports that harvesting is in full swing but that a good deal of green coffee is being picked with the ripe. In consequence of the large percentage of the hollow and burned (*requeimado*) fruit, the Inspector says that the crop will not come up to what was expected, but will be a good one, but that two such heavy crops must inevitably affect next year's crop.

PARÁ RUBBER IN BURMA.

The following is the text of a Memorial sent by the Planters' Association of Ceylon to the Secretary of State of the Colonies on the subject of experimental cultivation of Pará Rubber in Burma :—

To the Right Hon. Joseph Chamberlain, M.P.,
His Majesty's Secretary of State for the Colonies,
Downing Street, London.

The humble Memorial of the Planters' Association of Ceylon, and others.

Respectfully Sheweth :—

1. That your Memorialists, having received information that the Government of India is taking steps to develop the cultivation on a large scale of Rubber-producing trees in Burma notably the Pará rubber tree -- Hevea brasiliensis, Mull. Arg—in the Tenasserim division of Burma, desire to bring the question under your consideration.

2. Since 1880, when the late Director of the Royal Botanic Gardens, Peradeniya, drew up notes on some trees yielding India-rubber, considerable interest has been taken in the cultivation of rubber both in Ceylon and in the Straits Settlements, and your Memorialists now aproach you in the hope that His Majesty's Government may make such representation as will prevail upon the Government of India not to enter into the field as competitors with private enterprise in the Markets of the World.

3. In a report of the Planters' Association of Ceylon a few years ago the following sentences appear :—"The increasing demand for rubber both in Europe and the United States has again of late drawn the attention of the planting community to this product, and the area being planted with the Pará variety is rapidly increasing Several of the lower district estates have a fair acreage under this cultivation" Since the above was written the planting of Pará and other varieties of rubber yielding trees has been considerably extended and from the returns furnished for "Ferguson's Handbook and Directory" it has been estimated that there are now over 2,500 acres planted with trees of all ages and varieties in Ceylon alone.

These trees have in most cases been planted on tea and cacao estates as a subsidiary cultivation with a view to mitigate the losses sustained by planters through the serious decline in the price of tea.

The following is from a report of Mr. Willis, Director of the Royal Botanic Gardens, Peradeniya, dated 1898 :—"From what I saw of the condition of the trees and the results of the tappings, I am strongly confirmed in my previous opinion that the cultivation of rubber bids fair to form a profitable industry in Ceylon and a useful adjunct to the larger industry of tea and cocoanut cultivation." In his report for 1899 Mr. Willis points out that six or more years must elapse before any returns are forthcoming, and warns planters that in a few years substitutes for rubber may be largely used and cause a drop in the price

The above is quoted as showing that the results of private enterprise in the planting of rubber would not be apparent for some years, meanwhile it is known that considerable quantities of seed have been exported to the Straits and elsewhere, so that it can hardly be necessary to commence an extensive experimental plantation in a similar climate and under similar conditions.

4. In a recent report of the United Planters' Association, Malay States, the following sentences occur :—"Rubber (Hevea brasiliensis of Pará). This variety of rubber continues to come on exceedingly satisfactorily, the average growth of trees from nine months upwards amounting to about 1 foot per mensem, whilst at three years their average circumference at 3 feet from the ground is about 16 inches This far exceeds anything reported from Ceylon and other countries where Pará is being planted, and we consider that Mr. Curtis' description in the 1900 annual Report on the Botanical Gardens of the Colony, of the tapping of the 15-year old Pará tree in the Gardens at Penang, is conclusive evidence of the contention of the writer 'that in this cultivation lies a source of wealth of the greatest importance.' In two years 12½ lbs. of dry marketable rubber were procured 'without any apparent injurious result to the health of this tree, and the conditions under which it is growing are reported as anything but favourable. It appears in the opinion of the different Directors of the Botanical Gardens, that the size of a tree more than its age indicates its fitness for tapping, and probably a circumference of 30 inches 3 feet from the ground is the limit at which attempts to extract the rubber should be commenced. Reports from London show that prices of Pará have, of late, declined, one reason alleged being the falling off in the demand for bicycles; but in Pará rubber we have undoubtedly the most valuable and highest quality rubber in the world, and your Committee feel that the large number of trees amounting now to several millions, planted in the Federated Malay States, must, in the not very distant future, prove a source of revenue which will largely recoup the planters for the losses which they have sustained through the decline in value of Liberian coffee."

5. From the above quotations it seems plain that the success of the planting of Pará rubber in a suitable climate is apparently assured and that, therefore, no extensive experimental plantation of 5,000 acres is necessary, and your Memorialists submit that Government rivalry with private enterprise in the production of rubber is to be deprecated. The industry is already threatened with the production of cheap substitutes, and prices are declining and it is felt that the production by the Government of India of such a large amount as is likely to be secured from the plantations in contemplation would be a serious and undue competition with private growers who have, as it is, to contend with the enormous productions of the indigenous trees in the forests of South America and East and West Africa.

6. An authoritative statement that the Government of India had no intention of placing rubber on the London market nor competing with private enterprise by large operations, would, of course, tend to remove any cause for alarm. In 1882 representations were made to your predecessor Earl Kimberley on the subject of Government sales of Cinchona bark, and at that time Government was asked to obtain all possible information regarding the Indian plantations, and the intention of Government as to the future disposal of the product of the Cinchona tree. Government then gave a distinct assurance that it was not intended in any way to interfere with the ordinary course of trade or to do anything prejudicial to private interests. The two cases seem to be sufficiently analogous to call for similar treatment, and your Memorialists venture to express a hope that His Majesty's Government will respond to the representations submitted.

7. Wherefore your Memorialists pray that the present position of British-grown rubber producers may be considered by His Majesty's Government, and that any necessary action may be taken in the matter. And your Memorialists, as in duty bound, will ever pray. On behalf of the Memorialists.

(Signed) A. Philip, *Secretary.* (Signed) Edward Rosling, *Chairman.*

Kandy, Ceylon, *3rd September.*

THE AMERICAN TEA TRADE.

NEW YORK, *August 17th.*—When Sir Thomas Lipton goes to Brooklyn after his arrival in New York to take a look at "Shamrock II." he will pass a long row of warehouses which seem to have outlived their usefulness, and if he asks what they represent he will be told that they are reminders of a departed industry, one of whose features was the housing of a product which has made it possible for Sir Thomas to gain a title and indulge in international racing.

At the last meeting of the stockholders of Sir Thomas Lipton's company there were expressions of dissatisfaction at the diminished dividends, and some of the stockholders were even inclined to twit Sir Thomas, intimating that if he paid more attention to his company and less to sports his stockholders might get greater dividends, even if he himself did not win the favour and companionship of the King.

But Sir Thomas' explanation to his stockholders would furnish a part of the explanation for the deserted appearance of the warehouses along the Brooklyn water front. The idea contained in his remarks was that he grieved to discover a falling off in the fondness of civilized people for tea, and that it was a tendency which, unless checked, would some day make it unprofitable either to grow or to import tea.

TENDENCY CAUSES GRAVE ANXIETY.

It is certainly a tendency that has been noticed in this country and recently has been so strongly developed that the gravest anxiety in circles that used once to make much money in the tea trade has been created. Recently an attempt was made te discover through questions put to men of life-long experience in the tea trade what it was that had caused a depression in that trade that could only be compared with the depression that existed in all trades in 1893.

Some of the answers were given by men who have reasons, so they think, to be dissatisfied with the imposition of the tariff of 10 cents a pound, but the great majority who replied to the inquiry stated it to be their belief that the people of the United States were very rapidly giving up the tea-drinking habit and that coffee was more and more taking its place.

The recent figures that have come from Washington to some extent tend to prove the truth of this assertion, for these figures show that the people of the United States consumed nearly 800,000,000 pounds of coffee, valued at nearly, $53,000,000, in the year ended June 30th, 1900, whereas they consumed only 84,000,000 pounds of tea, valued at about $10,000, 00, and this was a considerable falling off from earlier days.

Grocers and dealers in spices, both retailers and wholesalers, do not hesitate to say that the taste of the American people is changing and that it will not avail the Secretary of Agriculture to try to encourage the tea-planting industry in that peculiar soil in parts of the South where the agricultural scientists say it may be successfully cultivated.

SOME GREAT CHANGES IN NEW YORK.

Up to six or seven year ago the great warehouses along the Brooklyn water front earned handsome dividends, part of which were obtained through the storage of tea. But these now comparatively silent and deserted buildings do not wholly or even in greater part lay their recent mercantile senility to a change in the taste of the American people with respect to their table beverage. They owe it to one of those remarkable changes so many of which have been under development in the past five or six years. And it is due in great measure to these changes that the falling off in the proportionate part of American commerce which New York city has experienced in recent years is to be traced.

Our Trades' Associations, our Chamber of Commerce, some of our Press, and the Government have recently taken occasion, in view of the figures that tell of New York's foreign commerce and that of the whole country, to attempt to agitate in favour of some legislative or commercial plan whereby this threatened loss of supremacy may be averted. It used to be the case that New York's commerce was more by a good many millions than that of all the other American ports put together, but the figures of last year show that although New York still has many millions more of foreign commerce than any other American port, yet of the increase of $30,000,000 this city gained only about $700,000.

DOWNFALL WAS FORESEEN.

Many of the influences that have caused the former profitab warehousing business along our river front to become practical dead are also accountable for this change in the relation of Ne York's foreign commerce of the whole country.

Some ten years ago the officers of one of the greater trust co panies of this city went to a man of wealth in New York, a gre merchant, a successful financier, who had also had a conspicuo part in the politics of his party, and asked him to join with othe in the underwriting of a proposition that contemplated the comb nation into one corporation of all the storage warehouses. He w shown figures that told of most tempting profits, and was told th economies through combination would increase these profits or 40 per cent. But his reply to the tempters was, "No, t steamship has put an end to the warehouse business."

They laughed at him, but his statement was true. In the d days, when the sugar importers brought their cargoes to New Yo by means of sailing vessels, they could not tell within two week or even thirty days, when they might expect the cargo. To-d the steamship arrives upon the dot, and a business amounting hundreds of thousands of dollars a year, furnished by the sug refiners to the warehousemen, is lost to them because there was longer any need of providing storage. What is called prima storage has taken its place. The same is true of cotton, and many other products, and, although the storage-warehouse schem was financed and capitalized for something like twenty millio yet, after a few years, the combination fell to pieces, for it had be demonstrated that warehousing, formerly so profitable, the mea by which several men became multimillionaires, is now almost dead as the stage coach.

BOSTON GAINS THROUGH VANDERBILT.

Vanderbilt, when he reached over into Massachusetts a captured the Boston and Albany railroad was presumed to ha done that partly for speculative purposes and partly that he mig command all of the Boston and Albany traffic to and from the We for the New York Central. Boston was frightened, however, a the authorities of Massachusetts and of the Municipality were n willing to consent to the absorption of the Boston and Albany the New York Central unless pledges were given that the Centr was not to divert traffic from Boston to New York. Vanderb and his friends looked serious, but those who were very near that group detected a merry twinkle in their eyes as they mo gravely and with utmost dignity informed the Boston and Mass chusetts authorities that they did not intend to divert traff Had the New York trades organizations or Chamber of Commer visited Mr. Vanderbilt and his associates for assurances th traffic was not to be diverted from New York to Boston there wou have been no merry twinkle in the eye, and seriousnesss would n have been seen. For the Boston and Albany was secured chie to enable the New York Central to command, if not bett at least cheaper terminal facilities for its ocean-bound traf than New York has ever permitted, and exactly what Bost and Massachusetts were pleading for was what Vanderbilt a his associates had in mind. When the terminal facilities East Boston are perfected, and when the Vanderbilts comma their own ocean steamship line, as they undoubtedly will, th New York will wake up to the fact that Boston has been the gain and the metropolis has been the loser by reason of this absorpti of the Boston and Albany.

GOULD'S EYES ON PHILADELPHIA.

Gould is believed here to intend to make Philadelphia t Eastern terminal of his transcontinental system. And the reas why he seeks Philadelphia rather than New York is that believes that natural and artificial conditions are tending more a more to build up other ports upon the Atlantic coast at the expen of New York. The terminal charges at New York are excessiv At Philadelphia, Boston, and Baltimore they are not. In additi to that it is a shorter haul from grain, cotton, coal, and tobac belts to some of the more southern points upon the Atlantic, th to New York city, and the Government itself, recognizing th has expended millions in improving river and harbours.

Just as the steamship, now so greatly used in almost all oce commerce, brought doom to the once most profitable bond warehouse of New York, so the steamship has developed t commerce of Boston, Philadelphia, Baltimore, New Orleans, a Newport News at the expense of New York.

CHINA TRADE GROWING SMALLER.

It was not this, however, that has practically destroyed or at least greatly impaired the China tea trade both here and in Boston. A few years ago the great mercantile house of which Carter was the head, and which for years had been chief among the importers of tea, gave up that business completely and took up in the place of it the importation of asphalt. Another house of world-wide fame instituted by the father of President Seth Low, and which brought to the Low family fortunes of millions, has also completely given up the tea-importing business, not because the steamship and the Pacific railway have furnished a swifter and a cheaper way of bringing tea to our market, but because the house has recognised that the tea-drinking habit seems likely to become almost as traditional as the snuff-taking habit. The reduced importation of tea and the very great change in the foreign commerce in cotton in part account for the diminution of New York's prestige as a commercial city.—*Philadelphia Post.*

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

Extract from an abstract of the proceedings of a meeting of the General Committee held on 10th September, 1901. PRESENT :—Messrs. H. S. Ashton (*Chairman*), A. Tocher (*Vice-Chairman*), H. C. Bagg, H. W. Boyd, W. Brown, A. C. Lawrie, R. Magor, and R. R. Toynbee.

Considered letters of 4th, 6th, and 7th September, from Messrs. Kilburn & Co., Secretaries, Durrung Tea Co., Ld.; Messrs. Kettlewell, Bullen & Co., Managing Agents, The Mothola Co., Ld.; Messrs. Octavius Steel & Co., Secretaries, Kalacherra Tea Co., Ld., Loobah Tea Co., Ld., and Eastern Cachar Tea Co., Ld., regarding the statement of the tea crop which is published annually by the Association as soon as possible after the 15th August. In each of these letters the suggestion was made that the publication of this statement should be discontinued; for the Directors of the Companies named were of opinion that it served no useful purpose, by reason of the fact that the figures given in it were always more or less unreliable. In two of the letters enquiries were made as to manner in which the statement was compiled. And in three it was suggested that only the actual returns of tea manufactured to 15th August should be published.

Judging by several of these letters, there appeared to be some misconception in the minds of members of the Association both as to the position of the Committee in regard to the statement, and as to the manner in which the latter was compiled. In order that these misconceptions might be removed, the Committee decided to forward to each of the Companies named a copy of the following resolution, which was carried at the Annual General Meeting of the Association held on the 16th August, 1898, *viz.* :—

"That with the view of obtaining greater exactness and reliability in the estimates of the tea crop, the first statement of figures shall not be issued until it is also possible to give details of the tea manufactured up to 15th August, and that no further statement be issued until the actual outturn of the crop is published."

The statement in question was issued annually by the Committee under the authority vested in them by this resolution. It was not for them to discontinue the publication of the statement or to modify it in any way while the resolution remained in force. The proper procedure to be adopted by those members who thought that the statement should not be issued again was, therefore, to propose a resolution to that effect at the Annual General Meeting which would be held in February or March 1902. The Committee, as a body, were not disposed to express an opinion upon the matter, because it was one which was entirely in the hands of the members of the Association.

Regarding the compilation of the statement it was to be pointed out to the Companies named above that the only items of production which the Committee estimated for were (1) Kumaon 300,000 lbs., and (2) "Gardens from which no returns have been received and private and native gardens" 11,500,000 lbs. The figures given for Assam, Cachar, Sylhet, Darjeeling, the Terai, the Dooars, Chota Nagpore, Chittagong, Kangra Valley, and Dehra Dun were not estimated by the Committee. They were merely the totals of the returns which had been furnished by Tea Garden Proprietors and Agents in response to the Committee's Circular No. 52 of 1st August. The items of consumption estimated for by the Committee were (1) Foreign markets 25 millions of lbs. (the actual figures for 1900), and (2) local and trans-frontier consumption 9 millions.

A letter from a firm of buyers, making certain enquiries respecting the compilation of the statement, was also to be replied to in conformity with the foregoing.

Considered a letter dated 30th August, from Messrs. Aitken Spence & Co., Colombo, with reference to the question of the respective advantages of Singapore and Colombo as ports of transhipment for Indian teas to Odessa. In the letter figures were quoted with the object of showing that more favourable terms could be secured by transhipping at Colombo than at Singapore. An offer was also made to furnish any further information that might be desired.

These figures were inaccurate as far as Singapore was concerned; and the Committee decided to point this out to Messrs. Aitken Spence & Co. A correct comparison of the terms as between the two ports was also to be sent to them. This comparison showed that the through rate *viâ* Colombo was Rs.39; and *viâ* Singapore Rs.36-8. The difference was therefore in favour of the latter. It was further to be suggested that it would be advantageous hereafter if a through Bill of Lading, between Calcutta and the Black Sea ports, could be arranged for. Reference was also to be made to the fact that some of the Liners were prepared to book tea for Russian ports with transhipment at Port Said, guaranteeing that it would be taken on in vessels flying the Russian flag. The rate quoted was 47s. 9d. Messrs. Aitken Spence & Co. were to be asked if they could offer more favourable terms *viâ* Colombo than these or those available by the Singpore route.

Considered a letter No. 1161 of 24th August, from the Secretary, Bengal Chamber of Commerce, forwarding a copy of a communication from the Government of Bengal, in which a list of those Railway projects recommended by the Chamber for inclusion in the Imperial Railway Construction programme was asked for. The Committee of the Chamber stated the recommendations which they proposed to make; and enquired if this Association wished to urge the construction of any other lines.

After discussion the Committee decided to advocate the following projects:—

(*a*) A line connecting the Eastern Bengal State Railway at Dhubri with the Assam-Bengal Railway at Gauhati. In the opinion of the Committee the construction of this line was of greater importance than that of the hill section of the Assam-Bengal Railway at present being proceeded with.

(*b*) Certain feeder lines to railways and rivers in Assam.

(*c*) A line from Quetta to Seistan on the Nashki-Seistan trade route. The Committee regarded this project as of special importance in connection with the attempts being made to develop Indian trade with Persia.

Considered a letter No. 741 of 29th August, from the Honorary Secretary to the Central Committee of the Pasteur Institute of India, asking that a suitable annual grant should be made by the Association to the funds of the Institute. The Committee fully recognised the valuable character of the work being done at the Pasteur Institute. It was not, however, an object to which, in their opinion, the funds of the Association could be properly devoted; and they therefore regretted that they could not sanction a grant.

A STORY OF THE CENTURY.

Here is a quotation from an old friend of mine and of yours—a doctor, one of the wisest, most kindly-hearted, and successful of the men who compose his useful profession.

"One thing," he says, "I have been telling my patients for the past forty years, that, so far at least as the science of medicine is concerned, the human mind is merely a name for a group of brain functions. The food in the blood acts chemically upon certain nerve centres, and this is mysteriously worked up into what we call reason. In other words, the condition of the mind depends upon that of the body.

"For example," continues the doctor, "there are people who are troubled by irritability, great mental depression, sleeplessness, mental hallucination, and those symptoms expressed by the general term '*nervousness*' (and who also fear insanity), who might either avoid such sufferings or be cured in a month, if they but knew that at the bottom of the whole business lie the poisonous products of imperfect digestion. *Ninety per cent. of all the cases of mental and nervous ailments in persons under fifty are directly due to dyspepsia.*"

Now we will listen to Mr. George Bath.

"For many years," he says, "my life was marred and spoilt by indigestion. At first only slight, the attacks became more and more severe as the years rolled by, until at last I was a mere physical wreck, a ready prey for every disease. My head was racked with pain, fierce darting, stabbing, rending pains, that almost drove me frantic. I had no relish for food, and what morsel I did swallow filled my body with wind and caused a most oppressive sense of fulness on the chest.

"What with a distressing sense of sinking in the stomach, and a constant feeling of sickness, through the foul state of my tongue, I felt, as I looked, 'of all men most miserable.'

"This wretched existence—it wasn't life—I dragged on for *twenty years* with just a short respite now and then. Each year the disease tightened its grip, sapping my strength and vitality. Doctors examined me and gave me medicine. They lightened my purse but not my ills. At times I turned quite dizzy and faint, and got so nervous and depressed that I scarcely dared venture out of doors.

"My whole nervous system seemed unstrung; the slightest noise distressed me. Why, the ticking of a clock, in *another room*, was sufficient to keep me awake for hours, and a knock at the door would make me jump and tremble all over.

"Friends shook their heads as they saw me tottering about more dead than alive, and said 'Bath has not long to live, poor fellow.' That was six years ago, but I'm alive still and very much alive too. Why, I seem to be getting younger every day. Though I am now seventy years of age, I am so brimful of energy and animal spirits that I feel equal to anything. It was Seigel's Syrup that wrought the change, nothing else; I owe my life to its wonderful power.

"Now, forty clocks ticking wouldn't spoil my sleep, and food must be very indigestible indeed to upset me. I would rather lose £50 than be without Seigel's Syrup, for it has made a man of me, and added years of happiness to my life." George Bath, Trefusis Villa, Windmill Road, New Brompton, Kent. April 25th, 1900.

No word of the writer's can add one jot or tittle to Mr. Bath's frank and eloquent statement, the truth of which is vouched for by many independent witnesses, among them being Mr. John Scrace, Relieving Officer, Medway Union, Chatham, and Mr. A. Durrant, Short Street, Luton Road, Chatham, to both of whom Mr. Bath is personally known.

Now turn back to the quotation from the old doctor, and you will learn what Mr. Bath's disease was. No, never mind, I will set it down here—it was dyspepsia. Oh, if my voice could but reach all the suffering men and women in dear old England, how I would shout to them the old doctor's deep saying and the story of Mr. Bath's illness and cure. But, as it is, we must take the chances of their seeing this report in print.

MARKET REPORT.

[*Per Mail advices of 6th September* 1901.]

COFFEE.

The London Commercial Record says:—The public market has again been very sparingly supplied during the week, and has a steady demand from the trade has prevailed prices show a further improvement of 1s to 2s per cwt., closing with firmness at the advance. Ceylon realised very firm rates, whilst the East India sold with active competition at the above advance. Nyassaland also went off readily. Washed Dumont Santos brought about valuations. The market for "futures" has shown some fluctuations, but the latest prices exhibit little alteration for the week; yesterday Santos December delivery sold at 28s 6d to 28s 4½d, March at 29s, and May at 29s 4½d per cwt. The sales to-day went off well with good demand. East India and Vera Paz of good quality 1s per cwt. dearer; supplies were restricted to 659 bags of the former and 619 bags of the latter.

Rio Exchange 10⅛d, previous day 10⅛d.

HAVRE, *September* 5.—Good average Santos September opened steady at 34f. and closed steady at 34f. December opened at 34½f. and closed at 34½f, March opened at 35¼f. and closed at 35¼f., May opened at 35¾f. and closed at 35¾f., July opened at 36f. and closed at 36f.

HAMBURG, *September* 5.—Good average Santos September opened steady at 27¾pf. and closed at 27¾pf., December opened at 28¼pf. and closed at 28¼pf., March opened at 29pf. and closed at 29pf., May opened at 29½pf. and closed at 29½pf., July opened at 30pf. and closed at 30pf.

NEW YORK, *September* 5.—Closing prices of No. 7 Rio were as follow:—

	Sept.	Oct.	Nov.	Dec.	Jan.
September 5...	4·70	4·75	4·85	5·00	5·05
September 4...	4·70	4·80	4·90	5·05	5·10

TEA.

INDIAN.—Rather more was brought forward, *viz.*:—29,800 packages (of which 7,400 packages were offered on Wednesday at the first private auction), compared with 25,600 packages in the preceding week and 32,700 packages in the corresponding time a year since.

Demand continued to run on parcels with point and character, which in the majority of instances maintained their former value. On the other hand, however, those with plain and poor liquor, were less wanted and quotations for such further declined, and now show a marked difference on those current for earlier arrivals from the same garden.

For 23,800 packages on Estate Account 8½d per lb. was obtained, contrasted with 8½d per lb. for 28.800 packages and 8⅝d per lb. for 37,900 packages in the two preceding seasons.

CEYLON.—Catalogue included 24,200 packages *versus* 25,400 packages the week before, and 21,900 packages twelve months ago.

The selections being on the whole desirable met with considerable attention from the trade and, with the exception of common leafy kinds which did not alter much, there was a firmer tone generally. Enquiry for fine and finest Broken Pekoes and Broken Orange Pekoes was strong, and in many cases after keen bidding the most attractive lines brought higher rates. Buyers for outside markets took a fair proportion of suitable lines, though orders did not appear to be so extensive as usual.

The average is 7d per lb. On the 29th ultimo it was 6⅞d per lb., and 7d per lb. in 1900.

JAVA.—In the absence of sales of direct import there is nothing to report. Nearly 1,500 packages are advertised for the 12th instant.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 31st August,	1901	... ...	16,316,896 lbs.
Do. do.	1900	... ...	15,412,766 „

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	25,136	4,698	29,834
Ceylon	22,868	1,323	24,191
Total ...	48,004	6,021	54,025

Also 672 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated September 6th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	211,987	355,336	18,625
1900-1901	196,584	375,070	13,095

30,139 *pkgs.* INDIAN
24,590 „ CEYLON
267 „ JAVA
} Total 54,996 packages were offered in public auction this week.

Imports of all tea since the 1st June are less than the same period last year, while indications from India and Ceylon point to a further reduced supply.

INDIAN.—Monday's sale passed rather irregularly, any slight change being in favour of buyers; the firmest kinds were teas with good quality. On Wednesday the first auction under the new conditions was held, totalling 4,475 packages, which passed at fairly steady rates.

The official telegram estimates the season's crop at 184,250,000 lbs., against 187,527,435 lbs. last season; the quantity available for the U. K. 150 millions, against 160,487,154 lbs. shipped to U. K. last season, and gives the out-turn to mid-August as 77,250,000 lbs. Travancore is not included in any of the above figures.

Export to U. K. for second half of August (with Chittagong, 2,065,650 lbs.) was 14,105,650 lbs., against 13,700,000 lbs. same period last year, and from 1st April to end of August 50,009,330 lbs., against 55,840,000 lbs. in 1900. The following averages are worthy of note:—"Darj. Co. Phoobsering," 1/4½; "Amal. E. Co. Nagri & Dooteriah," 1/4 and 1/3½, respectively; "Brit. Darj. Co. Pussimbing," 1/3¾; "Badulipar," 1/3; and "Ass. Fron. T Co. Hilika," 1/2¼.

Week's average of New Season's Tea sold on Garden Account, 1901, 23,823 pkgs., av. 8·47d. 1900, 29,355 pkgs., av. 8·37d.

New Season's Tea sold on Garden Account 1st June to date, 1901, 127,951 pkgs., av. 8·39d. 1900, 150,931 pkgs., av. 8·14d.

CEYLON.—22,511 pkgs. were brought forward on Tuesday, and 2,079 packages on Thursday. The market was strong, and prices tended to harden, especially for better liquoring kinds; the improved quality now arriving continues to attract attention. The official telegram gives exports to U. K. for August as 6,000,000 lbs., against 7,500,000 lbs. same month 1900, making from 1st January to 31st August 73,750,000 lbs. against 81,500,000 lbs. The estimate for September is 6¼ million lbs., against 5,000,000 lbs. shipped in September, 1900.

Average for week 6·93d., against 6·81d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 831,696 pkgs., av. 6·59d. 1900, 879,615 pkgs., av. 7·20d.

JAVA.—1,474 packages are advertised for sale next week.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

The weekly auctions on Tuesday presented 5,920 bags for public competition; there was not much animation in the bidding, except for the fine grades of West India (which went off well at full prices), and the total quantity sold under the hammer did not exceed 2,350 bags. The supply of Trinidad totalled 2,509 bags of which about 1,000 bags sold; the desirable lots realised quite recent values, but common qualities were not wanted; very fine red brought 72s 6d to 73s 6d, middling to fine 66s to 70s, and common 63s to 63s 6d. Of 1,499 bags Grenada 610 bags sold—fine 64s to 65s 6d, fair to good 60s 6d to 63s; in this case also the demand ran principally on the better lots at firm prices. 56 bags Demerara mostly sold at 63s to 68s 6d for fair to fine bold red. 9 bags Dominica brought 60s 6d. Of 175 bags Jamaica 65 bags sold—good 63s, common to fair 59s to 62s. 39 bags Puerto Cabello about half sold at 81s 6d. 74 bags Caraquez Guayaquil found a buyer at 64s 6d to 66s. 304 bags Venezuelan mostly sold—unclayed 68s to 70s. Of 739 bags Ceylon about 250 bags sold at about recent rates:—good medium red 71s 6d to 72s, brownish to fair 61s to 66s, small 45s 6d to 55s, and blacks 40s to 42s per cwt. The bought in lots comprised—117 bags Bahia, 102 bags Colombian, 23 bags Costa Rica, 59 bags Pará and 211 bags Haiti. Privately a good enquiry prevails at firm prices, sales including 500 bags Trinidad at auction rates, 200 bags Grenada at 61s to 64s, 80 bags African at 60s, 200 bags Haiti at 54s, and 250 bags Guayaquil—greyish Caraquez at 65s to 66s, greyish Machala at 65s, and good Arriba at 77s per cwt.

PEPPER.

BLACK.—The market has assumed a firmer appearance, and value has improved. About 100 tons Singapore have been sold for arrival, including near at hand parcels at 6 1/16d, and Sept.-Nov. shipment at 6 3/32d to 6⅛d. Some business has also been done on c.i.f. terms for the Continent at 6d. On the spot sales of fair Singapore have been made at 6d, and a little lot of good to fine heavy Ceylon at 6d. to 6⅛d.

Auctions on Wednesday presented 80 bags light and shelly, which realised 5⅜d. to 5½d. 20 bags Ceylon, fair to good heavy brown, sold at 6d. to 6½d per lb.

To-day firm but sales unimportant.

The shipments of Black Pepper for the month of August compare as follows:—

	1ST-HALF.				2ND-HALF.			
	1901.		1900.		1901.		1900.	
	Tons.		Tons.		Tons.		Tons.

United States ...	...		20		110		50	
Total ...	310		810		290		310	

WHITE—Is also dearer, and more enquired for. For arrival 50 tons Singapore are reported sold, *viz.*, Aug.-Sept. and Sept-Nov. shipment at $8\frac{5}{13}$d, and Penang Sept.-Nov. $8\frac{9}{32}$d. On the spot sales of fair Singapore have been made at 9d, and fair Penang at $8\frac{9}{16}$d per lb.

The only offering at the public sales on the 4th instant was 1 bag Ceylon; 9d. per lb. was paid for it.

The shipments of White Pepper for the month of August compare as follows:—

	1ST-HALF.				2ND-HALF.			
	1901.		1900.		1901.		1900.

GINGER.

COCHIN—Still hung fire, and all the wiles of holders could not extend business under the hammer. 121 cases 478 bags were offered, but only 7 bags damaged washed rough sold, at 35s to 36s 6d Bold and medium cut and scraped was held for 80s to 85s, medium and small ditto for 60s to 65s, and washed rough for 38s to 40s per cwt. Privately, however, a good business (some 2,000 bags) has passed at 38s for good washed, and 38s 6d per cwt. fo rough Calicut sorts.

No *Jamaica* catalogued.

QUININE.

The expected reduction in the official price of quinine wa announced on Saturday last, when English and German maker lowered their quotations by 2d per oz., and the latter now quot sulphate in bulk at 1s 2d. Howards' price is now 1s 3d in bulk and 1s 5d in vials, for not less than 1,000 oz. Whiffen's quote 1s 2d. Quinine salts have also been reduced, and now stand as follows, the prices referring to 100-oz. tins: Acetate 1s $8\frac{1}{2}$d benzoate 1s $9\frac{1}{2}$d, bi-hydrochloride 1s $9\frac{1}{2}$d, bisulphate 1s $2\frac{1}{2}$d, citrate 1s $8\frac{1}{2}$d, hydrobromide 1s 8d, hydrochloride 1s 8d, lactate 1s. 8d phosphate 1s $9\frac{1}{2}$d, salicylate 1s 8d, and valerianate 1s 11d. Immediately the official reduction in sulphate was announced there was a decline of 1d, in the second-hand market, the week opening with buyers of December delivery at 1s 1d. Since then, however business has been done for December at 1s $1\frac{1}{8}$d to 1s $1\frac{1}{4}$d by "bear" sellers who are apparently depressing that position, which is now weaker than other months; October has been sold at 1s 1d, and spot at the same figure. The market closes quiet, no business being reported to-day.

CINCHONA.

The *British & Colonial Druggist's* correspondent writing on the 5th instant says:—Further particulars of the bark auctions, which were held in Amsterdam last week, have come to hand, and show that the bark was divided as follows: *Succirubra*, 97,505 kilos.; *Ledgeriana*, 533,169 kilos.; *Officinalis*, 9,030 kilos.; *Calisaya*, 6,173 kilos.; hybrid and other kinds, 61,767 kilos. Of the total thus formed root bark formed 95,966 kilos. The richest parcel of bark was lot 86, consisting of 23 bales of *Ledgeriana*, which contained an equivalent of 10·67 per cent. of sulphate of quinine.

CARDAMOMS.

Mysore medium to medium bold have been in good demand at 1d to 2d above last Thursday's sale prices. Malabar, business doing at 1s 8d.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 11th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *October 1st.—Weather*—The North-East Monsoon was very welcome when it set in last Saturday evening with 60 cents. The rain is especially welcome to the ryots on account of their paddy, which was suffering. *Works*—Fly picking, weeding and digging. *Crop prospects*—The worst crop on record. *Health*—Good. *Labour*—Abundant.

Coorg. Polli Betta, *2nd October.—Weather.*—It still continues to rain, and is wet and gloomy. 1·40 inches on Monday, 30th ultimo. *Plant diseases*—Leaf disease has not got any great hold of the trees, and coffee, on the whole, is looking very fine. *Crop*—ripening up fast in parts. All hands will be employed on picking on some places soon. Work will be over very early this season. *Interesting item*—Dr. Lehmann's lecture on Chemical manures last Friday, the 27th ultimo, at the Club.

THE CURRENCY PROBLEM.

A few planters are very anxious to keep up an agitation about the artificial rupee; another section of the community regards such agitation as almost disloyal. Our personal feelings in regard to this matter have undergone no change. The artificial inflation of the rupee was, at the best, an heroic attempt to remedy a disastrous state of affairs. It was an attempt that could only be carried out at the expense of Indian agriculturists, including planters. All theorising to the contrary notwithstanding, we take it as an established fact that the new currency policy has been detrimental to agriculture in India. Whether the benefits it has conferred upon Government and perhaps in some other quarters have fully compensated for the above disadvantage, is a question

that we cannot pretend to answer. Still, we feel that that is a very great deal to be said for, as well as against, the policy now in vogue. In former days it was doubtless very pleasant for the planter to see Exchange falling just as his crop was ripening. We can fully appreciate the joys of receiving Rs.17 for every pound's worth of produce, where once there was but Rs.10 to be had. It must be conceded, however, that a violently fluctuating exchange is, in the long run, disastrous to the trade of a country. A stable exchange is a necessity, and the Government must, after all, be guided by what it deems to be best for the country, or its trade, as a whole, not for the interests of any one community, however influential this may be. We opposed the scheme when it was put forward, and we are in opposition to it now, but the difficulty was, and is, to suggest a better way out of the dangers threatening the State, among which dangers was, at the time the currency policy was adopted, something very like a certainty of financial disaster.

In the last number of *Capital*, a well-known writer on financial topics who hides his identity under the mask of "X." makes certain remarks that all planters might take to heart. He rightly points out that when Government finally decided to act in 1893, they were standing in the cross-ways with four roads for them to choose. Road number one would have led to practical repudiation of their obligations and National Bankruptcy. Road number two would have led to the odium of excessive taxation. Road number three would would have led to economic reforms of a kind which to really be effectual would have starved and weakened the administration to a dangerous degree. Road number four led to a Managed Currency. This road they took. He adds:—"Now if a Government could only escape the odium of excessive taxation by incurring the odium of economically disastrous legislation, it should be clear to anybody that such a position was a desperate one indeed. That the Indian financial position, despite all the fair things which may be said about it, was in such a position I do not think there is the shadow of a doubt. And I am of opinion that it is just as desperate to-day. The position is, indeed, I think, worse, though the Currency stimulant is keeping the patient up." The truth of these statements appears to us to be beyond question. The solvency of the Government of India is apparent only, not real. It is absolutely dependent upon the maintenance of the rupee at an artificial gold value. Under these circumstances, is it wise to ask that the veil should be torn asunder and the truth exposed? Who would gain if India were declared hopelessly insolvent? Certainly not the planter, not even those planters who are advocating the return to an honest currency. On the other hand, there is room for the hope that, with the artificial aid now given to them, Government finances may yet recover tone and health. Is it not wise, therefore, to wait and watch? Is it not wise rather to try to help Government than to oppose it?

While saying this, we say also that planters should not remain absolutely silent. They should not cease to let it be known that they are heavy sufferers by this artificial raising of exchange. Any reasonable concession they can ask for as a sort of make-weight, should be pressed for; but the time for an agitation against the present currency policy has passed. It may return; but until it does, attempts at agitation cannot do good. We would remind planters also that every argument they have put forward against the present policy can be turned against themselves. Government m well wonder what manner of man is this who, for ye reaped unexpected, unhoped for, benefits from the declin the rupee, and now complains so bitterly because the has turned. It is but too certain that a little forethou and providence a few years ago would have saved the pla ing community from feeling, as it has since felt the pi of hard times. This is a home truth, and an unpleasant to the hearer; but it is a fact, and Government is f aware of it. Planters should remember also that, even if to itself, the rupee cannot fall indefinitely, nor can serious fall remain long unaccompanied by a correspond fall in the prices of the commodities they produce. things considered, therefore, we would urge them to end yet a little longer, profiting in the meantime by the st lesson taught them by low prices: the lesson of the neces of economy and care, of cheap production and impro quality. Every advance they can make in either of th directions will help to slacken the strain to which they h now to submit.

BOARD OF TRADE RETURNS.

AUGUST.

We take the undernoted figures from tables showing Imports, Consumption, and Exports of the undermentio articles for the 8 months ending August 31 in the pre and 2 previous years, compiled from the Board of Tr Returns, with stock in U. K. on August 31:—

Coffee.—Home consumption and Export show a v healthy expansion, but stocks continue heavy.

—		1899.	1900.	1901
Import	cwts.	874,316	663,558	817,22
Home Consumption	,,	176,532	190,538	227,44
Export	,,	394,364	357,941	475,08
Stock	,,	577,000	396,000	430,00

Cocoa (Raw).—Stocks are getting heavier, because of rapid increase of imports, which is only partially comp sated for by improved demand.

—		1899.	1900.	190
Imported ...	lbs.	36,226,199	38,730,952	41,220,
Home Consumption	,,	23,610,396	25,203,067	29,659,
Export	,,	7,566,160	6,928,016	7,313,
Stock	,,	20,191,000	18,028,000	21,040,

Cocoa (Prepared).—Very satisfactory figures all roun

—		1899.	1900.	190
Imported ...	lbs.	3,332,655	4,655,468	5,477,
Home Consumption	,,	3,546,260	4,088,687	5,072,
Export	,,	517,375	618,580	578,
Stock	,,	529,000	240,000	156,

Tea.—A relapse in Imports and a steady growth of consumption are coupled with heavier stocks. The position revealed is fairly satisfactory.

—		1899.	1900.	1901.
Import	lbs.	153,900,371	162,230,366	158,898.085
Home Consumption...	,,	157,348,450	170.259,935	172,001,484
Export	,,	19,741,688	28,514,356	28,408,327
Stock	,,	74,869,000	77,946,000	79,485,000

GREEN TEA IN CANADA.

Mr. P. C. Larkin, of the Salada Tea Co., writes us from London, under date 7th September, 1901 :—

"As you are probably aware, Ceylon has been shipping green tea to us for two years back, at first in a very small way but its a trade that has grown very rapidly and as the consumption of green tea in America is three times that of black (last year amounting to over sixty million lbs.) you can see what a field is open for exploitation. Now that India is producing *quite as fine green* tea as Ceylon (and that in low grown gardens) it is in order that they go about making their wares known to the consumer, and the only way to do this is the road travelled by all successful firms, advertise them, and do it largely, and it will cost the planters nothing, for it would bring into consumption quickly in America such a quantity of India tea that the relief the London market would get *would recoup them many times over their expenditure and it would do this, the first year.*"

As Mr. Larkin has been asked while in London to meet the Indian Tea Association and chat matters over with the members, he will, doubtless, impress these views upon them. Mr. Larkin's business is a wholesale one, and he has branches in Toronto and Montreal in Canada and also in Boston, Detroit, Buffalo, and Pittsburg in the U. S. He is in a position to speak of the manner in which Ceylon green tea has been received by those who taste it, and he says that all pronounce it the finest green tea they have tasted.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Trade with Persia.

The following communication from Mr. E. G. Foley, who is travelling in Persia on behalf of the Association, is published by the Indian Tea Association (Calcutta) :—

Dated Meshed, 6th August, 1901.

Since my letter of the 2nd instant, I have had a long interview with the chief Mahomedan Jew merchants (who are the principal traders with Russia) at the house of the Manager of the Imperial Bank of Persia. These people made me *bonâ fide* offers for 2,000 chests of tea, Pekoe and Orange Pekoe, delivered here for cash at 10 annas average per lb. I have been holding out for 12 annas, but promised to wire to you if you would accept 11 annas *ex* duty of 5%. Besides these there are others—one man wants 500 chests Pekoe Souchong—another 2,000 chests Orange Pekoe for Tabriz, delivery at Calcutta. The Mahomedan Jew merchants also want 500 chests of Pekoe No. 1 and 500 chests green tea Pekoe, as per samples sent by Mr. Buckingham through Messrs. Begg, Dunlop & Co. to the Consul-General here last February, at the same price as the Pekoe and Orange Pekoe per my samples. These samples of Mr. Buckingham arrived only two days ago. The box in which they were packed was broken and the lead packets mostly torn. Fortunately there were triplicate samples, and one of each of the several kinds remained intact, also samples of local made brick tea. For Mr. Buckingham's green tea Pekoe the same price was offered as for his No. 1 Pekoe and our Pekoe and Orange Pekoe, as these merchants were of opinion that it would sell well at Bokhara. It is a great thing to know that for this class of so-called green tea there is a market, as it is so easy to manufacture, provided one has a Gibbs & Barry's cylinder drying machine. It might be too late for Mr. Buckingham to make any this season, but if he could, 500 chests would probably be placed here at, say, 11 annas *ex* duty, or at Quetta for 8 annas 6 pies. The samples were priced—I mean Mr. Buckingham's Pekoe No 1 and green tea Pekoe—at 10 annas per lb. Quetta, which is far too high a quotation. I say Quetta 8 annas 6 pies, for I have just had an interview with the great millionaire Banker and Merchant the Miaru-i-tizar, in the presence of our Consul-General, who will probably take up the entire business of buying tea from us in partnership with his hitherto rival the Malik-i-tizar, and would take delivery *at Quetta* and pay in cash, so saving us any trouble or running any risk ; the prices I have quoted to him are for Orange Pekoe 8 annas and 6 pies, Pekoe 7 annas 6 pies, Pekoe Souchong 6 annas 6 pies Quetta f.o.b., or half an anna under the original price. In ten days' time, on his return from the Turquoise Mines, which are leased by him from the Persian Government for about £5,000 annually, I shall hear from him definitely. In whatever enterprise these two merchants and bankers the Miaru-i-tizar and the Malik-i-tizar enter, all the rest of the merchants are guided by them, and would take their requirements and supplies from them. If this business comes off, my mission will be completed, and a success, in bringing the Persian buyers to India, and will be the making of the Nushki route, and will save us the trouble of sending Agents with tea into Persia. In the meanwhile, I will try and secure all the orders I can for other places like Tabriz, etc., delivery in Calcutta.

I am sending you samples of white Java and green tea as sold here, with prices marked. Kangra Valley green tea similar in flavour is valued at 3 Krans less or 12 Krans per man, because it is not the right colour. With the proper colour there would be a large market for this tea in Afghanistan from here. Since my arrival here I have been busy seeing merchants, but they are all shy of taking delivery at Quetta, for reasons already given in my two previous letters from here. The Miaru-i-tizar is the only one who has offered to take delivery at Quetta. On his return from the Turquoise Mines ten days hence I will receive his reply. He has taken samples with him. Should it come off, or even in the event of any arrangement being made for supplying orders as stated in the earlier portion of my letter, and if sanctioned by you, our Consul-General here will advise the Government of India to put the Nushki route in thorough order, to make a cart road from Quetta to Nushki and, if possible, lay down a light railway and construct a telegraph line from Quetta to Fort Robat, the borders of Beluchistan, to dig more wells and deepen the present ones, and lay in more provisions for man and beast at the different stages. The cost of carriage as paid by the Pathan merchant here for goods from Quetta to this is 3

Krans per man of 6½ lbs. or 14 annas = Rs.10-8 per maund Indian ; freight from Calcutta is Rs.2-7 per maund on tea ; to this has to be added the 5% *ad valorem* duty, which includes the cost of camel hire. This would be paid by the buyer in the event of orders. The cost of carriage from Moscow to Askabad during the Summer is 1 rouble and 10 kopecks, and during the Winter 1 rouble and 40 kopecks per pood of 36 lbs. From Askabad to Meshed, during Summer 1½ Krans—during Winter 4 Krans per man of 6½ lbs. The distance from Askabad to Meshed is about 160 miles. From Askabad to Meshed carts are used as well as camels. In the event of the Miaru-i-tizar taking up the business, a very large quantity of his purchases will be sent into Russian territory through the medium of the Mahomedan Jews and Armenians—more so than could be done profitably by any European syndicate.

MEMO :—The subjoined papers regarding trade with Persia are also published.

No. 1047, *dated* QUETTA, *3rd September*, 1901.

From

Captain J. WEBB WARE, I.S.C.,
Political Assistant, Chargai.

To

THE INDIAN TEA ASSOCIATION,
Calcutta.

In continuation of my circular letter of the 6th August, 1901, I would be much obliged if you would cause the following notes, regarding trade with Persia and the Persian passport regulations, to be circulated as widely as possible among such members of your Association as are interested in the Nushki-Seistan trade route.

(*a*) For purposes of calculating the 5% *ad valorem* duty which is payable on all goods crossing the frontier into Persia, the Persian Customs Officials insist on the production of the original Invoices, and decline to accept true copies.

(*b*) All Invoices should be clearly written in English.

(*c*) Merchants forwarding goods to Persia will find that it will save much time and delay if they take the precaution of having there Invoces attested by a properly qualified official in the town or place from which the goods are despatched.

(*d*) The importation of arms and ammunition into Persia is strictly forbidden.

(*e*) It has been decided that the meaning of the term 5% *ad valorem* is 5% on the original Invoice value of the goods *plus* 5%on the freight charges to the Persian frontier, in other words 5% on the value of the goods at the point they enter Persia.

(*f*) The Persian Customs Department reserve the right of buying in any goods which they consider are declared below their proper value.

(*g*) By a Persian law, which came into force on the 3rd April, 1901, all inland customs house and transit and other dues paid on imported goods transported from place to place in Persia have been abolished, and a Rahdari tax of 22 Shahis per load of 120 Kilos. has been instituted, the tax being taken on the departure of goods from the frontier, and is payable by the carriers ; the Rahdari tax is leviable in addition to the duty of 5% *ad valorem* which the Persian Government takes under the present International Customs Convention.

Although Persian law prescribes that the Rahdari tax is payable by carriers, yet merchants forwarding goods to Persia *viâ* the Nushki-Seistan route will be called on to pay the tax themselves, unless the agreement they have entered into with carriers in Quetta expressly stipulates the contrary.

(*h*) Passports :—

(*a*) Passports can be obtained on application to the Fir Assistant to the Hon'ble the Agent to the Governor-Gener in Beluchistan, and on payment of a fee of one rupee p passport.

(*b*) To save delay, applicants for passports are recon mended to apply to the First Assistant to the Hon'ble th Agent to the Governor-General in Beluchistan, one cle month before the date they are timed to arrive in Quett enclosing the accompanying Form D duly filled in, and sta ing the date of their arrival in Quetta and what their addres will be there.

(*c*) No passport will be issued to natives of India, unle they come to Quetta, provided with identity certificates mad out in the form attached, and countersigned by the Deput Commissioner of their district.

(*d*) The Persian passport regulations dated 1st Marc 1900, provide that every foreigner who may wish to travel i Persia must show his passport on entering Persian territor and if the passport is not provided with the visa of a Persia Consular Officer, he must obtain the visa and pay the fee 12 Krans prescribed (labourers 4 Krans).

(*e*) Articles 12 to 15 of the Persian order in Council 1889 lay down that every non-resident British subject arrivin in Persia at a place where a Consular Officer is maintaine shall register himself within a month of arrival in a speci register to be kept for the purpose, and obtain a registratio certificate, paying a fee of Rs.2-6 for the same, and that n one not so registered is entitled to sue or to receive the su port or protection of a Consular Officer.

NOTES FROM CARACAS.

From the reports of the Vice-Consuls it appears, observ Mr. Acting Consul Andral in his report on the Trade Caracas in 1900, that there has been a decrease in the impor ation of every class of goods with the exception of coal an kerosene. This implies that the purchasing power of th country through the depreciation of coffee has decline sensibly, for it even appears that there has been a gre reduction in the amount of food-stuffs imported, and as

was considered that this item had been brought down to its minimum, being limited to primary needs, it shows that now the people are obliged to deprive themselves even of necessities, for it is not that there has been any increase in home production, since there are always complaints of the shortness of the crops. He proceeds to say that figures shown in the tables of exports are more satisfactory for the principal products of Venezuela; coffee, cocoa, and hides have all increased considerably in the total quantity, although at Maracaibo coffee showed a slight falling-off. The improvement, however, is not a monetary one, for the price of coffee remains very low and although that of cocoa is fairly good, the quantity produced is as yet insufficient to replace coffee which at present hardly pays for its production. That is where the shoe pinches. Statistics of exports may be read wrongly unless it is known whether the prices obtained for a particular product are or are not profitable. The following figures show exports of Coffee, Cocoa, and Quina Bark from Maracaibo—

		Bags.	Kilos.
Coffee	1899	334,328	20,268,737
	1900	345,471	20,829,464
Cocoa	1899	2,602	123,933
	1900	3,885	184,456
		Packages.	
Quina Bark ...	1899	250	10,241
	1900	95	4,099

The export of Coffee in 1898 was 441,579 bags. The average price for Maracaibo may be taken at 27s per 100 lbs. for 1898, 25s for 1899, and 26s for 1900. Shipments from La Guayra were:—

Coffee	1900	175,941	10,300,565
Cocoa	—	107,627	5,766,160

In both cases there was an increase when compared with 1899 figures.

PERFUME FARMING.

We learn from the *Queensland Agricultural Journal* that a practical start has been made in Western Australia in the direction of perfume farming and manufacturing. Our contemporary has the credit of having pressed this industry upon the notice of its readers, and some time ago, referring to the essential oils used by perfume manufacturers, it again tried to stimulate interest by remarking:—"How valuable some essential oils are may be gathered from the fact that weight for weight the essential oil of roses is worth nearly as much per ounce as gold, and finds of all botanical growths the readiest market; 300 lbs. of roses will yield 1 oz. of attar or oil, besides a quantity of fragrant saleable rosewater. One acre of land will yield 1,500 lbs. of rose petals, and this will give 5 oz. of attar worth £1 17s to £2 15s. per oz., and there will be some 300 gallons of rosewater valued at from 3s. to 4s. per gallon. Lavender will give a nett profit of £20 per acre. Pure lard saturated with the scent of flower is worth from £1 5s. to £1 10s. per lb. in London or Paris, and if the fat is cut up and digested in spirits of wine (60 over proof) and 2 lbs. of fat to 2½ lbs. of spirit, this scent-laden spirit is worth 3s. 6d. per oz. or £3 10s. per pint." Throughout Victoria, we are informed, increasing numbers of persons are turning their attention to the production of flowers for scent-making. The flowers most favoured are lavender, vera, tuberoses, rose, geranium, peppermint, lemon, thyme, violets, etc.

In Western Australia the industry has commenced in earnest. Mr. Kirton has established a perfume farm and factory on the Collie River, for the purpose of utilising the various shrubs which grow in Western Australia, in order to obtain their essential oils, as he is persuaded that the climate is especially favourable for the growth of the plants and the secretion of oils. He is at present working on the wild verbena, but intended to deal with lavender on a large scale. He has now several acres of lavender planted. Mr. Kirton points out that the price of the oil obtained from the peppermint is only a little more than one-third of that obtained from the Eucalyptus globulus, the oil not being considered by the British Pharmacopœia of much value. Our contemporary writes:—

"Some months ago we ourselves experimented with the blossoms of the Plumeria, or Frangipanni, and successfully extracted the scent from some thousands of blooms. The method was this: A box was provided with six shelves of common glass, the front closed by a glass slide. These shelves were coated to a depth of half-an-inch on both sides with absolutely pure fat. prepared by rendering down and refining beef suet, mutton suet, and lard. Every morning the spaces between the shelves were filled with fresh flowers, the old ones being removed. This work, which took very little time, was continued for about six weeks. At the end of that time the fat was removed and taken to an analytical chemist in Brisbane, who digested it (about 4 lb. weight) with 60 o. p. spirits of wine, and thus extracted the whole of the perfume. The spirit was redolent of it. This spirit could have been easily sold for £3 or £4, but, as we wished to make a complete experiment, the chemist tried to distil it, but he failed to separate the scent from the spirit, stating frankly that he had no experience in this particular class of work. Still, he did enough to prove that a large quantity of scent was contained in it."

THE CANKER (ROSTRELLA DISEASE) OF COFFEA ARABICA.

In a Dutch technical journal Mr. A. Zimmermann, describes a canker disease of coffee trees, shows that it is caused by a hitherto undescribed fungus, and suggets methods of treatment. The disease is confined to the Java variety of coffee and usually attacks isolated trees. So far it has been known to attack only trees at least 10 years old. A yellowing and sudden drooping of the leaves indicates the presence of the disease, which is further characterized by the development of brown patches in the cortex of the stem and larger limbs. Death follows soon after the leaves droop. The brown patches may extend nearly around the tree and involve the entire cortex, including the cambium layer. The mycelium has not been found in the wood. The fungus belongs to a hitherto undescribed genus of Ascomycetes, and the author names it *Rostrella coffea*. Four forms of reproductive bodies are developed, ascosporus, macroconidia, microconidia, and a fourth form which the author calls rudimentary microconidia, produced by the breaking up of hypae developed from the macroconidia and microconidia, each form being fully described.

Infection experiments were made by placing small portions of diseased tissue under the cortex of healthy trees or pieces of stem and later by inoculation with microconidia. All the infections were successful, and the checks uniformly remained free from the disease. The characteristic symptoms appeared in from 4 to 8 days and frequently all the spore forms were developed. Infection experiments made on the leaves and young twigs, as well as on the older limbs and trunk, showed that in very moist air Rostrella coffea can develop on the leaves and young twigs of Coffea arabica when fresh wounds

are present, but that the disease is checked on the young parts by the development of a cork layer. Hence the injury to the trees is always caused by the disease attacking the stem or larger limbs.

Experiments on Coffea liberica showed that while the fungus made a weak growth in fresh wounds on both stem and leaves, the mycelium did not penetrate beyond the wound. Open air experiments gave negative results. Experiments on shrubs or weeds growing in or near coffee plantations proved that the fungus would grow in wounds on Erythrina lithosperma, Albizzia molukkana, and Cedrela serrata, but only when the experiments were conducted in moist air. Open air cultures were unsuccessful. The fungus will not grow on sugar cane (Saccharum officinarum).

For treatment of the disease the author recommends burning all diseased trees ; or, if this is not desirable, cutting out the infected parts and coating the wounds with tar. Tree trunks should be coated with Bordeaux mixture or lime to prevent insect injuries. All wounds due to pruning should be coated with tar. If diseased trees are allowed to remain in the plantation, the trunks should be coated with tar to prevent the dissemination of spores.

NOTES.

Brazilian Enterprise. The Secretary of Agriculture in Brazil has remitted 600 marks to the Brazilian Consul at Hamburg to purchase samples of coffee offered in that market.

Colouring Coffee. The Hamburg Courts have decided that the custom of artificially colouring Brazilian coffees to give them the appearance of Costa Rica is not a misdemeanour as the process does not injure the coffee and is harmless to consumers.

The Position of Coffee. The coffee supply continues to increase observes the *American Grocer*. The outlook is not such as to induce the carrying of heavy stocks. In view of the enormous crop and heavy visible supply, the market holds very steady for Brazil.

South Indian Tea in London. In Messrs. Stenning, Inskipp & Co.'s Indian Tea Report, dated September 12th, 1901, we read :—Southern India has been represented by 2,10[illegible] packages, the quality in some cases showing a slight improvement

Java Quinine. At the auctions of quinine in Batavia, on September 5, 1,700 kilos. (59,500 oz.) Ed. II. were sold at an average of 20fl. per kilo. (about equal to 7¾c. Amsterdam unit), against 21½fl. per kilo. last auction. The next auction to be held at Batavia will take place on October 9.

Indian Tea for Indians. The Commissioners of the Indian Tea Markets Expansion Commission have received, through his Private Secretary, a letter from the Governor of Madras wishing every success to the movement for developing the consumption of tea in India, which seems to His Excellency to be in the right direction.

Coffee in the U. S. The *American Grocer* says :—The firm of Francis H. Leggett & Co. has an enviable reputation for carrying the largest and [illegible] varied stock of coffee of rare sorts of any house in the Un[illegible] States. The firm uses one-sixth of the imports of gen[illegible] Mocha and Java coffee. Their offering of fine grade[illegible] extensive.

Coffee in Sweden. A Consular report states :—Owin[illegible] the cheapness of the inferior-quali[illegible] of coffee, this article attracts the most attention, whereas superior qualities are neglected on account of the comp[illegible] tively high quotations. The latter article being chiefly bou[illegible] from London the import from that port was consequen[illegible] insignificant, while Hamburg delivered the greater par[illegible] the supply.

The proposed Green Tea Association abandoned. The *Times of Ceylon* understa[illegible] that the idea of a local syndicat[illegible] Association, to handle green tea[illegible] order to equalise standards and regulate supplies, is not t[illegible] pursued. It was felt by the proposers that, to be a succ[illegible] the Association must either be directly helped by the Th[illegible] Committee, or that it must control all the teas receiv[illegible] the bonus.

Theine in Tea. In the *Revue des Cultures Coloni[illegible]* Mr. J. Kochs gives the results[illegible] investigations into this subject. The percentage of th[illegible] in the teas examined was as follows : Souchong, 2·[illegible] Flower Pekoe, 4·36 ; Scented tea, 3·08 ; Pouchong, 3·[illegible] Congou, 3·83 ; Oolong, 3·66 ; Cha Morumby, a Brazi[illegible] tea, 3·11. The quality and value of tea does not dep[illegible] alone upon the composition, but also upon the appearan[illegible] aroma, and taste of both the leaf and the infusion.

Hybrid Coffee at Reunion. Mr. E. Bordage, in the *Revue des Cultures Coloniales*, gives illus[illegible] tions and descriptions of the leaves, flowers, and fruit [illegible] natural hybrid between the Liberian and Arabian coffee tr[illegible] The hybrid resembles the Arabian tree most in the form[illegible] its leaves, flowers, fruits, and the quality of the berries. [illegible] the other hand, it is much more resistant to insect atta[illegible] and fungus diseases than the Arabian coffee, and in th[illegible] respects resembles the Liberian tree.

Prices of Coffee. The following comparisons of re[illegible] prices with the rates in 1900 s[illegible] that there has not been a very great difference in the ex[illegible] to which various descriptions have suffered from the gen[illegible] decline :—

	Current.	190[illegible]
Java in Holland	31½ à 32½ c.	... 36 à 3[illegible]
Santos	17½ „ 18 „	... 25 „ 2[illegible]
Guatemala in London parit. of	36 *sh.* à 38 *sh.* 22 „ 23¼ „	... 30¼ „ 3[illegible]
Haïti in Hâvre... parit. of	43 *fr.* „ 44 *fr.* 20½ „ 21 „	... 26½ „ 2[illegible]

The figures are from Messrs. G. Duuring & Zoon's market report.

Coffee in London. The *Produce Markets' Revie[illegible]* 17th ultimo says :—The public [illegible] tions during the past week have contained only a lim[illegible] supply, which has met with a brisk demand, the greater [illegible] tion selling at full rates. In consequence of the absence desirable first hand coffee, second hand parcels continue find a ready market, the better qualities and marks fetch

very long prices. In view of the fact that further arrivals will be very limited, it is safe to predict that prices will further advance. The fluctuations in the terminal market have been slight, the market closing somewhat easier. The receipts in Brazil are exceedingly heavy.

Tea condemned in Australia.

The *Brisbane Courier* writes that twenty half-chests of tea, shipped from Sydney per steamer *Aramac*, were condemned on the 31st July, and Dr. Ham, Commissioner of Public Health, acting on the certificate of the Government Analyst, ordered its exportation or destruction. Twenty-five half-chests of the same tea, shipped from Sydney and transhipped to a Northern port, were similarly dealt with by Dr. Ham's order. It may be mentioned that samples are procured by officers authorised by the Commissioner under Section 99 of the Public Health Act, and can be ordered to be destroyed under Section 103 of the same Act. It is a great pity that we are not told from what country this tea was imported.

American Tea Imports.

The New York correspondent of *Indian Gardening & Planting* writes :—The average value per pound of the net imports of tea brought into this country during the year ending 30th June was 12·18 cents—rather less than a year ago when it was 12·45. Of our total imports of 90,381,270 pounds China furnished about 52 per cent. ; Japan 37 per cent. ; all other countries 11 per cent. The imports from the United Kingdom, East Indies and other parts of Asia and Oceanica (excluding China and Japan) were 8,732,622 pounds against 3,998,789 pounds two years ago, an increase of 118 per cent., practically all in British-grown teas. But the figures do not show any increase in the *per capita* consumption, which was but 1·08 per pound, while some years have shown a consumption of 1·58 pounds.

London Tea Market.

Cabling to Colombo on the 26th ultimo Messrs. Gow, Wilson & Stanton reports that the market generally shows a fractional advance, that for fine teas generally being dearer, while the market for teas for price is also dearer. The price of fair liquoring Ceylon Pekoe Souchong is 5¾d (a ¼d up), and the average price of Ceylon tea sold on garden account this week was 7⅞d (⅜d up). The average of the corresponding week last year was 7d. Reuter reports that the tone of Ceylon tea is generally very firm ; rather better prices, probably owing to small quantities on offer and improved quality. Fair Pekoe Souchongs are quoted at 5d (a ¼d up) and the average for the week is 7⅞d (three-eighth of a penny up). 20,000 packages of Ceylon tea were offered for sale and 19,000 were disposed of ; while of the 35,000 packages of Indian tea offered, 31,000 found purchasers, at an average of 8¾d per lb.

Calcutta Tea Sales.

The shortage in the tea crop this season was again evidenced on Friday, when only 18,400 packages were offered in the Calcutta Sale Room, against 22,000 packages last year. There was improved demand, and prices may be quoted about 3 pies higher all round. When the improved quality and shorter crop, however, is taken into consideration, there seems room for a very substantial rise yet, and prospects for sellers should soon look brighter. Advices from the manufacturing districts continue to indicate an early close, and Dooars' teas are beginning to show the nice cold weather flavour that finds so much favour with the present day blender. Export figures, we understand, by no means reflect the present position, owing to large quantities of tea having come forward this season by quicker routes. As far as we can ascertain the actual shortage to date is 12 to 14 million lbs., which should mean a firmer market from now to the end of the season.

Crop Estimates.

Indian Gardening & Planting writes :—The Committee of the Indian Tea Association have had the advisability of discontinuing their annual statement of the tea crop brought to their notice by several influential firms in Calcutta. It is suggested by the Directors of certain Companies that the statement serves no useful purpose, as the figures given in it are always more or less unreliable. The Committee explains that it has no power of its own motion to discontinue the publication and in response to other enquiries shows that the forecast is made up from returns of estimates supplied by gardens. We would point out that such a publication is both useful and interesting as the sum of the estimates of the estates have a strong bearing on the question of crop as affording an indication at least of the amount to be expected. It is only those who expect an unattainable accuracy in matters affected by so many chance circumstances who express disappointment. We would point out, however, that all returns and estimates of this kind require to be read as well as compiled with discretion. Their limitations must be understood.

"Nature Teaching."

The *Gardeners' Chronicle* says :—The Imperial Department of Agriculture for the West Indies has issued a text-book, entitled *Nature Teaching*, based upon the general principles of agriculture. This is prepared for the use of schools by Francis Watts, Government analytical and agricultural chemist, Leeward Islands. According to the preface, the book is an "attempt to place in the hands of teachers, both in elementary and secondary schools a well selected but co-ordinate body of information suitable to West Indian conditions, to be supplemented in each case by numerous illustrations and experiments in which pupils themselves take an active part." *Nature Teaching* treats of the seed, the root, the stem, and the leaf, each separately ; as regards their uses and structure both botanically and economically. There are also chapters upon the soil, plant-food and manures, flowers and fruits, weeds, and insects. The book is clearly written, but it is not intended to be read through, but to be used as a guide by the teachers in training pupils to observe for themselves, and in endeavouring to give them an intelligent interest in the everyday facts of rural life, and is very well suited for the purpose.

Indian Tea Companies.

Mr. George Seton's excellent analysis of the working results of forty-five Indian Tea Companies for the season 1900 has, usual, been compiled with the utmost promptitude, for although the 1901 season is now well advanced several of the important Companies have only just succeeded in getting out their reports for the previous year. Perhaps this is partly due to a desire to keep back bad news as long as possible, for the results have been anything but brilliant. The total capitalization of the forty-five concerns dealt with is given as

£8,759,910, against £7,964,925 for 1899, but this increase is mainly due to the inclusion for the first time of Debenture issues. The cost per acre has risen from £43 to £47, and the output has increased from 72,290,170 lbs. to 79,272,490 lbs., being an average per mature acre of 475 lbs. in the one case and 487 lbs. in the other. Owing, however, to a decline in the average price from 8·34d. to 7·32d. per lb., while it has only been possible to reduce expenses from 6·60d. to 6·47d. the net profit for 1900 was only 0·85d per lb., against 1·74d. in 1899, and as a consequence the average rate of dividends has fallen from 5·65 per cent. to 3·90 per cent. People interested in tea company investments would do well to study the figures for the different gardens in detail; they will find several very interesting and instructive contrasts.

Indian Tea in London.

The market has not materially changed, says the *Produce Markets' Review* of 7th ultimo; the quantity brought forward was somewhat larger, but, with a steadily improving demand, prices generally have remained steady. There has been a fairly liberal selection of the fine and finest sorts, and where the teas showed no depreciation in quality a firmer tendency prevailed. On the other hand, the prices of those teas showing a falling off in character have barely been maintained, but in no case has the change been important, the better inquiry being sufficient to absorb the slightly increased supply. Medium teas have been rather more plentiful, and any change that has taken place in values has favoured buyers, while the market still points to a further fall in prices, and until this takes place transactions are likely to remain of a hand-to-mouth character. The common grades continue to meet with but a moderate demand, several lots having failed to pass the hammer even at the easier rates ruling, owing to the poor and undesirable quality of the bulk of the supply. The following are the statistics for the past month and August last year:—The imports amounted to 12,850,000 lbs. as compared with 13,015,000 lbs., while the deliveries show an increase of 1,400,000 lbs., the figures respectively being 9,483,000 lbs. and 8,082,000 lbs., while the stock is still in excess of 7,895,000 lbs. There were 29,870 packages offered at the public sales, and the large proportion of 5,233 was withdrawn. There was a fairly strong competition for the finer grades, but the lower kinds received less attention, and they consequently were easier in price.

GENERAL ARTICLES.

TO MAKE GOOD COCOA.

1. Start with a pure cocoa of undoubted quality and excellence of manufacture, and which bears the name of a respectable firm This point is important, for there are many cocoas on the market which have been doctored, either by the addition of alkali, starch, malt, kola, hops, etc. The treatment of kola with alkali is to render it more miscible with water; and, therefore, a cocoa which seems to dissolve very freely in water should be regarded with suspicion If the cocoa thickens very much in the cup, even though a small quantity is used, it probably points to an addition of starch, which lowers the nutritive value of the beverage. The addition of other constituents is unnecessary and have no good effect, but, on the contrary, may be positively harmful.

2. With a little warm water or milk, thoroughly reduce the powder to a fine, thin batter, carefully crushing down all lumps.

3. Pour on boiling water as quickly as possible, stirring rapid It is necessary that the water should be really boiling; if ju below the boiling point a perfect mixture is not obtainable. milk be employed, it should also be at a boiling point.

Cocoa prepared in this way forms, with water or milk, a perfe mixture, and leaves no sediment in the cup. It is a good plan stir the contents of the cup now and again between the interva of drinking.

If cocoa is to be prepared in large quantities for catering, t best plan is to bring the water to the boil, and then gradually a the powder to the boiling water, constantly stirring.—*Caterer Gazette.*

RUBBER COLLECTING IN THE PEMBA FOREST OF ZANZIBAR.

The chief interest in the forests centres about the rubber creepe *Landolphia Kirkii* (*Mpyo*). In some places the rubber creepe grow thickly, and in the others large areas are without any rubbe The *L. Kirkii* as it grows in Pemba is not a large creeper, rare exceeding the thickness of a man's wrist. But it attains conside able length in creeping along the ground, or in linking itself ov the boughs of the trees. The bark is red and rough and when slice off liberates a snow-white latex which almost immediately coag lates into India-rubber. The process of collection requires som skill and experience to be profitably conducted. Where the vines a plentiful and rich, an experienced and industrious man will bring as much as 3 lbs. a day, while an unskilled workman will scarce gather a quarter of a pound. The general mode of collectio consists in slicing off the bark in the form of scarfs at intervals of few inches or a foot. When three or four scrafs have been mad the collector dabs the wounds with salt water, which he carries in calabash by his side for the purpose. The salt water causes th juice to coagulate as it exudes, preventing it from dripping to th ground and being wasted. He now leaves these scarfs and pr ceeds to make and treat others on the same vine or an adjacent on after which he returns to his original group. This interval give the rubber time to collect. The latex is now pure rubber and pul off clean and white. With the ball he may have already gathere the collector goes over each scarf in succession, merely rolling along. The fresh rubber clings to the ball which grows in size, bu does not cling to the fingers. If the collector has no salt wate he smears the juice at once upon his arm when it coagulates rapidl Probably the saline exudations of the skin assist the process.

A good deal of waste in the collection takes place if the men are le to themselves. They will, for instance, only operate upon those part of the vines which are within easy reach, leaving the upper region among the trees untapped. Again there is always an "aftermath upon the creepers, which collects a quarter of an hour or so after has apparently been done with. The "aftermath" consists of onl a small quantity of rubber scarcely worth the collector's while t return and gather, but the accumulations from hundreds of vine amount to a good deal in a day and in time would sensibly affec the quantity gathered.—*Zanzibar Gazette.*

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, 17*th August*, 1901.—Ninety day's Bank rate on Londo opened on Monday, 12th instant, at 10¼ and closed this evening wit the Banks drawing at 10¼d. We have nothing to add as regard position of the market, which is one of liquidations and likely t continue until an ample supply of other bills supplements th meagre resources of those afforded by coffee.

Shipments or *Embarques* of coffee during the past week were con siderable, being 309.508 bags at Rio and Santos, as against 295,01 the previous week, and 184,608 for the corresponding week of las year. In spite of the very large volume, nearly 68% more tha last year, the value of shipments is almost the same being £432,00 for the past week, as against £417,000 for the corresponding wee of last year.

Rubber shipments at Pará and Manáos during the week ende 15th of August, amounted to 270 tons, of the value of about £10,00

Arrivals, however, seem to be increasing, and there is some hope that in September shipments may take considerable impulse.
Extremes during the week ending August 16th were 10⅛d –10 11/32d for 90 d/s Bank paper and 10 3/16d—10 5/16d for private.

Coffee.—Entries during the week ended 16th August were again smaller in consequence of the bad weather which has ruled, with a slight break at the beginning of the week. Consequently, the arrivals were 35,869 bags less than in the previous week, but 35,861 bags more than in the corresponding week of last year. From the 1st of July to the 16th of August entries were 807,494 bags in excess of last season. Declared sales were also slightly smaller, being 13,000 bags less than the previous week, but 62,000 over those of the corresponding week last year.

Stocks continue to increase from 1,099,035 bags on the 9th instant, to 1,183,202 bags on the 16th as against 946,492 bags on the corresponding date of last year.

LEEMING'S SYSTEM OF COFFEE CULTIVATION.

Mr. Robert Gompertz writes to the *Madras Mail* :—

I fear you must be sick of "Leeming's System ;" but, as it is clear, from the numerous questions I have been asked about it, that it is of the greatest interest to coffee planters, I hope that, with your usual courtesy, you will be kind enough to find space for the following letter. One man asks if I do not think it would be sufficient to dispense with pruning and handling, and to leave the trees to themselves. Is it absolutely necessary to cut out? His coffee looks so fine, it seems such a pity to sacrifice any of it. Another tells me he has cut out all the trees at once to 12 feet apart, on a block of poor soil, and is much disappointed at the result. Another man says he is willing to cut out his trees, and to let the remainder grow up, but he is sure that, if he does not handle them out, black rot will play the mischief with them. May he handle them? etc. If these gentlemen were really in earnest they would visit Yercaud themselves, and put their questions verbally to Mr. Leeming, instead of writing to me. But just as, under the old system, some men succeeded whilst others failed, so I think it is absurd to suppose that, under all variations of soil, climate, rainfall, and—above all—of superintendence, every man will achieve the same measure of success which has crowned Mr. Leeming's well considered application of the improvements he has introduced. From some of the letters I have received I should doubt if the writers would be very successful with any system under heaven. For you cannot possibly eliminate the personal equation. To be sure of success you require not only the system but the *man* I have adopted his method myself, and hope for favourable results, but if I had 2,000 or 3,000 acres of coffee I would ensure them by offering Mr. Leeming such a salary as would tempt him to come and introduce his system upon it, feeling sure that, whatever I may be able to do, he would save the money, over and over again, by reducing the working expenses to half or a quarter of what is necessary under the old system, as well as by improving the quality, and increasing the quantity, of the crop.

If we were in America, some wealthy man or Syndicate, would have done this ere now, but English capitalists are very conservative, and though the Report I read at the late Conference, by an experienced planter from the Nilgiris (which was published in the *Madras Mail* of the 2nd August and afterwards in *Planting Opinion*), and that of Mr. Elder, from South Mysore (published in *Planting Opinion* of the 21st ultimo), must have convinced many of them, not one (that I have heard of) has had the courage of his convictions, and been bold enough to accept the situation wholesale, and wise enough to ensure success by adopting the man, as well as the system. It is much to be regretted, for, while benefiting himself, he would earn the gratitude of his poorer brethren. Such a practical demonstration of faith, by a man rich enough to make it, would be invaluable, and would do more to convince the timid, and, by ensuring the general adoption of the system, to improve the prospects of Indian coffee planters than fifty letters or Reports in its favour. Let it not be thought that I am unduly prejudiced by my friendship for Mr. Leeming. At the Planters' Conference last year, when I first drew attention to his improvements, I said: —"I think he deserves our warmest thanks, for he has solved for us the problem of cheap production;" and I should certainly be pleased to see him reap some reward. In the same speech I said that, though it had been practised in Brazil, "as regards Indian planters, it ranks as a discovery of the first importance, which will probably revolutionise the culture of coffee in Southern India." Naturally, I should like to see my predictions verified as soon as possible, and to this extent I may be prejudiced; but, beyond that, it is a matter of indifference to me whether planters are wise enough to avail themselves of the means of salvation discovered by Mr Leeming, and published to them by myself, or foolish enough to struggle on, on the old system, producing their coffee at a loss until ruin overtakes them or until prices improve.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; it is applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

PRODUCE AND PLANTING.

We are glad to find that the question of the tea duty is not allowed to slumber. The increased duty was a blow to the industry which there have been attempts to minimise, but no apathy on the subject or acceptance of the inevitable can alter the fact that an act of injustice has been committed against the tea grower. In a letter to the *Financial Times* Kar Guzar deals with this duty question, and he protests against this burden on the producer. He says: "Messrs. Finlay & Co., in their circular addressed to shareholders in their companies, and published in your issue of the 10th inst., rightly stated that the sudden increase of 50 per cent. to the duty previously levied on tea has prejudicially affected the industry. They place the amount of their losses by it at £60,000, and at the rate of 1¼d per lb. The lower the tea produced is classed the greater is its producer's loss. The quality of tea depending upon the lay of the land, the altitude at which it is grown and the qualities contained in the soil, it is not in the producer's power to vary its quality at pleasure; he may pick finer or coarser, he may improve the appearance of the tea, but its chemical qualities will remain the same to the end of the chapter. We are told that the average price of Indian tea before the levying of the surcharge was 8d without duty. To get an average of 8d a lb. much tea must have been sold at 4d per lb., some at 1s, but we must not think, because one producer received 12d a lb. for his tea and another received only 4d, that the one was intrinsically worth three times the price of the other. The difference in price is not regulated by its intrinsic properties—the prices the consumers pay the merchant are regulated by the relative intrinsic values of the teas—but the price the merchant pays producers by the amount of duty plus the price he can afford to pay to equalise its cup value to the consumer.

The inequality of the impost is pointed out. "The duty falls unequally on teas of different qualities, and it forces merchants to buy the higher-classed teas to the neglect of the others. A rate of duty which produces a revenue equal to 75 per cent. of the whole value of the industry, a rate of duty varying from 50 per cent. to 150 per cent., is out of all proportion to its value. The price to be paid to the producer will be reduced by every penny that the merchant will not be able to recover from the consumer. If the merchant wishes to sell two teas to the consumer, the one at double the price of the other, it will be necessary for him to purchase the lower-classed one at a third of the price of the other—hence we may conclude that every 2d added to the duty takes a penny per lb. off the prices received for all teas below a certain value. When, the duty stood at 4d. low-classed teas were handicapped 2d. per lb. and the average, or 8d. teas by 1d. Now that the duty has been raised to 6d. low classed teas are handicapped 3d on the pound of tea, and average teas 1½d, as against the higher-classed teas. The duty as it is now levied acts as a direct tax on the majority of us producers. The amount levied from me as a war tax I estimate

at £2,000 per annum. It would have been less had the merchants not succeeded in passing so much free of increased duty and would have been greater had my teas not been in some request for outside markets. It is, I think, much to be regretted that Messrs. Finlay & Co., limited their statement to a bare chronicle of results, and did not boldly state in what manner and why the duty has borne, and is still bearing, hardly on our industry. The Chancellor of the Exchequer, when introducing his Budget, stated his reasons for having selected tea as a fit article for increased taxation, (*a*) because it was not an article of manufacture in this country; (*b*) it is largely consumed, and (*c*) at the time of the Crimean war the duty on tea stood at 1s 6d. per lb., and that it was promptly raised 3d with practically no objection from anybody concerned. He then went on to state that even with the addition of 2d per lb. tea would still cost the consumer 2d per lb. less than it cost the consumer in 1889, before the duty was reduced from 6d to 4d per lb., and wound up by saying that he did not think the population at large will have any very fair ground for complaint at the amount which they will be called upon to bear towards the cost of what the vast majority of them believe to be a necessary war. It is very evident from what fell from the Chancellor's lips, as from the tenor of the debate in Parliament, that the Chancellor and also Parliament intended that the tax should be levied from the tea-consuming public, and not from the producers I am one of the vast majority who deem the war to have been a necessary war, but I deem it wrong to attempt to levy any special portion of its cost under a special tax from the persons we made war to protect. If we are to be taxed, by all means tax us, but levy the tax in such a manner that it will not act unequally in its incidence. Had the duty fallen to the lot of the consumer to pay, as it was intended it should have done, the reproach that it added to the poor man's burden would have been a just one. Why an article produced and manufactured by a large number of his Majesty's subject residing in his Majesty's colony, as also in a Dependency of the British Crown, should be taxed, and articles manufactured within the United Kingdom should be exempted, we can leave those who talk so glibly of consolidating our Empire to inquire into; the principal therein propounded found favour with Parliament, and with the rest we have no concern, and it is most certainly largely consumed."

The objections to the tax are urged. "At the time of the Crimean War the duty certainly stood at 1s 6d, and was promptly raised 3d per lb., but in 1852 it stood at 2s 1d, was reduced in 1853 to 1s 10d. and again in 1854 to 1s 6d per lb. Thus, when it was raised 3d it still stood at 1d per lb. less than it had previously done. A duty levied on trade will fall either on the consumer or the producer, in no instance on the merchant, and in some instances, as in the present instance, it may act to his direct advantage. In 1854-55 the consumers, acknowledging the necessity of levying a duty to meet war expenditure, could not fairly object to having the rate of duty raised, more particularly as the duty and surcharge together left them a penny better off than they had been in the habit of paying. Producers could not object, as the article taxed was of foreign origin, and they had no cause to object, as they had possession of the markets of the world. What they could not sell to us they could sell elsewhere; our custom or our values did not rule their prices. Our case at the present day is wholly different. The major portion of the tea brought for sale to the English market is of British production, owned by British subjects. It is not an article that can be increased or decreased at will, and it is an article which spoils after a time in keeping. Our home market was, until recent times, our sole market, and is still our principal market; its prices regulate the prices for all; whatever we make must come forward, and we must accept the prices offered or not sell at all. When it was suggested in Parliament to substitute an *ad valorem* duty for a duty on weight, the Chancellor vetoed the suggestion mainly on the ground that it had been tried and found wanting—I presume on the ground that it left openings to the quick-witted merchant to pass his goods through the Customs House at lower values than he should do. I cannot help thinking that where there is the will the way will be found, and that an industry which yields a revenue of several millions sterling is worth trying to do justice to, and for my own sake and for the sake of others I sincerely hope the Chancellor of the Exchequer will see his way to perfecting one. For my own part, I believe a duty of 4½d on all teas valued at 6d and under and an *ad valorem* duty of 75 per cent. on all teas from 6d to 10d (all teas over 10d paying 7½d) would more than make good the lo the revenue might incur from the acts of the quick-witted me chants, and if the Customs House officials find difficulty in assessi duty on the fractions of a penny might count as one."

Whether the views of the majority of producers are for or again "secret" or, as the supporters of the movement prefer to call the "private" sales of tea, they continue to be bitterly resented grocers. "*Spectator*," writing to the "*Grocer*," says, in t course of his letter: "Regarding Wednesday's secret sale itself, was somewhat remarkable in that it partook of a more mysterio nature than anything we have yet seen. Competition among buyers to buy their own property afforded a special feature interest, and the good old games of 'bluff' and 'puff' were merri played, to the satisfaction of all concerned. It is, however, ve apparent to the ordinary mortal that a scratch lot of Calcutta-boug tea is not the class of article which promoters of private sales ha in view. The auction might perhaps be best likened to a bir catcher's net, with many decoy birds in various false feathe hopping about and greedily picking up gilded oats. Its attractio do not, however, so far appear to have ensnared any of the wa old birds who own the bulk of the fine tea gardens; perhaps th do not care to risk having their marks prejudiced in the countr or perhaps the Ceylon merchants who have tried the scheme ma have whispered that the gilded oats are only chaff after all. understand that the Tea Buyers' Association anticipates that priva sales may 'by a more extended range of prices in some way confer benefit on the retailer.' There can be no doubt as to the questi of 'extended prices,' as they will most certainly extend dow for the merchants and up for the grocers; but with regard to t benefits to the retailers the prospects do not appear to be so clea I would, therefore, suggest, Sir, with all due deference, that t General Purposes Committee of the Grocers' Federation invite t chairman and a few other members of the committee who drew the private sales scheme, and have taken a leading part in t movement, to meet them next month and explain the advantag likely to accrue to the grocer. By this means the grocers wou be enabled to gather much valuable information, and the represen atives of the Tea Buyers' Association would not only be afforde an opportunity of gaining increased notoriety, but if their schem is found to possess the merits claimed for it, their names wou probably also be handed down to posterity as public benefactor If I recollect rightly such a meeting took place at the time of t pound-draft dispute three years ago, when, I believe, the groce were given to understand that the protection of their interes was one of the principal objects for which the London wholesa trade existed. It is probably fresh in the memory of many of yo readers the quarter from which that unfortunate disturbance em nated. In conclusion, I would venture to take the liberty of mo strongly impressing upon the General Purposes Committee t extreme importance of giving this subject of secret auctions the most serious attention, as if allowed to continue without prote or action from the country it may, although the Ceylon merchan destroyed the recent public sale boycott, yet develop into a mo dangerous situation for the retailers. I understand on good auth rity that many leading Indian and Ceylon merchants intend adhere to the policy of the 'open door,' and I know that there a several powerful blenders and many old established leading deale who look upon the new movement with suspicion, and are prepare to support the public sale room. To these firms I would mo earnestly recommend the grocers to accord their support an countenance, and, by making common cause with them, stam out once for all the most mischievous scheme that ever was concocte benefiting for a few at the expense of the many."

A correspondent of the *Daily Mail* of the 12th inst., writing o the same subject, says:—"Despite the fact that the 'tea ring' whic recently made an unsuccessful attempt to promote the secret sale of Ceylon teas was compelled to abandon its plan of boycotting th public auctions, its spirit still exists, and has shown itself in the for of secret sales of Indian teas. While it is unlikely that the old 'ring will be got together again on the same lines, the secret Indian sale were given a start last week by the action of one company in cata loguing 3,500 packages for sale behind closed doors. This compan is said by the anti-ring men to be the concern solely responsible, a least so far as estate tea is concerned, and no other large Indian Ceylon merchants are represented in the private auctions. One the most prominent of the anti-ring men in Mincing Lane sai

yesterday:—'We need not go far to find the reason for the proving action of this company. It is the agent of a group of companies. At recent meetings of two of the companies the chairman stated that the firms were interested in what he described as a 'distributing business,' which had now reached 'a paying stage,' and should prove a 'lucrative investment.' This should be of interest to grocers and retailers. It shows the reason for the interest of this company in secret sales, and the probable effect private auctions would have on the retailer and eventually on the consumer. 'No, the secret sale scheme is not yet done with,' said a representative of one of the largest Indian tea houses in London yesterday, but I really doubt if it will thrive long. When the recent agitation over private Ceylon sales was in progress, some of the merchants received ample assurances from the small dealers throughout the country that the 'open door' policy would receive almost universal support, and the wishes of the small dealer cannot be judiciously overlooked. The London trade does not appear to take much interest in this new movement, and as long as the grocers and retailers watch the sales as closely as they are doing, but few companies will risk having their marks prejudiced in the country by associating them with the little green notices marked 'Admission to this sale by ticket only.'"

COFFEE STATISTICS.

Messrs. G. Duuring & Zoon's circular of 5th ultimo gives the following figures :—

THE GOVERNMENT CINCHONA DEPARTMENT.

The following are extracts from the Report on the Administration of the Government Cinchona Department during the year 1900-1901 :—

GENERAL CONDITION.

(a)—Dodabetta.

As stated in paragraph 1 the season was an exceptionally favourable one for this estate, and the general condition of the plantation throughout the year was all that could be desired. The trees on the small plots of new land continue to make good growth and the oldest trees show no signs of failing health. In some fields the growth is rather too close and these plots will be moderately thinned during 1901-1902. The pruning that was done in 1899-1900 proved very beneficial to the trees by admitting more light and air, and during the past year the area pruned was 32·90 acres. This pruning was confined to the removal of the larger branches and

* Last month estimate.

extra stems in places where the trees were crowded, and in carrying out this work the importance of maintaining a good crown to each tree was kept in view. It has long been supposed that the leaves of the cinhona tree constituted the laboratory in which the alkaloids are formed and this conjecture has now been proved to be correct by Dr. Lotsy of Buitenzorg, Java. Pruning should therefore be a work carried out with caution and discrimination. In dense plantations the removal of some of the lower branches and extra stems is decidedly beneficial as it tends to the more vigorous growth of the crowns of the trees and admits more light and air to the soil, but where the trees have ample space in which to develop naturally it may be said that pruning should be left as much as possible to nature. The difficulty experienced in recent years in filling up gaps in the plantation with seedling plants, or rather the difficulty in establishing these supplies, has been so great that it was decided to make a trial with stumps of well matured plants. 36,407 of these stumps were put out in different parts of the estate in the gaps formed by the removal of old trees, and it is hoped that on account of their more vigorous root system the stumps will succeed where seedlings failed. Allusion was made in the last report to an experiment that had been made with the object of ascertaining if the protection of the stems of old trees by means of a covering of grass increased the alkaloidal value of the bark. Bark from a number of the covered stems and from a similar number of trees on the same plot, which had not been grassed, was analysed with the result that the former yielded 6·36 per cent. sulphate of quinine, while the latter gave 5·58 per cent. The increased yield of sulphate of quinine was thus ·7× per cent. Taking the yield of dry bark at 4,000 lbs. per acre which is a low estimate, the increased number of units obtained was 3,120. The present value of the unit is $1\frac{3}{4}$d so that the gross increase in the value of the bark which had been covered was Rs.341-4-0. The cost of the grassing per acre was Rs.58-2-10 so that the net increase in value amounted to Rs.283-1-2.

The total expenditure on the estate was Rs.13,806-2-3 or Rs.42-12-0 per acre. The crop obtained was 68,411 lbs. and the cost of the bark was therefore 3 annas 2·74 pies per pound.

A peculiar condition of the roots of some of the old trees on the estate was observed during the year. The roots were found to be covered with nodules or galls. Specimens of the affected roots were submitted to Mr. C. A. Barber, the Government Botanist, who reported that they were attacked by the root gall nematode Heterodera Radicicola. This nematode attacks tea and coffee and a large number of wild and cultivated plants, but its presence in the roots of the cinchona tree has not, it is believed, been noticed before. The affected trees at Dodabetta do not show any traces of impaired vitality, although it is evident from the condition of the roots that the disease is not of recent date. Pot experiments are being made in order that the effect of the nematode on the cinchona plant may be better observed. Several cinchona stumps on whose roots the galls formed by the nematode were numerous were put into pots and in the same pots healthy cinchona and tea seedlings were planted. At the time of writing the stumps have thrown up healthy shoots and are growing freely and the cinchona and tea seedlings are doing well. The roots of these seedlings will be examined from time to time to ascertain if they have been attacked by the nematodes from the cinchona stumps. The disease has not been noticed among the old trees at Nedivattam, but the nematodes have been found on that estate in the roots of young plants on old land. The young plants thus affected were stunted in growth and unhealthy in appearance, a condition which was attributed to exhaustion of soil. It has yet to be proved whether the unhealthy condition of these plants was due to the attack of the Heterodera Radicicola or to the exhaustion of the soil by previous crops of cinchona.

(*b*)—*Nedivattam.*

The damage done by the unusually heavy south-west monsoon was to a great extent compensated for by the rains continuing later than usual and the dry season being less severe than ordinarily. In the last report, it was remarked that during the period from 1st November to 31st March rain fell on only five days. During the year under review, however, there was rain on 14 days during t period, and it is partly due to the favourable dry season that estates looked so well at the close of the year. There has bee great improvement in the appearance of the trees on this est during the year, the result of the more liberal system of cultivat that has been followed in recent years. The good effect of d digging and the burying of weeds on 129·61 acres was well mark and the pruning of plots 21 and 28 as well as the removal of d branches and twigs from the older trees improved the appeara of the estate. At the commencement of the year the remain succirubra on plot 2 were coppiced. These trees were the oldes any on the Government estates, having been planted in 1862, a it is satisfactory to note that at the end of the year the you growth from the stools was healthy and vigorous. The condit of the trees on plot VII which were coppiced in 1879 is very sat factory, and other coppiced plots on the estate show very g growth. On the Nilgiris, where the successful replanting of land is a matter of considerable difficulty, there can be little do that the most profitable method of working a cinchona plantati in order to obtain a sustained yield, is to combine the syst followed in Java with that of the coppice system. Close planti and gradual thinning out followed by coppicing offers a bet chance of success than thinning out followed by uprootal of trees, and a replanting of the ground which is the course adop in Java. The systems of shaving and stripping seriously aff the growth and vigour of the trees, and although renewed bark generally richer in quinine than natural bark the yield of quin per acre over a series of years is greater in the case of thinning a coppicing than by either the shaving or stripping system.

During the south-east monsoon 46,400 eucalyptus plants w put out on plot XI as an addition to the fuel reserve, but excessive rain, during June, July and August caused a number the plants to damp off and the planting was not a success. vacancies will be filled during the coming monsoon with well-gro plants of which a considerable stock is in the nurseries.

The expenditure during the year was Rs.15,279-0-3 or Rs.48- per acre. The crop obtained was 64,317 lbs. at a cost of 3 an 9·61 pies per pound.

(*c*)—*Hooker.*

The old estate has improved in appearance during the year. sickly and dying trees were coppiced, dead branches and tw were removed and pruning was done where it was required. T estate was sickle weeded during the monsoon and dug over bef the dry weather set in. The new extensions now consist of 2 acres, of which No. 1 was planted in 1898-1899, No. 2 in 1899-19 and No. 3 during the past year. The growth of the plants No. 1 has been rather uneven. Some portions of the 80 acres ha come on very well, but the excess of moisture during June, Ju and August proved fatal to a certain number of plants. The vacancies will be filled in during the coming monsoon with we grown plants raised from seed received from Java. Out of the plants on this plot whose height measurements are taken quarte three died during the year. The average height of the 47 survivo was 7 feet 3 inches. The tallest of these plants was 10 feet inches. These plants were from 3 to 4 inches high when put o in 1898 and the growth they have made in a little over $2\frac{1}{2}$ years very satisfactory. The No. 2 extension is more even than No and promises to do very well. The plants have made good grow and look strong and healthy. No. 3 which was opened during t year promises well. The plants were small when they were p out but owing to favourable weather in the dry season they ha already made good growth. The fourth extension of 80 acres w be planted in 1901-1902.

The total expenditure on the old estate was Rs.5,261-3-9 Rs.27-2-10 per acre and the crop obtained was 61,686 lbs., the c of which was 1 anna 4·37 pies per pound.

The low expenditure on the Hooker estate is due to the fact th it is managed by an overseer under the orders of the Super tendent of the Nedivattam estate. Taking the two estates togeth the expenditure amounted to Rs.40-6-3 per acre and the cost of t bark from both estates was 2 annas 7·29 pies per pound.

MANURE.

On the Dodabetta estate 1,875 cartloads of cattle and stab manure were put out on different plots, at Nedivattam plots 9, and 28 were manured with cattle manure and at Hooker plot 1 was thus treated. In the last administration report mention w made of an experiment with a mixture of fish and chemical manur

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

The mixture consisted of 1 ton fish, 2 cwt. superphosphate, 4 cwt. of basic slag, 4 cwt. of potash and 1 cwt. of sulphate of iron. This quantity was evenly distributed over one acre and lighty forked in. The cost of the manure including the cost of application was Rs.185-6-4. The stems of the trees were covered with grass at a cost of Rs.58-2-10, so that the total cost of the experiment was Rs.243-9-2. The bark of the trees thus treated yielded 6·91 per cent. sulphate of quinine, while the bark from unmanured and ungrassed trees on the same plot gave 5·11 per cent. There was thus an increase of 1·80 per cent. sulphate of quinine. Of this increase ·78 per cent. may be attributed to the covering with grass, so that the net gain from the manuring was 1·02 per cent. Taking the yield of the acre at 4,000 lbs. there was an increased yield of 4,080 units due to the manure which at the present rate of the unit (1¾d) represents Rs.446-4-0. The cost of the manuring was Rs.185-6-4 and the net gain was consequently Rs.260-13-8. It was shown in paragraph 3 that the net increase in value of bark from covering the stems with grass amounted to Rs.283-1-2 per acre, so that the total gain per acre by the combination of manuring and grassing was Rs.543-14-10 per acre. With a unit of ½d the experiment would have shown a slight loss, but with a unit of ¾d the net gain would be Rs.9[illegible]-14-10.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

The following are extracts from an abstract of the proceedings of a meeting of the General Committee held on 24th September. There were present: Messrs H. S. Ashton (*Chairman*), A. Tocher (*Vice-Chairman*), H. W. Boyd, W. Brown, R. H. A. Gresson, A. C. Lawrie, R. Magor, and R. R. Toynbee.

Considered a letter No. 2338 of 20th September, from the Vice-Chairman, Calcutta Port Commissioners, regarding teas bulked in Calcutta by Mr. Apjohn's tea bulker. In this letter it was stated that arrangements had been made with the London Customs authorities whereby Calcutta tares would be accepted without limit as to variations, if, after a short trial, the weights were found to be correct. The conditions laid down in London were also detailed in the letter, copies of which were to be published for the information of the members of the Association. A copy was also to be sent to the London Committee.

Considered a letter dated 5th September, from Captain R. Kennion, I.S.C., British Joint Commissioner, Ladak Agency, Leh, forwarding samples of the brick tea in general use in Tibet and Ladak. In the proceedings of the meeting held on the 13th August, it was stated that samples of Indian brick tea—manufactured on a Dooars garden—were to be sent to Captain Kennion. This had been done, and in the letter above mentioned, Captain Kennion remarked that from a casual inspection he did not think the samples bore sufficient resemblance to the Chinese article to command a sale in the frontier markets. He would, however, report further after getting the opinions of connoisseurs. The thanks of the Committee were to be conveyed to Captain Kennion for the trouble he had taken in the matter.

NELLIAMPATHY.

Proceedings of the Annual Meeting of the Nelliampathy Planters' Association, held at the Victoria Bungalow, on the 27th September, 1901. PRESENT:—Messrs. J. C. Abbott (*Chairman*), C. Hall, A. R. Jones, A. Barnes, A. G. Murray, G. H. Welchman, and W. R. Mackenzie, *Honorary Secretary*.

Proceedings of last meeting were taken as read.

The Honorary Secretary made his Annual Statement and presented the accounts which were confirmed.

The Honorary Secretary was re-elected.

Roads and Bridges.—Read correspondence with the Chief Engineer on the necessity of repairing or renewing the Bridge between Kythode and Valavachen in Padagherry.

Honorary Secretary was instructed to again address the Chief Engineer on the subject of the roads from Kythode Bridge to Valavachen, they being impassable. Also to ask the Darbar to finally decide which road they intend to keep up, the old trace or the new diversion.

Roads.—Honorary Secretary to ask Government for a statement showing what allotment of funds for up-keep of District roads has been made, and by whom are the works being carried out, as the Association—the most interested party—is in entire ignorance of what arrangements have been made.

Police.—Read correspondence with Superintendent of Police on the subject of engaging new police officer. The Association approves of the Havildar mentioned and recommended. The Honorary Secretary to forward through the Superintendent Rs.15 for the Havildar's travelling expenses. It was noted with satisfaction that the local police against whom charges had been made had been severely punished.

Hospital.—Read correspondence. Honorary Secretary to inform Peishkar that the land for the new hospital had been acquired and should now be demarcated and a deed drawn up at Government expense.

Honorary Secretary was directed to again bring to the notice of Government, the serious delay in carrying out this work which had been sanctioned years ago.

Hospital Staff Quarters.—Honorary Secretary to ask Government to erect suitable quarters for above, as the temporary buildings are no longer habitable.

New Member.—Mr. R. K. Walker.

Reduction of Rates.—It was agreed that Mr. Barnes's resolution to reduce coolies' pay be held in abeyance till every member of the Association be consulted.

Proposed by Mr. J. C. Abbott, seconded by Mr. Cecil Hall:—That the Honorary Secretary be requested to address the Collector of Malabar with reference to the land tax in the British portion of the Nelliampathies asking that a reduction or remission of the tax might be made.

The Association passed a vote of sympathy with the Assam planters.

(Signed) J. C. ABBOTT,
Chairman.

(,,) W. R. MACKENZIE,
Honorary Secretary.

SELANGOR PLANTERS' ASSOCIATION.

Extract from minutes of General Meeting of the Selangor Planters' Association, held at the Selangor Club, on Saturday, the 17th of August, 1901, at 11 A.M.

[Subject to confirmation at a subsequent meeting].

PRESENT:—Mr. W. W. Bailey (*Chairman*); Messrs. C. Meikle, E. B. Skinner, P. W. Parkinson, H. C. Rendle. Members of Committee; and E. B Prior, *Honorary Secretary;* also Messrs. A. G. Tanner, H. M. Darby, E. V. Carey, O L. Carey, R. C. Kindersley, A. Fraser, J. Glassford, and M. Stonor.

Mr. Carey proposed and Mr. Skinner seconded a proposition that in future if the minutes be sent to local and other newspapers before having been confirmed, a note to that effect should be made on such copies, and that the minutes were subject to confirmation at a subsequent meeting. This was carried unanimously.

The Secretary then read the minutes of the last meeting.

Mr. C. Meikle proposed that the minutes be placed on the table. This, on being seconded by Mr. Parkinson and put to the meeting, was carried *nem. con.*

The following correspondence was read to the meeting:—

(*a*) With Government—

1. Letter, dated 11th July, 1901, from the Secretary to Resident to the Hon. Secretary, Selangor Planters' Association, concerning the subject of recruiting free labour.

Mr. Carey asked if the Hon. Secretary of the United Planters' Association had received a similar communication, and was informed that he had.

Mr. Meikle, on the Chairman's suggestion, proposed and Mr. Darby seconded that the matter be placed before the United Planters' Association and that the Secretary to Resident be informed of the course adopted.

This was put to the meeting and carried unanimously.

2. Letter, dated 22nd July, 1901, from the Secretary to Resident to the Hon Secretary, Selangor Planters' Association, enclosing copy of Memorandum by Dr. H. A. Haviland on the distribution of meals to Indian immigration coolies.

The Chairman asked if anyone wished the memorandum read as it had been published in the local paper, and no doubt all present had seen it. It was decided unanimously to lay the memorandum on the table, which was done accordingly.

3. Letter from the Secretary to Government, dated 6th June, 1901, to the Hon. Secretary, Selangor Planters' Association, in reply to one from Hon. Secretary, Selangor Planters' Association, of the 28th May, 1901, which was also read.

Mr. Carey considered that the Government had done all they possibly could in this matter and that for all practical purposes the Association's request had been granted. Messrs. Bailey, Skinner, and Parkinson all agreed that the members of the Association had reason to thank the Government for taking the matter in the way they had.

Mr. Carey proposed that the letter be copied *in extenso* in the minutes, and this, being seconded by Mr. Bailey and put to the meeting, was carried unanimously.

Letter, dated 20th June, 1901, from Mr. Derry, Government Plantation Office, Perak, to the Hon. Secretary, Selangor Planters' Association, enclosing copy valuation of sample of rubber sent some time ago by Mr. Tan Chay Yan, of Malacca, from Ficus elastica trees four years old.

The following is the valuation made by Messrs. W. J. & H. Thompson:—"This a good rubber and well prepared. The value is about 3/- per pound, provided the bulk is fully equal to the small sample (one kati), equally clean and equally dry."

MARKET REPORT.

[*Per Mail advices of 13th September* 1901.]

COFFEE.

The London Commercial Record says:—Supplies at auction during the se'nnight have been rather larger than those of last week, but they still continue to be on a moderate scale, and with a steady inquiry the bulk has been disposed of. Prices as a rule show a further hardening tendency, especially for fine quality. Plantation Ceylon realised extreme rates, and home-trade grades of East India sold at very satisfactory prices to importers. Dumont Santos was not so readily sold as of late. There have been some slight changes in "futures," but, in spite of the continuance of very heavy receipts at the Brazils, the closing quotations are rather higher for the week. Yesterday March Santos was done at 29s to 29s 6d and May at 29s 6d.

Auction supplies to-day comprised—107 bags East India, 40 half-frazils Mocha, 56 bags Nyassaland, 61 bags Nicaragua, 572 bags Salvador, 331 bags Guatemala, and 237 bags Costa Rica. The small auction sales went off with good spirit Bold sizes were 6d to 1s and pile lots 2s to 2s 6d per cwt. dearer.

London ...	... Santos ...	Dec. delivery	... 28s 9d.
New York	... No. 7 Rio...	,,	... 5·00 cents.

Rio Exchange 10$\frac{13}{16}$d, previous day 10$\frac{11}{16}$d.

Havre, *September* 12.—Good average Santos September opene quiet at 34f. and closed steady at 34f. December opened at 34½f. an closed at 34½f, March opened at 35¼f. and closed at 35¼f.. Ma opened at 35¾f. and closed at 35¾f., July opened at 36¼f. and close at 36¼f.

Hamburg, *September* 12.—Good average Santos September opene quiet at 27½pf. and closed at 27¾pf., December opened at 28¼p and closed at 28½pf., March opened at 29pf. and closed at 29¼pf., Ma opened at 29¾pf. and closed at 29¾pf., July opened at 30pf. an closed at 30¼pf.

New York, *September* 11.—Closing prices of No. 7 Rio were a follow:—

	Sept.	Oct.	Nov.	Dec.	Jar
September 11...	4·75	4·80	4·90	5·00	5·1
September 10...	4·70	4·75	4·85	5·00	5·0

America, *August* 28, 1901.—Deliveries are running ahead of las year, but the market continues to favour buyers. During the wee Brazil sorts have been steady at last week's quotations. No. 7 Ric spot, at 5⅝c; Nos. 7 and 8 Rio offered at 5⅛c.,c. and f.; No. 3 Ric 7¼c; No. 5 Santos, 6⅜@6½c. The visible supply is very large and grows.

In mild sorts there is a firmer market for coffee from Venezuel and Colombia, due to the political troubles there existing. Ther is no stock here of Bucaramanga. The better grades of Bogot are held from 9¼@12½c for invoices There is no stock here o Porto Rico, Liberia, Hayti, or Angostura coffee, so that quotation below are nominal Of Mocha there are only 1,500 bags in stock

held from 14@18c, and higher for extra fancy. Padang Interior, 14@19c, with fancy mats at 24@28c, and higher for extra fine marks. The sales from August 9 to 23 include 33,379 bags Maracaibo, with good Cucuta at 7½c and choice at 10½@11c; 11,596 bags Savanilla, 5,745 bags Central American, and 2,616 bags Laguayra.

TEA.

INDIAN.—Sales amounted to 32,000 packages (of which 7,200 packages were brought forward at Wednesday's private auction) compared with a total of 29,800 packages in the week before, when 7,400 packages were offered in the "ticket" room, and 33,200 packages for the same period of 1900.

There is no great change to note but full coloury teas of all grades have been wanted at rather enhanced rates, while invoices giving liquor of a "rawish" type although possessing quality, were in less favor and barely maintained their former level. The more useful common sorts here and there shewed a little indication of moving upwards, but are no doubt affected by the character of the somewhat heavy bonded stock of old import still remaining. Among the best results were:—Assam—Pabbojan Co., 152 packages, 1s 5¾d; Balijan Co., 218 packages, 1s 3¾d; Deamoolie Co., 86 packages, 1s 2½d; Mokalbari Estate, 141 packages. 1s 2¼d, and Suddia Road Co., 212 packages, 1s 1¾d per lb. Darjeeling—Poobong Estate, 137 packages. 1s 5¼d; Thurbo Estate, BDTCo., 158 packages, 1s 5d, and Selimbong Estate, 119 packages, 1s 4¼d per lb.

For 26,200 packages on estate account 8¼d per lb. was obtained, against 8⅛d per lb. for 31,400 packages and 9⅛d per lb. for 37,600 packages in the two foregoing seasons.

CEYLON.—Not quite so much was printed, *viz.*, 22,600 packages contrasted with 24,200 packages in the previous week, and 26,500 packages a year ago.

A stronger tone was observable in the bidding, and with more enquiry from the Continent quotations for nearly all descriptions tended in favour of sellers, partly due to further improvement in the style of manufacture now usually apparent. Leafy kinds for "price" were firm, while medium and fine hardened in value, sometimes marking a rise of ¼d to ½d per lb. The position of Broken Pekoes under 9d per lb, excepting those with thick liquor which were in good request and occasionally dearer, did not on the whole alter appreciably, but over that they often denoted an advance. All finest and choice lines attracted attention and sold well, some of the top figures, secured being:—West Holyrood 1s 6½d, Talawakelle 1s 4¼d, Concordia 1s 3d, and Kotiyagalla and Mount Vernon 1s 2½d per lb.

The average is 7¼d per lb., on the 5th instant it was 7d per lb. and also twelve months since.

JAVA.—Catalogues included 1,400 packages of direct import which went with spirit, though in several instances limits were not reached and the lots had to be withdrawn.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 10th Sept.	1901	5,322,077	lbs.
Do. do.	1900	5,130,786	„

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	28,187	3,789	31,976
Ceylon	20,981	1,644	22,625
Java	384	590	1,474
Total	50,052	6,023	56,025

Also 270 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated September 13th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	244,331	378,302	20,099
1900-1901	232,338	402,135	14,307

32,344 *pkgs.* INDIAN
22,966 „ CEYLON
1,474 „ JAVA
} Total 56,784 packages were offered in public auction this week.

Reports from both India and Ceylon continue to indicate a probable reduction in the output. Still, so much land has recently been brought into cultivation in India that young Tea is now coming into bearing; every effort will therefore be required on the part of Planters to reduce the out-turn. According to the Indian Government Report—in 1897, 36,838 acres were added, in 1898, 31,561 acres, in 1899, 13,978 acres, and 1900, 6,829 acres.

INDIAN.—Auctions continue to be on a moderate scale, while indications point to a more active tone among buyers. The market has been very steady for all descriptions, medium Teas occasionally showing an advance of ¼d. to ½d., while Teas for price were also slightly dearer. Public auctions were held on Monday and Thursday, and on Wednesday 7,245 packages were offered under the new conditions. The following averages are worthy of note:—"Pabbojan T Co.," 1/5¾; "Poobong," 1/5¼; "Brit. Darj. Co. Thurbo," 1/5; "Selimbong." 1/4¼; "Balijan T Co.," 1/3¼; "Deamoolie T Co.," 1/2½; "Mokalbari," 1/2¼.

Week's average of New Season's Tea sold on Garden Account, 1901, 26,930 pkgs., av. 8·15d. 1900, 30,742 pkgs., av. 8·07d.

New Season's Tea sold on Garden Account 1st June to date, 1901, 154,881 pkgs., av. 8·35d. 1900, 181,673 pkgs., av. 8·13d.

CEYLON.—The volume of auctions has been gradually diminishing during the last few weeks, while a still further reduction appears likely to take place next week. Bidding was very general, all grades meeting with good attention, the better kinds frequently making an advance of fully ½d. per lb., while Teas for price were occasionally ¼d. dearer.

Average for week 7·19d., against 6·76d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 853,129 pkgs., av. 6·61d. 1900, 905,965 pkgs., av. 7·19d.

JAVA.—Offerings comprised some Teas of very useful quality which were fully appreciated by the Trade. Prices reflected the improvement noticeable in other growths. The best average was made by the "Goalpara" Estate, 108 packages selling at 10¼d.; "Tanawattee," 120 packages, 8¾d.; and "Djati Nangor," 216 packages, 7¾d.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

Auctions on the 10th inst. presented 3,621 bags, which moderate quantity experienced a fair demand at full rates to an advance of 1s per cwt. Of 1,086 bags Trinidad catalogued 750 bags were placed, at 71s to 74s for very fine red, 69s to 70s for good to fine, and 67s for middling, being about 1s dearer. Only 74 bags Grenada were offered, and these sold at valuations—65s to 65s 6d for fine. Of 633 bags Jamaica 520 bags sold firmly at 60s to 64s for good to fine fermented and 54s to 57s for ordinary. 3 bags Dominica brought 56s 6d. A small portion of the 63 bags Caracas offered sold at 86s for fine clayed. Ceylon was not very brisk and of the 871 bags brought forward only 240 bags sold—fine bold red at 85s 6d to 88s, but principally pickings at 51s 6d to 59s, and blacks at 42s to 47s 6d per cwt. 50 bags Bahia, 44 bags Colombian, 193 bags Para, 3 bags Maracaibo, 509 bags Haiti, and 3 bags Seychelles all passed the hammer unsold. Privately the following sales are reported:—250 bags Trinidad at 70s to 71s, 20 bags St. Lucia at 63s for fine, 50 bags Caracas at 96s for fine clayed, 800 bags Guayaquil at 70s for red Caraquez and 77s to 79s for good to fine Arriba, and about 700 bags Ceylon, fine at 80s to 88s, good 70s to 75s, and medium 60s to 65s per cwt.

PEPPER.

BLACK.—A fair demand has been experienced since our last, and full prices have been paid. Singapore has been sold on the spot at 6d for fair, and at same price for shipments near at hand; September-November quoted at 6⅛d.

At auction on Wednesday 120 bags Singapore were bought in at 6⅛d per lb. 24 bags Estate Penang withdrawn.

To-day quiet.

To arrive business has been done in Tellicherry to Genoa at 56s to 56s 6d per cwt. c i f. delivered weights, per September-October (s.).

WHITE—In more demand, and about 50 tons Singapore sold for arrival—at 8 15/16d near at hand, and at 8 15/16d to 9d for October-November shipment.

At public sale on the 11th instant 26 bags Estate Penang were taken out.

GINGER.

COCHIN—A firm tone exists, but not much business has passed this week. 120 cases 160 bags offered, of which only 18 cases very bold branchy rough Calicut, but much mouldy, sold at 45s per cwt.

JAMAICA.—32 barrels sold steadily—middling to fair bold washed 43s to 45s, good ordinary 38s to 40s per cwt.

ST. LUCIA.—10 bags small plump dull sold at 35s per cwt.

CINCHONA.

The Amsterdam auctions to be hld on October 3 next will consist of 4,550 packages, including 2,728 bales Ledgeriana, 951 bales and 307 cases Succirubra, 385 bales hybrid, 93 bales Calisaya, and 86 bales officinalis. A supplementary catalogue will also be p lished. Six bales of coarse and broken Calisaya quill sold at fr 8¼d to 8½d per lb. in auction.

QUININE.

The market has been very flat throughout the week, and val in second-hand are again easier, especially for forward delive small transactions of good German sulphate in bulk being repor at 1s 0⅜d to 1s 0⅞d per oz for December, and October at 1s 0 The spot price is nominal, at 1s 0¾d, but there are few, if a sellers for prompt delivery, and the market in this position is fi The next Amsterdam cinchona-sales will again be heavy, in wh case there is likely to be a further decline in the unit.

TREATMENT OF SCALE PESTS.

In continuation of recent remarks upon the San José Scale, we now proceed to make further use of Mr. Benson's article in the *Queensland Agricultural Journal*, to show the treatment he recommends. We need scarcely say that it will doubtless be found equally applicable in the case of other scale pests than the San José, and these, at least some of our readers are familiar with. Mr. Benson states that although this scale multiplies so rapidly it has been found possible to keep it in check by constant and systematic spraying, as has been proved by years of experience. There are (in Queensland) two main periods of spraying, one during the winter after pruning, when the leaves are off the tree and every part of it can be reached by the spray, and the other when the young scales are hatching out during spring and summer. The most important treatment is the winter spraying, as this can be carried out at a time that the tree will stand the strongest dose without injury, and also on account of the fact that the tree can then be much more effectually sprayed than when it is covered with foliage, as, no matter how carefully the spraying is done when the tree is in leaf, some part is sure to be missed and to become a breeding ground from which the scales rapidly spread over the whole tree. The best winter

spray is the sulphur lime and salt wash, which is made as follows:—

Take 40 lbs. of unslaked lime, 20 lbs. of sulphur, 15 lbs. of salt, and 50 gallons of water.

To mix, take 10 lbs. of lime, 20 lbs. of sulphur, and 20 gallons of water; boil for not less than one-hour-and-a-half, or until the sulphur is thoroughly dissolved, in a strong iron (not a thin copper) boiler; when the mixture will be of a light amber colour. Slack 30 lbs. of lime in a barrel with hot water, and when thoroughly slacked but still boiling add the 15 lbs. salt; when this is dissolved the whole should be added to the lime and sulphur in the boiler, and the whole boiled for half-an-hour longer, when water to make the whole up to 50 gallons should be added. Strain through a wire sieve, and keep well stirred whilst in use.

In making this mixture be careful to use a strong iron boiler, for if made in a copper wash boiler, the sulphide of lime which is formed will rapidly eat away the copper, and thus destroy the boiler. This wash connot be applied by means of a copper knapsack pump for the same reason. As the wash is very hard on the hands and clothes, use strong leather gloves and cover the body with a sack in which holes have been cut for the head and arms. Good bamboo extension rods are also essential, and the best nozzles to use should be strong, simply constructed and easily cleaned.

One great advantage of the spray over all others is that it is an excellent fungicide as well as an insecticide, and will destroy all moss, lichen, or canker on the bark, and prevent to a great extent the spread of the black spot of the apple and pear, and of the shot-hole fungus of the apricot. Another advantage is that when the spray dries it is readily seen whether the work has been carefully carried out or not, and any parts of the tree that have been missed can receive a second dressing, thus securing the treatment of every part. The remedies used for the destruction of the young scales when hatching out are not as caustic in their effects as the above, and in order to obtain the best results from their use they require to be applied several times at short intervals so as to catch the succeeding crops of scales as they hatch out, as the younger the scales are when treated the more readily they are destroyed.

Mr. Benson states that the following remedies have been found effectual, *viz.*:—

WHALE-OIL SOAP AND BLACK LEAF TOBACCO EXTRACT.

Dissolve ¼ lb. of whale-oil soap in 1 gallon of water, and add 2 fluid oz. of black leaf tobacco extract, and apply with sufficient force to reach and wet every part of the tree.

SULPHIDE OF SODA AND WHALE WASH.

Boil 6 lbs. of sulphur and 3 lbs. of concentrated lye in 2 gallons of water till thoroughly dissolved and of a dark brownish green colour. This dark liquid is sulphide of soda. Dissolve 30 lbs. of whale-oil soap in 48 gallons of water, add the sulphide of soda to it, boil to thoroughly mix, and add water to make 120 gallons in all and apply.

Moreover, in severe cases it is found advisable to apply as a paint to the trunk and branches a mixture prepared as follows:—

A PAINT FOR THE TRUNKS AND MAIN BRANCHES.

Boil 2 lbs. of sulphur and 1 lb. stone-lime in 2 gallons of water for an hour-and-a-half. Then add 3 lbs. more stone-lime and boil half-an-hour. Make up with boiling water to 2 gallons, and add enough fine flour or fine clay to the mixture to make it of the consistency of thin paint.

Mr. Benson prefers these remedies to the use of kerosene sprays, though the latter are recommended by many orchardists, as he considers that there is less likelihood of danger to the tree, and also that those washes in which lime is used leave such a mark on the tree that it is easily seen whether the work has been carried out properly or not.

THE PROSPECTS OF COFFEE.

It must be confessed that Coffee has held its head up fair well in the face of an adverse statistical position; but it is sadly diminished head as regards price. As to the futu there is at least as much uncertainty as usual. The Bahia R crop of 1900-01 amounted to 242,600 bags; the Victoria cr to 201,500 bags. The 1901-02 crops are estimated at 400,0 and 500,000 bags respectively. Estimates for 1901-02 p crop at 3¾ to 4½ million bags, Santos at 7½ to 8 million together 11¼ to 12¼ million bags. The general idea appea to be that 12 millions may be regarded as a minimum. A regards the next year's crops there are already rumours of reduction. These were expected for, after two years of hea bearing, a lighter crop is always looked forward to. It however, impossible to draw any reliable conclusion. Pro pects of the Venezuela crop are unfavourable; in Guatema only about half an average crop is expected, and that som what late. Costa Rica advises, also predict, a small cro The present Java crop is short, but all this is practically ou weighed by the fact that the total visible supplies a enormous.

NOTES.

Rubber in the Amazon District. An expedition has been despatche from Washington to study the rubb resources of the Amazon basin.

Ceara. Good crops of Maniçoba rubb are being obtained in the Coi district, where more than 20,000 trees have been planted.

Assam Planters and the Chief Commissioner. Recent meetings have laid stre upon the desirability of appointing Commission to report upon the cond tions of the tea industry all over Assam.

Samoa. The attempt to cultivate coffee the Samoan Islands was a failur Cacao can be successfully grown almost everywhere in t islands except on the summit of the mountains.

Pepper in Turkey. The Singapore and Penang peppe are imported direct into Turkey fro those two places and Jamaica pepper from Liverpool. Abo 800 bags arrived from Penang and 500 bags from Jamai during 1900.

Cocoa in Barcelona. The principal feature in cocoa the market in 1900 was the gre falling-off in the supply from Cuba, but, on the other han the quantity imported from Fernando Po has quadrupled the last six years.

More Indian Tea for Persia. Mr. T. J. Greensill, representi the Kangra Valley planters, is takin 100 camel-loads of tea to Meshed a leaves for Quetta almost immediately. He is also takin some indigo from Multan district.

Australian Tariffs. The Australian Commonwealth Tariff Bill introduced in the House of Representatives provides for a new duty on tea of two pence per pound, *plus* twenty per cent. *ad valorem*; cocoa, two pence, *plus* fifteen per cent.

Where to cut in Pruning. Mr. C. A. Keffer, in the Univ. Tennessee Record, expresses the belief that the best method of cutting off limbs is through the base of the shoulder parallel to the trunk or limb on which the branch to be removed is growing.

Bolivia. During 1900 Bolivian exports included the following items :—

	Bols
Rubber	2,049,389
Coco	398,629
Coffee	94,819
Quinine (Cinchona)	47,306

Indian Tea Exports. The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association :—Quantity of tea entered for export to the United Kingdom for the second half of September, 1901, Calcutta, 11,119,342 lbs.; Chittagong, 952,470 lbs.; as compared with 14,095,562 lbs. entered during the corresponding period of last year.

The Value of Advertisement. Apparently as an additional inducement to the Canadian public to buy Ceylon and Indian Black and Green Teas, an advertisement in the *Canadian Grocer*, which sets out the claims of the teas and the names of sellers at Montreal, includes this remark :—"In addition to their unquestioned merits, remember how they are advertised—*See* the daily papers." It is a curious appeal!

Ceylon Tea Exports, U. K. The following has been wired to London by the Ceylon Chamber of Commerce Committee :—

September shipments	6,000,000 lbs.
October estimate	8,000,000 ,,

The estimate for September was six millions to six and a quarter millions. The estimate for October is two millions less than shipments of the same month last year, and nearly three millions less than in 1899.

Ceylon Tea Exports. The *Ceylon Observer* writes anent "our black tea exports for three-quarters of the year." The comparison of total exports stands as follows :—

		lbs.
January 1st to September 30th,	1900 .. .. =	109,662,605
Do. do.	1901 ... ... =	106,533,166
	Decrease ...	3,129,439

Mr. P. C. Larkin in London. A special cable to the *Times of Ceylon* states :—Mr. Larkin has addressed to the Tea and Produce Committee of the Ceylon Association in London, a most encouraging account of the progress of Ceylon tea in Canada and the United States, especially in greens. The Committee is writing to the Thirty Committee suggesting an increased cess, and the devoting of a larger proportion of the funds to the fostering of the green tea industry.

Borneo Coffee. It may interest our "coffee-men" to know that the Borneo Coffee Co. advertises that it will ship pure Borneo coffee on orders being sent to Messrs. Shand, Haldane & Co., London. Raw at 1s per lb., roasted whole berry at 1s 3d, roasted and ground at 1s 3d, and Borneo coffee, mixed with Chicory, 1s 1d "The charge for postage or carriage on 1 lb. will be 3d.; on quantities of less than 5 lbs. 6d.; 5 lbs. or more will be sent carriage free. Terms :—Cash with order."

Tea in Australia. The *Age* remarks :—The market is firm all round for Indians and Ceylons. For quick shipment to Sydney some further good business has been done in both these lines, the market there being much above this centre; 300 packages have been sold. The Customs Bill, now nearly through the Federal Houses, contains rather more drastic sections in relation to tea than the State act. The provisions are worthy of consideration—especially by those interested in the importation of "commonest" descriptions.

Commercial Cinchonine. According to Jungfleisch and Léger (*Pharm. Zeitsch.*, 1901, 595), commercial cinchonine sulphate contains as much as 20 per cent. of hydrocinchonine. By treatment of the sulphate with 95 per cent. alcohol, then converting into the basic sulphate, and, finally, recrystallising several times from water, a product containing only 3 per cent. of hydrocinchonine is obtained, and after ten recrystallisations the product contains only one per cent. of that base. The melting point of the thus purified product is 264·3° C. (corr.), and the optical rotation is always higher than that of the commercial salt.

Indian Tea Crop Prospects. The following telegram with reference to the tea crop in the various districts has been despatched by the General Committee of the Indian Tea Association in Calcutta to the Committee of the Association in London, *viz.* :—Assam, outturn last month poor; immediate prospects fair. Cachar, outturn last month poor; weather generally too cold for time of year, and is checking leaf. Sylhet, outturn last month poor; immediate prospects fair. Dooars, outturn last month about normal; immediate prospects fair. Terai, outturn last month poor; immediate prospects bad. Darjeeling, the outturn is stated to be 5 per cent. under last year; immediate prospects fair. Deficiencies increasing generally.

The London Tea Market. The weekly special telegram dated 3rd instant from Messrs. Gow, Wilson & Stanton to Colombo reports that competition is general and well distributed, and that the market for fine teas as well as for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is $5\frac{3}{4}$d (same as last week), and the average price of Ceylon tea sold on garden account this week was 8d (up $\frac{1}{8}$d). The average of the corresponding week last year was $7\frac{1}{4}$d. Reuter reports that Ceylon tea generally realised full rates, but medium broken Pekoes were irregular. Fair Pekoe Souchongs are quoted at 5d (the same as last week), and the average for the week is 8d ($\frac{1}{8}$d up). 19,000 packages of Ceylon tea were offered for sale and 18,000 were

disposed of; while of the 52,000 packages of Indian tea offered, 50,000 found purchasers, at an average of 8½d per lb. (¼d less than last week).

Tea in Australia.

Messrs. Alfred Harvey & Co., of Melbourne, in their September Tea Report state that shipments from Colombo to date were 8,840,588 lbs., as against 6,323,000 lbs. at the same time last year. Shipments from Calcutta to date were 2,254,718 lbs., as against 3,319,000 lbs. at the same time last year. "Arrivals," say Messrs. Harvey & Co., "have been on a smaller scale than usual, the high Calcutta costs no doubt tending to restrain operators from shipping freely. A few breaks have shown good quality and strength, but on the whole the new crop is distinctly disappointing, and in the lower grades is barely able to compete with similar class Ceylons. One or two small sales have been held during the month, but, except for a few stand-out lines, sales have been difficult to effect, and the result has been disappointing to importers. Stocks in bond on the 7th instant were 658,293 lbs."

A Bye-Product.

"Bananas and plantains," write a Honduras correspondent of the *Boston Herald*, "are, of course, grown almost everywhere; and while in camp it was my custom to purchase bananas for our party. And such bananas! of red or yellow variety, just as we might select, but in every case large bunches, almost as high as a man and weighing over a hundred pounds each. One of the many purchased was of the red variety, and contained by actual count 262 bananas, and was over five feet in height. Some of the bananas measured 8¼ inches long and 9 inches round. They were brought from the plantation of an Indian, who travelled with the bunch on his back and held to his head by a leather strap. He crossed the Chiquilla River five times, and his price for this bunch was 10 cents in our money. Our custom was to eat raw when ripe, or fry them. Our cook's way was to roll them in flour so as to avoid their sticking to the pan."

Calcutta Tea Sales.

At the Calcutta tea auction on the 4th instant 19,800 packages were offered, as against 22,000 on the same date last year. These figures again show the shortage of the crop. There was a strong and active tone throughout the sale, the firmest features being lower grades, which showed an advance of 3 to 4 pies, and in some cases as much as half an anna. For really good Dooars, a few invoices of which had cold weather flavour, there was very keen competition, but in view of the evident sign of the early close of the season in this district, it is more than likely that this class of tea will go a good bit higher yet. Assam Broken Pekoe kinds well selling much under the rates ruling at this time last year, and seemed to offer unusual value for the quality now being offered. Taking, as a whole, yesterday's sale was a distinctly more encouraging one for growers, and there seems every prospect now of season 1901 winding up more satisfactorily than at one time appeared likely. The sale is the last to be held this side of the Puja holidays.

Estimating Cinchona Alkaloids.

In the *Pharmaceutische Centralhalle* the following method of estimating the alkaloids in cinchona bark is given: Four grammes of powdered cinchona bark are trit rated with 2 grammes of calcium hydrate until the wh particles of the latter are no longer visible. Five c. of ammonia are then added so as to impregnate all the powd The whole is placed in an Erlenmeyer flask, with 100 c.cs. ether, and exhausted for half an hour. The liquid is th filtered through cotton wool, the flask and the filter bei washed with 80 c.cs. of ether. The filtrate is next shaken three minutes with 10 c.cs. of 10 per cent. hydrochloric ac allowed to separate, and the alkaloidal solution drawn o after which the ethereal portion is again shaken with 5 c of water. The acid solution of the alkaloids is introduc with 70 c.cs. of ether into a separator and made alkaline wi caustic soda. The alkaline solution is run off, and aft washing with 2 c.cs. of water the ether is evaporated in weighed flask. The residue is dried and weighed. V Ketel suggests this method, which is applicable to all t fixed alkaloids soluble in ether.

A German Report on Coffee.

Messrs. Scheffer & Dracher, Hamburg, in their report dated 14 ultimo says:—"The stocks of coff in Brazil last week have become unusually large, and up now from the beginning of the season, they are 4,267,0 bags against 2,718,000 last year. Fortunately the shi ments are also heavier. The quantity sent from Brazil North America and Europe is distinctly greater than ev before and as by far the larger part of this goes direct retail traders, the balances on hand will be soon furth diminished. The market kept steady all the week and clos a shade higher which was the more surprising as suppli came in so fast. The improvement will make faster progres should the reduction of the stock in the end of September the beginning of October coincide with unfavourable news the plants. On every side it is stated that the Brazilia coffee plants are in a bad state and suffer in many places fro some sort of leaf disease. This is likely enough, as the plan bore so abnormally last year, that they must be exhauste They require now good manuring and great care, but t planters are not able to give them this. For this reaso managers expect but a poor crop."

Coffee in London.

The *Produce Markets' Review* 14th ultimo says:—The auctions th week comprised moderate quantities, mostly Central Amer can, and, with a strong demand still prevailing, the who was readily sold at full to again higher prices. Privatel the demand for Costa Rica and fine Guatemala and Salvad continues and further substantial advances on recent valu have been paid. There is no longer any Costa Rica in fir hands and the Continental demand for this description, whic continues strong, has had, to a large extent, to be satisfie from London home trade stocks. The quantity availabl from now until the arrival of the new crop next year ha consequently become unsually small, and it seems likely tha still higher prices must eventually be paid. The sam remarks apply to the fine qualities of Guatemala and Salvado and these are also sharing in the rise in values. Receipts i Brazil continue on an unprecedentedly large scale, but hav little effect on the market, which is no doubt supported b the prevailing good demand for all kinds and the general u willingness of speculators to sell at the present low price

Santos in the face of the uncertainty as to the next Brazil crops, as to which rumours will probably be current next month.

Phosphorite and Green Manuring.

In an Austrian technical paper Mr. A. N. Engelhardt refers to 3 years' field experiments and concludes that the soils which responded to applications of fine-ground phosphorite were those in which the phosphoric acid was in form of apparently unassimilable organic compounds not set free by calcium carbonate (chalk). The fine-ground untreated phosphate was especially effective on cereals, the effect depending upon the percentage of calcium phosphate in amorphous form. The finer the meal the more effective the phosphate. The best results were obtained with rye, but the following crop of oats was also benefited. When the phosphorite was applied to rye, or flax, and these crops were followed by a crop of rye to which barnyard manure was applied, the yield of the latter was much greater than that of rye which had received only an application of barnyard manure. The ground phosphorite can be profitably used to supply a deficiency of assimilable phosphoric acid on all soils which contain a sufficient amount of nitrogen, potash, and lime. On soils which give a good yield without barnyard manure it does not prove profitable. An application of chalk improved the action of the phosphorite. How long the application of ground phosphorite may be continued with profit is a matter of doubt. When its action ceases, green manuring should be resorted to. Other mineral substances, especially marl, should be used in connection with the phosphorite.

Indian Tea in London.

With a moderate supply and a steady demand prices have not materially changed, says the *Produce Markets' Review* of 14th ultimo, most descriptions remaining firm at last week's rates. Although the late estimate of the outturn up to date shows a falling off to the extent of 6,000,000 lbs., the imports for the past month were practically on a par with those for the same month last year, which is reported to be due to the quicker despatch from the different Tea districts. The arrivals for this reason will probably not show any material deficit for some time, notwithstanding the reported shortage in the crop, part of which, if not the whole, may be made up should the more favourable weather continue for the remainder of the season. So long as imports continue about equal to the quantity of last year, coupled with an excess of stock of about 7,800,000 lbs., there is not likely to be any upward movement of importance in prices; at the same time the better grades will, no doubt, well maintain, if they do not improve on, present values. The total quantity of all tea in the bonded warehouses on the 31st August was 5,300,000 lbs. larger than at the same period last year, the respective figures being 74,221,000 lbs. and 68,878,000 lbs., those showing an increase being of Indian and Java growths, while the stock of Ceylon has decreased 2,700,000 lbs. There were 32,344 packages offered at the sales and the small proportion of 3,200 withdrawn. The bidding was active for the better Assam and Darjeeling teas, prices favouring holders, but for the other growths, which are generally of a disappointing quality, there was a steady demand and no appreciable change in values.

GENERAL ARTICLES.

TEA IN THE U. S.

A correspondent of the New York *Journal of Commerce* says: "It is well to note the fact that the present prostration in tea comes from the interposition of Providence. Atmospheric influence decimated the production of fruits and vegetables to an extent almost unprecedented. This is an industry in which every grocer in this country is involved. The capital employed in canned goods is enormous, exceeding all other lines. The light production of any food indispensable to the needs of the people renders it necessary to provide means for that particular one to the exclusion of all others; hence no surplus capital for tea. The evolution develops the fact that tea, like all commodities, is governed in price upon the principle of supply and demand. This is demonstrated daily, and on this basis the future of the tea business will be conducted. Reduce the duty, increase it to 20 cents, make it free—the result will be the same to the consumer. Its removal would produce a revolution, destroy the trade for twelve months, and wreck many operators."

Alluding to the duty, he says: "Without the duty the United States was the dumping ground of the world. We have endured imposition long enough. It is not an unjust law. It is not onerous. Why open the door again? The duties imposed in other countries are: Russia, 45 cents per pound, Portugal, 48 cents; France, 25 cents; Germany, 11 cents; Spain, 26 cents; England, 12 cents. Others average 18 cents. Before the duty was imposed consumers paid 25, 30, 40, 50, 60, 75 cents, and $1·00 per pound on the lower grades of impure tea, retailers profiting 100 to 150 per cent.; now they pay 30, 40, 50, 60, 75 cents, and $1·00 per pound on pure tea, retailers profiting 50 to 75 per cent. Herein find the incentive. Consumers have not protested since the duty was imposed, nor do they substitute coffee, which was done during the influx of impure tea."

CEYLON TEA ON THE CONTINENT OF EUROPE.

Mr. J. H. Renton has written as follows to Mr. Rosling on pushing and making known Ceylon Tea in Germany:—

Konigsberg i Pr., 1*st September*, 1901.

My dear Rosling,—I last wrote you from Stettin on the 28th. I have been over a month wandering round the summer bathing places of the German public on the Baltic, and also seeing if there was any greater tea consumption in the northern provinces of Brandenburg. Pommerania, West and East Prussia. The consumption of tea is even less than it is in some other parts of Germany. I had thought that perhaps amongst the fisher population I should find tea consumed, but beer, coffee and schnapps form the drinks of the people, and in the winter schnapps form the main consumption, I am told. The sea-side bathing places all along the coast are innumerable, and have all been crowded this year as the summer has been a very fine one. In most of these places big hotels,—open only in the season, June to 15th September,—have been built close to the little villages and hamlets, but in some others again the primitive hotels still exists, and they are primitive. In all of them tea is procurable, and I should say that at breakfast in the mornings 5 to 10 per cent. of the visitors drink tea, and, as a rule, very poor China tea it is. Occasionally, but very seldom you see tea ordered in the afternoon. The hotel-keepers say their guests would not drink a strong Ceylon tea. They buy and give the public what it is accustomed to. There is room here for a

---

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

demonstrator to go round the small towns and give the tea away in cup, and I have put this suggestion before a Bremen importer, but he does not believe in it yet, and I daresay it would be better to wait till we get tea-rooms established in the big towns, and let example and habit filter from the classes to the masses. Even here in East Russia, and close as we are to the Russian frontier, tea is not drunk by the people; it is all coffee and beer, but when you cross the frontier tea takes the place of coffee at once, so the tea dealers here tell me. In this hotel though, which is quite full, I noticed the usual order of things in Germany was reversed, $\frac{7}{8}$ths of the visitors drinking tea at breakfast, and the tea is not the usual thin watery liquor, but a strong thick dark tea. It is drunk out of *glasses*, but the hot water jugs are twice the size of the teapots You fill the glass about one-third full and then add water. The tea is good and is not pure China; I should say a blend with Ceylon. In the cafes and restaurants tea is served per glass, also in the *theatres*, and is as easily procurable as beer. It is all strong tea, not pure China.

So much for the general aspect of the trade. To come to details. In Stettin and Danzig, the capitals of Pomerania and West Prussia there are no purely wholesale tea dealers. Even in the directory no retailers are entered as tea merchants. For vendors of tea you are referred to Colonial merchants. In both cities I found only two wholesale men in each handling tea with other articles. The Stettin men do not touch Ceylon and do not care to at present, though one of them admitted to me that he might take to it. Böhringer, from Stuttgart, had already supplied this gentleman with Bamber's book and other literature on Ceylon tea. The few retailers I called on admit they buy it and use it for mixing, but do not sell it pure. Of the Danzig firms one had already been supplied by Mr. Föllen, in Bremen, with his book on Ceylon tea, but said he had no wish to introduce it. The other firm, who get their teas through another Bremen importer, will not go in for Ceylons. In Danzig there are four large retail tea and coffee shops. They all say they keep Ceylon, use it principally for mixing, and sell next to nothing pure. But one of them offered of his own accord to issue Bamber's book in the form of a circular to his clients and I at once promised that the expense of doing so would be refunded to him *by the Hamburg importers*, through whom he gets his teas. I know the firm well, and this will, I hope, show them that in helping their clients I am helping them. All these 4 retail Danzig firms buy direct from the Bremen and Hamburg importers.

Here in Konigsberg things are somewhat different. Years ago it was the centre of a very large tea trade, all of which practically went to Russia. According to some the opening of the Suez Canal, according to others the introduction of the Russian Government randerole, has forced all the trade into Russia itself—and the trade of Konigsberg is practically *nil* in tea with Germany. There are four wholesale houses here—one still a very large one with a branch in Moscow, but the branch is really bigger than the parent-house They have their correspondents in Colombo and buy some 1,600 chests per annum of Ceylon tea, the bulk of which is for Russia. Another smaller firm buy their Ceylon tea all on the London market and their business is entirely Russian. Then there are two others, both doing a local trade. One of them is an old employee of the once famous Bandelsverein, who has an old connexion on the frontier and in Russia. The last is run by a pushing man, who has advertised largely and issued a great deal of literature on tea with a view to getting it more largely consumed in Germany. He likes Ceylon and says no China tea can be drunk without an admixture of Ceylon, but that the time has not yet come for the sale of pure Ceylons in Germany. He makes five blends, Ceylon tea is in all, the lowest 10 per cent. the highest 40 per cent.—average in the five 25 per cent. I have offered this man some support for his advertising campaign this winter. This is going beyond my rule, but the man is so favourably disposed to Ceylon that I am in hopes that on my next visit I will get him to run a pure Ceylon tea and give it a special advertisement. All the dealers here say that in Russia all the tea contains 25 per cent. of Ceylon. I called on three retailers. One said they sold a little; one a great deal; the other one, the biggest, none. He kept only Indian, and found it kept better.

I think, however, my visit in these provinces has done good. I hope my long conversation with some of them will induce them to give Ceylon a fair trial, and I think the retailer in Danzig and the dealer here will push it more now.

THE "COFFEE-STEALING PREVENTION ACT IN MYSORE."

The Inspector-General of Police in Mysore submitted to t Secretary to the Government in Mysore a report on the worki of the "Coffee-stealing Prevention Act" for the past season. T Durbar has passed the following order:—"Four cases were repo ed during the year as against eight during the previous year. A four ended in convictions against five during the past year. Sev persons were prosecuted during the year, and all of them were co victed. No case was reported in the Hassan district under t provisions of the Coffee-stealing Prevention Act during the yea The two cases that were pending with the magistrates at the en of the previous year ended in conviction during the year, and bo the persons concerned were fined a rupee each. The Deputy Co missioner attributed the absence of cases under the Act to t depression in coffee trade; but there were 20 cases of ordina thefts of coffee under the Penal Code. The amount of fines inflicte on persons was Rs. 358 during the year under report, against Rs.2 during the previous year. This increase is reported to be due t the fact that the three persons concerned in a case in the Mudge taluk were fined Rs.100 each. The Deputy Commissioner of t Kadur district reports that from December, 1900, to March 1, 190 14 constables were lent to private individuals on the usual cond tions of payment, that this was chiefly in the taluks of Kopp Mudgere and Chickmagalur. He further reports that a few me were, as usual, detailed in each taluk for special duty, with instru tions to visit coffee estates, markets and petty shops, and tha their constant itineration produced the desired effect on dishone coolies and receivers of stolen coffee. It would further appea that the account books kept by dealers in coffee were examined i some cases. Inspector Shama Rao, of the Koppa taluk, was give a reward of Rs.5 by the Amildar of the Koppa taluk for the goo work done by him."—*Madras Times.*

OUR TEA EXPORTS; GREEN TEAS, ETC.

The expert who prophesied 5 per cent. decrease in export of a teas in June states now that "he failed to take into account th large quantity of surplus tea from 1900 brought forward for expo in January and February, 1901. He feels certain it will be 5 pe cent. by end of 1902, though he gives up the 7 per cent. idea, as h understands there are now makers of coarse teas in Ceylon. It i to be hoped they will get into the same tight corner as India men. For now the Indian Tea Stocks are increasing, while th Ceylon Stocks are decreasing. What does Mr. Andrew Yule sa to this fact? It does not bear out his impudent statement regard ing Ceylon coarse and inferior teas.

"*Green Teas.*—In September averages published in Messrs Forbes & Walker's last circular

Udabage green tea 76½ chests fetch 26 cents per lb.
add Tea Cess bonus 5

Total 31

Udabage black tea 97 packages fetched an average of 32 cents. Green tea costs at any rate 1 cent more than black, and even wit the bounty has an average sale price of 1 cent *less.*

"So all this fussing of Mr. McK. in regard to Green Teas and th wish of some of his backers to increase the tea cess, so that bounties may be more largely given, are likely to land us in trouble. If th green tea dealers in America through their agents here, are onl to give us 26 cents and the makers of such green teas are to b recouped by bounties, we have indeed come to a sad plight Mr McK. had better try remaining out in America for the whole yea than donkey-galloping for three months, divided into visits of on month each."—*Ceylon Observer.*

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant th appointment of "Purveyors to Her Majesty The Queen and Empres of India" from the year 1837 until the time of her death, have no had the honour of being appointed by Royal Warrant "Purveyors t The King."

PROPOSED EXTENSION OF THE BANDONG QUININE FACTORY.

Since the introduction of the co-operative working arrangement between the Bandong quinine-works and the Java cinchona-planters, the factory has been fully employed, and is now even working day and night to keep pace with the deliveries of bark. The total quantity of bark worked up in one year comes to about 30,000 to 40,000 tons, and is equal to about one-eighth or one-tenth of the total annual production of Java, the remaining seven-eighths being exported and sold to the European quinine-factories. The low-grade bark, which, as a rule, was not exported, is now also worked up with advantage, as contracts have recently been made with American firms for the sale of such by-products of the quinine-industry as cinchonine and cinchonidine.

It is said that the opinion prevails in Europe that if about three-quarters of the annual production of Java bark is exported to Europe, and the remaining quarter manufactured into quinine in Java, the situation would be satisfactory to all parties concerned. But in view of the growing output of other countries, and notably the increasing production of high-grade bark in British India, and the possibility that this may ultimately have an unfavourable effect on the quinine-market, it is advocated in Java that a larger proportion of the bark grown there should be worked up in that country. With this view, it is recommended that the works of the Bandong Company should be extended by the erection of a second factory, and that the required capital, which is estimated at about 20,000*l.*, should, at least in part, be subscribed by the Java planters. It is further considered essential for the success of the undertaking that the cinchona-planters who agree to send their output to the new factory should undertake to continue to do this for a period of not less than five years.

PRODUCE, PLANTING, AND COMMERCIAL NOTES.

Commenting on the table published by Mr. George Seton, giving results of Indian tea companies during the season 1900, the *Financial Times* says: "It will be observed that despite an increase in the output of tea amounting to nearly 10 per cent., the profit per lb. has fallen to nearly one-half of what it was last year, the working cost being little under that of 1899. There is, however, one encouraging feature. Over-production is admittedly the root of the evil, and it is therefore gratifying to find that notwithstanding the failure of the scheme to effect a combined reduction in the output, there is evidently a disposition on the part of the companies to follow out this principle individually. A glance at the figures representing the acreage shows that the increase in the area planted is only a little over 1 per cent. This can only be regarded as a very moderate proportion to meet the depreciation in the gardens, and goes to show that the different managements have fully realised the folly of large extensions. As to the outlook for the current season, it is as yet too early to express any reliable opinion. We are informed that in all districts, with a few exceptions, there was a considerable shortage in the tea crop at the end of August, owing, to a large extent, to the weather, which curtailed the pickings, and this being the case it is certain that unless this falling off is made up by the end of September the crop will be materially reduced. It must not be overlooked, however, that there was a large surplus from the past season at the end of May, and the question is as to what stocks are held in private hands. The opinion expressed by an authority is that it is now but small, and in that event, if there should be, as is not unlikely, a shortage in the current crop, it is not improbable that we shall see better prices at Mincing Lane before very long. This view is corroborated by Messrs. Gow, Wilson & Stanton in their weekly report, issued yesterday, but, at the same time, they emphasise the warning that as young tea from the recent extensions of tea plantations in India is now coming into bearing, every effort will be required on the part of planters to reduce the output. In the meantime it is interesting to note that the direct export of Indian tea to places outside the United Kingdom for the first half of the year was largely increased, no fewer than 5,774,600 lbs. having been shipped, as compared with 3,344,200 lbs. in the corresponding period."

A writer in the "Trade Press List" published at Boston, U.S.A., seems more scornful than hopeful on the subject of tea-growing in the Southern States. He says: "For over a hundred years different individuals have used the United States Agricultural Department as a nursing bottle to draw funds from the Treasury, to let them pose as tea-planters. Secretary Wilson has lately slopped over in a statement, 'we are succeeding admirably in producing tea in the United States.' As a fad, supported by the Treasury of the United States, it is a very pretty occupation, but, from a commercial stand-point, the quality of the stuff as yet produced, makes his remarks rank nonsense."

"Mr. R. V. Webster, of Colombo, Ceylon," says the *Canadian Grocer*, "who is now pretty well known all over Canada as a dealer in Ceylon tea, is on his regular trip through the United States and Canada, and is in Montreal this week. He finds that everywhere he goes there is a steadily increasing demand for Ceylon tea, and he visits almost every point in the world."

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Analyzing the late course of Exchange, *Le Moniteur des Intérêts Matériels* says:—

"It is quite certain that a great many other factors than the simple balance of trade act upon the course of exchange, and particularly the abundance of paper money, and the course of coffee prices. We said two months ago that, if the fluctuations of exchange regained a normal condition, it would fall until June, and rise again gradually until it attained its maximum in the autumn, at the close of the coffee season. Instead of that, ever since May exchange has done nothing but fall from 12 to 10d, and even lower. We can only conclude, thereby, that the coffee market is not in a normal condition."

What the *Moniteur des Intérêts Matériels* understands by a "normal condition of the Coffee market," we are at a loss to understand. Coffee is always either going up or going down; but very seldom indeed does it keep level.

The prices of Coffee obey the condition of supply and demand, and, as the supply has of late years largely exceeded the demand, the tendency, with the exception of a few spasmodic reactions, has been generally downwards. Such is the normal condition of Coffee of late years, and that, therefore, cannot be sufficient cause to explain the reaction of exchange. In point of fact, whilst carefully taking into account the well-known factors which contribute activity to the exchange market at certain times of the year, notably the Coffee and Rubber seasons, our contemporary entirely neglects the most powerful of all the causes of oscillation—speculation.

In February of this year the liquidation of last year's speculation for the rise was complete, and the balance of trade being largely in favour of the country in consequence of extraordinarily large and simultaneous Coffee and Rubber shipments, amounting in March to over £4,000,000, exchange was rising of itself. Speculation recognizing the fact that the supply of bills was for the time larger than the demand, and a consequent upward tendency of exchange, commenced selling heavily towards the end of February, and continued till the 14th of May.

In that time they had succeeded in overselling to the amount of nearly £4,000,000 and when the banks shut down in June and commenced to demand delivery, precisely in the month when exports were at their very lowest, the conditions were reversed, and the demand for bills scarcely satisfied by the supply, leaving little or nothing over for the speculative market. Of course a slump ensued.

Were Coffee prices not so extremely low as they actually are, three months' shipments on the present scale would have sufficed to clear off the arrears, but under the present circumstances there seems every probability of the liquidations being dragged on until the end of the year, when Rubber bills will be again available. Not until then can any considerable reaction be expected.

It is this flux and reflux of speculation that the *Moniteur des Intérêts Matériels* does not take into sufficient account; but that, if indeed it does not control the ultimate course of exchange, is unquestionably the most powerful factor of its oscillation.

Coffee reshipped.—A telegram received by the *Prensa* of Buenos Aires, states that the arrival of 233 bags of Brazilian coffee *viâ*

New York at Porto Rico has almost caused a riot. In view of the popular indignation, the consignees decided to reship the Coffee, and a meeting was called at which it was determined to boycott any one importing Coffee for sale in the island. Whilst Porto Rico coffee is sold at 10 and 12 *pesos* an *arroba*, Brazilian can be sold at 7.

Alfalfa.—The samples of *Alfalfa* (Lucerne) exhibited at the Hortulania in the rua do Ouvidor, grown by Dr. Victorino Monteiro on his *Estancia* in Rio Grande do Sul, show what a future there is for this important branch of agriculture. At present we import all our *Alfalfa* from the River Plate to the amount of over 600 Contos annually.

Sao Paulo.—The Carruncho pest is said to be doing a good deal of damage in several districts.

Exchange, *Saturday, 24th August,* 1901.—Ninety days' Bank rate on London opened on Monday, 19th inst. at 10¼d. rose to 10$\frac{1}{32}$ on the 22nd and closed this evining at 10⅜.

Extremes during the week ending Aug. 23rd were 10$\frac{3}{16}$d.—10$\frac{1}{32}$d. for 90d/s Bank paper and 10¼d—10½d for private.

Coffee.—During the week ended August 23rd the value of Coffee shipments (embarques) here and at Santos amounted to £492,000 as against £431,000 for the previous week and £571,000 for the corresponding week last year. The value of the Coffee sailed since the 1st August is £1,410,985 as against £1,607,262 for the same period last year and for the season (1st July to 23rd August) is £2,851,875 as against £2,779,077 last year.

In spite of unfavourable weather and the occurrence of a holiday, the week's entries show an increase of 75,088 bags compared with last week's, entirely at Santos, and of 68,460 bags compared with those for the corresponding week last year.

Entries for the current month up to the 23rd were 1,353,076 bags as against 1,142,941 for the same period last year, and for the current crop amounted on the same date to 2,807,814 as against 1,931,860 last year of 45% more.

Shipments (embarques) were also somewhat larger than the previous week's and 66,842 in excess of last year's for the corresponding week.

Declared sales, on the contrary, were smaller, 222,004 as against ,000 the previous week and also for the corresponding week t year.

Stocks on the 23rd inst. show an increase of 103,704 bags com- ed with the previous Friday and 291,357 compared with the same date last year.

In Sao Paulo the impression seems to be general that the coming crop of 1902-1903 will be much smaller than the current one, and under the average. Planters are, therefore, advised by the local papers to dispose only of what is necessary to meet expenses and hold the balance for better prices.

We hear that the coming crop on the Dumont Estates will this year be the largest ever produced. It is expected to reach 450,000 *arrobas*, or 112,500 bags.

Rubber.—The shipment of Rubber of all descriptions from Pará and Manáos during the week amounted to 271 tons of the value of about £100,000, so that so far, Pará bills cannot assist this market very much. On the 22nd, Stoks at Pará and Manáos were 467 tons

CEYLON GREEN TEA IN AMERICA.

Mr. C. Shand writes from London to the *Ceylon Observer* :—

I enclose copy of a letter I have written to Mr. Leake. It is only as a feeler, and to induce planters to think over the subject. Exception is sure to be taken to my statement, that Japanese tea holds in America an impregnable position—so I may as well anticipate criticism, and give my reasons for so pronounced an opinion, though in doing so I shall only be repeating what I have already written to you.

There is, to begin with, the very important advantage of 30 per cent. in the difference in exchange. This I know is partly compensated for, by the bonus now paid on the export of Green Tea. It now amounts to above 15 per cent., but it still leaves an appreciable advantage to the Japanese. Ceylon planters can, and do undoubtedly, make better Greens than the Japanese, and on their merits they should realise much better prices; but alas, we are told authoritatively, that for a time, Ceylon planters must be content with lower prices, than those obtained for Japans; and moreover they must make their Greens resemble in every way, Japans, even to the appearance of the packages. Now I have heard of people passing off inferior goods, as superior, but I confess I hav never known goods of superior quality passed off as inferior Is this a promising outlook for those planters who wish to ge better prices than if they kept to Black tea?

There is no difficulty whatever in making Greens, as cheaply a Blacks, if it were not for the fact that there is no way of disposin of the lower grades, such as yellow leaf and fannings and dust, a prices which would cover cost of boxes and transport. Thes grades will not be admitted into America, so the cost of Ceylo Greens is enhanced considerably by having to throw them away The Japanese consume this themselves, but I do not suppose the would buy Ceylons. I doubt, if the three first grades, or rathe two first grades, can be put F.O.B. under 35 cents per pound Then to make superior Greens, the best leaves must be used, *i.e* fine plucked. Well, even now good broken Pekoes and Pekoe show a profit equal to any that is likely to be obtained for Green if it were not for the bonus which after all cannot be depende upon, if they are made on a large scale.

Last week some 70 packages of Greens were sold here at auctio and realised fair prices, considering all things, but no better tha if they had been made into Blacks :—

Chs.		d.	Chs.		d.	
10	Young Hyson sold at	7½	7½	B. P. Fns at	3½	Dubli
13	Hyson No. 2 (? Simpton) do	6¼	11½	Dust	2	do
			3	Young Hyson at	5½	do
16	Hyson No. 2 Nuevo do	4	8	Hyson Sift at	3½	do
10	Nuevo do	6¾				

These lots were, I suspect, bought in Colombo by a well-know buyer who probably made more out of them than the planter Messrs. Larkin & Co. say :—"We again predict that, in the cours of a very few years, Japan teas in Canada will be a thing of th past, and we will be supplying their place with at least ten millio pounds of Ceylon Green Tea per annum!"

If this prophecy were fulfilled, what would be the result? Wher would the over-production of Black Tea be and where would be th necessity of making Green?

I think we are more likely to see Canada taking 10 millions Ceylon Black, instead of that quantity of Green, judging from pas experience. If I were a prophet, I would predict that half-a-mi lion of pounds of Greens will not be exported from Ceylon withi the next six months! I do not think planters can afford to be ph lanthropic enough to try and undersell the Japanese for th benefit of those who may come in after the war of competition.

If this letter I am merely trying to justify my opinion tha Japanese tea holds an impregnable position in America, and tha planters would do much better by diverting their means and atten tion to unappropriated fields.

I know, of course, that—in thinking the capture of the America market, by supplying it with Green Tea, is a game not worth th candle,—I differ from the opinions of far more intelligent men wh can see into the future much better than a man whose sight an intellect are dimmed by old age. My excuse for discussing the sub ject at all, is that I have to find occupation for my time Thinkin too much is the very devil for an individual—supposing that i dividual to be one's own animal nature.

P.S.—By unpractical methods—I mean talking and writin Strongholds are not to be captured by the use of such weapons, an they are the only ones with which the Commissioners are furnishe What is the use of inviting a person to buy an article you hav not got, if he wants it? The result is the talkers get the credit f the effect of what practical men have done—in the way of pushin the consumption of tea. Who captured the English and Australia markets? Not the officials of the C. P. A. Who pushed the Russia trade? Rogivue. And now when the battle is half won, an offici steps in!

To the Secretary of the Ceylon Association,
London.

London, *September 9th.*

Dear Sir,—As I am one of those who have suffered most severe from the effect of last year's over-production of Indian and Ceylo tea, I naturally watch with anxiety the progress of the metho now in operation, for counteracting the consequence of that di aster, and to turn the British Tea Planting Industry back in its normal state of prosperity. The remedial forces now at wor are as every interested person knows, Restriction of Productio and Expansion of Consumption.

As regards Ceylon the year is so far advanced that the progress of the application of the first of the remedies can be gauged with some degree of accuracy, and so far it has been very effective, and there is also some evidence that Indian planters are adopting the same methods of restricting output, as those in Ceylon, namely by finer plucking where practicable, and abandonment of planted areas which cannot at present be profitably cultivated. Restriction of production, though a drastic remedy, is not a permanent one. It acts like quinine in intermittent fever, being curative only as long as it is employed; it does not prevent a recurrence of the complaint. The specific is undoubtedly to be found in the Expansion of Consumption, especially in countries outside the United Kingdom. It is, therefore, cheering to learn from recent Indian advices, that the planters there, have at length discovered, that in the North-Western Provinces, in Persia, and Afghanistan, they possess most promising fields for a great increase in the consumption of their tea.

The inhabitants of these countries are nearly all Muhammedans, whose religion forbids the use of intoxicating liquors. Their habits of life, consequently, peculiarly adapt them to the use of tea, if it is placed within their reach.

There is, therefore, every probability that the operations about to be carried on under the management of Messrs. Andrew Yule & Co., to distribute tea amongst the towns and villages of the respective countries, will be very successful.

If the Ceylon Tea Planters' Association were to relinquish their costly and unpractical attempts in America, to oust the importers of Japan tea from their impregnable position, and direct their resources and attention to increase the use of their tea in such tee-total countries as Turkey, Egypt, and North Africa, they would, I believe, do more within a year or two after commencing work, to counteract the effect of Ceylon's over-production, than is likely ever to be accomplished by their present mode.

The American Campaign may now, I think, be advantageously left in the hands of those private firms already engaged in the Black tea trade in that country.

The object of this letter is to ask you to be so good as to submit to the consideration of your Tea Committee my proposal that the Planters' Association's Tea Campaign in America should be abandoned, and their resources and attention be diverted to more appreciative countries; and if your Committee think the idea a judicious one, to invite them to endeavour to induce the planters in Ceylon, to carry the change out. I also venture to suggest, that they might themselves take steps to promote the consumption of Ceylon tea in the countries I have mentioned, by appealing to the proprietors of Ceylon Estates in this country for their co-operation in forming a Joint Stock Company to purchase tea, ship it to the principal seaports, whence it could be hawked through interior towns and villages in vans or on camels loaded with packets of cheap tea, and thus place it within the reach of those who would otherwise be unable to obtain it; or perhaps some of the large Tea-Distributing Companies in this country would undertake the business, if subsidised for a limited period, out of the Ceylon Cess Fund which is formed by the contributions of all proprietors.

C. Shand.

COFFEE TRADE IN DOUBT AS TO THIS YEAR'S STANDARDS.

A matter which is the source of considerable discussion in the coffee trade is the alleged inequality of standards. Particular complaint is made against Standard No. 5, which, it is asserted, is altogether too high, and shippers in Brazil are, in some instances at least, refusing to recognize this year's No 5 standard and will only do business on last year's No. 5 It appears that there has this year been considerable delay in establishing the standards but that they have now been satisfactorily arranged, except in the case of No. 5.

Price differences on standards are established by a Committee of the Coffee Exchange every year in the fall and when once established usually remain unchanged the entire year. They are based on No 7, and are this season ½c per pound apart, as follows:

		No.			No.
No. 1 Prime	...	3·00 above 7	No. 6 Ord.	...	50 above 7
No. 2 Good	...	2·50 „	No. 7 Low o	...	
No. 3 Fair	...	2·00 „	No. 8 St g. c	...	50 below 7
No. 4 Low f	...	1 50 „	No 9 Gd cm.	1·00	„
No 5 G. o	..	1·00 „			

While these differences govern transactions on the Exchange they are not conclusive so far as trading in spot coffees outside the Exchange is concerned. If the spot month on the Exchange for No. 7 is 5c, for instance, a dealer who sells a contract there can deliver any kind of coffee; and naturally as the Exchange differences are higher than differences on the actual spot market (the Exchange differences, as already noted, being ½c per pound between grades while the differences in actual trading are but about ¼c) the man who sells the coffee contract will naturally deliver the higher grades in order to obtain the premium on the Exchange over what he can get for the actual coffee by private sale. This condition, of course, enters into the calculation when the trade is made, and the buyer pays a proportionately lower price for No 7.

The discrepancy between the Exchange differences on grades and the actual value of the various grades of coffee is receiving official attention by the management of the Exchange; but many members of the trade seem to take the part of the Committee and argue that the Exchange differences should remain as they are notwithstanding the discrepancy. To change them, it is asserted, would be to disturb the trade of the Exchange. It would in fact work a revolution in regard to contracts dealt in on the Exchange, for long-time contracts would be affected and it is the practice on the Exchange to deal as far as a year ahead.

All importers do not admit that Brazilian shippers are discriminating against the No. 5 Standard "The largest exporters in Brazil to-day," said a large importer on saturday, are "selling coffee to be graded in New York in the usual way on the existing types. This means the types issued on May 31st this year. Furthermore, as those types have been forwarded to Brazil promptly the exporters have now got the types before them, and the coffee bought since the types have been issued will in the majority of instances be graded under the new types. It may be that some disadvantage

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

CELEBRATED OILMAN'S STORES.

may result in respect to No. 5, but there is a wide difference of opinion as to how much the new No. 5 standard is superior to the old No. 5."

Other members of the trade argue that the Brazilian exporters are not finding fault so much with the price they get for No. 5, as with the price they get for their coffee on any basis of grading. These people assert that coffee is now below the cost of production. In this connection it is of interest to note that, according to a statement made by the Brazilian manager of the Dumond Coffee Association, it costs them four milreis per arroba of fifteen kilos. to produce coffee. On this basis a Brazilian planter getting $6·00 per bag in Rio and Santos at present values shows a margin of $2 for railroad freight and final profit. A despatch to a leading local coffe house from a member of the firm in Hamburg declares that careful enquiries including S. Paulo coffee estates, are convincing that present milreis prices are remunerative for large well-conducted plantations and are without loss for the smaller planters.—New York *Journal of Commerce.*

A UNIQUE ADVERTISEMENT IN CANADA.

Slowly, quietly, soberly a procession of six of the strangest looking folk that have been seen in Toronto for many a day, walked up Yonge street. The people on the street were immediately interested. Curiosity was aroused, for not only were each of the six of a dark, nut-brown complexion, and garbed in the fancy costume of the Cingalese from their broad turban to their long-toed shoes, but each bore a tea-tray, kettle and cup, as if serving some of the finest of pure Ceylon teas.

The colouring of the costumes was bright and attractive, and the procession so quiet and stately that everyone stopped to have a look, and heads appeared, as if by magic, in doors and windows.

"Who are they?" was the frequent query.

Sometimes the answer was not forthcoming, but more often it was: "Why, dont't you recognize them? They're the men whose pictures are in the Ross Tea Company's advertisement, and on the packages of Ross's Tea. That's the way they dress in Ceylon where that tea comes from."

The advertisement was unique, and proved a hit—in fact, one of the best hits that have been made in Toronto for some time. It was, too, one of the hits that have to be seen to be fully appreciated. —*Canadian Grocer.*

CEYLON TEA ON THE CONTINENT.

The following are extracts from a letter from Mr. J. H. Renton, dated "Bückeburg, Germany, 11th Sept., 1901":—

I am sending you by this mail a little

PAMPHLET IN GERMAN

which gives a short, but clear account of the rise of the Tea Industry in Ceylon, the culture of the tea bush, and the manufacture. This is known in Germany as the defence pamphlet ("Abwehr Brochüre"). It was written as a reply to the numerous libels on Ceylon tea which appeared in numerous Continental market reports in the early part of this year. It does not enter into any controversial points, nor does it attack China tea. It simply shows our teas are clean, well-made teas and that our cultivation is good and sound. This pamphlet has been distributed to every wholesale tea dealer, most of the wholesale colonial produce dealers, 3,000 newspapers and 1,000, hotels in Germany. The demands for more copies are numerous and the notices which have been received are very flattering.

Well, now to give a very brief summary of what I have done this year:—

I visited Western and Southern Germany, Austria, Bohemia, Hungary and Trieste, Northern Italy, Southern and Western France and Paris in the first four months of this year. In May I went to Hamburg, Berlin, Leipsig, Dresden, Magdeburg and I have now been round the Baltic and Eastern Germany, going as far north as Konigsberg. These visits have not only been made to thoroughly acquaint myself with the tea trade in these places, but also with a view to preach Ceylon tea to the dealer and the grocer, leaving as I do copies of your book and of Bamber's pamphlet. Apart from those visits I have been carrying on the campaign in Switzerland and Scandinavia by correspondence.

IN GERMANY,

a Bremen importer furnished me with the names of all the who sale dealers in the inland towns, and although several of the have been induced to give small orders for Ceylon tea, only thr of his friends have been found willing to take it up, make a spe ality of it, and put *their own money* into the pushing of it. The three firms are in Breslau, Strassburg and Holstein. A spec circular (I sent you one in the book marked Talanda tea) has be printed for these firms. The circular is illustrated and they be two-thirds of the cost. The same firm in Bremen has also induc (K—— Co.) the great coffee distributing firm, with their 780 sho throughout Germany, to take up Ceylon tea. They get 500,0 circulars and a special mark and label. They bear half the cost of this expenditure. Their campaign does not open till November the teas are all put up in ¼ lb. and ½ lb. packets. If proper managed and run, we want no better agencies in Germany. addition to these firms I have secured other wholesale dealers w are making a speciality of Ceylon tea—one important firm in Fran fort, a smaller one in Berlin, another beside Böhringer in Stuttga Böhringer is doing excellent work in Stuttgart. In Dresden a Konigsberg there are two firms who use it largely in their mixtur but will not advertise it, because they maintain that, owing mai to ——'s Association with Ceylon, and the poor teas he has put on t German market, the name Ceylon has got into bad repute for t In Münich a lady,—'s sister, carries on an active propaganda pure Ceylon tea.

IN AUSTRIA.

Mr. Marinitsch has done well in Karlsbad and got the g medal at the Exhibition. We have three agencies in Vien A dealer in specialities, who has for years imported it direct a sold small quantities, is now getting aid to advertise it. Marinitsch has associated with himself a wholesale coffee dea with a conection amongst town and country grocers and is worki hard, not with much success though, Toifl the client of the Brem importer, is doing better. He promised me to place the tea w 500 of his clients throughout the Austrian provinces. He has 350 up to date, he has to pack the tea in $\frac{1}{16}$ lb., ⅛ lb. and ¼ packets for them; and then the Anglo-Continental Company Paris are working from Trieste, so is also anothor house in Tries

IN FRANCE.

We have three Paris houses, and in Marseilles two smaller fir at work. The Paris firms are working hard; one has specia distinguished itself by its enterprise in starting the big new rooms in the Rue Caumartin, by its display at the Exhibition the Petit Palais this year, and at the Exhibition Culinaire, a by its handbill posters, bills and general advertising. Anoth has done very well in various advertising schemes; but mo particularly by taking up at my express wish a demonstrati scheme. A man is going round the Provinces, and in all the l towns where he can get the grocers to buy the tea, he gives demonstration of from four to ten days. It is advertised in t local Press that free teas will be distributed in cup at that groce shop from 4 to 7 o'clock. Samples of the tea are given aw free—and lots of literatures on how to make it, etc., and Bambe book, in French. Here is a resumé of the wok done in June a July in Normandy:—Six towns visited. Tea distributed in c on 28 days. 4,425 cups tea served; tea sold to the public 2,0 people: advertise in 11 local papers; tea sold. 650 kilos. N grocers secured, 24. Printed matter distributed, 41,500. Placar posted in and on windows of shops, 110. Both these firms are spen ing far more than three times my grant on their work this year.

IN SWITZERLAND

we have four firms at work, in Sweden two, in Chirstiania two, Copenhagen two.

IN ITALY

in Naples one, in Florence one. The arrangements I made Genoa have fallen through, unfortunately.

I go to

SCANDINAVIA

to-morrow to inspect the work there and on my return st immediately for Frankfort and Stuttgart. In the latter town client of Böhringer's opens a tea room on 1st October. Fr Stuttgart I proceed to Switzerland to inspect work and accou and then to France. I shall go to all the towns in France wh the demonstrator has been, to see personally how the work agr with his report. In Paris I inspect accounts and talk over schem for next year.

I then go to London to see the British Commissioner for the
ST. PETERSBURG EXHIBITION
and obtain letters of introduction from our Foreign Office to the British Embassy there. End of November I shall probably go to St. Petersburg to inspect the land and make the necessary arrangements for our show in the Autumn of 1902. From Germany, Austria, and France I receive *half-yearly reports* and an abstract of accounts and expenditure. All vouchers in these three countries are examined and compared with the accounts in my visit in each town. From Scandinavia and Switzerland the vouchers are sent to me and then returned. I keep a most watchful eye on all expenditure and I feel quite certain the Committee get full value for their money. In Germany I know I could get an agent in each large town to run, push and advertise Ceylon tea; *but* then I should have to bear *all* the expense. The difficulty is to get them to put their hand into their own pockets and bear even half the expenditure.

ANGLO-AMERICAN DIRECT TEA TRADING COMPANY, LIMITED.

At last we have been able to get sight of the report of this Company for the year ended November 30th last, but it has not illuminated us much. It is printed on the same coloured paper as the reports of other subsidiary Companies of the Consolidated Tea and Lands parent and the directorial report signed by "James Finlay & Company, Secretaries," is divided into the same kind of paragraphs telling us about the quantity of tea marketed, the extensions of the acreage cultivated, the balance at credit of profit and loss, and sundry other matters, but into the true position of the Company we get not the slightest glimpse. Very little profit has come from the Company's estates in Ceylon, we are told, because of the fall in prices, but the directors are glad to state that Ceylon produces generally are now "plucking much finer," therefore it is hoped that on enhanced average price will be realised by the Company in 1901. Even so, we cannot think it will be benefited much, for coffee is falling in price, and the Company does seem to produce a little of that berry, although its directors are careful to avoid confinding to their shareholders how much. What, though, has become of the "direct trading" portion of the business? It is all very well to inform shareholders that "Cardamoms are produced in the form of three-celled capsules, containing numerous seeds which yield an aromatic pungent spice with a peculiar but agreeable taste." This is interesting and quite nice, but where is the market for the Company's teas in America of which so much was originally made? There is not a syllable about the subject in the report, nor can we trace anything relating to it in the accounts.

In order to bring the statistics of these various and fascinatingly peculiar emanations of Sir John Muir's Company—framing industry into uniformity we have drawn up table to exhibit the figures of this Company on the same lines as those laid down for his other Companies in last week's issue. These tables show that the Anglo-American Direct Tea Trading Company offers as good an example of the financial "rake's progress" as any one of them. It has extended the acreage under cultivation somewhat in the year ended November 30th last, and marketed a much larger crop of tea, but the price exhibited a disastrous fall and, worse than all, the Company has to lean more and more upon borrowed money, while dividends on the ordinary shares have become impossible. Twelve months before the directors boldly paid a 5 per cent dividend, with a 4 per cent. bonus, making 9 per cent. for the year on those shares, and for last year they got nothing, in spite of the large amount of additional money poured into the business. This "manœuvring with capital" has become quite appalling. The paid up share capital remains much as it was twelve months before, but loans and advances from shareholders have risen from £156,000 to £233,000, and advances by bankers from £171,000 to £202,000. The Company thus owes £108,000 more than it did twelve months previously, and has not a rag of a Scotch £1 note to show for the money. All that we can discover is a slight increase in the value of the tea pledged to the bankers against advances, but that increase left the bankers uncovered at the date of the balance-sheet to the extent of £145,000. What have they got for that money? Adding it to the debt of the other Companies over £500,000 has been advanced by bankers to the various Companies known as the Muir group, apparently without security unless the "investments" paraded in the accounts are pledged to them. But these investments have all shrunk in value, so far as we know, and probably could not now be realised at one-half their cost price. It is only necessary to state facts of this description to indicate what a bottomless quagmire of unstable credit the accounts of these Companies present. We must, however, congratulate the directors on being able to write off £434 on account of preliminary expenses during the past year, although this is almost balanced by the increase in the suspense account for coolies, etc. That, however, is the only word of commendation it is possible to utter, and against it we must place a decrease of over £2,700 in the cash, the total of which is now down to £1,117. No wonder it was deemed prudent to abstain from declaring any dividend on the ordinary shares. Who holds these ordinary shares? Not the public, it is to be hoped. If the public, may the gods help them—Sir John won't.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

TEA OUTTURN AND ESTIMATES.

A Special General Meeting of Members of the Indian Tea Association was held on Monday.

There were present:—Messrs. H. S. Ashton, *Chairman, presiding;* L. C. Baines, H. C. Begg, H. W. Boyd, W. Brown, G. S. E. Colville, R. H. A. Gresson, D. King, R. Magor, H. R. McInnes, Norman McLeod, W. H. Miles, H. Roxby, C. A. Stewart, E. S. Stewart, H. W. Sutcliffe, A. Tocher, and R. R. Toynbee.

* Including £2,073 commission paid to Finlay Muir & Co. and £1,047 to P. R. Buchanan & Co. in 1899, and £2,045 and £1,023 respectively in 1900.

† Coffee crop not given in either year, only estimates of coming crop and estimates of price, the latter 44s. per cwt. in 1900, against 63s. in 1899.

The following notice convening the meeting was read by the Secretary :—

I am instructed by the General Committee of the Indian Tea Association to convene, under Rule No. 9 of the Rules of the Association, a Special General Meeting of members of the Association, on Monday, the 30th instant, at 12 o'clock noon, for the purpose of considering the question of the publication of crop estimates by the Association, and, if so decided, to pass a resolution on the subject.

The resolution under which the General Committee at present act was passed at the Annual General Meeting held on 16th August, 1898, and is as follows :—

"That with the view of obtaining greater exactness and reliability in the estimates of the tea crop, the first statement of figures shall not be issued until it is also possible to give details of the tea manufactured up to 15th August, and that no further statement be issued until the actual outturn of the crop is published."

I am desired to add that this meeting is called in consequence of proposals having been made by members that a fresh statement of actual crop either to 15th or 30th instant should be compiled.

Yours faithfully,
W. Parsons,
Secretary.

The Chairman said :—

The subject before the meeting was one on which the Committee were not altogether unanimous, and therefore no proposition with regard to it could be put before the meeting as from the Committee. He would therefore suggest that a member who was interested in some of the concerns dissatisfied with the existing instructions to the Committee should make some kind of definite proposal. He would suggest that any proposal that was made should simply have reference to what the Committee should or should not do now, and that the Resolution should not be one dealing with the matter for subsequent seasons. It would probably be necessary to get the views of their friends in London before dealing with the subject beyond present time.

Mr. Boyd said he had no suggestion to make with regard to the alteration of the procedure in connection with the issue of the figures and the estimates. He thought that might very well be left over until the next Annual meeting of the Association. He was prepared with a resolution with regard to the statement of revised figures of crop up to the 30th September, which he would be glad to put before the meeting.

Mr. Boyd then proposed the following Resolution :—

"That the General Committee be requested to call upon all agents and others interested for a return of tea manufactured this season up to date, and also for a return of the comparative figures to corresponding date last season; and that such figures when ascertained be issued to members as customary."

This was seconded by Mr. C. A. Stewart.

The Chairman said he would like, before putting the Resolution to the meeting, to put one point before them. Supposing that the Committee found that a large number of gardens did not send in any returns, should they publish those sent in giving a comparative statement? He thought it would be as well for the members in meeting to instruct the Committee as to what they were to do under those circumstances.

Mr. C. A. Stewart thought there would be very little fear of any one objecting to give actual figures.

The Chairman said he was of course putting a hypothetical case. But supposing Mr. Stewart proved not to be right, in his supposition, he would like to know what the Committee should do.

Mr. McLeod said the Committee should certainly publish what they got.

The Chairman then asked if any members had any further remarks to make.

Mr. E. S. Stewart said it should be left to the Committee to see if the actual returns from the districts were fairly averaged. For instance it might be that the returns were all from Cachar and Sylhet, and none from Duars and Assam, that would give a false average.

Mr. Tocher said he presumed the returns would be issued by districts as hitherto.

The Chairman answered in the affirmative. He then put the Resolution proposed by Mr. Boyd, and seconded by Mr. C. A. Stewart, to the meeting, and on a show of hands being taken was declared carried.

Mr. Tocher suggested taking an expression of opinion of members as to the future method of dealing with this matter.

The Chairman said if any gentlemen had any opinions to expr about the future, they would be very glad to hear them. T Committee proposed to advise the member of the Association incl ing their London friends what the feeling was here, and give th an opportunity of expressing their views before the next ann meeting come on.

Mr. C. A. Stewart said his instructions were not give any es mates at all in future; nor to give any figures which would held frame an estimate.

Mr. E. S. Stewart enquired whether it would not be possible get the actual outturn at the end of every month to the end of t season.

The Chairman said it was possible, but it was a question wheth it was advisable, and the Committee would like the sense of t whole meeting. There was a considerable difference of opinion be in regard to actual figures and estimates.

Mr. E. S. Stewart then proposed the following resolution: —

"That the figures of output, at the end of October, November a December, be collected and published by the Association."

There being no seconder to the Resolution, it could not be put the meeting.

With a vote of thanks to the chair, the proceedings terminated

WYNAAD.

Proceedings of a General Meeting held at Meppadi Clu on Wednesday, 2nd October. Present :—Messrs. Abbo Atzenwiler, Mackenzie, Taylor, Trollope, Winterbotham, a W. Mackinlay, *Acting Honorary Secretary.* Mr. Abbo *in the chair.*

1. Proceedings of last meeting were taken as read.

Two members again complained that they had received no copi of the previous proceedings.

2. **Labour Law.**—Read U. P. A. circular, s. 78.

3. **Tea Cess.**—Messrs. Parry & Co., Peirce, Leslie & Co., a Mr. Romilly have already sent in their subscriptions. Other pr prietors promised to do so shortly.

4. **Ceylon Import Duty on Tea.**—Read U. P. A. S. I. circular, No. Approved.

5. **Coffee.**—Read U. P. A. S. I. circular, No. 73, on rail freights.

Read Circular No. 80 on a general cess for coffee.

The Honorary Secretary was instructed to ascertain what M Barber's actual proposal is, as the circular is not perfect understood.

6. **Differential Duties.**—Read correspondence between the Hono ary Secretary and the Chairman, U. P. A. S. I., regarding the advis bility of publishing a précis of the correspondence already receiv on this subject. The Chairman of the U. P. A. S. I. after consulti with the Secretary thinks that it will be wiser to await the public tion of the book of the U. P. A. S. I. proceedings, as the Secreta promises "that the correspondence published therein will be mo instructive than any précis could be."

Resolved that this Association sees no reason to alter its previous expressed opinion, and hopes that the publishing of the book proceedings will be expedited.

7. **Proposed visit from Mr. de Niceville.**—Resolved that the Hono ary Secretary be instructed to write to the Secretary, U. P. A. S. saying that we shall be glad if Mr. de Niceville can arrange to vi the district in January and will undertake to make all arrangemen for his tour.

8. **Assam Planters and the Commissioner.**—Read U. P. A. S. circular, No. 77. Resolved that this meeting unanimously expresses i sympathy with the Assam planters in the great difficulties they a experiencing with their labour and the seeming want of considerati shown them by the Chief Commissioner of Assam.

9. Draft rules under the Madras Coffee-stealing Prevention A Read and recorded.

10. The following papers were laid on the table :—

Sale notice of Karawan Tode Estate.
Circular *re* sale of tea at St. Petersburg Exhibition.
I. T. A. Circulars. Committee Proceedings.
Trade with Persia.
Green Teas.
Declaration of Value of exported Teas.
Madras Government Cinchona Department Annual Report.
Tea Eelworm disease, Bulletin No. 45, by C. A. Barber.
Agricultural Ledgers—
No. 3. Piper nigrum.
4. Reh, the nature and value of alkali lands.
5. Sugar diseases.
6. Geranium nepalense.
7. Blassica (mustard).
13. General index.
Department Land Records and Agriculture, N.-W. Provinces.
Bulletin No. 12. Irrigation wells.
14. Housing cattle.
13. Sugar beet.

A vote of thanks to the chair terminated the proceedings.

(Signed) C. E. Abbott,
Chairman.
(,,) W. Mackinlay,
Acting Honorary Secretary.

The next meeting will be held on Wednesday, 6th November.

NATURE AT HER BEST.

We love Nature! Our regard for her, with her sweet and varying moods, is undying, and our love such that it is beyond the art of man to quench. The promise of Spring is one great message of Hope. The fragrant breath of Summer whispers "Paradise"; the mellow touch of Autumn's hand ripens recollection; and crisp-biting Winter brings merry, ringing laughter, and rosy cheeks.

But of all, Summer is most dear.

It was in Summer that Tennyson found Rose, the gardener's daughter, "standing in a porch of roses." "Who had not heard of Rose, the gardener's daughter?" asks the poet.

Why did he not also find a gardens's wife, of rosy cheeks, whose buxom figure might tread with us down the ages as a picture of what a gardener's wife might be—not a woman "languid and weary," whose plaintive cry is that "every little duty is a trouble, and takes all the joy out of life."

Such women there are, even "gardener's wives," like, let us say, Mrs. Martha Herriott, whose very words we have written above. Who continues thus: "Morning, noon, and night, my head was racked with pain; often for days together I scarcely got a moment's freedom from it. Sometimes, when the attacks were very severe, my left eyeball became quite shrunken and small, and my head would swell right across the top. The pain I suffered then was intense; I cannot properly describe it, but shall never forget it so long as I live. I consulted the doctor and tried all kinds of medicine recommended by my friends, but, until I commenced taking Mother Seigel's Syrup, got no real benefit from anything."

A happy illustration is given us now of Nature quickly changing from decay to health, "for" continues Mrs. Herriott, whose address is 24, John Street, London Road, Sheffield, "after taking it a short time, I felt much better, and the improvement continued until I was *free* from pain. Mother Seigel's Syrup completely cured me.

When I am tired and worn out, after a hard day's work, nothing so soon revives me as Seigel's Syrup. It seems to strengthen every part of the body, and is, indeed, a splendid tonic."

That was in the Summer of 1900. And *now* Nature is herself again! Life is gladness indeed.

We love Nature as she is portrayed in the fields and flowers, but we ourselves, who are part of Nature, must be in perfect health to be in harmony with the countless beauties around us.

The keynote of contentment is good digestion, and Seigel's Syrup awakens into life, by its nutritive and medicinal properties, those dormant digestive organs of the dyspeptic.

He or she can then say, "Nature is at her best."

MARKET REPORT.

[*Per Mail advices of 20th September* 1901.]

COFFEE.

The London Commercial Record says:—Since our last public sales have been held on only one occasion, when there was a continued steady demand, and full to rather higher prices were paid, Dumont Santos being especially well competed for. In "futures" a generally stronger tone has prevailed in conjunction with a rising Exchange, but at the close the market is dull at a decline of 3d per cwt. from the late highest point. Yesterday business was done in Santos, September delivery, at 28s 9d, December at 29s 3d to 29s, March at 30s to 29s 6d, and May at 30s per cwt.

A good market to-day and at auction nearly all offered sold at full prices to here and there 6d to 1s dearer. Catalogues embraced—181 bags East India, 113 bags Nyassaland, 91 barrels 18 bags Jamaica, 530 bags Mexican, 102 bags Nicaragua, 67 bags Costa Rica, 434 bags Colombian, 190 bags Guatemala, 48 bags Coban, 375 bags Vera Paz, and 406 bags Santos

September 17...	4·85	4·90	4·95	5·10	5·20

TEA.

INDIAN.—Auctions were larger, *viz.*:—41,300 packages *versus* 32,000 packages in the week previously and 45,100 packages for the corresponding time a year since.

A better tone was evinced throughout, partly due to the saleable character of many of the arrivals. Assams, although generally of a desirable standard, were not always so very attractive as some of the earlier receipts. Cachars and Sylhets inclined to improve and some useful invoices appeared. Dooars teas have been most irregular and in many instances showed a decided falling off, latest shipments however are again more promising. Darjeelings were not uniformly good but when choice full prices resulted. The chief want was again for "coloury" sorts of all grades and such close firmer; light brisk kinds sold quietly. Commonest descriptions kept about steady, while those above this level favoured sellers. Medium to fine thick broken Pekoes are dearer, but low brokens with small leaf and inferior Fannings went cheaply.

At home trade is by degrees recovering from the "Duty Scares" and other hindrances it has recently experienced.

For 32,800 packages on Estate Account $8\frac{3}{4}$d per lb. was realised compared with $8\frac{1}{4}$d per lb. for 37,600 packages, and $8\frac{3}{4}$d per lb. for 40,400 packages in the two antecedent seasons.

Entries for export (including Chittagong) to Great Britain from 1st April to 15th instant, were 60,949,000 lbs. contrasted with 64,980,000 lbs. for the same period of 1900, but it is reported that the deficiency in the output is increasing so that the discrepancy in shipments should be more marked later on.

CEYLON.—A somewhat smaller amount was brought to the hammer, 20,600 packages against 22,600 packages in the week before and 30,600 packages twelve months ago.

There was a strong all-round demand, parcels with ordinary liquor ruling firm, while those marking improvement in quality brought in some instances very full rates. Common to fair Pekoe Souchongs and Pekoes were in request, and usually the turn dearer. Medium and fine "leafy" kinds for the most part received good support, especially those suitable for the Continent. Broken Pekoes without special point did not alter much in value, but on the other hand there was brisk bidding for those and also B.O. Pekoes possessing fine flavour and strength, quotations often denoting a rise of $\frac{1}{2}$d and 1d per lb., among the best being:—Goatfell 1s $5\frac{3}{4}$d, Cranley, Henfold and Ingestre 1s $4\frac{1}{4}$d, Talawakelle 1s $3\frac{1}{4}$d. and Holmwood 1s $2\frac{3}{4}$d.

The average is $7\frac{1}{2}$d per lb. On the 12th instant it was $7\frac{1}{4}$d per lb. and $6\frac{7}{8}$d per lb. in 1900.

JAVA.—Slightly over 1,300 packages of direct import comprisi a varied assortment were brought to the notice of buyers, a taken up freely.

Deliveries.—Clearances of all tea (on which duty has be paid) from the London warehouses, as per official returns are, *viz.*:

From 1st to 17th September, 1901 ...	...	9,267,684 lbs
Do. do. 1900 ...	...	8,848,391 „

During the week the following have been printed for sale public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offere Pkgs.

1901-1902	285,146	399,317	21,4
1900-1901	277,888	432,938	15,7

40,815 *pkgs.* INDIAN
21,015 „ CEYLON
1,318 „ JAVA
} Total 63,148 packages were offered in public aucti this week.

The market expansion which has been quietly going on f several months past in the re-export of Indian and Ceylon Tea fro the United Kingdom has perhaps been hardly sufficiently apprecia ed. The following are figures from 1st January to end of Augus

	1901.	1900.	1899.	1898.	1897.
Indian ...	8,422,618	5,093,465	4,213,753	4,329,045	3,281,6
Ceylon ...	11,871,757	8,946,997	7,553,903	7,644,380	6,837,7
	20,294,375	14,040,462	11,767,656	11,973,425	10,119,4
	1896.	1895.	1894.		1893
Indian ...	2,083,717	2,314,494	2,067,138		1,780,6
Ceylon ...	5,206,535	4,599,615	3,267,813		2,609,8
	7,290,252	6,914,109	5,334,951		4,390,4

Countries in Europe are now taking important quantities; ever effort should be made to foster these outlets. Russia is one of t principal, and considering the weight of Tea used in that mark the attention of planters might well be directed towards it.

QUANTITY OF INDIAN AND CEYLON TEA RE-EXPORTED FROM THE U. K. FROM 1ST JANUARY TO 31ST AUGUST.

Countries outside Europe and America are also showing the appreciation of our produce to a remarkable extent, having take nearly treble the amount they did two years ago.

INDIAN.—The better tone noticed last week has been still furthe accentuated, while some improvement in prices was again record

or medium and better liquoring Teas, common kinds being also a rifle firmer. This improvement was especially noticeable in Assam growths, some of which were very attractive. The Official Wire gives exports to the United Kingdom for the first half of September, including 1,180,000 lbs. from Chittagong, as 10,910,000 lbs., against 9,140,000 lbs. for the same period last year, making the total from 1st April to 15th September 60,919,330 lbs. against 54,980,000 lbs. last year. The following averages are worthy of note:—"Pabbojan T Co. Pabbojan," 1/6; "Seeyok," 1/5; "Pabbojan Co. Dhoedaam," 1/4¼; "Tingri T Co. Keyhung," 1/3½; "Rungmook" and "Tara T Co.," 1/3¼.

Week's average of New Season's Tea sold on Garden Account, 1901, 33,521 pkgs., av. 8·78d. 1900, 38,267 pkgs., av. 8·14d.

New Season's Tea sold on Garden Account 1st June to date, 1901, 238,402 pkgs., av. 8·42d. 1900, 219,940 pkgs., av. 8·13d.

Ceylon.—Auctions were again smaller, and as the better quality previously noticed was maintained, general attention was attracted to these Teas with a still further slight rise in quotations, buyers being ready to pay some what better prices for all kinds, more specially desirable Teas Private Telegraphic advice from Colombo gives exports to U. K. for first half of month as 2,500,000 lbs., against 3,600,000 lbs. same period last year.

Average for week 7·51d., against 6·83d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 872,174 pkgs., av. 6·64d. 1900, 934,534 pkgs., av. 7·18d.

Java.—The 1,318 packages sold with fair spirit at prices fully up to last week's quotations.

COCOA.

Auctions on Tuesday, when 5,024 bags were presented, produced very little change in prices, but there was somewhat of a falling away in the demand. Under the hammer about 1,800 bags changed hands. Of 1,224 bags Trinidad catalogued 575 bags sold at about valuations—fine 70s to 71s, middling to good 66s 6d to 69s. Grenada gave way a little in value as far as regards the finer grades, but medium and good qualities sold steadily; 935 bags offered and 710 bags found buyers at 64s to 65s for fine red, 62s 6d to 63s 6d for good, and 59s 6d to 61s 6d for common to fair. Of 31 bags St. Vincent 5 bags were placed at 61s. 2 bags Dominica realised 59s. Of 112 bags Samana 25 bags sold at 57s 6d. 79 bags Colombian mostly sold at 72s for good bold red. Guayaquil quiet but steady; 1,042 bags offered and 105 bags sold—Esmeralda 58s 6d, Caraquez 67s to 70s. Of 595 bags Bahia 150 bags were placed at 64s 6d for fine red, and 54s for very common gray. Ceylon has been extremely quiet, and only 170 bags sold out of the 666 bags catalogued, at 88s 6d for fine bold red and 63s 6d to 69s per cwt. for brownish to good fair. The bought in growths consisted of 80 bags Jamaica, 5 bags St. Lucia, 23 bags Costa Rica, 57 bags Caracas, and 173 bags Haiti. The private sales include 750 bags Trinidad—fine at 70s 6d to 73s, good 68s to 69s, 200 bags Grenada at the auction range, 125 bags Haiti at 54s, some Samana at 57s 6d, 150 bags Ceylon at 60s to 64s for fair estate and 67s to 69s for good, and 1,000 bags Guayaquil—Caraquez at 66s to 69s, Arriba at 77s to 79s per cwt.

PEPPER.

Black.—The spot trade continues very quiet, but prices are unchanged; the few sales reported have been in fair Singapore at 6d per lb. For arrival values have improved, about 100 tons having changed hands at $6\frac{1}{32}$d to $6\frac{1}{16}$d for Singapore near at hand and $6\frac{3}{32}$d to $6\frac{3}{16}$d per lb. for October-December shipment.

At auction on Wednesday 170 bags Aleppy were bought in at 6d per lb.

To-day, Black firm. Sales of Tellicherry, September-October shipment at 57s to 57s 3d c.i.f. Genoa, now 57s 6d asked.

The shipments of Black Pepper for the first half of September compare as follows:—

		1901.		1900.	
U. K.—Singapore	... ...	70	80	70	70
,, Penang	... ...	10		*nil*	
Continent	... ...		170		290
U. S.	... ...		260		*nil*
Total tons	...		510		360

In *White* more demand experienced for Penang on the spot, and 250 bags of this description sold at $8\frac{5}{8}$d for fair limed and $8\frac{9}{16}$d for brownish, with retail lots of Singapore done at 9d. For arrival a firmer feeling rules, there being buyers of near at hand Singapore at $\frac{15}{16}$d and distant at $9\frac{1}{8}$d per lb., while 25 tons Penang December-February (s.) have been done at $8\frac{3}{4}$d per lb.

Nothing offered at auction this week.

The shipments of White Pepper for the first half of September compare as follows:—

		1901.		1900.	
U. K.—Singapore	... ...	90	130	220	320
,, Penang	... ...	40		100	
Continent	... ...		140		270
U. S.—	... ...		90		...
Total tons	...		360		590

GINGER.

Cochin.—Only 220 bags of washed rough were catalogued, and these retired at 42s 6d for fair plump medium and small, and 38s per cwt. for mouldy. Privately business done at 38s 6d per cwt. for medium and small washed.

Jamaica.—The uninteresting display of 17 barrels partly sold at 36s 6d per cwt. for common dull wormy.

QUININE.

The market last week closed fairly active, good brands of German sulphate in bulk changing hands for October delivery at 1s $1\frac{1}{8}$d, and 1s $1\frac{3}{8}$d for December, but on Monday, when it was found the bark shipments from Java for the first half of the month were heavier than had been expected, the market opened flat and declined quite $\frac{1}{2}$d, October selling at 1s $0\frac{1}{2}$d, and December at 1s 1d. Subsequently the market became firmer, with small sales of October at 1s $0\frac{3}{4}$d to 1s 1d, and December at 1s $1\frac{1}{8}$d to 1s $1\frac{1}{4}$d, andthe market closes at the outside figures. Imperial brand is quoted 1s $0\frac{7}{8}$d spot, and 1s $1\frac{1}{2}$d forward.

CARDAMOMS.

At last week's auctions 410 packages were offered, and 222 sold, about half of which at irregular, but firm to slightly dearer prices. and extra bold sizes of good quality, splits and smalls were in good demand. *Mysore*, extra bold pale fetched 3s 5d to 3s 6d bold pale 2s 9d to 2s 10d, medium bold palish 2s 6d to 2s 8d, dull medium bold 2s 3d to 2s 5d, medium pale 2s 2d to 2s 3d, small medium pale 1s 8d to 1s 11d, small 1s 4d to 1s. 7d, splits 1s 4d to 1s 9d according to quality, shells 3d, and seeds, grey to good, 2s 3d to 2s 5d, being a 1d dearer. *Malabar*, barely fair, 1s 4d to 1s 5d. The unsold lots of *Mysore* were partly disposed of directly after conclusion of the auctions, and a good shipping demand has prevailed since that date.

VANILLOES.

The record quantity of 1,530 tins brought to auction to-day comprised a large proportion of mediocre and common quality. At time of going to press the sales were still in progress, but the bulk of the quantity that had passed the hammer sold. The few stand-out lots of prime quality realised very full rates, while grades just below were steady, but the prices accepted for the medium and poor character beans were 1s to 2s per lb., and in some cases 3s, lower.

Fine crystallised Seychelles ("Cascade") 8 inches brought 24s, $7\frac{1}{2}$ to 8 inches 22s, 7 to $7\frac{1}{2}$ inches 18s, 7 inches 16s, $6\frac{1}{2}$ to 7 inches 15s to 15s 6d, 6 to $6\frac{1}{2}$ inches 13s 6d to 14s, $5\frac{1}{2}$ to 6 inches 11s 6d to 12s, 5 inches 10s to 10s 6d, $4\frac{1}{2}$ inches 9s 9d. Good color and flavour, 8 inches 18s 6d, $7\frac{1}{2}$ to 8 inches 18s 6d, $7\frac{1}{2}$ inches 17s 6d, 7 to $7\frac{1}{2}$ inches 17s to 17s 6d, $6\frac{1}{2}$ to 7 inches 16s; fair, 7 to $7\frac{1}{2}$ inches 14s, $6\frac{1}{2}$ to 7 inches 11s 6d, 6 to $6\frac{1}{2}$ inches 9s 3d, $5\frac{1}{2}$ to 6d inches 8s 6d per lb.

INDIA-RUBBER.

The Market for Pará keeps steady and a fair business has been done in soft cure fine 3s $8\frac{1}{4}$d to 3s $8\frac{1}{2}$d and hard at 3s $8\frac{3}{4}$d, spot and near delivery; sellers are now holding for 3s 9d both hard and soft. Negroheads, scrappy sellers at 2s 9d, and small sales of Cametas at 2s 2d. Peruvian quiet; ball 2s $6\frac{1}{2}$d, and small sales slab 2s $1\frac{3}{4}$d.

At auction to-day moderate supplies were brought forward and only a small part sold at rather lower prices.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 25th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad. *October 9th.*—*Weather*—Wind varying from West to South-West. Rain in heavy showers from the North-East. Days generally overcast and moderately cool. *Works*—Preparing for crop. *Coffee*—exceptionally healthy, and next year's prospects very bright. *Health*—Good. *Labour*—Abundant.

Munzerabad. *October 14th.*—*Weather*—Fine with local showers from the N.-E. *Crop*—ripening up fast. *Coffee*—very healthy. *Works*—Cleaning up and getting ready for crop. *Health*—Good. *Labour*—Abundant.

Coorg.. POLLI BETTA, *16th October.*—*Weather*—Last shower on Sunday afternoon. Fine and bright yesterday and Monday. Total rainfall about 55 inches since January. Bright sun will hasten on crop which will be got over with early. Weeding is still being done. All other works are finished. *Labour*—is very plentiful and *General Health*—Fair. Volunteer Camp opened yesterday.

STATISTICS AND REMARKS.

TRUTH may lie at the bottom of a well, but it is by no means always to be found in official statistics, no matter how deep we dive. Statistics are not merely misleading sometimes, they are contradictory. Here is a specimen of the misleading kind. In a statement of the progress of large industries from 1887 to 1899 the Director-General of Statis-

tics shows the capital employed in Coffee works as Rs.50,000 in 1892 and 1893 (previous columns are blank), Rs.3,50,000 in the next four years, Rs.2,00,000 in 1898, and Rs.50,000 once more in 1899. Then as to labour, the average number employed throughout the year and the average number employed during the working season are shown as follows :—

	Year.	Season.
1887	1,176	8,078
1888	1,617	8,417
1889	1,429	6,166
1890	1,059	5,426
1891	1,400	4,221
1892	1,414	5,548
1893	1,099	6,289
1894	1,145	5,800
1895	5,514	2,580
1896	1,233	6,822
1897	2,142	5,883
1898	4,963	
1899	5,081	

These figures are certainly not in harmony with those that refer to the amount of capital employed. Nor are the following figures, showing value of production year by year :—

1887	1,17,92,863
1888	2,20,91,044
1889	1,04,83,394
1890	1,28,24,618
1891	1,08,80,060
1892	1,14,50,879
1893	1,28,57,666
1894	1,39,59,044
1895	1,54,93,851
1896	1,58,65,249
1897	1,09,56,803
1898	1,33,76,286
1899	1,58,07,370

Doubtless there is an approach to accuracy in figures relating to new planting companies started and companies that have wound up in 1899-00. In Bengal there were working in 1899-1900, 126 tea companies; in the North-West Provinces and Oudh, 3. The whole paid-up capital of tea companies at the end of 1899-1900 stood at Rs.3,25,38,118. Of Coffee and Cinchona companies (which are, unfortunately, grouped together) there were 4, all in Madras; and at the close of the year the total capital invested in companies of these classes was only Rs.1,96,800. Of "other" planting companies 5 were working during the year in Assam, 2 in Bengal, 1 in the Punjab, 2 in Bombay, 5 in Madras. At the close of the year the total paid up capital of planting companies other than those classified under the heads of tea, coffee, and cinchona was Rs.18,39,660. Of course, a comparison of these figures with those relating to other industries would be useless, for, as is well known, the Tea industry is largely financed by companies registered in London, whereas the above figures relate solely to those registered in this country. The number of companies registered during the year was as follows :—1 tea company in Bengal, with a nominal capital of Rs.2,00,000 and no figure given under the head of paid-up capital; 2 coffee and cinchona companies in Madras with a paid-up capital of Rs.1,16,000, and 3 "others" (2 in Bombay and 1 in Madras) met a paid-up capital of Rs.13,703.

During the year 8 companies ceased to work, *viz.*, 6 companies in Bengal, 1 in Punjab, and 1 "other" in Bomb Paid-up capital of the first batch Rs.10,06,000, of the last lots *nil*.

The following table shows number and paid-up capital rupees) of each class of company in existence at the end each official year since 1881-82 :—

—	Tea and other Planting Companies.							
	Tea.		Coffee and Cinchona.		Others.		Total.	
	No.	Capital.	No.	Capital.	No.	Capital.	No.	Capita
1881-82 ...	113	2,75,89,930	5	1,97,500	4	1,81,360	122	2,79,68
1882-83 ...	121	2,92,22,180	2	1,28,240	7	5,02,580	130	2,98,53
1883-84 ...	121	3,05,91,970	7	3,81,720	5	4,61,870	132	3,14,35
1884-85 ...	127	3,30,56,050	8	4,13,110	3	4,52,270	138	3,39,21
1885-86 ...	130	3,27,73,950	7	4,42,030	5	4,57,190	142	3,36,73
1886-87 ...	131	3,52,48,430	7	4,67,430	5	4,84,180	143	3,62,00
1887-88 ...	127	3,54,36,070	7	4,81,810	7	5,60,480	141	3,64,78
1888-89 ...	129	3,52,91,400	7	5,14,290	9	5,41,830	145	3,63,47
1889-90 ...	133	3,55,17,340	7	5,26,710	4	4,58,280	144	3,65,02
1890-91 ...	140	3,54,62,510	6	4,61,890	8	4,62,420	154	3,63,86
1891-92 ...	144	3,64,88,340	5	3,83,290	9	6,31,000	158	3,75,02
1892-93 ...	142	3,63,68,980	5	3,83,390	10	9,56,280	157	3,77,08
1893-94 ...	148	3,71,30,890	5	3,89,990	12	9,56,280	165	3,84,77
1894-95 ...	154	3,67,23,550	5	3,91,990	13	10,07,250	172	3,81,22
1895-96 ...	156	2,52,20,590	3	2,76,800	13	12,47,250	172	3,67,44
1896-97 ...	156	3,60,04,640	2	1,61,500	13	12,42,250	171	3,74,08
1897-98 ...	371	3,21,85,020	1	39,000	14	12,31,660	152	3,34,55
1898-99 ...	135	3,21,23,100	2	39,000	13	10,92,860	150	3,32,54
1899-1900 ...	129	3,25,38,118	4	1,96,800	15	18,39,660	148	3,45,74

The next table we have to give is a very long one t shoul dprove permanently useful for reference. It states value (in rupees) of principal articles exported from Bri India to the United Kingdom from 1853-54 to 1899-1900

	Coffee.	Tea.		Coffee.	Tea
1853-54 ...	4,75,980	Included under "Other articles."	1876-77 ...	77,19,310	2,60,18
1854-55 ...	3,82,650		1877-78 ...	74,58,780	3,03,72
1855-56 ...	6,84,100		1878-79 ...	99,46,500	3,12,62
1856-57 ...	6,99,130		1879-80 ...	1,04,50,710	3,03,51
1857-58 ...	4,01,620		1880-81 ...	93,31,410	2,99,43

1865-66 ...	36,09,480		1888-89 ...	1,00,69,070	5,07,78
1866-67 (eleven months) ...	22,05,490	35,46,870	1889-90 ...	72,53,450	5,03,10
1867-68 ...	45,84,470	68,45,650	1890-91 ...	66,90,550	4,92,64
1868-69 ...	70,66,110	95,13,260	1891-92 ...	94,31,580	5,52,47
1869-70 ...	43,43,810	1,04,78,130	1892-93 ...	96,06,660	5,99,25
1870-71 ...	49,44,980	1,12,10,560	1893-94 ...	99,61,630	6,11,44
1871-72 ...	1,00,99,900	1,45,07,570	1894-95 ...	1,04,25,020	6,97,11
1872-73 ...	73,98,530	1,56,00,270	1895-96 ...	1,06,15,810	6,93,82
1873-74 ...	80,61,920	1,73,42,700	1896-97 ...	83,34,071	7,48,38
1874-75 ...	78,19,940	1,93,27,830	1897-98 ...	83,63,386	7,45,60
1875-76 ...	82,88,320	2,16,29,530	1898-99 ...	1,13,72,874	7,32,00
			1899-1900 ...	95,16,769	8,29,11

This shows very plainly how completely Tea has outstrip Coffee in the race.

BRAZILIAN FINANCE.

By his latest annual report the Brazilian Minister of Finance has again secured the support of the Press of Rio de Janeiro. He gives a *résumé* of all that has been done since 1898, and refutes the criticisms brought against the financial measures taken by the Government. Recapitulating the services rendered by the Government, the report shows that 100,000 contos of paper currency have been redeemed. The Government has instituted a fund for guaranteeing the paper currency, to which £1,500,000 has been assigned. With the rise in the rate of exchange the gold value of the currency has increased from £19,000,000 to £30,000,000. The foreign payments in gold have been resumed, the Government having had over £2,000,000 at its disposal for this purpose. The Government has redeemed £700,000 worth of the foreign debt, and also £2,500,000 of the internal gold loans and 6,200 contos of internal paper loans. It has, moreover, improved the collecting of inland taxes. The revenue from stamp duties has risen from 9,000 to 15,000 contos, and that from the tax on retailed goods rose from 14,000 to 36,000 contos The railways, which before they were leased were worked at a loss, are now bringing in revenue to the Treasury. Besides rendering these services, the Government has also paid over £2,000,000 of unconsolidated debts already existing in the country and outside. Owing to the Government's policy the value of the paper currency has been enhanced so that now, taking 10d. as the rate of exchange, 45,680 contos will suffice to pay the interest on external loans amounting to £1,903,000, whereas in 1898, with the exchange at 6d., to meet the same payment, which then amounted to £1,549,000, a sum of nearly 62,000 contos was required. At the same rate of exchange, the guaranteed interest cost the Treasury over 44,000 contos, but to-day this expense amounts to less than 27,000 contos. This is a grand record, but, unfortunately, it is to a very large extent only a paper record. If the present system can be continued until Brazil has paid off her gold debts, all will be well ; but, any hitch midway might cause all the progress now recorded to be wiped out. In regard to railways, the report mentions the advantages of their redemption by the Government, and praises the services rendered by the agent commissioned to negotiate this operation in London. Alluding to the sudden rise in the exchange, it states that the banks are in part to blame for this, for they did not exert their influence on the market in order to regulate the offer and demand of bills, having in view the times of abundance or scarcity of coffee and rubber bills. Sometimes they oversell during the time the crop is being exported and try to cover themselves just when bills are becoming scarce, thus favouring speculation. The report declares that the present Government has never interfered in the exchange market, and brings forward detailed figures proving that importers are benefited by the improved situation of the country. The report insists on the necessity of continuing the redemption of the paper currency and of curtailing the public expenditure.

The above is taken from a summary cabled by the Rio correspondent of the *Times*, and is no doubt a fair representation of the Minister's statement. As we have remarked, all turns upon the continuance of the present system for a period long enough to permit of the establishment of Brazilian financed on a permanently substantial basis. There are many points of similitude between the financial policy of the Brazilian Ministry and that of the Government of India. Both have adopted certain measures under circumstances that amount to compulsion. We can but express the hope that both will be able to restore public credit and stability by the artificial means resorted to. As, however, the Brazilian Minister specially refers to *importers* as having "benefited by an improved situation of the country," we can but assume that it is not alleged that exporters have also benefited. The natural inference is that they have suffered.

THE UNITED PLANTERS' ASSOCIATION, F. M. S.

The Planters' Association of Ceylon has established what may be termed cordial relations with the local Government, and has secured a position of great influence. Whatever the views of the present Chief Commissioner of Assam may be, the Indian Tea Association has won the ear of the Governments of India and Bengal. In Madras the more youthful U. P. A. S. I. has the sympathy and, we believe, the respect of the local Government, and its influence is steadily growing. We are glad to believe that perhaps the youngest Association of the same kind in the East, the United Planters' Association of the Federated Malay States stands in much the same position as regards the Government there, and that it, also, is acquiring increasing influence with increasing age. Either it or its Chairman is consulted with respect to legislation, etc., regarding agricultural matters, and its, or his, opinions are well considered before action is taken. This is as it should be. One result of the representations of the U. P. A. F. M. S. is an increase of accommodation on the part of Negapatam for Indian labourers about to emigrate to the Straits Settlements and particularly the Malay States. A Madras firm has lately offered to import *Mahratta* coolies for the Government of the Straits Settlement and others, but we are pleased to learn that this is not regarded, at present, as a question that affects the Association. Preparations are being made by Government, in consultation with the Association, for establishing what may be termed an investigation farm, under the charge of Mr. Stanley Arden, a scientist. There is some little doubt as to whether Mr. Arden has selected the best site ; there is also a doubt whether he, "a new arrival, who is not acclimatising at all well" should be permitted to assume personal charge. The Association has therefore resolved, "that, seeing the importance of the best selection being made for the purpose of an Experimental Garden, the Resident-General be asked that such selection be finally approved by a Committee of five Selangor planters with a quorum of three. Such Committee to consist of Messrs. W. W. Bailey, C. Meikle, E. V. Carey, H. M. Darby, and E. B. Prior." We have no doubt that the Government will agree to this. Meanwhile there are hopeful prospects for rubber and *Ficus elastica* in those parts, to judge from the yields so far obtained, and the Chairman of the Association, Mr. E. V. Carey, lately stated that it was encouraging that practically no coffee land had been abandoned, and that planters were still able to keep things going. No report has yet been received on a shipment of 100 cwt. of coffee to London, but as to 5 pikuls sent from Aden (or *to* Aden—the report before us leaves us in doubt on this point) it unfortunately appears that for some unknown reason it arrived in a very bad state. Mr. T. H. Hill stated that he had seen it, and that it was about as bad as it could be, he further added that he believed that unless the coffee exported was cured in some central place, he did not think that any satisfactory results would be attained.

NOTES.

Russia's Demand for Indian Teas. This season Russia is a much larger buyer of Indian teas.

Tea at Baghdad. In 1899 Baghdad took 3,750 packages of Indian tea; in 1900 the quantity imported was 3,825.

Coffee at Baghdad. During 1900 Baghdad imported *from Europe* 607 bags of coffee, valued at £1,821; while the coffee she imported from India was valued at £4,056.

The Indian Tea Crop. The actual shortage of Indian tea to the 30th September is estimated by Messrs Cresswell & Co. to amount to 15 to 16 million lbs. This, it is believed, will ensure an advance in price in all grades.

The Private Sales Extinct. The London correspondent of the *Times of Ceylon* cabled on 10th instant:—There are no catalogues for the private sales for Indian tea, and Messrs. Buchanan & Co. are printing for the public sales.

The Java Coffee Crop, 1901. The *Straits Times* of September 30th says:—According to a telegram sent to Europe by the Governor-General of Netherlands India, the Government coffee crop in Java is estimated for the year at 95,000 piculs.

Foochow Tea Crop Short. Business in tea, reports the *Foochow Echo* of the 14th September, continues on a very small scale in spite of the short supplies. The arrivals of Congou to date are only 282,000 half-chests, against 447,000 half-chests at the same date last year.

Preferential Treatment of British-Grown Tea. In view of the proposed rebate in the excise on sugar grown by white labour in Australia, it is suggested that the Indian Tea Association should approach the Commonwealth of Australia to get a rebate on British-grown tea, as against China and Japan.

Tea in Java. It is stated on the authority of Mr. R. C. Wright, that, no matter how much the cultivation of tea extends in Java, the production is not likely to exceed the local demand, so greatly is the drinking of tea extending among the Javanese, Malays, etc., We hope soon to see it extending among Indians also

Amsterdam Bark Market. A supplementary catalogue issued for the Amsterdam auctions of October 8th increases the offerings by 1,280 packages, containing 108 261 kilogrammes of Cinchona bark. The shipments at Java for the first half of the month were 601,300 Amsterdam lbs., against 610,000 Amsterdam lbs. last year, and 740,000 Amsterdam lbs. in 1899.

The Tea Industry. An urgent circular was issued last Saturday by the Indian Tea Association, Calcutta, intimating that certain Calcutta Tea Agency Houses had supplied the Association with figures showing the quantity of tea manufactured up to 30 September compared with the quantity at the same date in 1900. Returns were not supplied by Messrs. Andrew Yule & Co., Messrs Devenport & Co., and Messrs. Mackinnon, Mackenzie & Co and did not include the figures of the native gardens in Dohr Dun or Kangra. The total quantity, as now returned, wa 110,837,762, against 125,134,481 lbs. in 1900.

The West Coast of Sumatra. The principal produce of the We Coast of Sumatra is coffee, the cult vation of which is chiefly in th hands of the Government, but there are also large priva plantations on the borders of the volcanoes. Much of th coffee is exported to America. Amongst other products ma be mentioned copra, nutmegs, mace, rattans, hides, variou gums (*gum damar* which is softer than gum copal produce in Celebes, *gum berjamin* used as incense, and india-rubber also a kind of cinnamon and a little pepper. The cooli employed at Padang all come from the island of Nias, qui a special race amongst whom are many Christians.

A National Monopoly. Another bill for a National Mono poly of Coffee has been presented Congress by a deputy for the State of Rio, Sr. Barros Franc Junior. The stipulations of the project are not dissimilar those of a year or two ago, comprehending exclusive rig to ship coffee; obligation to purchase all coffees offered at minimum price to be fixed annually between the Company Association that undertook the business and Government and obligation to export all the coffee so purchased at a pric not exceeding 20% of the purchase price. So far, the *Bra zilian Review* understands, the project has no official approv and is not likely to get further than the initial stage.

Red Rust. The Indian Tea Association did good piece of work for themselve says *Capital*, when they secured Mr. Harold H. Mann, B. Sc as their scientific officer The planters up in the Nowgon District of Assam were troubled with red rust in their garden and so they sent for their doctor. Mr. Mann went up i June, and made a thorough examination and diagnosis of th disease. He has given the results in a concise little pampl let, beautifully illustrated—the largest picture being i colours—which has just been published by the Associatio and planters, after studying that pamphlet and obeying th instructions therein given, will have themselves to blame they cannot keep the blight of red rust henceforth we in hand.

Bangkok Pepper. Bangkok does not seem to ha been able to take much advantage the advanced price of pepper. Exports in 1900 fell off b 437 tons as compared with 1899, and the crop in 1901 w practically a failure. Shipments in 1900 were as follows:- U. K. 279 tons, Hong Kong 190, Europe (outside U. K 111, India 77, Singapore 42. That item "India" ought n to appear seeing that India produces more than sufficie pepper for her own requirements. The greatest export fro Bangkok during the last 10 years was 1,541 tons, th average about 990 tons, last year's only 699 tons. Practicall all is sold as white pepper. The crop for 1901 is promisin well and is expected to be 25 per cent. above the average quantity.

Cacao Stealing in Ceylon. In the Administration Report of th Central Province Ceylon, it is stated —"*Cacao Stealing.*—This crime,

egret to say, is still prevalent in the Matale district; but in ne Panwila district there has been a marked decrease. In ict there were very few cases reported to Court, and some of ne leading planters connected with the Panwila district have tated to me that there have been very few thefts during the ast cacao season. The largest number of cases that were nstituted in the Matale Court were those from Marukon state. It is difficult to put down cacao stealing as long as lanters employ dishonest watchers. In several cases that ave come before me I found that the watchers connived at he thefts."

The London Tea Market. Weekly special telegram dated 10th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that heavy supplies of Indian tea are depressing the market, and that good liquoring Pekoes are easier; while the market for Common Pekoes and Broken Pekoes shows a slight decline. The price of fair liquoring Ceylon Pekoe Souchong is 5½d (¼d down), and the average price of Ceylon tea sold on garden account this week was 7¾d (¼d down). The average of the corresponding week last year was 7½d. Reuter reports that medium Ceylon teas are irregular, but others steady. Fair Pekoe Souchongs are quoted at 5d (the same as last week) and the average for the week is 7¾d (¼d down), 21,000 packages of Ceylon tea were offered for sale and 19,000 were disposed of; while of the 58,000 packages of Indian tea offered, 42,000 found purchasers, at an average of 8⅛d per lb. (⅜d less than last week).

Coffee in London. The firm tone prevailing, says the *Produce Markets' Review* of September 21, 1901, during the last few weeks is fully maintained, and the moderate quantity offered in auction on Tuesday met with strong competition, and realised full to again somewhat higher prices for Central American kinds. About 2,000 bags washed Santos (Dumont) were also offered, and realised previous values, with the exception of a small proportion of fine London-cleaned, which commanded relatively high rates, 55s 6d for No. 1, and 45s for No. 2 size. On Wednesday and Thursday there were no auctions. The scarcity of fine qualities of Central American is now very marked, and it seems likely that still higher prices will have to be paid to fill requirements of these sorts. It should be noted, however, that, notwithstanding the recent substantial advance in values, good and fine Coffees are still cheap in comparison with the prices which were considered reasonable a few years ago, say before the period of excessive Santos production. The receipts in Brazil continue on an enormous scale, the total from July 1 to date being 4,650,000 bags. Notwithstanding this, markets are firm and slightly dearer, terms being about 6d higher for the week. Exchange is 11 5/32d against 9¾d currency price, 4,500 reis against 7,100 reis, and sterling price 28s 9d (September) against 37s 9d the same time last year.

Java Government Cinchona. From the report on the Government cinchona-plantations in Java for the three months ending March 31, 1901, the *Chemist & Druggist* learns that the climatic conditions were somewhat unfavourable; the rainfall was much below the average, whilst heavy gales, about the middle of February, did a very considerable amount of damage to the plantations. These gales were mostly local, and of a cyclonic character, and the extent of the damage is shown by the fact that nearly 4,000 trees were blown down, from which over 200 tons of wet bark (equal to about 70 tons of dry bark) were collected. Numerous buildings were also more or less severely damaged. During the height of the stormy season the bulk of the native labourers, some 500 men, left the plantations, which caused great difficulty and much delay in gathering the bark of the uprooted trees. With the exception of some damage done by a caterpillar (*Euproctis flexuosa*), the depredations by insect-pests were inconsiderable. Further experiments made with a view of ascertaining whether the content of alkaloid varies with the climatic conditions, and whether it is greater in one particular month than in any other, have led to no definite results. The plants in the nurseries numbered 1,560,000, of which 1,428,000 were *Ledgeriana* and 132,000 *Succirubra*. In the open ground the total amounted to 2,641,500—*viz.*, 1,800,000 *Ledgeriana*, 433,500 hybrids, 362,000 *Succirubra*, and 46,000 *Officinalis*.

Calcutta Tea Sales. The last sale before the Poojahs was held on Friday the 11th instant when 24,000 packages were offered, against 22,000 packages, at the corresponding sale of last year. This is the largest auction yet held this season, and it is a pity the quantity was not restricted, as such a heavy supply to deal with on the verge of a holiday must have discounted to buyers' minds the actual shortage in the crop, which in our issue of last Thursday we estimated at 12 million lbs., but which we note Messrs. J. Thomas & Co. in their last fortnightly Market Report quoted from actual figures already in their possession as upwards of 13 million lbs. The result of the large offering yesterday was that prices were scarcely up to those of last week, and for good medium teas show up poorly against the values ruling at this time last year. This is also very noticeable in the case of tippy Broken Pekoe kinds, which are in many cases selling 30 per cent. under 1900 rates. The present seems to us a grand opportunity for sellers to retrieve, in great measure, their lost position if they will only use proper discretion in the handling of their crop. To offer 24,000 packages on the Calcutta market just when buyers, sellers, and brokers alike are naturally thinking of their holiday, seems to us to have been a great mistake—it will be an equally sad blunder if the teas that accumulate during that holiday are all forced on the market in one sale. We commend this to the attention of those who have the handling of tea agencies. With a short crop, such as is estimated, some balance sheets will cut a very sorry figure, unless proportionately higher values are secured, and it will be but poor consolation, after the produce is sold, to hear that it is showing large profits on resales in London.

Indian Teas in London. A firmer tendency generally has prevailed, says the *Produce Markets' Review* of 21st ultimo, some descriptions having advanced in price, the market closing with an improved tone. The demand is more active, and a larger volume of business has been transacted; and, as the trade hold but moderate stocks, the prospect of a further increased inquiry is favourable. The most active bidding continues to be for the medium and fine descriptions, and is principally centred on the Assam growths and the finer sorts of Darjeeling, which are far above the average quality. The former, taking them all round, have seldom offered better value, and although there will be, judging from reports, a good selection of Tea from the Assam

gardens, it is doubtful if the later arrivals will possess the fine quality of the earlier imports ; in fact, many of those offered recently are distinctly inferior. Darjeelings, on the whole, are little if any better than last season, and consequently they are selling at irregular prices, the less desirable sorts meeting with but a moderate demand, while those possessing the characteristics looked for in these Teas are readily bought at full rates. The Dooars, Sylhet and Cachar Teas up to the present are about on a par with those of last season, being mostly poor in cup and this is reported to be mainly owing to climatic causes. Later advices, however, speak of more favourable weather conditions, which, if continued for the remainder of the season, should produce more useful grades later on. Although from all accounts there will be less common Tea produced than last year, prices remain comparatively low, either due to the excess of stock on this side or the consumption running on the better kinds. The latter is probably the main reason, and this from all points is satisfactory, and it is, therefore, to the interests of the retailer to follow this up by getting the tastes of the consumer thoroughly established for the better class Teas. For the 41,412 packages brought forward at the sales there was good competition, prices being generally firm, and only 6,193 were withdrawn.

GENERAL ARTICLES.

PEPPER.

The *London Commercial Record* of 27th ultimo remarks :—

It is a peculiarity of all those markets the principal basis of which is formed by speculation, that they lend themselves most readily to the inventor of imaginary and romantic reports, cast abroad with a view to influence the mind of operators, and affect thereby the tendency of prices. We have all of us heard the most astounding communications regarding the development of young crops belonging to the species of speculative articles, reports which spoke of rains, floods, snow and blizzards, and which, when the truth leaked out, amounted to insignificant showers and anticipated snow storms. But they answered their purpose ; the bears became frightened, probably alarmed, and left the field to the inventive bull, whose conscience was probably as big as his pocket. Coffee, sugar, cotton, jute, hemp, cloves and shellac are, we think, the principal martyrs to the imaginary mind of some operators, and sad are the tales they can relate, but lately pepper has been added to the list of victims, and particularly Tellicherry seems to be a chosen subject for the imagination regarding this pepper. An endless number of crop reports and estimates have made their appearance in our market during the last fortnight, one more alarming than the other, until Holland seems to have beaten the lot by a communication according to which no more than about one quarter of last year's shipments will be available for export to Europe in the ensuing season. A very grave and alarming estimate which, we fear, must emanate from a bull holding dear pepper, but it is consoling to know that the effect upon the market has been no other than producing an incredulous smile. Other informers speak of a deficiency varying from 25 to 50 per cent., hinting that these figures have to be accepted as a minimum, there being every reason to suppose that the damage done both by rain and drought will exceed the figures stated In the face of these alarming reports, we have been approached by our readers for some explanation or authentic communication, and we are to-day in a position to state that as a result of our inquiries all these reports are greatly exaggerated. There is a grain of truth in them, but not more. At the beginning of the new season, the south-west monsoon was of an exceptionally beneficial character to the growing crop, and there was every ground for the hope of a bumper yield. Later on, we are informed, the monsoon changed into boisterous weather, accompanied by heavy downpours, which delayed the development of the fruit, and were, to some extent, responsible for a certain quantity of light pepper. Since then showers have ceased, and a somewhat protracted spell of weather has set in, amounting almost to a drought. Out of apparently capital has been made, and has led the imagina mind of some bulls to wander a little. We are told a great will depend on the strength of the north-west monsoon, before this has passed away it is very difficult to forecast probable size of the crop. To judge by the state of affairs so the crop will no doubt be late, and may fall short of last ye yield by about 25% maximum, but neither this nor any other mate must be accepted as final. The position of pepper, fro bull's point of view, is an excellent one, and it would be a pit an artificial range of prices were established through exagger crop reports. It hardly requires "puffs" of that description make pepper go.

FIRST RUSSIAN TEA.

THE TEA PLANTATIONS OF CONSTANTINE POPOFF IN THE CAUCASU

Having been closely connected with the tea trade from a early age, the project of introducing the plant into Europe had interested me deeply. I clearly saw, however, that before su scheme could be carried out with any prospect of success, the ditions under which the plant flourishes in its natural habitat, various properties of soil most favourable to the growth of the shrub, and the processes attending the manufacture of tea in Ch would have to be closely studied. It was not until 1889 that I in a position to carry out my long cherished scheme. For purpose I visited Hankow in 1899 ; thanks to the influence exe in my behalf by some Chinese friends, I was enabled, in spit the disturbances then agitating the country, to make a thoro study of the cultivation of the plant, and of the manner of pluck and drying the leaves, as practised in the province of Yu low-toong. I there worked side by side with the Chinese workm Twice subsequently—*viz.*, in 1891 and in 1893—I visited China. the first of these two visits to China I turned my whole atten to the flower teas, as well as to the black, yellow and green tea Foochow, studying later on the methods of tea cultivation Moning and Ningchow. On my third visit to China, in 189 visit which I consider as the most satisfactory of all, by its resu I succeeded in studying the culture of tea, not only in the provi I have already named, but in those of Mankong, Sanho, Ta-ping, Yung-low-see, and Nipcar-see, observing the progress of plant, from the first buds to the plucking of the leaf, noting conditions of soil and temperature, the atmospheric phenom as well as the methods employed in the culture and preparatio the leaf. Ceylon, Java, the Himalaya district, Japan, the Sandw Islands, and Assam were all afterwards visited, in turn more t once. The result of these voyages, and several subsequent o is that I possess: (*a*) A collection of specimens of the various ki of soil in which the tea plant flourishes best; (*b*) An herbariu the branches of the tea shrub; (*c*) A collection of the vari parasites that infest the tea plant; (*d*) A collection of tools u for cultivating the tea shrub; (*e*) Specimens of the tea-leaf every phase of its manipulation; and (*f*) Various kinds of ma factured teas.

I have imported on to my estates in the Caucasus :

(*a*) 10,000 tea shrubs from three Chinese provinces—*viz.*, M kong, Ningchow, and Yung-low-toong; (*b*) 5,000 tea shrubs f Japan ; (*c*) 500 tea shrubs from Ceylon ; (*d*) 200 tea shrubs f the Himalaya district; (*e*) 200 tea shrubs from Assam ; and (*f* tea shrubs from Java.

Unfortunately, several of the shrubs perished before they reac their destination. I have still, however, 1,257 bushes impor from China, 67 bushes from Japan, 40 from Ceylon, 7 from Ja 16 tea shrubs from the Himalaya district, and 22 from Assam.

The 1,500 bushes which had arrived intact out of the 10, imported from China had cost me, by the time they were lan in Batoum, and I had paid the Customs duties on them, close u £5,000 sterling.

Moreover, as I was particularly anxious that these plants sho be given every chance, I had engaged fourteen Chinese labou to accompany them to Russia, plant them in my estates, supe tend their growth, sow pure Chinese tea seeds, gather the c and manufacture the tea. Messrs. Butterfield and Swire, owners of the steamer on which the plants were carried as fa

Port Said, had agreed to demolish the partitions separating the second class cabins, thus forming a second deck, and obviating the necessity of their being placed in the hold of the vessel. By this means a sufficient quantity of air and light could be assured.

Whoever attentively examines my tea plantations in the Caucasus may make a very clear comparison between the tea plants imported from the various localities, and anyone versed in tea will find no difficulty in forming an accurate idea of the respective merits of each class of tea.

In 1892 I purchased three tracts of land in the district of Batoum —*viz.*, Salibaouri, Kapreshoum and Chakva, comprising, altogether, about 900 acres, and at once commenced preparing the ground for tea-planting. The three estates differ totally from one another, both as regards the nature of the soil and the climatic conditions, a circumstance which enables me to judge what elevation is the most favourable for tea culture in the Caucasus.

Before I purchased them in 1892, the three tracts of land were entirely covered with virgin forests of rhododendrons, wild laurel trees with stems thicker than a man's arm, with beech trees and alder trees, twelve feet in thickness and very tall. Thickly intertwined with furze and thistle, the trees effectually shut off every ray of sunshine, while rendering the forests absolutely impenetrable. Such was the tangled and swampy ground it now became necessary to clear and cultivate.

Not satisfied with having imported plants from China and the other localities before mentioned, I procured large quantities of Chinese seeds, as well as smaller lots from the other places, in order to be able to draw a comparison between them. I am obliged to admit that the seeds from China have been comparative failures, notwithstanding all the measures resorted to in order to induce germination. This unsatisfactory result, always the same after many trials, induced me to try and plant *shoots* from the imported Chinese plants, and this experiment has proved quite satisfactory

My tea plantations are in my three estates, in the district of Batoum; they are: Privolnoe (Salibaouri), Zavetnoe (Kapreshoum), and Otradnoe (Chakva). They are at the following distances from Batoum:—Privolnoe 3 versts' distance from Batoum; Zavetnoe 6, Otradnoe 12. The space occupied by each estate is about: Privolnoe 120 dessatins (equal to $2\frac{7}{10}$ of an acre); Zavetnoe 50 dessatins; Otradnoe 100 dessatins.

The three estates differ greatly both in altitude (from zero to 1,150 feet), in their proximity to the sea, in their accessibility to the influence of the sun and of the wind, and in the properties of the soil. My chief aim in purchasing these three estates was to see clearly, by practical experience, the climatic conditions, etc., which are best suited for the culture of the tea shrub in the Caucasus.

The following tracts of land have now been divided into tea plantations, and planted with tea shrubs of various ages:—In Privolnoe there are about 70 dessatins, planted; in Zavetnoe, 30; in Otradnoe 40, making 140 dessatins in all. I purpose shortly to portion out the rest of available land into new plantations, *i.e.*, about 130 dessatins more.

It is only the seedlings that have been raised from *imported* seeds that are cultivated on my estates; the tea shrubs that have been grown on the estates are not even allowed to flower, much less to turn to seed. Only a few seedlings have been raised from our own seeds, in Otradnoe, by way of experiment *viz*: In 1898, there were 345; in 1898, there were 388. All the rest of the seedlings have been raised from imported seeds. In reference to the latter, I may add that, in 1893, besides the chief quantum of China seeds, I imported seeds from other lands as an experiment; but none of the seeds, except those imported from China, yielded sprouts, or, at least, if they did, the sprouts all perished.

In 1895 I once more imported seeds from Ceylon, Assam, the Himalaya district, but it was a last and futile attempt, and from that time I have only imported China seeds.

From 1892 up to the present year I have continued importing seed from China every spring. It has even sometimes happened that I have received a cargo of seeds in the autumn in addition to those brought over in the spring.

In the year 1899 the seeds imported from China yielded about 10 millions of sprouts, and in 1900 about three millions, in the nursery gardens.

At the present time my plantations contain the following number of tea shrubs raised from seeds:—(*a*) In Zavetnoe.—Planted in 1893 from China seeds, 7,228; planted in 1897 from China seeds, 8,319; planted in 1897 from Assam seeds, 2,464; planted in 1898 from China seeds, 56,600; planted in 1898 from Himalaya seeds, 78; planted in 1898 from Ceylon seeds, 4,102; planted in 1899 from China seeds, 59,052. (*b*) In Otradnoe.—Planted in 1893 from China seeds, 19,302; planted in 1897 from China seeds, 35,144; planted in 1898 from our own seeds 345 and 388; planted in 1898 from China seeds, 34,018; planted in 1900 from China seeds, 284. (*c*) In Privolnoe.—Planted in 1893 from China seeds, 11,181; planted in 1896 from China seeds, 5,023; planted in 1897 from China seeds, 18,655; planted in 1898 from China seeds, 20,313; planted in 1899 from China seeds, 210,455.

The original tea shrubs have been planted in small experimental patches in my three estates.

At present there are the following original tea shrubs on my three estates:—(1) from China, Mankong, 401; from China Ningchow, 447; from China, Yung-low-toong, 409.—Total 1,257; (2) from Japan, 67; (3) from Ceylon, 40; (4) from Java, 7; (5) from the Himalaya district, 16; (6) from Assam, 22.—Total, 1409.

All the rest have perished.

The bushes mentioned above are distributed over my three estates thus:—(1) In Zavetnoe, Assam shrubs, 22; (2) in Privolnoe, China and Japan shrubs, 662; (3) in Otradnoe, China, Ceylon, Java, and Himalaya shrubs, 725.—Total, 1,409.

In 1894 I tried the experiment of raising new tea bushes from grafts taken exclusively from China bushes. Of these I have now (1) in Privolnoe, 2,509; (2) in Zavetnoe, 1350; (3) in Otradnoe, 2,120.

Personally, I am inclined to look upon no tea as really genuine but such as comes from China, and, indeed, only from two or three provinces in China, while, as regards the preparation of the tea, hand labour, such as it is practise in China, seems to me infinitely preferable to mechanical labour.

Notwithstanding this preference, however, a preference which has led me to bring Chinese cultivators to the Caucasus at an exorbitant cost, I found myself forced, after several failures, to procure from England the necessary machinery for the preparation of tea, as well as the framework for a new factory.

Messrs. Davidson & Co., of Belfast, furnished me with the apparatus for drying, rolling, fermenting, and sorting the leaves, apparatus for cutting and pressing the green twisted leaves, and also a hydraulic press to form the tea into tablets, and another to make tea in the form of a "pill."

The tea "pills," for the preparation of which I had to order a new machine, present, I think, a rather interesting and novel feature. They weigh each half a zolotnik (about 14 to the ounce), and should prove very useful for the army, as well as for sportsmen and travellers. A single "pill," steeped in boiling water, is sufficient to give a cup of good strong tea, and I believe that, before long, these "pills" will be known and appreciated at their true value.

The first tea I prepared and placed on the market was in 1895; the quantity in the year being, however, only 20 lbs. Since then the progression has been rapid. Thus I sold: Tea in packets—In 1895, 20 lbs.; in 1896, 37 lbs.; in 1897, 1,200 lbs.; in 1898, 2,900 lbs.; and in 1899, 3,610 lbs.

In addition I sold, in 1898, 10,000 lbs. of compressed tea (tablets).

The tea in "pills" has been already shown at several exhibitions, commencing with that held at Nijni Novgorod in 1896, then at Stockholm in 1897, St. Petersburg, 1899, and Paris, 1900. They were sold at the Exhibition in Batoum, 1900, too.

As regards the demand for Russian tea and the rapidity with which it is bought up, the only thing I can complain of is the small production, which is far inferior to the demand, owing to the newness of the enterprise and the fact that most of the shrubs are very young as yet.

The entire production of the three qualities I have placed on the market—*viz.*, at 2 roubles, 1 rouble 50 cop., and 1 rouble a pound, has been disposed of in Moscow, St Petersburg and Warsaw, as soon as offered. Almost everyone who has tried it prefers it to all other tea, many customers buying 10 lbs. at a time, in case they may have finished there supply before a fresh one is procurable.

It would be idle to deny that I am somewhat proud of such results. The examination of my teas from the point of view of flavour, as well as the chemical analysis which has been made of it, have proved that if this tea, grown on Russian territory, be not actually superior to the best Chinese kinds, its quality is in no way inferior. There is, therefore, every ground for hoping that, ere long, Europe will accord in full rights of citizenship.

Moscow, 15*th May*, 1901. Constantine Popoff.

BUYING, HANDLING AND SELLING COFFEES.

The *Canadian Grocer* publishes the three papers that won the cash prizes in the recent contest inaugurated by it. Our contemporary says: The object in view was the creation of greater interest in coffees among the trade. Already this has to some extent been accomplished, and, judging from the commendation which comes from the judges, the papers which we herewith publish will prove helpful as well as interesting to our readers. The five essays which were selected by the judges as entitling the writers to copies of the *Canadian Grocer* for one year will appear in subsequent issues.

Mr. C. L. Marshall, the winner of the first prize of $15, is the manager of Warren Bros. & Co's sample-room. He is a native of Bristol, England. Medicine was the career originally intended for him, and for two years he was a student of the healing art. It is over twenty years since he came to Canada, and during the first five years of his residence here he was engaged as an accountant in the lumber business. His first experience in the grocery trade was with Mr. John Garvey, then a retailer in Peterboro', but who has since left that town. Mr. Marshall's connection with Warren Bros. & Co. began about eleven years ago. During that time he has gone through nearly every department of that firm's business, and his present position, as manager of the sample-room, he has been filling for the last three or four years.

Mr. William Rhodes, the winner of the second prize of $10, was born at Elk Rapids, Mich., in 1870. In 1883, his father having died about ten years before, he went to live with his uncle, Mr. John Rhodes, a Brockville, Ont., grocer, whose store, three years later, he entered as a clerk. In 1892 he became a partner, the style of the firm becoming J. Rhodes & Co., and now, in the declining years of the senior partner, the responsibility of the business largely rests upon the gentleman who carried off the second prize in the recent essay contest.

Mr. R. H. Hudson, the winner of the third prize of $5, began his mercantile career in 1893 with the late W. Beatty, general merchant, Parry Sound, Ont. Mr. Hudson's duties were largely confined to the grocery department of the store, and he soon learned to take a lively interest in the goods carried in stock, as well as in the customers upon whom he waited. The result was that in three years he had become the firm's principal buyer, except for the dry goods and clothing department. The ill-health of Mrs Hudson necessitated the removal of Mr. Hudson and his family to Ashville, N.C. There he began business as dealer in teas and coffees. Large quantities of the latter being drunk in the south as well as in other parts of the United States, Mr. Hudson paid particular attention to them. He gave names to his blends of teas as well as of coffees, and his business gradually increased. The health of his wife having improved, Mr. Hudson finally returned to Canada again and took charge of the tea and coffee department of MacWilkie Bros., Yonge and Richmond streets, Toronto. In 1898 he went with Brown Bros., Queen street West, Toronto, where he still is, and where teas and coffees are still his hobby. Brown Bros., it might be noted, are famous for the exceedingly well appointed tea-room which they have in connection with their store. Mr. Hudson was last year President of the Grocery Clerks' Association and this year he is treasurer of that organization.

We give the first essay below :—

THE FIRST PRIZE ESSAY.

By C. L. Marshall (O. G. Java), Toronto

It is now generally conceded that coffee is the most intricate branch of the grocery business. A thorough knowledge of its details can only be obtained after a lifetime's experience, and even then, with new growths and types being marketed month after month, no one has ever reached the point where it can be said truthfully that there is nothing new to learn. Many a grocer has stood aghast as he has faced the immensity of the subject, and although, perhaps, a thorough master of everything else pertaining to his business, has neglected the study of coffee, and been content to let the spice or wholesale man secure all the knowledge, and incidentally nearly all the profit there is to be obtained from what should be one of the most profitable lines he handles.

That coffee can be made a profitable and extensive business is demonstrated in nearly every city and large town in Canada (as in other countries), where some particular grocer has built his reputation on selling good coffee—just a little better, perhaps, than his competitors sold.

Essentially a luxury, good coffee is, by the consumer, much more difficult to purchase than good tea. A more intimate knowledge of the latter has made it an important factor in every grocery store, whereas the former not being in as general use, has been neglected by the majority of our merchants. Convinced that by supplying a better article at a moderate price any grocer can foster the trade for and encourage the consumption of an article which in many countries far exceeds in volume the sale of tea, I will endeavour to give a few hints which may be useful to the retail grocer in buying, handling and selling of coffees.

BUYING.

The modern grocer rarely attempts to buy his coffee in the gr condition. There are good reasons for this. Grown in Ara Java, Ceylon, India, the West Indies, Mexico and in nearly all South-American Republics, with countless types and growt many of the lower grades washed, dyed, scented and soaked imitate the higher grades—numerous pitfalls await the buyer greens, and experience has taught many an ambitious mercha that it is safer and easier to buy it washed. Aside from expense incurred in the purchase of a roasting and cooli plant, the roasting itself is a high art and should not be attempted by any but a thoroughly experienced man. support of this, the experience of a large departmental store is good example. The company in question had always purchased coffee roasted from a local roaster, and thinking that a grea profit could be made by buying it green, despatched the manag of the grocery department to New York to buy what he consider in quality and quantity would meet the requirements of the sto Now, the buyer, an ex-proprietor of a grocery store and a thorough experienced man in many other respects, probably knew as mu about "green" coffee as he knew about astronomy (and that w very little), and the result was his purchase included a large p portion of soaked Santos, made to look exactly like Mocha, a other faked-up growths in imitation of Javas and Ceylons— which, besides paying to the New York dealer an extortiona profit, not being imported direct from the country of growth, a du of 10 per cent *ad valorem* had also to be paid.

That goods well bought are half sold applies very strongly to coff To buy it well you must rely on your own judgment as to wh will suit the tastes of your customers. Disabuse your mind of t idea that there are only two high-grade coffees of any merit. Ja and Mocha, for, whilst it is true that a good Mocha or a good Ja is hard to beat, it is also a fact that many Central and Sout American growths equal them in drinking quality.

Buy your coffees on sample, just as you buy your tea; grind and draw it and test it, as you would tea—above all buy it for drinking quality, not for style or appearance. Be satisfied with fair profit; do not expect to buy coffee to retail at 40c for less th 30 to 32c; those to retail at 25 and 35c. per pound at 18 or 26 27c. respectively.

Always buy coffee :

(*a*) Whole roasted (not ground)

(*b*) In air-tight cans.

(*c*) In small quantities (not over two weeks' supply if possible).

(*d*) From a reputable spice house or wholesale grocer.

Where there is any German, Dutch or foreign trade, there is demand for Rio coffees, in preference to mild growths, the consum nearly always buying them green. In making your selection these choose a green, flinty, regular bean, free from blacks a quakers. The latter can generally be detected by immersing small quantity of the coffee in cold water, when the quakers w float on the surface. Reject any that are spongy or soft or whi have the appearance of having been dyed or washed. Rio coffe in Canada are rarely consumed by English-speaking people—and f this reason, if you sell it roasted for your German trade, be caref not to mix or blend it with coffees sold to the former.

HANDLING.

Coffee may be carefully and skilfully bought at close price but not realizing how perishable it is, a serious loss is oft made by careless handling. One point in the handling of coff should always be borne in mind by those who wish to make success of the business—*viz.*, from the minute it is roasted until passes into the hands of the consumer, the less it is exposed to t air, the better. There are two reasons for this :

Firstly.—It is very absorbent and easily becomes tainted proximity to butter, cheese, coal oil, spices, etc.

Secondly.—It loses aroma and strength to a great extent evaporation.

Both reasons apply more to ground coffee than they do to t unground berry.

Bearing this in mind it is not advisable to dress windows make counter displays with loose, roasted coffee. Such a cour can only lead to rapid deterioration, and a week or two's exposu will render any coffee almost worthless.

Window displays can be made with green coffee, and ma

merchants who do not sell the raw article purchase a small quantity for this purpose, or if exposed in air-tight, light, white flint bottles and changed frequently very little loss will be incurred by using roasted goods.

Still bearing in mind the rapidity with which deterioration sets in from evaporation, the importance of not stocking too heavily in roasted coffee will be apparent. For the same reason purchase and keep your supply in air-tight cans, and refuse to accept any purchase you have made which is shipped to you in barrels, boxes, or paper parcels. Jealously guard your stock from the air, grind it only as you sell it, and to insure its reaching your customer in good condition parcel it in parchment or tinfoil bags. These cost a little more than the ordinary paper packages, but the outlay will amply be repaid by increased sales. The same diligent care should be taken in handling the cheapest as the highest grades sold. The ideal cup is made from freshly roasted and recently ground coffee. Impress this on your customers and induce them, if possible, to grind their own coffee, just as they want it for each meal. Small mills of good and lasting quality can be retailed at one dollar or less; keep a dozen or so in stock, and press the sale of them. In countries where the sale of coffee is greatest per capita, it is almost invariably ground by the consumer.

To sum up, a few of the more important things to be remembered are:—

(*a*) Expose to the air as little as possible.
(*b*) Induce your customers to do the same.
(*c*) Keep your stock fresh.
(*d*) If you sell it ground—sell it freshly ground.
(*e*) Never allow it to come in contact with other goods.
(*f*) Never grind anything but coffee in your coffee mill.

SELLING.

Your coffee well bought and skilfully handled will, to a great extent, make the selling of it an easy matter. It is however necessary to have a definite place of campaign in placing it before your customers,

Advertising.—If you have space in a newspaper, let the public know you make a leader of coffee, roasted daily, ground while they wait, etc. Emphasize the fact that you excel in this particular line and back it up with good values. Good coffee carries within itself its own best advertisement, *viz.*: aroma. Place your mill in a conspicuous position in the store; do your grinding within sight of the customer, and leave the appetizing odour arising from the process to tell its own tale—a tale more eloquent than any mere words can express.

Much good coffee is ruined by bad treatment in the making—and much has been condemned as "poor stuff" simply for this reason. To overcome defective preparation a good plan is to have one or two thousand neatly printed copies of the following formula, either on a special parchment coffee bag—or on a card which can be enclosed therein.

How to make a Cup of Coffee.

One table spoonful of coffee to each cup and one for the coffee pot. Boil ten minutes and allow time to settle. Fill the cup with three parts coffee and balance with cream or scalded milk.

There are those who will take exception to the instructions in this recipe for "boiling," but I have found that, with coffee drinkers generally, boiling is popular, for the reason that it extracts everything contained in the coffee, and although it is true that the flavour can be extracted by a mere infusion, the body of weight of liquor is not obtainable without boiling.

As a further aid to selling periodical demonstrations, preferably in cold weather, should be useful. The expense of such is not great and a small cup, perfectly made, of your best line served with cream will act as an inducement for many a new customer to buy.

THE USE OF CHICORY

In the history of the grocery business chicory has always been associated with coffee, and the judicious use of it is, without doubt, advantageous.

Many coffee consumers are much prejudiced against chicory or rather against the name, due largely to over-adulteration by grocers in the past when coffee was much higher-priced than it is at present. With low-grade coffee costing 22 to 23 cents per pound it was a great temptation, for the sake of profit, to add a too liberal proportion of chicory, so much so, that blends containing 50 or 75 per cent. were common articles of commerce. With the same low-grade coffees obtainable at 14 cents per pound and less the addition of chicory, from a profit point of view, is quite unnecessary. Chicory is now recognized as a most wholesome and harmless adulteration in coffee, and is appreciated, although unconsciously so, in blends containing 10 or 25 per cent. by a large section of the public who would consider there was something radically wrong with their beverage if the chicory were absent. At all events it is the custom of a great many grocers to add from two to four ounces to the pound, the consumer thus acquires a taste for the mixture and except in rare instances prefers the adulterated to the pure article.

Personally, I do not advocate the mixing of chicory with coffee, high grades in particular. It is true it adds body to the liquor, but it appreciably destroys the natural delicacy of flavour in a really good coffee—and in a properly balanced blend the addition of body should be unnecessary.

The chicory question has been threshed out over and over again in trade journals—much being written *pro.* and *con.*, but the wisest plan to adopt is to leave it to the individual tastes of the customers. If they prefer an admixture by all means supply it. When the sale of coffee is made endeavour, if possible, to sell two, three or four ounces of chicory in a separate parcel, to be mixed at home as required; in this way the purchaser can ascertain if he likes the addition, and if he does the proportion needed to suit his taste. Some coffee drinkers will have already decided the question and will ask for a stated quantity to be added, in which case the desired amount of chicory "nibs" can be added to the berry before grinding.

The grocer in buying should select a good, heavy-weight chicory, uniform in colour and grain, and now, that as good an article is grown in Canada as can be produced anywhere in the world, it is not necessary to purchase the more expensive English and German growths. Before making your selection carefully draw a teaspoonful in a cup of boiling water. The liquor should be sweet and faintly pungent with no disagreeable flavour, and have all the necessary body.

In conclusion, no branch of the business is more worthy of the attention of the grocer than the buying, handling, and selling of coffees. A careful study of the tastes of his customers is of the utmost importance, for be it remembered that "tastes differ" and the delicate flavour of the high-grade Java, is so delicate as not to be appreciated by the every-day coffee drinker, a coarser, harsher flavour often being preferred.

Success awaits the man who will make a leader of coffee—and in doing so supply the public with a good and fresh article at a reasonable price. Try the experiment.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *August 31st*, 1901—Ninety days' Bank rate on London opened on Monday, 26th ultimo at $10\frac{3}{8}$d. rose to $10\frac{9}{16}$d. on Wednesday and closed this evening at $10\frac{13}{32}$d.

The rising tendency of Exchange has received a set back probably due to the liquidations for the end of the month. Indeed it is somewhat surprising that the reaction was not more severe as there were known to be a good number of contracts for the 31st still running at relatively high rates.

Coffee shipments (*embarques*) during the week just closed were large, their value being £617,400 as against £595,000 for the corresponding week last year.

From the 1st July to 30th August the value of the coffee sailed was £3,457,745 and in spite of the terribly low sterling prices positively £104,736 more than for the corresponding period last year.

Extremes during the week ending August 30th were $10\frac{1}{4}$d.—$10\frac{9}{16}$d. for 90 d/s Bank paper and $10\frac{5}{16}$d.—$10\frac{11}{16}$d. for private.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

Coffee.—Entries at Rio and Santos for the week ended 30th August showed a renewed revival, being 54,246 bags over those of the previous week's and 323,736 more than for the corresponding week last year, which is accounted for by the strike on the Sorocabana Railway which stopped entries at Santos during 5 days at this period last year. The entries for the month of August amounted to 1,933,929 as against 1,319,583 last year and for the current crop to 3,308,192 as against 2,108,502 for the previous crop. Advices from the interior or to the effect that the weather has cleared and that, though a little damage has been done, it is unimportant and will not prevent the crop from being in all probability the largest on record. As regards the coming crop 1902-1903 there is little to say; in some districts a premature flowering has suffered from the rain and cold weather, but not on a scale to affect general results, as these premature flowerings are never of much importance.

Shipments (*embarques*) were also very large, being 82,776 bags over the previous week's and 128,862 more than the corresponding week's last year.

Declared sales, however, were slightly smaller than the previous week's, 195,000 as against 222,000, and 178,500 for the corresponding week last year.

Stocks grow steadily if slowly, and on the 30th August showed an increase at Rio and Santos of 29,991 bags compared with the previous week and of 398,769 compared with the same date last year.

Cost of Coffee. On the subject of the cost of production of coffee. Sr. Raul de Carvalho, a Santos *commissario*, who publishes a weekly circular called "O Café," to which we have several times referred, writes as follows:—

"No doubt on great estates like the Schmidt's and Prado's, coffee can be produced at very low figure. At São Manoel do Paraiso, the cost of production is undoubtedly lower than anywhere else, but neither one nor the other can be taken as guide of the general cost of production in this State. According to the statistics published a short time ago of the results of working from different plantations belonging to Sr. Domiciano Fagundes, with a total production of 54,874 *arrobas* in 1900 on one of the plantations, the cost worked out at 2$389, whilst the year before in was 5$212 per *arroba*, and the average in 1899 for the four plantations was 6$404."

COFFEE SEED FOR CENTRAL AFRICA.

In various places it is the fashion to urge that the importation of seeds must be prohibited, or else rendered practically impossible, because forsooth, seeds and plants—like men are subject to disease. The following remarks from the *Central African Times* go to show that the necessity for importation of coffee seed in that part of the world is deemed greater than the necessity for the exclusion of plant disease.

SEED IMPORTATION.

It has long been apparent to planters and others interested in the country agriculturally that new seed is absolutely necessary if the coffee industry is to be saved from the disastrous effects of the labour scarcity of the last two years. Moreover, the shade question has not yet been solved although various trees have been tried at the suggestion of the home authorities. Still further the need of importing seeds of new products in order to try and establish new industries has been prominently before the minds of the community during the past year and efforts have been made, with very doubtful success, to import seeds from countries not prohibited by the "Prevention of Coffee Leaf Disease Regulations." The necessity of a relaxation of the abovementioned Regulations is now admitted on all hands and we understand that the subject is engaging the attention of the Chamber Committee.

It will be remembered that the Regulations were made in the interests of the coffee planters. They have been loyally supported by the planters up till now although various modifications have been proposed and submitted to the home authorities from time to time. These proposals and modifications the Kew authorities have consistently rejected, and their advice was acquiesced in by the Chamber of Agriculture and Commerce here. We think it may truly be said that the Administration framed these Regulations with the best intentions and that they have carried them out consistently and wisely. We think it may also be said that the planters have supported the Administration throughout and that the present untoward result is due to the extreme stringency posed upon both the Administration and the planters by the authorities with, we may remark, the very best intentions. Regulations so far have been completely successful and as yet have been able to keep the leaf disease at bay. In barring importation of seed from all countries where leaf disease is kn to be, or has been, we have, however, handicapped ourselves tremendous extent as, unfortunately for a young country like o we have been unable to import seed from all those countries wh are our immediate neighbours. We have, in fact, had to face problem of importing our seed from the uttermost ends of the ea and seed is a commodity which cannot stand long carriage. example, it is practically impossible to establish cocoa here beca in ninety-nine cases out of a hundred the germinative powe the cocoa seed is lost by the time the seeds arrive in this coun from the East Indies, the Leaf Disease Regulations absolu prohibiting the importation from our nearest neighbours such Natal, Mauritius, India, or Ceylon. Most of the importations coffee seed have failed for a like reason and the shade prob might have been solved long ago if we could have adopted Indian shade trees instead of having to experiment with such tr as the Albizzia Moluccana and Grevillea which have turned practically failures. It is evident, moreover, that in barrin large country like India *in toto* a mistake has been made on side of stringency. India is not a small country and seed could imported from districts hundreds of miles away from the centre Coffee growing. We bar Natal, a small state, but we allow the importation of seed from Cape Colony, its immediate neighbo Why therefore when we bar Mysore and Coorg should we not all importation of seed from Assam or Calcutta (say) which are m further from the coffee growing states than Cape Colony is fr Natal. The result of these various considerations is that plant have the choice of two evils, either to take the risk of leaf disea or, to carry on an unequal fight under such hampering restricti as must spell failure to most. There is no quarrel with the p We have tried the policy of absolute prohibition and it has fai because we are a young country and dependent on other countr for the wherewithal to establish new industries. The conclus which has been come to therefore is that we must face the risks introducing coffee leaf disease and, for a time at least, allow importaion of economic seeds in order not only to revive coffee industry and solve the shade problem but also to enable to introduce new products with some prospect of success. must be noted however that the proposal is not to allow discriminate importation but only under special circumstan and after disinfection under specially appointed agents. this means it is hoped that the risk of leaf disease being i ported will be reduced to a minimum and after a period Regulations could again be enforced as at present. It is, howev apparent to all that this risk must be taken and we have no dou but that H. M. Commissioner, recognising the urgency of the ca will at once accede to the Chamber Committee's proposals It m be objected by some that coffee seed is now being imported Government and that we should therefore wait. The answer that after a year's delay this importation by Government has by any means been a success as only a few pounds of seed have yet been received, and further that such importations from o country do not meet the urgent circumstances of the case. Still mo they do not touch the shade problem nor do they help us to es blish new industries For ourselves we maintain that this count is as much a coffee country as India and if only we introduce n seed and also suitable shade trees, in a few years from now o export will be higher than it has ever been. At present the coff market is at its lowest. By the time the new crops are ready shipment it is safe to prophesy that prices will be rapidly on t rise and B.C.A. with its cheap labour will soon regain its lost grou

In conclusion, it may be observed that in order to justify t grave step which it is proposed we should take, the Commission will undoubtedly expect the community to be absolutely unanimo in supporting the Chamber Committee's proposals. We tru therefore that the country will heartily and loyally support t Chamber Committee in their action so that H. M. Commissioner m see that he has the support of the whole community in any acti which he may be asked to take. Never before was the need f united action so apparent as at the present time, seeing t whole future of the Protectorate depends upon the action taken this critical juncture.

THE AUGUST COFFEE MOVEMENT IN THE U. S.

Deliveries in August were again heavy, both in the United States and Europe, says the *American Grocer*. The combined movement in both countries leads last year by 298,873 bags. The total deliveries for the first two months of the present trade year lead 1900 by 216,387 bags. This shows that low prices are leading to increased consumption. The visible supply gained heavily, the amount held September 1 being 1,120,012 bags in excess of the total held August 1, and 2,065,353 bags larger than on September 1, 1900. These figures emphasize the enormous bulk of supply, especially when taken in connection with the record-breaking receipts at Rio and Santos, which in two months foot up 3,309,000 bags—a quantity about equal to the total crop in 1880. Such a fact shows the remarkable advance in the productive capacity of Brazil, which is far from reaching its possibilities.

The following statement shows the August movement and general position of the article:

	Bags.	Bags.
Stocks, August 1, 1901—		
United States	1,191,798	
Europe	4,063,991 —	5,255,789
Receipts during August—		
United States	757,957	
Europe	665,536 —	1,423,493
Total supply, September 1 ...		6,679,282
Less Stocks, September 1, 1901 —		
United States	1,471,686	
Europe	3,991,115 —	5,462,801
Deliveries, August—		
United States	478,069	
Europe	738,412 —	1,216,481
Deliveries, August, 1900 —		
United States	289,060	
Europe	628,548 —	917,608
Increase as compared with August, 1900 ...		298,873

The August deliveries in the United States consisted of 372,995 bags of Brazil; 105,074 bags of all other sorts.

The visible supply of the world, September 1,1901, was 8,654,801 bags, against 7,534,789 bags on August 1, an increase of 1,120,012 bags; visible supply on September 1, 1900, was 6,589,448 bags, or 3,065,353 bags increase in one year.

Receipts at Rio and Santos during the first two months of the crop year were 3,309,000 bags, exceeding the previous season's receipts for same time by 1,221,000 bags, and 1899 by 674,000 bags.

If the Brazil crop amounts to 14,000,000 bags—a low estimate—and the mild coffee crop to 5,000,000 bags, there will be with the visible supply July 1,1901, a total supply of nearly 26,000,000 bags of coffee to meet requirements of 15,000,000 to 16,000,000 bags, allowing for an increase in consumption. Present prices may be low but the situation is not such as to permit of manipulation for a rise, or to warrant much higher prices.

THE TEA TRADE.

The British Army requires 1,000,000 pounds of tea annually. Brig.-Gen. John P. Hawkins (retired), late Commissary-General United States Army, stated that, during the Civil War, the troops in his division travelled farther, and sustained the fatigues of the march better, when tea was served instead of other beverages.

W. A. King & Co., Detroit, Mich.:

"Tea-drinkers are rapidly dying off. America is destined to become a great coffee-drinking nation."

Mau, Sadler & Co., San Francisco:

"We decidedly think the depression in tea is due to the present duty. The imposition of the duty has been a detriment, decreasing the consumption among the poorer and medium classes. The duty has caused the importation of very much lower grades. Less fine tea is used at present than formerly. The removal of the duty would be a benefit to the cousumer, and better grades would be imported."

C. W. Antrim & Sons, Richmond, Va.:

"We consider the depressson in the tea trade due to two causes:

"*First.*—On account of the Government allowing low-class, trashy teas to be brought into this country before the duty was put on.

"*Second.*—When the duty was put on, it made the medium class of teas, that are great sellers, too high.

"Now, we think if the duty is taken off and low-class teas are prohibited, you will see quite a difference in the tea trade."

The above opinions are among many of similar import, given in reply to inquiries made by the New York *Commercial*. The facts are that the *per capita* consumption in 1901 is practically the same as in 1900, not varying over one one-hundredth of a pound. The use of tea, judged by the *per capita* record, has been lower since the imposition of the duty of 10 cents per pound. Americans are not lovers of tea as a beverage, and so because the average quality of imports has always been low—very low. Very fine tea forms a small part of the total imports. If consumers were educated to an appreciation of fine flavour, and would acquire the habit of using the beverage as a means of gratifying the palate, the tea trade would be in a more satisfactory condition. But how can we expect the inexperienced housekeeper to appreciate niceties of flavour, and pay for the same, when tea experts differ as much as 20 cents per pound in their estimate of value on a sample of fancy Formosa Oolong?

Russia has the equivalent of 185½ acres planted with tea bushes. Three million seedlings are in nursery. The plants now out are located in three estates. Mr. Popoff, who is making the experiments at Batoum, says:

"My especial duty is the manufacture of tea. There is a good factory—all iron, withering loft above with jute hessian tats it was built by Messrs. 'Sirocco' Davidson, who also supplied all the machinery *viz.*, 12 H. P. steam engine, roller, dry tea sifter and equalizer, ditto cutter and equalizer, oxidizer, downdraft sirocco, packer, machine for compressing pillules and hydraulic press for tablets, and electric machine. Also, Chinese hand sieves, pans, chulas, and winnowers. It is lighted by electricity; there is a telephone from the factory to the office, and thence to my house.

"The crop will be only some 12,000 pounds of tea this season, as I have advised husbanding a great part of the estate."

The export of brick tea from the port of Kiukiang in 1899 rose to 43,352 piculs, as against 33,831 piculs in 1898, and this might be considerably augmented if tea dust were procurable in larger quantities. It is curious to notice Ceylon tea dust figuring among the imports; this occurs for the first time this year, a small consignment having been brought in by the Ressian firms at Kiukiang by way of experiment. It is stronger and more highly flavoured than the China dust, and is to be used in the manufacture of brick tea.—*American Grocer.*

CACAO PLANTING IN COSTA RICA.

"E. A. C." writes to the *Ceylon Observer*:—

In reply to your foot-note appended to my article "Coffee in Costa Rica," I give you the benefit of what knowledge I have been able to acquire about cacao in this country. What is most surprising about it is that with such facilities as exist for its production, it should not be able to supply even the local market, which is a very small one, a few hundred quintals sufficing to supply consumption throughout the republic: one may go to several stores in the cities and villages and enquire for cacao in quite a few before he will find it, and then most likely have to pay about one colon per pound of native best, lower grades from Colombia and Ecuador selling for 60 centimos upwards. It is generally supposed that there are some millions of acres specially adapted for the cultivation of cacao in the following districts of the republic, Golfo Dula, El General, Talamanca, San Carlos, and Matina, the last-named being the only one with railroad advantages. This, however, should not be considered much of a drawback to the others on taking into account the high prices realised in the capital. The principal hindrance to the development of cacao culture on lands known to be of the best, is that unwise legislation has allowed anybody with or without intentions of cultivation to grab up enormous tracts of land wherever they chose by merely "denouncing" them according to a prescribed law: 99 out of 100 who did so, are doing nothing with the land, and are only waiting for somebody to turn up some day, and pay them a big price for it, meanwhile they are stubbornly fighting any small road-tax that is levied once or twice a year: the only lands of account that a poor man can work on are small lots of 50 hectares apiece, along the sea-coast or banks of navigable rivers known as the maritime mile, which can be taken

up and held according to what is known as squatter's right, which is indisputable to all-comers as long as it is not abandoned for over one year.

The Government is just beginning to offer some inducement to the culture of cacao by giving premiums of 30 centimes per tree on what is in production, Mrs. Arnold of Limon thereby coming in for a bonanza of some 1,000 colones on her farm in Matina: Messrs. Codleman and Heinsen, who have been planting for the past seven years in San Carlos, also received a considerable benefit from the same source. This coming season should give them splendid returns, and they are well prepared for it, having put in a great deal of drying apparatus this year, as well as a tramway to different parts of their estate.

It is to be regretted that cacao will not flourish in the most populated part of the country, the central plateau, and it is difficult to foretell when conditions will change for the better as regards the present tenure of lands. Many are looking hopefully for the opening of the Nicaragua canal, which they believe will be the means of foreign capital developing the enormous plains of San Carlos, and give a river and ocean outlet for all products. In the hands of the present owners the land can never improve.

I am indebted to Mr. Hugo Karlsen of San Carlos for the following details of a farm of 80 acres, that has been run for several years by Mr. W. Armstrong of Bluefields, Nicaragua, and hope that the same may be of interest to your readers. To abbreviate as much as possible I will summarize small items by stating that they call for:—gathering, planting, and taking care of seed; planting, cleaning, pruning, marketing of produce; tools, houses, foreman's salary, mules and equipments, boats, drying houses, stationery, etc.; values are given in American gold.

First year.—Cutting down forest, planting and cleaning once of 12,000 banana suckers, gathering and planting 10,000 rubber seeds, gathering and planting of 13,000 cacao seeds, erection of houses, etc.

		$
		2,957
Second year.—Transplanting and cleaning rubber and cacao, marketing of 15,000 bunches of bananas	... ...	1,832
Third year.—Cleaning, replanting, and marketing of bananas		1,845
4th year, cleaning, replanting, and marketing of bananas	...	1,920
5th year do do 10,000 lbs. of cacao	...	2,405
6th year do do 18,000 „ do	...	2,575
7th year do do 30,000 „ do	...	2,805
8th year do do 48,000 „ do	...	3,425
9th year do do { 60,000 „ do ; 15,000 „ rubber ; 19,200 „ do }	...	4,365
10th year do do 60,000 „ cacao	...	4,475
Total of expenses for ten years	...	$28,604

Proceeds.

			$
2nd year, by sale of	15,000	bunches of bananas at 16c. ...	2,400
3rd year do	20,000	do do ...	3,200
4th year do	20,000	do do ...	3,200
5th year do	20,000	do do ..	3,200
do	10,000	lbs. cacao at 18c. ...	1,800

do	18,000	lbs. cacao at 18c. ...	3,240
7th year do	12,000	bunches of bananas at 16c. ...	1,920
do	30,000	lbs. cacao at 18c. ...	5,400
8th year do	6,000	bunches of bananas at 16c. ..	960
do	4,800	lbs. cacao at 18c. ..	8,640
9th year do	15,000	lbs. rubber at 60c. .	9,000
do	60,000	lbs. cacao at 18c.	10,800
10th year do	19,200	lbs. rubber at 60c. ...	11,520
do	60,000	lbs. cacao at 18c. ...	10,800
Total of proceeds		...	$79,280
Total of expenses		...	$28,604
Profits		...	$50,676

I would remark that these are favourable returns all of which cannot be obtained in some parts as represented here; in the case of bananas nothing could be sold to advantage where the distance from the port or railroad is great. The Bluefields climate must always be a drawback to foreign settlement, whatever advantages it may have in the question of cheap labour; otherwise I see no reasons why similar results should not be obtained in favourable districts in this republic.

THE COST OF PRODUCTION OF COFFEE.

Apropos of the figures published in a late number of *Brazilian Review* on the cost of production at the Faze União, a correspondent from Pernambuco writes under designation of "Gold *versus* Exchange" as follows:—

	1896	1897	1898	1899	19
Arrobas per 1,000 trees ...	170	87	121	57	2
Average exchange ...	9 1/32	7 11/16	7 5/32	7 27/64	
Price per 15 kilos. ...	11s.8d	8s.	6s.	5s.4d.	6

A *reductio ad absurdum* to begin with! The table can be rea show that a low exchange causes the trees to bear less whils higher exchange causes them to bring forth more abundant This deduction is no more wide of the mark than is the asser that exchange can affect the gold price—as great a fallacy as it is the "tail that wags the dog."

The sterling price—assuming that this is based solely on sup and demand and that Stocks and Visible Supply are the pr through which the relative effect is foreseen, then we can arr at an evident reason why coffee was worth 11s. 8d. in 1896 and in 1897. In 1896 the reading of the prism was too optimistic an this year we got more for our coffee than the actual circumstar warranted. In 1897 the reading of the prism was still too optir tic at 8s., for next year still shows a decline, notwithstandin smaller crop. In 1898 the prism is still too optimistic, for n year shows a drop from 6s. to 5s. 4d. In 1899 the prism was low, for next year shows a rise from 5s. 4d. to 6s., and so we go on *ad infinitum*.

The above seems to disclose of two fallacies, *viz.*—that excha can be a factor in the fixing of the gold price—it, at most, can be a factor for accepting or rejecting the fixed gold price duri say, a month or two; the other fallacy is that of Dr. Assis Bra and of many others, *viz*, that importers and retail dealers combine to sell at fantastic rates. The import price, as we h seen, depends on the sanguine or doleful view of the prob effect of supply or demand, and the coffee market is not yet no it likely to be collared by any one Trust, so supply and dem hold the field. As for the fantastic difference between the p of coffee here and its retail price, this is naturally accounted by the actual cost of retail distribution. A corollary can easil deduced from all this, *viz.*, that speculation can have much les do with the price of coffee than is often supposed to be the case

DISTRICT ASSOCIATIONS.

SHEVAROY.

Proceedings of the Monthly Committee Meeting of Shevaroy Planters' Association, held in the Victoria Roo on Monday, 7th October, 1901, at 1 p.m. PRESENT:—H J. M. Kempff, Messrs. J. C. Large, W. I. Lechler, C. Lechler, and R. Gompertz, *Honorary Secretary*.

1. Notice calling the meeting taken as read.
2. Read a letter from Mr. Large complaining that the Tahsi had gone away on leave on days when notice had been given that treasury would be open, and that he had thereby been prever from cashing his supply Bills.—Read also the Honorary Secreta letter to the Collector, dated the 20th ultimo, reporting the ma and requesting that better arrangements might be made.

Resolved that the Collector's reply be awaited.

3. Read letter from Mr. Newton, of Willcocks & Co., offering send up 7 lbs. of Ufertas, and 20 lbs. dried blood manure experiment.

Resolved that Mr. Newton be asked to send the manure, but t he be informed that so small a quantity is insufficient for exp ments, and not likely to give very satisfactory results.

4. Read letter from Director of Land Records and Agricult N.-W. P. and Oudh, inquiring whether we would like his bulle

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant appointment of "Purveyors to Her Majesty The Queen and Emp of India" from the year 1837 until the time of her death, have had the honour of being appointed by Royal Warrant "Purveyor The King."

sent us, adding that anything of general interest is sent to the Imperial Agricultural Ledger.

Resolved that he be thanked for his kind offer, but informed that as we see the Imperial Agricultural Ledger, we do not think we need trouble him to send the bulletin contributed to it from the N.-W. P. and Oudh.

5. Read circular letter from Secretary, U. P. A. S. I., forwarding letter from Traffic Manager, S. I. Railway, drawing attention that coffee is carried much more cheaply at owner's than at Railway risk.

Resolved that the Traffic Manager be informed that planters are well aware that they can get their coffee carried more cheaply by absolving the Railway from the necessity of taking ordinary precautions to prevent theft or damage, but that this is not what they want. They desire that the rate for the carriage of coffee at the Railway Company's risk be reduced.

6. Resolved that a vote cob enksof thanveyed to Messrs. Binny & Co., for their courtesy in permitting Mr. Elder's report on the Leeming system to be published.

7. Read circular letter No. 77/01 forwarding letter from the Hon'ble Mr. Acworth proposing that each District Association should pass a vote of sympathy with the Assam planters, to be forwarded to that body through the I. T. A.

Resolved that this Association entirely agree with Mr. Acworth, and record a vote of cordial sympathy with the Assam Tea Planters, and hope that their representations to the Supreme Government may procure their speedy relief.

8. Read circular letter No. 80/01 from Secretary U. P. A. S. I., forwarding Mr. Barber's suggestion for a quasi-compulsory cess of Re.1 per ton on coffee.

Resolved that this matter stand over for consideration at the next meeting.

9. Read letter from Mr. C. G. Lechler *re* repair of part of the road to Killiur.

Resolved that the Collector's sanction be asked.

10. Read letter from Mr. Travers-Drapes asking the Association to engage a pleader to defend his maistry and coolies in a case which he says has been trumped up against them by the police.

Resolved that Mr. Drapes be informed that in the opinion of this meeting the estate concerned should give the accused such assistance as may be necessary.

The following letters were read and recorded :—

A letter from Mr. R. Buchanan, recommending a cheap manure—"Bone Char."

Circulars received from the Secretary U. P. A. S. I. during the month :—

No. 74/01. Forwarding copy of Mr. Elder's report on the Leeming system.

No. 75/01. Forwarding copy of letter from Mr. de Niceville, saying he will be glad to visit Tea and Coffee districts in South India, if Planters will assist him.

No. 76/01. Forwarding confidential letter which the I. T. A. propose submitting to Government.

No. 78/01. Forwarding letter from Mr. Hodgson to Chairman *re* Labour Bill.

No. 79/01. Forwarding letter from Planters' Association, Ceylon, saying that they have secured the right to sell Ceylon tea in the cup at the St. Petersburg Exhibition.

G. O. No. 1200, dated 7th August, 1901.

A letter from the Collector, Salem, forwarding terms on which Government will assist planters to undertake mule breeding.

The following books and papers received during the month were laid on the table :—

Planting Opinion, August 31st, September 7th, 14th, 21st and 28th, October 5th.

Brazilian Review, July 23rd and 30th, August 6th and 20th.

Proceedings of the Nilgiri Planters' Association, dated September 23rd, 1901.

of the Wynaad Planters' Association, dated September 4th, 1901.

of the I. T. A., dated August 27th, September 10th, and 24th, 1901.

Circulars from the I. T. A., No. 61, dated September 9th, 1901, No. 62, dated September 10th, 1901. No. 63, dated September 12th, 1901. No. 66, dated September 24th, 1901. No. 68, dated September 26th, 1901, and No. 1, dated September 23rd, 1901.

Agricultural Ledgers :—

No. 3. Cultivation of Pepper in the Bombay Presidency.

No. 4. Nature, value, and utilisation of Alkali Lands.

No. 5. Diseases of Sugar Cane in Bengal.

No. 6. Properties of Indian Geranium Roots.

No. 7. On the seeds of some species of Brassica and Sinapis.

Vol. II. Bulletin No. 45, Department of Land Records and Agriculture, Madras—A tea eel-worm disease in S. India.

ROBT. GOMPERTZ,
Honorary Secretary, S. P. A.

MARKET REPORT.

[*Per Mail advices of 27th September* 1901.]

COFFEE.

The London Commercial Record says:—The market continues to be somewhat sparingly supplied, and, as there has been a steady demand from the trade, prices have again been in favour of sellers, and privately business in second hands has been transacted at improved rates A large consignment of washed Santos sold with competition at rather higher prices. The general tendency for "futures" has been stronger, and though the latest prices are not quiet up to the recent highest point, they still show an advance for the week, a rise in Exchange counteracting the very heavy receipts; yesterday's business was done in December Santos at 29s 7½d to 30s, March at 30s 1½d to 30s 7½d and May at 30s 9d to 31s 1½d, closing at the lower figures.

To-day's auctions comprised—21 bags Ceylon Liberian, 797 bags East India, 280 bags Nyassaland, 3 barrels Jamaica, 256 bags Guatemala, 399 bags Colombian, 73 bags Costa Rica, 103 bags Nicaragua, 16 bags Salvador, and 57 bags Vera Paz. The auctions to-day offered only unimportant supplies and passed off slowly at steady prices.

London ...	... Santos ...	Dec. delivery	... 29s 7½d.
New York	... No. 7 Rio...	,,	... 5·20 cents.
Hamburg...	... Santos ...	,,	... 30½ pf.
Havre ...	... Santos ...	,,	... 37 francs.

Imports, Deliveries and Stock of Coffee in London are as follows :—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	16,432	17,436	39,311	30,626
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	14,956	12,248	22,444	15,624

The preceding figures exhibit—

	Tons.
In the Imports an increase this year of ..	8,685

TEA.

INDIAN.—Catalogues embraced a smaller quantity, *viz.*, 33,9 packages, contrasted with 41,300 packages during the foregoi week and 36,700 packages at this period a twelve-months since.

The above moderate amount was well within the requirements the trade, and a strong and progressive demand was appare The general quality was more useful, though really fine invoic were less frequently met with. There is not much change to no in values, but any movement has been against buyers, full ri liquoring kinds as before, continuing to be in most request. A low priced Teas above the commonest were again the turn dear and present indications for this class are favourable.

For 29,000 packages on estate account $8\frac{3}{4}$d per lb. was obtain *versus* $8\frac{7}{8}$d per lb. for 30,000 packages and $8\frac{3}{4}$d per lb. for 34,5 packages in the two former seasons.

Including what is advertised for next Monday the total submitt on importers' account in September is:—

1901.	1900.	1899.
173,000 packages	147,800 packages	175,300 package

making the total of this year's crop offered 281,000 packag compared with 294,000 packages and 341,700 packages to 3 instant in 1900 and 1899 respectively.

Telegrams from Calcutta state that 5a 2p per lb. was realis there for 20,000 packages on the 20th instant, a steady tone bei noticeable. For to-day, Friday, 20,000 packages are declared.

CEYLON.—Rather over 19,000 packages passed the hamm opposed to 20,600 packages in the previous week, and 19,3 packages a year ago

The desirable and somewhat limited selection combined further strengthen the market, and competition was spirited all grades. Ordinary descriptions were again fractionally dear while fair to good medium for the most part brought $\frac{1}{4}$d $\frac{1}{2}$d per lb. advance. Higher quotations were also often register for standout and choice lines, improvement in cup being w recognised in the bidding.

The average is 7⅞d per lb. On the 19th instant it stood at 7½d per lb., and 7d per lb. in 1900.

Totals printed for the month are :—

1901.	1900.	1899.
86,500 pkgs.	98,200 pkgs.	114,300 pkgs.
(Avge. 7⅞d per lb.)	(Avge. 6⅞d per lb.)	(Avge. 7⅞d per lb.)

Java.—About 2,600 packages of direct import were brought forward. There was an active enquiry and results were on the whole to the advantage of sellers.

September Public Sales aggregated :—

1901.	1900.	1899.
5,400 pkgs.	2,700 pkgs.	3,700 pkgs.
(Avge. 6½d per lb.)	(Avge. 6½d per lb.)	(Avge. 7d per lb.)

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.* :—

From 1st to 24th September, 1901 ...	...	13,323,904 lbs.
Do. do. 1900 ...	...	12,773,736 ,,

During the week the following have been printed for sale by public auction :—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	30,307	3,553	33,860
Ceylon	17,777	1,285	19,062
Java	2,553	80	2,633
Total ...	50,637	4,918	55,555

Also 424 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated September 27th, 1901, says :—

Quantity brought to Auction in London from 1st June to date.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	319,731	418,868	24,088
1900-1901	315,980	452,779	15,773

34,585 *pkgs.* Indian
19,551 ,, Ceylon
2,671 ,, Java
} Total 56,807 packages were offered in public auction this week.

The Indian Tea Association has published figures which show that the quantity of Indian Tea manufactured to mid-August was below that made to the same date last season, and estimating the total crop at about three million pounds under last season's outturn.

Mr. J. E. O'Conor, C.I.E., in his "Review of the Trade of India," commenting upon the over-production and consequent low prices during last season, remarks :—

"While reduced prices were the consequence of over-production, they also became the cause of the continuance of over-production, for, to compensate for the fall in prices, as much leaf as possible was taken from the plant, and the quantity was increased at the cost of the quality. This operation again, by lowering the quality, had the effect of maintaining and accentuating the fall in prices." "When prices fell because tea was produced in excess, the fall induced directors to endeavour, by further increasing production, to continue dividends to shareholders, and this endeavour to increase quantity was inevitably attended by a reduction in quality *the combination of the two bringing about a further fall in prices.*"

The above remarks are very pertinent, and well merit the serious attention of producers.

Indian.—With rather smaller auctions and a revival of trade in the provinces, the market was again strong, the better demand noticed last week being more pronounced, resulting in a very steady market for all descriptions. Common whole leaf Teas were, if anything, slightly dearer. Averages :—Amal. T Co.'s gardens "Dooteriah" and "Lattakoojan," 1/2¼; "Teesta Valley T Co.," 1/2¼; "Balijan T Co.," 1/1½; "Ass. Co.," 1/1¼.

Week's average of New Season's Tea sold on Garden Account, 1901, 28,951 pkgs., av. 8·62d. 1900, 30,347 pkgs., av. 8·75d.

New Season's Tea sold on Garden Account 1st June to date, 1901, 217,353 pkgs., av. 8·45d. 1900, 250,287 pkgs., av. 8·20d.

Ceylon.—With a comparatively light auction and a continuance of the improved quality competition was strong, and prices showed an advance varying from ¼d. to ½d. per lb., in which all descriptions participated. Averages:—"Drayton Ests. Co.," 1/-; "Nuwara Eliya Co. Concordia," 11¼d.; and "Talawakelle T Co., 11d.

Average for week 7·83d., against 6·97d. same week, 1900.

Ceylon Tea sold on Garden Account 1st Jan. to date, 890,366 pkgs., av. 6·65d. 1900, 953,369 pkgs., av. 7·17d.

Java.—The firm tone noticed above was equally pronounced in Java Teas, all grades showing a hardening tendency with improved prices. 120 packages "Tanawattee" averaged 9¾d. per lb., and 108 "Golapara" 9¾d.

COCOA.

An extremely slow tone prevailed at the auctions on Tuesday, when 2,225 bags were offered. Prices, however, did not alter materially, although only 575 bags sold. Of 359 bags Trinidad catalogued, 165 bags sold—very fine red 73s 6d, good to fine 70s to 71s, and fair 69s, or about the values ruling at the previous auctions. 12 bags Jamaica partly sold at 62s for good, while 5 bags Honduras realised 65s 6d. Of 850 bags Guayaquil offered only 40 bags sold—greyish red Caraquez 66s. 17 bags Seychelles partly found buyers at 61s. 118 bags common African sold at 58s to 59s 6d. Of 478 bags Ceylon 235 bags were disposed of at steady rates—60s to 65s 6d for brownish to fair red, and 40s 6d to 43 6d for small. 19 bags St. Lucia, 360 bags Haiti, and 3 bags Maracaibo passed the hammer unsold. Privately not much business done, the sales reported including 200 bags Trinidad at 66s to 70s, 300 bags Haiti at 53s to 53s 6d. 200 bags Ceylon and 1,000 bags Guayaquil, Caraquez at 66s, Arriba at 71s 6d to 78s.

PEPPER.

Black.—The market is firm, and with more demand fully 150 tons have changed hands, including fair Singapore on the spot at 6d to 6 1/16d, August-October shipment at 6⅛d, September-November, at 6⅛d to 6 3/16d, and November-January at 6¼d.

At auction on Wednesday 13 bags Singapore, 24 bags Penang, 200 bags Trang, and 200 bags Wynaad were all bought in.

White is firm. Singapore October-December shipment has been sold at 9¼d to 9 5/16d, and Penang December February at 8⅞d. About 120 tons sold.

At public sale on the 26th instant 109 bags Singapore were bought in at 9½d to 9¾d per lb.

Pepper firm to-day. Of White 20 tons Singapore October-December shipment sold at 9 11/32d.

GINGER.

Cochin.—The market continues very firm, but transactions are limited. Of 207 cases 92 bags offered only 3 cases bold and medium dullish cut and scraped sold at 85s per cwt. Privately medium and small washed rough has been sold at 39s 6d to 40s, being a little dearer.

No *Jamaica* catalogued.

CINCHONA.

At auction on Tuesday, the small supply of 1,828 packages was offered, of which the bulk sold, with good competition, at an average unit of 1⅜d, against 1½d at the last London sale, or a slight advance on the Amsterdam unit. A large supply of Bolivian cultivated Calisaya cinchona was offered, and met a good demand.

The following table shows the amount of bark offered and sold :—

	Packages offered.	Packages sold.
Bolivian cultivated Calisaya ...	979	979
East Indian	343	268
Java	236	191

West Coast African	44	44
	1,828	1,628

The following were the approximate quantities of bark purchased by the principal buyers :—

	Lbs.
Brunswick factory	59,143
The American and Italian factories	52,934
The Mannheim and Amsterdam factories	40,265
The Paris factory	15,412
The Frankfort and Stuttgart factories	11,024
Messrs. Howards & Sons	3,900
The Imperial factory...	1,500
Druggists, etc.	13,214
Total quantity sold ...	196,392
Bought in or withdrawn ...	27,194
Total quantity offered ...	223,586

The following prices were paid:—

West Coast African.—Broken quill, 5⅞d to 6d per lb.

South American.—Bolivian cultivated Calisaya, flat, 1s 3d to 1s 3½d per lb.; quill, part broken, 5d to 7¾d; rich, 8¼d. Cartagena small soft, 1⅝d per lb.

Ceylon.—Officinalis, chips and shavings, 2½d to 3½d per lb. Red stem, renewed, 3⅝y to 4⅝a; chips and shavings, 2⅛d to 4d; broken quill and chips, 2⅞d to 4¼d; and root, 4d to 5d per lb.

East Indian.—Ledgeriana, renewed, 4½d to 7½d; root, 5¾d; and quill, 7⅛d. Brown, renewed, 4½d to 6⅛d; chips and shavings, 2¼d to 5⅞d; branch, ¾d to 3¼d. Red, renewed, 4⅛d; chips and shavings, 2¼d to 3⅞d; and root 1½d to 2⅛d per lb.

Java.—Ledgeriana branch, 4¾d to 6¾d; stem-chips, 7d to 10¾d. Succirubra root, 3½d to 5d per lb.

To the Amsterdam auctions, to be held on October 3, 1,912 bales (170,807 kilos.) have been added, so that the total amount to be offered amounts to 6,155 bales and 307 cases, totalling 577,375 kilos The stock in first hands at Amsterdam on September 18 consisted of 2,348 packages Government and 8,528 packages private bark, including the quantity to be offered at the above auctions. In the drug-auction, 3 bales of thin flat Calisaya bark, partly damaged, sold readily at 1s 2½d per lb.

QUININE.

The market has not changed much this week, and although firm at [illegible], it closes rather quiet with buyers of B and S and or Brunswick at 1s 1⅛d, and sellers at 1s 1¼d for December delivery and October delivery quoted.

Vanilloes.—The large supplies offered at last week's auct took the whole of Friday and part of Saturday to be disposed and, with a fair competition, the greater part of the quan brought under the hammer was sold at an average decline of 4 5s, the cause of this having been that further shipments are pected shortly, and that the quality of the *Seychelles* vanilla mostly in bad keeping condition. Of 1,533 tins offered, ab 1,450 sold, as to quality, as follows: *Seychelles*, 7½ to 8 inches at 6d to 24s, 6½ to 7 inches at 12s 6d to 17s, 5½ to 7 inches at 8s 3 10s 6d, 5 to 6 inches at 8s 6d to 13s 6d, 5 to 5½ inches at 6s 9d t 3d, 4 to 5 inches at 7s 6d to 12s 6d, 3½ to 5 inches at 5s 3d to 8s 2½ to 4 inches at 7s 6d to 11s 6d, common and mouldy 2½ to 7 2½ to 6 inches at 2s to 6s 6d. *Madagascar* common at 8s to 9s, *Bourbon* fair 7½ to 8 inches at 18s 6d, and common, 3½ to 6½ inc at 9s. *Mauritius*, 7 to 7½ inches at 11s 6d, and 4 to 6½ inches a to 9s 6d.

CARDAMOMS.

Offered, 222 packages. Sold, 170. The quantity offered about half what it was a fortnight ago, and the lots sold to- fetched steady prices at a fair competition. *Mysore*, bold p fetched 4s 4d, good fair bold 3s 1d to 3s 2d, medium bold pa 2s 7d to 2s 9d, medium pale 2s 1d to 2s 4d, medium palish 10d to 2s, small medium pale 1s 7d to 1s 9d, small 1s 5d to 1s splits 1s 4d to 1s 5d, and seeds 2s 3d to 2s 4d. Good *Mala* bought in at 2s.

(Average for all India 8·86d., September 27th.)

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line-advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 1st proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *October 22nd.*—*Weather*—Wind from N.-E. and heavy showers alternating with bright sun. Temperature in shade ranges 60° to 80°. The heavy showers of the North-East cause a good deal of wash. *Crop*—ripening up rapidly. *Coffee*—very healthy, little or no leaf disease. *Health*—Good. *Labour*—Abundant. *Interesting item*—A small gymkhana is to be held at Saklaspur this week.

Coorg. Polli Betta, *23rd October.*—*Weather*—Occasional heavy North-Easters. Coffee looking very fine. In the western parts heavy pickings are being taken in, some estates taking in over 100 bushels per day. On the eastern side crop has not well begun yet. *Labour*—Plentiful. *General Health*—Fair.

MARKETS FOR INDIAN COFFEE.

Indian coffee-planters are fully alive to the desirability of lightening the quantity of coffee they place on the London market with a view to increasing prices. Needless to say, the course referred to can only have the anticipated result if the high standard of quality is maintained. *Apropos* of this subject, we would refer to the recent prize-essays quoted from a Canadian paper. Many of our readers may have wondered why we have devoted so much space to these. Well, in the first place, we think that the producer can derive nothing but advantage from acquaintance with the methods of the retailer; more especially, just at the time when the former is studying how to stimulate consumption. Moreover, there is one peculiar feature about these essays that can scarcely have escaped the notice of observant readers. Among the various descriptions of coffee specially recommended the essay-

ists, generally speaking, do not include *Indian*. They do include the Ceylon berry, which is almost out of the market. In other words, the reputation of Ceylon plantation coffee has survived its ancient glory—we might almost say, has survived the coffee itself—in such a distant market as Canada. Indian coffee has still to win a reputation there. If this fact does not put Indian planters upon their mettle, we know not what will. Canada is but one important market, among a goodly number, to which the above remark applies.

Our present aim is, however, to deal more particularly with the potentialities of the Indian market, rather than to discuss the chances for Indian coffee in foreign consuming centres. We cannot but think that the first duty of the planter is to cultivate to the uttermost the market that is at his door. He is striving now to do this ; but for years he neglected it, and one result has been that while Indian coffee has been fetching unsatisfactory prices in Europe, Brazilian and other coffees have been selling in India. On another page we give figures showing the extent to which this trade has been carried on. For these figures we are indebted to the Director-General of Statistics, who kindly furnished them at the request of the Secretary of the U. P. A. S. I. Roughly, they may be said to show that against every 10 tons of coffee that India has exported during the last 20 years she has imported 1 ton of foreign coffee. In other words, she may be said to have only supplied 90 per cent. of the demand for coffee within India itself. Yet the chief importing centre has been Bombay, which lies conveniently near some of the chief coffee planting districts of India. Burma, which grows a little coffee, has imported a fair quantity. Even Madras has at times drawn freely from foreign sources, and Bengal has been a steady, if small, importer for many years. During the last twenty years India has imported no less than 18,822 tons of foreign coffee. Every iota of the demand that this represents ought to have been met by Indian coffee. True, during the same period she has *exported* 630 tons of foreign coffee, but we need scarcely remark that this demand also should have been met from Indian estates. If it pays to export foreign coffee to East Africa, Arabia, Persia, and Mauritius (the chief centres to which the above coffee was sent) surely it should be possible for India to cut in against foreign rivals and secure a virtual monopoly of these markets.

Now, let us see whence comes this competition that India has had to face. Mainly from the Straits Settlements. Does this mean that Borneo, Sumatra, and Java coffees have been extensively placed on the Indian market? It looks like it. Large supplies have also come in from Austria-Hungary. This may be Brazilian. Some has come from Aden, some from Ceylon. The figures we give admit of only haphazard inferences, but we judge that a certain small quantity of fine coffees is imported into India to meet a special inquiry for such descriptions as Mocha, and that a larger quantity of very inferior stuff comes in—perhaps at low figures—which is probably passed off as Indian even in Indian bazaars and shops. To what extent raw coffee is imported, and how much of the importations are tinned, we cannot say ; but it is justifiable to assume that both the raw berry and the tinned powder are included. Planters must, therefore, prepare themselves to supply tinned coffee as well as the raw berry. They must show themselves capable of supplying all the coffee that is wanted, in whatever form it is required. They have the very finest quality available, they have also plenty of poor stuff to spare. Why, then, should they not succeed in meeting the whole Indian demand? We do not wish disparage the efforts that have been and are being mad attain this object ; but we invite those who are speci interested in these efforts to study the statistics we give, note how little impression they have yet made upon competition referred to. The fact that there is still su wide field before them should prove an incentive to f effort, to further outlay of capital, to redoubled enterpr and the information we place at their disposal should indi whence the chief rivalry comes, and to which markets—s Indian—special attention should be given with a vie replacing foreign coffee by Indian.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S

The Proposed Coffee Cess.

The following circular, dated Yercaud, 18th October, 19 from the Chairman has been forwarded to the various Co cillors of the U. P. A. S. I., who include the Honorary Se taries of all District Associations interested in coffee :—

GENTLEMEN,—At the late Conference, I proposed that we sh ask Government to impose a compulsory cess on coffee, and proceeds handed over to the U. P. A. S. I., to enable us to ad tise, and to push its sale. Though the meeting, for various reas objected to this proposal, the delegates were absolutely unanim in thinking that *something* should be done at once; aud w generally, in favour of inviting voluntary subscriptions for purpose. The question then arose how these subscriptions sh be utilized. As the funds already at the disposal of the U. P. A. were sufficient to subsidize the Paris shop, it was resolved tha the United Coffee Growers' Co. would consent to print, on t labels, the amount of chicory in their mixtures, the money shoul invested in shares of that Company, to enable it to extend its op tions. It has already been fairly successful; and it would undo edly do much better, if it had a little more capital at its comm

2. Since then a scheme has been formulated by Mr. Barber raising a quasi-compulsory subscription from planters, to be coll ed (and doubled) by the curers. His scheme appears to me excellent one (if accepted by a sufficient majority), to which two objections occur to me. The first is that some of the cu might refuse to join, which would enable the inevitable mino to avoid the tax ; and the second is that the small native own who would benefit as much, in proportion, as larger propriet but who do not cure their coffee, would altogether escape. B perfect scheme is impossible ; and I think that these trifling dr backs may well be disregarded.

3. I see no reason why the two ideas should not be worked gether. That is to say, why Mr. Barber's scheme should no adopted, and the money collected under it invested in shares of United Coffee Growers' Co. These shares are, I believe, Rs each. The curers therefore would have to take the shares (in th own names?), and to keep an account of the proportion belong to each of their constituents. For instance, if a man sent then tons to cure, he would receive a letter, or certificate, from the cu that he owned $\frac{7}{10}$ of a share, and would get his dividends in portion. I believe the shares are not yet fully paid up, which mi make it a little complicated ; but that is a detail which could ea be arranged, and which need not trouble us at present.

4. Several men, willing to subscribe voluntarily, have hithe refrained, because they have no definite information as to w will be done with their money. They say that, if their subsc tions are handed over to the U. P A. S. I., there is no organizat suitable for employing them to the best advantage, and that that they would eventually be lost sight of, and absorbe the general Funds of the Association, which is not what t desire. Others have told me that they consider the probabilit a direct return for their money too shadowy and undefined other words, they want a good investment.

5 The above scheme meets both of these objections. The United Coffee Growers' Co. has an organization already—capable of indefinite extension; and, as it is a Company which supplies a very decided and growing demand, it is likely to be a good investment, and to yield good dividends in future, besides the indirect advantages to planters from its advertising, and pushing the sale of, Indian grown-coffee, for which purpose it was originally started. At present, on account of the smallness of its capital, its operations, I believe, are confined to India; but, as more shares are taken up, they will doubtless be extended to the principal markets of the world.

6. The United Coffee Growers' Co. say that they would be delighted if a law were passed compelling all dealers to print on their labels the proportion of chicory they mix with their coffee; but that, until *all* are obliged to, it would be handicapping them too severely to insist on their *doing* it. They say that they already state, on their labels, that their mixtures do contain some chicory, which is more than other dealers do, and that the proportion they use is less than others use. Moreover the Secretary assures me that many of their customers are giving up the mixtures in favour of pure coffee They are doing good work, and there is certainly some sense and truth in these arguments; and though I—personally—still think that, at any temporary sacrifice, the percentage of chicory ought to be stated, I am convinced that unanimity is of the first importance, and am prepared to waive my own opinion for the general good.

7. As long as human nature is what it is, there must be many planters who think that if they were only placed in irresponsible charge of the United Coffee Growers' Co., they could do infinitely better than the present staff. May be they could; but that is obviously impossible, and it is scarcely the point at issue. The question is, has any scheme been put before us which would command so large a measure of support as the adaptation of Messrs. Hodgson and Barber's ideas, suggested in para 3—and I unhesitatingly answer No. Is it then better to adopt this—*faute de mieux*—or to sit still and do nothing? And, if the working of the United Coffee Growers' Co. could be improved, the remedy is obvious. Let those who think so take so many shares that they and their friends may make their voices heard, and to *compel* the Company to amend its ways. There really is no other method. Mere talking will never do it.

8. Without unanimity we can do nothing. If a number of men are hauling on a rope, it is clear that they must not only pull in the same direction, but that they must pull *together*, or their efforts will be vain. And that they may be able to pull together, some one must give the word. As you have made me your Chairman for the year, I take upon myself to give it. So now gentlemen, all together, for Mr. Barber's scheme and the United Coffee Growers' Co. !

9. I request that all Honorary Secretaries, will be kind enough to call a special General Meeting of their Associations, with the least possible delay and to put the subjoined motion to the vote, immediately reporting the result to the Secretary, U. P A. S. I.; also that, in reporting it, you will be so good as to state how many voted for, and how many against it. As the meetings will be held in so many different places, it is clear that amendments would be out of place, and would make it more difficult to ascertain the wishes of the majority; and that, therefore, the motion must be accepted—or rejected—as it stands. But if any are generally—in favor of the scheme, but would prefer it slightly modified, I earnestly hope they will vote for it *now*:—as immediate action is supremely necessary lest this season's subscriptions should be lost. I would beg them to leave the proposed modifications to be made hereafter, or discussed at the next Conference in August, 1902.

I am, Gentlemen,
Yours faithfully,
(Signed) Robt. Gompertz,
Chairman, U. P. A. S. I. (*Incd.*).

Proposed Motion.

That the scheme suggested in para. 3 of the Chairman's letter of the 18th October be adopted; and that, if carried by a majority of at least ⅔ of all the coffee-planters who vote on it, in all the District Associations, the Chairman be authorized to take immediate steps to carry it out as far as may be possible, with reference to the present season's crop, desiring curers to exempt those who inform him that they have already subscribed, since the last Conference, to the extent of their voluntary subscriptions.

(Signed) Robt Gompertz,
Chairman, U. P. A. S. I.

P.S.—Since writing the above, Secretary's Circular 86/01 of the 18th instant has come in. I always thought that to ask the curers to pay as much towards the Fund as the planters, would lead to the refusal of some of them to join—though that is not the only reason adduced by Mr. Stanes—but have hitherto refrained from saying so. I now propose that we should ask them to contribute only four annas per ton, for the following reasons:—(1) Though the curers would benefit, to a certain extent, by advertising Indian coffee, and by pushing its sale, it cannot be contended that they would benefit as much as producers would. (2) Even at present prices, most planters make a larger profit *per ton*, than the curers do; and if the price goes up as high as it was some 5 years ago, the difference would be very much greater. (3) They would have a good deal of trouble, and some little expenses, in keeping the accounts which would be necessary under the scheme (4) Last, not least, it is absolutely essential that a large majority of the curers should willingly join us; and it would therefore be very unwise to disgust them by asking for too much. For these reasons I think Mr. Barber's excellent scheme would stand a better chance of being carried out, if we asked the curers for only four annas a ton, at least in the first instance. In laying my proposal before your Associations, therefore, and asking them to vote for, or against it, I beg you will do me the favour to explain that the scheme suggested in para. 3 of my letter, should be understood to be modified, in the motion, and to the extent of asking the curers to subscribe four annas per ton, instead of one rupee.

(Signed) Robt. Gompertz,
Chairman, U. P. A. S. I.

THE COFFEE MARKET.

Java Coffee has been commanding good prices of Amsterdam of late, and is described as "a fancy article, owing to scarcity and strong liquor." During last month the Amsterdam market was generally in favour of sellers, and Santos varieties commanded a small advance on August figures. Messrs. G. Duuring and Zoon report that present low values in face of higher exchange are now meeting with more interest, and that sentiment is decidedly in favour of the article, looking more towards the probability of a coming reduced crop their to present excessive receipts. Thus far receipts from Brazil, have been 1,857,000 bags more than last year; but there are reports of drought and damage. There are also joyous advices, however, from Rio de Janeiro and Minas Geraes of the flowering of the coffee, and though these States are less important than Sao Paulo, it is well not to be too sanguine. At the end of September European stocks were 4,700 tons less but the visible supply shows another increase of 52,500 tons. In spite of this London advices confirm Dutch reports. The price of coffee is steadily advancing, for terminal as well as actual. The *London Commercial Record* reports that spot lots are enjoying exceptionally good support, and particularly fine colour East Indians are in strong request, the value of which have risen no less than about 15s. per cwt. during the last few weeks and as for terminal coffees, figures and position appear to count for nothing, for bulls have gradually succeeded in driving prices up about 3s. per cwt. within a very short space of time. Circumstances, of course, have favoured them. A rise in the exchange was a very opportune event; an improved demand in America also helped to harden prices; and last, but not least, the reported outbreak of plague in Brazil afforded to the bull operators an exceptional handle to raise the market. "In the opinion most people," says our contemporary, "the rumour of appearance of plague has been greatly exaggerated, and so people even go so far as to assert that the report was a m invention. Whatever the merits of the rumour may be, we must agree that bulls have made the most of it, and bea have allowed themselves to be frightened." This is not t first time the game has been tried.

Reverting to Java coffee for a moment, we may say th according to the Colonial budget there will be sold for Go ernment account during 1902.

95,000 bags Java	in Holland	estimate	30 cents
100, 00 ,,	,, at Batavia	,,	£32 per cw
42,000 ,,	,, Padang at Patang	,,	£55 per cw
900 ,,	,, broken ,,	,,	£18 per cw

The statistical position of coffee is referred to in some figu published on another page.

* It is understood that the bulk of this tea consists of transhipments for the United States and Canada.

NOTES.

Ceylon Tea Company. The Ceylon Tea Plantations C Ld., pay an interim dividend of 7 the Balmoral (Ceylon) Estates Co. an interim dividend of 5

Regulation of Tea Sales. A special cablegram dated 16 instant to the *Times of Ceylon* sta that Indian tea merchants have resumed regulating t weekly offering, of tea in London

Mosquito Blight. The Terai Planters' Associati having reported a severe outbreak mosquito blight in their gardens, Mr. Mann, the Scienti officer of the Tea Association, has been sent to advise regar ing mitigating measures.

Labour Recruiting Difficulties in Assam. Difficulties are arising this seas in recruiting coolies for Assam und the new regulations. No wond when the Chief Commissioner spreads far and wide su sentiments as those to which he has lately given expressio

Exhibitions of Coffee. It is proposed to start permane exhibitions of Brazilian coffee at t different Brazilian Consulates in Europe and elsewhere. T hint should be taken by India; but it is to be hoped so usef a propaganda will not stop there, but that visitors will supplied with a cup of coffee ground and made whilst th wait, and for the first time in their lives, perhaps, discov what real coffee is like.

Indian Tea in Canada. Toronto advices dated 19th ulti in the *Canadian Grocer* state :—T feature of the tea market is a firmer tone in Indian a Ceylon descriptions. Mail advices from London, under da of September 6, state that the previous Wednesday's auctio of Indian teas passed at fairly steady rates, and that t market was strong, with prices hardening, especially f the better-liquoring kinds in Ceylon teas.

The Indian Tea Crop. The General Committee of t Indian Tea Association intimate th the following telegrams have been received from the Kang Valley Planters' Association and the Dehra Dun Tea Planter Association :—"Comparative returns 30th September twel largest gardens give reliable information, last year bla

1,690 lbs.; green 157,452 lbs. This year black 581,387 .; green 167,272 lbs." "Dehra Dun tea crop to the 30th ptember, 1901, 1,560,000 lbs. Same date last year 390,000 lbs."

ylon Green Teas.

A correspondent of the *Ceylon Observer* asserts that 30 cents a lb. erage will be necessary to induce offerings of Ceylon teas, ese to include 15 per cent. of dust and fannings. He remarks: It costs a good deal more to manufacture green teas than acks, and outturn per 100 lbs. leaf is 22 or 23 per cent.; erefore *unlike blacks and very much so.* I have given up een tea manufacture and will have none of it with 10 cents for dust and fannings, against 28 cents for dust and inings black. Any man would be either drunk or insane manufacture green teas under these circumstances.

dian Green Teas.

The Indian Tea Association, Calcutta, has received the following egrams from the Kangra Valley Planters' Association and e Dehra Dun Tea Planters' Association.

From the Kangra Valley Planters' Association.

"Comparative returns 30th September twelve largest gardens give reliable information, last year black 601,690 lbs.; green 157,452 lbs. This year black 581,387 lbs.; green 167,272 lbs."

From the Dehra Dun Tea Planters' Association.

"Dehra Dun tea crop to 30th September, 1901, 1,560,000 lbs. Same date last year 1,390,000 lbs."

va Cinchona.

The N. V. Nederl. Veem. reports that the shipments from Java to urope during September have been as follows (in Amsterm lbs.):—

1901	1,200,000	1896	1,389,000
1900	1,366,000	1895	816,000
1899	1,232,000	1894	1,071,000
1898	790,000	1893	500,000
1897	1,051,000		

tal shipments January-September—

1901	8,724,000	1896	7,418,000
1900	7,090,000	1895	5,829,700
1899	8,462,800	1894	6,625,000
1898	7,926,000	1893	5,876,000
1897	5,982,000		

cline of 73 per cent. in Indian Tea Exports to Canada.

Tea exports from India to Canada direct, so far this season, were only 300,428 lbs., as against 1,145,752 lbs. last year. This means a decrease of per cent. The chief cause is undoubtedly the determition on the part of the shippers to curtail the quantity of tea nsigned to the Canadian market. As everyone in the trade nows, says the *Canadian Grocer*, shippers have been congning to this market quantities of low-grade tea which ere out of all proportion to its consumptive requirements. his led to teas not only being sold at a sacrifice, but being metimes sold to people who were unable to pay for them. ne result of the losses which have been sustained through lling to irresponsible people is the fact that the banks in dia now demand on drafts on Canadian account 25 per cent. their value before they will issue them.

e Amsterdam Cinchona Auctions.

Cabling on 3rd instant, the correspondent of the *Chemist & Druggist* said:—At the auctions of cinchona bark held here to-day 6,462 packages were offered, containing 577.375 kilos. of cinchona. This entire quantity was disposed of at an average unit of 8·25c. per half kilo., against 7·60 cents per half kilo. paid at the auction on August 29. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 10,738 kilos.; the Brunswick factory, 3,233 kilos.; the Mannheim and Amsterdam factories, 5,306 kilos.; the Frankfort-on-Main and Stuttgart factories, 3,775 kilos.; and various buyers, 5,919 kilos. The prices paid for the manufacturing bark ranged from 6½c. to 9 3/4c. per half kilo., and druggist's bark from 13c. to 76½c.

Charges on Coffee at New York.

According to the Brazilian Consul at New York, the charges for delivery and discharge of coffee at that port are as follows:—

Despatch and Entry dues at the Customs, invoices of 100 to 10,000 bags	$1 50
Freight from Rio or Santos per bag	25 to 05 cents.
Fire insurance	⅜ ,,
Cleaning	15 ,,
Sampling	1 ,,
Storage per month	4 ,,
Weighing per 100 lbs.	2½ ,,
Shovelling per bag	5 ,,
Brokerage 1½% per bag, or	10 ,,
Commission	1 to ½%
Sale for Cash	2%

The Consul does not recommended planters to consign their coffee, as, owing to speculation and the large stocks, prices are often positively lower in New York than at Rio de Janeiro.

Coffee in London.

At this season rumours as to the next Brazil crop are generally about, says the *Produce Markets' Review* of 28th ultimo, but are often of a most conflicting nature and quite unreliable. To some extent, however, they influence prices, particularly in the terminal market, and being further helped by a rise in the exchange, quotations advanced about 6d in face of receipts in Santos, which have reached the enormous total of over 70,000 bags in one day. Following the two largest crops on record, it is quite likely that the next will show a decided reduction, but even then will very possibly total 9,000,000 bags, a quantity which is generally considered as now requisite to meet the increased consumption. The demand for mild coffees has continued good, and with little selection offering prices are well maintained and in some instances dearer. A good trade has been done privately in East India, and as reports of the new crop all state that it will be the smallest on record, holders have been able to obtain a considerable advance over the prices of last month.

Indian Tea in London.

The market is stronger, says the *Produce Markets' Review* of 28th ultimo, and prices for all grades have advanced, closing with a good inquiry at the improvement. The common teas show the most important change in values, having risen from ¼d to ½d, the reason given for this being the reported shortage of the season's available supply. Some gardens have no doubt produced an increased percentage of the finer teas this season, but the districts where the larger proportion of the

lower qualities is usually grown have so far not restricted the output in favour of finer plucking. To initiate, therefore, an important advance in prices at this early period does not appear sound policy. notwithstanding that the estimate of the crop is put down at from 5,000,000 lbs. to 6,000,000 lbs. less than last year. At the public sales 34,035 packages were catalogued and the small proportion of 3,702 withdrawn. The demand was generally active with an upward movement in prices, particularly for the lower and medium kinds, which are at the moment not too liberally offered. For the finer descriptions there was active bidding, but, as the quantity brought forward was equal to the larger inquiry, prices were steady but firm.

Java Tea Tabloids.

The *Straits Times* remarks :—Tea-planters in Java complain bitterly of low prices, like their fellows in India and Ceylon. Yet so it is urged they have only to bestow a little extra care in preparing leaf for the market to realise higher prices. The Sukamaju estate in the Preanger provinces has just proved this. At Amsterdam the other day flowery Pekoe leaf from that estate fetched at auction 403 guilder cents per half-kilogramme—a price never before given for any kind of Java tea. The brokers had nothing but praise for the leaf in question and forecast that news of the success thus achieved by the estate will make more widely known the name of Java as a tea-producing land. Attention has been drawn there to the advantages of selling tea in tabloid or compressed form of a size just enough for the brewing of one cup. This, it is pointed out, will be of great advantage to travellers and wayfarers. They could carry about with them a refreshing drink, within a small compass and weighing but a trifle. On the Sinagar tea estate, such tabloids or packets of compressed tea have been prepared for the market. What is required for one cup of tea can be stowed away so to speak in a thimble. This new way of packing tea is expected to be highly advantageous to the army commissariat department.

Vanilla Planting in Seychelles.

The *Board of Trade Journal* for the week ending October 3rd reports that in the recently-issued report of the Administrator of the Seychelles group it is stated that although in 1900 the amount of vanilla exported was 17,569 kilogs., it is possible that the actual crop of that year did not exceed 12,000 kilogs., some of the vanilla of 1899 being included in the shipments of 1900. The vanilla crop for the current year promised at the end of last year to be an exceptionally fine one, and, notwithstanding losses owing to continued rain, the output for 1901 will probably be the largest on record. The preparation of vanilla has much improved of late years. Nearly all vanilla is cured in well constructed drying rooms, heated with hot air, instead of being left to dry in the sun. Large preparers of vanilla are now building houses of two storeys in which the whole process of preparation, from steaming the green pods to packing the prepared vanilla, is carried out. In 1900 prepared vanilla, sold at Rs.12 to Rs.20 per lb. In the Blue Book report for 1899 hints were given as to vanilla cultivation, and anyone who may think of embarking on vanilla planting in Seychelles may be referred to those remarks, and also to an excellent treatise on the subject by Mr. S. J. Galbraith, who was for some years one of the most experienced and successful planters in Seychelles. This treatise has been publi by the Department of Agriculture (Division of Botan the United States of America.

An Entomologist wanted.

Indian Gardening and Pla remarks :—"The planting intere the country are growing every year, and the planting munity is increasing correspondingly. That they recognise the value of entomological help may be gath from the fact that the planters of the Wynaad, Sout India, have invited the Entomologist to the Indian Mus Calcutta, to visit their district next January, they u taking to make all the necessary arrangements for his The Assam, Cachar, Sylhet, Dooars, and Darjeeling planters would also like to have Mr. de Niceville among for purposes of consultation and advice, so would the planters of the Kangra Valley, Kumaun, and Dehra likewise the fruit growers of Kulu and the indigo plante Behar and the North-Western Provinces; but as Mr Niceville is not ubiquitous, he cannot like Sir Boyle Ro bird, be in more than one place at a time; and being si handed, he cannot be expected to do the work of half-a-d men. It strikes us as curious that the Madras Governm cannot arrange to have a State Entomologist. The mone meet his salary could easily be found by a small reductio its stationery expenditure. The tons of paper wasted nually in printing its Resolutions and Orders on the trivial subjects might with advantage be saved and applie meet the salary of a competent Entomologist." But, a the request has been made, and declined, long ago. It t thousands of judges, magistrates and police officers and to look after criminal "unfeathered bipeds" in India; yet t is but one Entomologist to cope with all its *poochees*, n of which have truly criminal propensities.

GENERAL ARTICLES.

THE USE OF LIME ON SOUR LAND.

Lime is applied to the soil either slacked or unslacked certain portions of the middle Atlantic states its use to sw the soil and act upon latent plant food is quite general, and m farmers have their own kilns, where they burn limestone qua on the place or near by Lime can here be procured cheaply, even in remote sections by buying in carload lots a cheap gra agricultural lime it can be obtained at a much lower cost than commonly used for building purposes. The rate of applic varies from 500 to 2,000 lbs. per acre. Some successful farmers a heavy application which lasts for a number of years; others less quantity and apply more frequently.

The best results are obtained from applying the lime in a ca state. When air-slacked it loses much of its caustic properties the effect upon the soil is greatly lessened. A common mode o plication is to plow and prepare the land for wheat or rye, mark it off in sections 1 rd square. In the centre of each o these squares place in a pile 1-160th part of the amount to be ap to each acre and cover with earth. It will then slack gradually break up into a fine powder without losing much of its ca properties.

After the mass is thoroughly slacked it should be spread ev on the square rod of ground. If the grain is put in with a g drill the ground should be harrowed well before sowing the seed if sown broadcast by hand the harrowing to cover the seed w probably be sufficient. Timothy and redtop seed are usually at the same time and clover the following spring.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *September 7th,* 1901. Ninety days' Bank rate on London opened on Monday at 10 7/16d. rose to 10 19/32d. on Wednesday and closed on Friday evening at 10 17/32d. Saturday being a holiday the Banks were closed.

Extremes during the week ending September 6 were 10 5/16d.—10 5/8d for 90 d/s Bank paper and 10 3/8d.—10 3/32d. for private.

Coffee.—During the past week the value of coffee shipments was £497,000 as against £617,000 the previous week and £457,000 for the corresponding week last year.

Declared sales were slightly smaller, 177,000 bags as against 195,000 at Rio and Santos during the previous week and 198,000 last year. From Pará we are still unfortunately without advices.

Entries at Rio and Santos during the week ended 6th instant showed renewed activity, principally at Santos, being 1 ,076 bags greater than the preceding week and 221,761, double those of the corresponding week last year.

Since the 1st July the aggregate entries are 3,854,616 bags up to 6th instant as against 2,403,195 last year.

The total quantity of coffee cleared from these two ports from 1st July to 6th September amounted to 2,867,263 of the value of £3,814,190 as against 1,773,125 bags valued at £4,079,491 last year.

In his circular of 1st September Sr. Raul de Carvelho states that "from all directions come reports of the weakened state of the trees consequent on two monster consecutive crops. As regards the weight of the current crop there is now no doubt whatever that it is greatly inferior to last crop's, which was particularly heavy.

RUBBER.

From notes by Mr. H. C. Hill, *Conservator of Forests, N.-W. P., India,* we take the following :—

Mr. Carey : I should like to ask you, Mr. Hill, what reason you have for saying that Pará rubber will yield more quickly than gutta rambong, and if you will give us a few figures in support?

Mr. Bailey : I should like to ask Mr. Hill's opinion about topping Pará rubber so as to compare it with the way we have been recommended to top it by many experts in this country? And I should like him to tell us, for the benefit of the planting community, some of the little things from his great experience in forestry. I have no doubt he will be able to give us many things which he has not dealt with to-night; and, if he were to do so, I am sure everybody would be very grateful to him for it?

Mr. Fryer (Ag. R.E.R., Selangor): I should like to know why the "jarrah" sleeper should be disparaged in favour of chengal and merbau.

Mr. Marks (Ag. S.R.G.): I should be much obliged if Mr. Hill would tell us why this country is so suited, to Pará rubber, not on account of its soil but on account of its climate, which I heard him say a few evenings ago.

Mr. Hill: With regard to Mr. Carey's question, the point was discussed in settling on a plantation in Burma the other day, as to whether they should plant Pará or Ficus elastica. In Assam we have large plantations of the latter, and speaking from memory, they aggregate some 5,000 acres. Some parts are 30 years old, at which age the tree can be remuneratively tapped. These plantations have been tended and watched in Assam where Ficus elastica is equally as indigenous as here, and Mr. Ribbentrop puts the commencement of yield at a considerably longer period than the eight years estimated for Pará. That is what we found planting it in Assam. But I may mention one particular point. We first began to try the plant as nature does – in forks of trees—and the slowness of its growth led us to calculate that it would be fifty years before the roots got to the ground. Then we planted it under cover in the same way as Mr. Stephens (Forest Officer) has planted it in Perak. I am not sure that it is necessary to plant it under cover; but, so far as our information goes, it has to go to thirty years before giving a return, whereas Pará gives a return in eight years.

Mr. Carey: I would like to ask whether, from your personal experience, you consider the soil and climatic conditions of Assam analagous with the Malay Peninsula. It seems to me that a comparison may make a great difference. The only case in which we have any data in connection with a F. elastica plantation is that of Java, on an old abandoned coffee estate, and the yield was extremely poor. We were discouraged on those grounds. You have told us we have a rainfall of 200 inches?

Mr. Hill: I think all the circumstances are in favour of the Peninsula; and, as far as this particular tree is concerned, it grows in Perak, at Batu Kuran, naturally, just as it grows in Assam; and the yield will I think, certainly be greater than in Assam where there is a period of dry weather and rest.

Mr. Hill: With regard to Mr. Bailey's question, I proposed to say, only I inadvertently turned over two pages of my notes:

To those gentlemen who are here to-night with an interest in planting up large estates, or who have large estates, under coffee, I may perhaps express the opinion that no better investment offers than the plantation of Pará rubber (Hevea Braziliensis). It has been shown that it grows freely and that in 12 or 13 years it will yield a large return: moreover, that it can be tapped at the earlier age of 7 or 8 years.

As a shade tree over coffee it should be most remunerative, and then I venture to think it is better to let the leading shoot soar up to the highest possible point before it throws out branches; so that the cover may be high and as little detrimental as possible to the coffee.

Where only Pará is planted, I think 12 feet apart is far enough. Under these conditions it will form a complete canopy in 7 or 8 years when the time comes for tapping it, and all weeds will be kept down by the canopy.

The French have a very good definition of cover as opposed to shade. They say that it is the horizontal projection of the tree on the ground; cover is detrimental and shade is an advantage. But it is impossible to have one without the other.

I know perfectly well your argument for topping Pará trees—*viz.*, you find that the tall pliant stems are much acted upon by the wind and that the attacks of white ants are possibly due to a certain amount of breakage of the collar which gives the ants something to start on. Where you want to grow coffee underneath I have no hesitation in saying: let Pará grow up to its full height. Where you have not coffee I would plant it much closer together, at the outside 12 feet apart and not decapitate.

Mr. Bailey's suggestion for information about any little things about planting trees or rubber is too large a demand for me to meet. If he could give some specific questions, I would be glad to answer them.

Mr. Bailey: Something about your general opinion of Pará rubber you have seen in the Peninsula: whether you think it will be successful or not?

Mr. Hill: I distinctly think that at the age of from 8 to 12 years they will yield, and will go on yielding annually, that there is no reason why you should not have fifty isolated trees to the acre and they will give a product of 8 lbs. each, or 400 lbs. which worth 2s. 6d. a pound amounts to £50 sterling per acre. I think if it falls to half the price—*i.e.*, fifteen pence a pound—you would still have a splendid investment.

Mr. Hill (in reply to Mr. Marks) : In discussing the plantation of Para I said that I think a mistake has been made in experiments with individual trees. So far everybody, who has tapped it, has operated on isolated trees exposed on all sides to direct sunlight. The return has been 10 lbs. and 11 lbs. (Voice : and 16 lbs.), and even up to 16 lbs. per tree. As I pointed out to Mr. Ridley in Singapore these experiments are not to the point: you don't want to know what an individual tree will yield but rather what an acre will yield. It is only then that you can judge of the desirability or otherwise of planting the trees at wide distances from each other. You have been experimenting with no definite results. In Setiawan, I think it is, there is a very dnese canopy wich shows that Para leaves are absorbing the whole of the sunlight; and experiments there would show what return you would get per acre under those conditions. What you want is a tapping over a certain area and results would be, when the time comes to tap, simply proportionate to the complete leaf-surface you have got on the area Of course, where you have got coffee you may not want your cover, you may want merely shade with intervening spaces: and you must be content with an incomplete crop of rubber. What I want to explain to you is that the production of rubber must be proportionate to the leaf-surface on

which light is acting. Therefore, the sooner you get your crop of rubber complete the better it is. Once having got your crop of rubber complete you take nothing from the soil: whatever you take in the shape of rubber is taken practically from the air. Your plantation will not get played out; you go on improving the soil by the additions of decaying leaves and fruits.

Mr. Parry (Hon. Secretary, U. P. A.): I was told by Mr. Ridley to plant Para in wet soil, but I planted it on high land We have been informed that the humidity of the air supplies the necessary food for the plant. Now, in Brazil, it is necessary to plant it where at times it is completely swamped.

Mr. Hill: If you plant Para on a soil where it is well swamped and the flood remains for a certain time – twenty-four or forty-eight hours, I cannot tell you the exact time—the trees are killed. It demands a well-drained surface soil and can only stand flooding for short periods, though it flourishes where the water level is at no great distance from the surface. If planted so low that the floods remain and keep the trees long under water they are killed. You may see this at Kuala Kangsar, where all the trees on a part of the plantation have been killed by floods.

HE SOLD THE COFFEE.

A salesman for a coffee house which does a large business in Brooklyn, N. Y., has hit, according to a contemporary, upon a scheme to get orders which has the merit of cleverness. How he works it is best told in the words of a charming young housewife, who lives at what some Manhattanites call "the foolish end of the bridge."

"I saw his wagon stop at the door before the bell rang," said she, "and I knew it was one of those persistent coffee men. I had tried twice before to use their coffee, but it wasn't as good as the coffee my grocer sells. I went to the door myself, prepared to be awfully cross. The man stood with his hat in his hand. He gave me one look and started back a step with his hand on his heart. I thought the poor fellow was going to faint. He recovered himself in a moment, and looked very much embarrassed.

"'Pardon me,' he said, 'but I was so startled. I have recently lost a sister, and you looked so much like her that I thought, as you opened the door, she had come back to life.'

"The man was apparently much affected, and I felt so sorry for him. When he began talking coffee I tried to steel myself against him; but he looked at me so wistfully that I hadn't the heart to be disagreeable. He was evidently so well bred, too, that I couldn't shut the door in his face. Well, before I realized it I had bought a pound of his coffee.

"I didn't feel so badly about having broken my resolve until next day, when a woman in the apartment across the hall dropped in to tell me how sorry she felt for a poor coffee salesman who nearly fainted when she opened the door, because, as he said, she was the living image of his dead sister."—*Canadian Grocer.*

REGARDING TEA AND COFFEE.

"M. G." writes: Is tea and coffee healthy?

Certainly they are. Properly made, they are most refreshi and healthful, all the faddists and cranks to the contrary, who you every time you drink tea or coffee you shorten your life. we followed the dictates of these people where would we en Some of them preaching against meat; others on all manner fads pertaining to both eating and drinking. Be sensible, te perate in all things, even in eating and drinking. The pub generally place the proper value on these things. Thus, you fi the consumption of tea and coffee increasing, and the health of t public becoming better, the length of life also being prolong Those who sell the new health drinks now in the market seem think it needful to abuse tea and coffee in order to sell their p parations. Most people see the game and are not misled there Tea and coffee do not need our defence. The public know a go thing, and from present indications they intend to continue drink the "cup that cheers."—*Canadian Grocer.*

TEA-DRINKING IN INDIA.

"S. A. A" writes to the *Pioneer*:—

I have read with interest the correspondence recently publish in the *Pioneer* on the above subject, and considered the vario schemes suggested for the expansion of tea-markets in India. O writer says that the high caste native looks upon the dry tea polluted, because it has been touched by people of inferior caste whilst another suggests that the bunniah is the proper person be employed in the expansion of the sale of the article. As o intimately acquainted with native ideas and habits, I beg to subm that what these writers suggest and remark is quite beside t mark, and does not touch the real points at issue. No native, n even the twice-born Brahmin, thinks that any *dry* article, such tea, coffee, etc., can be polluted by the mere touch; but there is notion prevalent abroad that the *l ose* tea sold by the bunniah not the genuine article imported from respectable tea-merchan but, as is not unfrequently the case, old and stale tea which h lost its aroma and flavour by being exposed to the air; or, as erroneously but popularly supposed, *boiled* tea which he gets second-hand, *i.e.*, the tea which has once been used for the *Sahi logue* and then sold by the *khansama* to the bunniah after bei coloured by a certain process. It is ideas like these that requi to be set right, while the benefits of tea-drinking have to impressed upon the public mind. I would, therefore, suggest t following methods to be adopted by those who are interested in t promotion of tea-drinking amongst the natives of this country: (1) Publication and distribution broadcast of pamphlets and leafl in the vernaculars, explaining and enumerating the benefits tea-drinking. (2) Employment of one or two respectable nati travelling agents to visit large cities and towns with samples tea, and describe the benefits of tea drinking in the higher circl of native society, so as to create amongst them a taste for "the c

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to His Majesty The King.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98 -t.f o.]

that cheers but not inebriates." (3) Introduction of one and two-anna packets of tea for retail sale. I am sanguine that the adoption of these and similar methods will conduce to the creation of a widespread taste for tea-drinking among the natives of India; and "once a fashion is created," as remarked by the *St. James's Gazette*, "the immense population of India would ensure an enormous return," and, at no distant date, will Assam and Cachar have to *double* their tea-gardens. I shall be glad to supply further details and suggestions regarding the preparation and circulation of the requisite pamphlets, etc., with a view to the promotion of tea-drinking. if Messrs. Andrew Yule & Company, Commissioners for the Expansion of Indian Tea Markets, the Indian Tea Association, or other public bodies interested in the tea trade communicate with me through you.

COFFEE STATISTICS.

The official statistics given below are referred to in our leading columns.

Imports of **Coffee** *by Sea from Foreign Countries into each Province of British India from 1881-82 to 1900-01.*

Years	Bengal.	Bombay.	Sind.	Madras.	Burma.	Total.
	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.
1881-82 ...	107,968	3,199,728	...	212,688	269,024	3,789,408
1882-83 ...	40,544	2,731,008	...	311,920	264,880	3 348 352
1883-84 ...	6,944	2,151,184	...	21,728	310,016	2,489,872
1884-85 ...	39,424	3 780,448	...	112 112	305,536	4 237,520
1885-86 ...	62 160	1,297 184	112	127 232	297,136	1,783,824

CEYLON TEA ON THE CONTINENT OF EUROPE.

Mr. J. H. Renton reports with reference to Ceylon tea in Sweden, Norway, and Denmark:

I have been for the last 12 days in Sweden, Norway, and Denmark, and give you herewith impressions of my visit.

SWEDEN.

Ceylon tea has been well introduced into this country, owing to the fact that two or three planters are connected with Sweden, and have introduced the tea and pushed it through their agents and

friends. Some 10 years ago the Messrs. Seton, of the Agras, began the work, and others have followed, *viz.*, Mr. Dickson, who is himself a Swede, the Lethenty Co., and Mr. Luck. With the exception of the agents and friends of the Ceylon planters, I found only one other firm importing tea in Stockholm, and this firm has tea only as one of its departments. It is a large firm importing all Colonial produce. I called on two other large firms whose names had been given to me as tea importers, and found they did not touch the article. I was somewhat puzzled, therefore, as to how the 216,270 kilos. of tea consumed in Sweden got into the country. But when I got to Gothenburg I found nearly as much tea is imported here as in Stockholm, and that tea is imported into Sweden through no less than 22 other ports. Detailed statistics are as under:—

From	1899. Kilos.	1900. Kilos.
Norway	1,106	1,242
Finnland	675	3,522
Russia	22	687
Germany	64,598	60,618
Denmark	55,117	52,018
Holland	5,659	7,820
Belgium	7,201	14,056
Great Britain	67,105	76,084
France	26	223
Total	201,509	216,270

These statistics give no information as to original country of production. Tea transhipped at Hamburg, Amsterdam, and Antwerp, for instance, is all entered as coming from Germany, Holland, and Belgium, and these countries figure, therefore, as the countries of export. The population of Sweden is just over 5 millions. The consumption of about 0·09 English lbs. per head is very poor, especially when it is considered that the duty is only 50 öre per kilo., say 3d. per English lb. The consumption, however, is increasing slowly. Ten years ago the quantity imported for home consumption was only 80,000 kilos. From careful enquiries, I think quite one-third of the above quantity of 475,794 English lbs. (I should say it was over a third but not a half), is of Ceylon tea. With the exception of the quantity imported by the Messrs. Seton and Dickson's agents *viâ* Antwerp and Hamburg, all the rest of the Ceylon tea imported into Sweden is bought in London. Even Messrs. Seton's friends are buying now more in London. The reasons of this are, mainly, the London market is cheaper, the dealer gets samples in advance of the auctions and buys exactly what he wants, and finance is easier. For teas shipped from Colombo the drafts come forward by the mail in 3 weeks' time, and have to be paid at once, whereas the teas themselves are always seven weeks on the road, sometimes longer. Credit is much abused both in Norway and Sweden. The dealers have to give their clients, the grocers, a nominal four but generally six months' credit, because private individuals pay their accounts sometimes once in six months, sometimes in a year's time. On teas bought in London the Swedish and Norwegian dealers obtain the usual London terms and are not called upon to pay for the teas till long after their arrival. I called on the following:—

IN STOCKHOLM.

Firm A. General importers of colonial goods with a tea department—has imported direct from Colombo and are quite satisfied with their work, but prefer to buy in London. Use, however, mostly China tea and keep Ceylon only for clients who ask for it, are not inclined to go out of the way to push it; think the taste is growing for Ceylon.

B. Tea importers only. Ten or twelve years ago took up Ceylon at the instance of the Messrs. Seton, of Preston estate; now purchase only Ceylon and push it entirely. This firm received a grant from the Committee in 1897, I believe, and one through me this year of £100. Last year they expended on general and special advertisements 8,550 kronen, say £475: their travellers' expenses were 14,000 kronen, say £777.

In 1901 to date they have expended in general advertisements, signs to grocers, canisters, etc. 5,550 kronen = £297
Travellers' expenses 10,000 „ = £555
They well deserve our support

Their imports in 1900 were 61,000 lbs To date 1901 only 25,500 lbs. but 22,200 are on the way from London, Ceylon, and Hamburg. They anticipate that they will import about 6,000 lbs. less in 1901 than in 1900 as they got a large quantity just at end of last ye but they are buying more in London this year and the quan from there will be 10,000 lbs. over last year and correspondin less from Ceylon direct.

C. A small limited Company called Ceylon Plantage le Depô commenced by a coffee broker who, unfortunately, has failed plunging in coffee. This firm has been in existence four year and seems to have spent a great deal on advertising in m ingenious ways. To instance one, they have a number of l little match boxes, which they give away. Up to date t say they have lost money. They are supplied exclusively the Lethenty Estates Company from London. I have promi them a grant for next year, and will, if I have funds, make th a contribution for this. As vouchers were not ready for me th accounts are to follow me.

D. Mr. Dickson's agent has Dickson's tea and placards in thre four shops, but he is working mainly through private persons, has only commenced his general propaganda.

E. Is a firm of first-class grocers with five shops in Stockho The head of the firm, a born Englishman, but now a naturali Swede, has a nephew a proprietor in Ceylon. This firm, some th year ago, imported packet teas direct from Colombo, but now t have their own Ceylon packets packeted in London. They also a pure Indian blend—and give the preference to the Indian. London firm which supplies them, having a branch in Calcu naturally tries to push Indian teas in preference to Ceylons. T Calcutta firm seems to be doing a good business in Norw Sweden, and Denmark.

As we have quite enough firms in Stockholm making Ceylon t their speciality, I did not try to get any of the Gothenburg fi to take it up specially and push it. A special return is iss yearly of Gothenburg trade which gives, amongst other thi the quantity imported by each firm. The return for 1900 is out yet, but in 1899, 73,000 kilos. were imported by 14 differ firms. Two of these only are purely tea firms; the others general Colonial produce importers—I called on the principals.

F. By far the biggest importer, has correspondents in Colom but buys now always in London; is favourably disposed towa Ceylon tea and buys about 20,000 lbs. per annum, which is ab one-third of his total import.

G. 2nd largest importer, total import though only 15,000 buys principally Ceylon and Indian, all in London.

H. Imports 12,000 lbs., principal retail mostly China fr Hamburg, uses Ceylon for mixing purposes.

I. Entirely tea, imports only 2,000 lbs.! all China—was at time the biggest tea business in Sweden.

J. General importers; by blends from a firm in *Putney*, Lond S.W.!!!

NORWAY.

The consumption in Norway is as follows:—

	1899. Kilos.	1900. Kilos.
From Sweden	1,656	4,799
„ Denmark	20,340	18,805
„ Germany	51,884	58,571
„ Holland	2,091	1,640
„ Belgium	7,262	907
„ Great Britain	34,030	38,960
„ East India, China, and Asia	673	807
„ Other Countries	51	47
„ Russia	108	339
Total	118,095	124,875

Last year the consumption was 274,725 English pounds. population is 2,000,000, so the consumption per head of 0·13 o English lb. is better than Sweden, and this notwithstanding fact that the duty on tea in Norway is 2 kronen per kilo about 1/2 per lb. The Norwegian importers have petitioned t Parliament on successive occasions to have the duty redu The justice of their demand has been acknowledged, but Government cannot do without the revenue. The dealers sa the duty were only reduced by half, the consumption would

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant appointment of "Purveyors to Her Majesty The Queen and Emp of India" from the year 1837 until the time of her death, have had the honour of being appointed by Royal Warrant "Purveyor The King."

oubled. I have not been able to find out through whom most of he tea comes, and think Hamburg and Copenhagen dealers must upply the retail firms direct. I hear there is a firm in Bergen mporting a good deal of tea direct from London, but I could only earn of five firms in Christiania interesting themselves to any xtent in tea. Of these five three are general colonial produce ouses.

K. A big firm, tea is a minor article with them, and they confine heir purchases almost entirely to China. What little Ceylon they et, they buy in Bremen or Hamburg.

L. Also another large firm with whom tea is only a minor rticle, all of which they buy in London, and they sell principally heir Assam blend.

M. A smaller firm who took up Ceylon tea in 1897 and import t in packets direct from Colombo. They advertised and pushed t vigorously in 1898-99, and last year. It is gradually displacing heir China as this year they will import two-thirds Ceylon, one-hird China, but their total imports will not exceed 7,000 lbs. this ear. They got a grant last year, and I have promised one for next o include this year's expenditure.

N. A new firm started two years ago and entirely tea. They re to put up and run a pure Ceylon tea of three qualities, are get-ing special placards for it and circulars. Their first purchases of eylon have just been made, and we will see what they can do.

O. Is the Christiania branch of the Stockholm firm *B.* They pened in Christiania four years ago—and only sell Ceylon. Have orked up the importation to 8,000 lbs., but have lost money every ear. They have advertised very largely, but the expensive part of he business is their travellers, as it does not pay to travel only for ea. If I have funds available, I will give them something towards heir expenditure this year, and have promised them £50 for next! fancy that nearly one-third of the tea sold in Norway is Ceylon ea; if not sold pure, it is sold in blends. I have urged on the ealers the importance of getting grocers to reduce their prices. ea especially in Sweden is far too dear, and until it is much heaper the public will not take to it. The drink of these coun-ries is, of course, coffee. I fear nothing can be done at present n the way of tea rooms. The customs of these countries do ot lend themselves to afternoon coffee, and consequently not fternoon tea. The cafes are deserted between 4 and 6, as this is he dinner hour of the dwellers in towns. Coffee is drunk at reakfast and at supper. In a very few families tea is taken at o'clock occasionally, but when it is drunk it is at 9 or 10 o'clock t night. The peasant and fishermen will have no tea. Still the aste for tea is growing. and there is no reason why the ¾ million bs. of tea drunk now in these two countries should not be all eylon.

DENMARK.

In Denmark much more tea per head is drunk Quantity entered or home consumption in 1900 was 910,000 Danish lbs. The total mport was 1,490,000 Danish lbs., but as Copenhagen is a free port, good deal is transhipped there for Russia and Sweden and Norway. The steamers of the East Asiatic Company receive the ame privileges as steamers flying the Russian flag. The import or home consumption in 1899 was 900,000 Danish lbs, but in 1898 t was *990,000* Danish lbs. The population is a little over 2½ millions, of which nearly half a million is resident in Copenhagen nd suburbs. 910,000 Danish lbs. equal to say 990,000 English lbs. s equivalent to 0·35 per lb. per head of the population. I am onvinced that the Copenhagen dealers supply the retailers in outh of Sweden, so that Denmark offers a good field for Ceylon ea. In Copenhagen I saw no less than 5 large shops and 3 smaller nes selling only tea. In addition to these special tea businesses, tea s displayed in many grocers' windows. But in Denmark Ceylon has nade but a very small beginning, and where other than China are sed it is all Indian, that is used and preferred. The usual story s, it keeps better and is much better adapted for mixing.

IN COPENHAGEN

here are four large Colonial importers with tea departments. Four irms selling tea only wholesale, and five semi-wholesale with good warehouses and offices but with retail shops as well.

1. The oldest and most important in the first group do put eylon tea, but frankly told me they only kept it if it was asked or. They had sold China tea for 50 years and did not intend to ell any other, if they could help it.
2. Keep only China—and their tea is a very minor article.
3. A small house, principally coffee and exclusively China tea.

4. One of the partners in this firm has been in Colombo, and has correspondents there. Their business is principally other articles, but he takes a keen interest in Ceylon tea, and has tried to open up a trade in it though he finds it very difficult to do so.

The second group all keep Ceylon tea, and buy it in London or through Bremen firms. One of them gives all the preference to Indian. But another tells me he imports 100,000 lbs., of which one-third is Ceylon-Indian, mostly Ceylon bought in the London market. I have hopes that in time this man will take up and push Ceylon. The 3rd firm have agreed to make Ceylon a special feature in their trade, to run it in packets in 3 qualities under a special label, and will issue special circulars. I am to contribute the cost of placards and circulars, and this is a beginning, at any rate, of the 3rd group. I found one who said he sold practically no China. He keeps to the China designations, but his teas are all Indian blends. He maintains the public do not care for Ceylon. The other four firms all keep Ceylon, but use it mainly in their blends. The demand for pure Ceylon is, they say, very small. They buy all their Indian and Ceylon teas in London; one of them has the agency for the *Santhal Mission* teas from Bengal!!

You will see from the above that the work in the interests of Ceylon tea was begun in Sweden and Norway long ago, and that what has been done there has been through the initiative of the individual Ceylon planter. The increase in the consumption has been very slow, but continuous, and the work has been a very uphill work. We have made a beginning in Denmark; and I hope it will not be either so slow or such hard work as in Norway and Sweden.

The duty on tea in Denmark is 66 öre per kilo., say 3¾d. per English lbs.

CEYLON TEA IN N. AMERICA AND ITS PROSPECTS GENERALLY.

Mr. C. Shand writes under date London 27th ultimo to the *Ceylon Observer*:—

I enclose copy of another letter I have written to the Secretary of the Ceylon Association. Much of its contents will have appeared in the *Observer*, but there are a few points which are new.

I see amongst the many suggestions for getting rid of what is called rubbishy tea, is to buy it up and burn it! I think mine, to convert it into brick tea, is better. It appears that, after all the fuss about Japan tea in Canada, she only takes 5,424,000 lbs. per annum. How 10,000,000 lbs. is to be captured out of that by Ceylon Greens is a puzzle which Mr. Larkin will perhaps be able to solve when he comes back next week. I missed seeing him by a couple of minutes. If Ceylon planters continue their restrictive policy six months longer until the duty is reduced, they will set the industry on its legs again, because there will be an expansion in the home trade. I believe, however, even this is going on satisfactorily, but it will probably be checked by the rise in common tea.

I am not sure whether the statement in the Yokohama Prices Current includes shipments from Kobe, but I will find out. The Japan Blue Book is rather confusing; first they are given in kins, (100th part of a picul) and then the pan-fired and basket-fired are given separately. I shall no doubt find out all about it at the American Consulate and the Colonial Office; perhaps I may find it in the "Encyclopedia Ceylonica." 50 millions from China, 20 from Japan, and 17 from Ceylon and India—make up in all 87 millions.

THE SECRETARY OF THE CEYLON ASSOCIATION,
London.

52, Longridge Road, 25th September, 1901.

DEAR SIR,—In my letter of the 9th instant, I asserted that the importers of Japan tea into America held an impregnable position, from which they could not be ousted by the costly and unpractical methods adopted by the Ceylon Planters' Association.

As this opinion is contrary to that of many intelligent and experienced planters, it will certainly be disputed. I, therefore, think I may as well anticipate criticism, by stating my reasons for making so bold a statement, and, by thus raising the question, give my critics an opportunity of refuting my arguments, if they can do so.

That importers of Japanese tea in America have an advantage of thirty per cent. in the difference between 25 pence per yen, and 16 pence per rupee will not be denied. There are none better qualified to appreciate this advantage than Ceylon planters, for has not the action of the Indian Government in factitiously raising the sterling value of the rupee to the extent named, been, for the last four years, a standing grievance of India and Ceylon planters?

There is little doubt that Ceylon planters can, if they choose, make better Green Tea than the Japanese, but to do so, fine-plucked leaves must be used, and as the lower grades are not admitted into America, and cannot be sold elsewhere at prices that would cover the cost of packages and transport, they have to be eliminated, and this adds considerably to the cost of the exportable grades, which I think cannot be less than 36 cents per pound, laid down in Colombo.

That the leaves used in making superior Greens, would, if made into Black Tea, give more profitable results is proved by the fact, that very little Green Tea is now being made in Ceylon, and it looks probable, that there will be even less during the next few months.

Hitherto very little has been publicly written regarding the cost of tea in Japan, except vague statements that the prices of labour having advanced, there, the cost must be greater than in Ceylon. It is very difficult to obtain accurate information on this point, as there are very few merchants here who are interested directly in the trade between Japan and America. I have interviewed every one likely to be able to give me information on the subject, and Mr. Comes of Messrs. Comes & Co., was the only one I found practically acquainted with it. From him I learned that Japan tea was not sold packed ready for shipment, as in China, India, and Ceylon; but was sent to the shipping ports, in a half manufactured state, and there refired, sorted, and packed by exporters, and that the cost of doing this was about five yen per picul. By adding this sum to the market quotations, the price ready for shipment is obtained. This was confirmed by Mr. Walters, Manager of the Hongkong and Shanghai Banking Corporation, who has been in Japan.

I find by the Yokohama Prices Current of the 13th August, that common teas including re-firing, etc., cost 28 yen per picul; this at an exchange of 25d. is equal to 5·26d. per pound. Good medium tea at 25 yen equals 6·37d., and finest at 40 yen equal 7·52d.

Taking good medium to correspond with the quality usually shipped from Colombo, it would appear that there is not much difference between the cost of Japan, and Ceylon Greens.

It is authoritatively stated that, to capture the Japanese stronghold, it will be necessary to expend a very large sum in advertisements, and that Ceylon Green Tea must be made to resemble in every way Japanese, and moreover, for a considerable time, Ceylon planters will have to carry on the trade on philanthropic, and not on business, principles.

I will not dwell in this letter on the subject of the bonus paid by the "Thirty Committee" of the Planters' Association, because in a letter to the *Financial Times* in April last, copy of which you obtained, I fully explained its nature and object. I would simply ask what effect could the substitution of a couple of million pounds of Green for Black Tea have in counteracting the over-supply to Great Britain?

Those who are old enough to recall the time when China was the only source of supply, will remember that the consumption of Green went *pari passu* with Black.

Outside the producing countries, and North America, who now drinks Green Tea? I gather from the subjoined statement, taken from the Yokohoma Chamber of Commerce Prices Current, that, even in the United States and Canada, the taste for it is diminishing; whilst that for Black, as in all other Anglo-Saxon countries, is increasing.

Is it worth while Ceylon's spending large sums to try and revivify a declining trade?

I learn from Ferguson's "Encyclopedia Ceylonica" that the American campaign costs no less than £20,000 per annum. This amount, if diverted to practical purposes, would pay five per cent. dividend on £400,000 of capital.

Your Committee can imagine what that sum could be made to do in promotion the consumpting of Ceylon tea in Muhammedan countries.

It appears that the chief part of the annual cost of the campaign, is the secret services! One year's savings would cover the expense of erecting in Colombo a Brick Tea Factory, to use up those grades which every one, but the Chinese are anxious to get rid of. Those astute people are, I gather from the Ceylon newspapers, beginn to find out their value.

It would only cost £2,500 per annum to subsidise a Joint S Company with a capital of £50,000 to work the factory.

TOTAL EXPORTS OF JAPAN TEA FOR THE PAST SIX SEASONS.

Shipments.	1900-1901.	1899-1900.	1898-1899.
To U. S. America ..	19,859,749	19,846,372	15,947,030

PROSPECTS OF INDIAN TEA.

The *Indian Daily News* of the 18th instant observes :—

All interested in tea, and in this City of Palaces their name is legion, will learn with satisfaction that at last Mincing Lane appears to be attaching some importance to the threatened curtailment of the supply of Indian tea brought about this season by finer plucking and climatic causes. Telegrams received yesterday from London announce that lower grades of tea have advanced a farthing, and a strong demand is anticipated from now onwards. On the 10th instant we announced in these columns that, as far as we could ascertain, there was an actual shortage to end of September of 12 million lbs., and that latest advices from the districts indicated an early close to the season and to revised estimates not being reached. We then expressed the opinion that the present season would close with 15 to 17 million lbs. less tea than was made in 1900. Since we advanced that statement, the Indian Tea Association have announced an *ascertained* shortage to the 30th September of 14¼ million lbs., as compared with the same date last year, or 2¼ million lbs. *more* than we had estimated, and there seems every reason now therefore to expect a total shrinkage this season of 17 to 19 million lbs. This goes to confirm the opinion held in some quarters, to which we referred some short time back, that the shortage will be full 20 million lbs. Such a formidable deficit properly handled should soon make itself felt, and prices be brought once again to a paying level. It appears to us that sellers, if they like, can be more masters of the situation than has been possible for years, and by the use of ordinary discretion in the selling of the balance of their produce, recover some of the losses they have had to bear in the past. They must not force teas on the market in excess of the buying power, as was clearly the case at last Friday's sale, but restrict the auctions to moderate dimensions. They need be under no apprehension that buyers will not remain in Calcutta so long as there is tea to buy. Postponement of the dates of departure of some of the annually homeward bound will, we feel sure, be cheerfully conceded by buyers, if the trade of the Calcutta market, in which they are interested, can be improved by their remaining a little longer here. The tea market has been suffering for some time from the indigestion and lethargy that follows in the steps of gluttony. A little wholesome restriction of its diet will do wonders for it, and on shortened commons it will rapidly recover its tone and appetite. We would particularly commend these points of view to those who have teas arriving during the Poojahs. Far better to hold over an invoice or two to the following sale than to force 25 or 30 thousand packages on to the market at once and have a repetition of last week's languid tone.

PLANTING AND SCIENCE IN CEYLON.

In his address at the opening of the Legislative Council on the 18th instant, the Governor of Ceylon, the Right Hon'ble Sir John West Ridgeway, remarked :—

Mr. Willis, the very able and energetic Director, reports that the scientific sub-department has been fully organized. and a large amount of work has been carried out by it. The chief desideratum in organization is now the further division of the sub-department of gardens into the Botanic Gardens proper, and an Experimental Garden, where large experiments may be tried with staples, or with plants that may become staples, leaving experiments on the minor plants and the cultivation of ornamental plants to the Botanic Gardens. By the purchase of Gangaroowa estate, facing the Peradeniya Gardens, an unrivalled site for experimental work has been secured, and in future all work with tea, coffee, cocoanuts, camphor, cinchona, tobacco, fibres, fruit, etc., will be carried on upon this site on a scale sufficient for the practical commercial testing of the results and products for the information of all interested in agricultural enterprise in the Colony. With the Experimental Garden it is proposed to combine the training of a few students, and thus supply the place of the Agricultural School in Colombo now closed. The training will be of a strictly practical character, and almost entirely out of doors, the garden being worked like an estate.

The general condition of the crops of the Island in regard to diseases is distinctly better than usual. This is partly due to the work of the Mycologist and Entomologist, who have done much to spread a knowledge of the principles of sanitation and of treatment of disease in its early stages among planters and others. They have reported, mainly by letter, on over 750 cases of disease during the year, and have travelled over a large area giving advice and help. They have also carried out a large amount of scientific investigation into the life-histories of insects and fungi, especially those which are or may become harmful. Mr. Green has also devoted a good deal of attention to the question of mosquitoes and malaria, with a view to the discovery of preventive measures against this scourge.

With the of view obstructing as much as possible the introduction of disease into the Island, an Ordinance has been passed empowering the Government to prohibit the importation of plants from infected countries, or to require them to be fumigated on arrival, according to the necessities of the case. A small fumigating chamber is about to be built at Kochchikada for the treatment of imports.

Tea has passed through a critical period. The year 1900 was distinguished by an unusually favourable season for heavy flushing in most of the Ceylon tea districts, and there appeared also to be a prevalent belief that common teas were likely to find a good market. The result was a total of shipments far in excess of the estimate, no less than 149,264,602 lbs., or 19½ million pounds above the exports in 1899. This heavy increase, more especially in tea of poor quality, combined with large shipments from India, led to a rapid fall in the average price, until towards the end of the year and during the first half of the present year it approached a figure that could leave little or no margin of profit to a certain proportion of the producers. For a time production had overtaken consumption, checked as the latter undoubtdedly was to some extent in the

United Kingdom by the Imperial War Tax of two pence additional per pound on our staple; and with large stocks the prospect before Ceylon and Indian planters was at the opening of the present year by no means bright. But the planters of Ceylon, as in former crises, rose to the occasion, and by plucking finer leaf and preparing a better quality of tea have gradually circumscribed shipments and established a standard for which a much better and improving average price is now offered in the London market. The prospect then, at the present moment, is by no means unfavourable to the Ceylon tea planter. Let us hope that the lesson has not been lost, and that he has learned how shortsighted it is to rush the home market with large quantities of common tea, and how much wiser it is to endeavour, as far as possible, to make tea of good quality. Any extension of planting being for the present stopped, it is improbable that production will again be allowed to outstrip the combined requirements of home and foreign markets. Further, let us hope for an early termination to the troubles in South Africa and for the consequent removal of the war levy on tea, followed by a better progressive rate of consumption in the United kingdom. In regard to foreign markets, the progress made—more especially in Russia—continues to be satisfactory, and there is good reason to believe that the manufacture of pure green tea to suit the American market will benefit the local industry. The record for the six years so far as available may be given as follows:—

Total Exports of Ceylou Tea.

		Increase on previous Year.
	lbs.	lbs.
1896	108,141,412	10,000,000
1897	116,054,567	8,000,000
1898	119,769,071	3,700,000
1899	129,894,156	10,000,000
1900	149,264,602	19,500,000
1901 (Estimate)	146,000,000	Decrease.

The progress in shipments to countries other than the United Kingdom may be noted.

Exports of Tea from Ceylon to the following Countries.

	Australasia.	Russia.	All Countries outside United Kingdom.
	lbs.	lbs.	lbs.
1896	11,062,832	201,313	14,205,051
1897	13,258,456	439,349	17,124,508
1898	15,126,891	2,714,003	23,635,138
1899	15,606,833	3,949,740	25,946,032
1900	17,606,912	8,917,185	34,671,446
1901*	15,342,156	6,959,327	28,857,783

Colombo is clearly destined to become a great market and distributing port for tea. How far its trade and importance might be increased by the removal of certain restrictions, and the imposition of safeguards against the import and export of what is known as "rubbishy" tea, it is for those chiefly concerned to say. Meantime, confidently trusting in the judicious management of plantations, practical experience being aided by Science, I see no reason to doubt the continued well-being of the great planting industry of the Colony.

Cacao is doing well, and on most large estates the canker has been largely eradicated. Cocoanuts, cinnamon, cardamoms, and other smaller products have been in a prosperous condition during the year.

Of new products, rubber claims the first place. Exports of appreciable quantities have commenced, and the prices obtained have been most satisfactory. The latest market report contains the entry "Best Pará, 3s. 9d.; Ceylon, fine, Pará sort, 4s. 1¾d. per lb." This cultivation may now be considered established in the wet low-country districts.

Camphor has continued to attract attention, and bids fair to prove a paying minor product for many parts of the south west and the hills. Samples prepared from trees grown in the Botanic Gardens have lately been valued at 126s. per cwt. The yield of camphor from clippings of leaves and young twigs is about 1·2 per cent. and the preparation is cheap, so that in places where 16,000 lbs. of clippings can be obtained from an acre in a year, there is little doubt that it will pay well.

Of other minor or new products, tobacco continues to extend, also vanilla, pepper, cinchona, and tapioca: the roots of the last named are, however, only used as yams, and not for the preparation tapioca. Citronella oil is in a very depressed state, owing to ov production and to low prices, with new competition in unadult ated oil from Java. The adulteration of our oils is so wholes and so shameless that it is difficult to foresee any remedy for t depression, unless the cultivation be taken up by large ma facturers. A detailed investigation has been made, and a rep will soon be published.

Investigations are being made into the Ceylon gutta-perch ebonies, and other subjects. The laboratory here has been used numerous visitors, in addition to the staff of the Departme A scientific journal, the "Annals of the Royal Botanic Garde Peradeniya," has been established for the publication of t technical and scientific part of the work of the Department. T subordinate clerical and gardening staff has been re-organized wi an incremental system of pay, resulting in a slight saving. T Department has assisted the Department of Public Instruction the starting of the new system of School Gardens, providi numbers of useful plants of the best varieties.

* Up to 30th September.

BUYING, HANDLING AND SELLING COFFEES

THE SECOND PRIZE ESSAY.

By William Rhodes (Quality), Brockville, Ont.

Coffee is one line among the many which a grocer handles th is capable of being made a distinguishing feature in one's trad that is to say, a man may, by diligent pushing, assisted by a lit judicious advertising, establish a reputation for fine coffee whi will bring him trade outside of his regular customers.

This is something which should be aimed at for several reason First, it pays you a good profit; second, it is a good advertisemer and third, it helps to bring trade for other goods. Now in order accomplish this desirable result, the first step is the

BUYING.

We presume these essays are intended for the benefit of retaile generally, so first, we would say, do not attempt to import yo coffee green and do your own roasting unless doing an exceptional large business There are several good, reliable houses in Cana handling coffee and spices combined whose goods can be relied both for quality and price, and we would recommend placing yo account with one of them. They will do the roasting far bett than you can, for they will do it in so much larger quantities und the watchful eye of men who, after years of practice, have becon experts and know just when the proper color has been attaine Besides, there are several items in the cost of roasting which ha to be taken into account, such as interest on investment (cost oraster, etc.), fuel, shrinkage in weight, risk of burning a bat occasionally, and last, but not least, time consumed which could far more profitably employed in attending promptly to custome arranging stock attractively, or collecting accounts.

A merchant should know all he possibly can learn about t goods he is handling and so it is a good plan to

GET SAMPLES OCCASIONALLY

from other houses and draw them against the ones you are han ling in order to compare values. It is also well to familiarize you self with the flavors of the different coffees as well as noting t shape, style and general appearance of the berry. In these wa you may become something of an expert yourself in time.

Now, as to the different kinds of coffee. They consist of Ceylon from the island of that name; Javas, from the islands of Java a Sumatra; Mochas, from Arabia; Maracaibos, from Venezeula, South America; Santos and Rios, from Brazil; and Jamaicas, fro the island of Jamaica. There are a number of other kinds. fact, there is more or less coffee grown in nearly all tropical cou tries and islands, but the kinds we have mentioned are the on best known to commerce.

The Plantation Ceylon is considered one of the finest coffe grown, and has its largest sale in Europe. Its sale in this countr is limited; partly because it is not known, but principally account of the price which ranges from 35 to 36 cents per poun Having a rich, full flavor, it is often used for toning up oth coffees, or makes a very fine cup of coffee alone.

But the names of coffees most familar to the public are Java an Mocha, and there is a great deal of coffee sold under these nam which is a libel on them.

Java and Mocha are the coffees which should be pushed, as they ive the best satisfaction when your customers become educated o them.

There are lots of people who drink cheap, heavy, black coffee ith a thick sediment in the bottom of the cup and they like it ecause their taste has been educated in that direction. But if yoo ould get them to try a blend of Java and Mocha, and persist in its se for a short time, they would soon prefer it and they could not e induced to return to the cheaper grade. There are, of course, any grades of both Java and Mocha, the difference consisting artly in the draw and partly in the style of the bean, which is due o the care in cultivation and place of growth. Private Javas, hich are the finest grown, are those grown on private estates here they get the greatest possible care in cultivation, and com- and prices ranging from 35 to 45c. per pound, but they are sold lmost entirely to wealthy city trade.

Old Government or Mountain Java will be found satisfactory to ordinary trade, and when blended with Arabian Mocha in about the proportion of 4 parts Java to 1 of Mocha, will make an excellent coffee to retail at 40c. per pound. Mocha does not make a desirable coffee alone, because of its peculiar acrid flavor.

Next in order come the Maracaibos—a medium-priced coffee. Here, again, you find a number of different grades. The best grade is branded "C. C." from the district of Cucuta, in Venezuela, its place of growth. At its present wholesale price, 10c., it makes ex- cellent 30c. coffee alone, while by blending with Mocha and Java you have a choice 35c. grade. We do not recommend the use of chicory unless your customers demand it particularly.

The grades which retail at 25c. per pound or less are composed of cheaper Maracaibos, Rios, Santos, Jamaicas or a combination of several of them to suit the price and the customer.

You may buy small quantities of the different cheap lines and blend them yourself, or you can give your coffee house a price limit and have them put up the best blend possible at the price.

We think this the best plan as you do not require to bother with so many lines nor keep so large a stock. It is pleasing to note that Canadians as a people drink principally the best grades of coffee, the cheap package stuff, such as is sold largely in the United States, having little or no sale here. This condition of things is better for the seller, as the higher priced article affords a better profit, and they certainly give greater pleasure in the cup to the consumer.

HANDLING.

The first point under this heading is the quantity to buy. Our rule is, to buy only a month's supply at a time and have it shipped in air-tight tins, as when coffee is exposed to atmospheric changes it absorbs the dampness, making the bean tough and rubbery, thus losing its crispness and fresh flavor. Coffee is one article which must be fresh to be as good as possible, so we would say, never buy ground coffee, as the delicious aroma and flavor of a good coffee passes away before it is all sold no matter how tight the tin, and a poor coffee is certainly not improved by being kept ground. If you desire to draw people's attention to your coffee by means of price tickets, put it in a glass dish with a tight-fitting cover.

SELLING.

We now reach the last and most important point in connection with this subject, namely, the selling, for this touches your profit —your living.

The main point in selling is to get yourself and your goods pro- minently before the public. Use every legitimate means by which to get the people talking about your coffee, so that they will think you have the best coffee in your town or neighbourhood. One way to accomplish this is to

ADVERTISE IN YOUR LOCAL PAPER.

A large and expensive space is not necessary as a small one written up in plain, catchy style will often do just as well. Change it often and make quality your strong point. Keep hammering away on quality, quality.

Quote prices occasionally if you wish, but don't cut prices. A cutter generally cuts his own throat first. Have your profit and sell good goods, for that is what tells in the long run.

TO DEMONSTRATE COFFEE.

Another very good way of advertising your coffee is by demon- stration, when possible. Very often a back corner of a store or a small room in connection with a store could be fixed up cozily with little trouble or expense. A few small tables and chairs which can be rented cheaply; a good sized coffee-pot on a gas-burner or stove; clean linen, dainty china, and a plate of five-o'clock tea biscuit on each table, and you are ready for callers. Of course, a demon- stration, to be a success, must be well advertised for about a week beforehand.

Another point is to watch your custsmers' orders and see if they all buy their coffee from you. If you find that any do not, intro- duce the subject in a careful way, ascertain their particular taste as nearly as possible, give them a sample to try and tell them to be sure to let you know how they liked it. If they should forget to do that, ask them yourself and if that sample failed to please give them another blend, and so keep on until you strike something to suit their taste.

Do not keep much coffee ground up ahead. It is, however, a good plan to grind what you think will be needed on Saturday first thing in the morning, so that customers get the benefit of the aroma when they crowd in.

In conclusion, do not get discouraged if results do not follow as quickly as you think they should. Be patient and keep pounding away on quality first and success will be yours eventually.

CEYLON AND INDIAN AT THE PARIS EXHIBITION.

We give the following extracts from Lord George Hamil- ton's report on "the Indian and Ceylon Sections":—

The exhibits of Ceylon occupied the large portion of the eastern side of the Indian pavilion, as well as a considerable space in the grounds, which as before mentioned I was able to allot for this pur- pose. In the Commercial Court the great staple products of the island, such as tea, coffee, cocoa, cinchona, spices, etc., were well represented by exhibits from every important garden and estate in Ceylon, and the adjoining verandah contained a fine collection of plumbago and graphite, shown by the Morgan Crucible Company of Battersea.

* * * *

In the grounds of the Ceylon Tea House, a characteristic pavilion, in which tea and coffee in the cup were sold, soon became one of the most fashionable centres of the Exhibition, and it is gratifying to know that the strenuous exertions of Sir William Mitchell and Mr. J. H. Renton, the representatives of the Ceylon planters to make Ceylon tea better known and appreciated in France and the Continent generally, have met with the recognition that the com- mercial enterprise of the planters so well deserved.

* * * *

The popularity of the Indian and Ceylon exhibits may be judged by the fact that not less than six millions of people passed through the pavilion during the period it was opened to the public. It should be mentioned that the main buildings of the Exhibition, being entirely unlighted had to be closed at dusk, whereas, owing to a wise resolution of my Sub-Committee, the Indian and Ceylon sections were brilliantly lighted by electricity, and could thus be kept open later and give admission to the inquisitive crowds who had little else to see after dark.

From the reports of British Jurors we quote;—

Report by Mr. J. H. Renton,

British Juror in Class 39: Vegetable Food Products.

Coffee.—The only exhibitors of this article were Ceylon and the Madras Presidency. The British West Indies were not represent- ed. Notwithstanding the fact that in Ceylon, owing to the ravages of leaf disease, this article is rapidly disappearing from the list of this Colony's products, the exhibits, though small in number and from only four plantations, were excellent in quality and ap- pearance. One plantation made a very handsome exhibit of Liberian coffee, and the Grand Prix was awarded to Messrs. Lipton, Limited, in this section for their collective exhibit of coffee and cocoa. The United Planters' Association of Southern India made a very good exhibit of coffee, to which a Gold Medal was awarded. Awards were given to all the other exhibitors of coffee.

Cocoa.—Ceylon was the only British Colony that made any exhibit in this article; the exhibit, so far as number of exhibitors was concerned, was not to be compared with the large exhibits made by Ecuador, Guatemala, Salvador, and Mexico; yet the appearance and quality of the Ceylon cocoa was admitted to be very superior, and created a favourable impression. It is much to be regretted that Trinidad and the other West India Islands made no

exhibits. Trinidad cocoa is very much appreciated in France. The export of cocoa from Ceylon has grown from 16,000 cwt. in 1890 to 42,700 cwt. in 1899. Cocoa was exhibited from seven plantations; they all obtained awards.

A very interesting sample of cocoa was shown by the Administrator of the Gold Coast. I understand this was collected from a few experimental trees at Accra. The quality of this cocoa leaves nothing to be desired and if suitable labour can be obtained, there is evidently a future for this product in West Africa. There will not be a large increase in the export of this article from Ceylon, as much more suitable land is not now available in that Colony.

Report by Sir W. W. Mitchell, C.M.G.,
Member of the Ceylon Executive Committee;
British Juror in Class 41: Non-edible Agricultural Products.

Non-edible agricultural products comprised:—

Oils.—Animal and vegetable.

Fibres.—Cotton, wool, ramie, aloe, cocoanut, palmyra, and kitul.

Plants.—Medicinal and oleaginous.

France and her colonies were represented by eleven jurors, and the following countries by one each, *viz.*, Germany, Bulgaria, United States, Great Britain, Japan, Mexico, Peru, St. Salvador Hungary, and Russia.

The products of the various countries exhibiting under Class 14 were examined in a painstaking manner, and the awards of merit were judiciously bestowed on the recipients of them; the proceedings of the jury were characterised by fairness and cordial co-operation throughout.

Essential Oils.—There were several exhibitors of cinnamon, lemon grass, and citronella oils, chiefly from Ceylon. These are used principally for perfuming soap and to a small extent in drugs, and in cooking.

A number of oils used in native medical practice were exhibited. Some of these possess ascertained definite properties, whilst others have traditional repute, but they are of no commercial importance.

Fibres.—Cotton—The exhibits from the United States, as might be expected, were exceptionally fine, and the award of a Grand Prix for the collective exhibit is one that is well merited for its excellence in every respect. Specimens of cotton from other countries received attention, but all of them represented a growth insignificant as compared with that of the United States of America.

Aloe.—Many very fine specimens of aloe fibre were exhibited, but those from Mauritius were remarkable for their excellence; those of Messrs. Rougier, Lagane & Goupille were of a stand-out description, and obtained the award of a Gold Medal.

Ramie.—Several samples were contributed, which gave evidence of the great value that may rightly be attached to this article in future from a commercial point of view.

Thus for the endeavours to perfect the process of decortication, and to separate the fibre from the substances enclosing it, have only been partially successful. A conference on the subject is about to be held, when it is expected that special efforts will be made for the achievement of what is so much to be desired.

Palmyra fibre and kitul fibre were shown, and attracted the attention of those interested in the brush-making industry.

Coir Fibre, Rope, and Yarn.—These are produced from the husk of the cocoanut, and a large export trade is done from Ceylon. The finest range of exhibits was contributed by Messrs. C. P. Hayley & Co., of Galle, to whom was awarded a Gold Medal.

Cinchona.—Some choice specimens of cinchona bark were exhibited, chiefly from Ceylon, and a Gold Medal was awarded to Mr. F. G. A. Lane for succirubra description.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION (CALCUTTA).

The following is a report of the proceedings of a meeting of the General Committee held on the 8th October. Present:—Messrs. A. Tocher (*Vice-Chairman*), W. Brown, A. C. Lawrie, R. Magor, and R. R. Toynbee.

Letter of 26th September, from the Secretary, Indian Tea Association, London, came up for consideration. It was noted among other matters referred to that the British Exhibition at St. Petersburg had been postponed and that the last payment by the Government of India of £1,250 on account of the Paris Exhibit completed the amount due from Government. The informat about the British Exhibition at St. Petersburg was to be passed to the United Planters' Association of Southern India.

In reply to a telegram of 3rd October from the Indian Association, London, enquiring whether any alteration could be m in the estimate of the crop, Mr. Tye has been informed by wire t the Committee were collecting figures of actual manufacture up the 30th September, and in reply to a further enquiry with reg to the new levy, Mr. Tye had also been informed that the amo promised up to the date of the telegram was Rs.33,371-12-9, that a part of this was on condition that general support would given to the levy. It was also stated that further contributi were expected probably on similar terms.

A letter dated Meshed, Persia, 31st August, from Mr. E. G. Fo having been previously circulated, was next considered. In t letter Mr. Foley asks that 15 half chests of Orange Pekoe or N Pekoe should be forwarded to Colonel G. Chenevix Trench, Cons General, Meshed, care of Captain F. Webb Ware, Political Assist Chagai, Quetta. The Secretary was instructed to see that t order was executed.

Mr. Foley's remarks on trade in indigo with Persia were to passed on to the Committee of the Bengal Chamber of Commerce usual. It was noted that Mr. Foley expected to arrive at Que about the 10th October. Letters of 28th and 30th September a 2nd October from Captain F. Webb Ware, Political Assist Chagai, Quetta, were also before the Committee. Under cover these letters Captain Webb Ware forwarded the following do ments:—(*a*) Notes for the information and guidance of mercha and travellers proceeding to Persia or England by the Que Nushki-Seistan overland trade route. Members were to be inform that these documents could be seen on application to the Secreta (*b*) Notice issued by the Agent, Punjab Bank, Quetta, on subject of insurance of goods stored in the Persian caravant-se Quetta. (*c*) Notification issued by His Britannic Majesty's Con in Seistan with regard to the payment of Customs Dues. Cop of this notifications were to be circulated to all members.

Letters of 17th September and 1st October from Mr. Drummond Deane, Stagbrook Tea Estate, Peermaad, Travanco having reference to the manufactures of green teas, were n considered by the Committee. Also a letter of 7th Octo from Messrs. L. C. Baines and H. B. Yuille on the subject green teas for next season. The suggestions made in Mr. Dean letter had been submitted to Messrs. Baines and Yuille, wh opinions were also before the Committee. It was decided inform Mr. Deane that the General Committee were not disposed pay any bounty on fannings or dust. It had not hitherto been do and the Committee did not think it was advisable to make a alterations in the existing rules as regards this point. The Co mittee further were not in a position to sanction the payment freight on green tea to Calcutta. Messrs. Baines and Yuille were be informed that the General Committee accepted their suggest that the selecting of the type of green tea for next season sho be held in abeyance until all samples tendered for bulking had b received and reported on. Letter of 3rd October from the Honor Secretary, Terai Planters' Association, was next considered. this letter a severe outbreak of mosquito blight in the Te gardens was reported, and a request was made that Mr. Mann, Scientific Officer of the Association, should, if it could be arrang pay an early visit to the Terai. Mr. Mann being at present in Darjeeling District, the Secretary was instructed to send him a co of the letter from the Terai Planters' Association, and ask him pay a short visit to the district before his return to Calcutta wit view to advising the Managers of the affected gardens of the st they should take to mitigate the blight.

The Committee next proceeded to consider a notification da 21st September, 1901, issued by the Chief Commissioner of the C tral Provinces under Section 3 of Act VI of 1901 prohibiting fr 1st October, 1901, all persons from recruiting, engaging, inducing assisting any native of India to emigrate from any district of Central Provinces to any labour district otherwise than in acco ance with the provisions of Chapters III and IV of the said A On becoming aware of this notification the General Committee wired to the Chief Commissioner to enquire whether it would followed by any notification under Section 90 of Act VI and telegram in reply was now before the Committee, intimating th

it was not intended to issue any notification under Section 19 of Act VI of 1901. It was decided to address the Chief Commissioner of the Central Provinces pointing out the effect of his notification was to bar half the Province of Assam from recruiting in the manner which planters had followed for a great number of years, *viz.*, free recruiting by specially employed garden sardars. Act I of 1882, which had just been superseded by Act VI of 1901, was gradually being less and less made use of so far as Cachar and Sylhet were concerned. This was recognised by the Lieutenant-Governor of Bengal in Notification No. 2286 of 9th July, 1901, published in the *Calcutta Gazette* of 10th July, of which a copy was to be forwarded to the Chief Commissioner. The special provision in favour of Cachar and Sylhet was of comparatively minor importance as regards Bengal, as recruiting from districts in the Province of Bengal was now very limited for Cachar and Sylhet, which districts looked to the Central Provinces for the greater part of their labour supply. The matter was of pressing importance, as the recruiting season was about to begin. It was decided to postpone the question of dealing with the estimates of the tea crop next year until a fuller meeting of the Committee.

CENTRAL TRAVANCORE.

The Quarterly General Meeting of the above was held on Saturday, 12th October, at Carady Goody bungalow. PRESENT :—Hon'ble Mr. G. L. Acworth (*Chairman*), Messrs. R. S. Imray (*Vice-Chairman*), Buxton Laurie, E. Latter, H. M. Knight, F. Bissett, H. J. Blandford, F. M. Parker (by *proxy*), and W. H. G. Leahy (*Honorary Secretary*).

Notice calling the meeting having been read, the minutes of last meeting were taken as read.

Correspondence.—Read and recorded British Resident's letter No. 2195 of 31st July, 1901.

Read and recorded letter from Mr. J. Thomson of 21st July, 1901.

Read and recorded letter from local Medical Officer of 27th July, 1901.

Read and recorded letter No. 156 from P. M. G., Madras, of 22nd July, 1901.

Read and recorded letter from Secretary, U. P. A. S. I., *re* Government Entomologist's visit to South India.

Proposed by Mr. Imray and seconded by Mr. Leahy:—"That the Honorary Secretary be requested to inform the Secretary, U. P. A. S. I., that this Association will be glad to see Mr. de Niceville as early as possible, and trusts that this District, which was unfortunately not visited by Dr. Watt, will receive his attention first." Carried *nem. con.*

Read and recorded correspondence with U. P A. S. I. *re* American and Foreign Market Funds.

The Honorary Secretary said that the Committee had decided to contribute to the F. M. F. and had drawn out a list of donations for each Estate on the rolls of the Association. These were in addition to what would be contributed to Messrs. A. Yule & Co. in the form of tea, should the Association be called upon by those gentlemen. The subscriptions to the F. M. F. would however be only given in the event of other Associations in South India contributing likewise. It was disappointing to find, that apparently no Association except Central Travancore supported the Fund last year. It is true there were a few isolated subscriptions from individuals in other Associations, but, so far as can be gathered from correspondence, no general Association subscription to the Fund outside Central Travancore was made. This was rather surprising considering the vehement protests made at Bangalore, when it was announced that Central Travancore proposed to retire from the Fund. In reply to enquiries as to what amount other Associations had contributed last year, one Honorary Secretary ignored the question, another said he believed contributions had been made by some of his members, but he did not know how much: a third alleged that he had not called for the subscriptions promised, as there were so many schemes in the air. This last excuse would hardly hold water, as the money should have been paid in to the I. T. A. before 31st December, 1900, whilst no scheme, so far as the Honorary Secretary was aware, was brought forward before April or May in the current year.

Cumbum Agency.—Proposed by Mr. Knight and seconded by Mr. Leahy:—"That Angoor Rowthen should be approached with a view to seeing whether he would be willing to accept Rs.20 per mensem as Agent at Cumbum. This sum to include all expenses." Carried *nem. con.*

Roads.—Proposed by Mr. Leahy and seconded by Mr. Knight:—"To ask the Chief Engineer, P.W.D., to alter the present dates of inspection and payment of planters' roads in the Peermaad District to 15th April and 15th October in each year." Carried *nem. con.*

Asssam Planters.—Proposed by Mr. Leahy and seconded by Mr. Knight:—"That this Association wishes to express its sympathy with the Assam planters in their difficulties caused by the arbitrary action of H. H. the Chief Commissioner and trusts that the protest to the Government of India made by the Indian Tea Association will lead to a final and satisfactory settlement of the labour question." Carried *nem. con.*

Cardamoms.—A resolution on cardamoms was withdrawn as the proposer was absent, and the same did not receive the support of the Committee.

With a vote of thanks to the Chair the meeting terminated.

Papers laid on the table:—

Travancore Government Gazette.
Indian Gardening and Planting.
Planting Opinion.
Circulars—Indian Tea Association.
Do. U. P. A. S. I.
Leeming's System of Coffee cultivation.
Proceedings of Wynaad Planters' Association (2).
Do. Nilgiri do do
Do. Shevaroy do do
Do. Nelliampathy do do

W. H. G. LEAHY,
Honorary Secretary.

THAT "LITTLE DISH."

How we do like a little dish of something nice, served up hot! Charles Lamb would have sold his shirt for a tender suckling pig done to a turn Doctor Johnson used to say that a dish of tea was the most fragrant of life's beverages. "Why, what am I a-thinking of, I shall forget my own name next," said Toby Veck, "It's tripe—the best tripe ever stewed." And his daughter Meg smilingly gave him the basket, in which reposed a hot steaming dish of his favourite meat.

"My wife prepared nice, dainty little dishes to tempt my appetite," said Mr. Henry White, of that beautiful Devon town, Torquay, "but somehow I seemed to have lost all inclination for food, and after sitting at the table trying to swallow a little, I used to say to her:—

"It's no use. I can't eat it. You may as well take it away." This sort of thing soon told a tale, for one can't go without food for long without losing strength. Seeng my condition, a friend strongly advised me to try Seigel's Syrup. He said it had cured him, and might do me good.

"My appetite no longer needed coaxing. I could eat well-nigh everything that was put before me. Each dose seemed to give me life and vigour. To-day, no matter what ails me, Seigel's Syrup puts me right."

That "little dish." in fact is once again the favourite.

"Some three months ago my wife got thoroughly run down. For over a fortnight she could keep nothing on her stomach." Mr. Henry White, when certifying to the truth of this on September 13th, 1900, at his house, 10, Pediford Terrace, Torquay, Devon, does not say what was the matter with his wife.

We know why the "little dish" failed to digest, and we quote the words of the famous physician to prove it: "In the nervous and irritative form of dyspepsia, this is a very prevailing symptom. As is also a sensation of sinking, as if the stomach required food, due to the fact that the food has left the stomach in a half-digested condition."

Who could enjoy a "little dish," when the food could be but half-digested? "She was troubled a good deal with wind, and seemed to

be losing her strength. I fetched a bottle of Mother Seigel's Syrup from Holloway's Drug Stores, and she commenced taking it. In a short time she was quite well again." H'm, some men would now sell their shirt for a bottle of this remedy.

This essay, then, upon "little dishes" proves that while man and woman can in no wise *always* relish that favourite dish, yet a cure is ready to hand. On that has served men and women alike for more than the past thirty years.

MARKET REPORT.

[*Per Mail advices of 4th October* 1901.]

COFFEE.

The London Commercial Record says:—There is no new feature of interest to report in this market during the part week; supplies at auction were again limited in extent and included a considerable proportion of parcels in second hands. A fairly steady demand has prevailed, and prices are unaltered. In "futures" the tone was stronger and December Santos advanced to 30s 6d, but latterly there was a decline of 9d to 1s per cwt., with a partial recovery at the close. We quote:—

London	Santos ...	Dec. delivery	... 29s 10½d.
New York	... No. 7 Rio...	,,	... 5·10 cents.
Hamburg...	... Santos ...	,,	... 30 pf.
Havre ...	... Santos ...	,,	... 37½ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	15,941	17,385	39,784	31,047
	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	15,341	12,517	23,028	15,829

The preceding figures exhibit— Tons.

In the Imports an increase this year of	8,737
Home Consumption an increase of	2,824
Export an increase of	7,199
Stock a decrease of	1,444

Auctions this week have gone off as under:—

Ceylon.—*Plantation*—40 casks 15 tierces 13 barrels 24 bags nearly all sold—smalls 38s to 42s 6d, fine blue smalls 69s to 69s 6d, middling to good middling 52s 6d to 58s, peaberry 45s to 61s

East India.—1,347 bags 144 cases partly sold, *Mysore*, overtakers 64s to 64s, bold 68s; *Coorg*, smalls 36s to 44s, low middling to middling 43s to 50s, common bold 50s to 54s, fair 69s, peaberry 50s to 69s; *Neiligherry*, smalls 41s 6d, middling greenish 50s to 52s, bold 62s to 66s, peaberry 53s to 62s.

Costa Rica.—197 bags about half sold, good middling colory 65s 6d to 67s.

Guatemala.—1,061 bags catalogued and 500 bags sold, smalls 33s to 44s 6d, bold 62s 6d to 73s, peaberry 43s to 67s 6d.

Mexican.—250 bags offered partly found buyers, smalls 37s 6d to 44s, low middling 45s to 45s 6d, middling 57s, bold 71s 6d, peaberry 62s.

Colombian.—682 bags sold, partly damaged smalls 35s 6d to 39s 6d, ordinary to good 34s 6d to 38s, low middling brownish to middling 43s to 46s 6d, bold 52s 6d to 54s, peaberry 38s to 45s 6d.

Ecuador.—Of 115 bags 39 bags sold, ordinary pale 33s to 33s 6d.

Brazil.—Of 4,117 bags Washed Dumont Santos 2,335 bags sold, smalls 29s 6d to 34s, medium 33s to 34s 6d, fine medium blue 48s 6d, bold 39s to 40s, fine bold blue 60s, peaberry 36s to 63s 6d. 511 bags Unwashed, quay terms, sold, foxy brownish 34s, peaberry 34s.

TEA.

Indian.—Auctions were much larger, totalling 51 200 packa compared with 33,900 packages in the week before and 43 packages a year ago.

The selection was a very useful one, the tendency as rece being towards improvement in the general quality with fe choice Assams about. A good demand was experienced; desir ordinary kinds and the best finding the strongest market. Th is not much change to note in values, but the lower grades h continued to creep up, while here and there among the hig priced lines those without special point were a little ten particularly towards the close.

For 41,300 packages on estate account 8½d per lb. was real against 8¼d per lb. for 36,200 packages, and 9¼d per lb. 35,000 packages in the two preceding seasons.

Latest cable advices confirm reports as to the shortage of crop, Assam especially, owing to unfavourable weather, hav fallen much below anticipations in the past month. The m manageable supplies, together with their generally taken charac appear to be stimulating business throughout the country. September deliveries were 10,452,000 lbs. *versus* 9,832,000 lbs. year, while for the three months from the 1st July they v almost 3 million lbs. above those in the corresponding perio of 1900. The London bonded stock of British-grown Tea, accord to the figures issued by the Tea Brokers' Association, is now ab on a par with that of the previous year.

Ceylon.—A similar quantity was again brought forward, 18,900 packages, as opposed to 19,000 packages in the forego week and 22,600 packages twelve months since. A firm t prevailed for nearly all descriptions. Teas up to 7d per lb. above 10d per lb. being in greater request and usually dea Medium Broken Pekoes were scarcely so well supported and pa irregularly and slightly easier. Quotations for fine and ch parcels were well maintained, the most attractive bringing so what enhanced rates.

The average is 8d per lb. On the 27th ultimo it was 7⅞d per and 7¼d per lb. in 1900.

Java.—Nearly 700 packages of direct import were submit The bidding was a little uneven, but on the whole prices did alter much.

Deliveries.—Clearances of all tea (on which duty has b paid) from the London warehouses, as per official returns are, *vi*

From 1st to 30th September, 1901 ...		...	16,789,638 lb
Do.	do.	1900 ...	... 16,124,142

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	44,045	7,121	51,166
Ceylon	17,173	1,723	18,896

Total	61,680	9,070	70,750

Also 937 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated October 4th, 1901, says:—

Quantity brought to Auction in London from 1st June to date.

	Indian	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	371,340	448,075	24,776
1900-1901	359,531	476,222	18,530

51,609 *pkgs* Indian
19,207 „ Ceylon
688 „ Java
} Total 71,504 packages were offered in public auction this week.

Figures to the 30th September given below show that the imports of Indian tea from the commencement of the season to date are about 3½ millions below the same date last year, while those of Ceylon from 1st June are 7 millions less

Indian.—Although sales were somewhat heavier than last week, the quantity was not too much for the existing demand, and with a very strong market prices were again a trifle dearer. Quality from Assam and Darjeeling continues very fair, whilst Dooars are now commencing to show a distinct improvement. The official wire gives exports to U K. for the second half of September (including Chittagong 952,470 lbs.) as 12,072,470 lbs, against 11,050,000 lbs. same period 1900, making the total from 1st April to 30th September as 72,991,800 lbs., against 76,030,000 lbs. in 1900. Averages:—"Beheating," 1/3¾; "Jaipur," 1/2½; "Amal. T Est. Lattakoojan," 1/2

Week's average of New Season's Tea sold on Garden Account, 1901, 40,835 pkgs., av. 8·47d. 1900, 36,775 pkgs., av 8·08d.

New Season's Tea sold on Garden Account 1st June to date, 1901, 258,188 pkgs.. av. 8·45d. 1900, 287,062 pkgs., av. 8·19d.

Ceylon.—With a good general demand all grades passed very steadily, everything being fully ¼d. per lb. above last week's rates, except perhaps medium broken pekoes, which could occasionally be purchased at rates then current The official wire gives exports to U. K. during September as 6 million pounds, against 5 millions same month last year, making the shipments to end of the month 79,750,000 lbs, against 86,500,000 lbs. last year. It also estimates the shipments for October as 8 millions, against an actual shipment of 7,500,000 lbs. during October last year. Averages:—"Carolina T Co. Goatfel," 1/2¾; "Portmore T Co.," 1/-.

Average for week 8·03d., against 7·15d. same week, 1900.

Ceylon Tea sold on Garden Account 1st January to date, 908,136 pkgs.. av. 6·68d. 1900, 975,812 pkgs., av. 7·16d.

Java.—The few Javas brought forward were all of direct import, and included some teas of very fair quality, good averages being made by the following Estates: "Goalpara," 9½d.; "Perbawatte," 9d; "Djattie Nangor," 7d. The teas sold well, the tendency being towards rather better rates.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16

In our Circular dated 20th September, the average for Ceylon Trade Auction should have read 7·31d, not 6·31d. as printed.

COCOA.

The auctions on Tuesday offered 2,687 bags, and barely 400 bags sold, prices being about unchanged. Of 256 bags Trinidad only two lots sold—middling 66s. Of 84 bags Grenada, 24 bags sold—good 63s. 112 bags Surinam about half sold at 61s to 64s. 3 bags, Seychelles sold at 56s 6d. 3 bags Dominica, 84 bags Jamaica, 49 bags Costa Rica, 215 bags Bahia, 39 bags Para, and 308 bags Haiti were bought in. Of 1,525 bags Ceylon, about 300 bags sold small 51s to 55s 6d, dull brownish to fair 57s to 64s 6d, good to fine 70s to 86s.

COCOA POWDER.

At public sale on Tuesday, of 240 packages Dutch 30 packages sold at 5d to 10½d. 23 packages English and 8 cases French were bought in.

PEPPER.

Black.—A quiet market and prices close a little easier. Sales of fair Singapore have been made on the spot at 6 1/16d. For arrival no transactions reported.

Wednesday's auctions catalogued 69 bags Singapore, which sold at 6 1/16d per lb cash, less interest.

The shipments of Black Pepper for the month of September compare as follows:—

	1st-half.		2nd-half.	
	1901.	1900.	1901.	1900.
	Tons.	Tons.	Tons.	Tons.

Total	360	590	350	120

GINGER.

Cochin.—A better feeling has been noticeable during the past week than had been the case recently, and a really good business has passed privately. Auctions offered only 11 cases bold and medium cut and scraped, which were bought in at 95s per cwt.

Privately Cochin rough washed has realised 39s to 41s 6d, and Calicut rough sorts 38s 6d per cwt, the extent of the week's business summing to about 3,000 bags.

Jamaica.—76 barrels about half sold at steady prices—good ordinary to middling washed 38s 6d to 41s per cwt

CARDAMOMS.

A good business has been done in the seed since the auctions to 2s 4d per lb., and 2s 6d is now asked.

CINCHONA.

At to-day's Amsterdam auction the offers consisted of 6,155 bales 307 cases = 577,375 kilos. Java cinchona-bark, containing 28,941 kilos., sulphate of quinine, of which 90,854 kilos. was druggists' bark, containing 2,313 kilos. Q.S., and 486,521 kilos. manufacturers' bark, containing 26,628 kilos. Q.S., or an average percentage for the manufacturers' bark of 5·47 per cent., against 5·68 per cent. in the August auction, and an average of 5·26 per cent. for the ten auctions held in 1900.

QUININE.

A considerable amount of business has been done this week, and sales on Tuesday of 60,000 oz., on the basis of 1s per oz. on the spot, were reported; but there was much dubiety about the transaction, which, however, turns out to have been perfectly genuine. Yesterday the market was better, and the price stood at 1s 0¼d to 1s 0⅜d for some time, but the market closed with the quotation at 1s 0⅜d. Owing to the Amsterdam auction opening so well (8c.) the price jumped up suddenly this morning, and business was done at 1s 1d, while the closing quotation on 'Change was 1s 1¼d. For December 1s 1½d per oz. has been bid and refused. As we close for Press our Amsterdam telegram comes in reporting the advance of the unit to to 8·25c., or 10 per cent., so that an official advance in quinine is likely.

(AVERAGE FOR ALL INDIA 8·55d., OCTOBER 4TH.)

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 8th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, 30*th October*.—*Weather*—Occasional heavy showers continued up to Sunday evening, on which evening and the evening previous the rain came down very heavily. A characteristic of these N.-E. showers is that they come down at the rate of an inch in ½ an hour, sometimes more, and cause a great deal of "Wash." The rain seems to have passed off now. For the past two days the sky has been perfectly clear, and it has been chill. Out West leaf disease has been bad in parts. On the East there has been no severe touch of it yet, but crop this side is ripening later, so it may come on badly afterwards. All this rain has been a good thing for the paddy fields. *Interesting item*—Annual Inspection of "B" Co., Coorg and Mysore, Rifles passed off successfully on 22nd instant.

THE AUSTRALIAN TEA DUTY.

Alert Ceylon.

We announced recently that it was proposed to levy a higher duty on tea imported into Australia. Ceylon has already taken action in regard to this matter. On the 12th ultimo Messrs. Curfield, Lampard & Co. of Colombo, wrote to the Chairman of the Ceylon Chamber of Commerce urging that the proposed Federal Duty will act so distinctly against India and Ceylon to the benefit of China, that some endeavour should be made at once by the Colombo and Calcutta Chambers to get the whole question of the Tea Duty held over until Ceylon and India have had an opportunity of laying before the Federal Government their reason for making such a request. It was pointed out that the real effect of the Duty—if carried as proposed—means lowering the class of tea consumed in Autsralia. It will be an immense gain to

China, the largest producer of the commonest teas, and most detrimental to Ceylon and India, who together produce the whole of the good and fine tea now being imported. If the duty were uniform upon all teas, there would be no necessity for any interference in the Tariff question, by Ceylon or India, but an *ad valorem* duty is so manifestly against British interests and in favour of China that the above firm considered it the duty of the Chamber to move in the matter at once. The Chamber of Commerce promptly addressed the Colonial Secretary, Ceylon, on the subject. On the 15th instant it addressed him to the following effect :—It is understood that the Federal Government of Australia proposes to levy a duty of two pence per pound, *plus* twenty per cent. *ad valorem*, and the new duties are to come into force forthwith. The duties hitherto levied in the various Colonies were as follows :—

Queensland	6d. per lb.
Victoria, South Australia, and Tasmania ...	3d. ,, ,,
New South Wales	1d. ,, ,,
Western Australia	*Free.*

Ceylon exports for the year 1900 were as follows :—

	Lbs.		Lbs.
To Queensland ...	774,713	To Tasmania ...	145,710
,, Victoria ...	5,410,338	,, N. S. Wales ...	6,024,897
,, South Australia ...	1,651,196	,, W. Australia ...	522,469

For customs purposes, the average value of this tea has been taken as 36 cents per pound, but as a matter of fact, the class of tea exported hence to Australia is usually of good medium quality, and may be taken as worth nearer 40 cents or 8d. per pound. From China a certain quantity of low grade tea is imported into Australia, the value of which would probably average 3½d. to 5d. per lb. The incidence of the proposed taxation would be as follows :—1 lb. of Ceylon tea at 8d. per lb. introduced into South Australia would pay a duty of 2d. *plus* 20 per cent, or say 1½d., in all 3½d., as compared with 1 lb. of China tea at 4½d. per lb., which would pay 2d. *plus* 20 per cent., or say ¾d., in all 2¾d. only, as against 1d. per lb. hitherto common to both. It is feared that the result of the *ad valorem* taxation now proposed will be gravely to the disadvantage of Ceylon and Indian, that is to say, of all British-grown teas—practically amounts to a differentiation of duty in favour of China as against such teas. If the duty were uniform upon all teas, there would be no necessity for any interference in the Tariff question by Ceylon or India, but an *ad valorem* duty is so manifestly against British interests and in favour of China, that it is earnestly hoped that the Government of Ceylon will take prompt steps through the Secretary of State for the Colonies (or as may seem best) to secure at least the postponement of the new duty, until these views can be laid before the Federal Government of Australia.

There is room for some little doubt as to what the new duty is to be, for, though Reuter gives it at 2d. per lb. *plus* 20 per cent. *ad valorem*, the Australian Minister of Customs recently stated that it would be 2d. on the very low teas worth 2d. per lb. and less, and 20 per cent. *ad valorem* on higher qualities. Even taking it that Reuter's version is correct, it must be admitted that the proposed duty is not heavy ; it compares very favourably with the British duty. Hence, perhaps, the remark that if it were uniform on all teas there would be no necessity for interference. The reply may well be, however, that as the Ceylon planters are really asking that China should pay as heavy a duty upon low-class teas as Ceylon upon high-class leaf, the request is not altogether reasonable. However, the Chamber pointed this out in preference to arguing that any enhan ment of duty must necessarily have the effect of enhanc prices and thus restricting demand. The Ceylon Cham has invited the co-operation of the Bengal Chamber, has apparently overlooked the representatives of Mad trade. True, the quantity of tea grown in Southern Indi not yet important, but it is increasing year by year, and invitation to the Madras Chamber of Commerce to give support would at least have done no harm. Apparently, the Indian Tea Association has not been addressed on subject ; though it has since taken action and expressed hope that time will be permitted for it to submit its vie While, therefore, congratulating Ceylon upon its alertness taking this matter in hand, we cannot altogether approve its method.

We also notice that in acknowledging the receipt of letter of the Ceylon Chamber of Commerce, the Colon Secretary observes that the following telegram was sent the Governor-General of the Commonwealth of Australia the 16th instant :—"Ceylon Chamber of Commerce rep sents that proposed *ad valorem* duty on tea will give che China tea great advantage over British-grown tea. Th would prefer higher specific duty and beg postponem until they and India can represent their views." The Cha ber's letter does not contain anything to warrant the seco and last sentence ; so we must presume that there has be some semi-official or non-official communication betwe Ceylon merchants and the Local Goverment. As the Sec tary of State has also been informed of the action tak Ceylon's "case" is likely to get a fair hearing. We dou however, if any good result will follow. As regards t Secretary of State, at any rate, it is difficult to concei how he can press an objection to an Australian du that is considerably lighter than the duty now levied on t by the British Government ; nor can he very well oper advocate the acceptance of the principle of differential duti the application of which in the case of the British tea duty now so conveniently masked. However, Ceylon has do well in moving promptly, and the outcome of its represen tions will be awaited by Indian tea-planters with no lit interest.

BOARD OF TRADE RETURNS.

SEPTEMBER, 1901.

From tables showing the Imports, Consumption, and E ports of the undermentioned articles for the 9 months endi September 30 in the present and 2 previous years, compil from the Board of Trade Returns, with stock in U. K. September 30 we take the figures given below :—

Coffee.—Stocks have assumed healthier proportions, b are still somewhat bloated :

—		1899.	1900.	1901.
Import	cwts.	907,057	695,563	838,259
Home Consumption	,,	196,691	210,476	254,355
Export ...	,,	458,842	381,321	543,802
Stock ...	,,	521,000	386,000	355,000

Cocoa (Raw).—Stocks have risen in spite of increase of consumption. Comparing last year and the present there has been little development of imports, but since 1899 a very considerable increase has been recorded.

—		1899.	1900.	1901.
Imported	lbs.	37,935,179	43,146,779	43,691,019
Home Consumption	,,	25,974,865	28,865,552	32,749,077
Export	,,	8,701,495	7,551,760	8,428,905
Stock	,,	18,341,000	18,028,000	19,305,000

Cocoa (Prepared).—Since 1899 Imports have increased by 70 %, Home consumption by nearly 50 %, and Exports by nearly 10 %, while stocks have shrunk to little more than $\frac{3}{8}$ths of their former proportions.

—		1899.	1900.	1901.
Imported	lbs.	3,697,108	5,280,856	6,144,544
Home Consumption	,,	3,978,051	4,693,708	5,695,721
Export ...	,,	572,207	691,129	626,715
Stock ...	,,	407,000	166,000	153,000

Tea.—The statistics are satisfactory, but stocks continue large.

—		1899.	1900.	1901.
Import	lbs.	187,022,199	197,996,766	190,928,332
Home Consumption...	,,	178,562,356	188,113,805	190,568,971
Export ...	,,	23,172,557	32,008,863	32,100,675
Stock ...	,,	83,646,000	92,801,000	89,018,000

MR. P. C. LARKIN

Unfriendly critics have judged from letters addressed to the Canadian, Ceylon, and Indian Press that he is a man given to self-advertisement. Let it stand at that. Where is the harm, so long as the advertising is of a genial, business-like kind, as it is in Mr. Larkin's case ; and especially when his success is closely connected with the cultivation of demand for Indian and Ceylon tea? In London recently, Mr. Larkin stated that he had been originally in the Japan trade and was thoroughly acquainted with the workings of that trade and the qualities of the teas, but for some years now he had been devoting himself to the pushing of British-grown teas, and, during the last three years, especially to Ceylon green teas. He was convinced that in time they would, because of their superior merits, entirely displace Japan teas in the North American continent. They were, he considered, better teas. As Canadian consumers lean greatly towards Japan teas, Ceylon could scarcely have a better champion. Mr. Larkin remarked however, that if Ceylon now allowed trade to take its natural course it might be twenty years before they obtained the command of the Canadia market. If they took his advice and stimulated the trade, it might be done in two or three years ; but that it would come about sooner or later he had no doubt whatever. When he first started handling Ceylon greens they were laughed at as a new article generally was ; but that stage soon came to an end, and now in the Province of Ontario practically all the wholesale grocers, about forty in number, were obliged to handle these teas in chests. At Toronto during the eight weeks he had been absent the sales were 8,000 lbs. During the corresponding eight weeks of last year they were 2,000 lbs., odd. At Montreal, taking the same periods, the figures were 1,800 and 18,000 lbs. At Boston in the States the rate of progress was not quite so rapid, but there also it was satisfactory, the sales being 2,000 lbs. and 4,600 lbs. For next year the increase he had no doubt would be equally encouraging, and he repeated that the prospects for green teas were infinitely greater in the districts he worked than those for black teas. If he was asked why Ceylon greens took better than Japan greens he would say that while similar in flavour they were stronger. The agricultural population in Canada seemed to take naturally to the green variety, and kept the tea simmering on the hob all day. It was found in practice that the Ceylon make "boiled" very well. Many of the country people he had come across considered Ceylon tea "herby" and would have none of it. In reply to a question Mr. Larkin said he had never known Japan and Ceylen tea blended, and he also stated that it was not his experience that high-grown teas were more acceptable than low-grown. The teas from Dewalakande and Arapolakande were of excellent quality, and the finest British-grown green tea he had ever tasted was a sample from a Cachar garden.

In general terms he thought, and Mr. Mackenzie confirmed this, that both in the States and Canada the imports of green or unfermented tea were about three pounds to one of black or fermented tea. Incidentally Mr. Larkin remarked that the wonder was to him that any tea was drunk at all in the States under present conditions, as it was such unpalatable stuff as generally seryed, while the coffee was so good! He maintained that "five years of thorough good work and Ceylon would drive Japan out of the market." "And by the end of the first year they would be getting returns that would cover their outlay, in the diminution of stocks of Black Tea in London, and the higher prices which would follow. And it must be borne in mind that if it is a big sum they are being asked for, they would only have to shell out for a limited time, while we who distribute must go on advertising as long as we sell. They need not advertise once their tea has made its name," but he estimated that "from £80,000 to £100,000 a year would have to be spent, but if the Indian people will join as I have been asking them, Ceylon will not need to be at the whole expense of that" These are figures to give pause to any man less enthusiastic than Mr. Larkin. First, the money would have to be raised ; and, then, comes the question whether, spent as he would have it spent, it would be a good investment.

FOREIGN TEA IN INDIA.

We give to-day statistics of imports and exports of Foreign Tea. For these we are indebted, through the Secretary of the U. P. A. S. I., to the Director-General of Statistics. These statistics and those published last week with reference to foreign Coffees are, we believe, the most complete, as well as the most concise ever published in India to show the trade done here in other Teas and Coffees than those grown in the country itself.

NOTES.

St. Petersburg Exhibition. It is now announced that this Exhibition will be opened in June next.

Indian Tea Exports. Exports to the United Kingdom to the 24th October are :—87,462,068 lbs., against 98,431,209 lbs. at the same date in 1900.

Tea in London. Latest reports show that a large quantity was brought to auction, and with a slacker demand, prices suffered a distinct reduction.—For Ceylon tea there was less competition, but prices were fairly maintained.

The South Travancore Tea Co., Ltd. This Company has shown the enormous net profit of £78, and has carefully carried it forward. As the 1900 balance was £574, the Company does not appear to be in any hurry to pay a dividend. It would be interesting to know how much the Managing Agents have made out of its business.

Tea "Breaks" in Colombo. At the extraordinary general meeting of the Colombo Tea Traders' Association, it will be proposed by Messrs. Crosfield, Lampard & Co., and seconded by Messrs. Odell & Co., that, in view of the increased number of lots offered for local sale, the limit for big breaks should be raised from 700 lbs. to 1,000 lbs.

Amsterdam Bark Market. Further particulars of the bark auctions which were held in Amsterdam early in October, have come to hand, and show that the bark was divided as follows: *Succirubra*, 90,854 kilos.; *Ledgeriana*, 389,880 kilos.; *Officinalis*, 10,155 kilos.; *Calisaya*, 4,987 kilos.; hybrid and other kinds, 81,499 kilos. Of the total thus formed, root bark formed 65,938 kilos.

Mr. Foley's Record Ride. A Quetta telegram states that Mr. Foley, the representative of the Indian Tea Association, arrived there on Wednesday, the 23rd ultimo, after a record ride of one thousand miles on one horse, riding from Meshed. The journey lasted six weeks, and actual travelling occupied thirty days. Mr. Foley reports that the route from Nushki to Robat is fit for wheeled traffic.

Assam Planters and the C. C. With reference to the memorial of the Indian Tea Association to the Government of India, regarding Mr. Cotton's attitude towards the tea industry of Assam, it is understood that the Assam Branch Association is approaching the Viceroy independently with special reference to the Hon. Mr. Buckingham's analysis of the new Form "A" required by Mr. Cotton.

Cinchona. During the three months ended June the exports from British India were :—

	1901	1900	1899
Lbs. ...	666,252	1,321,682	931,456

In the drug auction 4 bales of flat Calisaya sold at from 1s. 3d. to 1s. 3½d. per lb. for country damaged, and for 23 serons of Huanoca quill 6¾d. was paid, and 1s. 2d. for 3 serons good bright Loxa quill.

The St. Louis Exhibition. *Indian Gardening and Planti* urges that planters should avail the selves of the St. Louis Exhibition to make a bit of a spla with Green Tea. As our contemporary says, "Our gre teas will take a lot of beating when Mr. Drummond Dean process is universally adopted. The soil in certain distri appears very suitable." Already three of Mr. Deane's stea ing machines have been purchased by local agents acting behalf of tea companies.

Coffee in London. Latest Home advices show th auctions of Coffee have been on unusually limited scale, and as supplies comprised a consid able proportion of second-hand parcels, the demand was l active and only attractive qualities met with much competitio The market for "futures" has been strong and prices ha steadily advanced and close at the best. Quotations: October 31s 6d, December 31s 9d, March 32s 6d, May 3 9d, July 33s 3d, and September 33s 3d.

Java Quinine. The exports of quinine from Ja during May amounted to 135 cas 50 of which were shipped to Rotterdam, 5[illegible] to the Unit Kingdom, 30 to New York, 2 to Hong-Kong, and 3 Japan. From January 1 to May 31 the shipments ha been :—

	1901	1900	1899	1898

So far this year the U. S. A. has received 579 cases, Holla 31 cases, United Kingdom 41 cases, and Japan 31 cases.

Indian Tea: Regulation of Supplies. Calcutta advices state that it h been decided to keep the remaini Tea sales this season within reasona limits, and to regulate supplies. On Friday, last wee 20,600 packages were catalogued. This was on the 24 ultimo. To-morrow's quantity considered well within the bu ing power of local bidders, and an improvement in pric was expected. London telegrams received report a stro advancing market, with a continuance of the arrangemer made amongst sellers to regulate the quantity offered.

The Question of the increased Cess. A special London telegram, dat 22nd ultimo, to the *Times of Ceyl* states that the Tea and Produ Committee have considered a letter from the Planter Association, of Ceylon, proposing the increased cess; and a of the opinion that the necessary unanimity is unobtainab at present. They think the existing allocation of £12,0 for green tea sufficient for immediate requirements, but th consider a five-cents bonus inadequate, with black tea present prices.

A Pound of Tea. Correspondents of the Londo *Daily Chronicle* have been dilating the "dishonesty" of tea sellers who weigh paper along with t tea in the scale. One man even says that no respectab grocer does such a thing. This sort of writing does no go to the planters. To weigh tea in a bare, and often dirty, sca would certainly be no improvement on the present syste which is fairly general. Many respectable grocers make rough allowance for the weight of the paper, but the wh

difficulty is capable of a very simple solution. All that is needed is that when the grocer puts the sheet of paper for the tea in the one pan of the scales, he should put an identical sheet of paper in the other, and then the weights!

Calcutta Tea Sales. The first sale after the Poojah holidays was held on Friday the 25th ultimo, about 20,000 packages being catalogued, against 21,000 packages in last year's Poojah sale. The offerings generally were of a good useful character, but without anything really fine, Assam and Darjeeling districts being rather sparsely represented. We have had several enquiries lately for really good Darjeelings, and think satisfactory values would be obtained should any be offered. A strong and active tone prevailed throughout the sale, teas under 6 annas being ¼ to ½ an anna dearer, other kinds, though somewhat irregular, remaining about the same. There was a fair demand for the Colonies. Bombay buyers are still quiet.

Methods of Pushing. In a recent letter to a Colombo contemporary Mr. Wm. Mackenzie remarks:—Of course there is ample room for difference of opinion as to methods. Some believe in large expenditure at great exhibitions. I *do not*. What could have been better done than the Ceylon Court at Paris last year? I see the increase of shipments from Ceylon to France is 15,000 lbs. this year as compared to last. I see one writer went twelve times round the world without discovering "a man who required money to induce him to accept a free gift." Mr. Renton without going once round the world discovered many He says "I tried hard to do without the cash subsidy. I wished to make the subsidy all tea, but I found it impracticable."

The Tea Expansion Scheme. Judging from the crowds that are surrounding the doors of the premises of the Indian Tea Expansion Commission in Canning Street, at all hours of the day, a roaring business seems to be going on both in the leaf and the liquor, says *Capital*. During last month, when the start was made, no fewer than about 50,000 pice packets of tea were sold, and this month's returns will be on a larger scale. The Commissioners seem to be going about the expansion business in the proper style. All the railway lines in India will by and by be able to supply their passengers with tea, and the habit of tea-drinking, once formed, is never left off, but tends to become contagious. At the end of the three years Messrs. Andrew Yule & Co. will have a fine Indian tea business to take over into their own hands.

The London Tea Market. In their weekly special telegram dated 24th ultimo to Colombo Messrs. Gow, Wilson & Stanton report that the market generally shows a fractional advance and that for fine teas generally is easier, while the market for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 6d (a farthing up), and the average price of Ceylon tea sold on garden account this week was 8d (also a farthing up). The average of the corresponding week last year was 7½d. Reuter reports that there is a good demand for common Ceylon teas. Fair Pekoe Souchongs are quoted at 5¼d (a farthing up) and the average for the week is 8d (also a farthing up), 20,000 packages of Ceylon tea were offered for sale and 18,000 were disposed of; while of the 35,000 packages of Indian tea offered, 33,000 found purchasers, at an average of 8¼d per lb. (⅜d above last week).

The Kajang Coffee and Rubber Company, Ltd. The Kajang Coffee and Rubber Company (Limited) has been registered in London with a capital of £23,000 in £1 shares. The object is to acquire (1) the West County Estate in Selangor, on which the business of growing and dealing in coffee, tea, rubber, and fruit, and prospecting for minerals is now carried on by A. A. Allen, F. R. Hicks, Frances M. Morten, Florence C. H. Morten, and E. B. Skinner, as Allen & Co.; (2) the Belmont Estate, also in Selangor, in which a similar business is carried on by the Hon. E. Field, M. S. Parry, and C. W. Prosser; and (3) the Weld's Hill Estate in Selangor, on parts of which a similar business is carried on, and other parts of which are being developed for building purposes by the same persons, and to carry on the abovementioned businesses. There will be no public initial issue. The first directors are C. W. Prosser, A. A. Allen, E. Fielding, and F. R. Hicks.

The World's Coffee Crop. In report dated October 3rd Messrs. I. A. Rucker and Bencraft say:—The enormous receipts current point to a crop even in excess of the estimates, but crop movements are fickle, they hardly ever run in the same groove two years consecutively, and figures which appear probable to-day, may look less probable later on. The cultivation of coffee in the Brazils covers a huge area, and estimates have been so erroneous, that they have lost their charm. It is more fashionable now to follow receipts, and up to the present receipts are altogether against the bull. As regards the next crop, it is too early to make guesses, but in some districts the prospects are said to be unsatisfactory, in others they may be good or fair. The problem is, will the next two crops on the aggregate give too much, enough, or too little. To-day the last contingency appears remote, beyond that we should not care to go. The basis of about 29s for good average Santos has been, and is, attractive to traders. The heavy advance in mild coffees appears for the moment to have quieted demand, but as stocks diminish rapidly, orders no doubt will be current again before long.

Coffee, etc., in East Africa. The following extracts from the prospectus of Blantyre and East Africa, Limited, will interest many of our readers:—"Blantyre and East Africa, Limited, has sprung from an amalgamation of some of the best Planting Interests in British Central Africa. The main objects of the Company are the cultivation of coffee, tobacco, rubber, chillies, capsicums, sugar, tea, cocoa, camphor, and other products. The (Scottish Central African Syndicate's) land under coffee amounts to over 3,000 acres, and only costs the Company an average of about £13 5s. per acre or £39,970. There are also included 154,385 acres of uncultivated land, costing on average about 1s. 4d. per acre, or £10,047, although part of this acreage, being Township blocks, is worth about £100 per acre. Central African coffee has already made a great name for itself in the coffee market, and this new Company, with its Experienced Staff, and with the economies and improvements to be effected, should give excellent results and substantial Dividends in the near future, for coffee is indigenous, the quality is excellent, while labour is plentiful, and costs under twopence per day." King Coffee has some loyal subjects still!

Coffee in the United States.

The *American Grocer* of 25th September reports :—The market has held very steady and closes firmer than last week. The enormous burden of supplies is reflected in the fact that receipts at Rio and Santos to September 21 were 1,756,000 bags more than for the same time last year, and that the total visible supply is getting close to 9,000,000 bags, being on September 18,654,801 bags. Deliveries continue large enough so as to warrant the conviction that jobbers are willing to carry liberal stocks on the present range of cost. No. 7 Rio closed at 5¾c., No. 3 Rio at 7¼ @ 7⅜c., No. 4 to 6 Santos at 6⅝c. (store terms), c. and f., and No. 5 Santos at 6⅜ @ 6½c. Sales of mild coffee from September 6 to 20 include 10,652 bags Maracaibo, 6,518 bags Central American, 1,044 bags Mexican. and 755 bags Laguayra. Padang holds as last quoted—14 @ 18c. for Interior, 24 @ 28c for fancy marks, and higher for extra fancy ; Mocha, 15 @ 18c., and higher for extra fancy ; good Cucuta, 7½c. ; choice, 10½ @ 11c., and 1 @ 3c. higher for extra fine style and color ; better grades of Central American, 9½ @ 13c., and higher where style and color are particularly attractive ; and this remark applies to all coffee. There is a nominal market for Bucaramanga ; Bogota, 10 @ 13½c., and little here.

GENERAL ARTICLES.

INDIAN COFFEE.

Reports from India concerning the progress of the various crops in which Mincing Lane is interested continue to excite general attention, says the *London Commercial Record*, for there appears to be some chance that after all the great damage done to the young plants by the prolonged drought will to some extent be remedied. Good rains, occasioned by the North-West Monsoon, have visited a large portion of India, and although they have failed to avert partial destruction of the growing crops, they have arrived opportunely enough to dispel a threatened total failure. But at the best the result must be regarded as greatly disappointing to planters, who in many instances have had to contend with small yields, last year, and who, in spite of the improved statistical position—from a bull's point of view—have been compelled to accept very low prices. Coffee planters, for instance, have suffered severely from the unsatisfactory state of affairs, and they are now even more affected by the possibility of a second crop failure. Their position is generally regarded as precarious, unless indeed the London market will assist them by paying full prices to overcome the financial difficulties in which they have been involved by a succession of small crops. Fortunately, however, spot values of fine East Indian sorts have gr improved lately, and there seems to exist a very fair prospect further rise, if planters can be prevailed upon not to press t Coffee upon our market in the same reckless manner in which forced it on us during the last season. Prices had then to give under the sheer weight of Coffee, but a judicious feeding of market this year would, in our opinion, result in a steady ris values. The lack of Coffee should render such a mode of proc ings very easy, unless planters should be forced by circumstanc realise their crop at the earliest possible moment. We are told of all Coffee districts in India South Coorg has suffered the m the smallest crop on record being expected there, whereas N Coorg will probably gather one-third of an average yield, My hardly one half and all the other districts are hoping for about half of the usual gathering. This is indeed a very serious matter one that ought to be well borne in mind by our trade when bidd but so far our dealers and speculators appear slow in realizing state of affairs in India for offers of crops of Neilgherry and My and others in the neighbourhood of 60s c.i.f. have attracted l attention and the only sporting bid they have received has l 54s c i.f. a price which of course has not been accepted. Such a di gence in the opinion of values is nothing new at the beginning o season, with patience and working a reasonable basis will soo found which should be all the easier to establish this season as b sellers and buyers are eager to deal.

INDIAN TEA IN LONDON.

A larger quantity has been brought forward, says the *Pro Markets' Review* of 5th ultimo, but as the demand has materi improved, most of this increased supply changed hands. Pr generally are firm, with a further upward movement of ¼d. in lower kinds, and it is anticipated that a strong market is likel prevail for these grades. Smaller imports up to date are ma responsible for this improvements in values, the decrease comp with the four months of last year being 3,568,000 lbs.. and con ing largely of the lower qualities; consequently but a limited q tity is now obtainable under 5d. The recent advices from Calc estimate the deficiency of the total crop at from 6,000,000 lb 8,000,000 lbs., which appears hardly credible considering that extensions added to the area of cultivation during the past years have been about 107,000 acres. This increase in the cult tion is computed to yield when in full bearing about 40,000,000 of tea and probably one-fourth of this, *viz.*, 10,000,000 lbs., already reached this stage. The statistics for the past mo compared with those of the same period last year, are as unde Imports. 22,773,000 lbs. and 25,007,000 lbs. ; deliveries, 10,452,000 against 9,832,000 lbs. ; while the stock shows an increase 5,000,000 lbs., the respective figures being 44,664,000 lbs. 39,663,000 lbs. There were 51,866 packages catalogued for auc and of this quantity only 6,133 were withdrawn. There was ac bidding for all descriptions at firm and in many cases at hig prices, but at the closing sale the tendency was easier.

MR. P. C. LARKIN'S VIEWS ON THE GREEN TEA TRADE.

At a recent meeting of the Indian Tea Association, at which Mr. P. C. Larkin and Mr. Mackenzie were present, the first-named gentleman expressed his views on the green tea trade at some length. He began by saying that there could be no question of the increase of the sale of green tea in America. "I have," he remarked, "had now the best part of three years' experience, and I have got my tea into practically every retail store in the Provinces of Quebec and Ontario, and I am gradually getting it into other parts of Canada. Also in New York State, the New England States, Pennsylvania, and Michigan, in which quarter, though not so successful, we get repeat orders continually, and the trade is increasing fast.

"My business is a packet business on the same lines as the Mazawattee Company, but on a smaller scale. I advertise largely in the newspapers, and I sample the consumers largely. The retail grocer takes my teas and sells them to the consumer because he is asked for them. I would just like to show you how we have increased our green tea trade in a year. We commenced, I think, by giving an order to a firm in New York for thirty-three half-chests a month—it went up to 50, 100, 200, 300, and for the last seven months we have been getting 400 half-chests a month regularly, besides what we have been getting elsewhere. The great increase I attribute entirely to the enormous outlay we have undertaken of late in sampling, etc."

I reply to an inquiry by Mr. Wallace, Mr. Larkin said his green tea was not, as a matter of fact, always packed in half-chests, but the figures mentioned by him were quite equivalent to so many half-chests. Mr. Larkin read a letter from his Boston manager, in which he said, "The fact of the matter is we could do 100,000 lbs. of green tea a month if we could do more advertising."

"You see," commented Mr. Larkin, "he is great in his praise of green tea."

"There are three or four pounds of green tea drunk for one pound of black, and if the people had your Indian greens, as I have seen them, they would never go back to Japans."

The sample of "Salada" green tea which Mr. Larkin showed the Committee he said was sold to the customer for 25 cents per lb. The way they made the tea in the farm-houses in Canada was to boil it, and the "Salada" green tea was in every way suitable for this. This is one of the principal reasons why Japan and China teas sell in the States and Canada.

The Indian green teas Mr. Larkin saw in Mr. Mcleod's office he said were the finest green teas he had ever seen. They came from a Cachar garden.

Mr. Bryans inquired how the teas were graded, to which Mr. Larkin replied that there were three grades when they reached him—Pekoe, Pekoe Souchong, and Orange Pekoe.

Mr. Stuart inquired what they did with the dust. Mr. Larkin said they ran in about 8 per cent. with the leaf, and Mr. Mackenzie said a considerable quantity was sent to China to be made into "Brick Tea" (the exports having increased to nearly double from Ceylon to China this year).

There was an objection to Japan and China dust in America, bacause the dust caused a scum on the tea in the cup, which was attributed to "rice water." It would be desirable to face the tea for the States.

An offer had been made by American firms to build a factory to do this, and also pack the tea, but nothing had come of it.

Mr. Larkin said his packet tea consisted of "unfaced" tea, and in Canada he made a great point of the absolute purity of the tea, and he thought the American market could be captured with this kind of tea, but Mr. Mackenzie said that other "wholesalers" who sold tea by the chest loose, and not in packets, would require a "faced" tea, and "to capture the market you must begin by giving tea that is similar in appearance to the tea now being sold."

Mr. Bryans remarked that two markets apparently appeared to exist—one for "faced" and one for "unfaced" tea. He asked what the proportions of "faced" and "unfaced" tea now being sold in the States were, to which Mr. Larkin said he should think that nine-tenths were "faced" teas. All China teas were faced, and at least seven-eights of Japan. In Canada the proportions were about the same.

Mr. Larkin said his method of getting his tea to the public was through the "retailer." His traveller would go into a store and say, "Now, I want to sell you some 'Salada' green tea, which is taking the place of Japan. Give me the names of fifty or sixty or 100 (as the case may be) of your Japan tea-drinkers, and I will send them on a 2 oz. sample free, with a small circular or pamphlet pointing out the merits of 'Salada,' with the name of the retailer at the foot. I will not expect the money for the tea you buy until it is all sold."

Mr. Larkin then read out several testimonials from French-speaking "retailers" in the Province of Quebec, whom he had got to take his green teas in that way.

Mr. Mackenzie said the quantity of Ceylon green tea sent into Canada was about 700 chests (of 65 lbs.) a month for the past eight months, and that 250,000 lbs. were sent from Ceylon in August.

Mr. Mackenzie remarked that they could not succeed in making black tea in America, as the Indian tea was not suitable for boiling as the Americans boil it, and it was impossible to overcome that difficulty through the newspapers. Green tea has a big advantage over black in this way, as it can be boiled.

Mr. Larkin said he was still making progress with black tea in the United States. I do not think, he added, that advertising will cost you a copper, as I honestly believe that any money you may spend you will get back the first year eightfold. For instance, an eighth of a penny per lb. on the total output would give you a total of 400,000 dols., and I believe the increase in the sale of tea in America would amount to 10,000,000 lbs. the first year. Your expenditure does not need to be kept up; in other words, you could do in two years what you have done in seven years.

Mr. Mackenzie: In Canada, if you have any money to spare, spend it in the direction of "unfaced" green tea.

CEYLON GREEN TEAS.

The Planters' Association of Ceylon has received the following letter from the Secretary, Ceylon Association in London:—

Dear Sir,—A meeting of our Tea and Produce Committee was held on Wednesday afternoon last, at which Mr. P. C. Larkin, of Toronto, Canada, attended to discuss the position of the tea trade in that colony.

Mr. Larkin reported most favourably as to the progress made with Ceylon green teas and the future prospects of that branch of the trade, and strongly advocated advertising on a more liberal scale to hasten its development.

After Mr. Larkin's withdrawal the matter was fully discussed in Committee, with the result that I was instructed to let you know that the feeling of the members present is in favour of the application of a much larger proportion of the funds at the disposal of the Thirty Committee to the encouragement of the manufacture of green teas.

It seems that at present the only consignments of green teas to London are in very small lots, often of three or four packages. As there is no demand here for these teas except for export for which small parcels are useless, any money expended in the way of bonus on these piecemeal exports is thrown away. It is felt that some arrangement should be made by which in the case of teas exported to this country the bonus should be restricted to shipments, say of 50 packages.

Mr. Larkin and Mr. McKenzie are both leaving for New York this week.

Yours faithfully,
(Signed) WM. MARTIN LEAKE,
Secretary.

CEYLON ASSOCIATION IN LONDON,

THE TAX ON TEA IN NEW ZEALAND.

REDUCED TAX DOES NOT REDUCE THE PRICE.

A great deal has been said lately, and especially in the House, during the discussion on the Financial Statement, concerning the recent reductions in the tariff charges being of little or no benefit to the consumer; and the article chiefly referred to in this respect was kerosene. But we do not all use kerosene, and to my mind these remarks apply with equal force to another commodity which is used probably in every household throughout the colony. The article I refer to is tea. Now, for years past the line of tea placed most prominently before the public has been the 2s blend or quality. It was 2s tea ten years ago; it is 2s tea to-day. There have been two tariff reductions of 2d each on tea since the present Government took office. When each of these reductions was made; I believe only one firm in the colony reduced their tea by the amount of the duty and without any claptrap as to better quality, etc., sold their former 2s tea at the reduced price of, first, 1s 10d and then 1s 8d. Probably the large amount of their tea sales to-day (I believe the largest in the colony) has proved the wisdom of their action. The other firms did not reduce their teas. They told the people they were putting in a better quality of tea for the same money and still sold the usual brands at the same price.

Now, there are two strange things about this business. First, how is it that 2s was the ruling price for tea ten years ago and before the reductions, in reduction yet with the 4d per lb. the tariff, 2s is still the ruling price? Why, either the people are more extravagant or the tea is inferior in quality. I defy anyone to say the tea now is better than it was before the tariff was taken off; and if the tea at 1s 8d now is as good as the 2s was then (which should be the case) why then is it not more patronised? The answer is easily seen. The public are being gulled day by day and they don't know it. This matter is one which concerns Wellington people, I think, far more than some other places. In Auckland the old "*Standard 5*" 2s tea (I have not seen any of it here) is retailed at all the stores at 1s 6d per lb; a few other firms' old 2s tea retails there at 1s 8d; other firms, again, are carrying on the same game there as they are here in Wellington—sticking on the prices on the ground that it is better tea. Wellington is by far the worst place of the lot, which is strange; for one would have thought, with its larger wharfage accommodation and increased shipping, and besides being the capital city of New Zealand, it could be retailed even cheaper than in Auckland.

When these liberal concessions in the duty upon articles of everyday use simply revert to these combinations of wholesale merchants, is it not high time for the Government to interfere, and if there is any possibility whatever of doing so, to enforce regulations that shall ensure the saving going to the consumer?—*New Zealand Mail*, Oct. 2.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

COFFEE IN LONDON.

The strong demand of the last few weeks has shown a very marked falling off, says the *Produce Markets' Review* of 5th ultimo, and in consequence the advance has not only been checked, but there is some reduction from the recent highest prices. This was only to be expected, as the advance was too rapid to continue, but, as stocks are almost sure to show a further reduction till the end of the year, there is every prospect of another upward movement so far as mild coffees are concerned. By the following table it will be seen that London has had a much larger quantity to deal with than last year, but the demand has been more than sufficient to meet this as is shown by the fact that the stock is now lower than last year.

Quantity of coffee offered at public sale during the first nine months of this and last year:—

	Plantation Ceylon.		East India.	Mocha.	Jamaica.	African.	Guatemala, etc.
	casks.	brls.	bags.	pkgs.	pkgs.	bags.	bags.
1901 ...	416	394	139,346	2,022	4,960	4,153	159,637
1900 ...	674	607	73,280	2,238	7,496	5,977	118,804

	Costa Rica.	N. Granada & Colombian.	Other Foreign.	Bahia.	Rio and Santos.
	bags.	bags.	bags.	bags.	bags.
1901 ...	183,915	42,070	43,641	726	42,538
1900 ...	158,198	22,996	34,332	...	28,797

Seeing that the bulk of the above arrived, and were immediately pressed for sale, during the four months April to July, it is not surprising that quotations fell to the low level which was then touched, and that as soon as the pressure to sell was removed a rise took place. In fact the rates then current were abnormally low, and such prices cannot be again looked for except under similar circumstances, which are unlikely to again occur before next June. In the terminal market quotations have again shown a good deal of fluctuation, varying in accordance with reports received from Brazil. The latest estimate of the current Santos crop is as much as 10,000,000 bags, an amount which no doubt the recepts of the first three months point to, but which is hardly likely to be realised. The reports as to the next crop so far as weather is concerned are all favourable, though the trees are said to show the effects of the two last enormous yields, but under any circumstances it is too early to look for reliable estimates.

BRIEF HISTORY OF THE CINCHONA.

BY J. F. SANFORD.

Read before the Massachusetts Pharmaceutical Association.

Let your imagination carry you back several hundred years, to a scene in the district of Loxa, in South America. A poor Indian is struggling through a dense forest, his footsteps are slow and faultering, there is a look of despair on his face, as his bloodshot eyes search in every direction. He is lost, and as wandered this way for hours without food. At last he drops down beside a pool of water and drinks eagerly; at first his parched lips fail to convey the intense bitter taste, and when they do, what does it matter to him, for he is lost, alone, and very near death with fever.

At last he drops into a troubled sleep, and remains so for hours. When he awakens, the fever has left him, but still he is very weak; he crawls to the pool and takes another drink. This time the bitter taste seems more intense; he notices a tree-trunk in the water, and trying the bark it has the same peculiar bitter taste. He has discovered a remedy for the most dread disease of the tropical countries. Thus runs the legend of the discovery of the quinquina, or bark of barks, as it is called by the South American Indians.

But to Anna, Countess of Chincon, the wife of the Count of Chincon, Governor of Peru, is awarded the glory of introducing this, the most valuable of all febrifuge drugs. In the year 1638 she was suffering from an attack of fever, and a magistrate of Loxa sent a package of Peruvian bark to her physician, assuring him that it was a never-failing remedy in fevers. It was administered, and effected a complete cure.

When the Countess and her husband returned to Spain in 1640, they carried large quantities of the bark with them. In this way was the first of what is now one of the most valuable of all drugs introduced into Europe. In memory of this great gift to mankind, Linnaeus named the genus which yielded the drug cinchona, dropping the "h" in the first syllable. Since then there have h several ineffectual attempts to correct this error in spelling. is the first well-founded instance of the use of the Peruvian b though the virtues of certain species must have been known to Indians of South America long before this. The Brotherhoo Jesuits came to know of Peruvian bark soon after the introduc by the Countess, and distributed it through their several stat in Spain, Italy, and Rome. They did more than anyone towa making its medicinal virtue known. It attained great celebrity was sold for enormous prices by the Jesuits, but soon fell into dis

It was again brought to notice by Sir Robert Talbot, who car it to England in 1671. He kept it secret and gained great f with it in curing intermittent fevers. In 1682, Louis XIV. chased the secret, and in 1690 it was brought into general fav by Norton and Sydenhan of England.

The work of gathering the bark is done almost entirely by Indians or cascarilleros, as they are called. A master cascaril with his band, sometimes as many as several hundred, select favourable spot on high land and establishes a main camp, t the party divide and form smaller camps, scattered through forest.

The trees grow alone or in small clumps in the dense fo which is so thick that one has to cut his way through. One or men from each squad are detailed to find the trees, which are fo with their trunks covered with moss and vines; these are remo and the outer bark broken off by pounding with a club. Then bark is peeled off as far as one can reach. After this the tree is and the bark removed from the smallest twigs. Now the bar taken chiefly from branches.

The tract of land in South America that yields the cinch is not so large as many think it to be, nor is the supply of the b inexhaustible. The dealers and natives claim that the old sys of destroying the trees, which was carried on for so many ye and is now to some extent, came near exterminating the tree f its natural sources. In Bolivia, according to the report of Consul of the Netherlands in 1898, private parties have begu replant the denuded cinchona forests, and at the present t there are more than a million young trees growing at La New plantations are springing up everywhere, and the old grou revisited where the sprouts from the stump yield much quill ba

The cinchona flourishes from 7 degrees north to 20 degrees so of the equator, and they grow generally from 5,000 to 8,000 above the level of the sea. The chief sources of bark in So America are in New Granada, in Colombia, Equador, Peru, Bolivia. The bark from New Granada is mostly shipped f Carthegena on the Caribbean Sea. That from Equador is mo shipped from Guayaquil and Esmerildar. The bark from North Peru from Paytu, that from Peru and Bolivia from Arica and I and Calleo. A limited quantity of bark from Bolivia is expo down the Amazon to Pará.

In 1735 the French sent an expedition to South America, and Condamine a member of the party. while journeying through province of Loxa, had an opportunity to examine the plant, an his return published a description of it. It was soon after that Linnaeus gave it the name of Cinchona officinalis, in hon of the Countess of Chincon. For a long time it was not known more than one species of it existed. According to Bentham Hopper, there are 36 species of cinchona, while Howard recogn 39, although only about a dozen have been used to advantage. was nearly a century after this bark was known in Europe that plant producing it was made known to naturalists.

Great difficulty has been found in determining the species by wh the different varieties of cinchona bark known to commerce produced. The common names are derived partly from the co of the bark, partly from the district where grown, or the clipped from.

The Calisaya bark, also called royal or genuine yellow bark, of the best kinds, is chiefly the product of Calisaya, a large grown in the hot mountain valleys of Bolivia and Southern Per

A number of the worthless varieties of cinchona bark are pu the market separately as adulterations of the other varieties. accurate discrimination of the different kinds of bark requ much experience.

The first attempt to transplant these trees was by La Condam in 1737. He started to carry several plants home with him. they were destroyed after he had preserved them for eight mon In 1846, Dr. Weddell was sent by the French to study the ha

and try to obtain plants for transplanting, but the next successful attempt to transplant cinchona was in 1853 by the Dutch, who sent Mr. Hasspar1, former superintendent of the Botanical Gardens of Java. A number of young trees were sent to him and planted in the mountains of Java, but, owing to the worthlessness of some of the varieties, the Dutch reaped success very slowly, although at one time their plantations were among the finest in the world. But during the 12 years ending in 1879, the amount of land devoted to the cultivation of the cinchona fell off nearly one-half.

The first suggestion of transplanting the cinchona trees into the English colonies was by Dr. Doyle, whose long residence in India satisfied him that the climate was adapted to their growth. He was unsuccessful in his effort in his lifetime, but he had set the ball rolling, and in 1859 Lord Stanley, Secretary of the State of India, made another attempt, to which the success of the present day is due. He authorised Mr. Markham to equip an expedition to go to South America for the purpose of obtaining some cinchona plants and seeds, and, despite the opposition by the Government of South America, they left in 1860 with 637 hearty plants and 100,000 well ripened seeds. These were planted in India, and in the year 1863 there were 160,000 of the trees growing, while in 1860 Mr. Markham stated that during his whole stay in South America he only saw one cinchona tree planted by human hands. In India they cut longitudinal strips of bark from the trees and then cover the trunks with moss. This seems to increase the yield of quinine.

The first chemical examination of the bark appears to be by Hermstadt in 1785, who obtained the calcium salt of quinic acid, which he designated as the essential salt of cinchona. Quinotannic acid was discovered by Dereaux in 1793.

Cinchonine appears to have been obtained by Gomez, of Lisbon, in 1811, but it remained unknown until 1820, when Pelletier and Caventou succeeded in obtaining cinchonine and quinine and proving them to be true vegetable alkaloids.

Later investigation in the chemical reaction of the alkaloids seem to indicate that within a few years they may be made synthetically.—*Pharmaceutical Era.*

DISTRICT ASSOCIATIONS.

KANAN DEVAN.

Minutes of the Quarterly General Meeting of the K. D. P. Association held at the Munaar Reading Room at 1-30 p.m., on Saturday, the 19th October, 1901. PRESENT:—Baron von Rosenberg (*Chairman*), Messrs. R. W. Cole, A. J. Wright, W. Hendry, W. D. Martin, W. O. Milne, M. Brewer, Charles Brander, E. E. Williams, G. H. Danvers-Davy, S. L. Robertson, J. M. Bridgeman, C. E. Hancock, M. C. Koechlin, H. S. Holder (*Honorary Secretary*).

Proceedings of last Meeting were taken as read.

Minutes of Committee Meeting held on the 7th September were read out to the Meeting.

Delegate Statement on Bangalore Meeting.—Baron von Rosenberg said that as nearly every thing that took place at the Meeting had appeared in the Press, he would not repeat what those present already knew. He however gave a brief sketch of what had occurred at Bangalore, dwelling on the most interesting topics such as—"The Compulsory Tea Cess," Exploitation of the Persian Market, "Exploitation of the Indian Market," Coffee Cultivation and the Sale of Coffee in India, etc.; he also spoke as to the advisability of this Association supporting the United Coffee Growers' Company, which gave rise to the following resolution being put forward and carried unanimously.

That this Association approach the various Estates of the Districts that are interested in coffee, asking them whether they are prepared to subscribe a tax of 4 annas per acre, the sum thus realized to be invested in shares of the United Coffee Growers' Company and that a copy of the U. P. A. Sub-Committee's report on this subject be sent with each application.

Roads and Bridges, Munaar Chinnaar Road. Read letter from Mr. Towgood having reference to the Munaar Chinnaar Road, in reply to which it was resolved to refer Mr. Towgood to the Kanan Devan Hills Produce Company, Limited.

Panniar and Sembootoluvoo Bridges.—Read letter from Mr. A. W. John *re* Panniar and Sembootoluvoo Bridges, after some discussion the following resolution was moved by Mr. Hendry and seconded by Mr. W. D. Martin.

That as soon as the work on these two important bridges has been completed and the cost ascertained, His Highness' Government be requested to have them inspected and asked to sanction a grant for same. Carried.

Bridge over the Kundale River.—Read letter from the Dewan stating that the Government was not prepared to make any further concession on account of this bridge (over the Kundalé river) in addition to the contribution already sanctioned.

Moved by Mr. Robertson and seconded by Mr. Bridgeman that the Dewan be informed that this Association regrets to learn that His Highness' Government does not see its way to defraying the cost of this bridge over and above the amount of its contribution of Rs.1,000 and begs that the work be inspected and the remainder of the Grant still due, *viz.*, Rs.500 be forwarded at an early date, as considerably more than a month has elapsed since it was requested that the work should be taken over.

The Munaar Mettu Road—Read letter from Assistant Engineer, Muvathupuzha, dated 20th September in compliance with which it was resolved that the Honorary Secretary be asked to write to members who had been in the habit of doing up the road and request them to put in hand the repairs as usual up to the amount of the Grant.

The Bodi Mettu Rest-House.—Read letter from Superintendent and Magistrate, Cardamom Hills, asking several questions relating to the taking over of the bungalow by Government in reply to which, the Honorary Secretary was instructed to furnish plans and to state that the Association desire the bungalow to be reserved for Europeans and accommodation for natives added on. That the bungalow should be taken over entirely by the Travancore Government and run as a second class Travellers' bungalow.

The Chief Commissioner of Assam and the Planters.—The following resolution was moved from the chair and carried unanimously.

That this Association desires to convey to the Assam planting community the expression of its hearty sympathy and support in the trying and difficult position in which it has been placed, in its contentions with the Chief Commissioner, and that this resolution be forwarded to all Associations concerned, through the Indian Tea Association.

Read Circular No. 82/01 from the U. P. A. *anent* Mr. de Niceville's visit.

Resolved that the Secretary, U. P. A. S. I., be written to and informed that this Association will be very glad to welcome Mr. de Niceville at any time, but that he would see our "Pests" at their worst if he visited us late in February or in March.

Mr. R. W. Cole was elected Committee member.

Railway Rates on Coffee.—Read U. P. A. S. I. Circular No. 73/01 and 84/01 and enclosures *re* the reduction of railway rates.

Papers relating to the following subjects were laid on the table—Munaar Chinnaar Road, Bodi Mettu Rest-House, Coffee Cess, Kundalé Bridge, Railway Rates on Coffee, Scaly-bug, Mr. de Niceville's visit. Statistics, Differential Duties, St. Petersburg Exhibition, 1902, Investment of Funds, Assam Planters and the Chief Commissioner, Adulteration of Coffee, the French Import Tariff, Panniar and Sembootoluvoo Bridges, Munaar Mettu Road.

The meeting closed with a vote of thanks to the chair.

H. S. HOLDER,
Honorary Secretary.

MARKET REPORT.

[*Per Mail advices of* 11*th October* 1901.]

COFFEE.

The London Commercial Record says:—Transactions at public auction this week, which have only been held on one day, have been on an unusually limited scale, and as supplies comprised a considerable proportion of second-hand parcels, the demand was less active and only attractive qualities met with much competition. Santos went off at rather easier rates. The market for "futures" has been strong and prices have steadily advanced on good advices from the Brazils and a rise in the Exchange. The market closes at the best point, Santos December delivery selling yesterday at 31s to 31s 6d, March at 31s 6d to 32s 3d, May at 32s to 32s 7½d and September 33s to 33s 7½d. To-day's auctions offered 4 casks

3 tierces 2 barrels 1 bag Plantation Ceylon, 40 ½-f azils Mocha, 24 barrels Jamaica, 100 bags Costa Rica, 115 bags Ecuador, 147 bags Guatemala, 22 bags New Granada, 410 bags Salvador, 99 bags Colombian, and 20 bags Venezuelan. These small supplies went off with a better tone, and the coloury grades realised valuations to a slight advance. "Futures" of Brazil in good demand; a further advance of 6d to 9d paid in the morning and a fresh rise of 3d to 6d per cwt. in the afternoon. We quote:—

London ...	Santos ...	Dec. delivery	... 31s 6d.
New York	No. 7 Rio...	,,	... 5·35 cents.
Hamburg...	Santos ...	,,	.. 30¾ pf.
Havre ...	Santos ...	,,	.. 38¼ francs.

Imports, Deliveries and Stock of Coffee in London are as follows:—

	Stock.		Imports.	
	1901.	1900.	1901.	1900.
Tons ...	15,309	17,395	40,212	31,442

	Home Consumption.		Export.	
	1901.	1900.	1901.	1900.
Tons ...	15,690	12,745	23,740	15,984

The preceding figures exhibit— Tons.

In the Imports an increase this year of	8,770
Home Consumption an increase of	2,945
Export an increase of	8,770
Stock a decrease of	2,086

Auctions this week have gone off as under:—

CEYLON.—*Plantation.*—1 cask 3 tierces 10 barrels sold—smalls 45s to 46s, medium 55s 6d to 64s, middling blue 85s 6d to 87s.

EAST INDIA.—24 casks 8 barrels (packed in Ceylon) were bought in.

EAST INDIA.—761 bags mostly sold as follows:—*Mysore*, peaberry 50s; *Coorg*, smalls 38s 6d to 40s, low middling 45s 6d, peaberry 60s; *Naidoobatum*, smalls 43s, bold 75s.

MOCHA.—53 ½-bales shortberry sold at 70s.

SINGAPORE.—*Liberian.*—27 bags withdrawn.

JAMAICA.—158 barrels partly sold—ordinary greenish 31s to 34s, fine fine ordinary 46s.

COSTA RICA.—383 bags mostly sold—smalls 49s, fine ordinary greenish 45s 6d, middling brownish and grayish 58s to 60s, bold 75s, peaberry 65s.

GUATEMALA.—Of 738 bags catalogued 190 bags sold—smalls 43s 6d.

VERA PAZ.—Of 124 bags offered 50 bags sold—smalls 48s 6d, bold 80s, peaberry 6[illegible] 6d.

SALVADOR.—503 bags about half sold—smalls 33s to 38 6d ordinary foxy greenish 31s, low middling to middling 46s 6d to 48s 6d, bold 60s; peaberry 47s to 54s 6d.

NICARAGUA.—1 bags were bought in.

COLOMBIAN.—Of 513 bags offered 400 bags sold—smalls 33s to 39s, ordinary to good ordinary 33s 6d to 36s, common bold 45s to 45s 6d, fair bold 49s to 49s 6d, peaberry 50s.

BRAZIL.—Of 2,000 bags washed Dumont Santos, 1,200 bags sold—smalls 28s to 29s 6d, medium 32s to 33s 6d, bold 37s 6d to 39s 6d. Of 1,855 bags Unwashed on quay terms, 1,070 bags sold—small 28s 6d, medium 32s to 32s 6d, bold 33s 6d to 35s 6d. Of 300 bags Rio, quay terms, only a few lots of damages sold. 294 bags Bahia bought in.

Receipts in Rio and Santos.

TEA.

INDIAN.—A further increased quantity was brought to aucti *viz.*, 56,500 packages contrasted with 51,000 packages previous and 54,000 packages at this period of 1900.

Arrivals were heavier, and the above amount coming after full supplies of the week before was more than buyers could possi grapple with, and this combined with a not unusual reaction af a period of considerable activity, and somewhat rapid advance values, caused an irregular and generally lower market. Consid ing the improving statistical position of this article, and in view the probable appreciable deficit in export from the chief produci centres in the United Kingdom, it would appear to be a favoura opportunity for a combined effort being made, so that in no sin week no undue quantity should be forced upon the trade. Su an arrangement, if all interested would carry it out loyally, co scarcely fail to have a beneficial effect, and would conduce to maintenance of a reasonably steady market. Violent fluctuati are alike prejudical to the interest of importers and distribute and any course calculated to guard against such would undoubte be welcomed.

Low-priced teas, both leafy and broken, were to be purchased easier terms, while medium kinds often marked a decline of ¼d ½d per lb., especially noticeable in the case of Assam Ora Pekoes and Pekoes and Broken Pekoes with thin liquor. The b lines did not show so much alteration, but any falling off strength or flavour from former offerings was fully reflected in reduced quotations recorded. Continental buyers expended c siderable support to useful Pekoe Souchongs and Pekoes, and it satisfactory to note that according to the table given below sh ments from here to foreign ports continue to expand.

For 45,000 packages on estate account 8⅛d per lb. was obtai *versus* 8¼d per lb. for 45,000 packages and 8⅝d per lb. for 39,0 packages in the two preceding seasons.

CEYLON.—Sales comprised 19,500 packages opposed to 18,9 packages on the 1st instant and 17,500 a year ago. There was a g

general demand but the bidding was scarcely so keen as last week, although quality continued desirable. Ordinary to fair Pekoe Souchongs and Pekoes were wanted and fetched firm prices. Medium Pekoes and Orange Pekoes for the most part also passed steadily. Broken Pekoes in many instances marked unevenness in value, especially in the case of the better parcels, which sometimes went in favour of buyers. Choicest Broken Orange Pekoes and Orange Pekoes on the whole sold well.

Clearances from this to outside quarters for the past month again indicate the growing demand abroad for these teas.

The average is 7¾d per lb. On the 3rd instant it was 8d per lb., and 7½d per lb. in 1900

JAVA.—Nearly 1,600 packages of direct import were placed before the trade. Competition was spirited and prices were occasionally fractionally to the advantage of sellers.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 18th October,	1901	4,951,228 lbs.
Do. do.	1900	4,538,023 „

During the week the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	39,423	17,045	56,468
Ceylon	17,020	2,463	19,483
Java	1,281	283	1,564
Total ...	57,724	19,791	77,515

Also 1,997 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated October 11th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	429,534	469,329	26,372
1900-1901	414,175	494,668	18,530

57,598 *pkgs.* INDIAN
21,254 „ CEYLON
1,596 „ JAVA
} Total 80,448 packages were offered in public auction this week.

Recent arrivals of Indian Tea have been heavy, and the late rise in the market induced Importers to sell freely. Consequently prices have somewhat receded.

There appears now to be little doubt that the crop from India will be below that of last year. It therefore seems unnecessary to risk overstraining the market, because immediate arrivals are large.

The question of regulating supplies, therefore, becomes very important, and if sales can be spread sufficiently to relieve too great a pressure upon buyers, considerable benefit may result to producers.

GREEN TEA.—Seeing how soon the black Tea market becomes overweighted, the advisability of relieving it through the manufacture of green and unfermented Tea is very apparent, and well merits the greatest encouragement from the India and Ceylon Associations. India is giving a bonus of 1½ annas per lb. for the manufacture of green Tea, but Ceylon of only 5 cents per lb., a sum which does not seem to afford sufficient encouragement to the enterprise. When making this class of Tea, sorting into very small breaks should be avoided, and all grades should be as free as possible from dust and fannings.

INDIAN.—The quantity brought forward was heavy, comprising 57,598 packages, not very much behind the largest sale of Indian Tea ever held in one week in London, which consisted of 60,606 packages, in January, 1900. The market not unnaturally showed weakness, and prices for all grades were a farthing to a halfpenny cheaper. The following averages are worthy of note:—"Seeyok." 1/1¼; "Tingri T Co Keyhung," 1/0¾; "Amal T Est. Lattakoojan," 1/0½.

TRAVANCORE.—This district is now assuming greater importance, considerable quantities being brought forward as a rule every week; some of the Estates situated at high altitudes are making Teas of nice flavour and obtaining averages considerably above the general run of Teas from this district.

Week's average of New Season's Tea sold on Garden Account 1901, 45,065 pkgs., av. 7·77d. 1900, 45,537 pkgs., av. 8·01d.

New Season's Tea sold on Garden Account 1st June to date 1901, 303,253 pkgs., av. 8·35d. 1900, 332,599 pkgs., av. 8·16d.

CEYLON.—The easier tendency noticed in the Indian market was reflected in Ceylon growths, the tone being distinctly in favour of buyers, and prices showing occasionally a fall of over a farthing per lb.

Average for week 7·79d., against 7·44d. same week, 1900.

Ceylon Tea sold on Garden Account 1st January to date, 926,837 pkgs., av. 6·71d. 1900, 993,092 pkgs., av. 7·18d.

JAVA.—In sympathy with other growths the Java market passed with a somewhat quieter tone, rates generally being below those ruling last week.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 5/32. Colombo 1/4 3/16.

COCOA.

Public sales on Tuesday offered 3,423 bags, of which only 1,150 bags sold; prices were unchanged. Of 741 bags Trinidad, 485 bags found buyers at full rates—72s 6d for very fine red, 70s to 70s 6d for fine, and 68s to 69s for fair to good. Of 339 bags Grenada, 270 bags were placed at valuations—good to fine 63s 6d to 66s, common to fair 60s to 62s. 51 bags Demerara realised 66s. Of 46 bags Jamaica, a few bags sold at 58s for common. 24 bags St. Lucia mostly sold at 57s to 58s for common. Of 169 bags Surinam, 20 bags fine sold at 72s, the remainder being withdrawn. Guayaquil very slow, and of 1,104 bags catalogued, only 30 bags grayish Caraquez sold at 64s. 110 bags common wormy African sold at 55s. Ceylon quiet, but steady; 520 bags offered and 160 bags sold—good red 71s, brownish to fair red 59s to 66s, smalls 40s to 46s per cwt. 156 bags Pará, 10 bags Maracaibo, and 160 bags Venezuelan passed the hammer unsold. Privately sale embrace 150 bags Pará ex the auctions at about 70s, and 300 bags Guayaquil —common grey Machala at 65s 6d, and grey Caraquez at 64s to 65s 6d per cwt.

PEPPER.

BLACK.—The market is rather lower on the spot, and only very small sales made at 6d to 6 1/16d per lb. for fair to good fair Singapore. For arrival no business reported.

At public sale on Wednesday, of 50 bags Singapore offered, 5 bags sold at 6d. 193 bags Penang and 69 bags Trang retired.

Singapore is very quiet to-day, no sales reported; prices unchanged.

Tellicherry sold to arrive at 57s 6d per cwt., c.i.f., delivered weights Liverpool December-February (s).

WHITE is steady, with sales to a fair extent on the spot at 9 3/16d 9¼d for Singapore, 9 1/16d to 9⅛d for fair Siam, and 8¾d per lb. for fair Penang. To arrive a firm tone prevails, but transactions are restricted to 20 tons Singapore October-December (s.) at 9⅜d per lb.

At auction on the 9th instant 147 bags Penang were withdrawn.

GINGER.

COCHIN.—A continued improvement in the tone of this market can be reported, and values have further risen. Since our last about 1,500 bags have sold privately at 42s 6d to 43s for medium and small washed rough Cochin, and 40s per cwt. for rough Calicut sorts. Under the hammer 160 cases 401 bags were offered, but only 36 bags sold—fair medium and small washed rough at 43s per cwt.

AFRICAN.—80 bags clean small and ends bought in at 40s per cwt.

JAMAICA.—45 barrels ordinary middling washed realised 40s 6d per cwt.

CINCHONA BARK.

Offered, 41 packages. Sold, 36. Of these 4 bold flat *Calisaya* rather rough and damaged fetched 1s 3d to 1s 3⅛d, and the other 32 being *Peruvian* realised 6¾d to 1s 2d.

QUININE.

Quinine has been a very unsettled market in second hands this week, quotations fluctuating daily. Opening at a decline on Monday, it subsequently went firmer, but on Wednesday prices were barely steady again, and good German brands of sulphate were quoted 1s 1½d per oz. nominally on the spot. December delivery 1s 1¾d, and March 1s 2d. To-day the market is flat, and these prices can be shaded by ¼d. Some of the makers are still sellers at 1s 2d, and others are offering at this figure. In Batavia, on October 9, 3,100 kilos. of Ed. 11 sold at an average of 20½fl per kilo. (about equal to

8c Amsterdam unit), against 20fl per kilo. paid at the previous auction. The next auction to be held in Batavia will take place on November 13.

CARDAMOMS.

In fair demand at slightly easier prices. The following were the sales: Ceylon-Mysores, extra bold pale heavy, 3s 6d; medium to bold pale, 3s to 3s 1d; bold medium pale, 2s 9d to 2s 11d; medium pale, 2s 5d to 2s 7d; long pale lean, 2s 3d; medium brownish, 1s 9d; bold splits, 1s 9d; small pale, 1s 7d to 1s 9d; very small ditto, 1s 3d to 1s 5d; small splits, 1s 2d to 1s 4d; and brown splits and pickings, 1s 3d to 1s 5d. Ceylon-Malabar, small and medium, 1s 4d.

Six cases of medium brown Tellicherry sold without reserv 1s 10d per lb. Decorticated seeds brought from 1s 10d t 4d per lb.

INDIA-RUBBER.

A considerable business has been done throughout the week, prices are ¼d to ½d per lb. higher for fine, closing quiet. Hard Para at 3s 7½d, soft fine at 3s 6¼d. Negroheads are steady; scra 2s 8d to 2s 8¼d Island s 11d to 2s, Cameta 2s 1d per lb. Peru ball 2s 5½d to 2s 6d, and large sales of slab at 2s 1d per lb. T have been sales of medium qualities at about steady prices. auctions to-day.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 15th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad. *November 4th.*—*Weather*—Heavy showers of rain, almost daily for the last two weeks; it is to be hoped that the East wind, that has now set in, will free us of their unwelcome presence. *Crop*—ripening up rapidly. The crop is a record one for its shortness. *Coffee diseases*—Coffee remarkably healthy. *Health*—Good. *Labour*—Abundant.

Coorg. Polli Betta, *6th November.*—*Weather*—The N.-E. showers are continuing. It rained all last night. Eastern places are now getting leaf disease, due probably to all this wet. *Crop*—on the western side of the district, where there was a February blossom, heavy pickings are now the rule. Out East gathering has hardly begun as yet. Weeds are much in evidence again, and are being got under. *Labour*—There is an abundance. *General Health*—Fair. *Interesting item*—Visit of the Inspector-General of Volunteers to Mercara on 24th instant.

THE COFFEE CRISIS IN BRAZIL.

In an introduction to his report for the year 1900, the Brazilian Minister of Finance has a good deal to say about Exchange and Currency and a little about Coffee. Dr. Joaquim Martinho speaks out plainly, and his remarks, even though they do not present matters in any new light, are well worth attention. What he says about exchange and currency may be left over for future treatment. What he states in regard to coffee is that the present crisis is due to over-production, and that the only remedy is to increase consumption, which low prices will greatly encourage,

and to restrict production. All this has been said before, but we must recollect that the opinions of the Minister of Finance are more likely to sway those of the Government than are the arguments of any outsider. DR. MARTINHO's utterances acquire additional importance from the fact that he touches upon the question of State intervention. If the development of consumption is to be aided by the State, it must, he says, be effected by the local Governments who can acquire a certain amount of produce at a moderate tax on it. As to the agency to the employed, it can only be carried out by those in a position to advertise the produce and who are directly interested in it. The Governments of the States would, therefore, if they adopted DR. MARTINHO's suggestion, buy coffee and sell it through one of the firms of exporters. If, he says, each State provide a certain amount of produce, the Agent could contribute a certain amount of capital, and no more would be required for its introduction into Russia for example.

This last sentence gives point to the whole suggestion. "New Markets" are to be worked up in behalf of Brazilian Coffee just as it is suggested they should be in behalf of Indian Consumption, and to be stimulated in old markets also ; but it is seen that all this is too slow a process to conjure away the present crisis, and DR. MARTINHO comes to much the same conclusion as we have ourselves expressed in the past. The doctrine of the survival of the fittest must, we have remarked, settle this matter. DR. MARTINHO says :— "the only remedy is to remove the weak by a natural process of selection and let the strong survive." In spite of its severity the law thus invoked is, as he says, "the law *par excellence* of progress, and on the day when it does not hold good in business, agriculture, industry and all human relations, all classes will be represented by inferior individuals and all society will infallibly degenerate." Such, says the Brazilian Minister of Finance, is the only solution for our present difficulties, for the crisis is not due to under-production, want of capital or labour, natural effects such as frost, drought, disease among the coffee, in which case assistance would be both advisable and useful. Far from this, however, the crisis is due to over-production, the result of wrongly applied energy, neither Government nor any one else can change the direction of these forces based on natural selection.

So far almost every word said in regard to Brazilian Coffee applies with equal force to the smaller Indian crops. But there is a difference marked in the next sentence, for it must be remembered that whereas coffee is a minor product in India it is the great staple of Brazil. DR. MARTINHO remarks :—"No doubt many agriculturists are in difficulties but it cannot be said with truth that the country is impoverished, seeing that our exports this year amount to 35 millions sterling and are not inferior to former years." Indian coffee-planters certainly are impoverished for the most part. We feel sure that they will approve of what DR. MARTINHO suggests for Brazil. The weeding out of the weak by the natural law of fitness and unfitness for the struggle for life ; the development of the country and its communications ; and the cheapening and increasing of the supply of capital. It is interesting to note also that DR. MARTINHO gives as his final suggestion the following :— "it will be advantageous to encourage the foundation of banks to render efficacious aid to agriculture, industries, and commerce. This can be effected by a law which will keep in view these two principal points—assimilating credit for agriculture and industries to that employed in commerce, guaranteeing the creditors to the utmost. The capital these banks will be furnished by the Government itself redeeming its internal debt." The last sentence shows the Brizilian Minister of Finance is a man of greater fores and greater courage than any Viceroy or any holder of financial portfolio that India has had of late years. Des the inferior credit of his country, DR. MARTINHO see way out, he realises what ought to be done, and he has pluck to tell the Government plainly that they should g their nettle.

WEEDY TEA NOT SUBJECT TO BLIGHT.

A practical planter writes a very interesting little lette the *Ceylon Observer* with reference to Java tea. The p upon which he lays stress is that *young* tea, like young chona, grows stronger and heartier if amongst weeds. So times old tea seems to do so, too ; not among bad gras The planter suggests that the fertilising weeds should left, though not to a too luxurious amount, and then dug He says :—"Young tea on my estate and on others I hav do with, seems to me to revel in such conditions—and su it is only following 'Nature' that it should do so—for young stems and crowns of the roots are all the time tected from excesses of sun, wind, wash and all form exposure and in the warm season kept cool and regul re-dewed." He saw really bad "Grey Blight" for the time in Java recently and that was on the young estate of a Ceylon co-Director of him, now resident in Ja on whose estate there is not a single weed of any sort to seen. It is a perfect example of a clean tea estate and weeding cost per bouw is very cheap, but "on more or 100 bouws the bushes were bare, from the joint attac Helopeltis and this awful Grey Blight, and at that rate weeding cost cannot be very cheap per lb. even if it is bouw !" This naturally suggests the question :—Can it not possible, the young tea would have been hardier and be able to withstand these attacks, if left to run a bit wild at fir

COFFEE IN DISTANT LANDS.

XXXIII.

Hawaii.—Following Porto Rico's example, Hawaii is n petitioning Congress for a protectionist duty on Coffee to s out the cheaper Brazilian article from the islands. Little little Brazilian Coffees are monopolising the markets even Coffee-producing countries and making competition impo ble. As it becomes unprofitable, Coffee-planting will be gi up and the circle gradually narrowed until with an imme consumption and practical monopoly of production we sh have it all to ourselves and dictate prices to the world. I this that Brazil should aim at to eliminate competition ; a that can be done only by selling at prices at which competit is impossible. The process may be painful to ourselves bu is certain, and in the long run will amply reward the sacrif Instead of limiting the output, what is wanted is to prod more and cheaper and flood the world with our Coffe

The following is a resolution passed by the Hawaiian Leg lature about to be presented to Congress :—

"Before Hawaii was annexed to the United States" s Mr. Kalanokahlani, "the coffee industry was fairly prosper

nd the growers were making money, but since the admission f coffee free of duty the business of the Hawaiian Coffee rowers has steadily declined, until now the industry lan-guishes.

"There are very rich coffee lands in Hawaii that, if worked, re capable of producing large crops of the most delicious offee in the world, but under existing conditions our planters annot compete with the cheap labour employed on the coffee lantations of Brazil, Mexico, and other South American ountries, and hence it is that they will ask Congress for rotection.

"It seems to me that since the Supreme Court's decision in he Porto Rican case Congress would have power to levy a tax n all coffee imported from foreign countries into Hawaii, while admitting free of duty all Hawaii's coffee into the United States and Territories. The duty on foreign coffee would give us protection and enable our coffee-growers to build up a home market in the Territory. The farmers of the United States re protected by the tariff, and why not extend like protection o the owners of coffee plantations in Hawaii?"

NOTES.

Java Cinchona Bark. Java shipments during first half of October were 680,000 Amsterdam pounds, as against 364,000 last year, and 657,000 in 1899.

Indian Tea Export. Exports from the 1st April to the 29th October to the United Kingdom amount to 93,585,430 lbs., against 102,868,434 lbs. in 1900.

Tea Exports from London. Exports of tea from London for the last nine months of 1901 have exceeded those of last year by 3,543,000 lbs.

Drought in Brazil. In his circular of 8th September, Sr. Rezende Carvalho, of Santos, says, "advices from Ribeirão Preto state the drought to be very bad as also at S. Simão."

A Fire in Brazil. At Cantagallo 25·499 kilos. of coffee were destroyed by fire on the 8th September. The building and coffee machinery, valued at 30:000$, were also destroyed.

Labour in Sao Paulo, Brazil. In the eight months from January 1st to the 31st August, 1901, there entered the State 34·973 immigrants, of whom 21·615 were assisted by the State government and 13·358 came spontaneous. In the same period there left the State *viâ* Santos 18·832.

Tea Stocks in London. At the beginning of this month stocks of Tea in London were as follows:—Ceylon, 21,000,000 lbs.; Indian, 53,300,000. As compared with 1st October, 1901, these figures show a fall of 3,500,000 lbs. in stock of the Ceylon leaf and a rise of 10,600,000 lbs. in that of Indian tea.

Unknown in Canada. Writer after writer competing for the prize offered by the *Canadian Grocer* for the best Essay on Buying, Handling and Selling Coffees ignores Indian coffee. Thus one writer, dealing with The Best Kinds of Coffee, says:—Mocha, Java, Plantation Ceylon, Ceylon, Jamaica, and Maracaibo coffee are amongst the best qualities, and would be classed high-grade coffees, particularly the first four named.

Indian Tea and its Flavours. Mr. Mann has returned from Darjeeling where he was engaged in experiments with the object of elucidating the problem of how the various flavours of tea are produced. The result will be laid shortly before the Association. He also paid a flying visit to the Terai Gardens which are suffering from mosquito blight of a different species from that usually known, the only resemblance being that it possesses wings.

Tea Statistics. Statistics are beginning to show a comparatively strong position, say Messrs. Stenning, Inskipp & Co. in their report dated 10th ultimo. Deliveries for the first four months of the season mark an increase of 3,276,000 lbs. over the corresponding period in 1900; the stock which on the 1st June stood at 12,680,000 lbs. more than at the same time in 1900 is now only 5,001,000 lbs. more, and the total stock at the end of September of Indian and Ceylon together is on a level with that of last season.

Coffee in the U. S. The *American Grocer* of 20th ultimo says:—Mild sorts firm for all very desirable lots, with fancy grades commanding 1@3c above current quotations. The September auction resulted in sales of 14,000 piculs, of which 12,000 piculs Interior brought equal to 15½c, delivered here. The local market for Padang Interior is 17@19c, with extra grades at 24@30c, and very fancy higher; Mocha 16@18c, and better for very fine lots; good Cucutta, 7½c, with better grades at 9@11c; Central American, 9½@13c

Tea Crop Prospects. The following telegram with reference to the tea crop in the various districts has been despatched by the General Committee of the Indian Tea Association here to the Committee of the Association in London, *viz.*:—Assam—Outturn last month about normal; immediate prospects fair: Cachar—Outturn last month good; immediate prospects fair: Sylhet—Outturn last month about normal; immediate prospects fair: Dooars—Outturn last month good; immediate prospects good: Terai—Outturn last month about normal; immediate prospects bad: Darjeeling—Outturn last month about normal; the season is practically closed.

Indian Tea in Canada. Reporting from Toronto on the 3rd ultimo, the *Canadian Grocer* remarks:—The demand here for Indian and Ceylon teas is only moderate. Since last week some shipments of new season's green China teas have been received and they have been gradually bought up at full prices by the trade. There is likely to be a distinct shortage of these teas, and high prices are ruling. Orders placed at limited prices have not been executed, and very few consignments of China green teas are likely to be seen on this market this season. A cable received in Toronto this week from Wisner & Co. reports a further advance of 1c. per lb. in China green teas generally. A cable received on Wednesday from Calcutta said that they were unable to ship Indian green teas up to

the standard required for the Canadian market, owing to the small quantity of that description being brought forward.

Brazilian Legislation. The *Brazilian Review* of the 24th September, 1901, says :—During the past week, in the Chamber of Deputies, among the bills introduced were the following :—a bill empowering the Government to monopolize the exportation of coffee and india-rubber ; a bill making an appropriation of 60:000$ for defraying the expenses with Brazil's exhibit at the Buffalo Pan-American Exposition ; . . . . a bill making an appropriation of 50:000$ for the Agricultural Congress at Rio de Janeiro ; a bill empowering the Government to contract with some bank for the redemption of the currency now in circulation. . . . . The debates on the general revenue bill and on the bill changing the import duty on cattle continued in the Chamber, which also discussed . . . . a bill for guaranteeing 6 % interest on capital to the amount of 2.000:000$ to be invested in an agricultural bank in Sergipe.

London Tea Market. Weekly special telegram dated 31st ultimo from Messrs. Gow, Wilson & Stanton to Colombo reports that competition for Ceylon tea is general and well distributed and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 6¼d (a farthing up), and the average price of Ceylon tea sold on garden account this week was 8⅛d (an eighth of a penny up). The average of the corresponding week last year was 7½d. Reuter reports that there is an upward tendency in common qualities of Ceylon teas. Fair Pekoe Souchongs are quoted at 5⅞d (⅛d up) and the average for the week is 8¼d (a farthing up). 17,000 packages of Ceylon tea were offered for sale and 15,000 were disposed of ; while of the 44,000 packages of Indian tea offered, 42,000 found purchasers, at an average of 8⅛d per lb. (⅛d below last week).

Calcutta Tea Sales. Sales on Friday the 1st instant totalled about 26,000 packages, most of which were disposed of in the auction room. The quality generally was again good average, although here and there inferior tea was shown from the Dooars. A better selection from Darjeeling was before the trade, and sellers were fortunate to meet a particularly strong demand and keen competition : indeed, the spirited bidding for these kinds was the feature of the sale ; otherwise there was no change in the tone of the market. It was again strong and active, and certain types of high class tea were dearer ; on the other hand, for plain liquoring sorts and commonest descriptions there was no inclination to follow the smart advance last week ; if anything these kinds were a shade easier, though they were not quotably lower. This was to be expected, as it is not unlikely that the recent advance on the home market may prove to be spontaneous, coming as it has before London has handled one-third of this year's crop.

The Fluctuations of Quality. In their report dated 17th ultimo Messrs. Gow, White & Co. remark : —Assams have mostly fallen away from the high standard reached before the rainy season had fully set in. Cachars and Sylhets however, moved up somewhat ; Dooars generally and with more rapidity than usual, recovered from the slump in quality, which quickly came after a very promising start, and advices point to a further improvement in invoices on the water. It is worthy note that several gardens in this district, which had in rec years earned the unenviable character of being among "undesirables," have demonstrated that, given favoura conditions and handling, they can still produce a re attractive article. The majority of the finest Darjeeli from the second flush have now been disposed of, and me while there is little from this quarter, of real distinct Travancore and other South India teas have chiefly b showing useful style and appear to be gaining in popular

Coffee in London. Stocks during September have v materially increased in all positi says the *Produce Markets' Review* of 17th ultimo, and world's visible supply is over 49,000 tons in excess, hav reached the enormous total, a record one, of 550,300 t which is almost eight months' consumption even on the b of the heavy deliveries of last year. From such figures would be easy to argue in favour of lower rates, but on contrary there has been a persistent advance in prices in the "terminal" markets of the world. Here in Lon quotations have risen 2s, and the anticipation of those m interested in Brazil is for a much higher range. Apparen however, the sole cause for such an advance is the rumou a poor flowering. Seeing that there is no official confirmat of this, and that it is only natural for those interested in present prodigious crop to want to obtain as high a price possible and therefore to favour such rumours, we thin would be dangerous to encourage buying until someth more definite is known. Supplies of actual coffee, except Santos, are now so short that only very small auctions h been held this week, and on only two days. Prices w steady, but hardly up to the best of the last few weeks.

Annam Tea in France. The *Board of Trade Journal* s that according to the *Politi Coloniale* of 26th ultimo, the consumption of Annam tea Paris is rapidly increasing. Several provision mercha advertise and recommend it, and it is believed that product will assume an important place in the trade to detriment of Indian teas. The recent drop in the price the latter is attributed in India to a too great extension of cultivated area, and to the abundance of the last crop. Fr these considerations the writer of the article in the *Politi Coloniale* advises the tea producers of Indo-China to deve their production only in proportion to the assured mark On the Paris market it will find a ready sale, although consumption of tea in France is small compared to that other countries. Meanwhile there is nothing to prev producers from directing their efforts to Indo-China its where it has lately been observed that Chinese teas imported in smaller quantities than hitherto. In the months of April and May last, 60,000 kilogs. of tea, val at nearly 100,000 francs, were exported from the port Tourane. Annam tea is, therefore, on the way towa occupying an important position among the Colonial produ imported into Paris.

Indian Tea in London. The quantity brought forw exceeded that of last week by wards of 18,000 packages, says the *Produce Markets' Rev* of 12th ultimo, and was more than sufficient to meet a active demand. Prices in consequence have been irregu with a distinctly easier tendency for most grades.

common teas, for which there has been a good inquiry and a strong market for some time, have shared in the fall, and a considerable quantity is now obtainable at 5d and under. The medium descriptions are coming forward freely, and meet with a good demand at prices which are more favourable to buyers, and a steadily improving business has been transacted. The most important decline has taken place in the finest grades, which is due mainly to the falling off in quality, especially noticeable in the Assam teas. At the public sales 57,608 packages were offered, and the unusually large proportion of 18,159 withdrawn, only a limited quantity of the latter having since been disposed of privately. The bidding throughout was inactive, the lower grades having declined ¼d, and the medium teas ½d per lb., while the finer qualities have fallen from ½d to 1d per lb. For next week the quantity catalogued is much smaller, and it is probable that a reduced supply will be offered at the public sales for a week or two.

GENERAL ARTICLES.

THE PERSIAN TEA MARKET.

Mr. E. Bradford Ouseley writes from Birjand, Persia, under date 25th September, to the *Pioneer* :—

I have read with much interest Mr. Foley's reports and letters printed in the *Pioneer* from time to time, and with all due deference to that gentleman's thirty years' experience, I should like to make a few remarks about some of his statements. Firstly, about the prices of teas Mr. Foley gives and quotes. I think these are very liable to give people in India quite a wrong impression about the Persian tea market. In one of his letters he says "I was besieged by buyers of tea at their own price, 7 and 6 krans a pound for Orange Pekoe and Pekoe, equal to Rs.2 and Rs.1-13-6 per lb." At the same time Mr. Foley should have mentioned that in this place, *viz.*, Seistan, at the very outside, the yearly sales of tea do not reach three thousand pounds. In another of his letters Mr. Foley says his "tea was valued at 30 krans (or Rs.2-5-6 a pound) and this was confirmed by an Afghan trader, whom I met on the desert journey on his way to Meshed *viâ* Heerat with 22 camel-loads of black tea (Dehra Dun) purchased in Bombay." and he goes on to say—"I give him samples of Orange Pekoe and Pekoe, one pound tins with labels. He valued the samples at 30 and 25 krans and pronounced them superior to his tea from Bombay (*viz.*, Dehra Dun) which he would sell at 20 krans a man. Now I had the pleasure of being under the hospitable roof of the British Consulate at Meshed at the same time as Mr. Foley was there, and I think even Mr. Foley will allow that Meshed is the largest and most important tea mart in these parts. Well, the highest *offer* Mr. Foley had in Meshed for these very "*sup-rior*" samples which he says were *valued* at Rs.2-5-6 a pound was 15 krans a maund of 6 lbs. 6 oz., or well under ten annas a pound. This was an all-round average price, and the only *bonâ-fide* offer Mr. Foley had for any respectable amount of tea in Persia. I also saw, and Mr. Foley could hardly have helped seeing (in fact in one case Mr. Foley pointed it out to me), Indian black tea selling in the bazaar for ten annas a pound and under: Dehra Dun in one shop, Kangra in two, and Assam tea in six different shops. Now in one of Mr. Foley's letters he says, (I haven't the letter by me, but words to this effect): —"Gardens and Associations should all amalgamate, and not send up caravans under irresponsible agents to Persia" Yet what is more likely to cause a rush of such; than the—I can call them nothing less misleading statements in Mr. Foley's letters, and I think any business man looking at the above figures will agree with me. I have refrained from writing on this subject up to this for many reasons; but have at last come to the conclusion that it is only fair to intending explorers of the Persian tea market to give the above facts

As to Mr. Foley's sound and laudable plan of getting the Persian merchants to come to Quetta and take delivery there of tea I thoroughly agree with him, and should advise all gardens and Associations joining him if he could accomplish it; but if the mountain will not come to Mahomet, Mahomet must go to the mountain, and what is Mr. Foley's idea of progressing? This:—To send four large caravans with indigo and tea, each under a responsible agent, *i.e.*, a retired military officer from four different quarters. These columns, under their respective leader, to make a simultaneous attack upon the the Persian tea market, while Mr. Foley directs the operations from the base. It sounds quite like General Cleary's "Minor Tactics," and makes one think of Lord Kitchener's flying columns after De Wet. But I trust Mr. Foley won't find his campaign as hard as the latter. Still, to anyone knowing Persia and the Persians, the idea will I feel sure being a smile (at the least) to their lips—of the veteran soldier hawking his tea and indigo from village to town and town to village, seated on his double humped camel singing—"Oh! Won't you come and buy? Come and buy my pretty Indian teas." But there is one serious point I should like to remark on in Mr. Foley's letter, *viz.*, "British influence is *nil*." This passage occurs in Mr. Foley's letter, dated Calcutta, 27th August, and having seen as much if not more of Persia than Mr. Foley; I (with all due deference to Mr. Foley's thirty years' experience in tea) say this is quite a misapprehension on Mr. Foley's part, and anyone looking below the surface and even carefully at the surface cannot help seeing and feeling the very strong current of British influence that is rapidly spreading and drowning that of Russia in these parts of Persia, and being an important point to intending traders in these parts I feel bound to refute Mr. Foley's statement *in totum*, and wonder at his allowing such an unwarrantable error to occur, for he surely cannot have helped hearing the distinct hum (I can call it nothing else) of "*Ecce homo*!" in a large city of Persia when a certain man rides through it. Yes, a man held in high esteem by the people and fear by his opponents, and I can only think, Mr. Foley has fallen into the small error as Kipling's Wali Dad, and perhaps:—

> "He harked to a rumour, and snatched at a breath
> Of "this one knoweth" and "that one saith,"—
> Legends that ran from mouth to mouth
> Of a grey-coat coming and sack of the south.
> These have I also heard—they pass
> With each new spring and the winter grass."

PRODUCE, PLANTING, AND COMMERCIAL NOTES.

An advertisement which recently appeared in one of the papers shows that the commercialism of the age is by no means confined to the male sex, and that in the tea trade the weaker sex are deemed useful allies. "Pinmoney.—A well-known firm of tea growers are open to pay a remunerative commission to any lady who can influence the introduction and use of their teas among her friends. No risk, and every application treated in strict confidence. References permitted to ladies already acting for us. Apply in the first instance to——."

In their review of the coffee market, Messrs C. J. Leech & Co. say: "There is undoubtedly going to be a large expansion in the consumption of Brazil coffee this season, owing to the low prices. It is a remarkable fact that there has been absolutely no pressure from Brazil, and the planters have realised far better prices than they could have hoped for. In the speculative markets more animation has been observed than for many months past, the London market in particular having been very active with large buying orders to hand daily from influential quarters, giving rise to the idea that adverse news concerning the new or 1902-1903 crop had been received, but nothing really definite transpired. The weight of the present huge Rio and Santos production has no terrors, and the great question is the growing crop. Should the unfavourable advices concerning the latter become confirmed during the next few weeks, a further advance in values would seem likely, taking into consideration the present highly bullish sentiment. Since writing the foregoing Messrs. Naumann, Gepp & Co, Limited, inform us 'Our Santos firm cables prospects for next crop unfavourable'."

While Englishmen generally have been reminding themselves of the second anniversary of the war the West India Committee has been reminding the readers of its fortnightly circular of another anniversary—the fourth anniversary of the despatch to the West Indies of the Royal Commission to investigate the parlous state of

those Colonies. Each anniversary deals with an event of importance to Imperialism: the war is being waged for the strength and integrity of the Empire; the West Indian Royal Commission's appointment was a preliminary attempt to fulfil the Mother Country's obligations to a more loyal part of the Empire. But here, the *Financial News* points out, the parallel ends. The Imperial Government in the one case perseveres unflinchingly in its task, though that task is wearisome and hugely difficult, and attended with phenomenal sacrifices of blood and treasure. In the other case the Government abandoned its task in the preliminary stage, though the work might have been carried to a successful conclusion quickly and easily, and without the expenditure of any money or an ounce of blood. The task which the Government is still battling to accomplish has provoked an exhibition of world-wide hatred, of which we have not yet, perhaps, seen the end or the worst; the task which has been laid aside would only have provoked a professional and meaningless remonstrance, coupled with a real sentiment of congratulation upon our backbone. The performance of this task would have brought immediate prosperity to our oldest and most devoted Colonies; the carrying-out of the other task, necessary though it is, involves devastation and perhaps a long time of depression, preparatory to the resumption of the progress of Colonies in which half of the inhabitants detest us. Not only has our Government ceased to go forward with the easy task of procuring Imperial justice for the West Indian Colonies, but only this year it deliberately turned its back upon the obviously right course when a new chance offered in the reimposition for revenue purposes of the sugar duties. Nay, three years ago it also turned its back, and wantonly destroyed an opportunity of getting the sugar bounties abolished, by sending its representatives to the International Conference without power to sign the only kind of agreement which could be effectual; so bringing the otherwise promising labours of the Conference to naught. Upon the other side, all that the Government can claim is that it has given to the West Indies a few doles and subsidies (out of the overburdened British taxpayer's pocket) which are as powerless to restore the Colonies to prosperity as are alms to turn a pauper into a capitalist.

In his "Suggestions for British Traders with Turkey in Asia" our Vice-Consul at Adana incidentally draws a picture of the commercial conditions operating in that part of the world which almost prompts "Don't" as the best suggestion; for the commercial classes of Asia Minor seem to possess even less honesty than capital. Moreover, the British merchant, who invariably employs Levantine agents and German commercial travellers, loses his money and trade in seeking to gain business. The Levantine has ways of disposing of the former which do credit at least to his ingenuity; and the German traveller represents German as well as English houses, and works upon a patriotic basis. However, in these days of competition and closing markets we cannot afford to let even Asia Minor slip, and attention might well be bestowed upon Colonel Massy's suggestion of a central agency or inquiry office for English traders, to be established by an Association of them in Constantinople.

BUYING, HANDLING, AND SELLING COFFEES.

THE THIRD PRIZE ESSAY.

By R. H. HUDSON (Wahbunung), Toronto.

I am not asked to say anything in this article as to the history of the coffee bean, or as to the amount used in our own or foreign countries. Instead, as the preacher would say, my text has been given to me and I shall proceed with the subject on hand.

To my mind the buying, handling and selling of coffee, is the most important by far of all the duties of the grocer; and it must, of necessity, call for the greatest possible care and intelligent consideration on his part and the faithfulness of those associated with him in seconding his efforts to maintain a high standard. For no matter what care and wisdom have been manifested in buying, unless they are handled properly, the selling of them will eventually amount to but very little in building up and holding your trade.

THE MOST SUITABLE COFFEES.

In buying your coffees you must know what kinds suit our water; that is, what coffees are the best to use where you have hard water, and what kinds are best where the water is soft. The kinds which I believe to be most suitable here are Mocha, Java, Ceyl Maracaibo, Santos and Rio; and grocers, in Canada, at least, sho be very sparing indeed of any other kind. Two of the kinds m tioned should never be put in where finest quality is sought, delicate flavor departs when you sprinkle Rio or Santos in yo blend-, just in proportion to the extent in which you use them.

THREE GOOD BLENDS.

If your trade demands what mine has you need about th regular blends. The first should be a well-colored, strong flavored blend of about 10 parts Mocha, 4 parts Java, 2 pa Ceylon and 1 part Maracaibo. A second blend, very mild for th who delight to smack their lips and say, "There's the flavour would be of about 10 parts Java to 4 parts Mocha and 1 Maracaib while a third blend to please the cheap trade can be made of abo 4 parts Mocha or Ceylon, 4 parts Maracaibo and 3 Rio or Sant (Santos preferred).

But whatever blends you have keep them the same, and buy that you may be able to do so. You may as well attempt to fly to please your trade by giving one good blend this time, and different one next time, and so on. Give a poor blend, if you mu all the time, rather than a good one and a poor one alternately.

Seeing, then, it is so important to have a fixedness of flavor, y must necessarily obtain the same coffees and not go hunting fr Dan to Beersheba for something cheaper to palm off on your trad for when it comes to drinking coffee, the trade worth seeki demands the best and will pay for it. The proper way, no dou is to have a sample of your last purchase on hand and draw match; and never buy, or, at least, never have roasted more th a week's supply on hand at one time. Never mind that quarter a cent extra for roasting often, for the resulting benefit will exte into dollars.

BACON'S OPINION OF COFFEE.

The philosopher, Bacon, said of coffee: "This drink comforte the brain and heart and helpeth digestion." Fortunate for hi that he does not live in this day and be forced to drink some of t mixtures sold for coffee!

There is a reason for the large sale of package coffees whi give so little profit on a turn-over; and possibly you've guess it by what I have said. "There the same poor quality," do y say, "but they can always be relied on for one thing, namely, t same flavour as last time." And the demand for these packa goods is on the increase and will be still greater if you will n buy what will change your cereal, or chicory, or paste-drinki customers into substantial coffee customers; and your casual coff customers into well-pleased and delighted customers, who mu have your blends no matter where they move, so long as it within reach of you at all.

There is no food which gives the mental exhilaration a physical buoyancy which coffee gives: hence the importance purchasing with this high ideal in one's mind and not merely gratify a fancied whim on the part of your customers. Be firm your resolve to have the best procurable, and to always ha the best.

CARE IN HANDLING.

Then, there is the handling of coffees, so dependent on the bu ing and so fraught with important issues. For how true it is th the best coffee ever imported can be spoiled entirely by carele handling; handling by wholesalers or jobbers, and later by t retailer or his assistants! Grocers err mostly in some of the fo lowing ways: By exposing the bean in the store or window f show or advertisement, leaving it in the same store-room wi coal oil, or fruit, such as oranges, lemons, pineapples, etc., or veg tables, such as turnips, cabbage, and potatoes. You remember wh

---

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, oth have no effect, and none do good. Sugar and water, or a little glycerine, giv relief when the throat is inclined to be dry; this applies to persons whose thro are affected by the weather. About a third of a teaspoonful of Condy's Fluid a tumbler of water, if used as a gargle every morning, will clear the throat a brace up the uvula, which, in some singers, is so long that it interrupts the p emission of the voice, and introduces a grating undertone, while it also tends make a tremolo on the upper notes."—*The Idler*, February, 1900.

the proverbial preacher said: "Brethren, these things ought not so to be." And so we must lay all the emphasis possible upon the importance of keeping this delicate berry away from its grocery store associates: for nothing can improve the flavor of the bean, but dozens of fruits, vegetables, etc., can do untold harm.

Another thing I must mention is the

PACKING OF ORDERS,

a very important matter, and yet one which is relegated to the freshest boys in the store. A lady returned a pound of coffee a short time ago, complaining of a taste of sulphur about it, and the fact was revealed that it had been packed on the top of a box of matches which went in the same order. And I could give you similar instances, where good coffee had been rendered almost useless and the trade of the customer in question jeopardized. Be sure always to pack the tea and coffee away from anything and everything which could possibly affect it, and the best plan is to have a separate box, clean and dry as a bone, for teas and coffees, then it will run no risk of being packed in a fish box, a haddie or codfish box, for instance. I spoke about this not long ago to a delivery clerk and he replied, "Why, haddie boxes are the nicest delivery boxes we have!"

I have often thought how much I would like to take some of our grocers and clerks through some good coffee-milling establishment where they could see for themselves how very particular the operators are in their work of sorting, then cleaning and grading, then roasting of the berries. While the coffee is yet warm it is ground and packed in tin boxes, half-pound, one pound, and up to fifty pound tins, when it is labelled and taken to the wareroom ready for shipment, the whole manipulation, from beginning to finish, being a practical demonstration of the

NECESSITY OF CLEANLINESS

and the utter absence of all foreign flavors. It is not a question of what our mothers twenty years ago thought about coffee, or how the grocer around the corner used to handle his coffee, for likely he had only one scoop, and it had to do duty for pepper and tea, cloves and coffee, as well as salt, sago and snuff. This is a day when law and order should be recognized everywhere, and especially should we have the best going in our up-to-date stores. I would just as soon think of taking the peck measure or oyster ladle to fill up my coffee with as the scoops which are used by some grocers daily. No wonder your customers have been driven to the package goods, for they have seen some of your habits and they "beg to be excused," and so take the other fellow's brand, while you are out a nice little profit. Worst of all, you have by your carelessness forced them to use some brand which can be purhased anywhere else, and so they need not put themselves about to come to your store, when they can just send across to the little corner grocery. A customer lost through careless handling! Are our customers particular? Are they cranks? Let us praise them for it, and be even more particular, for it is right and will surely pay.

And so the proper handling means the easier selling, for after all

SELLING IS THE GOAL.

We buy and handle to sell. We read and think what and where to buy and how to handle that we may sell the goods. And how pleasant and comparatively easy it is to sell what we have confidence in ourselves; what we know comes up to our ideal of what is possible in coffee blending.

If there is one kind of an individual for whom I have no respect, it is that storekeeper who prates about relatives, friends, weather, the latest in novels or shows; but when he is asked about coffee is as dumb as an oyster. What is the matter? Why, his heart is in these things and not in his business; and the day seems so long, and dinner time or supper hour so tardy in coming, because he doesn't enjoy his work, and he is not trying to do his best. Know how to prepare coffee yourself and you will be able to speak from experience.

When the boys came home from South Africa how we endeavoured to get near them to talk with them! Why? Because of their experience, thrilling and interesting as it was! And their words burned themselves on our memory, and we said: "What splendid fellows!"

And if we wish to impress our opinions upon our customers, we must

SPEAK WITH AUTHORITY,

though humbly and kindly, and be able promptly to give a reason why we recommend any special blend of coffee, so that if Miss A. wishes a nice, mild drink, we shall explain the character of our No. 2 blend, and if Mrs. B. wants a good, strong drink, our No. 1 blend will just suit, and so on. Take your customers into your confidence, and explain the proper mode of preparing for use; for really very few people know how, but will follow your advice gladly.

Sell your customers your best. Rather sell half a pound of good than a pound of cheap coffee, and it will pay you to do so. Few are attracted by low prices. It is quality that draws, and quality that retains.

Demonstrate your best blends occasionally. Serve with dainty cups and saucers.

Advertise judiciously. Let the people know that you are stil alive and in the old stand.

Be good-natured, courteous, attentive, and keep your blends always up to the standard and enclosed in well-fitting tins, arranged in sight of your customers.

SHADE FOR COFFEE.

The Central African Times states that the Head of the Administration Scientific Department has been visiting estates from time to time and has published in the *Gazette* his opinions on what he saw. Our contemporary adds:—We are glad to see the Scientific Department evincing such a practical interest in planting matters, and hope that the system will be continued and extended. There is, however, one little suggestion we would make by the way, and that is that the notes should not be published under the heading of each estate without the express consent of the Proprietor or Manager. It is obvious that no Proprietor or Manager likes to have his methods cut to pieces or his shortcomings exposed to the public gaze, while in the case of commendations the article is too apt to form a free advertisement. Equal good would result by merely stating the district, except in any special circumstances, while invidious distinctions would be avoided.

It is pleasing to note that the Head of the Scientific Department is not at all despondent about Coffee and we quite agree with him there. We are also pleased to see that he puts his finger on the chief cause of past failures, *viz.*, want of Labour. While agreeing with most of the opinions expressed we would however draw attention to his dictum on shade. Mr. McClounie quotes a former statement of his, written in 1898, in which he says:—"It is not consistent with reason that any shrub such as Coffee can derive any benefit from another tree growing in close proximity, requiring as much and more nourishment as the plant from which is expected marketable produce." To this he now adds "Unfortunately the above remark has been proved to be too true."

This is exactly where we join issue with Mr. McClounie. We have advocated shade since 1895 but owing to the exigencies of the Coffee Leaf Disease Regulations we have been forced to limit ourselves to three imported trees, all of which may be said to have been proved failures. Had Mr. McClounie said that Albizzia Moluccana, Grevillea Robusta and Pithecolobium Saman had all been proved unsuitable as shade we would have agreed with him. That these trees have proved unsuitable does not necessarily mean that shade trees are a failure. Can Mr. McClounie point to any estate which is under proper shade and which has proved a failure? Undoubtedly he cannot because at present we are prohibited from importing proper shade trees and have had to experiment with the three above named and indigenous trees. In another case he refers to the native ficus and concludes that they appear "to exert no influence on the coffee under them whatever." He then goes on to instance the case of some of the coffee under the shade of these trees carrying as heavy a crop as that in the open, while in other instances there is no crop. Naturally this is so. We can point to unshaded coffee where some trees are bearing heavily and others are not but what does that argue. Merely that in the case of the unproductive bushes there is a want of some essential, such as plant food, or that it is suffering from some enemy or disease, while the bearing coffee is not. The fact that some of the coffee under the native figs is bearing heavily on the other hand argues that coffee can be got to flourish and to bear crops under shade and therefore disproves his quoted statement. Mr. McClounie's statement however contradicts the whole present practice of the Coffee-growing districts of India where

Coffee is grown successfully only under shade. Perhaps in a year or two, when we have found the most suitable trees for shading our Coffee, Mr. McClounie will change his opinion and we hope that it may be so and that this matter of shade will be solved at an early date.

Shade, we repeat, is necessary at low elevations to keep down the ravages of borer, which, as Mr. McClounie admits, do a vast amount of harm. Shade lessens the work of weeding, lessens the pruning operations, and also lessens crops but compensates for that by prolonging the life of the tree and making crops more regular and certain. The only way in which it adds to the work is in the manuring and where good shade is established it will usually be found that liberal manuring is the only thing necessary in order to produce regular crops. The shade tree ought to find its nourishment far below coffee feeding grounds. It brings this nourishment from the lower levels and by means of its cast leaves adds it to the surface mould so that it is to some extent a direct feeder to the Coffee. We can profit by the experience of Coorg which at first grew coffee without shade The result was total failure. Shade was introduced and a flourishing Coffee industry was established. Let us hope it will be so here and that the Administration will relax the Regulations against the introduction of seed from India so that proved shade trees from the Coffee districts may be obtained.

REGULATING THE SUPPLIES OF TEA.

We are glad to learn that steps are being taken to prevent undue pressure in the offerings of tea for sale this season. In view of the marked shrinkage of the exports to the United Kingdom, and considering the reduced crop indicated by the latest telegram from India, preventive measures are necessary, so that only manageable quantities of tea are placed on the market. The Indian Tea Association, at their meeting this week, resolved to resume the regulation of sales until January 31, 1902, and a circular has been issued to all tea companies and proprietors acquainting them with the facts and urging them to co-operate for the mutual interest of all concerned.

The Chairman of the Brokers' Association has been informed of the decision arrived at by the Committee, and it is hoped that the Ceylon Tea Association will see their way to come into line and adopt a similar course of action.

It is hardly possible to exaggerate the advantages to be gained by united action in this matter.

The following is the circular referred to:—

INDIAN TEA ASSOCIATION (LONDON).

14, St. Mary Axe, E.C.,
October 15, 1901

Dear Sir,

Regulation of Sales.

At a meeting of the Committee of the Indian Tea Association held yesterday, the figures telegraphed from Calcutta of the amount of crop made to the end of September .... were considered. These go to show that there will be a heavy deficiency in yield for this season from India, while the Ceylon crops also are short.

But, owing to the greatly improved means of communication in India, teas have been reaching London much more rapidly than they did in past years, and in the absence of any organised system of feeding the market, large quantities have been thrown on to it lately to the great detriment of prices.

The Committee were therefore unanimously of opinion that prompt steps should be taken to regulate the supplies offered for sale in order to give confidence to buyers, to steady the market, and to prevent any unnecessary fall in prices.

I am therefore instructed to inform you that a resolution was come to to resume the regulation of sales until the end of January next on the lines of the regulation of 1893-9.

Will you therefore be good enough to instruct your brokers every Wednesday what amount of tea you wish to sell during the week commencing the following Monday week, *i.e.*, ten days before the earliest sale date, with instructions to forward the same to the regulating Committee.

I remain, yours faithfully,
Ernest Tye,
Secretary.

LECTURE ON TEA BLIGHTS.

At a general meeting of the Ambegamuwa Planters' Asso ciation on the 29th ultimo Mr. Carruthers gave the followin interesting lecture :—

Coming to Ambegamuwa to talk about the diseases of tea i somewhat like taking coals to Newcastle, as your Chairman ha observed so carefully and knows so well the nature and effects o your common blights. Still, if you are already interested in ther by means of Mr. Collett, you may be more willing to hear what have to say.

We may for practical purposes group the diseases which tea an other cultivated plants are subject to as environmental and specifi Environmental are those diseases which are due to physical cond tions injurious to the vigorous growth of the plant such as drough excess of water at the roots, continuous and powerful win absence of nutritive substances in the soil, etc.; these are evi which the planter knows well and he knows the way to cure th plant suffering from a disease of this order—remove the condition if possible and the plant recovers if it is not too late. Whi mentioning this I may say that it would be an advantage if th planter would make himself acquainted with the usual symptom in the leaf of some of these environmental diseases. If he can d it no other way, let him select a bush of no great value, somewher that he can conveniently examine each day, and damage the root by severely cutting them, so as to imitate to some extent th physiological effects of drought. He will then have an objec lesson of a tea bush suffering from an environmental disease— disease which he is able himself to deal with quite as well as, i not better than, a plant pathologist. I have frequently sent to m specimens of tea leaves, and the leaves of other cultivated plants which are merely discoloured and partially dead from the effect of drought or "wet feet." It is not always easy to say without microscopical examination if this is so; but in many cases a acquaintance with the effects caused by drought, wind, etc., woul lead to the planter being himself able to remedy the evil.

The other class—the specific diseases—are more common, perhap and more difficult to remedy or cure. They are diseases due to th attacks of a foreign organism on the plant—an insect, fungus o bacterium. It is the duty of all to endeavour by observation an experiment to get all the knowledge possible of these enemies, s that we may be able to war intelligently against them and reduc the loss to the tea bush. It is important to remember that thoug the fungus or bacterium is called the "cause" of the disease yet i is only one of the causes, strictly speaking. Such diseases are th effect of a number of factors working together. In the case of lea diseases on tea we can see what conditions in addition to th presence of the spores of fungi are needful. We have in tea i Ceylon some specific leaf diseases, of which grey blight (*Pestalozzi Guepini*) is the most widely distributed and best known; and as i is known so well a great many leaves which are dying owing t environmental diseases, and other specific diseases not grey bligh are attributed to it. Grey blight is due to the presence of th growing mycelium of *Pestalozzia* in the leaf tissues, but the attac of blight in any spot on the leaf cannot take place unless when th spore lights on the under-surface of the leaf, when there is moistur in the atmosphere to allow it to germinate. Here, in Ambagamuw you have exceptionally favourable conditions for the germinatio of spores of fungi. Your days in which there is a moist atmospher sufficient for spores to germinate are in a tremendous proportion t your anti-fungus growing days, *i.e.*, with dry atmosphere. Th spore of the grey blight lights on the under-surface of the leaf- .....—and in a moist air—a very damp atmosphere is no needed. I have grown the spores of grey blight on dry glass plate in the evening and early morning of an average day at Peradeniy when the air was not either by the wet and dry bulb thermomete or to one's own senses damper than usual. The spore grows along th surface of the leaf until it reaches a breathing hole or stoma in th leaf, of which there are large quantities on the under-surface of th tea or other leaves. When it reaches one of these holes, it turn in and grows in the spaces between the cells of the leaf. After

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant t appointment of "Purveyors to Her Majesty The Queen and Empre of India" from the year 1837 until the time of her death, have no had the honour of being appointed by Royal Warrant "Purveyors The King."

as grown for some time in these spaces, it penetrates the cells nd kills them successively. The time taken to kill any definite rea of tissue in a leaf varies with the condition of the leaf, the noisture of the air, and other factors. In some experiments of tea eaves I found that a discoloured patch about the size of a ten-cent iece was produced some time after the spore had been sown on he leaf. In one case a visible patch of this size was caused in 12 ays, in another 19, and in a third in 24 days. It is important to eep in mind that the time of the visible signs of disease is not he same as the time of the outbreak of the disease or rather the rigin. Planters frequently say of tea diseases as well as others a sudden outbreak—I know exactly when it occurred;" but it nust be remembered that the time responsible for the evil may ave been 12, 19, 24, or even more days previously. The mycelium f the fungus is present in the leaf long before the discolouration s perceptible. In fact, there is, no doubt, in some of the flush icked and taken to the factory, some mycelium of the fungus, so hat, if these leaves had been left, in a few days the disease would ave been noticeable.

The methods of cultivation of tea are, most fortunately, the nost excellent means of combating leaf diseases. The grey blight n nearly all cases is confined to the leaf tissues, not spreading to he leaf stalk, but I have, in a few cases, found this not to be the ase, and I have received specimens from three different districts n which the fungus has spread to, and partially killed, the leaf talk and the young wood of the bush. This should be looked out or by all planters carefully, and directly it is observed the bush hould be pruned back below the discoloured leaf stalks and young ranches. If the grey blight began to invade the permanent por- ions of the tea bush, it would prove a much more serious enemy han it is at present.

After the grey blight mycelium has grown for some time and roduced a fairly large discoloured patch, spores are produced, and hese, becoming detached, float about in the air and are carried by the wind to other tea, and the same process goes on again.

A most interesting instance of the nature of the wind distribution of spores is to be seen quite near to this place. There is a belt of jungle along the crest of a hill about 30 yards wide and a road cut through the trees. The tea on the far side of the jungle was blighted fairly badly, but the tea on the near side—the leeward—was only blighted just at the place where the wind blew through the gap in the jungle, a clear case of wind-borne spores and a most instructive one.

With regard to the measures to be taken to reduce or avoid the evils caused by grey blight, our knowledge of the life history of of this (though this is not yet complete) shows us the direction in which success is most likely to be gained. The destruction of as many diseased leaves as possible removes an immense quantity of spores Burning is the only effective means of destruction. Unfortunately, men who had taken trouble and spent money in removing their blighted tea leaves, were discouraged when the effects were not so markedly beneficial as they hoped. This would always be so while only one man here and there went in for preventive measures: universal co-operation in such sanitary means was essential to a complete success.

The study of the factors which are needed for an outbreak of grey blight is of importance, and it is a matter for surprise that after an abnormal prevalence of this disease in 1898, followed by two years of rather exceptionally favourable weather for the spread of fungi, the quantity of grey blight is less than before. What factor is missing is not known. It is probable that the distribution of spores by the wind has been in some way favourable—perhaps a larger quantity are being carried away from the areas of tea cultivation than at other times.

The other diseases of the leaf in tea common in Ceylon are *Colletotrichum camelliæ* and *Cladosporium herbarum*. The former was observed in 1897, and sent home to a mycologist, Mr. Massee, at Kew, and named. I had not seen it on any tea in Ceylon until some months ago I got it from the same estate as it was got from before, so that in the four years intervening it has not spread, and therefore need not be considered as a serious danger. *Cladosporium* is also comparatively rare.

Turning to root diseases, for I am thankful to say we have no stem diseases, there is a disease which must be watched for, and guarded against, as carefully as possible. It is known to science as *Rossellinia radiciperda*, and is characterised by a white thread-like mycelium which can easily be seen with the naked eye. The majority of fungi are either saprophytic, *i.e.*, living on dead and decaying substances, or parasitic, *i.e.*, preying on living animals or plants; but in this case of *Rossellinia* the fungus starts as a saprophyte on any dead timber, roots especially, and spreads to the living roots of tea and other plants. The white threads of mycelium can stretch out 7-10 inches from the dead root on which they are growing until they reach the young and tender rootlets of the growing tea bush Those roots of jungle trees, like *Simplocos*, which are soft and spongy in tissue, afford the best home for the fungus and enable it to spread more luxuriantly. In connection with this I have been working for some little time lately upon a disease of *Grevilleas* which may be due to the ravages of this same root disease. I have not yet discovered whether the root disease (*Rossellinia*) is the cause of the death of the grevilleas, or whether it comes on the dead roots of that tree after the tree is killed. I am experimenting by infecting the roots of a grevillea tree with the fungus to see if it is capable of killing the tree. However, it is important for every planter to recognise that the grevillea roots may be the harbourers of this dangerous disease, and when they have a tree dying or dead to use preventive means. The best preventive means for this and other root diseased is to isolate the diseased tree or trees by means of a trench one foot wide, and at least two feet deep, over which the mycelium of the fungus cannot stretch—in addition lime should be put into the affected patch and all diseased roots should be taken out and burnt. If this is not done the roots of supplies will contract the disease; sometimes three or four supplies dying in the same way and from the same cause. Buried prunings also, where this root disease existed, are a source of danger, as the fungus could start there on a piece of buried prunings not thicker than a pencil. In affected spots it is best not to bury prunings at all, and in places where, from damp or adjacency to infected places, danger is feared, lime should be freely used with the prunings. Damp and undrained spots were the most likely to be the starting points of this evil, and the cutting of the isolating trenches wound tend to reduce this condition.

At the close of Mr. Carruthers's lecture, which was illustrated by diagrams, and was listened to with great attention, the Chairman said that Mr. Carruthers had intimated that he would be glad to discuss any points in detail, and would be willing to answer any questions put to him by those present.

Mr. Nelson asked whether the root disease just referred to caused the death of plants in young clearings.

Mr. Carruthers said that no doubt *Rossellinia* was the cause.

Mr. Horn mentioned a case of some plants which were killed by being planted near a poisonous tree, and

Mr. Carruthers said that decaying trees often became poisonous because of the presence of *Rossellinia* in them.

Mr. Shand asked if the tree *Simplocos* was generally harmful to tea.

Mr. Carruthers pointed out that all dead roots of trees are harmful when *Rossellinia* commences to grow upon them, and they are a favourable starting point for it. Roots which are spongy like *Simplocos* are the best home for the fungus causing the root disease.

After a few more questions, chiefly relating to root disease, had been answered by Mr. Carruthers, the Chairman rose and said:—

"I am sure we all feel grateful to Mr. Carruthers for the trouble he has taken to come here and lecture to us to-day. Now that the Scientific Department at Peradeniya is fully organized and equipped, we may, I hope, look forward to the pleasure of receiving more frequent visits and lectures in the future. Mr. Carruthers, when speaking of grey blight, referred to a question of special interest, —*viz.*, the unknown cause of its remarkable disappearance from most of our fields since the great outbreak of 1898. This is a matter which has exercised my mind for some time, and I am inclined to think—perhaps Mr. Carruthers will correct me if I am wrong—that it is one which is more intimately connected with the condition of our labour supply than has been generally supposed. Let me explain. There is, as you know, a condition into which tea falls, after it has run through its flushing season and awaits pruning, which may be described as one of *inertia*, or stagnation. In my observation, it is while in this state of reduced vitality that tea becomes specially susceptible to attacks of disease. You may remember that when addressing you on the subject of tea diseases some time ago, I ventured to suggest that more frequent pruning would probably tend to keep the grey and brown blights of tea in check. Now I cannot help thinking that the comparative immunity from

these scourges which we have enjoyed during the past two seasons has been in great measure due to a plentiful supply of cooly labour, which has enabled us to carry out the timely pruning of our fields while they were still in good heart. Probably other factors have also been at work, but they have not yet been identified. What we want are observations—and at present there is great lack of them. Yet they are easily made, and it surely forms part of our business as cultivators to study as closely as we can the habits and wants of our plants, in health as well in disease. Gentlemen, I ask you to pass a hearty vote of thanks to Mr. Carruthers for his very interesting lecture."

Mr. Carruthers, in replying to the vote of thanks, said: "It has given me great pleasure to come here to-day; to have obtained information, and—I hope—to have given some. I should like to say how glad I am to see your Chairman in his place again. It is a good thing that local Planters' Associations, like that of Ambegamuwa, have Chairman who, by observation and experiment, add to our knowledge.

THE CEYLON PLANTERS' RUBBER SYNDICATE, LIMITED.

THE FIRST GENERAL MEETING OF SHAREHOLDERS.

The first general meeting of the shareholders of the Ceylon Planters' Rubber Syndicate, Limited, was held at Colombo on the 31st ultimo.

On the proposal of Mr. Harrison and seconded by Mr. C. A. Ferguson Mr. A. M. Forbes was elected Chairman.

The notice convening the meeting having been read

THE REPORT OF THE DIRECTORS

with the accounts to the end of August, 1901, audited by Mr. W. H. Graham, were submitted and accepted by the meeting. The report was as follows:—

Acreage.—The acreage of the Syndicate's property is as follows:—Opened land, 615 acres; reserve, 269 acres; total 884 acres. At 31st August, 1901, 615 acres had been felled, of which:—480 acres were lined 12 in. by 12 in.; 350 acres were holed, 12 in. by 12 in., 310 acres were filled in, 12 in. by 12 in., and 300 acres were planted, 12 in. by 12 in.

The manager expected to have 350 to 370 acres planted by the 30th September, and the remainder by the end of the year, the plants not yet being large enough to put out. Thus the whole 615 acres should be planted in 18 months instead of 2 years, as estimated in the prospectus. Most of the land is given out to Chinese to weed in return for being allowed to plant vegetables. The amount expended on the property to the end of August was Rs.82,993·82; Coast advances outstanding $1,910·34 say Rs.2,865·51. These are recoverable. Estimated expenditure September-December $9,157·84, Rs.13,736·76; this does not include Ceylon expenses. As will be seen from the above figures, the funds in hand will not suffice to carry on the working of the estate until next July, when the last call is due. The Directors therefore think it advisable call up the 20 per cent. still unpaid, early in 1902 instead of July, of which formal notice will be given. As the 31st of Aug is an inconvenient date for closing the accounts, the Direct purpose to call a general meeting early in 1902, to receive accounts made up to the end of December, 1901. The pres meeting is called to conform with the ordinance. The shareholc will have to appoint Directors, Secretary, and Auditor, the pres office-bearers having only been appointed until the 1st ordin general meeting could be called. Mr. Carey, a well-known Str Planter, has been asked to give a report on the property.

ELECTION OF OFFICE-BEARERS.

Messrs. Halliley, Hamilton and Wilson-Wood having left island, Messrs. Harrison and Dunsmure were during the y appointed as Directors in their place, under clause 91 of the Artic of Association. As all office-bearers were only appointed till first ordinary general meeting, it was proposed by Mr. A. Forbes and seconded by Mr. C. A. Ferguson:—"That Mes Harrison, Dunsmure, and Clements be elected Directors; Harrison, Secretary; and Mr. W. H. Graham, auditor, at a fee Rs.25 for each audit." Agreed.

A CALL ON THE SHAREHOLDERS.

It was proposed by the Chairman, and seconded by Mr. H. Harrison:—"That, in view of a much larger acreage having b taken in hand than was at first proposed, and the funds in ha not being sufficient to carry on the working of the estate u next July, the Secretary be requested to ask the shareholders they will consent to pay half the amount of the remaining call c 1st July, 1902, on or before the 1st March, 1902."

A vote of thanks to the Chair brought the meeting to a close.

WHICH IS THE CHEAPEST?

Which is the cheapest beverage, coffee or tea? According the correspondent of an American contemporary, who takes a v rosy view of the question of the consumption of tea, coffee literally "not in it" with tea, so far as cheapness is concern but there is certainly not the wide difference between them t the aforementioned authority would have the trade believe.

We quote his estimate, as follows:—

"The cost of tea yearly to each family is a mere bagatelle. Co is more expensive. There is contained in one pound of tea cups—at 40c. per pound, seven cups for one cent. In one pound coffee thirty-two cups; it requires eight and one-half pounds coffee to equal one pound of tea. Coffee at 20c. per pound wo cost $1·70. Calculations are in order. Consumers are ignorant these facts. No beverage is so nutritious, so healthy, so cheap whatever the cost."

The best authorities credit coffee with a potency of two-gall of beverage to the pound, and tea with a potency of six gallons the pound. Calculating that the ordinary cup holds half a pint beverage these figures would give us 32 cups to the pound of co

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

[w. 1-10-98—t.f.o.]

and 96 cups to the pound of tea. No doubt a good many people get more than 96 half-pints of beverage from each pound of tea they use, but, on the other hand, the average consumer of coffee obtains more than two gallons or 32 cups from each pound of the aromatic berry, many people using chicory to eke out the coffee and give it the body which cannot be otherwise obtained save by a generous use of the coffee berry. Consequently any shortage in the estimate of six gallons or 96 cups of beverage to a pound of tea would be offset by an equal deficiency in the estimate of two gallons or 32 cups of beverage to a pound of coffee.

Now, as to the average cost of tea and coffee to the consumer The above-mentioned correspondent does not err much if at all in estimating the average price of coffee at 20c. a pound, but 40c. is a little low as an estimate of the price of tea. Fifty cents would be nearer the mark, at least since the duty was laid upon the article. Say, then, that coffee costs 20c. and tea 50c. a pound. With tea furnishing only three times the quantity of beverage that coffee furnishes, the consumer of coffee, in order to get 96 cups of beverage, must pay 60c., just 10c., more than the consumer of tea pays for his 96 cups. Whether he obtains 10c. extra in gratification, the pleasure of the palate, which only a well-made rich cup of aromatic coffee can give, depends upon what sort of coffee he buys and how it is made.

It may be urged against the lower estimate (96 cups) of the number of cups in a pound of tea that the average tea cup holds less than the average coffee cup, and that therefore more cups should be counted to the pound of tea than we have given; but it is obvious that it is not fair to calculate in so one-sided a way. The same measure of quantity must be used with each article, if the estimate of the relative cost of tea and coffee is to be worth the paper it is written on. This being so there is no apparent reason why the 10c. difference should not be accepted instead of the grossly exaggerated difference which the aforesaid correspondent arrives at.—N. Y. *Merchants' Review.*

THE AUSTRALIAN TEA DUTY.

MEETING OF MELBOURNE IMPORTERS.

THE AD VALOREM METHOD CONDEMNED.

An Australian paper records the following :—

A meeting of tea imports, brokers, and distributors was held at Messrs. Fraser & Co.'s rooms, Marketstreet, Melbourne, to discuss the proposed duties of 2d. and 3d. a pound and 20 per cent. *ad valorem* on teas. Mr. Charles King (Messrs. Henty & Co.) presided, and the attendance numbered about fifty. The chairman explained that the meeting had nothing to do with either free trade or protection. There was no desire to even suggest the amount of duty that ought to be imposed, but there was a strong feeling in the trade that the attempt to collect an *ad valorem* duty on tea would prove costly and clumsy, and probably unworkable. It would, moreover, be injurious to buyers, as the duty would have to be paid on invoice values at ports of shipment whether the teas sold at cost or at loss. The effect would be to increase importers' losses, and to make it impossible to fix prices for teas, pure or blended, re-shipped to ports outside the Commonwealth. The Government had had a difficult task in framing the first tariff, and he was sure Mr. Kingston would be ready to listen to any statement on behalf of the trade. The proposed 20 per cent. only meant a farthing per lb. on average values, but it would entail such cost and confusion, besides exposing confidential business, that they would prefer to pay a higher fixed duty.

Messrs. Albert Harvey, Shelley (Griffiths Bros.), C. Crespin, T. D. Edwards, W. Harper, M. Mitchell, R. G. Wilson, and Thompson also addressed the meeting, and pointed out the peculiar difficulty of applying an *ad valorem* duty to a variable commodity such as tea. It was ultimately decided to ask Mr. R. Harper, M. H. R. to introduce a deputation to the Minister of Customs on the subject and a deputation was appointed to lay the views of the trade before the Minister.

During the meeting the Chairman read a telegram from Sydney, stating that a similar meeting, with a similar object, was being held in that city.

THE PUBLIC TO PUT UP WITH AN INFERIOR TEA.

"The tea trade," said Mr. Charles King, principal of the importing firm of Henty & Co., in conversation last Friday with a representative of the *Melbourne Age*, "is but little understood, and if I spoke to you all night I doubt very much if you would leave me any wiser than before. That, of course, refers to the trade as a whole, and the many technicalities that are involved. You ask me what the effect of the new tariff will be. It is simply this—the public will have an inferior tea. Under the Victorian tariff, we and all the trade knew what duty we had to pay, but under the new tariff we do not. A fixed duty as in the past enabled us to buy and regulate our prices according to the quality of the tea. Under the new conditions we can't do that, simply because it is a matter of impossibility for any man to grade an article without testing it. The trade want a fixed duty—what that duty should be we are perfectly willing to leave to the Government."

BRINGING THE TEA TRADE IN SORROW TO THE GRAVE.

The following comment on the same subject gives the experience of the first three days of the tariff :—

The composite duty of 2d. per lb. and 20 per cent. *ad valorem* on tea has been in operation three whole days, and in that short period has nearly carried the whole tea trade in sorrow to the grave. There are many and varied objections to such an impost, the chief of which are that tea is sold in bond, the buyer paying the duty. He has no original invoice to produce. If he prevailed on the seller to produce one, it would disclose the importing profit! Again, tea is mostly sold at public auction. A buyer might purchase a tea at 7d. in bond, and when the original invoice was produced, the actual cost might turn out to be anything from 5d to 8d. The duty he would have to pay would be incalculable! The tea traders are strongly adverse to the new duty, and intend to do all in their power to secure an alteration. The Committee appointed at the recent meeting of the tea trade, after deliberation has prepared a statement of the various reasons which have guided the trade in arriving at the unanimous conclusion that the *ad valorem* duties will prove unworkable, and this statement will be presented to Sir G. Turner next week, through Mr. R. Harper, M.P.

THE TARIFF AND THE TEA TRADE IN SYDNEY.

AN IMPORTER'S VIEWS.

A well-known importer in Margaret-street yesterday expressed to a *Herald* representative several objections to the tariff as it would apply to the importation of tea. He pointed out that the proposed duty was 2d per lb. in the bulk, and if packed in small parcels an additional differential duty, according to the size of the packet. Strong exception was taken to the latter clause, which, he asserted, would deprive the public of securing their tea in the most popular form, while it would yield nothing to the Federal Government. He traced the history of the tea trade for the past 15 years, during which time the bulk of the Australian trade was transferred from China and India to Ceylon. In 1880 Ceylon produced no tea worth mentioning, whilst at the present day, out of a total of 25,000,000 lbs. imported annually into Australasia no less than 18,000,000 lbs. came from that island. Of very recent years there had been an increasing popularity among the public for pure Ceylon tea made up in small packets of lead. This tea is chiefly packed at Ceylon, where the favourable climate enables the fresh supply to be kept up during the whole of the year. Tea packed locally is mostly put up in tins or paper packets. It is maintained that the tins absorb the taste, and injuriously affect the quality of the tea, while that placed in paper packets rapidly loses its freshness and flavour. If the object of the Government in taxing the packets was to raise revenue, it would meet with failure, for the reason that the duty was prohibitive, and the trade in that line would cease. On the other hand, if protection to local labour was aimed at the game was insignificant, as the packing was but a small matter, and was accomplished chiefly by boys and girls. In any case, the public were being deprived of a most popular article. Astonishment was expressed that tea should be singled out specially for a duty in that form, while other commodities were allowed to come in in the smaller packets without extra duty being levied.

SPIRITS AND TEA.

Mr. T. G. Kenny, acting manager for the Civil Service Co-operative Society, when asked his views on the tariff, said frankly that he would not express any opinion as to whether it was too high or too low, but he fully believed that the proposals brought forward by the Federal Government would raise the revenue that was required. The duties on spirits had been altered, inasmuch that spirits in

bottle imported under the new tariff would be required to pay an additional duty. In regard to whisky, the increase would amount to about 4s 6d per two-gallon case, brandy 3s per two-gallon case, and gin 9s per four-gallon case. This seemed to mean that at present the duties would entirely shut out the trade for whiskies and brandies imported in bottle, and the consumer would purchase certain brands which are imported in bulk and "bottled upon the premises," for the reason that on the spirits imported in bulk which are generally "proof" or "over proof" no alteration has been made in the rates. Mr. Kenny said the idea of the Government might be to provide additional labour in the way of bottling these lines of goods in bond, as, he believed, had been done in Victoria, but he thought the importers of known brands were sure to make arrangements for the future for bottling to be done here, so as to avoid the increased duty now levelled against them. In his view a specific duty upon tea would be preferable to the proposed system, whereby both specific and *ad valorem* duties were imposed. The imposition of both duties would not, he thought, bring about the importation of higher grade leaf. It seemed to him that the importers might possibly adopt the system of keeping down the *ad valorem* duties as low as possible, which would bring about the importation of low-priced teas. Mr. Kenny added that it was to be hoped that a specific duty on tea of, say, 4d per lb. would be imposed, and that the *ad valorem* duties would be abolished, but he admitted that the Federal Government's device was an ingenious attempt to get at the consumer of the higher-priced article. —*Sydney Herald*, Oct. 12th.

BRAZILIAN COFFEE NOT WANTED.

SAN JUAN OF PORTO RICO, *Aug.* 10.—The merchants of San Juan are alarmed concerning the importation of Brazilian coffee, which has been made possible by the removal of the tariff. Yesterday the steamer *Ponce* brought two consignments of coffee, one of 120 bags and the other of 113 bags. This coffee can be sold here at about one-half the price of the Porto Rican product, thus destroying the market for the latter. The merchants of Manita met to-day and resolved not to trade with the importers of coffee from Brazil, and meetings were held in other towns. Governor Hunt has consented to ask Washington for relief by the enactment of a measure declaring that the proclamation does not refer to the special duty of five-cents on coffee, as per section 1, but only to section 3.

The importers of the coffee arriving to-day, fearing public feeling, announced that the coffee received would be shipped back again by the next vessel, the newspapers having demanded that a boycott be instituted against the dealers on patriotic grounds until Congress can act, considering a favourable construction of the law to be impossible.—New York *Journal of Commerce.*

COFFEE AND COTTON COMPARED.

The New Orlean *Times Democrat*, of July 18th, after presenting a table of coffee supplies and prices since 1883, says:—"In the light of this information, the disease is not difficult of diagnosis. The very high level of value coincident with the years 1893—96 (both inclusive) brought about the over-production which has been the planter's undoing. Coffee is not an annual plant like cotton, but is a tree which bears through several successive seasons. A heart-breaking collapse of prices is, therefore, bereft of immediate influence on the area under cultivation. *Per cohtra*, brighter prospects for the industry do not make themselves instantly felt, because several years are needed to bring new trees to the productive age.

"In a general way, the position of coffee is similar to the status of cotton, in the days when every price on the New Orleans boards began with the figure 5. The crisis has been accentuated by events in the financial world. The Rothschilds hold great blocks of Brazil's obligations, and have, in self-defence, set to work to lift the rate of exchange, as between milréis and sterling. The efforts of the great bankers have succeeded so well that the Brazilian planter now receives less per pound in his own currency than he did in the historic depression of 1899.

"In the very nature of things, there can be but one end to conditions that spell out ruin for many millions of people. Nature works on the law of average, and one may, therefore, safely inf that an under-production will come in its turn. Coffee is still article of universal use, but has pratically ceased to be an arti of value. It has, indeed, been seriously proposed in Brazil that fixed percentage of the present monster crop be burned, so th living prices might be had for the remainder. Human natu being what it is, no such palliative is within the bounds of t possible. Every man would be willing to help to burn his neig bour's crop, provided his own were spared.

"It is at such junctures that the speculator performs his legi mate function, by carrying the destructive surplus against the r current seasons of scarcity. Old Stephen Girard declared that had made his fortune by buying what nobody wanted and selli what everybody wanted. The plan has lost none of its effectivene with the lapse of time. Fortunes were amassed by far-seeing oper tors who bought cotton when it went begging, and calmly awaite their opportunity. Such a method of procedure requires mu more nerve and patience than the average man can ever hope possess. The vast majority of speculators prefer to sell what nobo wants and buy what everybody wants Hence the tears that a secretly shed on the international exchanges from year to yea The buyer of coffee may be sure that many a bad quarter of hour lies before him, for the gloom will deepen as the price go down. It is, assuredly, no game for weaklings, and even the gian may grow weary of the work. This is only another way of sayin that, in the markets as in the more prosaic avocations, the labour is worthy of his hire."

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange, *September 14th*, 1901.—Ninety days' Bank rate London opened on Monday, 9th instant at $10\frac{17}{32}$d. and closed th evening at $10\frac{27}{32}$d.

Since our article on the subject in July the situation has unde gone a profound modification. The failure of speculators to deliv the bills for which they had engaged in July last obliged son brokers to come to arrangements with the Banks for payment differences by instalments, whilst others broke down altogethe Consequently liquidation of the Bank's overdrafts was likewi postponed and, as soon as this pressure was withdrawn from th market, rates reacted and rose almost at once to 10d. and, unfettere by troublesome liquidations now show an unmistakable tendency rise. The improvement of Exchange in its turn reacted on foreig quotations of coffee so that in spite of enormous entries and stock gold prices did not give way so much as they otherwise must, an fell since 1st July only 11%, from $5\frac{5}{8}$c to 5c, whilst currency pric were maintained at about 7$000 per *arroba.*

In this way the terrible menace of simultaneous fall of Exchang and gold coffee prices, that seemed imminent, was averted and th *degringolade* practically saved the situation.

The value of coffee shipments (embarques) here and at Sant during the past week was £512,000, whilst declared sales were al very large, £244,000 bags.

Coffee.—The aggregate value of coffee cleared from the two port from 1st July to 13th September was £4,418,770 as again £4,486,745 for the corresponding period last year.

Entries at Rio and Santos during the week ended the 13th i stant show a slight falling off at Santos, Saturday being a holida and were 492,774 against 516,454 the preceding week and 342,6 the corresponding week last year.

The aggregate entries since 1st July were up to the 13th insta 4,317,420 as against 2,745,840 bags last year, or an increase of 57

Shipments (embarques) were 17,049 larger than last week' 371,818 against 354,769 and 249,667 for the corresponding perio last year, their respective values being £512,000 for this wee £497,000 for last and £487,000 for same period last year.

Declared sales show also a considerable increase, being 244,0 as against 177,000 for the preceding week and 154,000 last year.

Stocks on same date were 1,576,831 bags, or an increase of 59,8 bags on last week's and 561,021 bags larger than on same da last year.

Exchange, *20th September.*—Extremes during the week endi September 20 were $10\frac{3}{4}$d—$11\frac{7}{16}$d. for 90 d/s Bank paper and $10\frac{13}{16}$d- $11\frac{1}{2}$d for private.

The average Bank 90 d/s counter-drawing rate for the week comes out at 11 3/32d., the corresponding sight rate being 11 1/32d. against 11 7/64d., the average sight rate of the *Camara Syndical*.

Coffee, 21*st September*.—Entries at Rio and Santos during the week ended the 20th instant show again a large increase, the respective figures being 566,837 bags, as compared with 492,774 for the week before and 402,573 for same date last year.

The total entries for this crop up to the 20th instant amount to 4,884,257 bags as against 3,148,353 for same period last year, showing an increase of 1,735,904 bags.

Shipments (embarques) totalled 479,680 bags as against 371,818 for the preceding week and 283,722 for the corresponding week last year, their values being £696,000, £512,000, and £440,000 respectively.

Declared sales were 204,000 bags for this week, 244,000 for last, and 243,000 for corresponding date last year.

Stocks continue to increase, and are 5,274,879 bags against 4,952,439 bags last year.

Crop.—A correspondent on whose information we can rely writes from S. Carlos as follows:—"The current crop will no doubt be a big one, the biggest one we have yet had as regards volume. The yield, however, is 8 to 10% under last crops, but this will be swamped in the general increase. When comparing this crop with the last, it is well to remember that up country sentiment is very different to what it was last year, planters for some unintelligible reason having got the idea that prices were going to 15$000 per arroba, in which they were encouraged by commissaries who had all underestimated the crop. Consequently those who had sent down their coffee to Santos witheld it from sale, whilst others did all they could to keep it on their farms, a big currency drop being the result. This year no one talks of holding back; every one wants to sell, whilst exporters want to keep on the short side and the general short interest has kept prices in sterling very steady.

"Prospects for 1902-1903 are for a smaller crop, how much smaller is difficult to say at present. The first flowering was late and irregular and in most districts the trees are not up to the mark, but there will be no crop failure, from the point of view of consuming markets, unless prospects change for the worse, six million bags will probably be about the Santos figure."

Entries at present at Rio are over the usual average as regards quality, the coffee being mostly handpicked, and the higher grades, which at present command a premium, mostly forwarded to market. Later on the lower grades, which are now being withheld, will come down and redress the general average.

The first flowering in the Minas and Rio districts has been good and seems to hold out prospects of a good crop again next year. The weather has been also very favourable and the trees in spite of the heavy bearing are looking strong and healthy.

DISTRICT ASSOCIATIONS.

COORG.

Proceedings of a Quarterly General Meeting held at the N. Coorg Club House, on Saturday, October 12th, 1901.

PRESENT:—Messrs. W. H. Ball, P. Beni Singh, H. F. Davy, G. C. Garrett, C. J. Maclean, W. G. Mackilligin, E. Meynell, C. M. Nunjappa, E. Richter, A. J. Wright, W. R. Wright, W. H. Sprott (*Chairman*), and A. Lambert (*Honorary Secretary*).

The Minutes of last Meeting were taken as read.

The Chairman then read the Report of the Delegates to the U. P. A. S. I. Meeting which was approved of, under the proposition of Mr. Meynell, seconded by Mr. Sprott.

Proposed Coffee Cess.—After some discussion, the following resolution was put to the Meeting, proposed by Mr. Meynell, seconded by Mr. A. J. Wright, that a circular letter be sent to all coffee owners in the province, asking their consent to the imposition of a cess at the rate of 2 annas per cwt., the money to be collected by the Association, and utilised for purposes of advertising our coffee in India. Mode of advertisement to be decided upon after a sufficiency of funds has been guaranteed.—Carried unanimously.

The Chairman read a letter from Mr. Parsons on this subject.

Remission of Taxation.—With reference to this question it was decided on Mr. Sprott's proposition, seconded by Mr. Meynell, that a Sub-Committee be appointed to draw up a petition to the Chief Commissioner during his coming tour, and that a deputation be also elected to meet him and present the same, if convenient and agreeable to him. It was also arranged on the motion of Mr. Ball to include the Railway question therein.—Unanimously agreed to.

The following gentlemen were appointed as members of the delegation: Messrs. Murray-Aynsley, C. Appiah, A. Boponna, H. F. Davy, G. C. Garrett, H. J. Grant, J. W. Irwin, A. Lambert, J. Logan, J. Macpherson, E. Meynell, W. G. Mackilligin, C. M. Nunjappa, H. G. Parsons, W. H. Sprott, and C. Thimmiah, R. B.

The Sub-Committee to consist of the following:—

Messrs. Meynell, Sprott, Nunjappa, and A. Lambert.

General.—Read U. P. A. S. I. Circular No. 77/01

Resolved that this Meeting unanimously accords a hearty vote of sympathy with the Assam Planters in their present labour difficulties, and the apparent want of consideration they are receiving from the Chief Commissioner of Assam.

Read U. P. A. S. I. Circular No. 75/01.

Resolved to write and suggest that Mr. de Niceville, Entomologist to the Indian Museum, Calcutta, should visit Coorg during his tour through South India.

Read U. P. A. S. I. Circular No. 80/01 *re* a General Cess on Coffee.

The feeling of the Meeting was not in favour of the proposals contained therein.

It was unanimously resolved to forward a hearty vote of thanks to the Government of Mysore for the loan of Dr. Lehmann's services, expressing a hope, too, that he will be able to visit Coorg again in the future.

The following papers were laid on the table:—

Proceedings of the Nilgiri Planters' Association, Sept. 3rd, 1901.
,, Wynaad ,, Oct. 2nd, 1901.
,, Shevaroy ,, Oct. 7th, 1901.

A vote of thanks to the Chair terminated the Proceedings.

(Signed) A. LAMBERT,
Honorary Secretary, C. P. A.

POLLI BETTA,
October 27th, 1901.

THE UNEASY ROCKS.

Earthquakes are the cause of much destruction, but what is the cause of earthquakes? The scientific fellows say the heat inside the earth, and the big rocks trying to get into more comfortable positions. That being so we can't cure earthquakes; the cause is too deep and too big.

Here is a matter easier to handle and yet not easy enough to make us vain or conceited. Humility and modesty are well-fitting coats for the backs of the best of us.

"Rheumatic fever laid the foundation of all my trouble many years ago," says Miss Jane Williams. Yes, but what laid the foundation of the rheumatic fever? The man who can answer *that*, with a sound of sureness in the talk of him, will do more good than the long-headed statesman who captures a fresh foreign market or cuts off the heads of a million Chinese Boxers.

Whatever may turn out to be the cause of rheumatic fever Miss Williams (with lots of other afflicted persons) has no doubts about the effects of it. "The early atttacks," the lady tells us, "left me very weak and low. They took away from me pretty nearly all my relish for food, and the power to digest (I mean to digest quickly and thoroughly) the morsels I did eat."

Does the reader think Miss Williams has put the cause and effect in the true order here? She thinks so, to be sure. But we will not be hasty to conclude. She wants us first to hear the rest of her story.

"After meals," she goes on to say, "my stomach became filled with wind and I was tortured with pains in nearly every part of my body. They were worse, however, in my chest and at the pit of my stomach. I was often bilious, too, and had violent sick headaches."

(Thus far she speaks, you perceive, of indigestion or, as it is sometimes called, acute dyspepsia. He is the same hungry beast, though—whether we put a Latin or a Greek collar on his neck).

"No matter what I did," continues Miss Williams, "my strength would not come back; and small wonder, for I could neither eat nor sleep properly. Instead of getting stronger as the months passed by I grew more feeble and depressed."

We can well credit that. If all at once the wind-mills, the water-mills and the steam-mills should stop grinding grain for a year what should we do for bread and cake?

"My life," says this patient woman, "was one dreary and monotonous round of suffering and weakness. I was always weary and exhausted, although I did no work to make me so. All the strength went out of my back and at last it got to be so painful and weak I couldn't even sit up. *For seven years I spent most of my time on the couch*, unable to get about the house."

"At length, and a tiresome length it was, as the doctor's medicines seemed to be doing me no good, I was in some way led to try Mother Seigel's Syrup. After taking it a few weeks the improvement began. At first it was not much to notice, but it kept up, and little by little my strength returned.

"The Syrup gave me an appetite, a *real* appetite, and I began to enjoy my meals as I had not done during all the years I have spoken of. I had no longer any pain after eating; and oh, what a relief it was to eat and not be punished for it. I need only add that in the end Seigel's Syrup restored me to health and strength, such as I had not been blessed with for time almost out of mind.

"Once in a while when, through thoughtlessness or for any other reason, I feel a touch of any of my old symptoms, I fly to my bottle of Seigel's Syrup and that marvellous medicine sets me right. I believe I owe my life to it, and my *health*, which is better than life. If you think what I have said may be useful to others you may print it as you think fit." (Signed) Jane Williams, Chapel House, Llanrug, near Carnarvon, Wales, September 4th, 1900.

Anybody who would like to see this lady may find her at her home at Llanrug, a village between Carnarvon and Llanberis, and a very pleasant spot in Summer, where she does her work and commends Seigel's Syrup to all.

Earthquakes are caused by the mighty fires in the earth's bowels and rheumatism is caused by indigestion. The latter fact is of the greatest practical importance.

MARKET REPORT.

[*Per Mail advices of* 18*th October* 1901.]

COFFEE.

The London Commercial Record says:—Supplies at auction during the week have been even smaller than in the previous week, and little alteration can be reported in value. The first arrivals of new crop Nyassaland were actively competed for at some advance, the quality being better than previous importations. Privately a moderate amount of business has been transacted at steady prices. Unfavourable reports respecting the 1902-1903 Brazil crop have caused an advance in the market for "futures"; prices have fluctuated in the last day or two, and close slightly below the highest point, but still at an improvement for the week of 1s 9d to 2s per cwt.; yesterday December Santos sold at 32s 10½d, March at 33s 6d to 34s, May at 34s 1½d to 34s 6d, July at 34s 6d to 34s 9d, and September at 35s to 35s 4½d per cwt. Auctions to-day comprised:—32 casks 5 tierces 15 barrels 6 bags Plantation Ceylon, 132 bags East India, 271 bags Nyassaland, 40 bags Java, 110 half-frazils Mocha, 452 bags Salvador, 114 bags Mexican, 120 bags Nicaragua, 11 bags Columbian, 28 bags Coban, and 284 bags Vera Paz. The sales passed off with good competition at full values to in some cases 6d per cwt. dearer. We quote:—

TEA.

INDIAN.—Auctions were much smaller, totalling 38,400 package compared with 56,500 packages from 4th to 10th instant, an 54,900 packages in 1900.

Assams have mostly fallen away from the high standard reache before the rainy season had fully set in. Cachars and Sylhets however, moved up somewhat; Dooars generally and with mor rapidity than usual, recovered from the slump in quality, whic quickly came after a very promising start, and advices point to further improvement in invoices on the water. It is worthy o note that several gardens in this district, which had in recent year earned the unenviable character of being among the "undesirables," have demonstrated that, given favourable conditions and handling they can still produce a really attractive article. The majority o the finest Darjeelings from the second flush have now been disposed

, and meanwhile there is little from this quarter, of real distinc-on. Travancore and other South India teas have chiefly been nowing useful style and appear to be gaining in popularity.

The curtailed weight put forward was easily absorbed by the rade at firm values based on the previously recorded decline, and lore dispositon to purchase was evinced. At the moment the eadiest market is to be found in sweet consuming varieties above ommonest; this tendency being doubtless fostered by a growing elief that the probability of an appreciable shortage in the crop vailable for the United Kingdom has passed the stage of surmise. n view of the more assured position given in latest cablegrams, im-orters have considered the advisibility of exercising so far as may e, some check in the direction of regulating the weekly offerings, nd it is to be hoped that the proposed arrangements will meet with dequate support. The object is not to endeavour to force up prices o an unhealthy level, but rather, by placing manageable quantities efore the trade at a time, to guard against sudden relapses, hich in view of supply appear unwarrantable, more especially aving regard to the moderate scale of value now existing.

For 32,000 packages on Estate Account 7⅞d per lb. was realised pposed to 7⅝d per lb. for 44,700 packages, and 8¾d per lb. for 6,000 packages in the two seasons before.

Entries for export to Great Britain from 1st April to 15th instant ncluding Chittagong) were 84,002,000 lbs., *versus* 90,150,000 lbs. or the same period in 1900.

CEYLON.—Catalogues comprised 16,200 packages, contrasted with 9,500 packages on the 6th instant, and 19,600 packages a year ago.

This limited amount was taken up with fair competition, on with-ut much change. Flavour was on the whole about maintained, hough here and there a slight falling off from the best point eached was noticeable, which will account for some irregularity in uotations. Clean common to fair leaf teas met with the most de-nand, both for home consumption and outside quarters. On the ther hand, although choice liquoring parcels were in good request, nedium to fine grades did not seem so much wanted.

The average remains as on the 10th instant, *viz.*, 7¾d per lb., at hich it also stood twelve months ago.

JAVA.—Rather over 1,200 packages (800 packages of direct im-ort) were submitted and went off with spirit in favour of sellers.

Deliveries.—Clearances of all tea (on which duty has been paid) rom the London warehouses, as per official returns are, *viz.*:—

From 1st to 15th October,	1901	... ...	9,736,815 lbs.
Do. do.	1900	... ...	8,867,987 ,,

During the week the following have been printed for sale by ublic auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	30,294	8,058	38,352
Ceylon	13,506	2,665	16,171
Java	973	240	1,213
Total ...	44,773	10,963	55,736

Also 570 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated October 18th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	469,107	486,064	27,585
1900-1901	470,587	515,061	20,633

39,573 *pkgs.* INDIAN
16,735 ,, CEYLON
1,213 ,, JAVA
} Total 57,521 packages were offered in public auction this week.

There seems now to be absolutely no doubt that the crop from India will be very short, while it is almost equally certain that a considerable diminution will take place in the production of Ceylon tea.

An official telegram from India states that up to the end of September only 111,000,000 lbs. had been produced by gardens which had manufactured 125,000,000 lbs. up to the same date last year. These returns include the great majority of estates in North-ern India.

Under these circumstances the circular just issued by the Indian Tea Association in reference to the regulation of supplies has appeared at a most opportune moment. The Association state that figures go to show that there will be a heavy deficiency in yield this season from India, the Ceylon crop being also short, but that Indian teas have been arriving in London more rapidly than usual, and have been offered in such quantities as to depress the market. The Committee therefore consider that supplies should be regulated in order that confidence may be imparted to buyers, and the market saved from an unnecessary fall in price.

INDIAN.—With a material diminution in offerings, which fell from 57,598 pkgs. to 39,573, buyers purchased with more confidence, and the sharp fall noticeable towards the close of last week was not only checked but a reaction took place, some recovery being apparent in the later sales of the week. The official wire gives exports to U. K. for first half of October (including Chittagong 1,070,000 lbs.) as 11,010,000 lbs., against 14,120,000 lbs. in 1900, making the total quantity from 1st April to 15th instant. 84,001,800 lbs., against 90,150,000 lbs.

Week's average of New Season's Tea sold on Garden Account 1901, 32,005 pkgs., av. 7·75d. 1900, 44,516 pkgs., av. 7·61d.

New Season's Tea sold on Garden Account 1st June to date 1901, 335,258 pkgs., av. 8·29d. 1900, 377,115 pkgs., av. 8·10d.

CEYLON.—There was a marked decrease in the quantity offered, only 16,735 being catalogued this week against 21,254 pkgs. last. This smaller supply, together with the reduced offerings of Indian tea, was sufficient to steady the market. and caused good general competition at the lower rates of last week, and although the market was here and there irregular, the tone was, generally speaking, somewhat steadier. Shipments to U. K. for first half of Octoder were 3,800,000 lbs., against 3,500,000 lbs. same period 1900, quantity available for the month being estimated 7,500,000 lbs., against 7,500,000 lbs. Average for week 7·79d., against 7·62d same week, 1900.

Ceylon Tea sold on Garden Account 1st January to date, 941,290 pkgs., av. 6·72d. 1900, 1,011,792 pkgs., av. 7·19d.

JAVA.—Only 809 packages were of direct import; these com-prised some teas of very fair quality. Prices were very steady. "Goalpara," "Malabar," and "Djati Nangor" averaged 9½d., 7¾d., and 7½d. per lb., respectively.

COCOA.

The auctions on Tuesday last were very uninteresting; 3,010 bags were catalogued, but only 520 bags found buyers; prices were practically unaltered. Of 302 bags Trinidad 65 bags sold at steady rates—very fine red 72s to 72s 6d, dark 65s. 23 bags Grenada partly sold at 63s to 64s, for good red. 159 bags Jamaica nearly all sold—fine red 6s 63d, common 55s, being valuations. 53 bags common St. Lucia realised 56s. Of 205 bags Colombian 60 bags good bold brought 72s. Of 1,194 bags Guayaquil only 80 bags were placed—greyish red Caraquez 67s, good Arriba 74s to 74s 6d. Of Ceylon 618 bags were brought forward, of which 140 bags sold without material change—fine bold red 80s, small 49s 6d to 52s 6d per cwt. The bought in growths comprised—31 bags Surinam, 17 bags Bahia, 207 bags Venezuelan, 102 bags Puerto Cabello, 50 bags Haiti, 30 bags African, and 8 bags Seychelles.

PEPPER.

BLACK is cheaper and very slow of sale; on the spot fair to good Singapore sold at 5$\frac{15}{16}$d to 6$\frac{1}{16}$d; near at hand Singapore sold at 6d, and October-December (s.) quoted 6$\frac{1}{16}$d per lb.

Nothing offered at auction on Wednesday.

The shipments of Black Pepper for the first half of October compare as follows:—

	1901.		1900.
U. K.—Singapore	40	130	130
,, Penang	*nil* } 40	*nil* }	
Continent	20		200
U. S.	350		100
Total tons ...	410		430

Black Pepper firm to-day, 15 tons Singapore near steamer sold at 6$\frac{1}{32}$d per lb

WHITE is steady on the spot, with business done in fair Singapore at 9¼d and Penang at 8¾d per lb.; quotations for arrival are rather lower, about 25 tons Singapore selling at 9$\frac{3}{32}$d to 9$\frac{1}{16}$d per lb., c.i.f., October-December (s.)

No supplies were brought to the hammer on the 16th instant.

The shipments of White Pepper for the first half of October compare as follows:—

	1901.		1900.	
U.K.—Singapore	300	300	220	340
„ Penang	*nil*		120	
Continent		50		40
U. S.		170		...
Total tons ...		520		380

GINGER.

COCHIN.—A firm market obtains and a fair amount of business has been done privately at 42s to 43s for fair medium and small washed rough 40s for medium and small, a little bold, rough Calicut, and 39s per cwt. for small ditto. Under the hammer cases 273 bags were presented, of which. however, only 10 ca sold—medium rather roughly cut and scraped, partly limed at to 72s 6d per cwt.

JAMAICA.—75 barrels sold at steady rates—fair bright wash 44s to 46s 6d, lean and dark 40s to 40s 6d per cwt.

QUININE.

Last week the second-hand market closed rather dearer wit fair business for December delivery at 1s 2d, and March 1s 2¼d, a these prices were manitained until Wednesday, when the announ ment of unexpectedly large bark shipments from Java caused easier feeling, and to-day sellers quote December at 1s 1½d, a March at 1s 1¾d, and spot 1s 1¼d, without any important busines

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 22nd instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad.

November 12th.—*Weather*—East wind, warm nights, sunny days. Temperature 62 to 76. *Works*—Gathering crop in full swing. *Crop prospects*—Planters are realizing sadly the shortness of the crop, now that it is being put into the baskets. Several estates are simply pounding the coffee out, and not pulping to avoid expense. *Health*—Good. *Labour*—Abundant. *Interesting item*—The eclipse of the sun was clearly visible here yesterday.

Coorg.

POLLI BETTA, *12th November.*—*Weather*—We are having a bit of a respite from the rain for the last few days. It was very heavy on some days last week. *Crop*—Everybody may be said to be picking now, but the quantities being got in on the Eastern side are still small. Besides picking, weeding and digging are being done. Leaf rust is becoming worse every day. Bright weather now might do a lot to check it. *Labour*—as usual, is always plentiful here. *General Health*—Fair.

BRAZIL'S FINANCE.

THE POLICY OF THE EMPIRE.

FOR the tea-planting community our present remarks will, we fear, have but little interest. Coffee-planters should, however, find in them food for thought. Whatever concerns the financial policy of the Brazilian Republic concerns also the price of coffee, for, while the relations of supply and demand are the chief factor in determining values, the upward or downward tendency of Brazilian exchange exercises a most important influence, and the currency policy of the Republic hinges upon the question of upholding the gold

value of the milreis. We have seen no better history, in brief, of the past and present currency polices of Brazil than that given in an introduction to the report of the Minister of Finance for the year 1900. Naturally, it reflects an official view; but whatever individual opinion may hold as to deductions, the statements of fact may be accepted as authoritative. According to DR. JOAQUIM MURTINHO, the young Republic adopted, in an evil hour, the currency of the Empire. This consisted in constant deficits on the Budget covered sometimes by loans, sometimes by issues of paper money,—which constituted promises to pay at some indefinite date. It was a policy of procrastination, of putting off the day of settlement. That that day must come, was a foregone conclusion; but the day came in the time of the Republic, after the Empire had come to an end. The continually increasing number of loans resulted in an increase in annual expenditure. Year by year the amount due for interest and sinking funds increased. Year by year the continual issue of paper money forced the rate of exchange down and increased the silver equivalent of the gold debts of the Government. Deficits, instead of being covered, were increased. Expenditure waxed larger as the intrinsic value of receipts grew smaller. The loans destined to productive and remunerative works were few. Brazil was in the hands of the money-lender, and its substance was shrinking while its indebtedness expanded. The more the need for credit developed, the smaller that credit became, until vanishing point was in sight. There was an appearance of wealth and credit, a certainty of ruin if the attempt to prolong this policy were continued.

In 1898, says DR. MURTINHO, the financial discredit of the Brazilian Treasury had reached its maximum, no means could be found to cover the enormous deficit; credit was so low that fresh loans could not be contracted, no further issue of paper money could be made without aggravating the position and causing a further fall in exchange—and thus a further increase in the current liabilities of the State. Differences in exchange absorbed nearly two-thirds of the revenue. Causes have been outlived above, effects are sketched thus:—"The rate of exchange had fallen to $5\frac{5}{8}$, the foreign bonds of 1889 were quotod at $42\frac{1}{2}$, discounts could with difficulty be effected, failures were on the increase, and business men, seeing the uselessness of further sacrifices, petitioned the Government to no longer delay the adoption of the only remedy, namely the suspension of payment of interest and of the sinking fund on the national debt." The main cause was low exchange; the chief desideratum, therefore, was to raise the value of the currency. One alternative was to redeem the paper currency. Various authorities had pointed out the necessity of this. A method justified only by emergency had crystallized into a custom. The time had arrived for changing this. The superfluity of paper money prevented an influx of gold, and even encouraged our efflux. The Government reviewed the situation and determined, in the face of some opposition, yet in accordance with the advice of experts, to adopt drastic measures of reform.

The situation in 1898 was as follows:—A programme to raise the value of the currency by means of the redemption of paper money, a programme warmly advocated by the most notable statesmen in matters of finance during the Empire, and which even at the time of the large amounts issued by the Provisional Government found defenders in that same Government and in the Press of that day as well as in the administration and in Congress which passed a law in support of it, a programme supported by the outgoing and by incoming Governments On the realisation of this p gramme depended the solution of Brazil's most pressing d culties, but the means to carry it out were not in sight. this juncture the foreign creditors of the State, convinced t its interests were intimately connected with the restoratio finances and therefore with the appreciation of Brazil currency, and also that the redemption of the paper was best means to attain that end, offered Government a loa 10 millions sterling on condition that paper money cor ponding to that amount at the exchange of 18d. should redeemed. The Government promptly accepted this p posal. The aim of the creditors was exactly the same that of all Brazilians: namely, the financial and econo recovery of Brazil, allowing not only for the payment of foreign debts but also for the development and progres the Republic An agreement was signed on June 15th, 18 came into force on July 15th, 1898, and ended on July 1901. Of DR. MURTINHO's account of what happened dur the greater part of its duration we propose to write i future issue.

THE FRENCH IMPORT TARIFF.

The French Tariff in force on Colonial produce, pri pally Coffee, which expired at the end of June, was exten to the 23rd February, 1902, for the following countri German, British, Danish, Spanish and Dutch Colon Dominions and Protectorates; United States of America, five Republics of Central America, Cuba, Porto Rico, Ecuad Perú, Chili, Liberia, the Congo State, Abyssinia, Co China, Siam, and the Philippines. If, after that date, no p visions are made by a new law, the Maximum Tariff will applied to Colonial produce of the aforementioned countri

The time is drawing unpleasantly near, and although are aware that the Secretary of State for India has taken subject in hand we feel sure that planters would like to kn what is being done, and whether there are indications o satisfactory result to the negotiations that are no doubt progress. The Colonial Office has moved in the matter, well as the India Office, and it is certain that every possi exertion will be made to prevent the imposition of duties t would stifle India's trade with France, at least so far Coffee is concerned.

THE AUSTRALIAN TARIFF.

The exact figures of the new Australian Tariff have n reached us, and we find that there must have been so error about the remarks attributed by an Australian c temporary to the Minister of Finance with respect to duty on Tea. The following are extracts from the Tar showing *ad valorem* imposts:—

Cigars	5s 6d per lb. and 15 %.		
Cocoa and chocolate	2d	„	„ „
Coffee and chicory, raw	3d	„	—
Do. kiln, dried, roasted and liquid ...	5d	„	—
Spices, not ground	2d	„	—
Do. ground	4d	„	—
Tea in bulk	2d	„	„ 20 %.
Do. packets	3d	„	„ „

In reckoning the value for purposes of duty, "10 per ce to be added to value, and value of outside and ins packages to be included. This applies also when th are two rates, specific and *ad valorem*, on same article."

NOTES.

he American Market. During the year ended June 30, 1900, the United States imported nchona bark to the value of 1,025,546 dols., vanilla beans, 75,229 dols.

Coffee" in New York. It was rumoured a short time ago that a leading firm of brokers in lew York intended to issue a coffee trade publication under ie title *Coffee*. We have not yet heard that effect has een given to this intention.

inchona at Amsterdam. The auction to be held at Amsterdam on November 7 would consist of ,601 bales and 319 cases, amounting to 6,920 packages, and eighing 605,609 kilos. A supplementary catalogue would lso be published.

aluable Book by Mr. Mann. Mr. Mann, Scientific officer of the Indian Tea Association, is bringing out an elaborate work on tea soils in Assam and manuring, including much valuable information n tea culture and manufacture.

he London Teapot. It has been calculated that something like 1,250,000,000 pints of tea re imbibed yearly by Londoners, and that the teapot ecessary to contain this amount, if properly shaped, would omfortably take in the whole of St. Paul's Cathedral.

Discovery at Darjeeling. *Indian Gardening and Planting* announces a discovery by Mr. C. R. Newton, of Kurseong, Darjeeling, of ferment on the tea leaf which produces the flavour of the ea. He has applied for a patent for its utilisation in tea manufacture.

rade with Persia. The Bengal Chamber of Commerce has received from Captain Webb Ware, the Political Assistant at Chagai, Quetta, an intimation hat the Persian Customs authorities now demand payment of lues, for all places in Persia, at the frontier station of Seistan. Merchants must produce their invoices at that place.

he Position of Coffee. Surprise has been felt at the way in which Coffee prices have held up n the face of enormous receipts. The fact appears to be hat stocks in retailers' hands have been allowed to fall very ow, and that speculators are confident of a rise, sooner or ater, no matter what statistics may point to.

Patti on Poisons. Thus Adelina Patti :—"Drink nothing but water or milk—especially drink lots of water. You never can drink too much of it. On the other hand, remember that alcohol is poison which does untold damage within you; that wine, beer, coffee, and tea are poisons, too. Shun all of them as you would diluted vitriol."

Ceylon Tea Cess. The General Committee of the Ceylon Planters' Association, at a meeting held at Kandy, on Saturday, passed the following Resolutions :—(1) The Committee is convinced that an increase in the cess is a pressing necessity. (2) That the Ceylon Association in London be urged to join the movement with a view to obtain the sanction of the Government to an increase in the cess from 20 to 30 cents per 100 lbs.

The Australian Tariff. Replying to the telegraphic despatch of the Governor of Ceylon, the Governor-General of the Commonwealth of Australia wrote on October 17 :—In acknowledging the receipt of Your Excellency's telegraphic despatch of the 16th instant, embodying the views of the Ceylon Chamber of Commerce on the proposed *ad valorem* duties on tea, within the Commonwealth of Australia, I have the honour to advise Your Excellency that I have submitted the purport of your message for the earnest consideration of my Responsible Advisers.

The Surma Valley Planters. The Surma Valley Branch of the Indian Tea Association, representing the tea planting communities of Cachar and Sylhet, welcoming the Viceroy in an address, on the 8th instant, dwelt on the progress of the tea industry since Lord Northbrook's visit in 1874. Owing to the difficulty of road construction through want of metal, the Association hoped for the construction of light feeder lines. The Assam-Bengal Railway was quoted as an instance of how cheap importation of rice by the Assam-Bengal Railway had saved a disaster in the early part of the year. The Association also hoped for the postponement of the recent settlement rates until the financial position of the industry was more satisfactory.

The Delicate Cocoa Tree. A traveller in Venezuela, where the cocoa tree is now largely cultivated, speaks of the great care with which the young plants have to be protected from the sun, which, if very strong, is fatal to them. To secure this protection the planters shield them by banana trees and plantain trees, the broad leaves of which give them the needed shade. And even when they are fully grown they need protection, which is given by trees known as "immortels," or, as the planters call them, "the mother of the cocoa." Thus, the whole cocoa plantation has a sort of canopy. The fruit of the cocoa is a pod, resembling a cucumber, which grows on the trunk or the large branches and looks as if it were stuck there by artificial means. The seeds, which are the "beans" of commerce, are like big lima beans, embedded in pulp.

Brazilian Exchange. The following figures will probably interest many of our readers :—

	Price of Coffee in New York.		Maximum Rate of Exchange.	
	Maximum.	Minimum.		Minimum.
January	7·25	7·00	$10\frac{1}{4}$	$9\frac{3}{4}$d
February	7·50	7·00	$11\frac{5}{16}$	$10\frac{1}{16}$
March	7·62	7·00	$11\frac{7}{8}$	$11\frac{1}{4}$
April	7·00	6·00	$13\frac{1}{4}$	$11\frac{3}{4}$
May	6·31	6·25	$13\frac{3}{8}$	$11\frac{3}{4}$
June	6·25	6·20	12	$10\frac{15}{16}$
July	6·00	5·62	$11\frac{3}{16}$	$9\frac{1}{2}$
August	5·75	5·62	$10\frac{3}{16}$	10
September	5·75	5·50	$11\frac{1}{8}$	$10\frac{7}{16}$

It will be seen that the oscillations of coffee prices in New York are by no means synchronous with those of exchange; nor are the prices of coffee (in currency) at Rio.

The "Science(?)" of Tea. Dr. Andrew Wilson, in "Science of the Day" in the *Daily Chronicle*, has the following astonishing statement under the heading,

"Tea and Theine." After pointing out that theine is best developed "in the skin or covering of the leaves in their young state" he says:—"I have always been given to understand that the young shoots thus amply provided with theine and representing the finest of the crop, are sent to Russia, where they fetch a high price. What we get in this country is presumedly the older leaf," etc. A generation ago, remarks the London correspondent of the *Times of Ceylon*, there might have been some truth in this, but this Rip Van Winkle of science should know that the tea now drunk in this country is practically all British-grown tea, and his statement that the young leaves do not come to this country is childish and absurd.

London Tea Market.

Weekly special telegram, dated 7th instant, from Messrs. Gow, Wilson & Stanton to Colombo reports that heavy supplies of Indian tea are depressing the market and that the market for medium liquoring Pekoes and Broken Pekoes as well as that for Common Pekoes and Broken Pekoes shows a slight decline. The price of fair liquoring Ceylon Pekoe Souchong is 6d (a farthing down), and the average price of Ceylon tea sold on Garden Account this week was 7⅞d (also a farthing down). The average of the corresponding week last year was 7d. Reuter reports that the tone of Ceylon tea generally is rather easier, common qualities showing no alteration. Fair Pekoe Souchongs are quoted at 5¾d (⅛d down) and the average for the week is 7⅞d (⅜d down). 13,000 packages of Ceylon tea were offered for sale and 10,000 were disposed of; while of the 55,000 packages of Indian tea offered, only 34,000 found purchasers, at an average of 8d per lb. (⅛d below last week).

The Calcutta Tea Sale.

The sale on the 8th instant comprised about 18,000 packages, against 16,000 at same date last year. The news wired out from London of 55,000 packages having been put up this week, close on half of which had to be withdrawn, had a somewhat disturbing effect on the market. Fortunately, the small size of the sale kept things fairly steady, with the result that a drop in price of only 3 pies on lower grade teas, and about 6 pies on the higher qualities was registered. The assortment on offer did not comprise any really fine tea, and the highest prices realised were: Maharanee Fine Orange Pekoe, As.15; Dehing Broken Orange Pekoe, As.12; Sungma Broken Orange Pekoe, As.11-9; Orange Pekoe, As.11-9; and Bullabarie Broken Orange Pekoe, As.11-6. It is to be regretted that the attempt to control the size of the sales in London has again broken down, as at the present time it would seem that sellers have a better opportunity of getting a voice in the sale of their produce than they have had for some years.

Associated Tea Estates of Ceylon.

Five years ago, says the *Critic*, the prospectus of this Company was dangled before the British public with a tempting bait of £9,000 profit per annum. On Thursday, at the sixth ordinary general meeting, the shareholders, stinging under the continued discrepancies between promises and performances, gave the Directors, whose cause was championed by Sir Alexander Wilson, a bad quarter of an hour. The balance-sheet presented showed, instead of a profit of £9,000, a debit to profit and loss of £963 11s. 3d., irrespective of liabilities to the extent of £10,000! Owing the distressing financial position the elaborate system recen augmented of manuring the estates has had to be discontinu Sir Alexander confessed that they were completely baffled their attempt to keep the tea up to its original quality. T announcement that a proposition had been received j before the commencement of the meeting, from certa quarters to relieve the acute financial situation, gave t Chairman an excellent opportunity of getting the rep adopted, but Mr. Densham, who was too quick for hi clamoured for its rejection, and afterwards the Board w severely criticised. Ultimately the meeting was adjourn for a fortnight to enable the Directors to consider the propos financial arrangement and report to the shareholders.

Coffee in the U. S.

The *American Grocer* of 9th Oc ber says:—The September deliver in the United States and Europe were very heavy, bei ahead of any month during the previous year. In the Unit States they were 550,111 bags, against 362,201 bags for sa month in 1900; in Europe, 848,290 bags, against 618,9 bags in 1900; total for both countries, 1,398,401 ba against 1,216,481 bags in August. A full review of t movement is reserved until our next issue. The market h ruled very steady in spite of heavy receipts. At Rio a Santos they amount to 5,555,000 bags for three months, more than the entire crop of 1895-96. The market closed 5¾c for No. 7 Rio, 7¼c for No. 3 Rio, 6½c for No. 5 Sant and 6¾@6⅞c for No. 4 Santos. There is a fair trade in m sorts, with prices steady. There is no stock of Bucaramang Angostura, Hayti, Porto Rico, or Liberian coffee, and the fore list quotations are nominal. Sales from September to October 4 include 22,568 bags Maracaibo, 9,426 ba Savanilla, 4,838 bags Central American, 1,379 bags Mexica and 1,324 bags Laguayra. We quote: Padang Interi 14@18c, with fancy at 24@28c, and very fancy higher; go Cucuta, 7½c, with choice at 10½c, best washed at 11c, a for extra fine lots, so far as color and style go, a premium 1@2c is asked; Central American, best marks, 9½@11c, a up to 13 for invoice lots—the latter choice Guatemal Mocha, 14@18c, and higher for extra fancy; best Mexica 9@11c.

Indian Tea in London.

The market is firmer, says the *P duce Markets' Review* of 19th ultim and in some cases prices have advanced, while most of t smaller quantity offered was sold. There is a tendency to further rise due to the reported appreciable shrinkage the season's production as compared with last year. Th coupled with the reduced exports from Ceylon, will make t available supply of the two growths materially less than 1900, and should the estimate of the crop prove corre which now appears probable, the prospects certainly poi to an improved market. The bidding at the public sales w more animated than last week, and the fall in values w practically recovered. The common grades met with goo competition, and advanced ¼d. per lb., and but little cle sweet tea can now be bought under 5d. The finest sor continue to be well bid for especially those showing appreciable depreciation in quality; on the other hand tho with appearance but inferior in cup meet with a compar tively slow inquiry, and have sold at lower prices. There h been a steady demand at hardening rates for the mediu

as giving a good infusion irrespective of leaf, but as is the se with the higher grades, those with appearance and fficient in liquor have met with only a moderate inquiry, nd prices generally have favoured buyers. The quantity talogued for public sale was 38,782 packages against 56,000 the previous week, 8,277 being withdrawn, a considerable ortion of which has since been sold privately.

overnment Cinchona-cultivation in British India.

A German scientist, Dr. Stuhlmann, who has recently returned from a journey to Java and British India, made for the purpose of studying e cinchona-cultivation, contributes an interesting article the *Tropenpflanzer* The cinchona-plantation in British ndia visited by the doctor is at Mungpo, about seventeen iles from Darjeeling. The cultivation was commenced in 862, when 40,000 acres were reserved for plantations ; a onsiderable part of this area is left in the natural state, as rest, whilst part is let for cultivation, at an annual rental of r. per acre, to the labourers, mostly Nepaulese, who number rom 300 to 400. Some 200 acres are planted every year, nd as the trees are allowed to grow for eight years there re about 1,500 acres continually covered with cinchona. fter eight years the trees are uprooted, and the ground is hen left lying fallow for a considerable time. One piece of round was said to have been in this condition for fifteen ears, after having produced one crop of Succirubra, and ven after this laps of time it will be necessary to manure with bone-dust before *Ledgeriana* can be successfully grown pon it. Wherever the character of the soil allows it *Calisaya edgeriana* is now chiefly grown. *Ledgeriana* thrives only a well-drained soil, and steep slopes are consequently dmirably suited for this variety. *Cinchona officinalis* does ot thrive here at all. Dr. Stuhlmann's article winds up ith a detailed description of the process of manufacturing uinine from cinchona. A fact which appears to have greatly truck Dr. Stuhlmann is that one of the labourers, who is onstantly working in a white cloud of quinine-dust, has ttended to this work for the last twenty-five years. This erson is no doubt perfectly malaria-proof, but one would xpect to find symptoms of quinine-poisoning where the dust f quinine is constantly being inhaled.

GENERAL ARTICLES.

THE INDIAN TEA INDUSTRY.

Messrs. Brooke, Bond & Co., Ld., of 17, Piccadilly, Manchester, rite as follows to the *Manchester Guardian* :—Many have wondered hat effect the increased duty has had upon the consumption of tea t home. It is now seen from returns issued by the Board of Trade that the additional tax of 2d. per lb. imposed last year has lightly checked consumption. In 1899 the consumption of tea as 5·98 lbs. per head ; it has fallen to 5·91 lbs. This has affected ndian and Ceylon planters, from whom we get our tea supplies. Already they were producing tea at a greater rate than the normal onsumption in the United Kingdom. This, together with an over-ountiful "flushing" season and the arbitrary fixing of the rupee alue, has brought heavy losses on the tea-planting industry. But uch losses have only served to stimulate the Indian Tea Growers' Association. With commendable zeal, they have turned their nergies to seek outlets in new markets, and they have found one, hey hope, in India itself. To Englishmen it may seem odd that he land which produces tea should know little of the stimulating ualities. Yet that is so. Many of the natives know tea only as a medicine, and not as a beverage. The tea they have used has not been the clean, pure, wholesome kind shipped to England, but decayed leaf mixed with mud and sweepings. It will be an excellent thing for the Indian people to acquire a taste for the health-giving properties of good tea. When they do so, and bring it regularly, instead of "the fiery juice of the palm and unboiled tank-water," there is reason to believe they will become a hardier and a healthier nation. The value of this outlet to the planters will be appreciated when it is remembered that if only one-fourth of the natives become tea-drinkers and drink 1 lb. per head per annum (one-sixth of the quantity consumed per head in the United Kingdom) more than one-half the tea grown in India would be required for native use alone. So vast a trade is worth securing. But the taste of the native has yet to be educated to accept a clean pure drink. Such an education will take time. Meanwhile the planters have decided to distribute one million pounds of tea in free samples among the natives for the purpose of stimulating this taste. The natives are not plutocrats, their income being in the region of 4d. per day and their outlay for food usually one farthing at time, so that the sale of tea to them in packets will have to be in very minute quantities. But it is not alone in India that new markets are being sought. Canada and the Northern States of America have hitherto drawn most of their supplies of green tea from China and Japan. British planters in India, however, are making efforts to capture a portion of this trade, and have begun to make a green tea specially for our kin in Canada and the States. One difficulty in developing this trade has been that many American people are indifferent to the flavour of tea and are satisfied if what is served is a warm beverage. It is only a few who appreciate fine-flavoured tea such as that which at least two milions of the British pople drink daily. In Persia, too, a new market has been found for Indian tea. A representative of the Indian Tea Association, who has been distributing samples in that countary, has been besieged by buyers. We may gain a footing in Persia with Indian teas for a time, but when the China tea industry becomes a Russian industry, as it may when Russia has devoloped her railway enterprises, we should have to retire.

A taste for tea is also fast increasing in Germany. At present it is confined to the wealthy classes of the communtity ; for tea that is in any way agreeable costs in the Fatherland from 3s. to 9s. per lb. The same duty is charged as in England—namely, 6d. per lb. France has developed a craze for five o'clock tea.

RUBBER IN AMAZONAS.

In the message of the Governor of Amazonas, Dr. Silverio José Nery, of the Congress of Representatives on the 10th July, 1901, we find the following remarks :—

In compliance with an old law a tax of 300 réis per kilo. is recovered on rubber and of 20 réis on other products to meet cost of the immigration service and for the construction of a *Bourse.* This special tax produced during the last 3 years 1.500:000$ which were paid into the Public Deposits Office, but were withdrawn and spent by previous administrations, the Government being debtor to the Deposits Office for the amount. With the object of relieving the Treasury as far as possible and putting its accounts into order, I venture to ask you to remit this debt and to suppress the tax altogether. By this tax exports are unnecessarily burdened whilst the debt of the State is augmented without any advantage. Later on when circumstances permit. Government can take steps to provide for those services by regular appropriations and without requiring to create special taxes.

It would, however, be a mistake to limit our efforts for restoration of financial prosperity and equilibrium to merely cutting down or fiscalising of expenditure.

The practical monopoly of rubber that we enjoy must not only be taken advantage of in every possible manner but obliges us to do all in our power to resist the encroachments of speculation.

With this object I beg to call your attention to two measures of the highest importance—the payment of export duties in kind and revision of the schedule. To the former I had occasion to refer in my message of 15th January when I pointed out the advantages of the measure. Experience has convinced me of the utility of the scheme by which new markets and consumers may be secured for

our rubber and conditions of our market be improved and the burden of duties themselves be perhaps relieved.

It will therefore be advisable to pass a law authorising the payment of a minimum of 25 or 33% of the exports duties in kind, with faculty on the part of Government to admit payment of the total duties in this form when convenient to the Treasury or circumstances of the market should demand it.

As the consequence of this resolution with which the financial measures of my programme will be complete, a special authorisation will be requisite for Government to dispose of the rubber or to borrow on security of same and thus safeguard the interests of the article and those of the Treasury. The difficulties caused to commerce by the scarcity of paper money are well known and the influence it must exercise on their profits. It is therefore, unnecessary to dwell further on a measure that will make the discharge of payments to the Treasury easy and put a check to the reckless speculation that does all in its power to monopolise them, in the absence of any intervention on the part of Government. The revision of the export duties on Rubber is also a matter for which I beg your attention.

The laws regulating the packing and preparing (*acondicionamento*) of rubber for export being in force, there is now no justification for the differential taxation of direct and transit (*cabotagem*) consignments.

I consider it indeed advisable to fix the duty at the mean of the two rates actually in existence. Considering the position, quality, and application of the article it can undoubtedly support an export duty of 20 % *ad valorem*, which is less than what had been charged for year in other parts and cannot injure anyone so long as the measure be generally adopted and put into practice.

Nor can it be alleged that this represents an increase of duties. Of the total quantity of Rubber, shipped from Amazonas one half at least went formerly by river boats to Pará and paid 21% duty. For this, the greater part exported, the new tax of 20% will therefore be lighter than before.

Leaving out of consideration the fact that at least for the present and until more definite steps can be taken it is absolutely necessary to counterbalance the recent loss of our frontier traffic, increased as it is by the smuggling from the Upper Purús, Acre, and Jurúa. This apparent increase of taxation will be compensated by the suppression of the special taxes which I have recommended, and the abolition of all dues on imports, that by raising the prices of the necessities of life raised the cost of living and production and to a certain extent neutralised the benefits derived from the preparation (*beneficiamento*) of the rubber at Manáos.

Although the increase of revenue at the cost of further taxation is not part of my general programme, the measure I have proposed is in my opinion indispensable for the work of financial restoration, which demands good will, harmony, and even sacrifice from all of us. I am certain that I shall not appeal in vain to my fellow-citizens, but whilst doing all that is possible for repairing the credit of the State, it is necessary to look always forward, and by careful measures prepare for future development.

It is true that as regards quality we may be said to possess the monopoly of rubber, the origin of our wealth. But we should not on that account let ourselves be blinded by indulgence in phantastic dreams, but rather remember that if it be true that the Amazon valley provides more than half of the total production, from 26·000 to 27·000 tons, Africa has become a formidable rival, producing some 24·000 tons, which with 3·500 tons yielded by other parts of Brazil, though of inferior quality, combine to depress the value of our own superior product, whilst the extensive and methodical plantation abroad of the Hevea Brazilensis contrasts so forcibly with our own neglect in this respect.

Certainly Amazonas is rich in native products, with many climates from that on the border of our great river to that of the Central and Northern Uplands; and rich, too, in most fertile lands. But for that very reason, now that we have to repair the errors of the past, all the more must we think of the future and make ready elements of resistance and production.

Such indeed is the objective of the measures I now propose: the repair of our finances and the laying of secure foundations for future prosperity, which cannot be far off, so long as we maintain our present line of conduct, in virtue of which, though beset by difficulties of all kinds, I am now able to present so relatively favourable a report. The rest will assuredly follow.

The decree of 8th October by which I disposed that all A zonas rubber should be prepared (*beneficiado*) at Manáos, foll by other dispositions respecting duties, is the starting point o my financial programme, by which Manáos will be raised to position corresponding to its great natural resources. As you aware, that measure raised great clamour and a regular camp of invectives of those who desired, even under the Federal reg to subject the State of Amazonas to others' tutelage. In noth however, could it affect the programme of the Government flexble to every suggestion.

The first argument on which claims were founded was that measure was a surprise. As you know, however, there was no surprise becauce ever since the decree of 25th December, account was kept of all the rubber shipped, the precaution being more rigorously enforced by the regulations of 24th August, In consequence of the abuses that the lax execution of this regula produced, it has been simply now revised and made effective decree 422 of 8th October, 1900.

To remove any appearance of surprise I fixed a period of 90 for the measure, establishing the forced preparation (*benef mento*) of Amazonas rubber at Manáos come into force.

In view of the state of this and neighbouring markets the fixed seemed perfectly reasonable, especially as there are n agencies of exporting houses established here to oversee cons ments received from the rivers of the State. Seeing, moreo that foreign shipping houses have not increased in numbers that all have agencies already in Manáos it is difficult to unders how there could be any surprise, especially with 90 days in w to take precautions, more than sufficient even to communicat necessary, with Europe itself with regard to operations that now executed with perfect regularity at Manáos.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Consumption of Coffee.—In the State Chamber of Deputies Paulo, a bill was introduced for granting a subsidy of 2,000:000 an Association to be organized by coffee-planters and merchant promote the increase of consumption of coffee. This subsidy be paid in maximum instalments of 200:000$, whenever the Asso tion proves having received from other sources in money or co a sum equal to the respective instalment.

Auxiliary Products.—From January 1st to July 31st of present year the Department of Agriculture distributed am 6,917 persons, 7,715 packages of seed weighing 21,992 kilos. August it distributed among 3,169 persons 3,568 packages weigh 15,327 kilos. Among the kinds of seed distributed were following:—Upland and Sea Island cotton, tobacco, flax, he jute, rice, wheat, maize, barley, clover, sorghum, manicoba, alfafa. In July and August the Department also distributed 29 cuttings of grape vine.

Exchange.—Extremes during the week ending Sept. 27 w $11\frac{1}{16}$d.—$11\frac{7}{16}$d. for 90 d/s Bank paper and $11\frac{1}{8}$d.—$11\frac{1}{2}$d for priv The average Bank 90 d/s counter-drawing rate for the week co out at $11\frac{17}{64}$d., the corresponding sight rate being $11\frac{13}{64}$d. aga $11\frac{1}{4}$d. the average sight rate of the *Camara Syndical.*

Coffee.—Entries at Rio and Santos during the week en 27thSeptember were 559,917 bags as against 566,837 for last w and 420,191 for the corresponding period last year. The aggreg entries for the crop up to same date amount to 5,444,174 b against 3,568,544 last year.

Shipments (embarques) for the same week were 488,697 bag compared with 479,680 last week and 294,330 bags same date year.

Declared sales were larger than last week's 231,000 aga 204,000, and 231,500 for the corresponding period last year.

Stocks are still increasing and are now 1,748,728 bags, or 95 bags more than on same date last year.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant appointment of "Purveyors to Her Majesty The Queen and Emp of India" from the year 1837 until the time of her death, have had the honour of being appointed by Royal Warrant "Purveyor The King."

MR. COTTON AND THE PLANTERS.

MEMORIAL TO THE GOVERNMENT.

Mr. M. Hadow, the Secretary of the Assam Branch of the Indian Tea Association, has addressed the Secretary to the Government of India in the Home Department as follows :—

SIR,—Under the instructions of my General Committee, and of the Cachar and Sylhet Branches of the Indian Tea Association, Calcutta, I have the honour to submit the following letter and enclosures for the consideration of His Excellency in Council.

1. Since the passing of Act VI of 1901 the relations between the planting community and the Executive of this Province have become considerably strained, in consequence, my Committee regret to have to submit, of the action of the Chief Commissioner of Assam, first of all in re-opening the wage question of Act coolies, which they had been led to believe was definitely settled by the Supreme Legislative Council in March last: and also advocating in strong terms the abolition of Act VI altogether.

2. Secondly, by issuing a resolution, reflecting on the character of an honourable body of men.

3. Thirdly, by issuing orders affecting the working of Tea Estates repugnant to the spirit of the Act, thereby causing confusion, and unnecessary disturbance on well managed Tea Estates.

4. Fourthly, by issuing orders that a new form of wage statement of Act coolies should be submitted monthly in lieu of every six months, which from the memorandum hereto annexed marked "B" leaves no doubt whatever that a wrong impression will be given as to the actual remuneration of Act coolies.

5. Fifthly, by issue of a resolution on the amendment of Act I in which an entirely new interpretation is laid down on the amendment of section 170, which, if strictly adhered to by District officers, it is contended would make it next to impossible to recover a defaulting sirdar (*see* extract from the Chief Commissioner's resolution No. 748/56 R., dated 4th April, 1901, forming part of correspondence in annexure "E").

6 . . . This was followed by the Chief Commissioner declining to attempt to enforce certain warrants issued in due course of law by his District officers against some sirdars and absconding coolies of the Makum Tea Estate (*see* annexed correspondence marked "C").

7. Lastly, by publishing in the Immigration Report for 1900 certain cases of friction between employers and employed, which, if in the interests of the administration of the Province, it was thought advisable to publish, it is contended should have been published and criticized by the Chief Commissioner with the strictest impartiality, and accuracy; instead of which it is impossible to conceal the fact, that the Report throughout shows a want of impartiality amounting to bias, in matters affecting the Tea Industry, and has naturally led to indignant protests from every part of Assam.

8. As to the first point at issue, my Committee would point out that in the Immigration Report for 1900, the Chief Commissioner loses no opportunity of re-opening the wage question, and in addition to this, His Honour now openly asserts (*see* para. 28 of the same Report) that "he is no longer prepared to advocate half measures and it is in his opinion a serious consideration, whether the Legislature ought not now. . . . to abolish a penal contract altogether."

9. My Committee contend, that a penal labour law, and Government protection to the labourer are correlative terms. Chief Commissioners have repeatedly stated that owing to the cost of labour some more effectual means of enforcing a contract than a Civil action affords, is demanded by justice; my Committee therefore view with alarm a declaration such as the above, emanating from one in such high authority; who could have hardly put forward such definite views unless under the authority of His Excellency's Government. It is submitted that the time has by no means arrived when it would be advisable, expedient or politic, to dispense with a penal contract; and after the assurance His Excellency gave in Council in respect of no further legislation on coolie matters, the above utterance of His Honour the Chief Commissioner causes not only unrest in the Province, but unsettles the relations between employers and employed.

10. As to the second point taken, it is submitted the resolution of the Chief Commissioner No. 1165-73 R., dated 10th May, is written in an unnecessarily suspicious and irritating manner and form; Inspectors are to proceed to gardens with a lurking suspicion of inaccuracies. It is submitted that it was never the intention that Inspecting officers should even make a point of questioning coolies and thus invite complaints, but rather, as a former Chief Commissioner said "he should state the results (of his inspection) by his own observation."

11. The third point at issue may be taken consequent on the above resolution, and my Committee submit that the cases of Executive interference with gardens, to this letter, resulted for the most part in harassing employers without being in the interests of the employed. The Executive in several instances not seeming to recognize or fully understand the internal economy of garden management, or the requirements necessary to ensure a contented labour force. The cases more particularly referred to are those of the Sukenbarrie Tea Estate in the Nowgong District, in which the Officiating Commissioner of the A. V. D. characterized the giving of a five null harder task to a coolie in his 4th year than given to new coolies as "an ingenious device for frustrating the intention of the law that long term coolies should get higher pay in the closing year of their agreements" and directed "that it should be stopped forthwith." The Borjan case in the Golaghat sub-division which resulted in completely upsetting the otherwise contented labour force of that garden, the Deckajulie case in Dibrugarh; and the Tingalibam case in the Sibsagar Sudder. With regard to the latter case, my Committee are confident that His Excellency will hold with them, that the Chief Commissioner's reference to this case in support of his arguments in Council was hardly jnstifiable.

12. On the fourth point my Committee would refer to memorandum in which are fully set forth the many objections to adopting such a form as that proposed by the Chief Commissioner to represent the average earnings of Act coolies. In the correspondence between the Government of India and the Chief Commissioner of Assam in 1891-92, the old form of wage was fully approved of, and accepted, but my Committee cannot trace any acceptance in the present instance by the Government of India of the new form "A," nor were the officers of the Assam Administration, or planters consulted as to its suitability, or even the expediency of its adoption.

13. On the fifth and sixth points, my Committee contend on the authority of Mr. Buckingham, who was in the Select Committee for the amendment of Act I, that the Chief Commissioner misinterprets the concluding para. of section 170. The Chief Commissioner on the 6th March. 1899, issued a Circular to all Deputy Commissioners in Assam, directing them to exercise discretion in the issue of warrants for defaulting sirdars, and the Planting Community loyally accepted such precaution, and intimated to their Agents in the recruiting Districts that the mere fact of sirdars staying over their time was not a sufficient reason that warrants should be issued; correspondence clearing up this point will be found in annexure "E."

14. Following the above the Chief Commissioner declined to enforce warrants issued in the Dibrugarh District against five sirdars who had long overstayed the period of their licenses, and of two absconding coolies all of the Makum Tea Estate, in consequence of which the services of these seven men have been lost to that Estate. In this case as will be seen from the correspondence marked "C" His Honour at first declined to communicate the nature of the orders passed by him on the serious complaint brought to his notice, and on repeated pressure being brought to bear, months after, merely informed the legal advisers of the Makum Tea Company "that the purport of the orders passed was that no further action should be taken in regard to the execution of the warrants."

15. With regard to the objection taken in para. 7 of this letter my Committee contend it will be sufficient to compare the form and manner of the Immigration Report for 1900 with previous Re-

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

ports issued by former Chief Commissioners, and by the Hon'ble Mr. Cotton himself, and submit, on such comparison, it is impossible to be blind to the fact of the marked want of impartiality amounting indeed to hostitility to planters and employers of labour, with which it is emphasized.

16. To instance the want of accuracy and impartiality shown by such Report, my Committee would refer to the chapter on Relations between Employers and Employed; and would draw special attention to the following cases of friction cited, *viz.*:—

Case No. 3, in which the Chief Commissioner states that "the case was originated by some violence on the part of the planter" (Mr. Calman) whereas my Committee are credibly informed that this was not the case!

In case No. 4, it is stated the coolie got three months for assaulting Mr. Mortimer, whereas my Committee are informed the sentence inflicted was for two years! So serious did the Magistrate consider the assault.

Again in case No. 7, the Chief Commissioner does not hesitate to state "that Mr. Greig struck one of the coolies some blows on the head with a stick. The coolie fell down and died on the spot." Whereas, as a matter of fact, the Jury found after unanimously acquitting Mr. Greig, "that there was no evidence produced before them to show that Mr. Greig struck deceased the blow under the ear" which was the only mark found on the head; and the Chief Commissioner's statement, therefore, appears to be utterly uncalled for, and amounts, it is submitted, to a grave libel on Mr. Greig.

In referring to case No. 9, the Chief Commissioner leads the public to believe that the incident was a trifling one, and that Mr. Begg had not given the coolies a holiday, and further infers that the riot arose from want of tact on his part. Though, as a matter of fact, the coolies had had a half holiday, and the excuse was merely seized upon as a culmination of considerable previous insubordination by the Sonthals who had for some time previously been terrorizing the other coolies, as pointed out by Mr. Begg in his letter to the Assistant Commissioner of Jorhat of the 25th October, 1900, when reporting the case.

It is submitted Mr. Begg showed the greatest tact and forbearance on the occasion, and it appears to my Committee to be a pity that the Chief Commissioner did not emphasize the fact that had the other coolies not interfered to protect Mr. Begg the riot would have terminated in bloodshed, if not in actual loss of life or limb.

In case No. 9, of which many details are given, and in which the Chief Commissioner holds the opinion, and expresses it, that "the orders passed were too severe" no mention is made of the important fact that the coolies implicated, wrecked the bungalow, or as stated on oath by the District Superintendent of Police in referring to this "practically every thing that could be broken, was broken."

While in case No. 12, it is stated "Mr. Jamieson used some force to a sirdar—His action was misunderstood, and a riot ensued, and Mr. Jamieson was assaulted. Whereas the sirdar in question, one Gunpot, in his sworn deposition, says, "The Assistant Manager did not ill-treat me, or use any force towards me." ... "He simply took me by the arm to show me the spot where to begin work." ... "The coolies were plucking leaves at random at their pleasure, but that could not be allowed. Hence they rose against the Sahib." Mr. Jamieson, in his evidence says, "I thought the sirdar could not understand me, and so took him by the arm to show the place where I wanted the work begun." It is submitted that the Chief Commissioner's reference to this case is both inaccurate and misleading, and that the more probable reason for the assault will be found in the sirdar's explanation, that the coolies who were plucking ticca, were not allowed to pluck at random wherever most leaf could be obtained.

These misstatements and omissions, together with the running comments, and opinions of the Chief Commissioner throughout the Report in question, taken in conjunction with the fact of the remission of the sentences on the coolies in cases Nos. 11 and 12 though the latter never appealed, and the reference to case No. 8 as a "trifling occurrence" "though serious notice was taken of it" it is submitted show a want impartiality, and indicate a distinct adverse bias against employers, and have caused a most unfavourable impression in the Tea Industry.

17. It is submitted that having regard to the vastness of the Tea Enterprise, and the sources from which the labour on Tea Estates are drawn, conflicts must occasionally occur between planters and coolies, however lenient the former may be, with their labour! and that the exercise of the utmost tact will not alwa avail, the most trivial circumstance and unlooked for imagina grievance, being alike seized on by the coolie as an opportunity riot; (*see* cases Nos. 8 and 12 referred to by the Chief Commission on pages 23 and 24 of the Immigration Report for 1900). My Co mittee have no hesitation in saying that this unfortunate tenden has received an impetus from the present attitude of the Executi of this Province and they have grave reasons for believing that will result in further undermining the prestige and control nece sary for the efficient management of Tea Estates.

18. My Committee believe that the punishment inflicted in t few instances where planters have been to blame, are in themselv sufficient to deter others (if such their be), from breaking the la but to gibbet all such cases of friction as has been done in Chapt VII of such Report is unnecessary, and uncalled for, stigmatizi as it does the whole industry, on account of the failings of t insignificant few.

19. My Committee have no desire to shield offenders, who rich deserve the punishment meted out to them for breaking the law an bring the Tea Industry into disrepute, but submit that it is le than fair or equitable to the overwhelming majority of Tea Planter who are among the most loyal and law abiding of His Majesty subjects, treating their labour force with the utmost leniency an consideration, that the industry should be held up to opprobiu not only throughout the vast Indian Empire, but also throughou the British Isles, where, needless to say, such sensational repor must cause the greatest anxiety and disquietude.

20. Having thus placed their case before the Government India my Committee trust that it may be considered in conjunctio with the grave representation already submitted by the India Tea Association on the 27th September last to the Secretary the Government of India in the Home Department. Leaving in confidence to His Excellency to decide, whether it would b advisable to appoint an Imperial Commission to enquire into, an settle once for all, whether the Act coolie is well treated, sufficientl paid for the amount of work he is called on to perform, and othe wise happy in his life and surroundings!

INDIAN TEA AT THE PARIS EXHIBITION.

Mr. Benjamin Rose, Honorary Secretary of the Indian Sectio of the Paris Exhibition, in his able and exhaustive report issue last night, says that the Indian Tea Courts were one of the mos pleasant popular features of the Indian Pavilion in the Trocader grounds. It is estimated, he tells us, that over 120,000 person patronised these courts during the seven months they were oper All through the Summer on fine days, between the hours of fou and six, every available seat was occupied and many visitors ha to be kept waiting for want of room. Some 30,000 decorate sample boxes of tea were given away. Each box contained a ounce of tea and a small booklet in English, French, and Germa giving particulars of Indian tea and how it should be prepared fo drinking. In a corner of the Private Exhibitor's Court, near th entrance to the Tea Courts, a small stall was constructed for th exhibition and sale of sample ¼, ½, and 1 lb. packets of tea and fo receiving orders for the delivery of tea from the permanent depô No. 3, Rue d'Alger. Over 8,000 lbs. of tea as well as a considerabl quantity of Madras coffee were sold in this manner. The appen dices to Mr. Rose's report conclude the final report of Mr. Edwar F. Langdale, the representative of the Indian Tea Association Mr. Langdale, writing on November 29th, 1900, says:—The likin for Indian tea had undeniably increased during the run of th Exhibition, but the increase of sales for the last few days is partl to be accounted for by the fact that purchasers had formed th idea that when the Exhibition closed the price of tea would b raised. This opinion was held by the trade, but that such will no be the case is now fast becoming evident to all, and our hopes therefore, are that we shall not lose much ground by reason of th Exhibition now being closed. That the low price can and will b maintained is, of course, in consequence of the support we hav received, and are to continue to receive, from the Association and which I venture to say is of far better form than that o subsidising grocers, with whom, however, we shall have t reckon later on when Indian tea is more generally enquired fo in France. Up to the present we have not been able to do ver much with the trade itself, for the reason that our price does no

rmit us to give a discount anything approaching the customary e in France—*viz.*, 25 per cent.,—but our hopes are that the pre- nt trade price may be modified if we can buy our tea through ore direct channels than we do now.

Infusion.—Owing, as I have already said, to their somewhat nexpected secluded situation the "Indian Tea Courts" were not sily found by many chance visitors, or by those who came pecially to visit them, but once they were found they became the sort of the best society, members of which have been known to y that the Indian Tea Courts were the most *chic* of any in the xhibition. Although in such "rushes" of business as occurred the Tea Courts, it was utterly impossible to give entire satisfac- on to every one, the complaints were very few indeed, and of ther a hypercritical kind. On the other hand, I am happy and ntent to mention that unstinted and warm praise was given by bitues of the Courts, notably the Princess Malakoff (who for ne days took her seat regularly at four o'clock), the Duchess of ecklenburg, Baron and Baroness Alphonse Rothschild, and the rench Commissary-General The Baron and Baroness were eased to say that the Grand Prix should have been awarded the ssociation for the manner in which the tea was served, as well for the goodness of the tea itself. The pretty boxes of samples ere much appreciated by all visitors, and happily by the French particular. About 30,000 sample boxes were given away during e Exhibition, and the balance of our stock will be distributed in nnection with the work to be continued at the Faubourg St. onoré and Rue d'Alger.

After some remarks about the demand for Indian coffee, Mr. ngdale proceeds :—

To revert to tea.—By a calculation of mine that on an average no e person ordered less than 75 centimes' worth of tea in the cup, e 69,500 francs' receipts represent 96,400 pots of tea (two cups each), but that number is considerably under-estimated, be- use so many people often ordered pots of tea for a smaller mber than their party consisted of, and also extra cups for the st.

Tea for two and cups for three, four, and five was an order equently executed. As also hot water in addition was served, fficient for another two cups; the quantity of tea drunk by each erson was, of course, much increased. I have not taken that into y calculations, but only the number of pots of tea served. Putting , however, at a reasonably low figure, I believe that not less than) to 60 people were every day served with extra cups without aving to pay anything except a penny for the accommodation. At is rate, in the 210 days of the Exhibition, 10,000 cups of tea can e added to the 96,400 pots accounted for.

The French do not always take their tea as the English do, but ey persevere in their attempt and evidently wish to like the everage.

Some more often than not dip their bread and butter and even ke into the cup of tea they are drinking, and some novices seemed consider the tea was a kind of grog to be mixed with the hot ater, which they poured into the cup first. Others poured the tea to the sugar basin, half the contents of which they had previously ten, and then into the hot water jug, and from that into the cup. r, for another change, they would partially empty the milk jug nd then pour tea into that. Our American visitors liked a glass iced water to drink either with their tea or after it. I do not ention these little parpeculiarities for the purposes of ridicule, ut rather to show that tea drinking in France is yet very much its infancy.

The expert was, of course, sometimes present in the Tea Courts, dging from the procedure of some of the visitors, who, to the reat wonderment of the foreign waitresses, would turn the leaves ut into the saucer or plate, examine them closely, and then turn em back into the teapot, and, having added more water, drink nother cup of tea.

I am aware that I am now about to tread upon delicate ground, ut as comparisons, sometimes unfortunately of an invidious nature, ave been drawn between India and Ceylon, I venture to do so, as cannot help thinking a totally wrong impression may have been iven to some garden proprietors and planters in India, who did ot visit Paris this year, that their interests were not always in the est keeping.

The circumstances under which the interests of India and Ceylon ot necessarily conflicting, but rather in friendly rivalry) were orked were very different. The Ceylon Commissioner, Mr. Renton, came over prepared to spend money lavishly in the interests of Ceylon tea. He did so, more particularly in the matter of advertisements—whether wisely or not it does not become me to say, but I do know that the Press were, so to speak, "nobbled" to the extent that, in their judgment, India was of secondary importance. I venture, however, to say that India with a less expenditure has, in comparison, done as well as Ceylon. An extensive free list, and many paid-for notices in the newspapers, of course, will always draw—for a time—as also do subsidies of another kind, and neither method adopted by Ceylon has injured India, but, on the contrary, has helped it. At this Exhibition, Ceylon had in their tea pavilion more than three times the accommodation India had in theirs—700 chairs against 200—and they worked under the direct auspices of the Ceylon Government. Between all the officials of the Ceylon Section, notably in that part relating to tea, and myself there has always existed the greatest friendliness, even to the extent of borrowing supplies of each other, and I do not impute to them any wish not to share some of their glory with India. Both have done good in France in the interests of tea.

Still, I cannot help thinking there were occasions when errors made by the Press might have been corrected by our friends, and wrong impressious thus prevented. To give only one instance: When the President of the Republic visited India and Ceylon, he was received in the former, at the entrance to which stood Indian Tea Court girls dressed in costume, from one of whom the President accepted in a most gracious manner one of the pretty little sample boxes of tea. So also did his retinue and many members of the Press, who at the same time made their notes concerning the Court. I was, as the Indian Tea Association's representative, personally introduced to many of the Press, notably the *Siècle*, which paper is particularly Anglophile. The President spent some time in the Indian Section, and then passed rapidly through Ceylon to Japan, so rapidly that there was no opportunity for the Ceylon Government delegate to present him, as he had intended to do, with a beautifully illustrated official catalogue of the Ceylon Court. The next day the Press gave all the honours to Ceylon, and the *Siècle*, to my particular surprise, reported, amongst other details, that the President visited the *Ceylon* Court, and that a charmingly-costumed girl belonging to that Court had presented him with a pretty little box containing a specimen of the island's tea! The other papers gave similar accounts, and in other ways misrepresented what had occurred. The representatives of two papers offered to give me small notices at the rate of about three or four hundred francs. I was unable to accept the offers, and their reports next day made no allusion at all to India!

Ceylon did not offer any explanation of the mistake I have mentioned, and which, perhaps, would not have been an unnatural one for the public to make, for at that period there was nothing except the exhibits to indicate which was the India Section.

The exhibit of tea in the Commercial Court attracted much attention, more particularly so as the tea sales stall was close to two of the show cases. The light, however, was not good, and although, with the object of showing up the tea better, I did not feel the globes more than three-quarters full, the exhibit at certain bones of the day was not so effective as could be desired. I may mention that the exhibit of very fine tip from some of the gardens, apart from all other merit, was most useful, in that many of the purchasers of our packets became disabused of the idea that tea with tip in it was not good, but contained some foreign matter.

I do not know if it is within my province to allude to the "judging;" for, of course, the reputation of the gentlemen appointed by the British Commissioners as jurors is undisputed; but I may, I hope, without presumption, ask to be permitted to say that no one could have taken more pains than Mr. Wilson did to have the tea properly judged and the awards fairly given.

All the samples, more than 400, which were in the show cases, were carefully examined in the leaf by all the jurors of Class 59, who, however, not being experts in tea, often deferred their opinion to Mr. Wilson, and that of Mr. Derode, the French expert on the Jury, and I would particularly mention how hard Mr. Wilson fought to have awards given to individual gardens independently of the Grand Prix which was to be awarded to the Indian Tea Association for the collective exhibit, and how, too he won his point in spite of very great opposition offered seemingly only on technical grounds.

The Gold Medal for coffee was, by a clerical error, first of all awarded to Ceylon, but was ultimately given to the United Planters'

Association of Southern India, after repeated and strenuous representations on my part.

SUMMARY OF QUANTITY AND VALUE OF TEA IN PACKETS SOLD AT THE EXHIBITION AND AT DEPÔT, 3, RUE D'ALGER, PARIS.

COFFEE IN LONDON.

A broker's circular issued on the evening of the 17th ultimo makes the following statement: "If later on further confirmation of moderate or poor prospects comes to hand, present values being very low will prove attractive to traders as well as speculators. This, no doubt, is true, says the *Produce Markets' Review*, but it is well to notice the last word in the quotation. It is the speculators who have brought about the recent rise amounting to 5s 6d during the last 3 months, and the trade generally do not see the warrant for it. There are two arguments used in favour of the rise, the first being that values are low. This, no doubt, is true, and is admitted by all. The same can be said of almost all articles of Colonial produce, and, with the enormous increase in the area of production, such is likely to be the case until consumption has evertaken production. Judging by the steady addition to the world's stock during the last five years it cannot yet be said to have done so, and speculators overlook the fact that every advance in values must tend to check consumption, and so operate against themselves. The second argument is that the coming Brazil crop is to be short; this can be nothing but pure speculation, based upon the statement that the trees are flowering badly. It has been proved on many occasions that estimates based on this the first flowering are most fallacious, and that it is far wiser to wait until the middle of December, or early in January, for reliable figures The fact is that sentiment has turned in favour of higher prices, and it remains to be seen whether the trade, who do not want an advance, or the speculators will prove correct. At this time of year the Brazilians generally manage to start some rumours that will enhance values, and enable them to sell the crop which they have in hand. Last year it was stated that the crop had been much over-estimated, and arrivals from the interior were judiciously curtailed to make such a statement seem plausible, but only to be contradicted by the largest out-turn ever received. This year a new scare is developed in another form, and time alone can show whether it is correct or not. Attention having been almost entirely taken up with Santos news, very little has been done in actual coffee, and prices are strong without being much dearer.

PRODUCE AND PLANTING.

The trade between China and Russia over the Kiakhta route is being superseded by the Vladivostock and Nicolaievsk route. It consists chiefly of tea which had been bought in Hankow, and was forwarded by camel caravans *viâ* Tientsin and Kiakhta for the Central Asian and Russian markets. The following are the most recent figures supplied by Messrs. J. Welch & Co., of Mincing Lane, of this year's trade, being dated Shanghai, September 4, and are compared with the figures for the corresponding periods of the two previous years, showing at a glance the change which has taken place in the past two years. May 1 commences a season. Export of tea *viâ* Port Arthur, Newchwang, and Tientsin (old route): From May 1 to September 4, 1901, 1,398,961 lbs.; from May 1 to September 4, 1900, 2,715,488 lbs.; from May 1 to September 4, 1899, 20,391,931 lbs. Export of tea to Vladivostock and Nicolaievsk (new route): From May 1 to September 4, 1901, 21,787,556 lbs.; from May 1 to September 4, 1900, 8,908,130 lbs.; from May 1 to September 4, 1899, 7,285,485 lbs. The same change has taken place betw Bombay and Batoum. Teas which formerly found their way Central Asia *viâ* Bombay now go in increasing quantities Batoum.

* * *

Several letters have recently appeared in the provincial P about the weighing of paper with tea, and now a correspondent the *Times* calls attention to an anomaly in our laws whereby punish for false, but not for short weight. He instances bread tea, and says, with regard to the latter, the grocer used to bl his own tea. Now he buys it quite as cheaply, much be blended, made up into packets, ready to hand across the coun The packet in many cases does not contain a pound of tea. little printed notice on the wrapper to the effect that the pac weighs a pound with the paper means nothing to the ordin purchaser. How many even of the intelligent middle-class r what is printed on the wrappers of the goods delivered to the Neither of the two classes is aware that that notice me thousands of pounds extra profit every year to the big packet firms who use it.

* * *

A writer in the "Tea and Coffee Journal," of New York, ferring to the tea market there, says: "Ceylon and India teas m increase in popularity, so far as black teas are concerned; and fr some experiments made this season in 'Ceylon Greens' it is unlikely that before many years more they may occupy an imp tant place in our tea distribution, and the jobber and retailer fosters the trade in both of the tea products from India and Cey will not be the loser."

* * *

It is mentioned by Mr. Robert Mitchell Floyd, of the "Tr Press List," published in Boston, U. S. A., that tea culture in southern part of the United States was attempted as far back century since, the produce costing about £15 per lb to grow. Ag an attempt was made in 1848. In 1881 Congress made an app priation for an experiment in tea culture, but when Mr. Will Saunders, of the Department of Agriculture, made an examinat of the work done under it, he found that owing to the illness of expert and other causes, he had to report that there was little p pect of anything of value being accomplished. Mr. Floyd, in April number of the "Trade Press List," published an interest account of a visit paid to the South Carolina tea gardens of Shepard.—*The Home and Colonial Mail.*

THE COLOMBO TEA TRADERS' ASSOCIATION

EXTRAORDINARY GENERAL MEETING.

An extraordinary general meeting of the Colombo Tea Trad Association was held in the Chamber of Commerce room, Colom on 4th instant. Mr. Stanley Bois presided and the others pres were:—The Hon. Mr. W. H. Figg, Messrs. D. W. H. Skrine, F Street, J. A. Henderson, G. Thomson, A. Lampard, W. Somerv W. Seale, E. Benham, J. A. Adams, G. H. Alston, W. E. Drury, Bartleet, C. M. Wright, W. E. Mitchell, A. G. G. Hyde, H. Waldock, R. Davidson, Hercules J. Scott, E. R. Waldock, G. Ginn, A. R. A. Heath, J. G. Melrose, R. John, S. P. Jeffery, W. Barber, L. O. Leefe, W. B. Cooke, J. Lochore, F. M. Mackwood W. Booty, and F. W. Waldock (*Secretary*).

THE AUSTRALIAN TARIFF ON TEA.

Mr. G. H. Alston, on behalf of Messrs. Whittall & C moved the following:—

"That this Association cordially approves of the action taken the Chamber of Commerce in approaching the Federal Parliam of Australia with a view to a re-adjustment of the duty proposed tea in bulk and endorses the arguments brought forward by t body that the imposition of an *ad valorem* duty is seriously de mental to the interests of capital employed in the tea industry Ceylon and India, placing, as it does, a premium upon cheap Ch teas. That this Association is of opinion that the 1d. per additional duty on teas packeted in other countries than Austr will be a great hardship to those in Ceylon and elsewhere in British Empire who have invested capital in developing that tr and is not in the interests of the consumer generally in Austr as it prevents him, except at an increased cost, from obtaining packeted in the country of production which must be regarded

guarantee from any admixture with growths of foreign countries. That the Tea Traders' Association of Ceylon respectfully direct the attention of the Federal Parliament to these facts and ask for the adjustment of the Tariff on tea so as to make it less damaging to this large industry of Ceylon and other British countries."

He briefly explained how the question of the exemption of the *ad valorem* duty had been taken up by the local Chamber of Commerce whose resolution had been forwarded by wire to Australia asking them to consult the wishes of the Tea Trade in the Island before any final resolution was come to. He also referred to the letter in last night's *Times of Ceylon* from Messrs. Finlay, Muir & Co. setting forth the views of the tea trade of Victoria on the *ad valorem* duty and stating that an *ad valorem* duty would be very difficult to work and would upset the whole of the usual course of trade. He also read an account of an interview with some members of the trade in Sydney, setting out the objections to a 1d. a lb. duty from the producers' point of view.

Mr. J. A Henderson briefly seconded.

Mr. G. Thomson proposed as an amendment the following :—

(1) That this Association approves of the action taken by the Ceylon Chamber of Commerce in approaching the Federal Parliament of Australia with a view to the re-adjustment of the proposed duty on tea.

(2) That this Association fully endorses the resolutions passed at a meeting of the members of the Tea Trade of Victoria, held in Melbourne on the 10th October last, which were embodied in a letter to the Right Hon. Sir George Turner, *Kt.*, Treasurer of the Australian Commonwealth, as being in the best interests of this important industry.

(3) That this meeting requests the Ceylon Chamber of Commerce to place these views before the Treasurer of the Commonwealth of Australia and the Melbourne Chamber of Commerce.

Mr. S. J. Jeffery seconded the amendment.

He said that the chief reason and strongest argument in favour of the omission of the clause was that they were entirely supported and seconded in the meeting which was held in Melbourne. He felt sure if that resolution was passed it would tend to show that they were anxious about the 1d. per lb. on tea, and that would be against the interests of the trade. Therefore he thought it better to leave out any mention of the 1d. duty on tea.

Mr. Thomson referred at length to the feeling in Australia against the employment of black labour and said the latter part of the motion would do harm. He thought the firms who brought the motion forward were ill-advised to do so. The first part of the motion he agreed with but the question of packet teas was such an infinitesimally small matter that it should not have been brought up at all.

Mr. Lampard also spoke in favour of the amendment.

The Hon. Mr. W. H. Figg thought that they should thresh out the whole question that day rather than seek refuge in a resolution passed outside the Colony.

Mr. J. A. Henderson said he thought part of Mr. Thomson's amendment might possibly be judicious, but his remarks certainly were injudicious.

Mr. R. Davidson proposed as a second amendment that that part of the original resolution from the words "That this Association is of opinion that the 1d. per lb. additional duty" to the end of the clause "this large industry of Ceylon and other British countries" should be deleted.

Mr. W. E. Mitchell seconded.

Mr. S. P. Jeffery suggested that the words "in bulk" which occurred in the body of the resolution be deleted.

The Chairman said he understood that the proposer and seconder had no objection to the withdrawal of the words "in bulk."

The amendment of Mr. Davidson was then put and declared carried, two only, Mr. G. H. Alston and Mr. Hercules Scott, voting against it.

The Chairman then said that with the passing of that amendment the previous amendment and the original resolution fell to the ground.

RAISING THE LIMIT FOR BIG BREAKS.

Mr. Lampard (on behalf of Messrs. Crosfield, Lampard & Co.) moved the following resolution :—

"That in view of the increased number of lots offered for local sale the limit for big breaks should be raised from 700 lbs. to 1,000 lbs."

Mr. Lampard said the limit for large breaks at home and in Calcutta was 18 chests and 24 half-chests, while in Colombo the present limit was 700 lbs. He believed he was correct in saying that the buyers in Colombo were unanimous in believing that the time had come for raising the limits for large breaks in the Colombo market. He had only heard of one firm which opposed the proposed alteration. In Colombo no such system of sub-division of the work of tea-tasting prevailed as in London, the only division being between large breaks and small ones. He did not believe any of them could go on continuously tasting and correctly valuing the number of so-called breaks which were now offered in the local market. The man who tasted the large breaks had more than he could do, and the man who tasted the small ones not enough. It was in the interests of sellers and buyers alike that an opportunity should be given for the sub-division of the labour of valuing the sales in order to ensure a correct valuation of each lot offered. Although local offerings since 1895 had increased from 24,000,000, to over 50,000,000 he did not at all believe the limit in the expansion of the market had nearly reached high water mark. A large and free local market was essential to maintaining on a proper basis the cutivation of tea in that island, and the present proposal was a step in the right direction to be followed later on by raising the limit of that now existing in London.

Mr. Adams (Messrs Odell & Co.) seconded, and the resolution, after being supported by Mr. J. A. Henderson was carried *nem. con.*

On the suggestion of Mr. G. H. Alston, Mr. Lampard added to his resolution that the new rule come into force from the first sale of the New Year.

THE LONDON COFFEE MARKET.

A Week of Excitement.

Not for a long time, says the *London Commercial Record* of the 25th ultimo, have the Sale Rooms witnessed such excitement as happened in the Coffee Ring during the week under review. Brisk selling and buying have been proceeding the whole week, and, if the terminal markets close a shade "off," we may regard this event more as a natural reaction following a sharp rise than as a sign of weakness in the position of coffee. Not very long ago the feeling in the terminal market was a decidedly bearish one, heavy stocks, bad trade, and the expectation of another big crop in the Brazils all led operators to believe in lower values, and few were the bulls who were hoping that by some unforeseen means prices would be raised. But it is the unexpected that generally happens. At first private wires came through speaking of a probable crop failure owing to bad weather, but little heed was paid to them, as they are no strangers in our market. As time proceeded, these rumours attained mere tangible form, and there being no want of confirmation of the report of an exceptionally bad flowering, operators began to pay more attention to these communications, and prices began to harden. Ever since telegram upon telegram has been received, one more alarming than the other, speaking of a poor crop, insufficient yield, and even of a total crop failure. Our sensitive market could not possibly remain indifferent to these alarming reports; buyers rushed in, and prices rose rapidly until Wednesday last, when after paying 40s for May next, bulls retired and the boom experienced a sudden check. No doubt this break in the upward movement has caused some consternation among a certain class of bulls, outside operators, put in by benevolent friends, and their selling somewhat weakened the market; but the bulk of bulls still believing in the soundness of the position stuck to their holdings, giving thereby a certain amount of stability to the market which otherwise might have experienced a bigger drop than actually has been the case. The market closed thus in a feverish condition, bulls maintaining that in the face of the exceptionally poor flowering, prices have not risen sufficiently, whereas the more timid fear that the second flowering may be a great extent counteract the harm done by the first. All other coffee holders are of course in sympathy with the Brazil sorts, and try their utmost to instil further strength into the market by asking absurd prices. For the present, however, buyers appear to be determined to await further developments, and unless a strong bull appears we are likely to see for some little time to come a nervous uncertain market.

THE PROPOSED COFFEE CESS.

(By a Coffee Planter.)

As the U. P. A S. I. Chairman's proposal is one of great moment to the whole planting community, perhaps you will allow me space in your columns to express my views concerning it at some length. There are two distinct points to consider:—(1) The manner in which it is proposed to raise the cess. (2) The manner in which it is proposed to deal with it. As regards the first, it appears to me to be quite the best proposal that has been made, both with respect to the principle on which it would be levied and to the manner in which it would be collected. There certainly would be some trouble involved on curers, but as regards planters, the method of payment would be simple, and would not be felt to the same extent as if we were called on to pay hard cash, though, after all, the amount of the cess is very trifling. Moreover, from the point of view of the "Fund" it would be excellent, as there would be no opportunity for arrears. There are no doubt minor objections—for instance, a considerable quality of cherry coffee does not reach the curer's hands direct from the producer, and so would escape the cess, but, as Mr. Gompertz says, it is impossible to get perfection, and I think this proposal is as near to it as any likely to be evolved.

As regards the second point, it was decided at the last U. P. A. Meeting that such funds as can be raised shall *at first* be devoted to trying to capture Indian retail markets, and I take it that planters are for the most part prepared to accept the policy adopted by the parent Association, and for the moment lay aside the idea of establishing new markets elsewhere. But it should be noticed that the policy of the U. P. A. is "*at first* to devote funds to capturing Indian markets," not permanently, and I protest against the apparent finality of Mr. Gompertz' proposal. In no case should we agree to any such scheme save for a fixed period of trial. I hope some day we may endeavour to catch the Australian market, in which I am confident there is great scope.

If, then, our policy be to raise funds and to devote them to capturing Indian markets, the question that naturally arises is, What means have we at our disposal for so doing? As far as I am aware, there is no other organisation at present existing in South India that would, in any measure, be likely to accomplish our purpose save the U. C. G. Company. Let us thus examine the proposal. It is that planters should pay Re.1 for each ton of coffee they send to be cured, that curers should pay 4 annas for each ton they receive for curing, that the whole should be made over to the U. C. G. Company, and that subscribers should be allotted shares, or proportion of shares, *pro rata* to the amount they pay each year. It may appear to some that the proposal is more to the advantage of the Company than to planters, but I think a little consideration will convince them that it is a fair and square one. The Company practically says:—"We want capital, you want the sale of your coffee pushed, we have the organisation ready at hand to do this, invest your money with us, whereby you will run the ordinary risks of profit and loss attendant on such undertakings as ours, but with the ulterior advantage that such success as we may meet with will promote the demand for your product." There are some matters of detail that require clearing up. For instance, the proposal to add the aggregate of the cess annually *ad infinitum* to the capital of the Company strikes me as somewhat extraordinary, and would probably require special provision which the existing shareholders might not view with equanimity. Such details, however, are no doubt open to satisfactory settlement.

If we admit, then, that the proposal is sound and that the Company's organisation is at present the only existing one at all capable of promoting our ends, we must ask ourselves if we have sufficient confidence in it to entrust it with the work. I know very little about the Company, and though my ignorance may be a fault, I believe it is not an uncommon one. The only information that has reached us, as far as I am aware, is contained in the Chairman's Annual Report, which appeared in one of your recent issues. Briefly put, what I gathered as the gist of that Report is:—

1. That the Company has worked at a loss.
2. That the Directors not only do not see their way to restricting their sales to pure coffee, but cannot undertake to state on their tins the proportion of chicory.
3. That in the interests of the Company they deem it inadvisable to state the amount of their exact sales.

Now, there may be satisfactory explanations of one or all the above points (Mr. Hodgson at the Meeting did explain how N arose), but I ask any impartial critic whether the Report a stands is such as will induce planters to go "*all together* for U. C. G. Company." I wish the Company every success, as I beli the projects it has in view are on the whole excellent, but I ma tain emphatically that it is incumbent on the backers of t scheme to place as full information as possible before the planti community regarding the constitution of the Company, its *mo operandi*, and the extent of its business. Otherwise, I fail to how it can expect the ready acquiescence which Mr. Gompe seems to hope for.

The policy of the Company as regards chicory is disappointi and it will be difficult to bring it and the consistent opposition adulteration in any form which planters have maintained into li The Secretary, in his letter dated the 31st ultimo, however, sta that there is an increasing demand for pure coffee, while that "French coffees" is gradually declining. A re-considerati therefore, of the question would seem possible.

There are other objections which might be urged against t U. P. A. Chairman's proposal, the chief of which appears to me be that the operations of the Company are carried on, I believe, one centre, and that it naturally makes its purchases from t nearest sellers, consequently, those who are the most adjac would receive more direct benefit than more distant ones. T success of a scheme of this description must depend in a gr measure on the impartiality of the lines on which it is conduct and it would appear that unless some such plan, as was suggest in one of your recent leaders, of placing low grade coffees with Company for sale, or the establishment of branches in the ch coffee centres, were contemplated, a general approval is not p bable. I have no wish to throw cold water on Mr. Gomper proposal, but it is of too important a nature to admit of our bei rushed, and I would suggest that, if he wishes to give early eff to it, he should lose no time in putting us in possession of as f information as he can regarding the doings of the Company a its proposed extensions, should the increment to capital be ma also in endeavouring to effect some modification of its adulterati policy. He urges us to agree at once so that we may not lose t cess this year. By all means let us agree to the cess, but let t disposal of it be deferred till we are in a better position to jud of the best method. The coffee industry at present is staggeri under the weight of various adverse circumstances, and I rega the establishment of new markets as one of the resuscitati measures available. With it and others in view, *spero melio* —*Madras Mail.*

THE VICEROY AND THE PLANTER.

At Silchar on the 8th instant H. E. the Viceroy received address from the Surma Valley Tea Association, as follows:

We, the members of the Surma Valley Branch of the Indian T Association, as representing the tea planting community in t districts of Cachar and Sylhet, desire to express our deep se of gratification that Your Excellency has found it possible, notwi standing the claims which press upon you from other parts of t Empire, to visit the Surma Valley, and we desire to offer you c most cordial and respectful welcome to this portion of the Province Assam. We are not able, as was the case with our fellow-plant in the Brahmaputra Valley, to welcome you as the first Viceroy a Governor-General of India who has visited this portion of t Province, as your distinguished predecessor, Lord Northbro visited the Surma Valley some five-and-twenty years ago, wh the industry was more or less in its infancy, the total exports of from the whole Province at that time being only about 20 milli of pounds, or about one-sixth of the present outturn. We can o express the hope that so long a period as a quarter of a centu may not again intervene before we have the pleasure of welcomi a Viceroy of India.

We do not desire to weary Your Excellency with a lengt address, or to dwell in detail on our local requirements, but o propose to touch briefly on the position and prospects of the industry in the Surma Valley, and on the undertakings which consider necessary for the proper development of these distri of the Province of Assam. The relative importance of the Sur Valley, as a tea-producing district, as compared with the Brahm

utra Valley, may be estimated by the fact that while the outturn of ne crop of 1900 in the Brahmaputra Valley amounted to 68 millons f pounds, the outturn in the Surma Valley amounted to 61 millions.

In the address which was presented to Your Excellency at Tezpur, n the early part of last year, by the Assam planters, the question f defective communications occupied a very prominent position. Ve desire to draw Your Excellency's attention to the fact that the tate of matters as regards road communications in these districts s worse than in Assam Proper. The almost apparent hopelessness f ever being able to construct permanent and durable roads on ccount of the absence of road metal and the prohibitive cost of nporting it weighs heavily upon us. For a portion of the year our oads are practically impassable, and such repairs as the Local Boards are able to execute from inadequate grants made to them or the up-keep of roads are of the most transient nature. With his fact in view, we look to the construction of light feeder lines of which there are none in either of the districts) to connect our gardens both with the main line of the Assam-Bengal Railway and he river, and also to serve as a means of transit for the large mount of native traffic which would probably use them. Proposals ave, as Your Excellency is aware, been made for the construction of uch lines, but so far without any practical result. We feel little loubt that capital would be attracted to the districts for this purpose if the Government of India could see their way to offer avourable terms, and also a minimum rate of interest. Such assistnce would be of immense benefit, not only to the tea industry, ut also to the general development of these districts of the Province.

While touching on the subject of the great need for improved communications both by road and railway, it would perhaps be appropriate for us to remark on the great benefit which the construction of the Assam-Bengal Railway has already conferred on these districts of the Province. No less than 1,160,000 maunds of rice have been transported since January, and this at a time when, owing to the failure of the crops, we were reduced to famine conditions. We can safely say that, had it not been for the existence of the railway and the cheap rates at which grain was carried, disaster would have stared us in the face, and numbers of the raiyats would probably have been reduced to starvation. Even under existing circumstances heavy loss has been sustained by many gardens. In saying this, we do not reflect in any way upon the River Carrying Companies, who could not possibly have carried the whole of the traffic, and whose efforts were also handicapped by drought and the low state of the rivers.

We here desire to tender to Your Excellency our grateful aknowledgments for the appointment of Mr. R. H. Henderson as an Extra Member of the Legislative Council of India during its last session in Calcutta, when the Bill to consolidate and amend the Law relating to emigration to Assam was under consideration. We recognised in this appointment Your Excellency's earnest desire that the Tea industry should be fully represented when important questions in which it is interested are under the consideration of Government. Our views on the Labour Question were fully represented by Mr. Henderson in Council and on the Select Committee, and we do not propose to refer further to the matter in this address, more especially as sufficient time has not elapsed to enable the amendment of the law to be fairly tested in the labour districts. At the same time we would draw Your Excellency's attention to the satisfactory working of Act XIII of 1859, with the provisions of which both employers and laborers in these districts are contented.

Your Excellency is well aware that the tea industry is at present passing through a very critical period and a time of great depression. The increase in taxation at home concurrently with the severe fall in prices has been the means of causing great anxiety to all whose capital is invested in tea, and to agents, planters and all who are engaged in the management of this important industry. We feel quite sure, from Your Excellency's sympathetic references on more than one occasion to the difficulties with which we are beset, that the Government of India do not desire to increase those difficulties, or to make our position more trying. In this connection we would desire respectfully to refer to the recent resettlements both of Cachar and Sylhet. The planters of Cachar submitted a memorial to Your Excellency last year, representing what they considered the injustice of assessing all the tea lands throughout the district at one uniform rate and on the basis of the highest rate assessed on rice land. As this memorial went into full details with regard to what we felt to be undoubted grievances, we do not intend to refer further to the matter here, except to express our regret that the prayer of the memorial has not been conceded. The resettlement of Sylhet has recently formed the subject of correspondence, both with the Government of India and the Assam Administration. We acknowledge with thankfulness the concession made by the Assam Administration, by which, in the case of any ilam estates in Sylhet held for tea cultivation, the assessment of which, at the sanctioned rates, would produce an enhancement of over 25 per cent, the enhancement shall be limited to 25 per cent. for the first four years of the term of the new settlement, after which the full assessment shall be imposed during the remainder of the assessment. We note that this concession has the approval of the Government of India, and we fully believe that it was the intention of Government to lighten our burdens in connection with land. We feel, however, that the Government of India have hardly realized what the consequences will be of the recent heavy increase in the assessment, coming, as it does, at a time when the financial position of the industry is so unsatisfactory. We respectfully submit, for Your Excellency's consideration, the desirability, if it is impossible to reconsider the recent settlement rules, of, at any rate, postponing their operation until the difficulties which beset us at the present are successfully surmounted.

There is one more point we should like to bring to Your Excellency's notice, and that is the frequent changes in Executive Officers. We believe that this important matter has already engaged Your Excellency's attention in other parts of India; we trust, therefore, it may please Your Excellency's Government to pass orders that the Chief Executive Officers in these districts be changed as seldom as possible.

In conclussion, we desire to express our regret that Lady Curzon has not been able to accompany Your Excellency, and we wish you a pleasant and prosperous journey to Burma.

His Excellency the Viceroy, in replying to this address, spoke as follows:—Gentlemen,—Your very temperate and well composed address opens with a reference to the circumstance in which the only one of my predecessors who ever visited the Surma Valley came here as far back as 27 years ago. It may interest you to learn that among the ex-Viceroys of India, of whom there are now five living at home, there is none who takes a keener or more constant interest in the welfare of the country which he once administered so conscientiously and so well than Lord Northbrook and that he still follows with the closest vigilance everything that passes here, though it has taken his successors a quarter of a century to follow his example in visiting Silchar. I hope that the tradition may now become fixed, and that my successors will not be so unwise as to deny themselves the pleasure which I am enjoying to-day of meeting the inhabitants of this interesting and prosperous neighbourhood. Had I not been able to supplement my visit to the Brahmaputra Valley last year by a similar visit to the Surma Valley before the end of my term of office, the condition of climate, of communications, and of labour differ so materially in the two cases that a man would no more understand Assam who had seen one and not the other than he would be able to judge of London had he only seen Bloomsbury and not Belgravia, or, *vice versâ*. Which is Bloomsbury and which Belgravia in the presnt case I will not undertake to say (loud laughter), perhaps neither is either (renewed laughther).

A prominent place has been given in your address to the subject of communications in this part of Assam and to the desirability of connecting the tea gardens by light feeder lines with the railway or the river; and you add that you entertain little doubt that capital would be attracted to the district for this purpose if the Government of India could see its way to offer favourble terms and a minimum rate of interest. You are right in one respect, but if you will allow me to say so, you are wrong in the other. The question is not one of favourable terms at all. We have never boggled about terms, or if this has ever been done in the past we certainly should not do so now. We are prepared to make the conditions as favourable as is necessary. I might almost say as favourable as is desired. But that is not the question. The confidence of every promoter that I have come across, great as it is, falls short of being willing to undertake the risk without a Government guarantee. He always declares that the prospects are assured, but he prefers that this should be assured by the bond of Government rather than by his own. Now I do not in the least complan of this business. Men are right to be cautious, and if they want to attract capital they know that it is better to have Gov-

ernment behind them than to step into the market alone; but as I explained last year at Gauhati, the moment a Government guarantee is asked the scheme passes at once into another category. It falls within the Government programme. It has to be correlated with every other railway demand that is based upon a Government guarantee or that involves the expenditure of Government money in every Province of India. You may say why not, and why should not Assam have its turn? To this the answer is very simple. Assam is already having a good deal more than its turn. The allotment of funds that we make annually to the Assam-Bengal Railway is greater than that to any other railway in India with three exceptions, and two of these are main trunk lines not running through, what have been described to-day as backward districts, but through the most populous Provinces of the Empire. Now we have to observe a certain proportion all round, and we cannot out of the limited funds at our disposal both provide large sums for the completion of the Assam-Bengal Railway (the great benefits of which to this district you have frankly admitted in your address) and at the same time risk it in the shape of guarantees upon smaller local enterprises. If we did so every other Province would clamour and scream, and my tours would be punctuated not so much by polite petitions as by angry protests (laughter). As soon as we have completed the Assam-Bengal Railway, then I hope that we may have the means to help you elsewhere. Meanwhile, as I said last year, there is not the least objection to the Local Boards undertaking the matter on their own account. I should like to see an expansion given to the financing of small railways by Local Governments and their subordinate agencies, and if I were an Assam planter or a person interested in the exploitation of the country, I would sit down and address myself to the problem from this point of view.

You have spoken in your address of the period of depression through which the tea industry has been passing. I am glad to see from a careful study of the declared dividends of the various tea companies in Assam that this is not universal, but in some cases it is undoubtedly severe, and generally speaking it is widespread. Into the causes of this state of affairs it is not necessary for me now to enter. We discussed the whole matter at great length in our debates in Council at Calcutta last Spring, and let me here say that I look back upon those proceedings with the most agreeable recollection. The case of the planters was stated with much ability by Mr. Buckingham and by Mr. Henderson, the latter of whom hailed from this immediate neighbourhood, and the substantial agreement at which we ultimately arrived was, I think, a proof of the advantage of frank and friendly debate. It certainly gave me a knowledge of tea which is incapable of being acquired from the inside of a tea-cup (laughter) and which I think enables me to understand, more intelligently, the vicissitudes and troubles of the industry in which so many of you are engaged. There is one respect in which I gather from your address that you think those troubles have been augmented, namely by the recent revision of the land settlement in these districts. I have looked into the matter, and I hardly think that the grievance is one of which much can be made. I remarked in reply to the preceding address that rates here are much lower than those in force in the As Valley, and, find that the total enhancement upon the tea l in Sylhet was only Rs.10,000, which can scarcely involve appreciable addition to the cost of output. Moreover it been in a large measure due to the assessment of lands which h been brought under cultivation since the last settlement, which could not of course escape paying their due share. In ca where the enhancement might have involved a substantial incre in the cost of working we have made the concession by postpo ment to which you have referred.

Gentlemen, having come twice to Assam in the course of months, I do not suppose that it will ever be my good fortune visit this Province again. Let me say therefore that I shall alw regard it as among the happiest features of my Viceroyalty tha have made the acquaintance of this most picturesque and p gressive corner of His Majesty's dominions and that if Ass ever wants a good word said for it, which I do not suppose is l ly seeing that it has very well equipped lungs of its own (l laughter), I shall always be glad to place myself at its dispo (loud and prolonged applause).

DISTRICT ASSOCIATIONS

WYNAAD.

Proceedings of a General Meeting held at Meppadi Cl 6th November, 1901. PRESENT:—Messrs. Abbott, D Guard, Lance, Macrae, D. Mackenzie, T. S. Malcolm, Nicc Powell, Trollope, Waddington, Winterbotham, and Romilly, *Honorary Secretary*.

Mr. C. E. Abbott *in the chair*.

1. Proceedings of last Meeting were taken as read.

2. **Tea cess.**—The Honorary Secretary notified that the Arap Tea Co., the Panora Co., and Mr. E. H. F. Day had paid their s scriptions to the I. T. A. foreign market fund.

3. **Coffee cess.**—Read Circulars Nos. 86, 90 from the U. P. A. S A lengthy discussion ensued on the best way of raising funds. following resolution was eventually carried "that this Associa is strongly in favour of pushing the local sales of East Indian co by advertisement, and in favour of the collection of funds the purpose; but it considers that the scheme proposed by Mr. Ba and modified by the Chairman, U. P. A. S. I., is, as it sta too indefinite, to express a final opinion on. The Association wo like to know in the first place if the curers have been consulted, what they and the U. C. G. Co. are prepared to do in the matter.'

4. **Tea theft.**—Mr. Waddington reported a case of theft of from a chest, which had been packed at his factory and despatc to Calicut, consigned to London. The theft was discovered at Cali and the matter reported at once to the District Superintenden

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CROSSE & BLACKWELL'S, LTD.

By Special Warrant Purveyors to His Majesty The King.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98—t.f.o.]

Police, but that no notice had been taken. The Honorary Secretary was instructed to address the Inspector-General on the subject.

5. **French duties.**—Read U. P. A. S. I. Circulars Nos. 83, 85, 87 recording that the Ceylon Association had addressed the Secretary of State for the Colonies and the U. P. A. S. I. had addressed the Secretary of State for India on the subject. "The Government of India have reason to believe that the matter is receiving the careful attention of His Majesty's foreign office"—letter dated Simla, 11th September from the Under Secretary, Finance and Commerce department, to the Government of Madras.

6. **Mr. de Niceville's visit.**—Read correspondence with the Secretary, U. P. A. S. I. Read letter from Mr. de Niceville to Mr. H. B. Winterbotham about a pest attacking pepper vines, stating that from the specimens sent him he believed it to be a mite, but would be glad to investigate it further on his visit in January next. The Honorary Secretary was instructed to find out from the Secretary, U. P. A. S. I., what arrangements had been made about Mr. de Niceville's visit and how much time he could spare to Malabar Wynaad.

7. The following U. P. A. S. I. circulars were read and recorded:—
   - No. 81. On Adulteration of Coffee.
   - ,, 84. Coffee Railway Freights.
   - ,, 89. St. Petersburg Exhibition.
   - ,, 88. Assam Labour Troubles.

8. The following papers were laid on the table:—
   - Sale Notice of Neminaad Estate.
   - Indian Tea Association Circulars.
   - Indian Planting and Gardening.
   - Planting Opinion.

A vote of thanks to the chair terminated the proceedings.

(Signed) C. E. ABBOTT,
Chairman.

(,,) G. ROMILLY,
Honorary Secretary.

The next meeting will be held on Wednesday, 4th December.

PLANTERS' ASSOCIATION OF CEYLON.

GENERAL COMMITTEE.

Extracts from minutes of proceedings of a meeting of the Committee of the Planters' Association of Ceylon, held at the Victoria Commemoration Buildings, Kandy, on Friday, the 8th November, at 3 p.m.

GREEN TEAS.

Read letter from Mr. H. Drummond Deane regarding the circulation of the printed card of instructions as to the process of the manufacture of green teas, and sending a set of samples of green tea, plain, glazed, and glossed, all the same tea.

Resolved:—"That the thanks of the Committee of the Planters' Association of Ceylon be conveyed to Mr. H. Drummond Deane and that the letter be brought under the notice of the 'Thirty Committee'."

RUSSIAN TEA TRADE: BRITISH EXHIBITION IN ST. PETERSBURG, 1902-3.

Submitted copy of cablegram received from Paris stating that the St. Petersburg Exhibition opens in June.

Submitted letter to the United Planters' Association of Southern India in reference to the sale of tea at St Petersburg Exhibition, 1902.

DUTY ON TEA IN AUSTRALIA.

Read correspondence with the Ceylon Chamber of Commerce on the subject of the proposal to levy a duty of 2d. per lb. *plus* 20 per cent. *ad valorem* duty on tea in Australia.

Resolved:—"That the Committee of the Planters' Association cordially approves of the action taken by the Chamber of Commerce in approaching the Federal Parliament of Australia with a view to re-adjustment of the duty proposed on tea, and endorses the arguments brought forward by that body that the imposition of an *ad valorem* duty is seriously detrimental to the interests of capital employed in the tea industry of Ceylon and India, placing as it does a premium upon cheap China teas."

OFFICIAL ESTIMATE OF TEA CROP FOR 1902.

Considered the question of the official estimate of the tea crop for 1902.

Resolved:—"That an official estimate of the tea crop of Ceylon be comipiled by the Planters' Association from the Ist January to 31st December, 1902. (2) That District Associations be asked to compile such estimates for their district, and furnish them to the Secretary, Planters' Association of Ceylon, by the 30th November, or as soon thereafter as possible. (3) That district estimators be requested to obtain their estimates from acreages as far as possible, the statistics received to be considered confidential and not to be published by the estimators, and the total district acreages only to be given. Such returns shauld, in the opinion of the Committee, be (*a*) total acreage in tea; (*b*) acreage in bearing; (*c*) total crop. (4) That forms be issued separately to each Superintendent to be returned by him in a closed cover. That the foregoing resolutions be forwarded to the Honorary Secretaries of the various District Associations, with a request that they will kindly take immediate steps to furnish the Committee with the desired data. (5) That a special Committee be appointed to consider the returns received in due course from District Associations, and to report to the Committee before the 17th February, 1902. (6) That the following members be asked to serve:—Hon. Mr. J. N. Campbel, Mr. T. C. Huxley, Mr. W. D. Gibbon, Mr. James Ryan, the Chirman, Planters' Association of Ceylon, and the Secretary, Planters' Association of Ceylon, and that the Ceylon Chamber of Commerce be invited to nominate two members of the Chamber to confer with the special Committee of the Planters' Association, especially as regards the probable distribution of the crop."

Read letter from the Secretary, Ceylon Association in London, stating that the feeling of the members of the Tea and Produce Committee, after hearing Mr. Larkin, of Toronto, Canada, on the subject of Ceylon Green Tea and the future prospects of that branch of the Tea Trade, is in favour of the application of a much larger proportion to the encouragement of the manufacture of green teas.

PROPOSED INCREASE OF THE TEA CESS.

Read the following memorandum for the Planters' Association of Ceylon received from the Thirty Committee:—"The following minute and resolution having been passed at a meeting of the 'Thirty Committee' held on the 14th September, 1901, are submitted for the consideration of the Planters' Association of Ceylon. [Minute and resolution—Read report of the Colomo members of the 'Thirty Committee' in conference with others interested in the American and Continental tea trade. After discussion, the following resolutions were possed:—(1) "That in the opinion of the Committee the cess should be increased; (2) That the Planters' Association be requested to ascertain the opinion of tea producers as to increasing the cess, with a view to give further assistance to the green tea industry."]

Resolved:—"That the Committee of the Planters' Association are convinced that an increase in the cess is a pressing necessity; (2) That the Ceylon Association in London be urged to join in the movement with a view to obtain the sanction of the Government to an increase of the cess from 20 to 30 cents per 100 lbs."

THE INDIAN TEA ASSOCIATION (LONDON).

COMMITTEE MEETINGS.

The following are extracts from minutes of a meeting of the General Committee, held on October 14, 1901:—

PRESENT:—Messrs. A. Bryans (*in the chair*), J. N. Stuart, G. W. Christison, J. S. Hulbert, G. Henderson, R. Lyall, F. A. Roberts, A. G. Stanton, and C. W. Wallace.

Correspondence with Calcutta, and a telegram from Calcutta, dated 12th instant, reporting that the outturn to the end of September was 111,000,000 lbs., against 125,000,000 last year, were read, and copies of the latter were to be circulated.

Regulation of Sales.—This question was discussed at some length, and it was resolved to resume the regulation of sales until January 31, 1902, on the lines of the regulation of 1898-99.

The Secretary was instructed to inform the Chairman of the Brokers' Association (Mr. F. S. Long) of the resolution, and it was decided to send a circular to all importers and public companies.

To prevent next week's offerings from being excessive the im-

porters present agreed to reduce their offerings by about one-third of the usual quantity.

New Levy (1901).—The Secretary was desired to ask Calcutta by the next mail to wire on receipt of the letter the total amount promised to the levy, and to give the names of any companies or proprietors not subscribing who could be approached on this side by the Committee.

The following are extracts from proceedings of a meeting of the General Committee, held on October 21, 1901 :—

PRESENT :—Messrs. A. Bryans (*in the chair*), J. N. Stuart, J. S. Hulbert, G. Henderson, Robert Lyell, C. C. McLeod, F. A. Roberts, and C. W. Wallace. A deputation from the Tea Brokers' Association, consisting of Messrs. F. S. Long (*Chairman*) and G. W. Lloyd, attended by invitation.

Correspondence with Calcutta, copies of which had been previously circulated, was laid on the table.

Regulation of Sales.—The Secretary read a letter, dated the 18th instant, from the Tea Brokers' Association, proposing an addition of a sub-section to clause 6 of the rules, *viz.* :—

That all teas passed by the Regulating Committee should be printed as arranged without any deduction.

And after discussing the matter with the deputation from the Tea Brokers' Association the sub-section was agreed to unanimously, and the Secretary was instructed to write officially to the Tea Brokers' Association informing them of the decision.

Mr. Long stated that the Brokers' Association would issue a copy of the amended rules of the Regulating Committee containing the abovementioned sub-section, and 100 copies were to be sent to the Secretary for distribution to members.

A letter, dated the 17th instant, from the Chairman of the Tea Buyers' Association to Mr. J. N. Stuart was read, asking for a Sub-Committee of the Indian Tea Association to meet them to discuss—

1. The present position of the Indian industry and of the home trade

2. To consider whether some central and permanent meeting place on neutral ground would or would not be useful in bringing together the various interests connected with tea.

3. To talk over any difficulties that may exist on the part of the growers, importers, brokers, dealers, or blenders.

And a Sub-Committee was appointed for the purpose, consisting of Messrs. J. N. Stuart, C. C. McLeod, and G. Henderson.

MARKET REPORT.

[*Per Mail advices of 25th October* 1901.]

COFFEE.

The London Commercial Record says:—We have again to report very limited supplies at auction, consisting for the most part of East India and Brazil, both of which met an active demand at an advance of 2s to 3s per cwt., extreme prices being paid for bold colory of the former growth. Small lots of plantation Ceylon realised very high figures. Under the influence of further unfavourable crop reports, the market for "futures" showed a considerable advance, but with realizations and rumours that the injury has been exaggerated, there was a decline of 2s 3d to 2s 6d per cwt. from the extreme highest point, but this has been partly recovered and the closing prices show a marked appreciation upon those current at the date of our last. October delivery has touched 36s 3d, December 36s 6d, March 37s 4½d, and May 37s 10½d, whilst yesterday business was done in December 34s 3d to 35s 3d, March at 35s 6d to 36s 6d, May at 36s 3d to 37s 1½d, and September at 37s to 38s 1½d per cwt. To-day's auctions offered—24 casks 2 tierces 4 barrels 1 bag Plantation Ceylon, 21 bags Ceylon Liberian, 489 bags East India, 253 bags Java Liberian, 1,094 bags Nyassaland, 308 bags Vera Paz, 39 barrels 1 half-barrel 30 bags Jamaica, 32 half-frazils Mocha, 242 bags Mexican, 85 bags Guatemala, 829 bags Costa Rica, 126 bags Columbian, 130 bags washed Rio, 251 bags Santos, 23 bags Ecuador, and 135 bags New Grenada. The sales went off well, and mostly all offered sold at full prices.

TEA.

INDIAN.—Sales were again light for the time of year, the total brought forward being 34,100 packages against 38,400 packages last week, and 52,400 packages in the corresponding period of 1900. Quality has, on the whole, been of a useful character, with a diminishing supply of really high grade tea The temporary weakness already reported has given place to a strong and well sustained demand, and the finer descriptions have steadied up to nearer their former value. The feature of the week's business, however, was the increasingly brisk competition for lines costing under 6½d per lb., which at the close marked an advance of about ½d per lb. compared with rates ruling a fortnight since, the smaller offerings and the firmer attitude assumed by sellers, owing to the growing probability of moderate shipments, contributing to this result.

On and after the 4th proximo the size of the auctions will be regulated by a Committee appointed for the purpose.

For 28,700 packages on Garden Account 8¼d per lb. was obtained, contrasted with 8d per lb. for 43,800 packages, and 8⅜d per lb. for 6,300 packages in the two preceding seasons.

CEYLON.—The amount submitted to the trade was 19,500 packages, *versus* 16,200 packages on the 15th instant, and 24,100 packages twelve months since.

Common and ordinary kinds, both leafy and broken, met an active enquiry, quotations showing a rise of ¼d per lb., while Pekoe Souchongs and Pekoes with desirable cup were occasionally ½d per lb. dearer. Shippers took a fair quantity of medium Pekoes and Orange Pekoes, but these classes scarcely received so much support from home purchasers, and went irregularly. Broken Pekoes over 7½d per lb. also appeared in rather less request, but, as a rule, choice Broken Orange Pekoes sold well.

JAVA.—Only 340 packages of direct import were printed, which passed the hammer with an upward tendency.

For the 31st instant 1,363 packages have been declared.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 22nd October,	1901	14,128,918 lbs.
Do. do.	1900	13,033,235 ,,

During the week the following have been printed for sale by public auction:—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offered. Pkgs.
India	31,055	3,042	34,097
Ceylon ...	17,413	2,114	19,527
Java	340	—	340
Total .	48,808	5,156	53,964

Also 970 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated October 25th, 1901, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1901-1902	504,446	505,724	27,925
1900-1901	523,896	538,559	22,280

55,339 *pkgs.* INDIAN
9,660 ,, CEYLON
340 ,, JAVA
} Total 55,339 packages were offered in public auction this week.

Duty payments to the end of September appear to indicate steady progress in home consumption, after giving due consideration to the heavy clearances in anticipation of the budget in the early months of this and last year.

The use of Indian and Ceylon tea, both as regards Home Trade and re-export, shows expansion.

Taking the above remarks in conjunction with the decreased shipments from India and Ceylon as well as China, there is abundant reason for the steadier tone recently noticed in the market; and if supplies are judiciously brought forward, there appears strong ground for the continuance of better prices with improved prospects for the tea producing industry. The auction of the Indian Tea Association in regulating supplies will doubtless commend itself to all interested in the welfare of the industry.

INDIAN.—With a marked diminution in the quantity brought forward, and the knowledge that supplies will be regulated, buyers evinced decidedly more confidence, resulting in a general advance of fully ¼d. per lb. in all grades, while common teas showed a rise of as much as ½d. per lb. Quality from Assam and Darjeeling has not been quite up to arrivals of a few weeks back, although that from the Dooars is now showing improvement.

Week's average of New Season's tea sold on Garden Account 1901, 28,892 pkgs., av. 8·21d. 1900, 43,744 pkgs., av. 7·89d.

New Season's tea sold on Garden Account 1st June to date 1901, 364,150 pkgs.. av. 8·28d. 1900. 420,859 pkgs., av. 8·07d.

CEYLON.—With moderate offerings prices showed a further advance, the lower grades being fully ½d. per lb. dearer than last week, medium kinds selling at steadier rates, although teas over about 9d. per lb. were irregular and occasionally easier.

Average for week 8·02d , against 7·45d. same week 1900.

Ceylon tea sold on Garden Account 1st January to date, 958,714 pkgs., av. 6·74d. 1900, 1,032,103 pkgs., av. 7·19d.

JAVA.—The few teas brought forward consisted of common and medium teas, which sold with strong competition at prices showing an advance of over ½d per lb. on last week's rates.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4 3/16. Colombo 1/4 7/32.

COCOA.

No auctions were held on Tuesday last, importers not being desirous of offering on a market so quiet and unsatisfactory as this one has been for some time. Privately, during the week, only about 300 bags have changed hands. Trinidad at 70s to 72s 6d, and greyish Caraquez Guayaquil at 65s per cwt.

PEPPER.

BLACK.—The market is quiet. On the spot small sales have been made at 6d to 5 31/32d for fair Singapore, and for near at hand parcels 6 1/32d to 6d paid.

At public sale on Wednesday 312 bags Singapore were bought in at 6d, and 17 bags Estate Penang at 6⅛d per lb.

WHITE is steady with sales of 300 bags on the spot—at 9¼d for fair Singapore, and at 8¾d for Penang.

At auction on the 23rd instant 79 bags fair Singapore sold at 9¼d average re-weights. 112 bags Penang retired at 8¾d per lb.

Pepper steady; of white 30 tons Singapore January-March shipment sold at 9¼d.

GINGER.

COCHIN.—A fairly satisfactory business—some 1,500 bags—has been concluded during the week at a further slight improvement in values—fair medium and small washed rough at 43s to 44s, dark and wormy ditto at 42s to 43s, rough Calicut Sorts at 40s 6d to 41s, and small brown rough Calicut at 40s per cwt. The catalogues comprised 147 cases 97 bags, the whole of which retired unsold—medium, some small, cut limed at 65s, cut small and ends at 50s, small to bold branchy rough, part limed, at 52s, and leanish Calicut Sorts at 42s per cwt.

For arrival importers ask 51s per cwt., c.i.f., for rough washed.

JAPAN.—100 bags limed medium and small plump bought in at 42s 6d per cwt.

JAMAICA.—79 barrels sold at very full rates—middling washed 52s, dull 41s 6d to 44s per cwt.

CINCHONA.

There was a good demand in auction on Tuesday, and the bulk of the offerings, which were small, sold at an advance of fully 10 per cent. on the last London auctions, the average unit being 1 5/8d to 1¾d per lb, against 1⅜d to 1½d unit last sale. High-testing barks met with strong competition, and there was a brisk demand at 2d to 3d per lb. higher prices for the Calisaya-bark, which comprised the greater part of the auctions.

The following were the quantities of bark offered and sold by the various brokers:—

	Packages offered.	Packages sold.
South American (Calisaya) ...	943	943
Ceylon Cinchona	240	197
Java Cinchona	282	209
East Indian Cinchona	142	133
African Cinchona	140	140
	1,747	1,622

The following are the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
The American and Italian factories	70,450
The Mannheim and Amsterdam factories ...	34,858
The Imperial factory	29,482
The Brunswick factory ...	25,418
Messrs. Howards & Sons	13,516
The Frankfort and Stuttgart factories ...	10,661
The Paris factory	3,215
Druggists, etc.	16,005
Total quantity sold ...	203,635
Bought in or withdrawn ...	23,536
Total quantity offered ...	227,171

The prices paid were as under:—

SOUTH AMERICAN.—Bolivian cultivated Calisaya, ordinary to good quill, from 4¾d to 9⅞d per lb.

WEST COAST AFRICAN.—Fair quill, 6½d to 7½d; broken quill chips, 7⅓d per lb.

JAVA. Ledgeriana, original stem, 4½d to 1s 6½d; branch, 7¾d; root, 4¾d; red, original stem, 3½d, and root, 4⅜d to 8d per

CEYLON.—Ordinary to good red stem chips, 2¾d to 5½d; ordi renewed ditto, 2½d to 3½d; twigs, 1⅝d to 1¾d per lb.

QUININE.

After closing easier again last week, the second-hand ma assumed a firmer tone on Tuesday, there being few sel Business has been done at 1s 1¾d for December, and at from 1 to 1s 1¼d for March, but to-day the market is again firmer, buyers at 1s 2¼d for December, and 1s 2½d for March. The price is 1s 2d to 1s 2¼d for good German brands in bulk. makers of B. & S. quinine advanced their quotation ½d per o 1s 2½d on Wednesday, and the other German makers followed to-day. Whiffens have also advanced to 1s 2½d, but Howards n no alteration. P. &. G. (French) is also quoted at this figure.

IN THE INTEREST OF HEALTH.

ESSENTIAL FOR EVERY PLANTER.

THE HOUSEHOLD PHYSICIAN.

A Family Guide to the Preservation of Health and to the Domestic Treatment of Ailments and Disease.

BY

T. McGREGOR ROBERTSON, M.A., M.B.

WITH AN INTRODUCTION BY

PROF. M'KENDRICK, M.D., LL.D., F.R.S.

THIS book is the most valuable of its kind ever introduced into India. The language is plain, and the bodily ills to which young and old are liable are considered more fully than in any other popular work. The management of children in health, the diseases of childhood, the diseases of women, hygiene, the action of drugs, electricity massage, insolid cookery, medical prescriptions, etc., are amongst the many features of this work. Numerous illustrations and coloured plates. In leather binding.

PRICE **Rs.25.** *By V. P. P.* **Rs.26-8-0.**

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 29th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad. *November 19th.*—*Weather*—Heavy North-East showers with a good deal of wash. Wind very unsettled. *Works*—Principally gathering and weeding. The rain causes the crop to drop very quickly. *Health*—Good. *Labour*—Abundant. *Interesting item*—The Maharajah and Resident are expected at Saklaspur on Friday, this week.

Coorg. POLLI BETTA, *20th November.*—*Weather*—We are still having rain from the North-East. This weather is most unusual for the time of year. Coffee looking very fine, but leaf disease is getting a hold of the bushes. *Crop*—Picking in full swing—not much to gather however. *Labour*—Plentiful. *Health*—Good. *Interesting item*—Visit of Inspector-General of Volunteers to Mercara on 25th instant.

BRAZILIAN FINANCES.

THE POLICY OF THE REPUBLIC.

IN a former article on the Policy of the Empire we traced the causes, as officially stated, of the crisis reached in 1898, when the Brazilian Government found itself forced to adopt heroic measures for its financial safety. The chief aim was the appreciation of the Currency. This was to be attained by the redemption of paper money and the founding of a guarantee fund in gold. The redemption was to be carried out by

(1) The funding loan.
(2) The product of the leasing of the railways.
(3) Instalments paid by the Banks in satisfaction of their debts to the Treasury.
(4) Any surplus on the Budget.

The guarantee fund was to be formed with the product of the gold duty and with any surpluses in gold. To these measures

were added, later: collection in gold of a proportion of the customs house duties, to meet payments in gold; creation of a fund to redeem the internal paper debt; increase in the taxes on consumption, improvement of the method of collecting import duties; increase and improvement in the stamp duties; severe economy; the leasing out of railways; payment by mutual arrangement of heavy amounts due on account of civil wars and concessions made by the first Government of the Republic; inclusion of foreign guaranteed railways in the property of the State; and, finally, the creation of the Commercial Statistical Department to furnish Government with the necessary data to enable it to form and carry out its financial and economic plans and to judge safely of the effects produced by them. The space at our disposal will not admit of our detailing, or even summarising, what has been achieved in regard to each branch of this comprehensive programme. We must content ourselves with giving a rough account of general results, as described by the Minister of Finance.

The Government has redeemed one hundred thousand contos of paper money, handed over a million and a half sterling to the guarantee fund, and raised the rate of exchange to 10½, thus raising the value of the national currency from 19 to 30 millions sterling. It has raised the quotation of Brazilian foreign bonds, organized gradually and without disturbance the collection of part of the export duties in gold, and, with the product thereof, paid one million and a half to the guarantee fund, accumulated in London its resources, which amounted to over two millions sterling at the time when agency specie payments were renewed, and, what is still more important, by organizing the collection of gold duties has insured the continuance of payments against the foreign debt. The rest of the programme has been carried out with equal fidelity. The Treasury has not increased its liabilities, for the appreciation of the currency has accompanied the rise that has taken place in the price of Brazil's bonds, so that the price of them has suffered no appreciable difference in Brazilian money. On the other hand, however, the quotation of the bonds is the test of credit abroad and the rise in their value shows plainly an improvement in this respect and renders it an easier matter for the Government to obtain loans. And as the influx of foreign capital is an essential element for the development of new countries, the rise in Brazilian's bonds and improvement of credit represent the first step towards the economic rehabilitation of the country. This is DR. MURTINHO'S view, and it appears to be a sound one. Where, however, the Government has undoubtedly fallen short of its expectations is in respect to the raising of Exchange. The 18d. level is still very far away. The Finance Minister reckons mathematically that 12d. may be taken as the normal rate; but it has never yet been so in reality. Speculation is probably not the least among the causes that keep the milreis down below the standard at which, according to theoretical demonstration, it ought to stand.

Critics have condemned the burning of money in Brazil on various grounds. It has been stigmatised as wasteful, useless, ineffectual. As a matter of fact, however, there has been no burning of money. The Brazilian Government has, in commercial parlance, withdrawn its acceptances from the market, thus reducing its liabilities. When urged to do this by means of loans rather than by increased taxation DR. MURTINHO replies shrewdly that a loan is simply an advance on taxes that must be raised to pay interest and sinking fund. This may be termed a typical remark. It indicates that t policy of the Government is to avoid speciousness, and to s and show things in their right light. As far as an artific currency can be healthy, the Brazilian appears to be a fair way to convalescence after a very serious attack disease. It is receiving constant and skilful nursing. E even after it recovers tone much will remain to be done. will be necessary for the nursing to continue until t financial stability is not only restored but permanent assured. It may be that when the right time comes t Brazilians will try to secure their position by "fixing Exchange, as the Indian Government have done. At t present time not the least interesting aspect of the Brazili currency problem is that which enables a comparison to drawn between Brazilian and Indian methods. The o Government has aimed at raising Exchange gradually withdrawing paper; the other has fixed it at a higher lev by withdrawing rupees, introducing a gold standard, a decreeing a standard rate of exchange between the t metals. The time has not yet arrived for a decision as which policy is the better for the country.

EXPERIMENTAL CULTIVATION IN ZANZIBAR

Mr. Consul Carr makes some interesting remarks abo experiments with various products, under the direction Mr. R. N. Lyne, by the Agricultural Department of t Sultan's Government in Zanzibar. He observes that t experiment made with

ARABIAN COFFEE

grown from seed obtained from British Central Africa h not been altogether successful, owing to a leaf disease whi has attacked and destroyed the majority of the young tree the remnant that survives gives excellent promise. The

LIBERIAN COFFEE

planted in 1899 is healthy and vigorous, and, like th raised from seed imported from Sierra Leone, almost com pletely free from parasitical attack.

TEA

does not appear to thrive in Zanzibar, where the soil is po sibly too stiff for it; 6,414 young trees were planted out April, 1899, and 7,385 more a year later, and of these on 2,874 now survive. The leaves have recently been attacke by a disease known as "blister blight," which is said to ha done considerable damage to the plantations in Assam, b its results have not hitherto been serious.

COCOA AND KOLA

are both doing well, the latter being especially hardy an free from disease.

VANILLA

has given most satisfactory results, and there is no reason wh it should not be remuneratively cultivated, some sample po which were sent Home last Spring having been favourab reported on; the plant does not require very much labo and there is plenty of shade. Various

FIBRE PLANTS

have been successfully tried, but would have to be spread ov wide areas to make the industry profitable. Good resul could probably be obtained with cinnamon and cocaine.

COFFEE DURING OCTOBER.

Bad reports regarding the Santos crop caused excitement in the market, notwithstanding continuous receipts far in excess of requirements. Drought and the exhaustion of trees after two years of heavy bearing counted far more than the influx of stock, and speculation was hard at work. A reaction set in, but prices were at the close of the month rather better than at the end of September, though they had dropped slightly from the highest point touched. Mild coffees scarcely followed the movement, values having advanced during the last few months. Closing values were in sellers' favour. In Amsterdam there was no Trading Company's sale during the month, the next one advertised being for November 5th, when 19,700 bags were to be offered. In their report dated 31st ultimo Messrs. Duuring & Zoon remark that the position looks altogether less complicated than for some years past. The present Brazil crop is very large, and it seems equally true that the next one will be very small. The present one may be taken at 13 million bags, against $10\frac{3}{4}$, $9\frac{1}{4}$, and $8\frac{3}{4}$ million bags in the three years perceding. It would appear as if the whole surplus were already worked off, so that receipts ought now to decrease. It would look both probable and wise to retain coffee in Brazil. It is specially noted, however, that the trade has been buying very freely of late, beyond actual requirements, and that at the latest advances it is speculation, not general trade, that has operated.

Stocks in Europe did not show any alteration last month, but visible supply was again 48,750 tons more. We may soon see a record broken, and a new one established.

NOTES.

"Golden Tips" in Melbourne. A sale of a box of Ceylon "golden tips" in Melbourne at 6s 9d per lb. is reported.

India Tea Exports. The exports to the United Kingdom to the 12th instant amount to 103,512,605 lbs., showing a deficit of 9,424,332 lbs. to date.

Dutch India Coffee. The Government crop is estimated at 110,000 piculs. Exports to Holland and the U. S. A. during October amounted to 43,400 piculs, against 46,000 piculs in September.

The Indian Tea Association. The Proceedings we publish to-day deserve careful perusal. The references, to green tea, the proposed tea cess and the Russian market are all of the deepest interest.

American Tea. At a meeting of the United States Cabinet on the 18th October last the Secretary of Agriculture discussed the growing of tea in America, and said that the green tea grown in South Carolina was as good as any in the world.

Coffee Warehouses in New York. Licenses for ten new warehouses have been issued by the Coffee Exchange to the New York Dock Company, and twenty-two to the Bush Company. This increases storage capacity for coffee to over 500,000 bags.

A Record Coffee Cargo. The steamer *Granada* left the port of Santos for Europe on the 30th September with a cargo of 113,084 bags of coffee. This is the largest coffee cargo ever carried by one ship to Europe, but not yet enough to beat the record of a cargo of 125,918 bags shipped last year to the United States.

Cinchona Bark from Jamaica. It is officially reported that in June last 290 bags of Cinchona Bark from the Government Plantations in Jamaica were sold in the London market, realising the sum of £594 12s 1d. The total weight of bark was 25,613 lbs., so that the average price per lb. is about $5\frac{5}{8}$d. The insurance, wharf charges, printing, advertising, and brokerage amounted to £32 0s 3d; the freight and charges to £32 1s 2d; and cost of bags and carriage in Jamaica to £20 11s 6d.

Supply of Japan and China Teas. The following shows the estimated supply of China and Japan teas for this season, with comparisons:—

	1901-1902.	1900-1901.	1899-1900.
	lbs.	lbs.	lbs.
Green	13,000,000	14,684,487	15,614,392
Japan	36,000,000	37,813,737	40.803,686
Formosa	14,000,000	16,424,143	14,024,378
Foochow	3,000,000	3,867,746	4,040,371
Congou	10,000,000	19,150,653	11,392,643
Total ...	76,000,000	91,940,766	85,907,177

Tea and Coffee at Bussorah. The British Consul at the Turkish Port of Bussorah gives the following statistics of imports:—

		1899.	1900.
Coffee	bags ...	9,635	8,984
Tea	cases ...	8,901	7,044

The decline in both instances is remarkable, as the general import trade of the port between 1899 and 1900 shows an increase. The following statement shows values of imports for comparison with the above list of quantities:—

	1899.	1900.
Coffee	£57,810	£35,880
Tea	£11,126	£ 8,805

Brazilian Coffee in Porto Rico. The treasury department has decided, says the *Chicago Grocer*, to deny the contention of the Porto Rico coffee-planters, who have demanded that a duty of 5 cents a pound be collected on all of the product brought to the island. Solicitor F. A. Reeve of the department has handed Secretary Gage an opinion in which he says that it will be illegal, under the law making free trade between American ports and the ports of the island, to charge any duty on coffee. While the much-abused Foraker law was in force there was a duty of 5 cents a pound on all coffee imported into Porto Rico. That gave the home-grown article full protection. But when absolute free trade between the United States and Porto Rico was proclaimed, to the great joy of the Porto Ricans, the coffee duty came to an end, for that article is on the United States tariff free list.

London Tea Market. The weekly special telegram dated 14th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that buyers are operating very cautiously and that the market for medium liquoring Pekoes and Broken Pekoes as well as that for Common Pekoes

and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6d (same as last week), and the average price of Ceylon tea sold on garden account this week was 7¾d (one-eighth of a penny down). The average of the corresponding week last year was 7½d. Reuter reports that good medium Ceylon teas are irregular, and others steady. Fair Pekoe Souchongs are quoted at 5¾d (same as last week) but the average for the week is 7¾d (⅛d down). 19,000 packages of Ceylon tea were offered for sale and 18,000 were disposed of; while of the 49,000 packages of Indian tea offered, only 30,000 found purchasers, at an average of 7⅞d per lb. (⅛d below last week).

The Supply of Tea.

Messrs. Wm. Jas. and Hy. Thompson say that the information published respecting the decrease in the total quantity of tea supplied this season to the various markets of the world has drawn attention to the position, and the decision of importers to act upon it has had a beneficial effect. The first result is an advance in the value of the kinds most needing it, the ultimate result should be to place the majority of producers in a better position than they were last season. It is needful to emphasise the fact that the altered prospect is not due to increased use of tea or to the opening of new markets, but solely to the concurrence of shorter supply with improved quality. This was the way back to prosperity to which we pointed in our annual review in June, and as it is now plainly shown to be the right way planters are urged to adhere to it and not to revert to heavy crops of inferior quality—at any rate, not until fresh outlets have been found for them.

Pepper.

This article is gaining in statistical strength every year. At the end of last month stocks in Europe were again 6,900 bags less, although deliveries were unusually small, thus for this year 30,000 bags less than in the two previous years. Arrivals, on the other hand, were 20,000 and 15,000 bags smaller, fully confirming all that has been predicted. It may be of some interest to compare stocks:

	1901.	1899.	1895.
	Bags.	Bags.	Bags.
Stocks Europe	280,800	395,200	508,000
Do. States	18,100	32,900	82,900
Total ...	298,900	428,100	590,900

Stocks of Lampong in Holland in 1895 were 159,000 bags, against 58,000 bags on 31st October, 1901. Crops still being on the same moderate scale, stocks are bound gradually to decrease in the same proportion. Under these circumstances a turn for the better may occur at any moment, in fact the present dulness looks rather astonishing and cannot be accounted for by facts.

Calcutta Tea Sales.

The tea sales on Friday the 15th totalled about 18,000 packages, and practically the whole quantity was quitted in the auction room under a generally strong demand; this is somewhat of a contrast to the London market, in which anything between ten and twenty thousand packages have been withdrawn from each of the sales held there during the last fortnight. The offerings call for no special comment in regard to quality; all districts supplied fully average teas. It was generally expected that the comparatively indifferent market at home would be reflected to some extent in Calcutta, but the sales passed off briskly with spirited bidding for all grades a qualities from start to finish. Outside markets genera were busy, and to this may be attributed the steady to fi tone, and is yet again another indication of the growing dependence of the Calcutta market. It is encouraging to also a very marked improvement in the demand fr Bombay and kindred outlets.

Indian Tea in London.

The *Produce Markets' Review* October 26, 1901, says the dema is active, and prices for tea up to 7d have further risen. considerable business has been transacted in the latter gra at an advance of ¼d to ½d, and the market closes stro Although a much larger quantity is catalogued for public s next week, it is expected that prices for the lower grades w continue very firm, as the proportion of the supply of th is comparatively moderate and by no means in excess requirements. In the medium descriptions a good busin has been done, the demand being principally for those ki giving a good infusion, and prices for these are steady firm, while for the less attractive teas in cup the tendency in favour of buyers. The inquiry for the fine and fin grades is not so active, no doubt attributable to the difficu in following previous purchases owing to the depreciation the teas, especially those from some of the more popu gardens. Of the 35,020 packages offered at the public sa 32,070 passed the hammer, and the balance has since be practically disposed of privately.

Coffee.

The speculation which commenc last week became rampant at t early part of this, says the *Produce Markets' Review* October 26, and all kinds of rumours were disseminated those desirous to push prices up, and accepted by oth temporarily interested in the advance. In the termi market the movements were rapid, and on Tuesday quotati were 4s dearer than on Saturday. When, however, a ca was received which stated that the trees had been so affec by drought that the crop for two years was imperilled, it w felt that the excitement was being overdone, and many of most interested commenced at once to secure their prof with the result that prices fell away, closing 3s from the t though still 1s above last week. Even those who talked Santos reaching 50s now think that 34s or 35s is a price shall get accustomed to. Possibly, if the coming crop estimated in January by reliable houses, who can then obt better information, at, say, 7,000,000 or even 8,000,000 ba such a price may be warranted, but any amount over t must lead to a further reduction when the weight of t present crop is realised, and the surplus, which will by Ju probably amount to 4,000,000 or 5,000,000 bags, has to carried. Little has been done in actual coffee, inter being entirely centred in the terminal market, but pres values have naturally brought out many old parcels th holders would be glad to clear.

The Rothamsted Experiments.

There is very little new in t report of the Rothamsted experime for 1901, bringing the records those still in continuance up to 1900, the fifty-seventh ye of some of them. The principal deductions derivable fr them have long been as household morals among ag culturists who take an interest in science with practice. Wh

the continuance of the old trials is desirable for scientific reasons, it seems a pity that new ones, calculated to throw light upon unsolved problems in the treatment of crops and animals, are not introduced. With respect to the continuous growth of wheat, which reached its fifty-eighth experiment in 1901, attention may be called to Dr. Dyer's exhaustive study of the phosphoric acid potash contents of the soils of the several plots, the results of which have been contributed to the Philosophical Transactions of the Royal Society, and published separately for the Society by Messrs. Dulau & Co., of Soho-square. The details may be commended to the careful consideration of agricultural students. For one thing, Dr. Dyer has found that potash, which has been commonly supposed to be pretty firmly retained in the surface soil where the land contains a fair proportion of clay, is far more migratory than phosphoric acid. It may be added that Dr. Dyer's investigations have strongly confirmed his view as to the value of his comparative method of estimating available soil fertility by the solubility of its constituents in dilute citric acid.

GENERAL ARTICLES.

COCOA IN TRINIDAD.

SHADE TREES.

Can any planter tell us the botanical name of what is known in Trinidad as the "Immortel?" It is largely used as shade for Cocoa, and in the Trinidad Bulletin of Miscellaneous Information we read :—

Any discussion on the advantages of the wellknown "Immortel" as a shade for Cacao would be incomplete without reference to the possible advantages of other trees which may alternatively be used in certain places. One of these is the wellknown "Saman," Pithecolobium Saman. In Trinidad this tree has not been proposed as a shade tree until recent years, but in neighbouring islands it has long been used, especially in the Jamaica Guinea grass fields, for it is known that the grass flourishes better when covered by its branches, than if grown in the open, and the same has been found to apply in Trinidad. The Saman is a deciduous tree and loses its leaves in the dry season as well as the "Immortel," though not so completely at once. It is, however, known that, at times when the leaves have not fallen, they are so choked in their action so as to be unable to evaporate moisture from their surfaces, and therefore, evaporation being stopped, it is quite on a par with the "Immortel." Many people suppose that trees with no leaves, or trees with leaves in a dormant state, do not take up moisture; but it is known that they do, and this same moisture gradually accumulates in plants until the stem, roots, and branches are distended with fluid, and have actually more water in them when the leaves are absent, than in full leaf, as can be seen by cutting the roots. This fact is one which gives rise to the idea that the tree itself stores water for the use of the Cacao tree, as on a root being cut, the sap flows readily, and not a few believe that a portion of the water supply to the Cacao is obtained from this source. To describe how water is transferred in accordance with the popular belief, I am inclined to think, would puzzle not a few. As well say a thirsty man could drink out of a tightly sealed bottle. The roots may contain water, but they are tightly sealed against the Cacao tree. The fall of the leaf in dry weather is a feature which generally accompanies the resting season of plants, whether the rest is occasioned by cold, by heat, or by drought. The manurial value of leaves, fruits, seeds, and flowers, the amount of evaporation and the amount of material left behind in the tissues by the moisture evaporated are wellknown points, illustrated regularly in the St. Clair lectures for the past two years. Another point in the question of the utility of the fall of the leaf is the fact that the trees require annual stripping for the purpose of what is known to the cultivator as "ripening the wood." Unless this ripening takes place the planter knows that flowers will not appear in so great a quantity, for sterility can often be traced to want of sunlight, in which figuratively it is necessary to bathe the branches to give them an opportunity to prepare the material to be used for the production of flowers in the following season. In estimating the manurial value of any shade tree, there must be taken into account the various elements which enter into the question, which is a wider one by far than is commonly believed. If we take the Immortel, Enthrina umbrosa, we have the flowers, the leaves, and the seeds. If we take the Saman we have in the same manner flowers, leaves, and seeds. The flowers contain nitrogen, also the leaves, seeds, and seed pods. When we compare the manurial value of the flowers, pods, seeds, and leaves of the "Immortel," with the flowers, pods and seeds and leaves of the "Saman," it is estimated that the advantage will be with the latter, on the ground of the total quantity of nitrogen which is contained in the sugary pods and the enormous quantity of leaves and flowers; but this has yet to be shown. Some of our common Legumes contain nitrogen as follows:—And it is probable the "Immortel" will be somewhere near the average.

Bonavist Seeds, Sample 1	2·77	per cent. nitrogen.
Do. do. do. 2	3·22	„ „
Yam Bean	3 35	„ „
Mungo Pea	3·06	„ „
Cow Itch. Mucuna	5·56	„ „
Lima Bean	3·22	„ „
Sugar Bean	3 38	„ „
Average ...	3·36	

The bean of the Saman dried at 130 degrees Fahrenheit, contains :—

Nitrogen	2·31
Glucose	21·45
Gums, Pectins, etc.	17·58
Albumenoids	14·44
Oils, Fats	1·51
Starch, etc.	27 07
Indigestible Fibre	5·85
Mineral matters	2·84
Water	9 26
	100·00

ANALYSIS BY PROFESSOR HARRISON.

It is not necessary to attempt to calculate how many tons per acre will be the weight of the crop of beans of the Saman, or how much manure may be brought to the land by animals and insects seeking them as food, as at the best it could only be estimated, except at an expense quite unlikely to be incurred. It has been recorded that the decrease in nitrogen of the flowers of the Immortel is very rapid, so rapid in fact, that in 15 days of dry weather (which, as a rule, prevails during the period of flowering) the nitrogen will all have disappeared before it can enter the ground and become available for the plant; for it is quite certain that the dews of night are insufficient to secure it for the use of the plant. It has been recorded to lose as much as 33 per cent. in five days, and at the same rate it would lose all in fifteen days. Another point to be remembered is, that the quantity of nitrogen thrown down or afforded by shade trees of any kind will not all be available for the Cacao beneath it, for it should not be forgotten that the Immortel itself will require a large quantity, besides what it may secure by means of the nitrogen nodules of its own roots, now known to be capable of supplying a large quantity; exactly how much, is another of the "Incidental Increments" yet to be worked out. It is quite possible, however, that the nitrogen collected by the nodules

---

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

on the roots of the Saman and the Immortel, and made immediately available for the Cacao tree, is quite equal to the "Incidental Increment" supplied by the flowers, leaves, and fruit. Any estimate of the actual amount of nitrogen returned to the ground must rest on much uncertainty, for some is carried away by water, and an unknown quantity is taken up by weeds, so that the actual amount available as food for any special plant is largely a matter of speculation. It is estimated that 4·5 per cent. may be available from the flowers, some 2·5 per cent. from the leaves, and some 3·3 per cent. from the seeds or 10 3 of nitrogen given once a year to the ground during the dry season. If we compare this with the available amount of nitrogen carried down in several forms by rain water, and the amount supplied by root nodules, it will probably be found that the incidental increment from this source is favourably to be compared with that obtained from the sources of nitrogen afforded by flowers, leaves, and fruits.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—Rio, *October 7th.*—Extremes during the week ending October 4 were 11 5/16d.—11 5/8d. for 90 d/s Bank paper and 11 3/8d.—11 21/32d. for private.

The average Bank 90d/s counter-drawing rate for the week comes out at 11 29/64d., the corresponding sight rate being 11 25/64d. against 11 29/64d. the average sight rate of the *Camara Syndical.*

Coffee.—Entries at Rio and Santos continue large, 551,079 bags against 559,917 bags last week and 382,744 for the week ending 5th October, 1900. Aggregate entries since 15th January at Rio and Santos total 9,890,483 bags as compared with 6,323,870 for the same period last year.

Shipments (embarques) were also very large, 525,737 against 488,697 for the preceding week and 378,115 same date last year, whilst declared sales for the same dates amounted to 214,000, 231,000, and 219,000 respectively.

Stocks on the 4th instant were 1,721,110 bags, or 27,613 bags less than the week before and 1,182,696 for the corresponding date last year.

SEPTEMBER COFFEE MOVEMENT IN THE U. S.

Last month's deliveries were heavy, both in the United States and Europe. They were greater in the United States than for any month since last March, and in Europe since July, 1900. The total deliveries in both countries in September were 1,398,401 bags—the largest for any month since January, 1900, and 204,241 bags above the monthly average for last year—or an increase of over 17 per cent. It is evident that stocks in second hands are increasing, for such a gain in consumption is improbable.

And notwithstanding the great distribution, the visible supply gains, reaching on October 1 the unparalleled quantity of 9,821,196 bags, or more than the entire crop of Brazil in 1899-1900 and 1898-99.

The receipts at Rio and Santos for the first quarter of the present crop year were 5,555,000 bags, or more than the entire Brazil crop of 1895-96. These figures indicate the great expansion of coffee-planting which has doubled within six years, with vast areas of undeveloped coffee land all over the coffee-growing belt.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

Evidently any return to high cost cannot be expected unless the is a crop failure of great magnitude.

The following statement shows the September movement a general position of the article:

	Bags.	Bags.
Stocks, September 1, 1901—		
United States	1,471,686	
Europe	3,991,115 —	5,462,801
Receipts during September—		
United States	690,010	
Europe	842,786—	1,532,796
Total supply, October 1		6,995,597
Less Stocks, October 1, 1901—		
United States	1,611,585	
Europe	3,985,611—	5,597,196
Deliveries, September—		
United States	550,111	
Europe	848,290—	1,398,401
Deliveries, September, 1900—		
United States	362,201	
Europe	618,997—	981,198
Increase as compared with September, 1900 ...		417,203

The September deliveries in the United States consisted 437,672 bags of Brazil; 112,439 bags of all other sorts.

The visible supply of the world, October 1, 1901, was 9,821,1 bags, against 8,654,801 bags on September 1—an increase 1,166,395 bags; visible supply on October 1, 1900, was 7,426,3 bags, or 2,394,837 bags increase in one year.

Receipts at Rio and Santos during the first three months of t crop year were 5,555,000 bags, exceeding the previous seaso receipts for same time by 1,913,000 bags, and 1899 by 1,455,0 bags.

Since the above was written an active speculative movement h begun, based on reports that the flowering of the growing Sant crop is poor. Possibly a "bull" movement may be successful carried forward when the present season's crops, added to t visible supply, will furnish nearly 24,000,000 bags to meet t world's requirements of not to exceed 15,000,000 bags. It will ta a pronounced crop failure to place and keep the price of coffee a much higher basis.—*American Grocer.*

THE ART OF TEA-TASTING.

IN WHICH WOMEN HAVE NO PLACE.

Woman has stormed and conquered trade after trade, professi after profession, but one of the very best-paid lines of industry s has not yet turned her attention to at all. At the tea warehous men are employed to taste the teas and decide on the differe samples, and for this work all the capital needed is a trained pala It is an occupation fairly within a woman's capacity, yet not one engaged in it.

"I don't know why they shouldn't be," said a prominent deal "Of course, every tea-taster has a standard to go by; otherwi as everyone's taste is different, no classification could be mad But it takes experience—familiarity with these standards."

A SIMPLE OUTFIT.

The tea-taster's outfit is very simple; a number of porcela cups, a pair of scales, and a half-ounce weight. For whereas t housewife measures tea into her teapot by spoonsful, or careless gauges the quantity with her eye, the professional maker of t proceeds upon an exact method. He differs from the housewi also in using only distilled or filtered water. Then, having put t kettle on to boil, he does not neglect it until part of the conten have boiled away, but pours the water on the tea-leaves the insta it reaches boiling point. Water boiled for several minutes becom insipid, and will not make a good tea. For this reason also, there is water left in the kettle, he is careful to rinse it out befo re-filling. After making the tea he only allows it from three five minutes to draw, this being just sufficient to develop fullest flavour. To the correct palate the bitterness consequent over-drawing tea is very disagreeable.

THE PERFECT INFUSION.

Given the perfect infusion the taster notes its colour; a ric clear golden hue almost always denotes good tea. He also inhal its odour, a significant indication of quality, and then his train

palate decides on the whole matter. He does not swallow the tea taken into his mouth, because to do so would temporarily destroy the acuteness of taste. It has been asserted, says the *Philadelphia Record*, that those who make a business of tea-tasting find it injurious to health, but this the dealer denied. Teas of all kinds have two values—intrinsic or real, commercial or market value. So that in their selection for commercial purposes four leading features are to be considered—leaf, style, liquor, and flavour. Choice of all kinds is handsomely made and stylish; if not artistically curled, twisted or rolled according to its make. Thus, green tea, of the imperial gunpowder order, is hand rolled and shotty, regular in make and of a bright natural green. Hyson leaf is well and evenly curled and twisted. Black or Oolong leaf is firmly silky and creepy. Old and inferior teas are large, rough and loosely rolled, and, being partially or entirely devoid of sap or succulence, are correspondingly coarse and flavourless in the infused state. —*Morning Leader*, October 22.

PRODUCE AND PLANTING.

BRICK TEA.

In his report of the caravan trade of Northern Siam, Mr. Beckett, the British Consul at Chieng-mai (Zimme), the chief town in Northern Siam, refers to the Keng-hung tea, which is an important item in this caravan trade. This tea is in circular bricks for the convenience of pack transport. The leaves are steamed in copper pots, a cloth being placed over the mouth of the latter; when sufficiently steamed the tea is turned out and squeezed in the cloth till it is fairly dry, when it is ready for sale. The price increases two to three fold between Keng-hung and Chieng-mai, and four to five fold by the time it reaches Moulmein. It is strong for European palates, but is liked by Burmese and Shans, who steep it in water before using. The best grade of this tea never goes south, but finds a better market on the Yangtsze. There is also a large local consumption in Keng-hung, where the leaf is used as a quid for chewing. The Consul thinks there is an opening for an enterprising trader in Moulmein to establish relations with these Chinese muleteers, provide them with the goods required for their return journeys, and receive their tea. With a little encouragement the trade, especially in tea, might be increased along the caravan routes.

LOW GRADE TEAS.

On the subject of "Teas of Low Grade" the *Grocer* says:—"'Keep your tea customers together,' an old grocer used to say, 'and other goods will virtually sell themselves. People who come to buy good tea,' he would add brightly, 'stop to buy other things, and the net all-round profit is satisfactory.' Many grocers are now acting on that advice, and are working energetically to keep their tea customers together. Moral suasion, taking the form perhaps of a little personal homily, is not a neglected method. It tickles the ears of consumers, so to speak; whilst in numerous cases printer's ink is largely employed. During the Winter season a number of persons drink more tea; consequently they become, in a sense, more important to their grocer, and, like a wise man, he is handling them accordingly. He keeps in touch with them, telling them what is good, giving small samples and excellent advice. One of our subscribers, addressing his tea patrons, states that 'recent exhaustive experiments by an eminent physician have demonstrated the value of pure, high-class tea as a stimulant and dietetic. . . Many low-class and adulterated mixtures of so-called teas are placed on the market by large advertising firms, and it behoves every householder to view with considerable suspicion brands retailed at prices which, with the cost entailed in advertising them, render it impossible to give anything like value for money.' It is also pointed out that teas of low grade 'contain an excess of tannin and other ingredients injurious to the nerves and irritating to the alimentary canal.' Harping on the same theme, whilst eager to keep their tea customers together and attract fresh buyers, another firm of grocers describe how they have established a reputation for the sale of good tea. 'We watch,' they write, 'what other people are doing; we personally sample all the advertised and unadvertised teas in the town, and do not rest until we have beaten or at least equalled them; thus our blends are the concentration of years of study and skill.' It will be perceived that, so for as tea is concerned, the education of consumers is now taken in hand with some degree of confidence; and we are glad to notice that they are being warned off low-grade stuff. That article does not give much satisfaction to the buyer; it is not really economical in use, since it does not 'go far,' whilst retailers get little profit or credit from the sale of an inferior commodity. Their present action, by way of pushing finer qualities, is worthy of hearty commendation. It is pretty sure to be successful in the long run."

NATAL TEA.

While efforts have lately been made, and with success, to improve the condition of the tea market by restricting production in India and Ceylon, there is apparently the prospect that tea cultivation in Natal will tend to expand. In the latest report of the Commissioner for Agriculture in Natal it is estimated that the yield for the year ended June 30 last was 1,600,000 lbs., in contrast with 1,300,000 lbs. in the preceding twelve months and 1,000,000 lbs. in 1899. Something like 500 acres more land have been planted in tea in the Colony since 1899, and it is expected that within two years the yield will reach 2,000,000 lbs., while the hope is expressed that it will shortly be increased so much as to supply the whole requirements of South Africa.

COFFEE PROSPECTS.

Messrs. C. J. Leech & Co., in their last weekly coffee market report, state that the markets in both hemispheres have been excited to a degree not witnessed for many years, and the enormous transactions and rapid fluctuations experienced bring back memories of 1886, when the great rise started on predictions of an impending crop failure, which were eventually confirmed to the very letter in season 1887-1888. Then, as now, it was thought that the pace was too fast at first, and set-backs occurred, but simply proved healthy reactions. History repeats itself once more, and early last week sensational advances caused by the daily, and sometimes several times a day, arrival of adverse crop reports, mostly of the same character as in the previous week, could only culminate in a reaction, which has since occurred, and the position is the sounder therefor. Past experience suggests caution in giving ear to Brazilian advices, but the information of the last few weeks, is so emphatic and so persistently confirmed by serious houses that there would appear to be no question about the poor outlook for the next Brazil crop. As showing the magnitude of the existing speculation it may be mentioned that the transactions in New York on Monday to Thursday last week inclusive amounted to the huge total of 554,500 bags. On the same four days London registered transactions of 192,200 bags.

THE CEYLON TEA CESS.

The Chairman of the Planters' Association of Ceylon has addressed the Secretary, Ceylon Association in London, on the subject of the proposed increase of the Tea cess as follows:—

THE CASE FOR THE INCREASE.

The "Secret Subsidies" Red-Herring.

MR. ROSLING'S LETTER TO THE CEYLON ASSOCIATION IN LONDON.

The Secretary, Ceylon Association in London, London.

Sir,—I now enclose a copy of a resolution passed by the Committee of the Planters' Association at a meeting held in Kandy on Friday, the 8th instant, and I would ask your good offices in calling a meeting of your Association to consider, and, I trust, support it.

Finances.—The position of the fund administered by the "Thirty Committee," made up to the 31st October, is as follows:—

Balance due on Mr. Renton's vote for current year	...	£4,500
Mr. Renton, however, hopes to show a saving of...	...	£1,500
So that the estimated debit balance is £3,000 or	...	Rs.45,000
Balance due account Mr. Renton's salary £500, or	...	7,500
Balance due account Mr. Mackenzie's vote £2,000, or	...	30,000
Balance due on account the Green Tea bonus already voted at 5 cents a lb.	...	19,500
Balance of Russian vote per Messrs. Crosfield, Lampard & Co.	...	3,700
Total liabilities account 1901	...	Rs.105,700

To meet this we have Rs.54,419 in hand, and may reasonably expect about Rs.60,000 from the Cess collections for October, November, and December, so that in the event of Mr. Renton effecting the

anticipated saving, there may be a balance of about Rs.10,000 to carry to the credit of next year.

ESTIMATION FOR 1902.—VOTES TAKEN IN SEPTEMBER.

Voted Mr. Renton, including salary £2,500	Rs.37,500
Voted Mr. Mackenzie, including salary £4,000	60,000
Voted bonus of 5 cents a lb. on 2,000,000 lbs. of Green Teas	100,000
Voted to countries other those worked by our Commissioners per Mr. Webster, vote brought forward from 1901 ...	7,500
Total ..	Rs.205,000
Voted in November a further £1,000 to Mr. Renton ...	15,000
Further aid to the first million lbs. of Green Teas in the form of a sliding scale over and above the existing 5 cts., say ...	18,000
Reserved for St. Petersburg Exhibition, say £3,000 ...	45,000
Balanced unalloted	17,000
Estimated income for 1902 ...	Rs.300,000

It is true that there may be a further Rs.10,000 to be carried forward from this year, but we cannot take this into consideration until we see the saving actually effected.

The vote of £4,000 to Mr. Mackenzie is chiefly for pushing green tea in the States and Canada, but when it costs no more to advertise black as well as green teas, such would be done.

The vote to Mr. Renton is miserably inadequate, more especially in view of the fact that the money spent during the last two years has been more or less used for paving the way to greater efforts by getting trade channels interested and into working order, and unless we can give further support, I fear much of the good work done in the past will be thrown away.

The vote of Rs.100,000 as a bonus of 5 cents a lb. on green teas has already proved inadequate, in that the difference in value between low-grown green and black teas is at least 7 or 8 cents in favour of the latter; this has necessitated a sliding scale to bring the value of green tea to the grower up to the parity of black.

Again the original vote only allowed for 2,000,000 lbs., or little more than we shall make this year, and unless it is possible to support this young enterprise to a much greater extent than this, it would hardly appear to be of much service to the Black tea industry to continue to foster green teas.

The work must be looked on as largely a work for future benefits, still one looks to a certain extent for some immediate results and, to do so, it is necessary to make a greater effort.

The course of competition with the Japan trade is likely to be a repetition of the history of our contest with China black tea. Our entering the market of the States and Canda with a first-class green tea, will first cause a fall in the price of the Japan article which will eventually be refleced in shorter shipments from that country. Our endeavour should be to work for an output of from 4 to 5,000,000 lbs. during the coming season, as with that amount we should make our competition really felt in the markets that we are endeavouring to capture.

The altering of the date of the St. Petersburg Exhibition from November to June, necessitated the setting aside of £3,000 which we had hoped would have been available for assisting green teas.

If the cess is increased from 20 to 30 cents per 100 lbs. it would give us an additional Rs.150,000, or say £10,000; part of this I would like to see devoted to the Continent and the balance to furthering the green tea business, either by increased advertising, or, should the bonus prove insufficient, by continuing or increasing the sliding scale.

I append figures showing the number of lbs. of green teas on which the bonus has been paid to the end of October:—

	1900	1901	Previous to 1900
January	3,560	252,582	
February	3,600	116,592	1898—13,302 lbs.
March	16,175	105,644	1899—86,327 ,,
April	10,378	70,614	
May	30,863	24,438	
June	16,939	108,017	
July	34,168	163,896	
August	45,180	177,079	
September	20,223	112,244	
October	48,384	105,137	
November	143,734		
December	99,090		
	472,294		

With the small balance at our disposal we may have to pra cally abandon the campaign long before the trade can be said to on a satisfactory footing. It is fully recognised that the bo cannot be continued indefinitely, which strengthens the desire do as much as possible in the immediate future.

So much for the present and the future, and I would now l to say a few words on the past.

In 1895 when Mr. Mackenzie first went to report on the posit of the tea trade in U. S. A. and Canada, our shipments were co partively trifling, probably not amounting to 3,000,000 lbs. annum. Last year we sent over 9,000,000 lbs. of Ceylon tea; a this year these markets will probably absorb from 11 to 12,000,0 lbs. in addition to a large amount from India.

It is very hard to get any accurate figures for comparison, prior to the war duty being imposed, all tea imported into States was treated as entering into consumption, and when t duty of 5d per lb. was imposed, it was estimated that there w between 20 and 30,000,000 lbs of very low grade teas in stock, a it was probably owing to this large amount of duty free sto going into consumption after the imposition of the duty that ga the appearance of a falling off in the consumption per head of t

Again last year's official returns give an import of Ceylon into the States and Canada of over 9,000,000 lbs., whereas c export figures from Colombo to London, including transhipmen only total some 7,000,000 lbs. This is explained by the fact tha lot of tea shipped to America is shipped on a London B/Ladi which is exchanged for one for the balance of the voyage, but t tea appears as a London shipment in the Customs returns; also certain amount is shipped *viâ* China, and is entered as such. mention this to show how misleading many of the returns are.

In regard to the methods employed by our Commissioner, it to be regretted that the expression "secret subsidies" has be imported into criticisms and discussions; I would rather use t term "assisted or grant-in-aid advertising" as more correc describing the methods employed.

When our Commissioner first went to America, he was told advertising authorities that if he had £100,000 per annum, might safely approach the consumer direct, but with only one-ten of that sum at his disposal, he could only afford to work throu the trade, and it was on these lines that he went to work, offeri those firms who would interest themselves in pushing Ceylon t one-third of their advertising expenses, and thereby securing us £30,000 worth of advertising for every £10,000 we supplied.

It is true that this advertised somebody's Ceylon tea, but it h always been found that a specific advertisement, such as Smit Ceylon tea or Brown's Australian butter, appeals far more to t consumer than merely Ceylon tea or Australian butter.

Looking generally at the Ceylon tea trade and its present po tion for the year ending 31st May, London imported nea 4,000,000 lbs. more than in the previous year and delivered m than 8,000,000 lbs. more. India imported * 13,000,000 lbs. more a delivered 4,000,000 lbs. less.

On the 31st October Ceylon stocks were 5,500,000 lbs. less th on the same date last year, and the Indian stock nearly 8,000,0 lbs. more and the price of the two countries' products practica the same.

The largest factor in the above result is that though our to shipments from Ceylon are equal to those of last year, yet o shipments to the U. K. are 5.000,000 lbs. less, the balance havi gone to other countries, and further out of our shipments to U. K., re-exports to the end of September have risen from million lbs. in the previous year to over 13¼ million lbs. this ye The year's estimates of the total amount of Ceylon tea taken outs the U. K. is about 58,000,000 lbs.

It is, therefore, very evident that the prosperity of the Ceyl tea industry depends on its outside markets, and when you member that there are still 100,000 acres of tea in Ceylon a India under five years old, I would beg of you to urge on yo Association to do its utmost to convince proprietors at home of t necessity of still further efforts to expand our markets.

No further action will be taken on this side until we hear fr you, and then, if we have your support, a general meeting of t Planters' Association will be held, and the Chamber of Comme asked for an expression of their opinion.

* London imported of Indian tea.—ED. *Times of Ceylon.*

The Planters' Association would not feel justified in approaching Government in the matter unless it was shown that a substantial majority was in favour of the increase.

It might assist members in coming to a decision if Messrs. Mackenzie and Renton were invited to attend.

Enclosing letters from Messrs. Renton, de Peyster, Pollen and Crosfield Lampard.

I am, Sir, yours faithfully,
(Singed). Edward Rosling,
Chairman, Planters' Association of Ceylon.

Dessford, Nanu-oya, *November 12th, 1901.*

MINUTE AND RESOLUTION REFERRED TO IN LETTER FROM CHAIRMAN, PLANTERS' ASSOCIATION OF CEYLON TO SECRETARY, CEYLON ASSOCIATION IN LONDON, DATED 12TH NOVEMBER, 1901, ON THE SUBJECT OF THE PROPOSED INCREASE OF THE TEA CESS.

Read the following memorandum for the Planters' Association of Ceylon received from the Thirty Committee:—"The following minute and resolution having been passed at a meeting of the Thirty Committee held on the 14th September, 1901, are submitted for the consideration of the Planters' Association of Ceylon. (Minute and resolution—read report of the Colombo members of the Thirty Committee in conference with others interested in the American and Continental tea trade. After discussion, the following resolutions were passed:—"(1) That in the opinion of the Committee the cess should be increased; (2) that the Planters' Association be requested to ascertain the opinion of tea producers as to increasing the cess, with a view to give further assistance to the green tea industry.")

Resolved:—"That the Committee of the Planters' Association are convinced that an increase in the cess is a pressing necessity; (2) that the Ceylon Association in London be urged to join in the movement with a view to obtain the sanction of the Government to an increase of the cess from 20 to 30 cents per 100 lbs."

THE STATE OF THE TEA TRADE.

The recent rise in the market value of tea, which in some cases is very considerable, has, says the *Produce Markets' Review* of October 26th, lightened the previous deep depression, it might almost be said the despair, which has for some months existed among the growers and importers. No one will grudge this piece of comfort, coming at a time when there seemed so small a chance of improvement. But a bad crop in some or all of the Indian districts is, after all, only a matter of one season. It remains to be seen, even this year, how much of the deficiency in the older gardens will be filled from new land now coming into bearing, and which it has been said will yield many millions of extra lbs. for several years to come. We are certain that the home trade cordially wish for renewed and continuous prosperity in the Indian and Ceylon industry. Better times, however, if they happily come, will afford an excellent opportunity for considering how far the recent extraordinary depression (due, of course, mainly to the production outstripping the consumption) may have been added to by the obsolete and costly organisation of the tea trade.

We are called on by every hoarding to remember the delicious teas of thirty years ago, but it is not added that the average price in bond at that time was 1s 9d per lb., while at the present time it probably only averages something like a third of that amount. Yet, notwithstanding this fall to something like one-third of the old price, the expenses connected with the import, sale, and distribution of a chest of tea are, if anything, higher than they were a generation ago. In the interval, every other article of consumption sold through grocers has had the expenses connected with it reduced to a minimum, and the organisation of the trade has been modernised, so much so, indeed, that our predecessors, if they could come to life again, would hardly recognise their businesses. In tea they would be quite at home, for as it was in the days of the East India Company, so it is now, and many are so conservative as to believe that so it will ever be. That it costs ten or more times to sell a chest of tea than to sell a hundredweight of sugar is in the minds of such people a perfectly natural and inevitable state of things. Dock charges four times what they are in coffee and immensely greater than in any other grocery, intricate weight notes and warrants of an aggravatingly useless and costly character—are some of the marks of antiquity which hallow the trade in the minds of some of its members. Unnecessarily long prompts, coupled with a system of deposits abandoned in all other commodities in Mincing Lane make matters worse. Then we have a system of public sales, well suited for potatoes or onions, but one main effect of which is to depress the price of medium and fine teas. These points mainly affect the growers and importers of tea, but they appear to accept the disastrous position as desirable, unavoidable, and inevitable. It is true that we knew one respected member of the home trade, who so far agreed with them, that he said that he would as soon join attacking the four Gospels as the organisation of the tea trade, hallowed as it was by long antiquity. We contend, on the other hand, that this obsolete system has materially aggravated the depression caused by the over-production of tea, and that it will continue to be most injurious, whatever the price may be. Tea at 1s 9d could stand expenses, that tea at 7d, 8d. or 9d cannot do.

While the growers and importers have had such terrible prices to contend with, it might be thought that the home trade would have found the sufferings of their suppliers higly beneficial, and it is likely enough that many of the less informed planters think so. As a matter of fact, the home trade, whether wholesale or retail, have never done so badly in tea as they have done during the last few years. House after house with names honoured and familiar in the trade for generations, have given up their wholesale businesses. Others go on with their profits reduced to something like the funds would yield them without any trouble. The facts are quite notorious and familiar to every one connected with the trade. An immense sum of capital has been withdrawn, which incidentally used to steady prices, and to foster and create a demand for fine teas. If things were to go on as they are doing now, far larger sums will yet be withdrawn, and businesses will perforce be so altered as to bring all teas to an even deader level of price, than even the very unsatisfactory one now existing. Nor is the position of the retail trader any better. Taste and care in tea, in which the older generation of grocers used to pride themselves, no longer pay, and cheapness is the aim of all distributors. The public, no doubt, are the greatest offenders in this respect, for, as *Punch* humorously remarked, the male giver of a dinner party boasts how much his Port costs, while his wife in the drawing-room tells her guests how little she gave for her tea at the Stores. No doubt this feeling exists to a considerable extent, but there are yet left connoisseurs who appreciate fine tea and would gladly pay a reasonable price for it. If any effort were made to meet such a demand such buyers would rapidly increase, but it is worth no one's while to foster it. More fine tea is grown than ever, but it is so blended and muddled up that it is practically lost to the consumer. If the planters still further lose the support of the wholesale houses, who practically finance the 100,000 retail grocers of the kingdom, and if the public is allowed to continue to believe that the finest tea the world produces can be sold wholesale at something like 1s per lb., when unpacked and unadvertised—things must go from bad to worse. Teas are already not sold on their value, but according to their cost, and of course the lowest cost secures the order, so that depression simply leads to more depression.

Things, indeed, have got into such a position that to find the remedy appears to be almost impossible. Here we have the grower on the one hand and the distributor on the other complaining, while some, at any rate, of the depression can be alleviated by concerted action. Such action is difficult, for between these two sections of the trade there is a great gulf fixed, imperfectly bridged by the brokers, who, quite unintentionally, keep the two sufferers from knowing each other's names or entering into each other's grievances. Yet if they would only come together they would find that to a large degree they were suffering from the same causes, and that they could do much to help each other and to bring about better conditions. We believe frankly that the interests of all parties are at the present time absolutely identical, and that by meeting together and openly talking things over they would find this to be the case. Separated, the branches of the trade are quite powerles, but jointly they can effect much. In the question of Dock charges, weight notes, and so on, the aid of the trade is essential, and would be readily given. There are many other matters in which the distributors can help the growers, and any mutual attitude of suspicion can only arise from absolute ignorance of the feelings and desires of the other side. Had there been free and constant communication between the various sections, for instance, the late difficulty as to drafts could never have arisen. In almost every other Mincing Lane product, joint interests are looked after by a body represent-

ing them all, and fairly and carefully considering what each section has to say Tea has been poetically described as the cup that cheers but not inebriates, but those who trade in it, or grow it, have all found it very bitter and anything but exhilarating of late years. To sit at tea is the proverbial acme of domestic bliss. Why should not the importing and home tea trade meet round a table, restore internal peace and talk over how things can be bettered? If no remedy can be found and nothing is done, at any rate they would get to know each other and would find that there were no Machiavellis on either side, but simply plain, honest people, who find the position intolerable and wish to alter it.

If such an organisation existed at present one of its first acts would be to protest against the new Federal Australian tariff. A fixed duty of so much per lb coupled with an *ad valorem* addition to it according to quality, must have a most disastrous effect upon the consumption of the finer teas in Australia. Assuming, for instance, that the range in tea should be from 6d to 1s 6d per lb., an *ad valorem* duty of 20 per cent would raise the cost of the first to, say, 7¼d and of the finest to 1s 9½d—that is, the intrinsic difference in value being 1s, the difference in cost would be raised to 1s 2¼d. All experience has shown that this extra 2¼d would simply be deducted from the bonded price given for the finer tea, thus seriously handicapping the grower. Again, how will it be possible for Customs officers to accurately value tea? The Australian tariff is a point in which the home tea trade are not particularly interested, but with the aid of a joint body very effectual representations could be made to the India and Colonial Offices, to the Australian Agents General, and to the Federal Cabinet itself.

THE COMMONWEALTH STANDARD FOR TEA.

UNDER THE NEW CUSTOMS REGULATIONS.

Section 54 of the Customs Act, clause *e*, states :—

"Any tea not complying with the prescribed standard of strength and purity shall be deemed unfit for human use." Clause 15 of the regulations, which have been issued only a few days provides that "Tea which does not comply with the following standard of strength and purity shall be deemed unfit for human use :—

"The analysis to be made on the tea dried at a temperature of 212°F, and then powdered and totally exhausted with boiling distilled water. Total aqueous tea extract, not less than 30 per cent.; total ash, not more than 8 per cent.; soluble ash, not less than 3 per cent."—*Australian Grocer.*

THE LONDON MARKET.

The *London Commercial Record* of 14th instant says :—

Several Mincing Lane markets have this week been the scene of brisk business and in some cases even of excitement, although an upward tendency of prices was not in every instance the cause of the change. For instance in Coffee bears have been victorious in the Terminal market, whereas in Ginger bulls have carried the day. The slight reaction of last week attained further dimensions during the last few days and the advance in values has experienced in consequenc a considerable diminution, yet the tone in the market generally is hopeful of an early reaction favouring bulls. Reports reaching our market from Santos do not speak any longer with the recent tone of conviction about a crop failure, but hesitate no longer in confirming that the damage done will not exceed 20 per cent., and even this moderate figure is seriously doubted by a good many shippers who apparently believe in a total recovery of the crop through the third flowering. Stocks of Coffee in the whole world are besides so enormous that even if the Brazil crop should fail altogether nobody need go short of his usual cup of Coffee, although he would probably have to pay double the price for it. Under the circumstances it seems difficult to see the justification for a renewal of the recent spurt. In all probability there will be no scarcity nor a reduced supply of Coffee, nor will the heavy stocks experience a sudden relief by a new kind of consumer. What is therefore the main moving power in Coffee at the moment? We are afraid nothing but speculation. Prices had been allowed to decline to such a low level that the slightest outside help could not fail to immediately evoke the sympathy of the entire trade and through it every possible support. When therefore alarming crop reports reached our market from Santos, everybody was only too ready to assist in producin a strong speculative demand. Even the cooler headed operato were induced to come in, and everything went merrily until a advance of about 10s per cwt. had been established. Then the pan came, and, with the appearance of larger receipts, prices steadi broke away until a decline of 2s 6d to 3s per cwt. had bee established, and everybody, although convinced of an early reactio felt somewhat loth to arrest the market by purchasing. In th meantime the strong Santos market in Europe has inspired oth Coffee-producing countries with fresh hope for a lasting boom, a most of them have withdrawn from the market altogether or a asking exorbitant prices. India makes no exception. Whereas few days ago good Neilgherry crop changed hands at 58s c.i f., less than 66s c.i.f. is now demanded, of course without findi buyers. Fine Coorgs have been wanted, but, as a rule, plante spoilt their chance by asking too high a figure. A good Coorg w disposed of at 67s c.i.f. at a time when others asked 69s c.i.f. T near future is looked forward to by all engaged in the Coffee tra with the greatest curiosity and anxiety, and as the bulk of operato stand in need of higher values it is to be hoped that the next tu will favour them.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

MEETING OF THE GENERAL COMMITTEE.

Extracts from an Abstract of the Proceedings of a Meeti of the General Commtttee held on the 5th instant.

PRESENT :—Mr. H. S. Ashton (*Chairman*), Mr. A. Toch (*Vice-Chairman*), Messrs. H. W. Boyd, W. Brown, D. Campbell, A. C. Lawrie, R. Magor, and R. R. Toynbee.

Letters dated 4th, 11th, and 18th October, from the Secreta Indian Tea Association, London, were brought up for final co sideration after previous circulation. The principal matters de with these letters were :—

(*a*) *Green teas.*—The London Committee had considered t circular issued in Calcutta on the 9th September, in which p posals for bulking green teas in Calcutta were advanced. They we in general agreement with the scheme outlined in the circular. formation was also contained in the letters regarding an offer ma by the Baraoora (Sylhet) Tea Co., Ld., to manufacture 200,000 l of "faced" green tea for 1902 in consideration of the bounty. Th offer had been accepted by the London Committee conditionally (*a*) funds being available; (*b*) the tea made by the Company in 19 being suitable; and (*c*) the teas being sent to the firms in Ameri selected by the Calcutta Committee to deal with green teas.

The General Committee observed that the offer of the Baraoo Co. had reference to "faced" green teas, which, they understoo were in demand in the United States. The scheme set forth their recent circular dealt with the unfermented or Ceylon type green tea, which they believed was preferred in Canada Th regretted to find that, in response to the circular, only two Co panies had offered to manufacture green teas on the lines sugge ed. It was to be added, in writing to London, that the Committ here intended to approach one or two of the larger agency hous with a request that they should take up the matter of manufactu and bulking.

(*b*) *Proposed Tea Cess.*—It was stated in the letter that a mem rial to H. E. The Viceroy upon this question had been prepare and was being signed in London. Subsequently, it would be fo warded to Calcutta for additional signatures and presentation.

(*c*) *Crop Estimates.*—In the letter dated 4th October, the opini of the General Committee was invited upon the following resoluti which had been adopted at a recent meeting of the London Co mittee, *viz.* :—

"That in the opinion of this meeting it is advisable that month figures of production with comparative figures for the two previo years should be published at the end of each month commenci from the 31st July, 1902, to the end of the season, so as to enab people to form their own opinions as to the probable size of t coming crop, and that the Calcutta Committee be asked for th opinion on this subject. And also (as a separate matter) whet

the forecast based on the tea manufactured to the 31st August (in lieu of the 15th August) should or should not be issued in future years."

The General Committee, after thoroughly discussing the whole question, came to the conclusion that the most satisfactory method of procedure would be to restrict the information published by the Association to the fortnightly statements of exports. In other words to abolish entirely all estimates and returns of the crop because of the difficulty of procuring complete and correct figures. They thought it would not be practicable to obtain the particulars required for the monthly statements proposed by the London Committee. Moreover they recognised that the Director-General of Statistics was giving special attention to that aspect of the question which was dealt with in the statements of actual crop hitherto annually issued by the Association. And they were of opinion that the returns which the Statistical Department was in a position to procure, were generally speaking, much more likely to be comprehensive and reliable than those obtainable by the Association. For these reasons they considered that, at the next Annual General Meeting of the Association, a resolution to discontinue the existing system of preparing and publishing crop statements should be proposed These views were to be conveyed to the London Committee.

(*d*) *Regulation of Sales.*—In the letter dated 18th October, it was stated that the London Committee had resolved to resume the regulating of sales until the 31st January, 1902, on the lines of the regulation of 1898-99. A circular had accordingly been issued to all Companies and Proprietors, explaining the importance of the matter and inviting support. The Ceylon Association had also been asked to co-operate.

The General Committee noted this announcement with satisfaction, and hoped that the regulation would be successfully carried out.

Considered a letter dated 19th October, from Captain F. Webb Ware, I.S.C., Political Assistant, Chagai, forwarding copies of a series of questions and answers regarding the Quetta-Meshed trade route *viâ* Nushki and Seistan. These papers contained information regarding the route, which would be useful to those interested. The Committee accordingly decided to inform members that the papers could be seen at the office of the Association

In the proceedings of the meeting held on the 20th September, reference was made to correspondence with Messrs. Aitken Spence & Co., of Colombo, regarding the shipment of teas from Calcutta to Black Sea ports. The letter which it was then decided to write to Messrs. Aitken Spence & Co. had been forwarded in due course; and the Committee now had before them a further communication, dated 18th October, from that firm. In this it was stated that the owners of a line of Russian steamers were willing to establish a regular service between the East and Odessa, provided sufficient inducement were offered. Calcutta might possibly be included in the itinerary, although it was feared that the stringency of the Russian quarantine regulations would be a serious obstacle. But even if this proved to be the case, shipments might be arranged on special terms *viâ* Colombo. And in order that the owners might have some idea of the probable extent of the trade, Messrs. Aitken Spence & Co. asked for information as to the quantity of tea which would be likely to go forward to Odessa. They also enquire whether in the event of special terms being arranged, Calcutta shippers would be prepared to enter into an agreement to ship by the line, which was run under the Russian flag.

The Committee noted this letter with interest. They were not, however, quite clear as to whether the reduced tariff on Russian railways applied to all steamers flying the Russian flag, or whether it was restricted to the vessels of the Volunteer Fleet. Messrs. Aitken Spence & Co. were accordingly to be asked to furnish information upon this point. If the reduced tariff did apply, the Committee were inclined to think that the Russian line in question might, by offering sufficient inducement, secure the bulk of the trade between Calcutta and Odessa. It was difficult to estimate the quantity of Indian tea which would be likely to go forward; but they noticed that the shipments to Odessa from 1st January, 1901 to 30th September amounted to 560,000 lbs. They were not at present prepared to enter into the question of an agreement, but they thought that if ample notice of the arrival of a steamer were given and if the rates of freight quoted were favourable, practically all the cargo available would be secured. A reply in these terms was to be sent to Messrs. Aitken Spence & Co.

In the proceedings of the meeteng held on the 13th August, reference was made to certain cases in which the District Magistrate of Ganjam had refused to execute warrants against a number of absconding coolies The coolies had been engaged in Ganjam for the Makum (Assam) Tea Co., Ld., upon contracts under Act I of 1882. The majority of them after working on the garden for a certain period had revisited the recruiting districts as garden sardars. They had subsequently declined to return to the garden; and warrants were then issued in Assam—under Section 151 of the Act—for their arrest. These warrants the District Magistrate in Ganjam had refused to execute; and the Chief Commissioner of Assam had declined to intervene.

Messrs. Sanderson & Co., who had been consulted, were unable to advise that any legal remedy should be adopted This had been communicated to the Committee of the Assam Branch who had decided to represent the matter to the Government of India.

Considered a letter dated 29th October from the Director-General of Statistics, enquiring as to whether there is a recognised tare for tea chests. In the case of most of the tea imported into Calcutta by rail, the gross weight of the packages was registered, and a deduction of 23½ per cent. was made as representing the average weight of the chests. The opinion of the Association was asked whether this rate—which had been adopted twenty years ago—was still correct.

The Committee were of opinion that the principal changes during the last twenty years were (*a*) a reduction in the number of half chests, and (*b*) the introduction—since 1896—of patent chests of metal and veneer. These weighed from about 20 lbs. to 22 lbs.

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98 -t.f.o.]

each, as against wooden chests at about 28 lbs.; and the average weight of tea per chest might be taken as 90 lbs. The use of patent chest had fluctuated; but the Committee thought that by referring to the statistics of the imports of such chests, the Director-General would be able to form a fairly accurate idea of the extent to which they were used. With the information thus obtained it would be possible to determine what correction, if any, in the deduction of 23½ per cent. from the gross weight, was needed A reply in these terms was to be sent to the Director-General.

UNITED PLANTERS' ASSOCIATION,
FEDERATED MALAY STATES.

These Minutes to be confirmed at the next General Meeting.

Extracts from Minutes of a General Meeting, held at the Selangor Club, Kuala Lumpur, on Saturday, 7th September, 1901, at 2-15 P.M.

PRESENT :—Messrs. E. V. Carey (*Chairman*), T. H. Hill, W. W. Bailey, C. Meikle, A. B. Lake, H. N. Parkinson, J. G. Glassford, C. S. Baxendale, T. S. Dumbreck, R. Meikle, D. C. P. Kindersley, Tamboosamy Pillai; E. B. Skinner (*Honorary Secretary*). Represented by proxy: Messrs. C. M. Cumming, G. E. Bagnell.

1. The notice calling the Meeting having been taken as read, the Minutes of the last General Meeting were also taken as read and duly confirmed.

2. *Experimental Gardens.*—As a great deal of correspondence had passed between the Govenment and the Association on this subject, Mr. Bailey proposed and Mr. C. Meikle seconded that the Chairman should give an outline of what had taken place. The motion having been passed, the Chairman gave a short account o proceedings. Mr. Baxendale then said that he considered Mr. Arden should be asked to study the commercial interests of ramie industry, as the present state of this was anything satisfactory. He also read a letter from Sir F. A. Abel to Col Secretary, Singapore, on the subject, which he said had published some time previously in the *Selangor Government Ga* and proposed that the Association should point out to the Go ment that this letter was inaccurate and misleading. The C man requested Mr. Baxendale to supply the Honorary Secr with a copy of Sir F. A. Abel's letter and a written statement o own views. This Mr. Baxendale agreed to do. Mr. Skinner he thought the subject of commercial interests of ramie was for the *Agricultural Bulletin* to take up and discuss. Mr. Baxe said that the paper was an individual one and probably not cient to deal with the subject. Mr. Bailey said that he unders Mr. Arden was brought out here to make experiments as to would grow and how to grow things in this country, and n make a study of markets. Messrs. Hill and Lake agreed Mr. Bailey's remarks. It was therefore resolved that Mr Baxe should send in his letter and remarks to the Honorary Secre who would send it on, with a covering letter, to the Resi General, asking the Government to give the matter their sideration.

Mr. R. Meikle made some remarks on copra and cocoanut oil said that the quality of oil obtained depended greatly on treatment, and that usually more oil was produced from the s nuts than from the large ones. He also suggested that Association should move for the abolition of export duty produce was consigned from one State to another, and it decided that this question should be gone into on a future occa

3. *Indian Immigration Correspondence.*—As the whole co pondence had been thoroughly gone into that morning by Committee, it was decided that instead of reading all the pa

A METHODIST MINISTER

OF

40 YEARS' STANDING, SAYS:

"For years I was troubled with Indigestion and Constipation, and suffered greatly from Giddiness, Nervous Debility and sleeplessness.

SEIGEL'S SYRUP

"The best medical skill seemed of no avail, and I quite thought my ministerial work was coming to a close. However, a friend urged me to try Seigel's Syrup, and 4 bottles sufficed to make my cure complete."

(Rev.) J. SPENSLEY,
Winterton, Doncaster.

6th January, 1901.

through, the most important letters only should be read and an outline of the whole question given by the Chairman.

The following twelve papers were read and approved:—

(*a*) Importers of "free" labour inducing coolies to sign in India promissory notes in their favour for advances.

(*b*) Medical examination of kangani-recruited and professional-recruited coolies; the examination of the former being optional and the latter compulsory.

(*c*) Straits Settlements paper No. 30: "Correspondence regarding the housing and shipping of coolies at Negapatam prior to their embarkation to the Straits."

(*d*) Further correspondence with the Indian Immigration Agent, Penang, and the Chairman *re* notice of termination of agreement between free coolies and their employers.

(*e*) Letter from Shunmuga Mudelliar offering his services as a Chief Agent for recruiting coolies for the Straits in Madras.

(*f*) Corresponpence with Government *re* one Kangani Rajappan obtaining State-aided tickets for coolies not of the agricultural class.

Mr. C. Meikle said these coolies were on Hawthornden and were working very well. He promised to send a letter to the Honorary Secretary covering this statement, which would be forwarded to the Resident-General.

(*g*) Correspondence *re* Mahratta coolies. The result arrived at was that they are more expensive to recruit, cannot speak Tamil, and do not appear to be regarded as better labourers than Tamils.

(*h*) Letter from Government enclosing a copy of a letter from the Colonial Secretary, Straits Settlements, on the subject of recruiting "free" Indian labour, together with copy of a letter from the Chief Secretary to the Government of Madras, relating to the Report on Indian Immigration, Straits Settlements, for the year 1899.

(*i*) Letter from Resident-General enclosing Dr. Haviland's report *re* the feeding of Tamil coolies on estates. Mr. Lake said he was feeding his coolies now.

Resolved that the Honorary Secretary should write to the Resident-General and say that planters would individually undertake the feeding of coolies under circumstances rendering it desirable, and that there were one or two cases at present in the Native States of estates feeding their coolies.

(*j*) Letter from Resident-General referring to a letter from Dr. Foston on the subject of recruiters' licenses.

(*k*) Letter from Resident-General *re* the appointment of a local agent in Penang Harbour to receive coolies shipped to that port.

Resolved that Honorary Secretary write to say that the Association does not consider such an agent necessary as the present existing arrangements are satisfactory.

(*l*) Letter from Secretary to Resident *re* depositing sums of money with Dr. Foston for disbursement to kanganies. The mistake in addressing the United Planters' Association on this subject was explained by the Chairman.

4. *Public Auction.*—As all the correpondence referring to this subject had been printed and circulated amongst members, it was taken as read.

The following motion was passed:—

"That this Association approves of the sale of coffee by auction as suggested by Messrs. Barlow & Co. and endorsed by the Committee in certain correspondence, and it is hoped that every individual member will make an effort to make the experiment a success. Also that Messrs. Barlow & Co. be henceforth recognised as the 'Brokers to the United Planters' Association' in the terms of paragraph (*a*) of their letter of 15th August, 1901."

The Honorary Secretary was instructed to write to Barlow & Co. and inform them of the resolution which had been passed and to say that none of the objections raised by the Committee in the printed correspondence were pressed on discussion.

5. "*Agricultural Bulletin.*"—The Chairman explained that the result of the correspondence on this subject was that the *Bulletin* had been sanctioned by Government and that the Straits Settlements Government had agreed to make a definite grant of $300 per annum, independent of any profits on the sale of the publication, which sum would be devoted to the purpose of generally improving the *Bulletin*, and that the Federated Malay States Government would do likewise.

The Honorary Secretary stated that he had received 33 subscribers for the *Bulletin* and expected to get more.

The annual subscription had been fixed at $3 and each copy to be 50 cents. The prospectus for the new *Bulletin* was read and Mr. Bailey suggested that the "Collection of Consular Reports from the Foreign Office" should be added to the list. It was resolved that the Honorary Secrettary write and suggest to the Resident-General that this be added to the prospectus.

6. *Improved Mail Service.*—Members' attention was drawn to the printed papers lying on the table of the agreement made between the British India Company and the Government for an increase in the number and size of steamers to run between Negapatam and Penang and the passage rates for coolies.

7. The State Engineer's report on the comparative values of casuarina, bakau, and ordinary firewood was put on the table.

Result of Experiments made with Firewood, consumed on Steam Roller 3,890.

Firewood.	Hours worked.	Consumption in lbs. per hour.	Consumption in cubic feet per hour.	Average time taken to get 50 lbs. steam.	Average steam pressure.	Average weight per cubic foot of firewood.
		lbs.	c. ft.	hours.	lbs	lbs.
Casuarina	105¾	56·44	1·22	2	81·7	46
Bakau	57¼	78·25	1·21	2	81·6	64½
Ordinary	62	75·8	1·36	1·68	87·5	55½

8. *Europe and Aden Coffee.*—The Honorary Secretary reported that the account sales had been received from Messrs. Frame, Alston & Company for the 84 pikuls of coffee sent to England which had been collected from five estates. Mr. Bailey had sent each contributor a cheque for the full amount realised—*viz.*, $17·78 per pikul. A sum of $2·62 per pikul was now due to the Association for charges incurred for storing and shipping the coffee to England, so that the experiment had not proved by any means a success.

The Honorary Secretary also reported that the 7 pikuls of coffee (belonging to the 12 pikul lot) which had been kept at Port Dickson, had been sent to England in July and consigned to Messrs. Frame, Alston & Company.

It was decided that the Honorary Secretary should write to the Manager, Port Dickson Coffee Curing Company, and enquire *re* the sale of the 12 pikuls.

9. *Dalwis & Sons:*—The Chairman said a letter and samples of coffee extracts had been received from this firm and that he and the Honorary Secretary had tried the samples, but found them not sufficiently palatable for any encouragement to be held out to the firm in question.

MARKET REPORT.

[*Per Mail advices of* 1*st November* 1901.]

COFFEE.

The London Commercial Record says:—There is very little of interest to report in the spot market as the supplies on offer are still limited in extent, and the assortment does not present much attraction to the trade generally. Coorg met with a good demand and sold at full prices to a further advance, and Nyassaland was also well competed for, selling extremely well. The transactions in Central American descriptions are too small to be of interest. Dumont Santos did not bring the top prices of last week. The market for futures has been a fluctuating one, but with realisations and somewhat conflicting crop reports the tone has favored buyers, and closing prices show a decline for the week of 9d per cwt. Yesterday Santos December delivery sold at 35s to 34s 6d, March at 36s to 35s 6d, May at 36s 6d to 36s, and September at 37s 6d to 37s per cwt. Catalogues to-day presented:—457 bags East India, 24 bags Peruvian, 49 bags Mexican, 95 bags Columbian, 311 bags Guatemela, 70 bags Salvador, 174 bags Guayaquil, 27 bags Costa Rica, 143 bags washed Rio, 519 bags washed Santos, 500 bags Rio (quay terms), and 500 bags Bahia (quay terms). The sales went off with good demand and full prices were paid, but some quantity was bought in.

The American opening cable came 5 to 10 points lower.

We quote:—

London ...	Santos ...	Dec. delivery	... 34s 6d.
New York	... No. 7 Rio...	,,	... 6·10 cents.
Hamburg...	... Santos ...	,,	... 34½ pf.
Havre ...	... Santos ...	,,	... 43¼ francs.

Rio Exchange 11 7/8d, previous day 11 7/8d.

HAVRE, *October* 31.—Good average Santos November opened quiet at 43¾f. and closed steady at 43f., December opened at 44f. and closed at 43¼f., March opened at 44¾f. and closed at 44¼f., May opened at 45½f. and closed at 44¾f., September opened at 46½f. and closed at 45¾f.

HAMBURG, *October* 31.—Good average Santos November opened quiet at 35pf. and closed steady at 34pf., December opened at 35¼pf. and closed at 34¼pf., March opened at 36¼pf. and closed at 35¾pf., May opened at 37pf. and closed at 36¼pf., September opened at 38pf. and closed at 37½pf.

NEW YORK, *October* 31.—Closing prices of No. 7 Rio were as follow:—

	Nov.	Dec.	Jan.	Feb.	Mar.
October 31...	6·05	6·10	6·20	6·30	6·55
October 30...	6·15	6·25	6·35	6·45	6·40

IN THE U. S.

Active option trading, with prices advancing, has been the feature of the week, says the *American Grocer* of . . . Options are from 25 to 30 points higher than last week and spot prices of Brazil are ¼c better. This movement finds its basis in cabled reports of unfavourable flowering of the growing Santos crop. Such reliable firms as Holworthy, Ellis & Co., Santos, cable: "Growing Santos crop, first flowering poor. General opinion points to a poor crop." Similar advices came from other firms. It is well to keep it in mind that the world's visible supply, added to one year's production, will give a total supply of 9,000,000 to 10,000,000 bags above requirements. Present prices are more than 2c below those ruling last season at this time, when the statistical position was less favourable to "bulls." It may be that the speculative element has nerve and resources to carry the market up, up, up.

Deliveries have been large. Last month's heavy movement is recorded on the editorial page. The market closed firm, with spot No. 7 Rio at 6c; No. 3 Rio, 7¾c; No. 5 Santos, 7c.

Mild sorts are well held, particularly fancy and choice grades. Quotations are about as last week, but more firmly held. Padang Interior, 14@18c, with fancy at 24@28c, and very fancy higher; good Cucuta, 7½c, with choice at 10½c, best washed at 11c, and for extra fine lots. so far as colour and style go, a premium of 1@2c is asked; Central American, best marks, 9½@11c, and up to 13 for invoice lots—the latter choice Guatemala; Mocha, 14@18c, and higher for extra fancy; best Mexican, 9@11c.

TEA.

INDIAN.—Although the regulating of sales by the Committee does not come into operation until the 4th proximo, offerings were by mutual consent limited to the moderate total of 45,500 packages compared with 34,100 packages last week, and 57,500 packages for the same time in the preceding year.

The selection has continued to be a very useful one, and included a remarkably small proportion of undesirable Tea, Cachars, Sylhets and Dooars especially being above the average. The advance noted previously for the lower priced grades has been well maintained and higher quotations have often been recorded, common to ordinary fannings being the most affected. It is satisfactory to note that in spite of the rise below, the finer descriptions have been in better demand, medium to fine brokens more particularly having favored sellers. Under present conditions the tendency of the market is for all kinds up to about 7d per lb. to realise full values compared with those over 7d per lb., this being principally noticeable in Pekoe types.

It is a matter for congratulation that the marked improvement in the position of common did not develop until the bulk of the crop had been manufactured, as otherwise the usual rush to make quantity with a total disregard to quality would have occurred, notwithstanding the severe lesson of the past season. Nature, in the shape of slow growing weather, combined with finer plucking has, at least temporarily, saved the situation, and it is earnestly to be hoped that growers will not at the eleventh hour endeavour to increase the output and by so doing adversely affect the position.

For 35,600 packages on Estate Account 8⅛d per lb. was obtained, opposed to 7⅜d per lb. for 46,600 packages, and 9d per lb. for 37,400 packages in the two foregoing seasons.

Total printed for Importers in October:—

1901	1900.	1899.
189,700 pkgs.	256,900 pkgs.	230,300 pkgs.

This will make 470,700 packages of this year's crop offered, *versus* 551,000 packages, and 572,000 packages to the end of October in 1900 and 1899 respectively.

CEYLON.—A reduced quantity was submitted, *viz.*, 16,600 packages *versus* 19,500 packages on the 22nd instant, and 20,100 packages in 1900

Bidding was again keen for both leafy and broken sorts up to 7d per lb, with an inclination to dearer rates, and not many Pekoe Souchongs in garden invoices were to be had at 6¼d per lb. Medium and fine met with less competition, however, and prices ruled rather irregularly. Stand out lines were sought after and on the whole fetched good figures.

The average is 8¼d per lb. On the 24th ultimo it stood at a little over 8d per lb.. and 12 months since it was 7½d per lb.

In the month the number of packages brought forward was:

1901.	1900.	1899.
90,700 pkgs.	103,900 pkgs.	129,100 pkgs.
(Avge. 8d per lb.)	(Avge. 7½d per lb.)	(Avge. 8⅛d per lb.

JAVA.—Nearly 1,900 packages of direct import passed the hammer with a strong tone but without material change.

The following were catalogued for October:—

1901.	1900.	1899.
5,700 pkgs.	6,500 pkgs.	5,500 pkgs.
(Avge. 7d per lb.)	(Avge. 6¾d per lb.)	(Avge. 7⅛d per lb.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 29th October, 1901 ... ... 18,789,269 lbs.
Do. do. 1900 ... ... 17,380,202 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	40,312	4,966	45,278
Ceylon	14,909	1,749	16,658
Java	1,568	311	1,879
Total ...	56,789	7,026	63,815

Also 362 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated November 1st, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	550,749	522,650	29,804
1900-1901	580,922	559,081	23,450

6,303 *pkgs.* INDIAN
6,926 „ CEYLON
1,879 „ JAVA
} Total 65,108 packages were offered in public auction this week.

Customs figures from the commencement of the season to the end of September show a decrease of about 11 million pounds in the quantity of tea brought into the country, while both Home Consumption and re-exports show a slight increase. Duty payments during October were also in excess of last year.

INDIAN.—The tendency of the market continues in an upward direction, teas for price still attracting the most attention, although other grades participated in the stronger competition noticeable throughout the auctions, with here and there slightly higher rates.

TRAVANCORE.—Offerings from Southern India continue to grow in importance, while some of the higher grown estates are showing a marked improvement in flavour and quality as evidenced by the "Munaar" teas sold this week. The following averages are worthy of note:—"Pabbojan T Co.," 1/1; "Margarets Hope," 1/0¾d; "Monteviot" and "Darj Con. Singbulli," 1/0½.

Week's average of New Season's tea sold on Garden Account 1901, 36,271 pkgs., av. 8·19d. 1900, 46,880 pkgs., av. 7·34d.

New Season's tea sold on Garden Account 1st June to date 1901, 400,421 pkgs., av. 8·28d. 1900, 467,739 pkgs., av. 8·02d.

CEYLON.—The better tone noticed during the last two weeks has been further emphasized, teas for price being about ¼d. per lb. dearer, while other grades showed an improving market. Only 2,613 packages are advertised for sale next week.

Average for week 8·18d., against 7·56d. same week 1900.

Ceylon tea sold on Garden Account 1st January to date, 973,493 pkgs., av. 6·76d. 1900, 1,049,292 pkgs., av. 7·20d.

JAVA.—The firmness noticed last week was even further developed, and prices generally showed a slight improvement. Invoices from "Tanawattee," "Perbawattee," "Djati Nangor," realized 9¼d., 8¾d., 7¾d., respectively.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4 3/16. Colombo 1/4 7/32.

IN CANADA.

Toronto advices dated October 17th in the *Canadian Grocer* states:—

There has been a little more disposition on the part of wholesalers to operate in Japan teas, but only a few transactions have taken place. as they are not willing to pay the prices asked. The market in Japan is firm at the present figures, and the third-crop teas are showing comparatively better value than the early teas. Very few teas, it appears, are this year being sent to Canada on consignment. This is not surprising, in view of the poor results that were experienced last year. The situation in regard to Indian and Ceylon teas also continues firm. Although a better feeling exists on the local markets, wholesalers are only buying for immediate requirements, hoping that better prices will rule later. It is worthy of note that Indian teas are just now at their best, being September manufacture, when the leaf is full of sap and flavory. The kinds of tea mostly wanted here just now are medium Pekoes and Pekoe Souchongs. Stocks of tea on the local market appear to be gradually diminishing, as far as we can gather. There are still some old teas on the spot, however, which are not without their influence on the market on new and better quality teas There is a little enquiry for Ceylon green teas, and a few are being offered, but sellers refuse to accept the bids which are offered. China greens are still scarce and firm, and 1½ to 2c. dearer than at the beginning of the season.

COCOA.

Public sales on Tuesday offered 5,855 bags; the result was very disappointing only about 250 bags selling. Of 619 bags Trinidad catalogued 100 bags were placed at 71s 6d for fine red, and 60s for common grayish. Of 1,317 bags Grenada only 60 bags fair to good sold at 61s to 64s 6d. 40 bags Samana sold, out of 204 bags offered, at 55s for grayish. Of 152 bags African 52 bags fine realised 64s 6d. The bought in growths comprised—10 bags Jamaica, 11 bags Dominica, 79 bags Venezuelan, 47 bags Bahia, 59 bags Puerto Cabello, 307 bags Colombian, 1,977 bags Quayaquil, 16 bags Seychelles, and 1,657 bags Ceylon. Since the auctions 200 bags Trinidad sold at 58s 6d to 60s, for weathered and dark, 67s to 68s for good red, and 72s 6d to 73s for fine; 50 bags Grenada at 65s for good; 20 bags Puerto Cabello at 110s to 135s; 60 bags Bahia at 62s; 350 bags Guayaquil at 65s to 67s for grey to greyish Caraquez, 69s for fine ditto, 67s for Machala, and 77s for fine Arriba; also 250 bags Ceylon at 64s to 69s for good and 82s 6d to 85s per cwt. for fine.

PEPPER.

BLACK.—The market remains very quiet. On the spot small sales have been made at 6d for fair Singapore; for arrival the only sale reported is a little lot of 25 tons, nearly due, at 5 15/16d.

The auctions on the 30th ultimo presented 380 bags Penang, weighing 3 lb. 4 oz., dust 5·30 per cent. per gallon, which retired unsold at 5¾ per lb.

WHITE.—The market is very quiet on the spot, with small transactions at 9⅛d to 9¼d for dull to fair Singapore, and at 8¾d for Penang. For arrival 100 tons have changed hand, *viz.*, October-December at 9¼d to 9 5/16d, November-January at 9¼d to 9 5/16d, January-March at 9¼d to 9⅜d, and Penang October-December at 8⅛d.

67 bags Singapore were offered at public sale on Wednesday, but were bought in at 9¼d per lb.

To-day quiet, and no sales reported.

The shipments of Black Pepper for the month of October compare as follows:—

GINGER.

COCHIN.—A good demand was experienced privately in the early days of the week, and sales to a fair extent were reported at advanced prices, fair medium and small washed rough selling at 44s 6d to 46s, Calicut Sorts at 42s, with buyers over at these figures. At auction, however, there was little or no enquiry for the 64 cases offered, only 5 cases dull limed small and ends, with a little medium cut, selling at 55s per cwt. Subsequently buying again became active, and washed rough sold up to 47s 6d (48s now wanted), and Calicut Sorts up to 44s per cwt. Sales for the week about 2,500 bags.

JAPAN is also dearer. The value of fair plump limed on the spot is 41s 6d. For arrival sales of 50 tons are reported at 33s for November-January (s.), and 32s per cwt., c.i.f., for January-March (s.).

JAMAICA has participated in the improved trade, and business to the extent of about 700 barrels has been done at 3s to 4s per cwt. over the recent range of values Under the hammer 98 barrels nearly all sold at about 7s advance on the last auctions' prices—low middling to middling washed 49s 6d to 54s 6d per cwt.

CINCHONA.

Additions to the quantity of bark to be offered at Amsterdam on November 7 now bring the total to 8,980 bales and 325 cases, weighing 816,285 kilos. The stock in first hands now consists of 2,651 packages Government and 12,314 packages private bark, including the quantity to be offered in auction.

QUININE.

Quiet and easier in second hands. At the end of last week small sales good brands of German sulphate were made at 1s 2d for December delivery, and 1s 2¼d for March, and these prices are quoted nominally. To-day no business has been done and pr are quite nominal, owing to the bark-shipments being 1,50 Amsterdam lbs., which are said to be the largest on record. S have been advanced, the following being the quotations for more important in quantities of 100 ozs.:—Bisulphate 1s 3d per citrate 1s 9d, hydrobromide 1s 8½d, hydrochloride 1s 8½, lactat 8½d, phosphate 1s 1 d, salicylate 1s 8½d, and valerianate 1s 11½

VANILLA.

At auction the considerable supply of 1,800 tins were offe (chiefly Seychelles), and mostly sold at irregular, but lower pri 2/s per lb. was paid for 7½ to 8½ inch Seychelles pods; 16s to 19 for 7 to 7½ inch; 11s 6d to 15s 6d for 6½ to 7 inch; 9s to 14s fo to 6½ inch, and 7s to 11s for 4½ to 5½ inch.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 6th proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

Munzerabad. *November 26th.—Weather*—East winds and cold nights. Rain gone. *Crop*—well in hand, almost finished on many places. *Coffee*—healthy, here and there a little leaf disease. *Interesting item*—The Maharajah arrived at Saklaspur on the 22nd and left for Hassan on the 24th.

Coorg. POLLI BETTA, *27th November.—Weather*—Perfectly clear during the past two days, and the cold weather appears to have definitely set in. Coffee has lost a good bit of leaf from A. V., but the wood is fine and thick with plenty of promise on it. Present crops after the very heavy ones of last year are naturally short. *Labour*—Ample. *General health*—Fair. *Interesting item*—The Inspector-General of Volunteers' visit to Mercara on the 25th. There were 50 members on Parade, which was very creditable, considering the time of year. Many members had come in 30 miles at great inconvenience to themselves.

INDIAN TEA AT THE PARIS EXHIBITION.

THE immense strides towards popularity which were made by Indian teas in France during the Paris Exhibition, must indisputably show the grower here the vast possibilities that a continuous pushing of the article before the public, holds for India. According to the letter of Mr. EDWARD F. LANGDALE in the report on the Indian section of the Paris Universal Exhibition of 1900, extracts from which we publish elsewhere, from the 17th April to the end of November 8,364 lbs. of Indian tea were sold, in packet form. This grip of the public taste once made, should open the way for a steady increase of sale, if only interest in the work

be maintained by the Associations concerned, and the producer aims at an even standard of leaf. One great point to be considered in the introduction of tea among people with whom the beverage must be an acquired taste, is the imperative necessity for illustrating the best methods of infusing. Many people who have been tea drinkers all their lives, are yet perfectly incapable of making an ordinary, drinkable, cup of tea. Their idea is to produce something strong and black, which goes by the name of tea. That is one of the reasons why tea in some countries does not obtain a place in the household equal with coffee. Coffee can bear stewing; tea cannot. Therefore the consumer must be shown where the difference lies, and that good, well flavoured, tea which correctly made would be a pleasure to drink, under the stewing process becomes nothing more or less than poison.

Tea to the appreciated, and brought into daily use by persons unaccustomed to its properties, requires that the vendor shall fully illustrate its preparation, so that a sufficient quantity shall only be used, and further that the infusion may not be too long. A novice on being presented in the house of a friend with a black, bitter, fluid, and informed that it is tea, will scarcely after tasting, desire to introduce it into his, or her, own home; but if the infusion be properly attended to, then, in all probability, the same person will make an effort to procure some, and try the experiment also. A good, well-blended, tea, properly introduced to the purchaser, accompanied by instructions for preparing in accordance with its strength, cannot fail to increase in demand when once an opening has been established. Every effort then should be made by Indian tea growers to extend their market now that such an opportunity has occurred; for each of the eight thousand odd pounds which have already been distributed through different parts of France will serve as a separate stepping-stone to a still greater success.

Indian tea is not so generally known as it should be, therefore to bring it into a more prominent position before the world must be the interest of the Associations. There is so much cheap rubbish masquerading under the name of tea that in countries where the buyer has not yet learned to make the distinction, all teas are looked on as being much alike. If the word Indian can be made synonymous with "good" as relating to tea, then the first hold gained by Indian teas on the public will never be lost. It is where good articles are placed on the market at first as a kind of sop, and then, when some demand has been produced, inferior qualities are substituted to fill the gap and to work off old stocks, that the damage is done. Confidence is lost, and when once lost in an article of consumption, and one especially which is not too firmly established, there is no hope whatever of regaining the lost stand. Indian tea, to take a firm hold, must be kept above a certain minimum standard in order that confidence may be gained; and when once gained, maintained. The substitution of inferior blends under the pressure of demand, for a better and wellknown quality, is a mistake; better to admit the temporary shortness of supply, and uphold the quality, than fill the order and lose the public confidence. Here in our midst, and at our very doors we have a market for the inferior qualities; therefore we do not require to lose by them or risk our foreign trade by introducing them among the better class brands. India can absorb all the cheap teas we can produce if only the taste for it can be cultivated among the poorer classes. There is no reason to doubt that it can be done; and the fact of the teas placed on the market for that class of trade being our low qualities, will not harm our better cla trade in the least, but will instead more surely come with their limited means. Therefore, in pushing ahead t opening of the markets in our own country we not only consequence supply a purer quality of tea to the forei consumer who can afford to pay a better price for a go articles, by preventing the temptation to work off inferi stocks to our future detriment, but we get rid of the b freight and prohibitive duties. France is a big countr and a country where the life of the peasantry is very qu and uneventful; such people would make good tea drinke Tea and "crackin" have ever gone well together, and whe ever the custom of the people is to sit together in pea and gossip, there the market for tea appears.

THE INDIAN TEA EXPANSION QUESTION.

[CONTRIBUTED].

The *Indian Planters' Gazette* has quite taken sides wi Mr. J. B. Leslie Rogers in his remarks on the exclusi methods adopted by the Indian Tea Expansion Commissi in introducing Indian-grown teas among the poorer class of natives. Mr. Rogers points out in a letter to that Journ that his offer to assist the Commission in their endeavours supplying information, and placing his own Agents, at th disposal; besides the further offer to establish a branch agen at Lahore which he calculated would control a great area country, was received in anything but an encouraging manne plainly illustrating to him that outsiders were unwelcor among the chosen few of Calcutta. "Had mine, and oth such offers, been entertained," says Mr. Rogers, "ma glaring blunders, and much waste of time would have be wholly avoided; and we would not still have been waiti for the exploiting scheme in a part of the country whi comprises the most extensive tea markets in all India.

The placing of the work in the hands of a private fir which should be solely carried through in the interests of t planters by the Expansion Commission does not seem t correct thing to do, and also calls for much comment fro Mr. Rogers. The scheme of the Association may fall throug and the planters be the losers, yet were it to fail in the han of the Commission trying its utmost to carry the work o on the best and most economical lines possible the disappoin ment and loss to the planters would not be felt so severely but if, on the other hand, the scheme should fall throug while in the hands of the "Private Firm" it is safe to s the planters will have lost to the gain to some extent others, whose chief interest in the movement is secured the almighty dollar, and not by a desire to advance the wo of the Indian Tea Association.

The attempt to cultivate the taste of the poorer classes natives for tea, will be accompanied with sufficient expens without there being the need for work undertaken by o body of men, with attendant expenses, to be handed ov again by them to a third party. If the Indian Tea Associ tion acting for the planters generally cannot appoint the own officers to carry out the work, then they should transf it to someone else who is capable of doing, and will do i not hand it to another body who will again pass it o Money, time, and opportunity are soon frittered away in su methods; and after a series of these passings on, and t consequent pickings attending each, the planters will fi the game scarce worth the candle.

THE I. T. A. SPECIAL COMMISSIONER IN PERSIA.

Mr. Foley, Special Commissioner for the Indian Tea Association has laid himself open to two grave charges which, if proved to be true, will place him in a very awkward position with the Association. The first appears to be a remarkable lack of veracity in a letter published by him in the *Civil and Military Gazette* of 31st July last, and the other is contained in the suggestion by the *Indian Gardening and Planting* of a symptom of incompetency for the task. Regarding the former, Mr. Foley is said to have stated that the Russian Vice-Consul at Seistan, Mr. A. Miller, told him that Cossacks to whom Mr. Foley had given some samples of tea, had declared they would never drink Russian tea again if they could get Assam. Mr. Miller denies this statement *in toto*, and further adds that what he did tell Mr. Foley was that, in his opinion, the Assam tea was much inferior to the worst qualities of Chinese teas drunk in Russia. Truly, a most contradictory statement. Mr. Miller again says he did not mention the opinion of the Cossacks,—which in reality was that they would never drink Assam tea again if even they could not get Russian. Mr. Miller is not alone in his contradiction of Mr. Foley's statements. Mr. Bradford Ouseley, the British Vice-Consul, has also seen fit to make some corrections. The "symptom" of incompetency is traceable in the face of Mr. Foley's submitting Assam teas in a country where that particular class is absolutely opposite to the requirement. There is nothing to hinder a man with the experience Mr. Foley should possess of tea-drinking peoples, from ascertaining the rend of taste in the matter of quality and blend, before submitting his own in competition. Tea drinkers no more than any other class of consumer are going to jump to extremes in their tastes all at once ; and however plucky it may be to try to revolutionise the taste of a community straight away, it is something very like a waste of time. Better to introducc a tea which will not show too marked a change at first, except it be for the better, and trust to time for the rest. Mr. Foley will probably make full explanation to the Indian Tea Association, which, in point of fact, he is bound to do in the face of such awkward charges ; and it is to be hoped the contending statements, of his own letter, and that of Mr. Miller, the Russian Vice-Consul, may be satisfactorily explained.

COFFEE.

We would call our readers' special attention to our market report on Coffee. It is not merely exceptionally interesting ; it is indeed of a somewhat startling character, and brings the news to the very hour at which the last mail left London. The market was quiet and dull until the day before the mail left, when Messrs. Johnston & Co. cabled an estimate of the new Brazil crop, 2,500,000 bags Rio, 4,500,000 bags Santos, and thus set things moving upwards. There appears to be little room for doubt that the next Brazilian crop will be a small one, but the present statistical position of coffee is so weak that this small crop can do little more than save the situation. Of course, prices will probably rise, they are likely to rise much more than the actual shortage of crop warrants, for speculators are keen upon seizing the opportunity for a "bull" movement. Still, unless there be a succession of short crops, the reaction must come. Here are a few figures. Stocks on 1*st November*—

	Europe. Tons.	United States. Tons.	Totals. Tons.
1897	150,060	44,117	194,767
1898	209,450	61,529	270,979
1899	230,350	70,058	300,408
1900	224,550	53,352	277,902
1901	242,200	107,882	350,082

Against this tremendous increase of stocks must be set a very satisfactory expansion of deliveries, which has been particularly remarkable in the United States. In the first ten months of 1897 American deliveries totalled 260,350 tons ; in the corresponding period of 1901, 324,172 tons. Joint European and American figures are as follows :—

	First 10 Months. Tons.
1897	642,420
1898	697,078
1899	725,207
1900	701,050
1901	777,442

The following figures are given by Messrs. Duuring & Zoon as showing consumption during the first *nine* months of the year :—

Consumption in January to September :

	1897. Tons.	1898. Tons.	1899. Tons.	1900. Tons.	1901. Tons.
In Germany	102,900	119,460	116,010	128.030	131,490
„ France	56,480	59,480	58,650	60,800	60,400
„ Austria Hungary ...	28,840	32,000	29,120	31,470	30,720
„ United Kingdom ...	9,320	9,480	9,840	10,520	12,640
„ Belgium	20,440	23,590	21,560	20,650	23,460
„ Switzerland ...	6,920	8,300	6,720	6,660	6,270
	224,900	252,310	241,900	258,130	264,980
„ U. States of N.-Amer...	230,760	262,000	271,820	233,290	279,470
	455,660	514,310	513,720	491,420	544,450

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

The General Committee of the Indian Tea Association, Calcutta, dated 21st November, 1901, have issued their Monthly Return of Sailings and Daily Customs Entries of Tea from Calcutta and Chittagong, and also a Return of Exports of Ceylon Tea for four years up to 4th November, 1901 :—

Exports of Indian Tea from Calcutta and Chittagong.

	1901. Lbs.	1900. Lbs.	1899. Lbs.
Sailings to Great Britain from Calcutta in October ...	21,634,823	27,587,403	21,692,976

* * *

The Indian Tea Association (Calcutta) has issued the following circular dated 19th November, 1901.

"Statistics of the production of Tea in India."

The General Committee of the Indian Tea Association have recently had their attention drawn to the paragraph headed "Export and Consumption" in the report entitled "Statistics of the production of tea in India," which is published annually by the Director-General of Statistics.

The paragraph contains a statement of the principal markets for Indian tea with the quantity exported to the various countries during each of the last five years. It was suggested to the Committee that this statement would be enhanced in value if it were so enlarged as to account for all the Indian tea exported, whether by sea or by land. This suggestion was made to the Director-General of Statistics, who has consented to carry it out in the future. The Director-General has also very kindly furnished the Committee with the annexed statement, which gives the total exports for each of the last five years.

* It is understood that the bulk of this tea consists of transhipments for the United States and Canada.

EXPORTS OF TEA (Indian Produce).

Assam Tea Soils.

A Circular of the same Association, dated 25th insta states :—

The General Committee direct me to inform you that the have now published a pamphlet by Mr. H. H. Mann entitl "The Tea soils of Assam and Tea manuring." In order meet the printing expenses of this pamphlet—which exten to 137 pages—the Committee have decided to make a char of 8 annas per copy to members of the Association; and Re.1 per copy to non-members. Copies may be obtain on application at this office. Early application is requeste

NOTES.

Amsterdam Bark Auctions. At the sale on 7th instant t unit worked out at 7·70 cents.

Sao Paulo (Brazil). The Secretary of Agriculture co templates the publication of an illu trated work on the State. This work is to be issued in t interest of immigration and will be widely distributed.

Tea and Coffee at Reval. Imports of Tea and Coffee into t Russian port of Reval during 19 were as follows :—Tea £5,774 ; Coffee £41,704. Both show a falling off of about 10% from 1899 figures.

Sicily's Imports. Coffee is chiefly imported in Sicily from Brazil ; Cacao, fro the United Kingdom ; Pepper, from the same country. T pepper, like the coffee, is described as chiefly Brazilian.

Planters' Association of Ceylon. We have to acknowledge recei of Proceedings of the Planters' Ass ciation of Ceylon, Kandy, for t year ending 17th February, 1901. The smallest massi volume is well arranged and deals with quite a multitude subjects.

* Included under British India, as the Exports were from the Briti port of Cochin.

Indian Tea Exports. The following are the figures of the tea exports from the Calcutta Customs:—Quantity exported to the United Kingdom during the first half of November, 11,647,660 lbs., against 9,953,994 lbs., last year. The total from the 1st April to the 15th November is 106,957,448 lbs., including Chittagong, against 115,288,093 lbs. last year.

Tea in the Duars. The *Englishman* learns that the rush of leaf on Duars gardens in the two months just past has been abnormal for the time of the year and it may be that the falling off in Duars invoices recently to hand is due to the difficulty in dealing with the unusual quantity of leaf. It is too late, perhaps fortunately, to increase the general output to any great extent.

Giant Cacao. Mr. C. W. Murray writes from Katugastota to the *Ceylon Observer*:—Mr. Holloway's "Largest cacao and pod ever seen" measured length 13 inches and girth 15½ inches, making a total of 28½ inches. I now send you a pod, length 12⅝ inches and girth 16⅜ inches—a total of 29 inches. Will you send this round the Fort until somebody can beat it?

Fruit Growing. Fruit growers, as a whole, will believe with Orchardist Williamson of the National Apple Shippers' Association, as noted by him in the *American Agriculturist*, that the cardinal principles leading to success are cultivation, fertilization, pruning, and spraying. But many must good-naturedly take issue with his assertion that the average farmer will not give due attention to these four particulars.

The Tea Outlook. Calcutta news states that telegraphic advices from Sylhet report a smart fall of rain, accompanied by the lowering of temperature, which should practically bring the tea season in that district to a close. The garden returns of tea made up to the 15th instant show a decrease of between 160,000 and 170,000 maunds, say thirteen to fourteen million pounds, compared with last season at the same date. This squares very well with anticipations and, with a somewhat brighter outlook for direct foreign tea exports, should sustain prices for the remainder of the season above the level of last year.

Tea in the U. S. The *American Grocer* of 23rd ultimo reports:—This market is very firm for Moyune greens and Pingsuey. The tone is better all along the line. To-day at noon the Montgomery Auction and Commission Company will hold their regular auction sale of teas. The offering comprises 4,190 packages, as follows: 278 packages Moyune, 201 boxes Pingsuey, 227 half-chests Japan, 65 half-chests Japan dust, 818 half-chests, and boxes Congou, 30 boxes scented Orange Pekoe, 257 packages India, Java, and Ceylon Pekoe, 545 half-chests Foochow, and 1,769 half-chests and boxes Formosa.

Another New Coffee. The following extract from a memo. received from the Royal Gardens, Kew, is of interest. It may be added that Trinidad plants of the species mentioned are established at the Experiment Station, St. Clair. They are six feet in height, and bearing their first crop. In appearance and habit, the plants much resemble Liberian coffee, but the berries are not yet sufficiently advanced to judge of their mature form or their quality:—"This is a new coffee from the Congo. It is said to be a free grower and to fruit freely. The berries are smaller than those of *C. liberica*, and are otherwise distinct. When I was at Gembloux with Professor Laurent, a few weeks ago, he prepared coffee from beans of *C. robusta* which differed in flavour and aroma from any coffee I had ever tasted, was decidedly palatable, and left a pleasant taste in the mouth. One gentleman who tasted it described its effect as that of a "palate cleanser." The general verdict was that this coffee was likely to become of considerable commercial value."

Coffee in London. The position has shown little alteration during the week though there have again been some fluctuations, says the *Produce Markets' Review* of 2nd November, on the terminal market. Owing to a continuance of heavy receipts in both Rio and Santos, it has been difficult to keep quotations up, especially as there have been no fresh cablegrams respecting the coming crop, and without such news and the assistance of outsiders, the tendency is to lower rates, as the trade generally still hold persistently off buying. Quotations close at about the same as a week ago, although in the meantime they have been 1s 6d higher. The London stock is gradually being reduced owing to unusually small arrivals, and in consequence the auctions are much smaller than is usual even at this time of year. What is offered is mostly from second-hand stocks, and of an undesirable quality, or last year's coffee which has lost colour, and is always difficult to sell. There is still some demand for fine Costa Rica and bold Mysore, and, as both crops are likely to be late, and the latter very small, the few lots offering have realised very full prices.

Brick Tea. It seems odd, with a Tea Association in Calcutta crying aloud for new markets, that the natives of Burma should have to go to Keng-hung to satisfy there wants: yet the last report of Mr. Beckett, the British Consul at Chieng-mai, the chief town in Northern Siam, states that this is done. The traders of Yunnan pass annually through Keng-hung, and load of up their animals with tea grown in that country. "The Keng-hung tea," says Mr. Beckett, "which is an important item in this caravan trade, is in circular bricks for the convenience of pack transport. The leaves are steamed in copper pots, a cloth being placed over the mouth of the latter; when sufficiently steamed the tea is turned out and squeezed in the cloth till it is fairly dry, when it is ready for sale. The price increases two to three fold between Keng-hung and Chieng-mai, and four to five fold by the time it reaches Moulmein. It is strong for European palates, but is liked by Burmese and Shans." Perhaps Mr. David Yule will see his way to experiment with a copper pot and a cloth. What is possible to the Yunnan trader and the Keng-hung grower, ought not to be impossible to the Calcutta merchant and the Assam planter.

Indian Tea in London. The larger quantity brought forward met with a good demand, and the greater portion was sold, says the *Produce Markets' Review* of November 2. Teas up to 7d have again favoured sellers, the improvement in values being ¼d per lb., and a considerable quantity of this and last season's teas both in first and second hands has been disposed of. The market closed steady at the advance, and the rise from the lowest point in the early part of the year now reaches 1½d to 2d. Any further

upward movement will probably curtail the consumption of the lower kinds, and it would appear advisable that the trade should exercise caution in their purchases of the common qualities at the present high prices. For the medium descriptions the market has been irregular, and in some cases easier, and the excellent value now offering should not be overlooked, as prices have reached a point when reasonable working stocks may be held. The finer sorts formed a liberal portion of the supply, and, although there is a fairly good demand, prices have a declining tendency. At the public sales 45,880 packages were offered, and 5,713 withdrawn, the latter being mainly disposed of since the auctions. The common teas were freely bid for at the advance noted above, while the other grades, although meeting with a steady inquiry, were less firm.

Coffee in the U. S.

The speculative activity in coffee continues, and prices advanced ½@1c. above last week's quotations, says the *American Grocer* of 23rd ultimo. The reports from Brazil continue unfavourable for the next crop. The first flowering was poor, and drought is reported. It is possible for great capitalists to control coffee, as easily as they can a billion-dollar Steel Trust or a Northern Pacific railway deal. Prices may go higher, and they may go lower just as quickly as they are put up. There is no danger of a short supply of coffee. There has been active spot trading, with sales of No. 7 Rio at 7c.; No. 5 Santos at 7¾c., and No. 4 Santos at 8¼c. Option trading has been heavy. The firm tone and advancing tendency of Brazil, notwithstanding heavy receipts, together with unfavourable reports of growing crop, caused active buying of milds, and large sales were made, principally of the lower and medium grades, at an advance of from ½@1c. per pound. Padang Interior, 16@19c., with fancy at 24@28c., and very fancy higher; good Cucuta, 8½c., washed at 8@11½c., and fancy lots 1@3c. higher; Mocha, 14@19c., and extra fine higher. Sales from October 4 to 18 include 35,427 bags Maracaibo, 4,898 bags Savanilla, 2,841 bags Mexican, and 1,594 bags Central American. No Bucaramanga here, and little Bogota—the latter 8½@13c. for invoices. Package coffee advanced to 10c. nett.

GENERAL ARTICLES.

CEYLON AND INDIAN TEA AT THE PARIS EXHIBITION.

THE LATEST, LAST, AND FINAL OFFICIAL REPORT.

(Extracts from the report on the Indian section by Mr. Benjamin J. Rose, Honorary Secretary, Indian and Ceylon Committee, Paris Universal Exhibition, 1900).

THE CEYLON SECTION.

A full official report on the work of the Ceylon section having been issued by Mr. W. E. Davidson, the Government Officer the executive charge of that section, it is only necessary to very briefly refer to Ceylon in this report.

By a friendly agreement with the Royal Commissioners for Ceylon, Sir Montague Ommanney and Sir Cecil C. Smith, the Indian Committee consented to place an area of 3,750 square feet of space in the Indian Pavilion at the disposal of the Ceylon Government for the display of exhibits from that Island, as well as a space of 3,065 square feet in the grounds for the erection of a tea house, in return for a contribution of £5,000 towards the cost of buildi etc The sum was later on reduced to £4,150 on the strong re sentations of Sir Montague Ommanney. The Indian Committee w pleased to be able to ultimately more than double the space gra ed to Ceylon without requiring any increase on the contribut paid by that Colony. The actual space granted was:—

	sq. ft.
In Indian Pavilion Ground Floor	4,766
Do. do. Gallery	3,715
Tea House and Grounds	5,728
Total ...	14.209

The arrangements made by the Government and Exhibit Committee in Ceylon, under the presidency of the Hon. Mr. F Ellis, for the participation of the Colony in the Paris Exhibitio 1900, were admirably planned and executed. The whole of the cases of exhibits were despatched from Ceylon in December, arrived in Paris in good time, and Mr Davidson, ably assisted Mrs. Davidson, was, by almost continuous work, under the m trying climatic conditions, able to have the whole of the exhi installed by the opening day.

The Ceylon exhibits comprised the great staple products of Island, tea, coffee, cocoa, cinchona, spices, plumbago, etc., as wel the largest and most comprehensive collection of gems and preci stones ever brought together. The most popular exhibit was large and well-executed Jungle Tróphy, in which among other stuf animals, were shown a full-sized elephant, a leopard, bears, d crocodiles, etc. This trophy was arranged by Mr. E. Gerrard London, and was a never ending source of pleasure to visitors.

THE CHARACTERISTIC CEYLON TEA HOUSE

in the grounds was largely patronised, and it occupied a better a far more prominent position than the Indian Tea Courts. Mr H. Renton, the special Ceylon Tea Representative at Pa reports that during the six months the Tea House was o 134,257 pots of tea and 12,000 lbs. of tea in small packets w sold, a result which Mr. Renton states exceeded all his expectati and he attributes this marked success to the following causes:—

(1) To the good quality of the articles, the tea being very ca fully made and then poured, after five minutes' infusion, into an u heated by hot water;

(2) To the Sinhalese boys, with their rapid and Ci waiting; and

(3) To the aid of lady friends, journalists, and others, who fr the first assisted in advertising the merits of the tea and t attractions of the Tea House.

The total number of exhibitors in the Ceylon Courts was 2 and the awards they agained were four Grand Prix, 19 G Medals, 60 Silver Medals, 61 Bronze Medals, and 47 Honoura mentions. The success of the Ceylon section was undoubte due to (*a*) the ample funds lavished upon it; and (*b*) to the sk and energy with which the Government and the Commercial Co munity of Ceylon took advantage of the unique opportun placed at their disposal by the Indian Committee for an effect advertisement of the products of the Island; and (*c*) to the st nuous exertions of the Royal Commissioners, Sir Montag Ommanney and Sir Cecil C. Smith, aided in Paris by the untiri zeal of Mr. W. E. Davidson, the Executive Secretary of the Ceyl section, and Sir William Mitchell and Mr. J. H. Renton, t Commercial representatives of Ceylon.

The cost of the Ceylon Courts was about £16,500, of which £2,0 was paid by the Ceylon Planters' Association and the remainder the Government.

THE BRITISH INDIAN TEA COURTS.

HOW THE WORK WAS DONE.

48, Rue du Faubourg St. Honoré,
PARIS, *November 29th*, 1900

I am in great hopes that this my final report of work done at t exhibition will satisfactorily show the Committee that the prospe of Indian tea in France are brighter now, even than they w when I wrote on the subject in September last, and that t Association will feel how justified they were in deciding to contin a business which has commence so well.

As the sale of tea in the cup was chiefly intended to serve a

means to popularise Indian tea in France, the Association will be pleased to note what progress was made in

THE SALE OF PACKET TEA.

At their stall in the exhibition which was opened on 13th June, the sales increased, *pari passu* in a manner which I think the Committee will consider highly satisfactory. A tabular statement will be given at end of this report. It will show that to date over 3,000 lbs. tea have been sold.

The liking for Indian tea undeniably increased during the run of the exhibition, but the increase of sales for the last few days is partly to be accounted for by the fact that purchasers had formed the idea that when the exhibition closed the price of tea would be raised. This opinion was held by the trade, but that such will not be the case is now fast becoming evident to all, and our hopes, therefore, are that we shall not lose much ground by reason of the exhibition now being closed. That the low price can and will be maintained is, of course, in consequence of the support we have received, and are to continue to receive, from the Association, and which I venture to say is of far better form than that of subsidising grocers, with whom, however, we shall have to reckon later on when Indian tea is more generally inquired for in France. Up to the present we have not been able to do very much with the trade itself, for the reason that our price does not permit us to give a discount anything approaching the customary one in France—*viz.*, 25 per cent.—but our hopes are that the present trade price may be modified if we can buy our tea through more direct channels than we do now.

INFUSION.

Owing, as I have already said, to their somewhat unexpected secluded situation, the "Indian Tea Courts" were not easily found by many chance visitors, or by those who came especially to visit them, but once they were found they became the resort of the best society, members of which have been known to say that the Indian Tea Courts were the most *chic* of any in the exhibition. Although in such "rushes" of business as occured in the Tea Courts it was utterly impossible to give entire satisfaction to every one, the complaints were very few indeed, and of rather a hypercritical kind. On the other hand, I am happy and content to mention that unstinted and warm praise was given by the *habitués* of the Courts, notably the Princess Malakoff (who for nine days took her seat regularly at four o'clock), the Duchess of Mecklenburg, Baron and Baroness Alphonse Rothschild, and the French Commissary-General. The Baron and Baroness were pleased to say that the Grand Prix should have been awarded the Association for the manner in which the tea was served, as well as for the goodness of the tea itself.

THE PRETTY BOXES OF SAMPLES

were much appreciated by all visitors, and happily by the French in particular. About 20,000 sample boxes were given away during the exhibition, and the balance of our stock will be distributed in connection with the work to be continued at the Rue du Faubourg St. Honoré and Rue d'Alger.

* * * * *

TO REVERT TO TEA.

By a calculation of mine that on an average no one person ordered less than 75 *centimes'* worth of tea in the cup, the 69,500 francs receipts represent 96,400 pots of tea (two cups in each; but that number is considerably under-estimated because so many people often ordered pots of tea for a smaller number than their party consisted of, and also extra cups for the rest. Tea for two and cups for three, four and five, was an order frequently executed. As also hot water in addition was served, sufficient for another two cups, the quantity of tea drunk by each person was, of course, much increased. I have not taken that into my calculations but only the number of pots of tea served. Putting it, however, at a reasonably low figure, I believe that not less than 50 to 60 people were every day served with extra cups without having to pay anything except a penny for the accommodation. At this rate, in the 210 days of the exhibition 10,000 cups of tea can be added to the 96,400 pots accounted for. The

FRENCH DO NOT ALWAYS TAKE THEIR TEA AS THE ENGLISH DO,

but they persevere in their attempt and evidently wish to like the beverage. Some, more often than not, dip their bread and better and even cake into the cup of tea they are drinking, and some novices seemed to consider the tea was a kind of grog to be mixed with the hot water, which they poured into the cup first. Others poured the tea into the sugar basin, half the contents of which they had previously eaten and then into the hot water jug and from that into the cup. Or, for another change, they would partially empty the milk jug and then pour the tea into that. Our American visitors liked a glass of iced water to drink either with their tea or after it. I do not mention these little peculiarities for the purpose of ridicule, but rather to show that tea-drinking in France is yet very much in its infancy.

THE EXPERT

was, of course, sometimes present in the Tea Courts, judging from the procedure of some of the visitors, who, to the great wonderment of the foreign waitresses, would turn the leaves out into the saucer or plate, examine them closely and then turn them back into the tea pot, and, having added more water, drink another cup of tea. [Here comes the portion we quoted on Monday, specially criticising Ceylon methods to secure public attention, to which we have directed the notice of the "Thirty Committee" and Mr. Renton. —Ed., *C. O.*]

The exhibit of tea in the Commercial Court attracted much attention, more particularly so as the tea sales stall was close to two of the show cases. The light, however, was not good, and although, with the object of showing up the tea better, I did not fill the globes more than three-quarters full, the exhibit at certain hours of the day was not so effective as could be desired. I may mention that the exhibit of very fine tip from some of the gardens, apart from all other merits, was most useful, in that many of the purchasers of our packets became disabused of the idea that tea with tip in it was not good, but contained some foreign matter. I do not know if it is within my province to allude to

THE "JUDGING,"

for, of course, the reputation of the gentlemen appointed by the British Commissioners as jurors is undisputed; but I may, I hope, without presumption, ask to be permitted to say that no one could have taken more pains than Mr. Wilson did to have the tea properly judged and the awards fairly given. All the samples, more than Rs.400, which were in the show cases were carefully examined in the leaf by all the jurors of class 59, who, however, not being experts in tea, often deferred their opinion to Mr. Wilson and that of Mr. Dérode, the French expert, on the jury, and I would particularly mention how hard Mr. Wilson fought to have awards given to individual gardens independently of the Grand Prix which was to be awarded to the Indian Tea Association for the collective exhibit and how, too, he won his point in spite of very great opposition offered seemingly only on technical grounds.

The gold medal for coffee was, by a clerical error, first of all awarded to Ceylon, but was ultimately given to the United Planters' Association of Southern India, after repeated and strenuous representations on my part. Summary of quantity and value of tea in packets sold at the exhibition and at Depôt, 3 Rue d'Alger, Paris:—

	K.	Frs.
From 17th to 30th April at Depôt	13·125	90·40
For May do	114·890	737·60
For June at Exhibition and do	388·010	2,704·60
For July do do	483·600	3,354·10
For August do do	492·375	3,208·60
For September do do	673·750	4,642·85
For October do do	1,021·575	7,117·25
For November (approximately) at Exhibition and Depôt	1,000·000	6,600·00
	4,187·325	28,455·40

(Equals 8,364 English lbs.)

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

TEA-SEED OIL AND OIL-CAKE.

Many attempts have been made by tea-planters to create a market for tea-seed and the fixed oil obtainable from it. Thus, in 1885 the seed was put upon the London market under the name of "taune" as an oil-seed, but although the material excited considerable interest, the prices obtainable were not sufficient to cover the cost of importation. These products have, at the instance of the Indian Tea Association, recently been examined by Mr. H. H. Mann, B.Sc. The seed had previously been examined by Mr. D. Hooper, who found that it contained 22·9 per cent. of a fixed oil, 9 per cent. of saponin, 8·5 per cent. of albuminoids, and 3.3 per cent. of mineral matter.

The fixed oil can be obtained by crushing the seed between hot rollers to the extent of about 26 per cent., but a better oil in smaller quantity is obtained by cold pressure. Produced in this manner it is a clear, light yellow, non-drying oil, possessing a more or less acrid taste. It is in common use among the Chinese for cooking purposes, and it might also be used in the tea districts of India in this way. It produces a soap of good quality which is hard and white, and this appears to be the most satisfactory use to which it could be applied. The saponin which was obtained from the seed by Mr. Hooper is a white amorphous substance, acrid in taste and leaving a tingling sensation in the throat. It is somewhat poisonous, and since it is entirely retained in the residue after the expression of the oil, it is obvious that the oil-cake cannot be used as a cattle food.

It only remains, therefore, to consider the value of the cake as a manure. In this respect it is distinctly inferior to most oil-cakes in content of nitrogen and phosphorus, as the following table shows :—

	Nitrogen (per cent.)	Phosphoric acid (per cent.)
Mustard cake	4 to 5	2 to 3
Linseed cake	4 to 5·5	1·5 to 3
Castor cake	5·5 to 6.5	2 to 3
Cotton cake	3 5 to 4·5	3 to 4
Tea-seed cake	1·92	·58

It will be seen that, as a manure, the cake produced by pressing tea-seed is of a very inferior character, and would hardly pay for carriage over very long distances, although it is quite good enough to use locally. Mr. Hooper has suggested, apparently because the cake is supposed to contain saponin, that a decoction of it might be used to spray plants for the destruction of insect pests, and this method of utilising the cake, Mr Mann thinks, might well be tried, although there are at present no data available with regard to the utility of saponin-containing plants for such a purpose.

It might be remarked, in conclusion, that three small samples of tea-seed oil were received in the Scientific Department of the Imperial Institute for examination some time ago, but the amount sent was too small to admit of a careful examination of the oil and the determination of its properties, and, so far, larger quantities have not been submitted.

INDIAN TEA IN LONDON.

The Regulation of Sales.

The following are the rules for the regulation of quanti of Indian tea to be offered weekly at Public auction :—

1. That public auctions of Indian tea be, as far as possibl distributed over ten months, August to May, inclusive, and th the months of June and July be not regulated for. Importers Indian tea will be at liberty, if they think fit, to sell in tho months.

2. That a Committee consisting of five brokers (three to be quorum), elected by the General Committee of the Tea Broker Association, advised by representatives of importers if necessar shall regulate the amount to be printed for sale each week, an shall be called the Regulating Committee; that the clerical wor entailed by these regulations shall be arranged for by the Broker Association, and the expense shall be borne proportionately by th Indian and Ceylon Associations.

3. That the importers instruct their brokers regarding tea ready for sale and which they desire to have sold on the firs opportunity.

Note.—All teas *ex* vessels which have been entered at the Custo House on or before the previous Monday shall be considere ready for sale.

4. That the brokers hand in to the Regulating Committee parti culars of all the teas that they are instructed by their merchant to print for the first opportunity.

5. That the closing time for these particulars be Thursda night at the office of the Tea Brokers' Association, Dunster House

6. That the Regulating Committee sit every Friday morning at 11-30 to consider the quantity it may be advisable to print fo the next opportunity, bearing in mind the total amount include in the particulars sent in by the brokers

Having arrived at this amount it will then be necessary to deter mine the quantity, if any, to be deducted *pro ratâ* from eac broker's particulars.

In considering the particular invoice or invoices to be so elimi nated the Committee will be guided by the date of the arrival o the ship, and by taking those invoices that most nearly approximat the quantity to be deducted.

The invoices which have been deducted to take precedence o particulars handed in the following week, if so desired.

All teas passed for sale must be printed as arranged withou deduction.

7. That the auctions be advertised for Mondays and Thursdays and the order of sales balloted for as heretofore.

TEA.

One of the Flesh-Reducers.

A Press report that the illness of Empress Auguste Victoria, of Germany, was the result of excessive tea drinking in an effort to reduce weight, and that Emperor William is also said to be suffering from tea drinking, led the New York *Journal* to procure an opinion from Dr. Cyrus Edson about excessive tea drinking, as follows: "I have never heard before of anyone who drank tea with the sole object of reducing flesh, but it is a matter of common knowledge among physicians that this is one of its properties.

"Not only is it the property of tea, but of all 'nerve excitants,' like tea. That is, it produces a nervousness that wears a person out.

"It may be readily imagined how anybody very anxious to reduce flesh would hail the result of tea drinking with joy and use it to excess, forgetting that it must practically produce a diseased condition before the fat begins to fall off.

"No doctor in the world would countenance this way of getting rid of adipose tissue.

"Sleeplessness is one of the results of nerve excitation, and will come from excessive use of coffee, as well as tea. Both drinks contain an alkaloid known respectively as caffeine and teaeine.

"The result of these on the system is to excite the nerve system so much that the brain cells, instead of becoming separated when sleep is desirable, adhere together, and celebration not only goes on, but is increased. Hence the sleeplessness results.

"The cell theory of sleep is a new one. According to it the cells of the brain are ordinarily in close contact, thus causing the communication of ideas, sentiments, etc. When sleep comes these cells contract and do not touch one another, and there is no mental activity in the wakeful sense."

Much the same result would follow the excessive use of bread, beefsteak, pumpkin pie, or any other article of food or drink. If people fail to exercise ordinary common sense in choosing a diet, they will pay the penalty in ill-health. Excessive mental work will produce indigestion, sleeplessness, and a chain of physical evils. Moderation in all things is the factor to promote health and happiness.

EAST INDIAN GINGER.

The fog, which has been hanging over the City for about a week with abnormal denseness, has greatly interfered with the transacting of business in most branches of the Mincing Lane trade, says the *London Commercial Record* of the 8th instant. The showing of goods advertised for public sale, their transport by road and water, have thereby greatly suffered, and an inactivity has been established in consequence, which would probably not have made its appearance had normal weather prevailed. Complaints have been freely made about this unexpected interference which, it seems, has been severe in some cases, but whatever effect the fog may have had on the trade of some articles, it certainly has not acted as a depressing agent in the case of ginger. On the contrary, it seems to have stimulated the energy and enterprise of the operators in this article, for we have this week seen a display of exceptional activity, which resulted in a further advance of prices The business has by no means been confined to private transactions, the public sales even experienced the novelty of a demand at full market values, 50s being paid for Cochin washed and 46s for Calicut rough unassorted, registering an advance in values of over 12s per cwt. in about six weeks. There was nobody who foresaw such a rise in so short a time. We all believed in higher prices when the unsatisfactory state of the monsoon predicted another small yield, but, in the face of the dragging market of Jamaica ginger which paralysed the efforts of bulls, nobody dared to hope for such a thorough change in the position of the article. But it was apparently a question of "following my leader." The postion of all descriptions of ginger was exceptionally strong owing to diminishing stocks and increasing trade demand, only Jamaica held back, but with the gradual decline of its supplies the interest in this ginger increased as well, until the boom in it has been as firmly established as in any of the other descriptions. There exists, therefore, no discord in the position of the article on this side of the ocean, and, as to India, no attempt at smashing our market may be feared, at any rate for some time to come. India is the producing country, it is therefore in the interest of planters that the high values established in Europe be maintained or even increased, for they will want fancy prices for the small yield they will gather, and the keener the competition between Europe, America, and India, the better they will be pleased. No wonder, therefore, that absurd values are asked for new crop ginger, values which are beyond us and which only India herself can afford to pay. Business will be practically confined to the turnover of our stocks, for very little of the new crop will find its way next year into our market, unless, indeed, crops should yield larger quantities than expected, or Europe should feel disposed to concede the famine prices demanded by Indian planters. There are, so far, no indications that either of the two events will take place.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

PRODUCE AND PLANTING.

The forthcoming exhibition at St. Petersburg should prove a very fine opportunity for developing the Russian taste for Indian and Ceylon tea, the trade in which is increasing. According to the report of the British Consul-General for Odessa it is likely that Indian and Ceylon teas will gradually make their way in the Russian market. At present, he mentions, they are merely required for mixing with China teas, and consequently only particular kinds find a market. Despite this, however, large quantities of the Indian and Ceylon product are already used for this purpose, and in view of this there seems no reason why the British article should not eventually capture the market. On the other hand, the Consul-General points out that should this desirable situation be attained, Indian producers must not expect to find Russia's tea consumption maintained, as the Ceylon and Indian teas being far stronger than Chinese, only half the quantity of the British grown leaf would be required. The same authority says that planters who wish to send tea to Russia would do well to employ a regular exporting house for the purpose and to recognise that uniformity of quality is highly desirable.

With reference to the private sales of tea, the following circular has been issued by the Federation of Grocers' Associations: "At the last meeting of the General Purposes Committee the private tea auctions which have been instituted were under discussion. The matter was brought before the Federation at the Brighton Conference, when a resolution disapproving of these sales as being contrary to the true spirit of public auctions and prejudicial to the interests of the retail distributor of tea was carried unanimously. The General Purposes Committee feel that it is a matter which should be brought to the attention of your Association at once, and that each member interested in tea should enter the strongest possible protest against the practice to the wholesale tea dealers with whom he does business. It would be a good plan if, on the receipt of this circular, your Association could get every one of its members to write forthwith to the firms with whom he is doing business, protesting against the secret tea auctions, and asking if they are supporting these sales. The Committee would be glad to hear the result of any such correspondence, and to assist your members in every possible way in opposing this unsatisfactory innovation. The Committee are informed that unless vigorous opposition is now

offered, the private auctions which have diminished in number will be very soon revived; therefore, prompt and determined action is necessary."

A Mexican living at Sierra Mojado claims to have discovered a process for extracting rubber from the hule plant, and a factory for this purpose has been established at San Luis Potosi. This plant is a species of sage-bush, with small leaves, which grows to a height of about three feet, and is found not only in Mexico, but also in Texas, Wyoming, and Nebraska. It grows in mountainous regions, and is said to contain 40 per cent. of rubber. While the cost of production is slight, however, the high cost of transport is a serious difficulty.—*H. and C. Mail.*

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—Extremes during the week ending October 11th were $11\frac{1}{4}$d.—$11\frac{9}{16}$d. for 90 d/s Bank paper and $11\frac{5}{16}$d—$11\frac{19}{32}$d for private. The average Bank 90 d/s counter-drawing rate for the week comes out at $11\frac{13}{32}$d., the corresponding sight rate being $11\frac{11}{32}$d. against 11 $\frac{25}{64}$d. the average sight rate of the *Camara Syndical.*

Coffee.—Entries at Rio and Santos during the week ending October 11th show a falling off of 36,904 bags when compared with the previous week, but were 159,655 bags greater than the corresponding week of 1900.

Aggregate entries for the crop at Rio and Santos to date are over 50 % or 2,203,590 bags greater than for the same period last year.

Embarques were a great deal smaller than the preceding week being 137,275 bags less and only 38,229 bags greater than the same week last year.

Stocks at Rio and Santos have increased 80,097 bags since last week and are 559,706 bags larger than on the corresponding date last year.

Sales during the week were very active, aggregating for Rio and Santos 104,000 bags above the previous week's total and 179,000 bags over those of the corresponding week last year.

JAVA AND SUMATRA COFFEE.

In a recent Sunday issue of the Philadelphia *Press* was an illustrated article on "Java Coffee," by Frank G. Carpenter, from which we take the following :

"The finest Sumatra coffee comes from the descendants of Arabian plants. It is very carefully cultivated and, after being picked, is sorted by hand. In the warehouses here I have seen scores of Javanese girls squatting down with basket trays of coffee in front of them. They handle almost every grain, putting the small ones into one place and the larger ones into another, sorting them as carefully as though they were grains of gold. As the coffee comes in it is of a rich olive-green color. It is left for some time on the floor of the warehouse, when it turns a light yellow. No coloring matter whatever is used, and the coffee is shipped as pure as it is on a plantation. The best varieties are sent to New York in sailing vessels which carry nothing else. The coffee steams and cures during the long three months' voyage, so much improving its flavor that sailing vessels are preferred to steamers. Coffee, like wine, improves with age, and up to a certain limit the older it is the better it is.

"Some of the private estates of Java are perhaps more scientifically managed than any other coffee lands of the world. At Sinagar a vast plantation near Buitenzorg everything connected with the curing of coffee is done by machinery. The trees are most carefully cultivated and the greatest care taken to produce fine fruit. I saw there one machine which cleans 20,000 pounds of coffee in a day. It reduces the dried pulp to a powder, but does not injure the grain. After this the coffee is further cleaned in a simple fanning mill. One of these machines costs about $320 in gold. I should think they would be of great value in Porto Rico.

"The private estates are rather increasing in number. It use to be that most of the crop came from the Government plantation whereas it is now from the private estates.

"The finest crop of the Java coffee, as we know it, is fro plants of Arabian descent. It was this variety that was affecte by the blight. The trees are small, slender, and delicate, comin originally from the hills of Yemen in Arabia from about the sam region as the Mocha coffee. In that country the Mocha coffee sti grows, but there is so little of it that it is safe to say that not grain of it comes to the United States. Twenty-five years ag about ten thousand tons of Mocha coffee were exported, but it said that the production is now not half that, and that it is a consumed in Mohammedan households. During my stay i Brazil I saw thousands of bags of coffee which I was told woul be sold as Mocha, and I visited warehouses where there wer sorting machines, in which the little round grains were picke out from the rest, to be put into bags and sold as Mocha.

"The coffee most raised in Java to-day is the Liberian coffe It is a coarse, large-grained variety. The beans are three tim as large as the real Mocha, and they have a different flavor. Th Liberian trees are stronger than any others. They have larg leaves and they grow thick and stout. They produce far mo than other varieties, and trees have been known to yield sixtee pounds. They will grow at a lower altitude, and in Liberia a found wild not far from the seashore. This tree has been taken Java, because it will withstand the blight and other parasite and also on account of its prolific bearing. The plantation on th Island of Jolo has nothing but Liberian trees, and I understan that there are large plantations of similar trees nearby in Borne I doubt whether this coffee would sell well in the United State although there is a good demand for it in Europe."

NEW MARKETS FOR BRITISH-GROWN TEAS.

The following letter has been sent by Messrs. Brook Bond & Co., Ltd., the well known firm of packet men the Manchester and many other papers :—

Many have wondered what effect the increased duty has h upon the consumption of tea at home. It is now seen from retur issued by the Board of Trade that the additional tax of 2d. per l imposed last year has slightly checked consumption. In 1899 t consumption of tea was 5·98 lbs. per head ; it has fallen to 5·91 lb

This has affected Indian and Ceylon planters, from whom w get our tea supplies. Already they were producing tea at a great rate than the normal consumption in the United Kingdom. Thi together with an over bountiful "flushing" season, and the arb trary fixing of the rupee value, has brought heavy losses on th tea planting industry. But such losses have only served to stim late the India Tea Growers' Association. With commendable ze they have turned their energies to seek outlets in new market and they have found one, they hope, in India itself.

To Englishmen it may seem odd that the land which produc tea should know little of its stimulative qualities. Yet that is s Many of the natives know tea only as a medicine, and not as beverage. The tea they have used has not been the clean, pur wholesome kind shipped to England, but decayed leaf mixed wit mud and sweepings.

It will be an excellent thing for the Indian people to acquire taste for the health-giving properties of good tea. When they c so, and drink it regularly, instead of "the fiery juice of the pal and unboiled tank water," there is reason to believe they wi become a hardier and a healthier nation.

The value of this outlet to the planters will be appreciated whe it is remembered that if only one-fourth of the natives become te drinkers, and drink 1 lb. per head per annum (one-sixth of th quantity consumed per head in the United Kingdom) more tha one-half the tea grown in India would be required for native u alone. So vast a trade is worth securing. But the taste of th native has yet to be educated to accept a clean, pure drink. Suc an education will take time. Meanwhile, the planters have decide to distribute one million pounds of tea, in free samples, among th natives for the purpose of stimulating this taste. The natives a not plutocrats, their income being in the region of 4d. per day, an their outlay for food usually one farthing at a time, so that th

sale of tea to them in packets will have to be in very minute quantities.

But it is not alone in India that new markets are being sought. Canada and the Northern States of America have hitherto drawn most of their supplies of green tea from China and Japan. British planters in India, however, are making efforts to capture a portion of this trade, and have begun to make a green tea specially for our kin in Canada and the States. One difficulty in deevloping this trade has been that many American people are indifferent to the flavour of tea, and are satisfied if what is served is a warm beverage. It is only a few who appreciate fine flavoured tea, such as that which, at least, two million of the British people drink daily!

A taste for tea is also fast increasing in Germany. At present it is confined to the wealthy classes of the community, for tea that is in any way agreeable costs in the Fatherland from 3s. to 9s. per pound. The same duty is charged as in England, namely, 6d. per lb.

France has developed a craze for "five o'clock" tea, and at the Cafe des Indes, in the Faubourg St. Honore, Colombin, in the Rue Cambon, and elsewhere, crowds of fashionables and Society butterflies regale themselves with afternoon tea. The Indian and Ceylon sections at the late Exhibition gave a distinct impetus to the trade in France.

So far as the United Kingdom is concerned tea has rarely stood at a lower price than it is to-day. It seems astonishing that really fine tea can be grown, plucked, manufactured, shipped, carried seven thousand miles, pay sixpence on every pound in duty, be blended, re-packed, distributed to retailers, and then sold to the public for so low a price as 1s. 6d. per lb. There is therefore, every inducement for the public to buy good tea. There is plenty of it, and they should "see that they get it."

WHAT PRODUCES THE FLAVOUR IN TEA.

AN INTERESTING INTERVIEW WITH MR. KELWAY BAMBER.

THE NEWTON "ENZYME" DISCOVERY DISCUSSED.

With reference to the discovery by Mr. Newton, of Darjeeling, of an *enzyme* or ferment other than that existing on tea which he has satisfied himself will produce flavour in tea, a representative of the *Times of Ceylon* has had an interview with Mr. M Kelway Bamber, M.R.A.C., M.R.A.S., F.C.S., the well-known Analytical Chemist, at The Laboratory, Hyde-Park Corner, with regard to Mr. Newton's discovery, the results of which are given below. The particulars which are as yet forthcoming regarding Mr. Newton's discovery, for the safeguarding of which he has apparently taken out patent rights, are as yet somewhat meagre, but Mr. Kelway Bamber was good enough to discuss in detail the general question of flavour in tea, and the tea *enzyme* upon the study of which, as stated by us some days ago, Mr. Bamber is engaged, as also is Mr. Mann, the well-known Indian expert. In answer to a question as to the nature of his enquiries on the subject, Mr. Bamber said

"I am personally engaged in trying to find out what the *enzyme* in tea does; whether the *enzyme* has anything to do with flavour, which has not yet been proved; and also to discover what are the causes which produce flavour in tea. If the latter can be discovered the natural sequel would be to try and aid in their development."

"What results have been so far brought out by scientific research or practical experience in these directions?"

"It is known that newly-pruned or heavily pruned up-country tea has little flavour, whereas after the same tea has run some time from pruning, it gets the flavour back again. If I only had the time, which I hope to have presently, to set up a laboratory on some estate, I would settle this question at all events. It means a thorough examination of innumerable sections microscopically and chemically, to ascertain the structure of, and the chemical constituents in, tea branches at different stages from pruning. At present, there is, roughly speaking, a period of about a year during which the pruned tree has little flavour. The examination I propose to make will, I hope, determine whether there is any constituent which can be added to the soil to hasten the return of flavour into the bush."

COLOUR AND STRENGTH AFFECTED RATHER THAN FLAVOUR.

"Do you yourself consider that the *enzyme* in the leaf has anything to do with the flavour of the tea?"

"I should not like to commit myself to a definite statement one way or another. There are, however, a few facts which help to show that the *enzyme* has more to do with the colour and strength of tea than with its flavour. Let us, for instance, take the case of green tea. The leaf is brought in direct from the field, it is immediately subjected to a temperature that would prevent the action of any *enzyme*, and yet the green tea will still have the distinctive flavour of the district. Again, such leaf will never assume the colour of black tea, which also, I think, goes to prove that the effect of the *enzyme* is upon colour and strength rather than upon flavour."

"Has China never been able to tell us what it is that gives the flavour to tea?"

"The Japanese have been studying tea scientifically for some time, but they do not seem to have discovered anything as regards a special ferment as yet. With regard to China tea, the process the green leaf undergoes in its early stages produces a result which supports my belief that if the *enzyme* has anything to do with the flavour of tea it effects this during growth or in the withering. Fortune, in his well-known book on the tea districts of China and India, says that the Chinese, in withering leaf for black tea, throw up and pat the leaves until they become soft and flaccid, when they are thrown into a heap and allowed to lie for about an hour or a little longer, by which time they have undergone a slight change in colour, are soft and moist, and have developed a fragrant smell From this it would appear that a slight bruising of the cells of the leaf was necessary to admit air for the production of this fragrant aroma either by direct oxidation of the essential oil, or through the medium of the *enzyme*."

"How then do you suggest that the tea gets its flavour?"

THE VIEWS OF PLANTERS INVITED.

"I think that probably it is due to the essential oil which is formed during slow growth. It would be very valuable if planters would give the benefit of their ideas with regard to these important questions—which would be the result of practical experience as to whether the *enzyme* could have any effect on the flavour. There is no doubt that the flavour in tea is most evident in the firing process when the oil has been exposed to a hot current of air. This would mean that the oil has probably undergone a slight amount of oxidation, and so developed an aroma which would not be noticeable in the unfired tea. As this takes place in hot air, it is possible a similar chemical action takes place during the oxidation process, possibly with the aid of the *enzyme* in question."

"You do not hold that bacteria produce flavour in tea?"

"Certainly not. It is quite certain that the bacteria do not produce flavour: numerous experiments have satisfactorily disposed of that idea."

"Then you are not, I presume in favour of introducing foreign bacteria or *enzymes* into tea under any circumstances?"

"I certainly do not like the idea of introducing foreign bacteria into tea; but this has not been suggested."

"I believe you hold that the loss of flavour in teas is probably due to the failure of certain soil constituents, do you not?"

"It is a well-known fact that the flavour is better on new clearings, and I find, from experiments I have made with innumerable speci-

mens of soil, that lack of flavour in tea is almost invariably accompanied by absence of lower oxide of iron from the soil. The flavour of tea largely governs its price in the market, as we all know. My experiments show that the soil on which six-penny teas are grown possesses no lower oxide of iron, that of seven-penny teas slight traces, that of eight-penny teas a fair quantity, whilst in teas of from nine-pence to a shilling there is always an abundant supply of lower oxide of iron. All new forest clearings have, moreover, far more of this lower oxide of iron than soils which have been opened up for some years."

"Cannot you replace this valuable constituent?"

THE ACTION OF OXIDE OF IRON.

"Certainly, but only at great expense, which renders it prohibitive. Planters have always held that iron in the soil has a great deal to do with the quality of tea. What we are trying to do, therefore, in regard to this important question of iron, is to prevent any further oxidation of iron in the soil by increasing the *humerous* or organic matter in the soil. We are endeavouring, as far as possible, to bring the soil back to its virgin condition."

"You are not prepared to say, I suppose, that the flavour of tea is entirely due to the presence of oxide of iron in the soil?"

"No, it is impossible to go so far as that. The absence of oxide of iron from the soil apparently affects the flavour of the tea; but the flavour might very well be due to certain conditions, which ensured the presence of the lower oxide of iron in the soil, or it is possible we may find that the presence of available iron is essential for the production of the *enzyme*, and that the *enzyme* is more active in consequence in young tea than in tea that has lost its flavour.

"To return to the question of Mr. Newton's discovery. He is supposed to have discovered an *enzyme*, other than the one to be found in the tea leaf. This he believes produces the same effect on flavour as does he says, the *enzyme* native to tea."

"Evidently Mr. Newton who has been closely studying the matter, believes that the flavour of tea is produced by the *enzyme*, and he has set himself to try and find a ferment elsewhere than in tea which produces the same effect. This he must apparently have been able to isolate and cultivate. Personally, I should conjecture that Mr. Newton proposes to apply the ferment which he isolates in some way or another during the manufacture of tea. One would hardly conceive it possible to go in for wholesale inoculation of the tea bushes."

"If Mr. Newton can give flavour to tea apart from the locality in which it is grown we are on the eve of a revolution in tea growing?"

"When you consider that the difference between the value of up-country and low-country tea is largely one of flavour, it is not difficult to conjure up in the mind what a halcyon period Mr. Newton's dream promises for the Kelani Valley for instance."

Mr. Bamber's smile as he spoke reassured me as to the impending horrible fate of the up-country planters. He, at all events, does not consider that science has yet discovered a means of making up-country tea in the Kelani Valley, and that epoch making discoveries in India need not absolutely fill with alarm the souls of the up-country planters.

A WALK AROUND THE LABORATORY.

Before leaving Mr. Kelway Bamber, I paid a visit around his laboratory, which is perfectly equipped in every way, and lacks in nothing to enable scientific research and experiment to be successfully and thoroughly carried out. A beautifully delicate instrument is a new polariscope which Mr. Bamber has just imported from Europe. The polariscope is used for estimating oils and sugars, for analysis and investigation work. The working laboratory is large enough for four or five men to work in with the greatest of comfort, and so replete with all necessaries that not infrequently the Peradeniya authorities from Kandy indent upon it, as they had done when I was there and carried off a bacteria apparatus, complete with incubators and sterilizers A considerable amount of assay work is done at The Laboratory. and Mr. Bamber could say a good deal if he liked about the anxiety of landed proprietors as to the auriferous nature of their estates. He showed me gold taken from a sample of the quartz of an up-country estate, which worked out on assay at an ounce of gold per ton! He also has fine specimens of lead from one or two districts in the low-country, and considers that many things are more improbable than that lead mining is a possible future industry for the island. An interesting apparatus was a chemical battery electrically depositing gold and other metals, and also a furna for assay work Distilling apparatus abounded—including a paratus for distilling in vacuum and otherwise—and shelves we covered with citronella and clove oil. Mr. Bamber thinks there a good deal to be done in the way of developing the essential o industry in Ceylon. At present citronella is practically the on one to which any attention is paid. As a matter of fa Mr. Bamber considers that there is endless room in Ceyl for the development of new products, and for their exportatin, su as gums, resins, scents, to mention but a few. I saw some bott of crude camphor, and here Mr. Bamber let me into a secret considers that there are possibilities of a new industry wi camphor, and as Government are very keen upon the possibili he has gone into the matter most carefully and embodied his vie in a lengthy report. The spectroscope is always interesting to t lay mind, and those which Mr. Bamber uses for testing for t presence of fine metals and for special forms of analysis are of t most modern character. There are two Sartorious scales—maste pieces of delicacy and accuracy—microscopes of various kin special specific gravity balances, special plates for counting ba teria, hydrometers for estimating the moisture in the air, etc., a thermomoters of all kinds. The Laboratory includes store-roo and sample-rooms which contain specimens of soil and rock fro practically every part of the island. Gradually Mr. Bamber working out the physical properties of the soils of the island: it a herculian task, involving endless labour, and when he finishes he may with pride regard it as his *magnum opus*. There is photographic dark-room fully equipped, for the camera has oft to be brought into requisition in The Laboratory to assist in i vestigation. Outside in the grounds Mr. Bamber is carrying o various little experiments with the citronella grass and the castor plant, endeavouring to destermine the most valuable in yield of t various specimens he is cultivating. There are again legumino plants of various kinds, some of which have been imported a others of which have been collected from various parts of t island: the object is to ascertain the amount of nitrogen they retu per acre, with the idea of their being used for manuring tea. T Laboratory is a place to visit, and, busy man as Mr. Kelw Bamber is, he always finds time to show the visitor arou Planters particularly have found out what an interesting pla The Laboratory is to visit, and they generally come away with fund of information gleaned from the enthusiastic chemist w labours there.

THE TEA INDUSTRY.

OULOOK FOR 1902-3.

(Special for the *Englisman*.)

The outlook for tea in 1902-3 is one which at the present ti is agitating the minds of brokers, proprietors, agents, a managers; in fact the subject, like the poor, is ever before the The shortage of the 1901-2 crop is at last becoming apparent the exports; and will be more and more accentuated as the da and months of the year (only two left) roll by; and although p phesy is a dangerous field we may take it that there will be sho age, and that too of a considerable number of million poun Exports by the Customs returns show some ten to eleven milli pounds short, and although the latter part of October was ve prolific of leaf, more so than usual, yet this only made up for t shortage of the first half of the month. Viewing the positi from a very fair, commonsense point of view, we would say that t deficiency between the outturn of this and last year had be slightly if anything reduced, but certainly not sufficient to in a way affect the strength of the statistical position According accounts published by the Indian Tea Association the shorta to the beginning of October reached as high a figure as seventeen million lbs. Now, suppose for the sake of being on the safe si we take it that this deficiency has been reduced two millions; still have a deficit of fifteen millions of pounds, which is about t ten per cent. reduction over which so much time and worry we spent in the beginning of the season. and which cost such a lot heart-burning at the time, but manifestly showed the want cohesion existent in tea circles. This was the more accentuated little later by the defection of Ceylon from taking part in a

attempt to regulate output, and plainly showed that the laws of supply and demand were the only safe factors to be calculated upon. Fortunately, nature stepped in, and affirmed this. Had it not done so, we doubt if teas would have been saleable at all by this time; and this brings us to the question of the 1902-3 crop.

Judging from the experience of former years, after scarcity comes plenty, and 1902 will most probably be a prolific year. What will the result be? Will planters, owners, and agents keep in memory the lesson of 1900 and 1901, or will they require a further practical lesson of adversity to bring it home? So far as human foresight can pretend to forecast, the market is bound to harden very considerably for the remainder of the season, more especially now that it has been wisely decided to regulate supplies in London. Will planters be content to pluck fine leaf and keep up the character of Indian tea? Will they be allowed to do so, in face of decent paying prices? That gardens are not making quantity has caused the present rise. This season so far, nature has stepped in, done the needful, and, in spite of planters, proprietors, agents, and directors a deficiency has been established, but this cannot be expected to follow as a normal sequence of nature. We do not believe for a moment the crisis is over, it will not be for a year or two more, and an approach to ruin has been effected in the case of a large number of gardens. It is the insane rush for wealth that is the cause of it all.

The point which we specially wish to draw attention to is that if instructions are already given out, what are these likely to be next year, when in all probability prices will open fairly firm at least, if not strong? Will the tea industry never learn a lesson? How often will it be pointed out that quality, not quantity, is wanted, and that those agents are directors who twit managers that so-and-so is making so many maunds per acre, while they are only doing so-and-so, are guiltly of a monomania, for suicide? What does it matter to an agent or director whether a planter manufactures his crop at three annas or four annas or five annas, so long as he gives good results? The end of this enormos cropping will be the abandonment of what we may term fair gardens and ruin to many, for only the very best ones will be able to emerge from the struggle, *i.e.*, unless wiser counsels than have hitherto obtained in tea are followed, and there is a strict adherence to fine quality in the leaf that is to be plucked, and to such orders as emanated from all agency house at the beginning of this year. Unless this is done, and we cannot too often refer to the subject, nor try to impress it too often, there will in the very near future be a collapse worse than any yet experience. Reckless plucking in 1902-3 will be attended by ruinous results, and we do trust that estimates will be framed on a scale of fine plucking, and keeping up the quality, the advantage of which this year is now only beginning to be felt. It will be a thousand pities if a course of free plucking is adopted next year, as it will completely wipe out the advantage gained this year, and which if lost, it will take years to pick up again. Mincing Lane after all is the true index of the market, and it is very coy. If deceived as it might be for a time by free plucking it would certainly retaliate, and no one could blame it; and everyone connected with tea must know that with be present surplus stock in London the consumer has the whip hand of the producer. The past season has helped the latter a great deal, and we trust the lesson will not be forgotten when the estimated output for 1902-3 sees the light of day.

DISTRICT ASSOCIATIONS.

INDIAN TEA ASSOCIATION.

Meeting in Calcutta.

The following is an abstract of the proceedings of a meeting of the General Committee of the Indian Tea Association held in Calcutta on the 19th November, when there were present Messrs. H. S. Ashton (*Chairman*), A. Tocher (*Vice-Chairman*), H. W. Boyd, D. A. Campbell, and Mr. R. R. Toynbee. Mr. D. Cruickshank, a former Vice-Chairman of the London Association, also attended by invitation.

Letters, dated the 24th October and the 1st November, from the Secretary, Indian Tea Association, London, were brought up for final consideration and disposal after circulation. The principal matters dealt with in these letters were:—Regulation of Sales—It was stated in the letter, dated the 24th October, that the steps taken in this connection had had a beneficial effect upon the market, and it was added that Ceylon was ready to support the regulation. Ocean Freights.—Mr. Tye stated in the letter, dated the 1st November, that the London Committee had again addressed the Calcutta Steam Conference upon this question.

The Committee decided to forward a copy of Messrs. Sanderson & Co.'s opinion to Messrs. Begg, Dunlop & Co.

Meeting of the London Branch.

A meeting of the Committee of the Indian Tea Association (London Branch) was held on the 29th ultimo. The chair was occupied by Mr. A. Bryans, and there were present Messrs. J S. Hulbert, G. Henderson, C. C. McLeod, J. N. Stuart, and A. G. Stanton. The minutes of the previous meeting having been read and confirmed, the Secretary read a letter, under date October 25th, from Messrs. Duncan Macneill & Co. Mr. Sinclair Macley was thereupon invited to become a member of the General Committee, and the Secretary was instructed to advise him of his election. The relations between the Chief Commissioner of Assam and the Indian Tea Association having been discussed, it was resolved to send the following telegram to the Private Secretary of His Excellency the Viceroy:—"Indian Tea Association (London) strongly but respectfully support the representations made by the Calcutta Association of September 27th on Assam labour report." The Secretary was instructed to forward a telegram to the Calcutta Association giving the text of the above telegram. The Secretary having read a letter from the Institute of London Underwriters with reference to the fraudulent sinking of country boats laden with tea in Cachar and Sylhet, it was decided to send a copy of the letter to Calcutta and advise the Association there of the suggestions put forward. The question of the compulsory cess was brought up, and the Secretary was instructed to circulate to members and proprietors generally copies of a memorial to the Viceroy with a covering letter asking if they were willing to support the same.

SOUTH MYSORE.

A special General Meeting of the South Mysore Planters' Association was held at the Munzerabad Club on November 7th. Present:—Messrs. J. G. H. Crawford (*President*), Anderson, C.I.E, Woods, Butcher, Robinson, Sladden, Park, Taylor, and Norton (*Honorary Secretary*).

Letters were read from several members regretting their inability to attend on account of unusually heavy rains.

1. The following motion was put at the request of the Chairman, U. P. A. S. I. (and his letter, as per circular 90, through the Secretary, U. P. A. S. I., read).

"That a general cess on coffee be levied in the following manner. The present curing charges amount to Rs.45 per ton in packed bags. That this be raised to Rs.45-4-0 and that Rs.1-4-0 of this be remitted to the Secretary, U. P. A. S. I., as the cess on coffee, the planter contributing Re.1 and the curer 4 annas per ton." Lost; all present voting against the motion. As amendments to the above were ruled out of order, a general discussion only took place, during which decided opinions were expressed in favour of a general cess being levied in a way to be settled hereafter, the Hon'ble Mr. Acworth's suggestion at the last General Meeting of the U. P. A. S. I. finding most favour.

Mr. Crawford, who attended the last U. P. A. S. I. meeting made the following remarks:—

Gentlemen,—You have all undoubtedly followed the proceedings of the U. P. A. S. I. in the *Mail*, so I need not recapitulate here further than to say, that as instructed by you, I voted against a cess being levied for pushing the sale of coffee and as others did the same, the subject fell through, to be brought up later on in a modified and, I might venture to say, improved, form by the Hon'ble Mr. Acworth. The latter commenced by saying that the advice he proposed tendering would be quite disinterested as he did not own a single coffee tree, etc., and from this went on to say that to

his thinking we had the machinery at our doors for the furthering of the sale of our produce both in India and elsewhere, in the U. C. G. Co. and suggested that as this was a going concern under able management with large supplies of coffee at its command it might pay the different Associations to purchase shares in the said Company from time to time as they found convenient, entering into an understanding with the Directors that they would do their utmost to increase the demand for East India coffee in India and later on at Home and on the Continent when funds permitted, and that French coffee when sold by them would be distinctly marked as such and as mixed with chicory. Members present at the meeting urged that the quantity of the latter should be stated, and this Mr. Hodgson promised to bring up at the next Board of Directors. The chief recommendations that this scheme offers appear to me to be the following: 1st, Feasibility, and that a business such as is required, managed on the most approved principles, is already formed, that we can take advantage of without running any particular risk, and so save ourselves and other Associations of S. India generally the grave risk and expense of starting a concern and maintaining travellers and agents, not to talk of stocks and buildings, to hold the latter, and a clerical staff for keeping the accounts, etc. The latter were some of the objections advanced when the subject was mooted here a year ago; they appear to me to have vanished, and it only remains with this and other Associations to see to what extent (when it can be afforded) we all are prepared to purchase shares in the U. C. G. Co., in doing which I need hardly point out that not only would the Company be assisted in pushing East India coffee, but that each Association would become a shareholder and not only have the advantage of drawing interest on the money invested, but eventually, if sufficient shares were held by the different Associations of S. India, to bring legitimate pressure to bear on the U. C. G. A. to abandon the sale of mixed coffees or to mark the percentage of adulterants used, as at present desired by all planters. I can say nothing further for this scheme than that to me it seems the most feasible one at present propounded; the risks are *nil* and the advantages obvious, they are mutual and not entirely one-sided, as some seem to think, and the plan has the merit of being an Association one pure and simple and not being in the least complicated like many others suggested, so I recommend it seriously to the attention of the members of the S. M. P. A.

I have now to allude to what is known as the Leeming system. While in Bangalore I had conversations with several gentlemen who had visited Scotforth and who seemed to think that there was a great deal in the idea and that planters in different parts of S. India should give it a fair trial. I am doing so myself and would suggest that others followed suit. I will say nothing further, as on the top of the report that appeared in *Planting Opinion* of the 10th of August, and later on Mr. Elder's lucid and exhaustive one on the same subject, my notes and additions on hearsay would be superfluous. Dr Lehmann's remarks (in the course of his lecture) about bone meal as a manure are worth bearing in mind. He practically said that this manure was not worth the money expended on it and planters could obtain a far better result from lime (air-slaked for preference) applied in quantities of one ton per acre. He also doubted the benefit derived from green manuring in the Malnâd *i.e*, planting leguminosæ between the rows and digging the same in.

2. RESOLVED.—That the members of the South Mysore Planters' Association desire to place on record an expression of their sincere sympathy with the Tea Planting community of Assam, and feel absolutely confident that the appeal to His Excellency the Viceroy will result in the prompt vindication of the essential and guiding principle, that the beneficial effect of all Government intervention between employers and their labourers is entirely dependent on the amount of tact, prudence, and impartiality exercised by the officials concerned.

3. The Honorary Secretary then called upon Mr. Graham Anderson to address the meeting in regard to a proposition which he had submitted at the last General Meeting held on the 6th of June last, copies of which had been freely circulated together with the minutes of the proceedings of that meeting at which many points had to be discussed confidentially, as they were connected with alterations and modifications of the draft of the new Labor Act submitted by the Government of Madras to the Supreme Government, the arrangement of which being a matter of collective importance could only be effected by the United Planters' Assoc tion of Southern India.

Mr. Anderson read a long and carefully prepared memorandu from which the following extracts are made:—

The proposition which stands in my name, and which we a about to discuss, must be considered as the supplement to t paper on the "State of the Coffee Market," which I read at t Annual Meeting of the United Planters' Association of Southe India in August, 1899.

I would solicit your attention to the printed proceedings of th meeting, as I specially desire to avoid any misconception relati to my action in this matter generally. If you will kindly refer pages 55 and 56 of the Book of Proceedings, you will see th although I endeavoured to obtain a resolution on the contents the paper I had read, and which I had prepared under the sancti of our Association, I was not successful, my representation bei simply recorded.

I venture to think that it is quite possible any casual observ might form the opinion that the views which I had expressed we not in accordance with those of the delegates present.

Now, this is an impression which I particularly desire to preve At the conclusion of my paper I summarized twelve distin subjects which I ventured to specify as affecting the interests our industry. The opinions expressed by the members prese were solely in regard to the first and most important, *viz.*, t alteration in the currency arrangements of the country.

As the mover of what I venture to consider one of the mo important resolutions which has ever been proposed by any indu trial Association in Mysore, I desire emphatically to state th the European planters are the most self-reliant body of men, a that the industry they have so long maintained in a flourishi condition is the most unselfish one in the Province, affordi constant congenial employment of many thousands of the labouri peasantry.

As you are all well aware, the affairs of our planting co munity have caused us considerable anxiety and vexation f some time past, and have been the subject of much deliberatio As a very old servant of this Association, I have frequently be asked as to what action it is possible for us all to take so as induce some improvement in a state of affairs which is gradual getting worse instead of better. We have before us two mo instructive examples of the wonderful results which have be secured by the thorough investigation of independent exper *viz.*, the Currency Commission and the Southern Indian Planter Enquiry Committee.

I cannot think how our reputation as a body of most self-relia men can, in any way, be compromised if, when our industry surrounded by difficulties which are relatively far greater tha those experienced by the Government of India in regard to t currency question, we venture to adopt a similar means of obtaini advice and assistance as to how our difficulties can possibly either mitigated or entirely removed.

I feel sure that the Government, with all the special faciliti for obtaining reliable advice which are at its disposal, will, once has comprehensively grasped all the details of the situatio cordially extend to us the benefit of its counsel and support.

Of one thing I feel sure, and that is that the prices ruling the London market this last year have had the effect of rousi planters to a full sense of their difficulties and responsibilitie Coffee planters have been nearly ruined this year at a time wh the middlemen are making fortunes by buying and selling the produce without conceding to the consumer any of the adva tages of the low level of wholesale prices.

Coffee planting in Mysore, like every other industry, requires f its maintenance and welfare the cordial assistance of the co mercial world, and the sympathetic support and co-operation Government in utilizing to the best advantage possible all existi means, institutions, and facilities for the removal or mitigation any disadvantages it may have to contend with.

It is extremely difficult to bring about an alteration in any usa or custom, especially when connected with a Government or co mercial system, and relief can only be hoped for by the caref avoidance of any disturbance of the necessary conditions of th alliance of interests upon which the success of all business tra actions must ever depend.

At no period of the existence of our industry has it ever be

beset by so many difficulties at one time, and when these are separately considered, many of them are at once recognized to be the usual factors which constitute industrial depression, but as our industry is a purely agricultural one, and as agricultural success is entirely dependent on propitious seasons, we, as planters, have all the difficulties, vexations, and losses consequent on abnormally unfortunate and unfavourable climatic conditions added to the usual group of untoward complications on which industrial depression invariably depends.

For the last five years India has been afflicted in a most unusually disastrous manner by faulty distribution of rainfall which by causing wholesale loss, failure or destruction of the crops of the country has induced widespread famine and scarcity which have caused Government immense trouble and expense, and have further necessitated other forms of assistance through the agency of what may be truly styled the most glorious and universal manifestation of private relief which the world has ever known.

To all of us it is a well known and thoroughly recognized fact that the same disastrously unfavourable climatic conditions which have caused all this ruin and destruction of life and property in vast areas of the Indian continent have not been wanting in their effects on our far more sensitive industry, and I may be permitted to point out that the planters have far greater difficulties to contend with than the ordinary agriculturist, the former having to cultivate and maintain trees which are established in the soil, while the latter has only to attend to cultivation during a few months of each year, and when he loses his crop prospects has no work to attend to, no expenses for upkeep to meet, while his land is benefited by the rest which a fallow induces. The planter has to continue the cultivation of his estates so as to secure the only chance of prospective good fortune, and any cessation in routine work or necessary expenditure is absolutely detrimental to his chances of future success.

All I wish to do is to dwell on the important influence which the matters specified by me have on our interests at the present moment, so that I may be able to explain what are the numerous confusing complications which have together caused so much vexation, loss, and anxiety to the coffee industry of Mysore.

I will now proceed to briefly touch upon some of the most important factors of the difficulties which sorround our industry.

His Excellency the Secretary of State for India in one of his masterly addresses has already given expression to his matured views as follows:—

"Does not India offer a wonderful field for private enterprise and the investment of private capital? In India there is a very great population, frugal, industrious, and orderly; a prolific soil, and a large amount of mineral wealth practically untouched. I will not take part in any controversy, but if, however it is done, people could be assured that they would get back from India the value of the money they had invested there, I believe it would effect an economic and industrial revolution in India."

These few well-chosen words accurately define the conditions on which the solution of the problems connected with the development of India's economic and industrial prosperity depends.

The free use of capital is indispensable to the development of India's resources, and anything which restrains or restricts its use is calculated inevitably to prove disastrous to its economic prosperity. You, I am sure, will readily agree that ever since our industry was established in Mysore, there have been most serious disadvantages always present which have caused immense discouragement to the free flow of capital into this province.

As a few examples of what I mean, let me remind you of our labour troubles, which have been constantly and vigorously represented for considerably over thirty years. All this time Ceylon has enjoyed the protection of a perfect labour ordinance, while we in Mysore have been losing lakhs of rupees annually in advances owing to the hedge of judge-made law which has grown up around Act XIII of 1859, which has generally been acknowledged to be utterly unsuitable for the purposes for which its provisions were specially extended to this province.

The entire absence of reciprocal arrangements in regard to Extradition is another most serious defect, as is emphatically explained by the following weighty opinion, recorded by the South of India Planters' Enquiry Committee:

"Mysore was under British administration when the planting industry developed * * * * * * and we considered that the paramount power is morally bound, especially in the case of Mysore, to extend to the planting industry in Native States as full a measure of its consideration and protection as in the case of British territory. This duty seems to us to rest on a three-fold basis,—the claims of the States concerned, the claims of the planters, and the necessity for removing from the recruiting tracts in British India a temptation which is found to be creating a special class of crime."

The adulteration of coffee still stands in the way of any chance of success following efforts of our own in regard to advertising or pushing our product, and has undoubtedly been the principal cause of intensifying the difficulties consequent on over-production in Brazil. I will merely say that recently I am led to believe that in regard to one improvement, namely, the prevention of adulteration of our coffee, the procedure recommended is for local Associations to move the Central Association which in its turn is to lay the matter before various Chambers of Commerce, who will draw the attention of Local Governments to the subject in view of their representing it to the Supreme Government, who will move the Secretary of State to take such action as may be necessary or possible.

Any one who has carefully perused the admirable proceedings of the recent meeting of the United Planters' Association of Southern India cannot but appreciate the good old saying that "unity is strength," and as a coffee planter myself I desire most emphatically to acknowledge that the strength of our position and of all representations have been vastly increased by the blending of tea and coffee interests, and especially by the counsel and advice of those who are engaged in conducting the sister industry.

The object of the proposition which I have had the honour to submit is simply to arrange for a Conference between one of the leading officers of the Mysore administration and the representatives of the Mysore planting community, in view of enlisting the friendly and general assistance of the Durbar in the organized endeavour to obtain some amelioration of the circumstances which place our industry at a disadvantage.

I beg to express a sincere hope that the United Planters' Association of Southern India may regard my action as an endeavour to strengthen its hands as the duly constituted medium for representing and arranging all matters of collective importance.

The interests of the Government of Mysore are so identical with those of the planters of this province that nothing but good can possibly result from soliciting advice and co-operation in regard to matters of vital importance to our industry.

Our present difficulties, as you are well aware, commenced in 1896 and 1897, when two very poor crops were produced, the heavy showers which fell in February, 1897, almost entirely preventing the formation of bud. This last season all of us have had very good crops, but not only have prices fallen to the lowest known level, but heavy rain again fell in February, and consequently the coming crop will be a record small one. I feel sure that the Government, with all the special facilities for obtaining reliable advice which are at its disposal, will, once it has comprehensively grasped all the details of the situation, cordially extend to us the benefit of its counsel and support.

The Government of Mysore has always extended its sympathy and support to local industries, and we as planters have on many occasions had the pleasurable duty of tendering our grateful acknowledgments for the benevolent attitude which the Durbar has persistently maintained in regard to all matters connected with our welfare. Our industry is now suffering from many untoward circumstances which we feel sure the Government will sincerely regret, as they are no fault of ours or of the Government.

I have the honour to make the following proposition:—

"The alarmingly depressed condition of the Planting industry in Mysore and the numerous confusing complications which have given rise thereto appear to be good and sufficient reason for respectfully representing to the Government of Mysore the propriety of deputing one of the leading officers of Government to visit the Planting districts with a view of making thorough investigations into the causes of the abnormal depression and advising the Government as to what measures are necessary or possible under the circumstances."

The President having called for a show of hands declared the proposition carried unanimously.

4. Mr. Crawford proposed that in co-operation with the North Mysore Planters' Association, this Association should depute two members (with Mr. Leeming's sanction) to report exhaustively on the "Leeming system."

Mr. Butcher seconded this and thought that this would be only satisfactory provided a man from each district was selected, as local conditions varied so much.

Mr. Park wanted to know what was to be gained after Mr. Elder's report, which appeared very satisfactory and full. Mr. Crawford explained that there was absolutely no wish to detract, in the slightest degree, from the merits of Mr. Elder's able report; but agreed with Mr. Butcher, that varying local conditions required an additional report. Carried *nem. con.*

Mr. Robinson called attention to the bad state of the road from Sucravasanti to Saklaspur parts of which were almost impossible for wheeled traffic during the monsoon.

5. Mr. Park proposed "that Messrs. Anderson, Woods, Sladden, and Butcher form a Sub-Committee to draw up a suitable address of welcome to the Maharajah of Mysore on his forthcoming visit to Saklaspur."

Seconded by Mr. Norton and carried.

A vote of thanks to the President closed the proceedings.

MARKET REPORT.

[*Per Mail advices of 8th November* 1901.]

COFFEE.

The London Commercial Record says:—Auctions have been held on only one day this week, when Santos was the only growth offered, which went off without alteration in value, further public sales being postponed owing to heavy fog, and there is consequently no business of interest to report, prices remaining nominally unchanged. The market for Brazil "futures" opened with a slight decline, but latterly a much stronger tone has prevailed, owing to further reports of drought, yesterday registering a rise of 2s 6d to 2s 9d on the day, and closing at the best point, on balance 2s to 2s 3d dearer on the week. Yesterday's sales include—December at 34s 9d to 36s 6d, March at 35s 9d to 37s 6d, May 36s 3d to 38s 1½d, and September at 37s 3d to 39s 3d. We quote:—

London ...	... Santos ...	Dec. delivery	...	35s 9d.
New York	... No. 7 Rio...	„	...	6·80 cents.
Hamburg...	... Santos ...	„	..	35¾ pf.
Havre ...	... Santos ...	„	...	43¾ francs.

Auctions to-day offered 6 casks 9 barrels 1 bag Ceylon, 1,378 bags East India, 52 bags Nyassaland, 39 bags Jamaica, 555 bags Costa Rica, 90 bags New Granada, 19 bags Vera Paz, 46 bags Mexican, 116 bags Salvador, 154 bags Ecuador, 147 bags Colombian, 39 bags Caracas, 38 bags Java, 279 bags Guatemala, 547 bags Rio, and 500 Santos. The sales went off with good competition at full rates.

A cable to hand yesterday from Messrs. E. Johnston & Co. says, "Prospects very bad indeed for the coming Rio as well as Santos crops. Estimate the former at 2,500,000 bags and latter at 4,500,000 bags."

Brazil futures have continued excited on strong improvement in the Continental markets on Messrs. E. Johnston's report, which we annex, and our market opened this morning at 1s 3d to 1s 6d advance, and we close at almost the highest of the day. May opened at 39s and has been done up to 39s 6d, March at 38s 7½d, September 40s 4½d up to 40s 7½d, December 37s 6d to 37s 10½d.

Receipts are moderate, *viz.*:—73,000 bags and pointers are still less, *viz.*: 40,000. Exchange remains unchanged at 11 29/32d.

In comparing Messrs. Johnston's estimate for the next crop with receipts already received from 1st July to present time, we would point out that so far this season we have received 8,250,000 bags which have nearly all gone into consumption, against their estimate of seven millions for both crops. If these figures are correct of course next year we must see prices many shillings dearer.

New York opens steady at 5 to 10 points advance.

Messrs. E. Johnston & Co. favor us with the following:—From Rio:—From information carefully gathered in all "districts, Rio flowering practically failure. In some districts owing to want of funds and low prices, labourers and Metayers abandoning land. From appearance at present new Rio crop estimated at about 2½ millions maximum. Owing to trees very bad condition, furth flowering unlikely."

From Santos:—"Trees very exhausted from old Santos crop, a damage to crop serious owing to drought. It has rained a lit recently, but not sufficient to be beneficial. Drought continue unless there is continued rain very soon, new crop estimated about 4½ millions."

At the Dutch Trading Co's public sale held in Amsterdam Tuesday, 19,699 bags 97 cases were offered; good ordinary Ja realised 38c against 35½c valuation, and 35c last sales held Rotterdam. The following are some of the particulars:—

Lying in Rotterdam.

No.	Bags.	Valued at. Cents.	Result. Cents.
1	339	36	39¼ @ 39
2	970	36	39½ „ 40
7	726	36	38 „ 38

Rio Exchange 11 29/32d, previous day 11 13/16d.

HAVRE, *November* 7.—Good average Santos November opene steady at 43½f. and closed steady at 43¾f., December opened at 43½ and closed at 43¾f., March opened at 44½f. and closed at 44¾f May opened at 45f. and closed at 45¼f., September opened at 46 and closed at 46¼f.

HAMBURG, *November* 7.—Good average Santos November opene steady at 34½pf. and closed steady at 35½pf., December opened a 35¼pf. and closed at 35¾pf., March opened at 36½pf. and closed a 37pf., May opened at 37¼pf. and closed at 37½pf., September opene at 38¼pf. and closed at 38½pf.

NEW YORK, *November* 7.—Closing prices of No. 7 Rio were a follow:—

	Nov.	Dec.	Jan.	Feb.	Ma
November 7...	6·75	6·80	6·90	7·00	7·1
November 6...	6·10	6·20	6·30	6·40	6·5

TEA.

Gloomy and foggy weather, both in town and many parts of th country, has interfered with the tasting and handling of tea durin the past few days, while the dull state of business throughout th provinces also helped to depress buyers and caused an easier ton generally.

Indian.—Offerings were heavier, *viz.*, 53,800 packages compared with 45,500 packages in the week before, and 43,900 packages for the corresponding period of 1900.

Quality was about maintained although in many of the better kinds any movement was towards an inferior article.

The immediate requirements of the trade having apparently been satisfied there was less disposition to follow the rise, and a tendency to lower quotations set in, medium grades especially Pekoes, perhaps showing this position more than others. As before, the chief demand ran on tea under 7d per lb., but it closes weaker to the extent of ¼d to ½d per lb., enquiry being no doubt somewhat narrowed, owing to the recent comparatively rapid advance which has taken place. Fine and finest broken were more enquired for and in most cases realised full rates.

For 40,200 packages on estate account 8d per lb. was obtained, contrasted with 7⅛d per lb. for 36,700 packages, and 8¾d per lb. for 6,900 packages in the two preceding seasons.

Ceylon.—Catalogues comprised only 12,500 packages opposed to 16,600 packages on the 29th ultimo, and 22,100 packages twelve months since.

This reduced quantity received diminished support, probably in consequence of the reasons given above, and considerable irregularity with easier rates for nearly all descriptions was noticeable. Leafy sorts under 7d per lb were usually ¼d to ½d per lb. down, while medium Pekoes and Orange Pekoes, unless suitable for outside quarters, mostly went in favor of buyers. Broken Pekoes and Broken Orange Pekoes were in smaller request, and a decline on previous quotations often had to be accepted to effect sales, though some of the choicest made good prices.

The average has fallen to 7⅞d per lb. On the 31st ultimo it was 8¼d per lb., and 7d per lb. a year ago.

Java.—Only 380 packages, 107 being of direct import, were submitted, and met with a quiet reception.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 5th November, 1901	2,965,236	lbs.
Do. do. 1900	2,721,708	,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	34,084	19,737	53,821
Ceylon	9,886	2,594	12,480
Java	121	260	381
Total ...	44,091	22,591	66,382

Also 2,036 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated November 8th, 1901, says:—

Quantity brought to Auction in London from 1st June to date.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	606,128	535,765	30,212
1900-1901	624,878	582,153	23,614

5,379 *pkgs.* Indian
3,115 ,, Ceylon
408 ,, Java
} Total 68,902 packages were offered in public auction this week.

Although figures published by the Tea Brokers' Association show that arrivals of Indian tea to the end of October slightly exceeded those of last year, this is due to the quicker despatch of tea from the gardens, and does not alter the fact that the Indian crop will undoubtedly be considerably below that of last season.

Owing to insufficient support from sellers, the Regulating Committee have been unable to efficiently control supplies. This week's unsatisfactory market is mainly attributable to this cause.

Importers should therefore in their own interests give more effectual support to the movement, in order to prevent a further fall in price.

Indian.—The heavy auction has resulted in a drop of fully ½d. per lb., with a general slackness in the bidding. The official wire gives shipments to U. K. for the second half of October as 11,250,000 lbs. (including 1,000,000 lbs. from Chittagong), against 15,200,000 lbs. last year, and the quantity from 1st April to 31st October as 95,251,800 lbs., against 105,350,000 lbs.

Week's av. of New Season's tea sold on Garden Account 1901, 40,208 pkgs., av. 7·90d. 1900, 36,641 pkgs., av. 6·87d.

New Season's tea sold on Garden Account 1st June to date 1901, 440,629 pkgs., av. 8·16d. 1900, 504,380 pkgs., av. 7·93d.

Ceylon.—The market was disappointing to sellers, a decline being frequently noticeable of ¼d. to ½d. per lb. The official telegram gives exports to U. K. during October as 9,000,000 lbs., against 7,500,000 lbs. in October, 1900, which makes the total exports from 1st January to end of October 88,750,000 lbs., against 94,000,000 lbs.; it estimates for the current month 8½ to 9 million lbs., against 9,250,000 lbs. actually shipped in November last year.

The quantity exported during October has doubtless contributed to influence buyers, through the apprehension that coarser plucking may be again adopted in Ceylon with heavy supplies in the near future, an event which would be most prejudicial to producers.

Average for week 7·85d., against 6·99d. same week 1900.

Ceylon tea sold on Garden Account 1st January to date, 985,455 pkgs., av. 6·77d. 1900, 1,070,456 pkgs., av. 7·17d.

Java.—Only 408 packages were brought forward, of which 107 were of direct import. In sympathy with other growths the market was somewhat lower.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4 7/32. Colombo 1/4¼.

COCOA.

No auctions were held on Tuesday last, and privately the market is very quiet, the sales reported including 400 bags Trinidad at 67s to 74s for middling to fine, and 150 bags Grenada at 64s 6d to 68s per cwt. for fine.

PEPPER.

Black.—The market is dull and value is easier. For arrival 50 tons Singapore January-March shipment (s.) have been sold at 6⅛d, and 25 tons October-December at 6d. On the spot small sales of fair Singapore have been made at 6d.

At public sale on Wednesday 324 bags Singapore retired at 6d to 6⅛d, 200 bags Penang at 5¾d to 5⅞d, and 125 bags Aleppy at 6⅛d, also 250 bags shells at 3d per lb.

White is firm, but only small sales reported. Sales of fair to good Singapore on spot at 9¼d to 9⅜d and Penang at 8¾d. For arrival nothing reported.

At auction on the 6th instant of 247 bags Singapore 60 bags sold at 9¾d for good. 94 bags Penang retired at 8⅞d per lb.

GINGER.

Cochin.—The good demand of the past few weeks continues unabated, and values have experienced a further upward movement. During the week about 1,750 packages have changed hands—good small cut and scraped at 57s 6d, small and ends rather roughly cut and scraped, part limed, at 55s, medium and small washed rough at 47s 6d to 50s, and rough Calicut sorts at 45s to 46s. Under the hammer 202 bags sold, out of 35 cases 302 bags offered—medium and small washed rough at 50s, and bright Calicut sorts at 46s per cwt. To-day Cochin ginger firm. Sales of medium Native cut at 69s, being dearer.

Japan has participated in the rise in value, and 62 bags medium and small plump limed were bought in at 45s—a bid of 43s 6d per cwt. being refused, but subsequently accepted.

Jamaica has further improved to the extent of 1s to 2s per cwt. 279 barrels mostly sold—middling to fair bright 51s to 55s, good common to fair 48s to 50s per cwt. Since the sales about 100 barrels have changed hands.

CINCHONA.

The N. V. Nederl. Veem. cinchona-bark department at Amsterdam reports the shipments from Java to Europe during October, 1901, at 1,577,000 Amsterdam lbs., against 1,100,000 in 1900, 959,000 in 1899, 969,000 in 1898, and 735,000 in 1897. The total shipments from January to October have been:—1901, 10,301,000 Amsterdam lbs.; 1900, 8,190,000 Amsterdam lbs.; 1899, 9,421,800 Amsterdam lbs.; 1898, 8,895,000 Amsterdam lbs.; 1897, 6,717,000 Amsterdam lbs.; 1896, 8,280,000 Amsterdam lbs. In auction a parcel of 38 bales, apparently mixed Huanoco and Guayaquil bark, was bought in at 7d per lb. A bid of 3¼d is to be submitted.

The Amsterdam Auctions:—The auctions of cinchona-bark held at Amsterdam, November 7, consisted of 8,980 bales and 325 cases, weighing 816,285 kilos, and containing 41,386 kilos. (1,448,510 oz.) quinine sulphate. The manufacturing bark contained an average percentage of 5·55 per cent. of quinine, against 5·47 per cent. at the October auction, and an average of 5·26 per cent. for the ten

auctions of 1900. Of the above 9,305 packages 8,550 sold at an average unit of 7·70c. per half-kilo, against 8 25c. paid at the auction on October 3. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 12,823 kilos.; the Brunswick factory, 7,167 kilos.; the Mannheim and Amsterdam factories, 7,302 kilos.; the Frankfort-on-Main and Stuttgart factories, 6,157 kilos.; and various buyers, 3,887 kilos. The prices paid for the manufacturing bark ranged from 2½c. to 88½c. per half-kilo., and druggists' bark from 13¼c to 47¾c.

QUININE.

Qunine is quiet in anticipation of the Amsterdam bark sale today. During the week a few sales of good German sulphate have been made on the spot at 1s 1¼d, and March at 1s 1½d per oz. Today there are sellers of December at 1s 1d and March at 1s 1¼d. The exports from Java during June amounted to 216 cases, 178 of which were shipped to New York, 24 to Holland, and 14 to Jap From January 1 to June 30 the shipments have been:—

	1901	1900	1899	1898
Cases	1,037	662	905	438

CARDAMOMS.

Cardamoms sold at very irregular prices, fine quality being n lected. The following prices were paid: Ceylon-Mysores, ex bold pale picked, 4s; medium to bold pale, 3s 6d; bold splits, 3s small splits, 1s 10d; very small ditto, 1s 4d; small to medi palish, 1s 10d to 1s 11d; ditto brownish, 1s 11d to 2s; small pali 1s 5d to 1s 7d; small brownish open, 1s 4d to 1s 5d; brown split, 1s 4d to 1s 6d; and seeds, 2s 2d to 2s 4d per lb. Telliche character, 1s 9d to 1s 10d. Ceylon-Malabar, small to medium bro 1s 4d to 1s 5d per lb; 22 cases sold without reserve at from 1s to 1s 8d per lb Mangalores were neglected at from 3s 2d to 3s for good to fine, and 2s 10d to 2s 11d for medium.

SUBSCRIPTION.—Payable in Advance: Yearly, Fifteen Rupees; Half-yearly, Eight Rupees; Quarterly, Five Rupees, and Monthly, Two Rupees, including postage. Single Copies, Eight Annas.

ADVERTISEMENTS.—The charge for line advertisements is As. 4 per line for the first; As. 3 for the second, and As. 2 for the third and succeeding insertions. Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 13th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad.

December 2nd.—Weather—East winds, cool days with rain. Last week gave us three very cold nights, on the 26th the register was near the freezing point; and on the 27th the register was 38°F. The rain is doing the coffee infinite harm, and spoiling the paddy that has been reaped, but not carted. *Crop*—This year's crop is a dismal failure, there is also a great deal of diseased and worthless crop, a large percentage of the beans being simply black and rotten. *Labour*—Abundant. *Health*—Plague rampant at Hassan, plague camps being erected all round.

Coorg.

Polli Betta, *4th December.*—*Weather*—Clear and very chill from 25th to 29th ultimo, cloudy on 30th November, with light rain that evening, and on the 1st instant. There is leaf disease, but coffee is able to withstand it as there is very little crop for it to mature. *Crop*—Picking is in full swing. As regards prospects for next season, they are very good. In spite of the late rains, the bud is not as forward as it was feared it would be, and the east wind will keep it in check. *Works*—Weeding and picking. *Interesting item*—The harvest festival of the Coorg is being celebrated now.

THE MANURING OF TEA.

Mr. Harold H. Mann, in his report on the tea soils of Assam, gives many highly useful hints to tea-growers in general. Dealing with manuring of tea crops, he not only gives it as his opinion that manuring is a most necessary thing, but states his reasons for it. That objections to the system are raised, Mr. Mann admits; but they are objections confined only to certain classes of planters. That manuring costs too much, is one of these reasons given against it; and the other, that when once begun, it becomes a necessity to

use manures continually. This, as Mr. MANN admits, is necessarily so to some extent; for when land has once begun to deteriorate, it will take a great deal of careful working, and judicious selection of manures, to bring it back to its original fertility. If youth or its nearest semblance is required, we must supply in some manner the lost vitality; which, though not actually rejuvenating the body, artificially provides the necessary power, and holds the functions in much longer and more vigorous use than would be the case were no stimulants applied. So then is it with the soil. To continue cropping a soil, without providing it in some measure with assimilative food, means, as any agriculturalist knows, a steady and certain deterioration of reproductive power. Certainly some soils stand the strain longer; but when they do finally go, the collapse is generally more complete, and the time for partial recuperation required much longer. That which applies to the agricultural farmer in the feeding of his land, certainly applies to the tea-grower. Manuring *is*, as a rule, dear; but the bulk of the manures should be drawn from the estate itself in some shape or form. Mr. MANN mentions, among others, bone manures, dung, pruning ashes, green manures; could anything be better or more inexpensive than these? If other manures are required merely to co-operate with and forward the fertilizing work of those already applied, it is easy enough then to make the outlay, satisfied that it is only as an extra, and not as the great bulk. But that the complaint against the necessity for continued manuring should be made is strange, considering that, unless a man have a very big area of virgin land to run at, it is better to work the already cultivated land while it can be made to pay, even with manuring, than to keep continually making inroads into fresh land. For a time such a system is bound to act, and then the reaction sets in; the whole of the available property has been worked over, and where is the virgin land as a stand-by? With the one system the land is worked, and manured until the utmost limit is reached, when it may be safely left to lie fallow or occasionally assisted in recuperation by green cropping, and the virgin lands gradually brought bit by bit under crop; and, on the other hand, manuring is not resorted to, but in its place a sweeping clearance of virgin land is made and the old cultivated lands left, absolutely without life-giving foods, to recover, how or when they can; useless when they should be full of vigour, and superseded by the fresh land which ought to have been left idle for many seasons to come. The great deterioration of the older parts of the Assam gardens, Mr. MANN is inclined to ascribe to this lack of fertilization, and it is reasonable to suppose that the conclusion is correct. Naturally, with time, the plant must deteriorate to a greater or lesser degree. Yet that deterioration can be arrested to a considerable extent by supplying plant foods most easily assimilated by the tea. This will naturally keep the bushes in better health and bearing, and make their cultivation a matter resulting in greater profit.

Another point made by Mr. MANN is the necessity for systematic pruning in whatever style the planter may consider best. Whatever else it be, let it be systematic. Let the plan of pruning each particular plot be laid out, and strictly adhered to, year by year; not, as he suggests is too often done, go round in December with the pruning knife, and there and then decide the year's pruning without reference to the past history of the bush; that is too casual a method for an industry in which the bushes represent b capital and stock-in-trade. The summary of the rep Mr. MANN gives, is as follows:—(1) The older parts of Assam gardens are gradually deteriorating in yield, an may be also in quality. (2) It is unsound to try and m up for this loss in yield by putting out new clearan (3) This deterioration can be largely stopped by the judici use of manures, principally obtained locally. (4) No n clearance should be put out unless the old area is produc its maximum, or it is intended to abandon an area equival to the new clearance. (5) A system should be laid down the future pruning and treatment of every plot on a gard only to be departed from for very trenchant reasons.

In addition to the fact of the immense advantages to reaped by planters from manuring in the ordinary mann Mr. MANN urges the advisability of rotation in the dressin This is a practice which has found the greatest favour in eyes of agricultural farmers, changing as it does the clas plant food, and introducing fresh elements into the soil wh act directly upon others which were only one class of dress used, would probably lie dormant and useless for an indefi period. Rotation of manures, like a rotation of crops, is most perfect mode of feeding the land, and should be adop by all up-to-date growers of whatever class of produce quires cultivation, and it is a point to be well conside where the best and cheapest methods are required to ra the standard of land, and of the crop produced from it.

THE DEATH OF MR. LIONEL DE NICEVILLE

Much regret will be felt in planting circles when news becomes generally known of the death of Mr. Nicev who joined the staff of the Imperial Museum in Calcutta the latter part of last year. He was appointed to cond economic research with special reference to insects injuri to agriculture; and was early employed in studying habits of the Indigo bug in India; after that again, bei deputed to gather facts regarding sugar-cane disease. Tr the services rendered to the planters by Mr. Niceville w so far not of any great value, yet he had been gradua collecting information which would soon have resulted much benefit. In the early part of next year, Mr. Nicevi had been in hopes of obtaining sanction to make a t through the planting districts of Southern India, and the s news of his untimely demise will be received with ke regret by Southern planters.

A TRANSITORY BOON.

Recent advices from Brazil reporting a break in t drought have completely upset the high prices maintain for coffee in London. The first telegrams caused a fall from 1/6 to 2s. per cwt., which, however, after cooler refl tion was recovered, as the news had not been confirm and might possibly have been exaggerated. Still, gr nervousness prevailed, and neither "bull" nor "bear" f any confidence in making a move. This highly unsatisfacto condition lasted for several days, when Santos again report satisfactory rain all over the country; expressing at t same time the opinion that the crop had benefited there This came as a fearful shock to the "bulls," and a rush realise was made. A drop of 2 per cent. was establish

within a few minutes of the receipt of the news, and although some of the more confident "bulls" endeavoured to inspire courage by purchasing, prices remained down, and the market consequently continued in a most unsettled state until next day when some renewed buying took place, thereby stimulating the market. There is little hope for a change until more explicit news is received; and in the meantime the majority of operators incline to the belief that the Santos crop will not exceed 4½ million bags, as in their opinion the fall is too late to materially benefit the crop. Coffee may go higher, still the shortage is not great enough to put coffee on a high basis of cost. The visible supply, added to one year's production is fully 9,000,000 to 10,0 0,000 bags more than the world's requirements. It is a big contract the "bulls" have undertaken to rush coffee up much beyond present quotations. They may of course succeed, but that a big advance can be held is doubtful, unless the damage to the next crop be great enough to amount to disaster.

The *American Grocer* of October 23rd says:—"The market is abundantly supplied with cable reports confirming earlier despatches of damage to the next crop. Undoubtedly some injury has been done, but the chances are that many of the reports are grossly exaggerated. Option trading continues active, and deliveries well ahead of last year."

BOARD OF TRADE RETURNS.

October 1901.

Tables showing the Imports, Consumption, and Exports of the undermentioned articles for the 10 months ending October 31 in the present and 2 previous years, compiled from the Board of Trade Returns, with stock in U K. on October 31 furnish us with the figures given below.

Coffee.—The statistical position has greatly improved, probably because retailers have resumed stockkeeping in lieu of buying from hand to mouth.

—		1899.	1900.	1901.
Import ...	cwts.	942,171	720,871	808,164
Home Consumption	,,	222,518	234,316	279,669
Export ...	,,	545,777	406,815	605,832
Stock ...	,,	443,000	360,000	297,000

Cocoa (Raw).—This trade continues to grow rapidly, and consumption develops even faster with increase on imports.

—		1899.	1900.	1901.
Imported ...	lbs.	40,076,127	46,743,198	46,356,870
Home Consumption.	,,	29,246,086	31,578,037	36,038,992
Export	,,	9,646,849	8,229,706	9,774,242
Stock	,,	16,149,000	17,972,000	17,335,000

Cocoa (Prepared).—Foreign makers hold them on in competition with British.

—		1899.	1900.	1901.
Imported ...	lbs.	4,160,864	6,147,410	6,980,324
Home Consumption	,,	4,458,874	5,439,735	6,414,276
Export	,,	639,032	769,787	699,516
Stock	,,	333,000	220,000	201,000

Tea.—Figures call for very little remark, beyond a reference to the steady expansion of consumption. Though stocks also are heavy the growth of demand is a sign of decided health.

—		1899.	1900.	1901.
Import ...	lbs.	224,377,839	226,490,224	228,934,771
Home Consumption..	,,	201,716,586	209,320,234	213,153.334
Export	,,	26,571,000	35,750,696	36,027,833
Stock	,,	93,657,000	96,992,000	100,408,000

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

Indian Tea Association.

The following letter has been addressed by the Secretary of the Indian Tea Association to the Secretary to the Government of India, Finance and Commerce Department.—I am directed by the General Committee of the Indian Tea Association to invite the attention of the Government of India to certain matters relating to the duty levied upon teas imported into the island of Ceylon. In the first place I am to state the facts concerning the duty. The most important fact is that it is a protective duty; for it is levied at a rate of 4 annas per pound on all imported teas of whatever origin. The consumption of tea in Ceylon is said to be, comparatively speaking, insignificant. It is unlikely therefore that the duty was imposed for the purpose of conserving the local market for the Ceylon planter. But in Colombo the blending of teas for exportation forms a considerable trade; and it was no doubt with the view of preventing the admixture of low grade China growths with the produce of the island that prohibitive taxation was determined upon.

It is, the General Committee think, only natural and right that Ceylon should have taken stringent measures in order to preserve the good reputation of its teas. But the duty has also the effect of practically excluding from the Colombo market all Indian teas which might otherwise be sold at the public auctions there. This exclusion does not closely concern the industry in Northern India; but it is of very great consequence to those gardens which are situated in the Madras Presidency. The cultivation and manufacture of tea in Travancore and the neighbouring districts are assuming large proportions. The extensions of the planted area during recent years have been considerable; and the annual production now amounts to about five-and-a-half, or six millions of pounds. But the planters labour under one great disadvantage: they are at present without an accessible market for their teas. Calcutta is too remote, and neither Bombay nor Madras, nor any of the smaller ports on the south coast are, or are likely to become, centres of the tea trade. The only market within easy reach of the grower in Southern India is Colombo; and that market he is practically debarred from using by reason of the protective duty.

The hardships which this barrier entails have been forcibly represented to the General Committee by the United Planters' Association and the other kindred Associations of Southern India. It has been pointed out in these representations that under existing conditions Indian teas cannot be sold in Colombo on an equality with Ceylon teas. The reason for this is that, being dutiable, they are stored in the Bonded

Warehouse, from which they cannot be removed, except on payment of the duty (which is equal to about 70 per cent. of their average value) or on their being shipped. This precludes their being used by dealers for blending purposes, and consequently has a distinctly adverse influence upon prices. The Ceylon planters are—as has been already conceded—doubtless right in taxing foreign teas, because they object to their own being mixed with inferior growths. But this objection does not apply to teas produced in Southern India, because these are equal in quality to ordinary Ceylon teas. For the protection of the latter, therefore, it is not nearly necessary to tax the former; and the Southern Indian Associations are very strongly of opinion that their produce should be admitted free into Ceylon.

As has been already stated, the duty does not to the same extent affect the Northern Indian industry, which this Association more especially represents. But in one respect it indirectly exercises a prejudicial influence upon the distribution of teas produced in the northern districts. This is particularly so in the case of teas destined for the Black Sea ports, where a great prospective market is believed to exist. There is no direct steamer service between Calcutta and Russian ports, and consequently transhipment at Colombo or elsewhere is unavoidable. Moreover, the Russian Government gives certain advantages in inland transit to goods landed from the steamers of Russian Volunteer Fleet trading between China and the Black Sea. And in order to put Indian tea on equal terms with that from China and Ceylon, it is therefore necessary that these steamers should be the carriers. It is almost needless to say that Colombo in view of its geographical position in relation to Calcutta is the natural point for transhipment. But the charges which are levied there are so heavy—because the tea has either to be stored in the Bonded Warehouse or to be cleared by payment of the duty—that it is less expensive to tranship at Singapore, notwithstanding the greater distance. If Colombo were a free port such a detour would be unnecessary, and much valuable time would be saved. In this respect therefore the existence of the duty is a distinct disadvantage to teas shipped from Calcutta.

It is the opinion of the General Committee—after having given the whole question their most attentive consideration—that the facts disclosed in the preceding paragraphs justify an application being made to Ceylon for the abolition of the duty, so far as Indian teas are concerned. They have consequently instructed me to enquire if the Government of India would be disposed to assist the Indian industry by preferring such a request to the Ceylon Government, or, if need be, to the Secretary of State for the Colonies. In making this enquiry the Committee have not omitted to take into account the possibility that the Colonial authorities, if they consent to admit Indian teas free, may be willing to do so only on the condition that the 5 per cent. duty now levied in India is likewise remitted in the case of Ceylon teas. So far as Indian growers are concerned the Committee are unacquainted with any reason why such a demand, if made, should not be complied with. And seeing that the revenue derived from this source cannot be large, they presume that the Government of India would raise no serious objection; for any readjustment of taxation which might be required would apparently be trifling and easily arranged.

The proposal which the Committee venture to advance is, therefore, of a two-fold nature. First, that an attempt should be made to induce the Ceylon Government to exempt Indian tea from the payment of duty; and secondly, that, if necessary Ceylon tea should be likewise exempt from the payment o duty in India. In the case of non-British teas the Committe consider that the existing duties should be maintained. I has been suggested that if the Ceylon Government definitel decline to make the concession asked for, the Governmen of India should seriously consider the advisability o enhancing the Indian duty to a protective rate. That th present position as between India and Ceylon is unfair to th former is evident. For while Indian tea—as has been show —is practically excluded from Colombo, Ceylon tea is bein sent to India in increasing quantities. The rate of duty i so low as to present no real obstacle to its importatio either for consumption in India or for re-exportation to Centra Asia.

The Indian tea industry have determined, as you ar doubtless aware, to make a strong effort to extend the con sumption of Indian tea in both the markets indicated especially that of India itself. And it does not seem fai that Ceylon should enjoy the benefit of developments effec ed at the cost of India, while itself retaining a practica embargo on Indian tea. Statements have also been made t the effect that the quality of a large portion of the tea no being imported from Ceylon is so inferior as to necessitate protective rate of duty. Upon this point the Committee ar at present unable to express an opinion, but they are distinctl opposed to the continuance of the inequality as betwee the two tariffs. The removal of this inequality would, the think, be best effected by abolishing both the duties i question. But if the Ceylon Government are not agreeabl to this being done, then the enhancement of the Indian ta would appear to be the only alternative.

NOTES.

The Ceylon Tea Duty. The General Committee has ap proved a draft of a letter to th Government of India regarding the import duty on tea i Ceylon, but the letter has not yet been published.

Amsterdam Cinchona-auctions. The ten cinchona-bark auctions t be held at Amsterdam in 1902 wi take place on the following dates:— January 23, February 27, April 3, May 15, June 19, Jul 27, August 28, October 2, November 6, December 11.

Java Cinchona. The island of Java, according t recently-published statistics, has no 25,000 acres devoted to the cultivation of cinchona, fro which quinine is made. The world's supply of this particula drug is almost entirely dependent upon the Java crop.

Indian Tea Cess. An Imperial Indian Tea Cess i imperative—of this there is no ques tion. We must have it. A memorial drawn up in Londo by the Indian Tea Association has been received in Calcutt for signature, and will doubtless gain the support of all con nected with tea out here.

A Green Tea Factory at Colombo. Messrs. Finlay, Muir & Co. ar constructing a Green Tea Factory a Colombo, adjoining the Stores, whic is now rapidly approaching completion. The size is 200 fe

by 40. The leaf has been partially treated up-country, and will be finished off at Colombo.

Regulation of Tea Supplies.

The *Investors' Review* of November 9th has the following regarding tea :—The arrangements for controlling the supplies coming into the market have, after all, broken down, as sellers have apparently not recognised that it would be to their own interest to support the Tea Association in its efforts to ensure more regularity.

Calcutta Tea Sales.

The tea sales on 29th ultimo totalled about 16,000 packages. The quality generally was poor and inferior tea was shown from all districts. There was a fair demand throughout the sale, but an easier tendency was noticeable, and the falling off in quality was plainly reflected in prices. The market may be quoted steady on all but medium whole leaf grades, which were lower, and firm for common tea.

India's Re-exports of Foreign Tea.

The following figures compare India's re-exports of imported teas during the first seven months of the official years referred to :—

	1899 00.	1900-01.	1901 02.
To Russia	3,769	19,652	40
,, Persia	3,89,530	6,82,001	4,33 693
,, Other Countries ...	62,032	1,16,768	1,00,928
	4,55,151	8,18,421	5,34,661

Green and Black Tea in the States.

A Mr. Fels, the representative of a large American tea firm, visited London during the last week in October and made enquiries about Ceylon teas. Unlike Mr. Larkin, Mr. Fels does not think at all highly of the prospects of green tea in the United States, and thinks that Ceylon planters should stick to black tea, the consumption of which he holds will increase considerably when the duty is reduced, which he anticipates will happen shortly.

Tea in New York.

A writer in the "Tea and Coffee Journal" of New York, referring to the tea market there, says : "Ceylon and India teas must increase in popularity, so far as black teas are concerned ; and from some experiments made this season in 'Ceylon Greens' it is not unlikely that before many years more they may occupy an important place in our tea distribution, and the jobber and retailer who fosters the trade in both of the tea products from India and Ceylon will not be the loser."

Lighter Load of Cocoa stolen.

Bahia has long had the name of being one of the worst of Brazilian ports for pilfering and robberies from merchandise in lighters awaiting shipment or in course of discharge. A few days ago, says the *Brazilian Review* of October 22, things reached a climax when an entire lighter load of cocoa—500 bags—awaiting shipment per R. M. S. *Thames*, disappeared, and the lighter was discovered scuttled and in a sinking condition. The cocoa belonged to Messrs. Blumler & Pauli, a German firm.

Shade or no Shade.

Thus a correspondent of *Central African Times* on the "no shade" question for coffee :—"I have experimented unostentatiously in every possible way with trees after they have given off their maiden crop ; manured, deep trenched, pruned, irrigated, and shaded, but the result—nothing but leaves. I am now convinced the only way to get regular crops is to open up plantations in sections of from 10 to 20 acres per annum ; run trees with all the blossom they can carry to maiden crop, take it off, and destroy all trees and plant up anew, keeping one section bearing each year. No shading ; no pruning."

Indian Tea Prospects.

The following telegram with reference to the tea crop in the various districts has been despatched by the General Committee of the Indian Tea Association here to the Committee of the Association in London, *viz.* :—Assam—Outturn last month about normal ; the season is practically closed. Cachar—Outturn last month good. Owing to late rain the season may be slightly prolonged. Deficiency slightly reduced. Sylhet—Outturn last month good. Owing to late rain the season may be slightly prolonged. Deficiency slightly reduced. Dooars and Terai—Outturn last month about normal. The season is practically closed.

Coffee in Singapore.

The following reaches us from Singapore :—Coffee is now on the up-grade and planters feel that the tide has now indeed turned. Six years ago Liberian coffee stood at $44·50, and prospects looked so brilliant that coffee planting seemed to be more profitable than gold mining. A rush for coffee land followed in the F. M. S. Prices began to fall in 1896 and receded to $40·50 in March, and to $32·50 at the end of that year. In December 1897, the quotation stood at $19·50. The price remained depressed with fluctuations. It touched $19 on the 5th January last and dropped to $16·25 early last month. Then it crept up to $20 this month. Further improvement is imminent.

Indian Tea Exports.

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association :—Quantity of tea entered for export to the United Kingdom for the second half of November, 1901 :—Calcutta, 10,337,055 lbs. ; for the second half of November, 1901, Chittagong, 1,376,000 lbs. ; quantity entered during the corresponding period last year, 10,121,840 lbs. ; total from the 1st April, 1901, to the 30th November, 1901, Calcutta, 108,683,473 lbs. ; total from the 1st April, 1901, to the 30th November, 1901, Chittagong, 9,987,030 lbs. ; total 118,670,503 lbs. ; total from the 1st April, 1900, to the 30th November, 1900, 125,409,933 lbs.

Brazilian Crop Prospects.

As regards the current opinions on the coming crop, it appears, says the *Brazilian Review* of 22nd October, that they must be taken *cum grano salis*. News received from a very good source informs that undoubtedly many districts in the State of São Paulo will be affected by the prolonged dearth, but that in compensation the crops in the States of Rio, Minas, and Espirito Santo are promising splendid results, and that the decrease in São Paulo will perhaps be partly made up by the increase in the other coffee producing districts. Anyhow, in our contemporary's informant's opinion, if there is going to be any decrease, it will be nowhere near that generally talked of.

India's Tea Exports.

The following are the official returns of Exports of Indian tea during the first seven months of each of the three official years, 1899-00, 1900-01, and 1901-02 :

	1899. lbs.	1900. lbs.	1901. lbs.
To United Kingdom ...	97,021,830	100,675,693	94,347,718
,, Russia	284,577	484,255	784,662
,, Canada	883,539	1,159,005	466,330
,, United States... ...	1,860,916	1,066,678	278,981
,, China	658,194	511,223	709,731
,, Persia	1,354,876	761,746	1,528,672
,, Turkey in Asia ...	1,432,291	1,911,292	1,774,208
,, Australia	5,452,808	7,028,453	5,330,322
,, Other Countries ...	1,202,328	1,525,197	1,119,611
Total ...	110,148,359	115,123,542	106,340,235

Green Tea Bulking at Calcutta.

Indian Gardening and Planting understands from the I. T. A. Committee minutes that there is on the *tapis* a project for establishing a sort of central Hong in Calcutta for equalising, sorting, and bulking green teas from various sources and placing them on the American market on the Chinese and Japanese system. It would be of great advantage to establish such a central factory in Calcutta, where half cured teas could be worked up into finished homogeneous breaks. The teas in bulk here, says our contemporary, could, in the final stages, be turned out far better under the eye of a practised expert for whom we would not have far to seek, and the result would be more satisfactory than that produced by many different planters making small breaks in the districts.

London Tea Market.

Special telegram dated 28th ultimo from Messrs. Gow, Wilson & Stanton to the Colombo papers reports that the competition for Ceylon tea is general and well distributed, while the market for medium liquoring Pekoes and Broken Pekoes, as well as that for Common Pekoes and Broken Pekoes, is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6d (same as last week), and the average price of Ceylon tea sold on garden account this week was 7¾d (⅛d up). The average of the corresponding week last year was 7½d. Reuter reports that common qualities of Ceylon tea are firm and others quiet. Fair Pekoe Souchongs are quoted at 6d (a ¼d up) and the average for the week is 7⅞d (also ¼d up). 17,000 packages of Ceylon tea were offered for sale and 15,000 were disposed of ; while of the 49,000 packages of Indian tea offered, only 41,000 found purchasers, at an average of 7⅝d per lb. (⅛d below last week).

Consumption of Quinine.

Messrs. C., M. & C. Woodhouse remark as follows :—" We have already called attention to the fact that the consumption of quinine has recently shown a marked increase in many countries. During the past month there has been a strong demand for quinine from consumers, and after the London public sales of bark on October 22nd, the German manufacturers raised their quotations ½d per oz. (to 1s 2½d) although it was known the November auctions of bark would be larger than usual. The London stocks of quinine were also reduced during October to the extent of 80,000 ozs , and the general tendency of the market was upwards. The very heavy exports of bark from Java for October have however given, at any rate for a time, an effectual check to the upward movement. At the Dutch sales on 7th instant (the larg ever held), the result was better than might have b expected, but the next day the German manufactur reduced their quotations ½d per oz. to 1s 2d, and following day the American manufacturers lowered th prices 2 cents, or 1d per oz., equivalent to 1s 1½d per So much depends at present on the exports of bark fr Java, that the bi-monthly shipments will be watched possible with greater interest than ever, and it is evident t the Java planters have the future of the market in th hands. The latest quotations for quinine in the Lond market are : spot and December 12¾d, March 1s 1⅛d per o

GENERAL ARTICLES.

CEYLON AND INDIAN GREEN TEAS IN CANAD

The business that is being done in Canada just now in Indi and Ceylon green teas is not satisfactory. The package tea-hou are steadily taking them, but very few transactions are report on wholesale account. There is an inquiry for them from t wholesale houses, and some samples are being shown, but the 'di culty is in regard to price. During the Summer months t quantity of Ceylon green consigned to this market was rath larger than the requirements demanded The result was. as always inevitably is, that sales were made at prices that were ar thing put remunerative. Now, when those in the trade are op to buy, they want to do so at the old figures, which the holde declare they cannot afford to accept. The difference in the views buyers and sellers is from 2 to 3 cents per lb. Judging from t private advices from Colombo, to which we have recently h access, the growers there are anything but satisfied with the pri they have received. One of the largest firms in Colombo writes representative in Toronto that the prices at which he has be selling green teas are lower by ¾ to 1d. than can be got at t auctions in Colombo for black teas from the same gardens. T firm in question declares that unless buyers in Canada increa their limits or the Ceylon Government increases the bonus, whi is 80-100 of 1d. per lb., the growers will have to stop making gre tea. It is no doubt most discouraging to sell tea at a loss : but cannot but think that those engaged in making green teas Ceylon are disposed to evince discouragement rather early in t campaign. The position that black teas of Ceylon and Indi growth occupy in the world to-day was obtained only after t expenditure of much effort, time, and money. It may not requ as much effort, time, and money to introduce and establish up the market the green description as it did the black, simp because India and Ceylon are now well known as tea-produci countries. But the growers and dealers in India and Ceyl cannot expect that they are going to accomplish with green tea a few months what has taken them several years to accomplish regard to black teas.—*Canadian Grocer.*

THE ROMANCE OF PEPPER.

The important part which the gourmet has played in mouldi the history of the world has never been adequately described, b ve can trace clearly his influence in the recorded annals of bla pepper, that commonest yet most delightful of condiments. V make little doubt that many bags of pepper were found in th very great store of spices which the Queen of Sheba brought Solomon, and of which the ancient chronicler wrote with ingenuo regret: "There came no more such abundance of spices as the which the Queen of Sheba gave to King Solomon." We know th a few hundredweights of pepper aided materially in the ransom the Eternal City from the hordes of Goths. Alaric and captains were gourmets who appreciated at its true worth t most finely flavoured of all spices. One of the great inducemer that started Vasco da Gama on that long voyage that ended Calicut in Malabar, was the hope of cheapening the price pepper. And is it not on record that the Dutch having raised t

price of pepper against England from three shillings to eight shillings a pound, the merchants of London held a meeting at Founders' Hall, with the Lord Mayor in the chair, on the 22nd September, 1599, and agreed to found an Association for trading directly with India? Such was the first beginning of the old John Company. But what London citizen of the twentieth century, ever dreams as he shakes the pepper-pot over the matutinal egg that he is handling the motive-power which set a-going the enterprise that at the last won for England her Empire in the Orient.

It was more through good luck than by design that da Gama steered his ships to the very home of the pepper vine. Pepper from time immemorial has been the mainstay of Malabar. For centuries that strip of prosperity, lying between the Western Ghâts and the Indian Ocean enjoyed the monopoly of the world. But as Arabia gave the coffee bush to Southern India, so did Southern India bestow on the sacred isle of Lanka and on the isles that stud the ocean farther east the precious gift of the pepper vine Penang, Java, Sumatra, and Borneo all export the spice. And the coming of the vine gave new wealth to the thrifty tiller of those volcanic soils, and added a new charm to the luxurian landscape. For the pepper vine is a plant of singular grace Its cradle is among the rocks that crouch in the everlasting gloom of Malabar's primeval forests. Is it not fit that this spice which has spurred men on to deeds of splendid daring should have its home in beautiful perilous valleys? For the valleys of Malabar are perilous, not so much because they harbour tiger and leopard and death-dealing snakes, as because malaria ever breathes from them fell miasms. A drink of pellucid water from a rippling mountain stream, and within three days the strongest frame shivers in the grip of ghastly ague. And very beautiful are the valleys clothed in the perennial verdure of the ancient trees. On the hill-tops the sun beats down with untempered fury. Shrill cicadas pierce the ear. Kites keen wearily as they circle beneath the cloudless blue. The red earth gives back the heat of heaven, and adds to it chocking dust. Down the hill strides the tired traveller and enters the forest. Here is shade; here is silence; here is rest. As one passes from a noisy Continental market-place into the quiet of an historic cathedral, so is the contrast between hill and valley in Malabar Creepers bind tree to tree, and over the huge boulders that rise out of the deep black leaf mould, softer than any Turkey carpet, are other creepers of delicate stem and thin leaf, shaped as the ivy. These rock creepers are pepper.

And one will find them growing up the rough bark of the more patriarchal trees. The fruit, before it ripens, resembles, not a little, bunches of unripe white currents, save that each berry is set closer to the parent stem.

The industrious husbandman of Malabar at a very early date discovered the commercial value of this jungle fruit, and he transferred the vine to his orchard, and by cultivation increased its yield and quality of its produce. Malabar is a land of a thousand hills, small hills uprising nearer the coast from alluvial flats cultivated with rice. Round the base of the hills are orchards, each house standing in a separate orchard. Here grow cocoanut palms and areca palms, also the mango, the jâk fruit-tree, and the nux vomica tree. To the three latter the pepper vine is wedded, but best of all it loves the mango tree, covering from stem to topmost bough mighty giants of this species. Happy is the man with such a tree and such a vine beside his palm-thatched cottage, he draws from it an annual income that is accounted wealth in that fortunate land of few wants and simple tastes. As time went on and progressive ideas ensued, the slopes of waste hills were specially devoted to pepper vineyards. First it was needful to find supports for the vine. The Erythrina Indica, or coral tree, so-called from the peculiar pinkness of its blossom, is a rapidly growing tree. In the hot moist climate of this "hilly country" beside the sea (Malabar means nothing more or less than "hilly country") the Erythrina can be readily propagated from live stakes, eight to ten feet in length. These stakes are set in the ground ten feet apart, and in the same year pepper cuttings are planted at their base. Four years later, when the vine begins to bear, the standard will have attained a height of twelve to fifteen feet. The leaves of the Erythrina are of the palest green, contrasting well with the dark verdure of the pepper. A lovely sight is a Malabar vineyard at maturity. The vines, clustering round the trees, form solid columns, three feet or more in diameter, and they appear to support a canopy of emerald silk, flecked by vivid sunlight. In March and April the Erythrina sheds its leaves and wears a coronet of coral flowers. By that time the crop has been picked, and the fierce heat of this Malabar midsummer prunes the vine so effectually that little work is left for the knife of the agriculturist. The crop is picked when the berries are turning from yellow into red. Purple is the sign of dead ripeners, but if allowed to pass into this colour, many drop and are lost while being gathered. A delightfully primitive ladder is used to gather the crop from lofty trees. It is nothing more than a long single bamboo, from which the lateral branches have been lopped some six inches from the stem, thus leaving horizontal pegs at regular intervals on each side. The bamboo is laid against the tree, and up these pegs climbs the pepper-picker with the agility of a sailor in the rigging.

Peter Piper, who is reputed to have picked a peck of pepper, was probably not aware that he bore the classical names of the pepper which he possibly picked. For "piper nigrum" is the correct botanical term for black pepper. Now Peter means rock, and the finest quality of Malabar pepper—that very variety which has gained for Malabar its pre-eminence in the spice markets of the world—is known locally as "kulloo vully," signifying rock vine The reason why it was so called is an open question. Some hold it came from the particular love of this kind of vine for rocks, others that it had reference to the weight and solidity of the fruit. The latter is the more usually accepted derivation. A very favourite form of pickle in Malabar is made from bunches of pepper, picked green, and preserved in vinegar. They possess all the delicate aroma of a peppercorn, but are not so hot that they cannot be enjoyed with comfort by even the most soft-mouthed gourmet. Curried prawns or oysters eaten with pickled pepper is an experience the memory of which does not quickly fade from a fastidious palate. —*The Globe.*

COOLY SANITATION.

Remarks of a Ceylon Planter.

The following paper on the above subject was read by Mr. MacLure at the Maskeliya Planters' Association meeting on Wednesday, 20th November :—

"This is a question the importance of which is not sufficiently realised by a good many people.

We can all remember the terrible death-rate through disease among our troops at one period of the war in South Africa. In response to the popular outcry, a Commission was appointed by Government to inquire into the working of the hospitals at the front. The results of the investigations of the Commission went to show that a large proportion of the deaths must have been due to the neglect of proper sanitary precautions.

A LESSON FROM SOUTH AFRICA.

"I think we might take this lesson home to ourselves. This and last year there has been a great deal of sickness amongst our coolies, and the death-rate has been higher than usual, and we have all been rather alarmed at the prevalence in our midst of enteric fever, and epidemic which, medical men tell us, is directly due to insanitary conditions of some sort. This abnormal sickness is no doubt due in a great measure to the seasons, but perhaps some of it is also due to the neglect of proper sanitary precautions in cooly lines. Anyhow we should see to it that everything is done that can be done to keep lines and surroundings clean, and prevent all sickness that is preventable, for our own sakes as well as the coolies. Having to pass and re-pass dirty lines might very easily affect Superintendents' healths too. There may be contamination in the atmosphere as well as in water or milk.

IS IT A HOPELESS AND THANKLESS TASK?

"It has seemed to me that greater efforts might be made to try and get our coolies to show a little more attention to cleanliness. It is uphill work I know. I don't suppose there is a single planter, who has the welfare of his coolies at heart, who has not, at one period of his career, made an honest effort to induce his coolies to keep their lines and surroundings cleaner, but spasmodic efforts are not enough. We must keep pegging away, and in time you will find coolies begin to appreciate the efforts, and show their appreciation by complaining of dirty neighbours, suggesting that they should be fined. I know a good many men look upon it as a hopeless and thankless task to try and instil any ideas of clean-

liness into the cooly. Let us not forget that it is not so very many years ago since the low classes in our own country were every bit as careless, and sanitary officers found the same indifference and even obstruction. It may be a disagreeable duty, but it is none the less a duty to see that our coolies live decently. The Superintendent who takes some trouble has his reward in better behaved coolies, not to mention the pleasure it must be to him in passing and re-passing his lines to see them swept and garnished. If they are allowed to live like pigs, coolies will behave like pigs. And now if I am not wearying you and you will forgive me for my little lecture, I will try and give you the results of my experience and efforts,—in the hope that they may be some little help to the younger generation of planters amongst us.

HINTS TO THE YOUNGER GENERATION.

"The Superintendent should see to it that there is ample line accommodation for his labour force, crowded lines are a most fruitful source of disease. Better to have too much than too little line room. I am sure proprietors or directors would never be so blind to their own interests as to refuse to sanction necessary expenditure on lines.

We all know what an important thing it is in the busy months to get our coolies to turn out to work, and how the outturn depends on the condition of the coolies as regards health. A room of 10' x 10' or 10' x 12' should be provided for at most every five labourers. Coolies should not be allowed to build in their verandahs, this excludes light and air from the rooms; if there is not sufficient room without the verandahs, then additional accommodation should be built. Nor should they be allowed to erect their garden fences bang up to their lines; there should be a good open space between lines and garden fence. In building a new set of lines the first essential is a

PLENTIFUL SUPPLY OF GOOD WATER.

I have some lines near a good supply of water, and others where the supply is rather scanty. The difference in health is most marked, and yet such is the callousness of the coolies that they prefer the less healthy lines, as they are on flat land, the others on the hillside. If a plentiful supply of good water be not available, I will tell you how a rough and cheap but effective filter may be improvised, a cooly mason could make one in a few days. Build four walls of rough masonry, enclosing a space of 4' x 4' walls, lay 3 ft. high, no mud or mortar should be used, it must be dry masonry, then at the bottom of the enclosure lay down charcoal broken into small pieces, to the depth of about 1 ft., then on the top of the charcoal put say 2 ft. of clean river sand. The water-supply should be conducted in spouting or pipes on to the top of the sand. It will percolate through the sand, then through the charcoal, and find its way through the stone walls into the drain or spouting conveying it to the lines. It should be made as near the lines as possible, and it should not be put in the natural bed of the stream, or floods will carry it away. Care should be taken when applying artificial or other manure, not to put it anywhere near the sources of the water supply. Next in importance to the water-supply are

CLEAN SURROUNDINGS

and with a lot of dirty and indifferent coolies this is hard to get, but not impossible. The cooly is a selfish creature and will do nothing for the general good, so a certain amount of compulsion must be used. Regular line sweepers are, I believe, a mistake. Left to themselves as they are, they do little or nothing, and that little is useless I believe the best system is to make each line occupant responsible for the space immediately in front of his room, and periodically to put on a small gang of coolies to clean up round about, burning all rubbish that will burn, and burying the rest. This is the system in South India where the climate necessitates very strict attention to sanitation. I have walked through some of the villages there, ond I was surprised to find how clean they were. What they can do there we can surely do here. Coolies who do not keep the space in front of their houses clean are fined. I have found a system of rough latrines to work fairly satisfactorily, but they must be made easy of access, and kept clean. It is a common sight to see a woman come out to the door of her room with a chatty full of rice water, and just throw it down right in front of the door. This should not be allowed. A good plan, for those who have a drain and running water round their lines, is to make paved receptacles, says one to every two rooms, into which the dirty water can be thrown. For those lines that have no running water, the same kind of thing can be made, some distance away, and leading into a drain, which should be flushed regularly. In the light of recent discoveries, stagnant water should be allowed near lines, and swampy plac should be well drained.

"We all know what an unsightly, dirty, rotten thing the usu cooly garden fence is. If I had an estate of my own, and if it we paying fairly well, I would go in for galvanized wire netting f

THE FENCING OF COOLY GARDENS.

5 feet netting can be got for about £5 per 100 yards. It wou greatly help towards keeping surroundings clean, and would pr vent gardens continually encroaching on the tea or line compound Another good fence can be made, cheaper but not so permanne by those who have suitable timber available, and that is by sawi good splitting logs into lengths of say 5 feet, and then splitting the logs into sticks, about one-and-half inch thick, in the same w as coolies split firewood; these sticks, which should be all the o length, can be nailed on to horizontals, fixed on to uprights in t usual way. Two good coolies I found could split about 30 of the sticks in a day. I do not believe in restricting coolies in garde It is a good sign to see them busy in their gardens, it means th have settled down; but they should not be allowed to make the gardens just where they please. To those who are convinced of t necessity for greater attention to sanitation in cooly lines, and wi to put their convictions into practice, I would say, tackle one s at a time, do it thoroughly, and when it is done, keep it right, a get your Kangany to help you. The coolies in the other sets w soon ask you do the same to theirs, and perhaps help you in yo endeavours."

A hearty vote of thanks was proposed by Mr. G. C. Alston, a seconded by Mr. G. Greig, to Mr. MacLure for his most interesti paper. This was carried with acclamation. The meeting clos with the usual vote of thanks to the chair

A CANADIAN ON THE TEA TRADE EXPANSIO

Mr. P. C. Larkin, of the Salada Tea Company, and Mrs. Lark have returned to Toronto after three months' absence in Gre Britain. The journey to Great Britain was taken with the spec object of seeking renewed health for Mrs. Larkin, and which w successful. Although the visit was chiefly for the object state Mr. Larkin spent some time in the tea circles in London, Englar When I saw Mr. Larkin in his office on Wednesday, he was as de as ever in the affairs of his own business, but found time to gi me a few minutes' talk. "I understand, Mr. Larkin, that y were present at a meeting of the Indian Tea Planters' Associatio where some discussion took place in regard to ways and means promoting the tea industry."

"Yes," said Mr. Larkin, "I was. On my arrival in Londor was requested to meet the Indian Tea Planters' Association, a give them some idea from my point view of the tea situation the United States and Canada. They were particularly interest in the prospective development of the green tea trade, and we had handled Ceylon greens for the last three years, since th were first produced, I was in a position to convey to them an id as to how they had been received by the public, not only in Canad but in the States of New York, Michigan, Pennsylvania, and t New England States. I showed them how sales of Salada gre Ceylon had gone on increasing, from week to week, through at lea two years, and that the sales were much larger now than they h been at any previous time. I also told them that we were maki much more rapid progress with Ceylon greens than we did wi Ceylon blacks, seven or eight years ago. And everybody kno that there are now practically no China Congous sold in Canada.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, oth have no effect, and none do good. Sugar and water, or a little glycerine, gi relief when the throat is inclined to be dry; this applies to persons whose thro are affected by the weather. About a third of a teaspoonful of Condy's Fluid a tumbler of water, if used as a gargle every morning, will clear the throat brace up the uvula, which, in some singers, is so long that it interrupts the p emission of the voice, and introduces a grating undertone, while it also tends make a tremolo on the upper notes."—*The Idler*, February, 1900.

"The meeting resolved itself into a discussion of how best to quickly displace Japan teas on the Canadian and United States markets. Of course my advice to them was on the lines that the 'Salada' tea business has been carried on. I told them we had a fine article to offer the public, and we told the public about it. I explained that the only way in which you can reach the large mass of the people was by advertising sampling, etc. I furthermore told them that if they could see their way to expending such a sum as ½d. per lb. on all the Indian tea produced, which would mean an expenditure of $400,000 or $500,000, it would be sufficient for advertising purposes and would create a very quick revolution, particularly in the green tea trade. The expenditure of such a sum in sampling and advertising would, I felt, positively increase the consumption in America of Indian and Ceylon tea by fully 10,000,000 lbs. per annum during the next four are five years. This, from the planters' point of view, would be a most excellent thing. It would relieve the London market of such a quantity of tea annually that the price for blacks would be increased fully ld. per lb., and that this expenditure need not be continued for more than four or five years. The increased consumption thereby brought about would be permanent."

"How were your suggestions received?"

"I might say that a number of persons in London interested in the tea trade, whom I met, agreed that my suggestions were excellent from a business point of view, and that if they could be carried out would put all the gardens on velvet; but they stated that the difficulty lies with people who feel that, as they are not making money now, they cannot entertain the idea of increasing their expenses one iota. However," continued Mr. Larkin, "I understand that something is to be immediately done in an effort to capture the American market, which means the capturing of 100,000,000 lbs. of tea per annum. The great difficulty heretofore has been the fact that most of the planters have a very faint idea of the amount that would be sufficient to attack the attention of the whole tea-drinking community to the article which they have for sale. No matter how good that article may be, unless this is done, dozens of years must pass before the whole trade is secured."

"What about the package tea trade in England?"

"The package tea trade is making wonderful progress in England. One of the largest concerns there have a most magnificent establishment covering acre upon acre of ground"

Mr. Larkin, before concluding the interview, stated that one of the things that struck him forciby while in England was the sympathy exhibited by the people there with the United States over the assassination of President McKinley. He said that in London there was a large profusion of flags, and that it appeared to him that out of every three flags displayed, one was the Stars and Stripes. The day that Mr. McKinley was buried, Mr. Larkin was in Oxford, and he noticed the same display of United States' flags there.—*Canadian Grocer.*

THE NEW PROCESS FOR FERMENTING TEA.

FURTHER INFORMATION ON THE ISOLATED ENZYME.

SIR,—It was with great pleasure that I read Mr. Bamber's criticism on my proposed new process of fermenting tea, in the *Ceylon Observer* of the 13th November. I have always looked up to him as the greatest authority on the chemistry of tea manufacture, and his difficulty in finding and isolating the tea enzyme in Ceylon goes far to corroborate my contention, that the better the quality of the tea the more enzyme it contains, as in the best class Darjeeling teas it is easily demonstrable and there is no difficulty about isolating it.

Mr Bamber has evidently had very little experience with plant enzymes or he would not say they increase in quantity after plucking, it being one of their peculiarities that they neither increase nor diminish in quantity, when separated from their original source, although they have the power of oxidising quantities of the product to which they are adapted.

In the Chemistry and Agriculture of tea by Mr. Bamber. he says that the essential oil is considerably increased in quantity during the process of manufacture. This hardly agrees with his present statement, but this is immaterial, my contention being that during the process of oxidation certain ethereal flavouring substances are formed which give flavour and aroma to the tea, and that by the addition of a proper enzyme more of the cell contents are rendered soluble, thereby increasing flavour and strength. Undoubtedly if a large excess of enzyme is added, or it is allowed to act for too long a time, there will be a loss of delicate flavour through the over-oxidation and rendering insoluble these delicate flavouring materials, the same as there would be by over-fermentation, but the one can be guarded against as easily as the other.

By the addition of the enzyme to most teas, the infusion is considerably improved in body and colour, by the larger quantity of the cell contents rendered soluble, and it remains to be seen whether with all teas an improvement in the flavour takes place, I sincerely hope that for the sake of the tea industry it does not, as that would mean a levelling-up of all qualities.

I have known of the oxidising enzyme in the tea for a considerable time, but have always hitherto thought it inadvisable to try to introduce chemistry into tea manufacture, in case we might reduce the industry to a level with that of Indigo. But now that the Japanese and the Ceylon and Indian Tea Planters' Associations have taken the matter up, it behoves all of us to do our best.

Unfortunately our tea season up here is over for this year, so I am precluded from continuing my experiments in manufacture and am reduced to those of the laboratory.

The enzyme can be demonstrated in the tea leaf by crushing a leaf, and then adding a few drops of tincture Guiac, when a blue colour will appear It may be necessary in some cases to add a few drops of Peroxide of Hydrogen, to intensify the re-action or, in extreme cases, when there is deficiency of enzyme and an excess of tanning, to disolve out some of the latter first with alcohol. If the chemically pure article is required it can be dissolved out of the tea with water, the tannin absorbed with gelatin, and the enzyme precipitated by adding five volumes of alcohol.

Yours faithfully,

KURSEONG, *November* 22. C. R. NEWTON.

TEA FERMENTATION OR OXIDATION.

In a paper on fermentation read by Mr. H. Sanderson before the Luskerpore Valley Society of Planters, many excellent hints to tea-makers are given which should prove of incalculable benefit in the manufacture of a more evenly coloured and flavoured tea. Mr. Sanderson considers fermentation, or oxidation, the most important process in tea-making, therefore special attention must be paid to the leaf in this stage, to secure the best results. "Bamber," he says, maintains that oxidation more correctly describes the changes in the leaf in the comparatively short time allowed. If, however, the leaf was allowed to lie in heaps for many hours, the temperature would rapidly rise to between 90°-100° and a *kind of fermentation* would set in, accompanied by decomposition, and in that view of the matter he is quite prepared to agree.

The following are a few of Mr. Sanderson's hints taken from the paper in question :—

As good colours are dependent on the leaf plucked, withering and rolling, it will be necessary to mention these briefly. From young and fine leaf it is easier to obtain good colour than from older and coarser leaves, and hard and sapless leaves are extremely difficult to colour.

Lightly withered leaf, after rolling, takes less time in assuming a good colour than highly withered leaf. With quick fermentation pungent liquors are obtained; with long fermentation, thick but dull liquors are the result. The happy medium, if it could be obtained, is what all tea-makers should strive for.

One of the most important points in rolling is that the tables should be situated in the coolest part of the tea house, free from the hot and oil-laden air of the engine house and of the exhausted and heated air of the firing machinery. The rolling table should not be filled to bursting point, nor should pressure, if required, be so prolonged as to cause heating of the "mahl."

On the discharge of the table, the rolled "mahl" should be broken up at once and aërated, and carried away to the fermenting house as soon as possible.

The fermenting house should be a *pucca* building with thick walls, and every means should be taken to keep it as cool as possible. A free circulation of air without strong draughts is most requisite, and it is generally accepted that strong light should be avoided. A *pucca* floor sloped so as to facilitate washing and

draining is, I consider, the best and cleanest mode of fermenting. The "mahl" should be spread in layers from 1½ to 4 and 5 inches, according to the state of the atmosphere, and then covered with wet cloths to prevent too rapid evaporation

A certain amount of heat is generated during the process, and it is generally considered advisable to reduce the temperature of the "mahl" by not allowing the beds to exceed 85°F. The period of time required to obtain the requisite colour varies much according to the heat of the atmosphere, the amount of moisture in the air, the quality of the leaf, the nature of the wither and time of the year, and no rule can be laid down as a guide to the length of time required. I have found that the best colours are always obtained in July and August.

The colour most desired in the final tea on infusion is one resembling that of a new penny. To obtain this, it is necessary that the "mahl," on leaving the table after the first roll, should be of a bright green colour, which can only be obtained with a perfect wither, a cool roll, and a moist atmosphere The fermented "mahl" should be removed to the second roll by the time that the small leaves have become tinted; to wait until the whole mass assumes a correct hue will discolour the finer portions of leaf. To a great extent this can be obviated by sifting the *kutcha* "mahl" after the first roll, an operation which also helps to break up and aërate the roll, and I would advise a second sifting before the second roll, if time and space permit.

When the second roll is completed, the sooner the "mahl" is placed on the firing machines the better chance there is of retaining the colour obtained. Colour, and I have no doubt liquor, are often spoilt by the "mahl" being allowed to lie in a big heap whilst waiting for the firing machines. Much better keep it longer in the rolling table or on the floor of the fermenting house.

With the limited amount of rolling tables and firing machinery usually at our disposal, it is a matter of great difficulty to obtain uniform colour throughout a day's manufacture, but much can be done to maintain uniformity by a system of allowing longer intervals between the gunnies early in the morning, decreasing the interval as the temperature rises, and, if necessary, decreasing the time of rolling and making up for the shorter roll by heavier pressure in the table; and as the temperature falls towards evening so can the intervals be prolonged by longer rolls. But this can only be done by constant supervision by a European, though in some cases I have known native tea-makers capable of using the requisite discretion and judiciousness in working, other than by the rule of thumb so prevalent in most tea houses.

In conclusion, I should advise every tea house man to keep a record of each day's rolling, gunny by gunny, noting the state of weather and temperature during the day, the style of wither, time of fermenting and the colour of the fermented "mahl" before firing. A sample of each gunny should be carefully taken and the following morning a selected batch of samples, representing teas made in the morning and midday and evening should be infused. By comparing these and noting any differences in colour of infusion, depth of colour in cup, and with the aid of notes made in the rolling book at time of manufacture, the careful tea-maker can learn much to avoid and plenty to follow. I take this opportunity of impressing on you the importance of tasting teas early in the morning, with a clean palate, if you wish to detect slight differences in the liquors.

THE STUDY OF ENZYMES.

Indian Gardening and Planting publishes a well written article treating on the subject of Oxidising Enzymes, by G. K Newton, F.R.M.S. The original discovery of the oxidising plant enzymes, says the writer, is principally centered round the investigations of G. Bertrand, who investigated the peculiar properties of Japanese lacquers, and proved that their hardening property was caused by the action of an oxydase which he named laccase, acting on a peculiar constituent of the juice of the plant *Rus vernicifera*. This juice, which is of the consistency of thick pale cream, remains unchanged when stored in well stoppered bottles, but almost immediately commences to turn brown and thicken when exposed to the air Here was a clear case of oxidisation, and it was proved that the juice had not the power of hardening in the absence of its enzyme, only a resinous soluble grease being obtained under such circumstances.

The above discovery gave an impetus to the enquiry into m domestic problems, amongst others into an enquiry as to wh apple turns brown when the rind is broken or taken off and exposed to the air. L. Landos in 1893 explained this discolours as resulting from an enzyme to which the name of *malase* subsequently given; the rapid discolouration of the cut slice beet in the sugar works even in the absence of all contact with or steel was also traced to an enzyme which was named *tyrosin*

C. Lowe in America, who investigated the cause of the flavou of tobacco for the U. S. Government, after deciding that it was caused by bacteria, describes first an enzyme, then a per-enz and, lastly, a *catalase*, all of which had the power of oxidising s of the constituents of the tobacco plant, and it was entirely to t action during fermentation that he attributed the different flav of the tobacco. One named *olease* is also present in the olive, w is the principal agent in its decomposition before being put in press; it also passes into the oil expressed at a temperature b 70°C. and continues to convey oxygen thereto, forming oleic acetic acid, sabacic acid, etc. Mustard oil as such does not in the seed, but is the product of an enzyme myrosin acting glucoside sinigrin or potassium myronate, which is also prese the seed In the presence of water the myrosin becomes dec posed, the potassium myrosin splitting into potassium hydr sulphate, sugar, and allyltheocarbimid (mustard oil). Flax, cas oil and many other plants contain in the seed an enzyme ca *lipose*. Care must be taken when experimenting with these enzy as they are not all harmless compounds. In the Rosaceae is fo an enzyme emulsion, often associated with a glucoside amyg which it decomposes into benzaldehyde (oil of bitter almo sugar, and the very poisonous prussic acid.

The above are a few of the well-known enzymes from the ac of which by analogy we can, to some extent, trace that of the found in tea.

A number of people have discovered enzymes and have assig to them different names and functions, but the broad fact rem that the majority of them have the power of oxidising in presence of air—lacoll, other palyotomic phenols, pyrogalic, hy quinone, etc , as well as their acid derivates, gallic acid, and tan as also the polyphenols contained in the last two groups of O NH_2 either in the ortho or in the pari position.

The known enzymes all appear to belong to the proteid clas organic compounds, and a small quantity of each is enable transform a large bulk of the object on which it acts without inc ing, or suffering much diminution in quantity; they are gene destroyed at a temperature of about 70°C., are very much r active in the dark, and are gradually destroyed on exposur bright light.

Now to turn more directly to tea, an enzyme is present in the also a per-enzyme, and a catalase, the former of which we may inaptly name as *thease*. This enzyme when isolated has most, i all the above chemical reactions, besides probably a few m which up to the present time I have not fully investigated function in the living plant is probably in conjunction with s plant acid to act on the tannins, which in this case are glucos converting them into aldehydes and phenols, which are absorb the nutriment of the plant. Isolated it converts tannic acid glucose, and during the fermentation of the tea leaf it is principal factor, as when extracted the leaf fails to colour; quantity present also seems to vary with the quality of the lea

This enzyme is probably in the sap of the tea plant and no the cells in contact with the tannin; as, if small pieces of leaf young stems be soaked for some days in an alcoholic soluti acetate of copper, then thin micrometer sections cut from t after some of the copper has been precipitated in the cell by tannin and then treated for one or two seconds with a very v solution of acetate of iron in water. the sections if then put u the microscope will show that almost every cell contains tannin now some Tinc, Guiac, and H_2O_2 be gently run in under the c

---

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant appointment of "Purveyors to Her Majesty The Queen and Em of India" from the year 1837 until the time of her death, have had the honour of being appointed by Royal Warrant "Purveyo The King."

glass the outside cells first turn a brilliant blue, and small globules also occur in the other parts of the leaf, leading to the fibro-vascular bundles. The latter part of this experiment is a very delicate one, and the investigator must expect many failures, the whole section generally turning an intense blue all over, obscuring everything. If now we take sections of the root of the tea plant we shall find that we have the enzyme in much larger quantities than in the young shoots, and this is the first time it has been noted in this part of the plant. It is also present in the seed, and seems to exert an oxidising influence on the tea oil when expressed cold, as under certain conditions I have observed a decided aroma, but up to the present I have not found time to investigate it.

That this oxidising enzyme is of great value in the manufacture of tea. Mr. Newton illustrates by pointing out, that as in some teas where the enzyme was deficient in quantity, and the oxidising effect not properly secured, the use of extracted enzyme produced a considerable improvement in the quality immediately. The subject, as he remarks, is indeed a vast one; and will, if successful, revolutionise for the better a great part of our tea manufactories.

COFFEE IN LONDON.

No fresh news as to the coming crop was received until Thursday, says the *Produce Markets' Review* of November 9, 1901, when it was stated that Messrs. Johnston & Co. had cabled that prospects were very unfavourable both in Rio and Santos, and estimating the next crop at 7,000,000 bags. If such is true, there is at least some justification for the recent advance, though we still think, taking other facts into consideration, that the rise has been too sudden and too great. It is the speculative element and not the regular trade that has rushed prices up, and it has yet to be seen whether they can carry the enormous weight of coffee which the present record crop is daily adding to the stocks. During October the visible supply of the world increased no less than 60,530 tons, and this, in the face of the heaviest deliveries ever known in both Europe and the United States, namely, 108,385 tons. It is hardly to be expected that the trade will want to continue to buy at this rate, and if not, a further large addition to the stocks must be looked for during the next two months. Moreover, there is still the possibility of a second flowering in Santos, which would alter entirely the estimates of the crop. As we have repeatedly stated it is never safe to rely on estimates given before January, and even then, judging from the experience of recent years, they often vary a million bags or more from the out-turn. In actual coffee very little has been done, the fog stopping all the auctions until yesterday.

INDIAN TEA IN LONDON.

The market has been less active, says the *Produce Markets' Review* of 9th uitimo, and a considerable quantity of the larger supply was withdrawn from the public sales, as the prevailing fog made it difficult to value the teas. Prices for the common grades are easier, more tea being obtainable at 5½d and under. With a continuance of lower values the demand will probably materially increase, as several of the larger buyers of these decriptions hold only moderate stocks. The medium and finer qualities have shared in the decline, which will probably prove but temporary under more favourable conditions for dealing with the teas. It will be noticed by the figures below that the stock is about 8,000,000 lbs. larger than last year, which is mainly accounted for by the quicker transit, several of the districts being able to forward their teas two or three weeks earlier than in former seasons. The quantity imported from the 1st July to October 31st amounts to 64,846,000 lbs. as compared with 62,178,000 lbs. in 1900, while the imports for the same period of all growths reach 109,812,000 lbs. against 116,113,000 lbs., the deficiency being principally attributable to Ceylon tea. The returns for the past month and for October last year were: imports, 24,515,000 lbs. against 19,450,000 lbs.; deliveries, 13,864,000 lbs. and 11,593,000 lbs. respectively, while the stock shows an excess of 7,820,000 lbs. Of the 55,379 packages catalogued for auction, the heavy proportion of 21,300 was withdrawn; the bidding generally was inactive, and prices were in favour of buyers.

PACKET TEA.

The following remarks about packet tea and the Merchandise Marks Act appear in the annual report of Mr. George F. Allwood, inspector of weights aad measures to the Wolverhampton Corporation: "Local conditions have operated this year to necessitate the institution of legal proceedings in regard to packages of tea sold and exposed for sale, upon which the weight was marked. A common custom now in vogue is for large firms of tea-dealers to import consignments of tea in bulk, and cause it to be wrapped in packages of various weights from 1 oz to 1 lb. These packages are then despatched for sale by the numerous small shopkeepers, who retail as received. Several quantities of these weight-marked packages have, from time to time, been tested in the shops, and the results go to show in some instances a large proportion of the packets were deficient in net weight. It is considered desirable, wherever blame appears attachable, to proceed against the wholesale dealer. Great difficulties, however, are found to operate against this being done with the prospect of a successful termination. Under this Act, if a defendant can prove to the satisfaction of the Court that he has taken reasonable precautions to ensure full weight, he is exonerated from liability. The two cases dismissed were in this manner adjudicated upon, although the retail shopkeeper was shown to be in possession for sale (in one case) of no fewer than thirty-four packets short weight, out of a total of forty-two tested. The cases against the shopkeepers were then withdrawn, although it is only a fair requirement that these traders should take the precaution of ascertaining how far such weight-marked packages are safe for sale before offering them to the public. How important a matter the subject dealt with in the above paragraph is will be fully realised when I mention it was stated in evidence that one of the firms concerned disposed of no less than 20,000 marked packets per week—and this by no means a leading firm in the tea trade!"

THE TEA TRADE.

NEGROES TAKING TO TEA.

"The increased consumption of tea is one of the interesting phases of modern commercial life in the South," said a drummer for a New Orleans house to a New Orleans *Times-Democrat* reporter, "and you would be surprised at the vast change which has taken place in this respect. The fact is that during the last few years the changes in the tea business have amounted to a revolution. I have just returned from a trip on the road, and I touched some of the more remote places in Texas and Mississippi, and while I have been out before in the same territory, I was surprised at the increased number of tea drinkers.

"Up to a few years ago, in the more remote sections of the country, tea was used almost exclusively in the sick-room. Tea had to be bought in the country from the druggist. The man who dealt in general merchandise rarely thought of selling tea, unless he had a medicine counter in his store. Tea was something finicky, something to be given to the convalescing patient along with crackers, tasteless broth, and things of that sort.

"This is not the case now. Tea is bought in rather large quantities by country merchants, and the country folk use it for other than sick-room purposes. It is extensively used throughout the country.

"There is still more interesting fact in connection with the growth of the tea trade. Negroes are now great tea consumers. You would be surprised at the amount of tea consumed by this element of the population. Using tea is a new thing with the negro element, but since they have got into the tea-drinking habit they have vastly increased the consumption of the product. Yes, they have about quit using sassafras roots for tea-making purposes, and this rather primitive drink is now used for its medicinal properties. It has exchanged places with the other tea.

"There are some reasons for the increased consumption of tea There are, of course, many other special and general causes for the new demand, and altogether the changes form a rather interesting subject, so far as modern commerce is concerned."—*American Grocer.*

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

A Coffee Exchange.—A center, where coffee-brokers and commissarios can meet in order to transact their business and ultimate negotiations is in the course of organisation. It is to be hoped that the steps already taken in this direction will be successful, because such a center has long been badly wanted.

Labour.—According to the *Gazeta de Noticias* there are between 1·500,000 and 1·600,000 Italians in Brazil, half of whom in the State of S. Paulo. Of this number only between 200 and 300, it asserts, have failed to receive the full amount of their wages up to date.

Exchange.—Extremes during the week ending October 18th were 11½d.—11¾d. for 90 d/s Bank paper and 11 17/32d—11 15/16d for private.

The average Bank 90 d/s counter-drawing rate for the week comes out at 11 9/16d., the corresponding sight rate being 11½d. against 11 9/16d. the average sight rate of the *Camara Syndical.*

Coffee.—Entries at Rio and Santos during the week ending October 18th were 35,517 bags smaller than the previous week and 82,229 bags larger than the corresponding week last year.

Aggregate entries for the crop show an increase of 2,285,819 compared with the same period last year.

Embarques were both greater than the previous week and the corresponding week last year, 26,184 and 113,513 bags respectively.

Stocks at Rio and Santos are still increasing being 47,138 bags larger than the week before and 508,545 bags greater than on the corresponding date last year.

Sales were regular being however 43,000 bags smaller than the previous week, but 14,000 bags larger than during the same week last year.

Values of embarques during the week amounted to £698,339 against £726,691 the previous week and £369,998 the corresponding week last year. Aggregate values for the crop to 19th October this year reached £7,976,872 against £7,542,322 to 20th October, 1901.

Meteorological.—The report of the *Boletim da Agricultura* of the State of S. Paulo for the month of August states that at S. Paulo "the average of temperature for the month was 15°7 against 15°4 the previous month. The maximum temperature reached was 29°4 on the 27th, the record for the respective month being 31°5 in 1897.

The South winds predominated causing abnormal an rainfall which reached 642mm, an increase of 23 % on the normal rate, 523mm, for this month. There were 17 rainy days against the normal rate of 8, and only 7 days fine against the normal 16, 7 stormy against normal 2.

In the interior, on the 4th, a terrible hailstorm passed over Pirajú, causing heavy damages to a large number of buildings. On the same date at night a hailstorm fell on the city of S. Paulo.

On the 6th, a storm, almost a hurricane, fell on the city of Brotas, the wind attaining a velocity of 27 metres for 3 minutes together, and 3mm rain fell.

On the 20th, hail fell at Brumado.

The inspector of the 1st district communicates that rain fell in the Tiété valley and the Paraïyba valley was dry. The flowering there, although premature, promises a fair crop. There is plenty of maize and beans, and rice is being sown.

The rain in the Tiété zone and at the Itapecirica serra stopped the cleanings and clearings, so that in the North there is but little beans and maize, and on the serra there has been no sowing yet.

The inspector of the 2nd district writes that rains have not damaged the crop but have made drying difficult. The trees in general have a poor appearance, the result undoubtedly of the past heavy crops, they are almost leafless and many of the branches are dried up. Even the newer trees do not look well. Were it not for the rain a large number of trees would have perished.

All the trees under 4 years and a few others started flowering between the 3rd and 12th. In some localities, such as Mogy-mirim, Amparo, etc., a very large quantity of hollow beans (*chôcho*) has been found.

The inspector of the 3rd district informs that gathering of the present crop is going on well; in some districts, however, there is lack of hands. He also recommends that the Railways should reduce fares for the transport of labourers during the gathering period, believing that this measure would help planters without loss to the Companies.

He thinks it is a great mistake to believe that this year's crop will be larger than the last, in fact he thinks it is smaller, becau based on data personally obtained last year, the average yield 76 litres of berries was 1 arroba of coffee, whereas this year litres are necessary to obtain the same result. He noted that whe the trees are most laden, the real production is smallest, but compensation the quality is finer. The facts stated are not, ho ever, common to all localities, being less frequent on red ear (*Terra roxa*).

The rain and fog have retarded gathering and drying in the 4 district and planters have had recourse to other means to dry the coffees.

The inspector of the 4th district states that sprouting is ve backward in the North which he attributes to the present hea crop. The new as well as the prepared trees are flowering, mo especially at S. Carlos, Ribeirão Bonito and vicinity, where t future crop is likely not to be much inferior to the present on This flowering is, however, likely to be damaged by the b weather of January and February, as also by the second floweri

The inspector of the 5th district states that disease (*febre ap tosa*) has attacked the cattle and even the deer in that locality, b that mortality therefrom is insignificant. As regards coffee says picking is being continued and the new flowering is develo ing. It is the general belief that the future crop will be small and therefore planters look forward to better prices.

Large Shipments.—Some of the largest shipments of coffee ev made by a single firm from this port, were those lately effected Messrs. Arbuckle Bros: one of 88,000 bags by the *Germanicus* a another of 46,000 bags by the *Mountfields*; both shipments we for New York.

THE TEA SOILS OF ASSAM AND TEA MANURING.

IMPORTANT REPORT BY MR. MANN.

From a report of exceptional interest issued by the Indi Tea Association, written by its Scientific Officer, Mr. Haro H. Mann, B.Sc., we make the following extracts :—

INTRODUCTION.

The successful production of any plant or of any vegetable pr duct is influenced for good or for evil by a number of conditio Soil, climate, "breed" of plant, conditions of culture, prevalence pests and blights, may each play a preponderating rôle in deci ing the possibility or imposibility of profitably growing a plant a given situation. But among these natural conditions there perhaps none (except that of climate—and this is entirely beyo our control)—which take a more fundamental part in determini the character of the cultivated plants in a country or a district tha that of the soil. Its character in England, for instance, determin whether land shall be devoted to wheat or to barley, to turnips to some other root crop, to pasture or to arable culture. In Ind likewise, entirely apart from climatic questions, it determines t paramount suitability of a district for rice, for millet, for cotto for sugar, or for tobacco.

Its influence is not less paramount in the case of tea. In ma parts of the tea districts it might be said that every condition h been favourable except that of soil, but as a result of bad soil co ditions in certain Assam districts garden after garden has pass entirely out of cultivation. It might be thought that the esse tial importance of a suitable soil was too obvious to need th stress should be laid on it, but I have noticed quite a number pieces of tea put out during the past three years in total ign rance of the character of the subsoil—which really proved to very unsuitable,—and also in positions where the tea can nev flourish nor do well. Such incidents seem to indicate that there room for insisting on the soil requirements of the tea bush, a for further investigating those soil conditions which answer t purpose best.

Not that it could be maintained that one class of soil and o alone is satisfactory. Far from it. The tea plant has a marvello faculty of adapting itself to conditions—within certain limit But even in these limits great care has to be taken to adapt t type or jât of plant, and the culture of the crop to the soil cond tions. For instance it would only be to court failure to attem to plant one of the delicate jâts of Upper Assam on a Cachar

Sylhet bheel—or even on the heavier and more difficult soils of some of the lower districts of the Brahmaputra Valley itself. Then again the amount and kind of culture given in the extremely sandy soils of some parts of Jorhat—magnificently suitable as they are for tea—would be totally inadequate if applied to the stiffer soils of Nowgong or even of the Tezpur bank; and would again be far too great under the peculiar root conformation found in tea grown on peat land.

My own investigations into the subject of this report have been conducted during two tours in the Assam Valley, one of which lasted from May 28 to July 3, 1900, and the second from November 3, 1900 to January 19, 1901, the latter being especially devoted to the investigation of the soils. From the end of January to the end of July, 1901 (excluding June when my time was otherwise engaged in Assam), I have been occupied with an attempt to work up some of the large amount of material collected during this tour,—but after all the results here presented only give the more obvious part of an extremely complicated and difficult subject.

DETERIORATION OF OLD TEA.

In a report presented to the Indian Tea Association in July, 1900, after my first preliminary tour in Assam, I made use of the following language:—

"The most striking observation made during my tour, and which was repeated in every district to which I went, was the manifest deterioration of the older parts of the garden, whatever the seed may have been with which they were originally planted. In fact, the question of most immediate importance seems without doubt to be: How can the vitality and yield of the bushes, together with the quality of tea produced, be kept up for a longer period than is at present the case? Whether the cause of this deterioration—which, though only suspected at the time of Dr. Watt's tour in 1895, is now obvious on almost every garden—be exhaustion of soil on the one hand, or old age of the bush on the other, or a combination of both, is left for experiment to solve. There is, however, little or no doubt in my own mind, even now, that exhaustion of the soil plays a very great part in the matter, and this is confirmed by the fact that in those gardens which possess soil of an exceptionally favourable and lasting character, or in which means have been adopted for keeping up its fertility, the deterioration of the bush and consequent loss is much less than in other cases. This conclusion, I am afraid, involves the belief that manuring, in one form or another will have, in future, to be a regular adjunct to tea culture on all but the youngest gardens."

To every word of this opinion I still adhere. There is absolutely no doubt that the gardens in Assam do deteriorate as they get older, with very rare exceptions, and, it is only according to reason that they should do so unless an attempt is made to keep them up to their original fertility. As a rule, however, no such attempt is made except by means of very deep cultivation, which is only a method of staving off the evil day; or by top dressing with bheel or hullah soil, which if correctly done with good material is one of the best operations, which has become at all general in the valley in the past few years. Even here, as I shall show later, a vast amount of expense and labour has been employed in putting absolutely useless material on to the land, and I can only urge very great caution in deciding whether or not it is worth while to spend a large amount of money in lifting any particular material.

I cannot consider that for many years to come any but a comparatively small quantity of the manure required will be in the form of artificial manures, unless it be to a certain extent as phosphates. In other respects as far as most places in the province are concerned, Assam is abundantly capable of supplying, if means were taken to utilise it, practically the whole of what is needed. I have yet to see any place where the vast amount of cattle manure is preserved with any reasonable care, and yet each cow will produce 2,000 lbs. of manure,—and useful manure,—per annum—the whole of the valuable constituents being obtained from land outside the tea area. Mustard is extensively grown in the province, and though much oil is used in the valley, a large proportion of the seed is exported to Calcutta and the oil re-imported, instead of the seed being pressed on the spot, and the cake used as manure. Green manuring is still in its infancy, and so on.

But beyond this, experiments are necessary everywhere to determine the best means of keeping up the standard of a garden. Laboratory analyses can show in some measure where the soil is deficient, but in their application to a new crop and especially one in the tropics there always must remain very grave doubts as to the conclusions only removable by actual culture trials in the field. One thing is now practically certain. It is impossible to apply without very great modification the experience of temperate climates to the condition of the tea industry. Plant nutrition is here very likely governed by somewhat modified rules. The conditions of the soil during the rains, that is, the growing season, is entirely different from what it is during the comparatively dry weather,—again the growing season,—used for the production of the ordinary crop in Europe, or even of the kharif crop in India.

In general the principle of culture adopted in most instances in Assam has been nothing more nor less than "juming"—the system adopted by the Nagas in the hills above. In brief it consisted of opening out virgin land, putting in the crop, utilising this land until it ceased to be profitable, and then again abandoning it to jungle and planting out more. The best managed gardens put out ten, twenty, thirty or more acres per annum to make up for the falling off in the old tea, and as a result had a constantly increasing acreage with a constant produce. As an example I may say that in one case which has come before my notice, a garden practically made the same crop in 1899 from 833 acres, as it made in 1893 from 525 acres. Making every allowance (say 20 per cent.) for increased fineness of plucking, a system which produces results like this cannot be called either sound agriculture or sound business. It means that the additional area added has to be worked and this must cause the use of extra labour and hence extra expense. It also handicaps the new land by the extra cost of carrying or carting leaf from a greater distance to the factory. And further, it means either more expensive or less adequate supervision. This principle, in addition, creates a tendency to ignore vacancies, and often has the statement been made to me that it was easier to plant out new land than to fill in vacancies, heedless of the fact that the vacancy land though producing nothing cost just as much to work as that producing the maximum crop. I think it must once and for all be recognised that the practice of making new clearances to take the place of the deficiencies of old tea still kept in cultivation is illogical and based on unsound principles. And as a natural consequence it must be laid down as an absolute rule that extensions are inexcusable unless the tea already in extistence is producing the maximum it is capable of producing of the quality of tea desired. I do not mean to say that one can always expect 20 year old tea to give as good a yield of as good tea as ten years old plant. This is, to say the least of it, very doubtful But if the yield of a plot of land shows a gradual tendency to fall lower and lower, it is time to deal with that plot and bring it up to the standard laid down before any further extension is carried out.

If such be not the recognised principle of culture it would be far better to frankly recognise that our tea culture is "juming" pure and simple, and abandon an equivalent for the tea coming into bearing. This would at least be a confession that it paid better to put out new tea than to keep tea up to a certain yielding power, but the system of constantly extending area at increased cost for working, with greater difficulty in working, and with less capacity for supervision is utterly wrong as an agricultural principle, and may be said to be non-existent in any other agricultural industry.

In brief then agriculturally the only sound system would be never to put out new tea until the old is yielding its maximum. If this old tea cannot be profitably kept up to the standard required either uproot and replant the plot, or plant out fresh tea with a view to the abandonment of an equivalent area so soon as the new plant comes into bearing. I am very doubtful whether this latter alternative will be necessary in many cases, unless some grievous errors have been made either in the original plant or in the subsequent treatment.

And here, as part of the introduction, to the study of the conditions existing in tea soils and their improvement, I cannot help remarking that, given the best soil in the world, a constant change in the system of dealing with the bushes will so ruin the tea that a time will come when it will no longer be possible either by pruning or by treating the soil to bring them back to anything like a reasonable yield. Such tea must be uprooted and replanted, or abandoned. But it seems a very great pity that tea should be allowed to get into such a condition. I know there are many different ways of dealing with a tea bush—all, it may be, equally or almost equally good. Two of the best gardens I know on the south bank of the Brahmaputra have been treated by almost

entirely opposite systems of pruning, but the same system has been applied for many years in each case—and an equally good result is obtained.

It would almost seem, if such a system were feasible—and I hardly see why it should not be—that a plan should be laid out ahead for five or ten years for pruning every plot of tea, and this, whatever manager were in charge, should only be altered for some very special reason. The present method of going round each plot with a knife in December, and there and then deciding the year's pruning without reference to the past history of the bush is, I think, far too casual an arrangement for an industry in which the bushes represent both capital and stock-in-trade.

SUMMARY.

Summarising therefore it may be said that—

(1) The older parts of the Assam gardens are gradually deteriorating in yield, and it may be also in quality.

(2) It is unsound to try and make up for this loss in yield by putting out new clearances.

(3) This deterioration can be largely stopped by the judicious use of manures, principally obtained locally.

(4) No new clearance should be put out unless the old area is producing its maximum, or it is intended to abandon an area equivalent to the new clearance.

(5) A system should be laid down for the future pruning and treatment of every plot on a garden, only to be departed from for very trenchant reasons.

In the consideration of the subject which follows one can only be said to have just opened the matter. We are ludicrously ignorant on almost every point on which I have touched, and were it not for the results obtained by Mr. Bamber both here in India and also more recently in Ceylon, it would almost be impossible to obtain any independent testimony on any question relating to tea soils which could be discussed. I have undoubtedly drawn illustrations, especially in that part devoted to the physical properties of tea soils, from results obtained both in England and America, but this is entirely because such data are non-existent for India and Indian conditions. The questions of the relation of soil to quality are still practically untouched except for Mr. Bamber's Ceylon results, and my view here reported, but altogether they form a most inadequate commencement to the study of the most difficult part of tea culture. Not until one can settle in the tea districts in a position where one can daily watch the influence of various conditions on the plants, conduct experiments—perhaps utterly unpractical in appearance—on the growth of the bushes under varying conditions, study the relationship of various conditions—not to quality as a whole, for this is a complex property, but to the relative amount of various constituents in the leaf; not till then will one be able to give out anything but more or less general platitudes as to the relationship of cultural, soil, or manurial conditions to quality of tea.

Such an investigation or series of investigations is for the future. In this report I have tried to indicate the present state of the question; the methods by which certain difficulties can be removed; some warnings against the probable results of continuing the use of methods now in vogue; some suggestions for making greater use of materials at hand than is now done; a discussion on the basis of Mr. Bamber's results and my own of the relationship of the constituents of soil to quality of tea and luxuriance of the tea bush; and finally a series of notes on the special needs, manurial or otherwise, of each district, so far as I know it, in the Brahmaputra Valley. A great many of the results may be applicable to other districts, but I have preferred for the moment to speak more specially of those parts of the Indian tea area which I know best, leaving to a future date, after a separate and careful examination of the soils of other sections, the presentation of special reports on those districts.

On these lines I have divided the consideration of the subject into chapters as follows:—

(1) Physical properties of Assam tea soils.
(2) Chemical characteristics of Assam tea soils in relation—
  (*a*) to luxuriance of bushes.
  (*b*) to quality of tea.
(3) Manures available and their utility for producing—
  (*a*) quantity of tea.
  (*b*) quality of tea.
(4) Notes on the tea soil of each district of Assam and its improvement.

THE CHEMICAL COMPOSITION OF TEA SOILS.

Having devoted a chapter to the physical properties of tea so Mr. Mann takes up the chemical composition of tea soils, summary of his observations with regard to the latter branch the subject being as follows:—

In summary, therefore, tea requires for its successful cultivat a considerable quantity of organic matter and nitrogen in the soi the best results being only obtained when more than 35 per ce of the non-sandy portions of the soil consist of organic matter, a 0·8 per cent. of nitrogen. Provided this is present, tea can cultivated with success in presence of a minimum quantity other constituents, notably Phosphoric Acid and Potash, but obtain high quality tea these latter materials must exist in soil in larger amount, and other things being equal, the lar the quantity of phosphoric acid (in presence of sufficient nitrog the better will be the tea. Potash runs parallel with phospho acid, but is probably present in ample quantity in Assam so In short, much nitrogen with little phosphoric acid will produ rank growth with medium tea only—much nitrogen with mu phosphoric acid will give luxuriant growth and high qual tea—little nitrogen with much phosphoric acid will give hi quality tea, but comparatively little of it—and if there is deficiency in both, tea can never be profitable. Other constitue besides the three named may possibly have an intimate conn tion with the quality of the tea. Lime probably has little or no —and is in any case present in ample quantity everywhere. I —available. Iron may have some influence and apparently c creases in old soils, but this requires further investigation, a iron, at any rate, does not apparently need to be applied manure. Manganese—whatever its value, which needs to be pro ed yet by thorough experiment on a garden—is, I believe, gener ly present in abundance in an available form in Assam. T deficiencies, and the increasing deficiencies, of the soils of many the tea gardens in the Brahmaputra Valley render manuring necessity in the future.

MANURE.

Chapter four deals with manures for tea in Assam, the subj being thus summarised.

We therefore limit the possibly profitable manure in Assam t the present to the following:—

1. Bheel Soil and Top-dressing material of all kinds.
2. Cattle Manure.
3. Green Manuring.
4. Fertilising Trees and Bushes.
5. Bones.
6. Oil-cakes—chiefly those of castor and mustard.

These are all more or less complete manures. Of those useful t special constituents we have—

7. Nitrate of Soda, or Potash in rare cases for nitrogen.
8. Superphosphate from Bones or from Mineral Phosphate phosphoric acid.
9. Basic Slag for phosphoric acid and lime.
10. Wood Ashes for phosphoric acid and potash
11. Sulphate or Muriate Potash in rare cases for potash.
12. Lime.

I have already, under each heading, pointed out the utility each of these, but it remains now to submit certain general con derations on the methods in which it should be carried out.

1. I am strongly of opinion that manuring should always carried out the year before heavy pruning a plot. Thus, if section is to be cut down in December, 1902, it should be manu with whatever it needs in the Winter of 1901-1902. This is on principle that before a serious operation is undertaken, the gene health of the bush should be as great as possible, and the manu should be so incorporated with the soil, that without undue stim lation the bush recovers from the serious cutting.

2. In 1898, Dr. Watt hinted in several places that rotat of crops in some form or other was imperatively needed in gardens. In this, I am at one with him, and would add that th is equal need of rotation of manuring, and would suggest here so rotations which might be profitably carried out. As far as manu ing is concerned, I do not think that a period of more than se years should go by on any plot of established tea without at le one application of manure. Ten years might occasionally pass some lands and some gardens, but this is, I fancy, quite the lim

WAS IT A POISON SNAKE?

Sometimes John Garrett would go from morning till night without bite or sup. This was three or four years ago. Every morning he got up with a disagreeable, gnawing pain in the stomach or abdomen—he couldn't quite locate it, but he felt it all the same. Still he kept on working. He meant to see a doctor but neglected it. So a year ran away. By then the complaint had got hold of him as a wild grape vine does of an old tree.

He was a man full of pain as an unsunned cellar is of mould and crawling things. Often they kept hot flannels on him for twelve hours before he got a bit of ease; and for three weeks straight away he was in racking pain. At intervals it made the sweat run off him in streams.

Then he went to bed, John did, and a doctor took him in hand, as a pilot does a ship when the navigation is growing ugly. "My doctor," Garrett says, "was the best of men, but he didn't seem to know what ailed me." Nor did the other medical man who followed him.

On this our poor brother's heart sank within him, as King David's did when he heard of the fate of Absalom. Having nothing to do except to think, he thought he would go to a London hospital and ask the learned men there what was the matter with him. They said his right kidney was diseased and the left one affected. They feared they couldn't help him but would take him in for a month if he cared to stay. He said he didn't care to stay, and went home to Dartford. Quite right. As a place to die in the hop country beats a hospital!

Then he told his home doctor what the London doctors had said. The home doctor agreed with the London doctors and told him he would soon join the silent majority—who are done with diseases.

The end of Garrett's story, written by him at his home, 13, Wellington Road, Dartford, Kent, January 7th, 1901, runs this way: "I kept out of bed and moved about all I could. I turned up at the works sometimes, but from January, 1900 to Easter I did not earn enough to keep myself. More than once they sent me home.

"For three years I lingered along in this fashion when one Sunday I read in *Lloyd's Newspaper* about a stevedore who was handled like me and had been cured by Mother Seigel's Syrup; and without saying a word to anybody I got that medicine and began taking it.

"The first bottle pricked up my appetite and I actually felt hungry—a strange sensation for me. I slept better. The pain was not so sharp and the kidney secretion was clearer and of a better colour. The second bottle did me more good still, and after the third I felt like a king, I mean a healthy and happy king, if there is such a being."

"To-day I feel as well as I ever did. Saturday last I felt a bit out of sorts, from indigestion probably, and took a dose of Seigel's Syrup; and to-day I am right as rain. You may publish my tale." —JOHN GARRETT.

Did this man have Bright's disease? You have heard what the doctors said. Let us leave the point to them. Whether the snake that bit us was a poison snake or not is of no importance after we have got rid of the effects of the bite. Anyhow, whatever Garrett had, Mother Seigel's Syrup cured him; and the rest is nothing.

He has been employed at the *Daily Telegraph* paper mills for twenty-six years, but does not look his sixty years, his real age. Meeting him to-day you would not imagine he had ever been ill at all.

MARKET REPORT.

[*Per Mail advices of 15th November* 1901.]

COFFEE.

The London Commercial Record says:—With the exception of Santos the market has again been very sparingly supplied, and prices for the most part show a fresh advance of 1s to 2s per cwt. Public sales were held only on Tuesday, and the business privately is of moderate extent at full prices. Further unfavourable weather reports and a low estimate of the 1902-3 crop in Santos in Rio gave fresh excitement to the market for "futures," and the quotation for December Santos advanced to 39s 6d, but did not long remain at that point; yesterday a cable from Messrs. E. Johnston & Co., Santos, dated 13th instant, said—"Rain general in the interior. Drought ended. We think Santos receipts likely soon to fall off. In our opinion prospects of new Santos crop more favourable," caused a sharp decline of 2s 6d, partially recovered subsequently, but the latest prices show a decline of 3s to 3s 6d per cwt. from the recent highest point; business yesterday comprised December at 37s 6d to 36s, March at 37s 3d to 37s, May at 39s 9d to 37s 6d, and September at 40s 9d to 38s 6d per cwt. Auction supplies to-day consisted of 16 casks 6 tierces 9 barrels 3 bags Plantatation Ceylon, 830 bags East India, 150 bags Java Liberian, 40 bags Java, 78 packages Mocha, 480 bags Colombian, 92 bags nicaragua, 50 bags Nyassaland, 175 bags Vera Paz, 238 bags New Granada, 28 bags Mexican, 313 bags Costa Rica, 107 bags Guatemala, 409 bags Santos, 11 bags Rio, and 195 bags Bahia. The sales went off with a good demand at full prices.

Tons ...	17,270	14,231	26,374	16,982

The preceding figures exhibit—

	Tons.
In the Imports an increase this year of	9,156
Home Consumption an increase of	3,039
Export an increase of	9,392
Stock a decrease of	3,335

Tuesday's public sales passed off as follows:—

MOCHA.—110 half-frazils withdrawn.

NYASSALAND.—53 bags sold—good middling blue 56s 6d to 58s, peaberry 57s.

COSTA RICA.—507 bags about half sold—good ordinary mottled greenish 42s 6d, good middling dull blue 71s, fine bold blue 94s.

MEXICAN.—33 bags sold—small 42s, good middling 63s, good bold 81s, peaberry 60s.

COLOMBIAN.—481 bags sold—smalls 37s to 47s, middling to good middling 53s to 67s 6d, good bold grayish 71s 6d to 72s, fine hard blue bold 83s, peaberry 55s 6d to 62s.

BRAZIL.—1,375 bags washed Dumont Santos sold—smalls 37s 6d, medium 44s 6d to 45s, bold to extra bold 51s to 56s. Of 2,125 bags unwashed Dumont Santos, quay terms, about one-half sold—smalls 36s 6d to 37s, medium 38s 6d to 39s, bold to extra bold 42s to 44s 6d, peaberry 41s to 46s. 23 bags washed Santos sold—good bold coloury 51s. 159 bags washed Rio were bought in.

Rio Exchange 12$\frac{1}{32}$d, previous day 12$\frac{1}{32}$d.

HAVRE, *November* 14.—Good average Santos November opened steady at 46½f. and closed steady at 45¼f., December opened at 46¾f. and closed at 45½f., March opened at 47½f. and closed at 46¼f., May opened at 48½f. and closed at 47f., September opened at 49½f. and closed at 48¼f.

HAMBURG, *November* 14.—Good average Santos November opened steady at 37¼pf. and closed steady at 37pf., December opened at 37¼pf. and closed at 37pf., March opened at 38½pf. and closed at 38¼pf., May opened at 39¼pf. and closed at 39pf., September opened at 40¼pf. and closed at 40pf.

NEW YORK, *November* 14.—Closing prices of No. 7 Rio were as follow:—

	Nov.	Dec.	Jan.	Feb.	Mar.
November 14...	6·40	6·40	6·50	6·60	6·70
November 13...	6·70	6·70	6·80	7·85	7·95

Brazil futures opened firm to-day at about 7½d above last night's closing rates; then reacted and close about 1s off the best. Transactions include May 38s 4½d, 38s 6d down to 37s 7½d, and September

39s 3d, 39s 6d down to 38s 7½d, December quoted 36s, March 36s 9d, May 37s 6d, July 38s, and September 38s 6d.

Havre opened ¼ to ¾ up, but has since declined 1¼ to 1½.

Hamburg ¾ to 1¼ lower.

New York opens 5 to 10 up.

Brazil receipts 81,000 bags against holiday last year and 52,000 in 1899. Exchange 12d.

TEA.

INDIAN.—Supplies at auction were much lighter, *viz.*, 41,000 packages contrasted with 53,800 packages last week and 46,500 packages a year since.

The more manageable quantity brought forward together with clearer weather has had a beneficial effect and a steady market at the recent decline with a wider demand may be advised. Enquiry was best for low to useful common descriptions and stand out parcels, either for tip or liquor—Pekoes from 7d to 9d per lb. continuing the least in request. Sellers appear to be gradually realising the great importance of not printing more at one time than can be dealt with except at a sacrifice. If the trade is able to rely on support in this direction it can of course proceed with confidence to the benefit of all concerned.

For 33,100 packages on estate account 7⅞d per lb. was obtained compared with 7¼d per lb. for 37,000 packages, and 8¾d per lb. for 39,500 packages in the two former years.

CEYLON.—Public sales totalled 17,200 packages *versus* 12,500 packages on the 5th instant, and 17,300 packages at this period twelve months since.

Competition was brisker for leaf teas under 7d per lb. which occassionally showed a slight recovery from the depression lately noticed. Medium to fine Pekoes and Orange Pekoes sold without much change in value. There was not such good bidding however for broken Pekoes of ordinary quality, for which a slight concession to induce business often had to be made, but the higher grades kept about firm though some irregularity in quotations was observable. Exporters secured a fair number of lots suitable to their requirements.

The average is 7¾d per lb. On the 7th instant it stood at 7⅞d per lb., and 7⅜d in 1900.

JAVA.—Nearly 2,300 packages (of direct import) passed the hammer with somewhat better spirit, though prices did not alter materially.

Deliveries.—Clearances of all tea (on which duty has been paid) from the London warehouses, as per official returns are, *viz.*:—

From 1st to 12th November, 1901	...	...	7,329,117 lbs.
Do. do. 1900	...	...	7,135,744 ,,

During the week the following have been printed for sale by public auction:—

	Sold.	Withdrawn.	Total offered.
	Pkgs.	Pkgs.	Pkgs.
India	28,218	12,771	40,989
Ceylon	15,037	2,186	17,223
Java	1,687	582	2,269
Total ...	44,942	15,539	60,481

Also 794 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated November 15th, 1901, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1901-1902	648,389	553,658	32,481
1900-1901	672,008	600,945	24,323

42,261 *pkgs.* INDIAN
17,893 ,, CEYLON
2,269 ,, JAVA
} Total 62,423 packages were offered in public auction this week.

The steady progress in the use of British-grown tea in markets outside the United Kindom continues to be maintained, the quantities taken for the first nine months of the present year comparing most favourably with previous years, partially no doubt owing to the exceptionally low prices ruling during many months of this year, *viz.*:—

	1901.	1900.	1899.	1898.
Indian ...	24,008,887	18,503,944	17,806,844	15,994,547
Ceylon ...	43,371,580	35,571,028	28,221,746	26,914,107
Total lbs. ...	67,380,467	54,074,972	46,028,590	42,908,654

	1897.	1896.	1895
Indian ...	14,058,281	11,809,394	10,311,1
Ceylon ...	20,800,934	16,441,567	14,691,1
Total lbs. ...	34,859,215	28,250,961	25,002,2

The developement which has recently taken place in the re-expo from Great Britain is very encouraging, showing that Continent markets are now becoming large and important consumers Indian and Ceylon tea.

INDIAN.—The Indian Tea Association has published figures sho ing the comparative outturn of a number of gardens, from 1st Ap to the 30th September, which includes almost the total quanti manufactured up to that date with the exception of Travancore.

	Assam.	Cachar.	Sylhet.	Darjeelin
1901 ...	48,521,567	16,328,863	18,866,492	5,164,55
1900 ...	52,047,133	20,105,826	23,313,645	5,825,45

	Terai.	Dooars.	Chota Nagpur.	Chittagor
1901 ...	2,199,728	19,160,281	108,160	488,112
1900 ...	2,783,787	20,287,686	116,302	654,650

	Kangara Valley.	Dehra Dun.	Total lbs
1901	748,659	1,560,000	113,146,4
1900	759,142	1,390,000	127,283,6

With somewhat more moderate supplies a further depreciati in price was arrested, and even a slight recovery here and the perceptible, the smaller quantity inducing rather more competiti with a distinctly better tendency, while the firmness displayed b merchants has also assisted to steady the market. The followin averages are worthy of note:—"Seeyok," 1/2; "Teesta Valle T Co.," 1/2¼; and "Okayti T Co.," 1/1¾.

TRAVANCORE.—This district continues to grow in importance, a has recently sent home some teas of very fair quality. The highe average this week was obtained by the "Munaar" estate of th Kannan Devan Hills Co., from which garden 149 packages realize 9d. per lb., while the "Sevenmallay" and "Peraivurrai" gardens the same Co. averaged 8½d. and 8d., respectively.

Week's av. of New Season's tea sold on Garden Account 190 33,283 pkgs., av. 7·82d. 1900, 38,389 pkgs., av. 7·17d.

New Season's tea sold on Garden Account 1st June to date 190 473,912 pkgs., av. 8·21d. 1900, 542,769 pkgs., av. 7·87d.

CEYLON.—Although no actual recovery can be quoted from th lower rates of last week, there was more disposition to operate, an competition was somewhat more general, prices being firm for th lower grades, although medium teas were here and there rathe easier, really fine parcels on the other hand selling well. Averag for week 7·69d., against 7 40d. same week 1900.

Ceylon tea sold on Garden Account 1st January to date, 1,002,31 pkgs., av. 6·79d. 1900, 1,086,421 pkgs., av. 7·20d.

JAVA.—A fair selection was brought forward, and comprise some very useful teas. The market was steady, and prices we fully up to those recently ruling. Invoices from "Goalpara" an "Perbawattee" averaged 9d. per lb.

COCOA.

Public sales on Tuesday embraced 3,636 bags, which induce little or no competition, the sold portion being only about 900 bags prices showed hardly any alteration. 163 bags Trinidad about ha found buyers at 66s to 68s for middling, and 59s for defective, bein unchanged. Of 89 bags Grenada 35 bags sold at 64s to 66s fo good to fine, down to 60s for fair common. 24 bags fine Demera realised 66s. Of 223 bags Jamaica 90 bags were placed at 62s 6 to 64s for good to fine, and 54s to 57s for common to fair, bein firm. 11 bags good to fine St. Lucia sold at 62s 6d to 66s 6d C 2,465 bags Guayaquil 55s bags sold at 70s to 71s for late Arriba, an 63s to 64s 6d for grayish Balao. 100 bags good African realised 6 per cwt. The following all passed the hammer unsold:—43 bag Colombian, 20 bags Venezuelan, 30 bags Puerto Cabello, 137 bag Haiti, and 331 bags Ceylon. Private transactions embrace 1 bags Trinidad, good at 70s, fine at 74s, an odd lot of Puerto Cabell at 135s; 60 bags Caracas, ordinary to fine clayed at 78s to 95s, fi unclayed at 80s; 50 bags fair African at 58; 50 bags Haiti a

53s, and 200 bags Guayaquil—Machala at 65s 6d, and good Arriba at 78s per cwt.

PEPPER.

Black.—The market is firm in tone, with value dearer. On the spot 500 bags Singapore have been sold at 5 3/32d to 6d; for arrival 150 tons have changed hands, *viz.*, near at hand at 5 5/16d, October-December (s.) 6 1/32d, and January-March at 6 1/16d to 6 7/32d.

Nothing offered at auction on Wednesday.

White is dearer, with a good business in all positions. Sales on the spot have been made at 9¼d for fair Singapore and at 8 3/16d for fair Penang. For arrival 50 tons Singapore, January-March shipment, have been made at 9½d, and 50 tons Penang, January-March, at 9d to 9⅛d per lb.

No supplies of white pepper were included in Wednesday's public sales.

Black pepper firm to-day. 50 tons Singapore sold at 6 7/32d for January-March shipment and buyers.

For arrival 5 tons Tellicherry November-December (s.) sold at 56s 6d per cwt., c.i.f., delivered weights Trieste.

GINGER.

Cochin.—In the early days after our last, washed medium and small rough further advanced to 51s, at which business was done, but subsequently the market became rather flat, and at the auctions there was not much life. 130 cases 100 bags were catalogued, and 3 cases 100 bags sold—fine bold plump A cut 100s, good bright medium and small washed rough 51s per cwt. Small and tips roughly cut and scraped sold privately at 57s 6d per cwt. To-day 25 tons washed rough have been sold to arrive *ex* January-February (s.) at 45s per cwt., c.i.f., London.

Jamaica received very few bids, and when offeres were made they were many shillings below the rates required by holders, and, in the end, the whole of the 369 barrels brought forward passed the hammer unsold—at 48s up to 65s per cwt., as to quality.

QUININE.

As a consequence of the 7 per cent. decline in bark at the Amsterdam auction, makers of German quinine reduced their quotation by ½d per oz.—now 1s 2d—with the intimation that "until further notice the falling clause will be given for contracts." A larger reduction had been anticipated by outside holders, so this was considered satisfactory, and the week closed with sales of about 40,000 oz. at 1s 0¾d for December delivery, and 1s 1¼d for March. Early this week, however, prices slightly receded again, December selling at 1s 0½d, and March at 1s 1d, subsequently becoming rather firmer, with a small business at 1s 0¾d for December, and 1s 1¼d for March. To-day the market is quiet, and the above prices are unchanged. Whiffen's price has also been reduced to 1s 2d for 1,000 oz. lots. The result of to-day's quinine-sale at Batavia is as follows: Of 6,600 kilos. Ed. II. offered, 5,200 kilos. sold at an average of 20fl. per kilo. (about equal to 7¾c Amsterdam), against 20½fl. at the October sale. The next auction to be held at Batavia will take place on December 18. In response to a petition the Board of Trade have consented to publish the imports and exports of "quinine and quinine-salts" monthly in the Board of Trade returns commencing January next.

(Average for all India 7·82d., November 15th.)

IN THE INTEREST OF HEALTH.

ESSENTIAL FOR EVERY PLANTER.

THE HOUSEHOLD PHYSICIAN.

A Family Guide to the Preservation of Health and to the Domestic Treatment of Ailments and Disease.

BY

T. McGREGOR ROBERTSON, M.A., M.B.

WITH AN INTRODUCTION BY

PROF. M'KENDRICK, M.D., LL.D., F.R.S.

THIS book is the most valuable of its kind ever introduced into India. The language is plain, and the bodily ills to which young and old are liable are considered more fully than in any other popular work. The management of children in health, the diseases of childhood, the diseases of women, hygiene, the action of drugs, electricity massage, insolid cookery, medical prescriptions, etc., are amongst the many features of this work. Numerous illustrations and coloured plates. In leather binding.

PRICE **Rs.25.** *By V. P. P.* **Rs.26-8-0.**

Five-line (or shorter) advertisements from Subscribers will be inserted for three issues for One Rupee; non-Subscribers will be charged Two Rupees.

DOMESTIC OCCURRENCE.—The fee for inserting a domestic occurrence will be *One Rupee* for each insertion, payable in advance.

N.B.—Remittances should be sent to E. C. DUFF & CO., Proprietors, "Planting Opinion," 106, Armenian Street, Madras.

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 20th instant. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Coorg.

Polli Betta, *11th December.*—*Weather*—Very heavy rain here yesterday, 1·30 inch. Previously, for one or two days, it had been cloudy and drizzly. Of course, this weather is unseasonable in every way. It will be very injurious to paddy, causing a lot of light beans. I notice that pruning has been inaugurated. Weeding and gathering constitute the work on most places. Coffee is generally looking very fine. *Labour*—Ample. *General Health*—Very fair.

BRAZILIAN COFFEE.

Position and Prospects.

We give to-day some remarks on Brazilian Exchange and on Coffee at Rio de Janeiro during the year 1900. The year 1901 is now drawing near a close, but the only change that has occurred is in regard to crop estimates—an important change, indeed, but one that can scarcely have more than temporary influence upon prices. Any rise that may result will probably have the usual effect of stimulating production, and thus, while one "good" year may cover the loss incurred by planters during several "bad" ones, it is almost certain also to bring about those same bad seasons whose effects it counteracts. Coffee continues to be the economic mainstay of the district, but many plantations are now causing loss rather than profit. There seemed, moreover, in 1900 little prospect of any improvement for a considerable time, in view of the enormous production and of the fact that consuming markets were apparently so well provided that they need buy only at prices which absolutely suit their own purposes. The situation was doubtless much aggravated by the disaster to the Banco da Republica and other native banks in September, 1900. At the end of the year probably but few estates were

free of encumbrance, and planters had to borrow money for their working expenses in raising and marketing the crops. Under the circumstances it was difficult, in many cases impossible, to get the necessary accommodation, while the difficulties were added to by the attitude of the labourers, who energetically resisted the lowering of their wages when this was attempted in order to meet the new conditions. The amount of money available for trade purchases in the interior was very limited; merchants were unable to collect accounts, failures were frequent, credit was practically suspended, and importers, having thus a very restricted field for action, had naturally to curtail their orders. Efforts were being made to compensate the unsatisfactory results from coffee planting by raising cereals and other produce, which formerly were being brought almost entirely from other countries, chiefly the River Plate Republics. Much had been accomplished in this direction, but until the means of communication, both internal and coastwise, are more extensive, and economical, and inland taxation regulated with a juster appreciation of fiscal attributes—inter-State duties in particular being abolished—it is to be expected that foreign supplies will continue to find a ready market in Rio, particularly with a low currency valuation of gold, unless an absolutely prohibitive tariff against foreign produce be created, as some appear to desire.

Apart from other considerations, however, the extremely erratic course of exchange was sufficient in itself to discourage commercial enterprise. The rate was said to have improved 100 per cent., but the improvement was not at all of a solid and assured character. Fluctuations, upwards and downwards, of more than 1d. in a week, or even in six hours, were still being seen; every day each bank fixed its own particular value for the currency, and the rates were frequently altered about six times, sometimes twelve times, in the same day. Under such conditions it is impossible to carry on steady business, and trade was practically limited to speculative ventures. Even moneyed proprietors were undoubtedly feeling the strain, and it would seem that there is necessary a complete revolution in the system of marketing the produce with the object of freeing the trade from many of the high intermediary charges with which it is now burdened in the transfer of the coffee from plantation to export ship. Direct purchases by exporters from planters are steadily increasing, and another new feature is that exporting merchants are now making preparations to hold stocks on the Rio market, for which purpose several of them have already acquired the necessary warehousing accommodation. Great results are by many expected from the introduction of bonded warehouses and sales by "warrant," the adoption of which system has been sanctioned by the Legislature, and for the application of which, it is said, a code of regulations is being drawn up by the Executive. It would appear, however, that while such a system is admirably calculated to flourish when capital is abundant and credit easy, the same results can scarcely be expected during the absence of these commercial essentials. If the adoption of this system only leads to more careful selection and the adoption of improved methods in preparing the coffee for market, much will have been accomplished, as more satisfactory valuations must necessarily ensue. It has been frequently asserted that, were this principle acted upon, there would be no need to curtail or destroy production in order to bring it down to the level of demand, inasmuch as quite 20 per cent. of the material now marketed as coffee is in reality no better th rubbish. With a view to discouraging trade in unselec qualities it is proposed to adopt a scale of differential duti which would bear more heavily on the lower grades, and, fact, render the marketing of them impossible except at loss.

The wages of agricultural labourers vary considerab according to the districts, and efforts to reduce them have led serious trouble and disturbance throughout the country. T scale most generally adopted appears to be 70 milreis for ca and treatment of 1,000 trees per annum, and 1$600 reis for ea bushel of coffee picked during the harvest; for day laboure 1$500 reis per diem with board or 2 milreis per diem witho board. The crisis had naturally led to considerable depreci tion of the value of estates and landed property in gener but prospective investors should bear in mind that the figu published as the purchase values of plantations are mo frequently fictitious. During recent debates in Congress transpired that the real prices paid are considerably unde stated in order to evade payment of the full transfer taxe which are very heavy.

INSECT PESTS AND ACETYLENE GAS LAMP TRAPS.

Wherever planting, in any shape or form, is carried on, matter in what part of the world, there an insect or a fung pest of some sort is sure to appear sooner or later. It is t chief stumbling block of the fruit-grower, the vintner, t grower of farm produce, the tea and coffee grower, and, fact, all such pursuits as aim at excellence of product. T little attention is paid by the producers as a body to the org nized extermination of pests; therefore, while one man mo energetic, and desirous of fighting the enemy is up and doin and trying by all available means to effect a clearance on h own land, others, too indolent, too selfish to help in the gen ral good, stand by with badly infested lands, and critici and condemn as useless what perhaps with their help an co-operation would be perfect success; but without it can the most be the temporary staying of the tide.

Both tea and coffee planters groan under this load "pest" quite as much as any other class of crop produce and though there are many who will not stir themselves look abroad for ways and means of combating the trouble, would worry much about applying a means ready to han providing things could hang together for a while longer, y there are many again who are glad of a hint to guide the in their progressive labours. Pests which assume moth for in certain seasons of their life span are one of the hardes classes to deal with, owing to their easy mode of progressi from estate to estate, and so on through districts. Yet, the experiments conducted by two French gentlemen amo the vineyards of Beaujolais in France, even they can destroyed in large numbers, sufficient to materially assist reducing the source of danger. It is, to some extent, the sa method adopted by the fruit-growers of Australia and Am rica; the placing of strong flaring lights among the orcha when the nights are darkest, thereby causing many hundre of these moths to be attracted to the flame and destroye That which may serve the vintner and the orchardist m well do, on probably slightly altered lines to meet the necessi serve the planter. The work done by these two Fren

experimentalists is embodied in a pamphlet, of which the following is a resumé :—

The authors of the pamphlet in July last, attempted the destruction of a pest which, for several years, had infested the vineyards of Beaujolais; many of the vintners had tried to eradicate it, but without satisfactory result, and the "Pyralid" moth bade fair to "gang its ain gait." Messrs. G. Gastine and V. Vermorel determined to try an experiment with illuminated traps, a proceeding which appears to have met with unhoped for success. The lamps used were served with Acetylene Gas, the burner, with a naked flame being fixed in the centre of a metal basin with a diameter of about 18 inches. This was partly filled with water covered with a film of petroleum, the burner projecting a few inches above the level of the water. The small generator was charged with 150 grammes (about 4¾ oz.) of Calcium Carbide, which quantity kept the light in action for six or seven hours: the flame being of a little over one "carcel."* The generator supported the basin and was fixed on a post at a convenient height. The lamps were lighted between 8-30 and 9 P M., and burned till daybreak. During the dusk it was found that few moths were captured. The big catches commenced after dark, when clouds of the moths were attracted by the brilliant light. Some were singed by the flame itself, but the greater number precipitated themselves directly into the basins. When the insects are very numerous, a greater proportion of oil should be used to ensure their capture. The trials commenced on the night of 13th—14th July, with two lamps. One basin was accidentally overturned: the other captured 4,650 of the moths, besides an assortment of other insects. On another night as many as twenty lamps were employed, a total of 64,000 moths being accounted for, giving an average of 3,200 for each lamp. The biggest catch in a single basin was 5,000. From the 13th to 31st July, 170,000 of the moths had been destroyed in this manner. The average proportion of the sexes was 42 per cent. females and 58 per cent. males."

Mr. E. E. Green, Ceylon Government Entomologist, writing on the above subject gives it as his opinion that "this method of catching noxious insects deserves a thorough trial, and would be particularly applicable in such cases as "tortrix"†, "nettle-grubs"‡, "red-slug"§, and other pests due to the catterpillars of moths. Whether it would be equally effective against helopeltis, "shot-hole borer," and other miscellaneous pests, can only be proved by separate experiment in each case. I have tried "he says" small oil lamps, without result upon either helopeltis or shot-hole borer. But insects that take no notice of a small light, may be readily attracted by a more powerful one. A special apparatus, with which I hope to conduct experiments against our various wingéd insect pests, is now being constructed for me."

The experiments on vine pests having resulted so satisfactorily, there is no reason to doubt that similar tactics applied to pests of tea and coffee plants, would be productive of material good. All it wants is for a few planters to take the idea up, and see if their good example will wake up the others whose unclean estates are always the thorn in the side of those of their neighbours who desire progress. Nothing in this form can be done thoroughly without co-operation; for the pest cleared off of one estate for a season has still to be re-conquered the next as a result of the neglected condition of perhaps only one of the neighbouring estates. What matter how careful the sheep farmer may be in clearing off every burr thistle from his lands, if the Summer winds sweep the flourishing crop of seeds from a thriftless neighbours' field on to his again, there to furnish another set of the pest to battle against. Still the Acetylene lamp seems to be worth a trial; and even if a thorough clearance cannot be made, a partial routing of the enemy may be accomplished, and that in itself must pay for the outlay in the improvement of the crop to come.

MORE ABOUT THE APPARATUS.

We had, says the *Ceylon Observer*, the pleasure of inspecting the simple apparatus which Mr. E. B. Creasy has constructed for Mr. E. E. Green, Government Entomologist, with a view to the destruction of tea blight and insect pests. To begin with the generating chamber itself: this, we saw, is a light tin vessel containing two chambers, in the inner one of which gas is generated through the contact of water with calcium carbide. The water remains in the outer chamber, but is so connected with the inner one—up which passes a series of spiral trays bearing the chemical required—that the production of gas is continuously going on. A tube on one side connects with a safety valve through which the gas, if over-produced, is allowed to escape. The chamber containing the gas in the centre of the generator rises automatically with the gas produced. On the other side from the safety valve, is a tube connecting with the inner chamber, through which the gas is borne off for consumption.

The whole generator weighs a very few pounds and can be conveyed about the estate by any ordinary cooly. The destructive apparatus itself consists of a tin basin soldered on to the end of an alavanga, a burner passing up through the basin-centre, attached to the end of a tube—which for a few inches passes down along the alavanga and then connects with a rubber tube leading from the generator. The basin contains water and a little kerosene oil on the top. When the burner is lit, a flame of about 50-candle power is produced, and though we were not able to see the apparatus working last night, a wet evening having been threatened, we were told by Mr. Creasy that flies and insects of various sorts have already proved their affection for the powerful light emitted by the acetylene flame, and fallen in quantities into the kerosene oil in the basin round it. This successful result is most noticeable on the darkest nights. The apparatus is extremely simple and for planters who find their bungalows dull of an evening, few more interesting excursions could be made than with cooly, generator, basin, and acetylene flame—to collect and kill their vile enemies, tea blight and insect pests.

TEA IN LONDON.

MORE PROMISING OUTLOOK.

The London Tea statistics to the end of November reveal a more satisfactory position of affairs for growers of Indian and Ceylon teas than has, perhaps, existed for many months past. For the past month the deliveries of Indian descriptions alone amounted to no less than 14,400,000 lbs., and this, following on the almost equally satisfactory deliveries for October, would go to show that the large clearances effected during the duty scare in the early months of the year have now passed into consumption, and that the trade has once more reverted to its normal condition as regards the quantity of duty-paid stocks held in the country. At the beginning of this year a very gloomy view was taken of the position, mainly owing to the heavy accumulation of stocks, which showed an increase as compared with the previous year of

* "Carcel" is the French unit of artificial illumination, and is equal to the light emitted by a standard lamp with a flame 40 mm. high and burning 42 grammes of colza oil an hour.

† *Capua coffearia*, Nietner.

‡ *Thosea cana*, Wlk.: *T. recta*, Hmpsn.: *Natada nararia*, Moore, etc.

§ *Heterusia cingala*, Moore.

no less than 14 million pounds of Indian and Ceylon teas. With the low prices, however, a remarkable stimulus has been given to consumption during the current year, and the deliveries of Indian kinds alone for the eleven months of this year show an increase of no less than 11½ million pounds. Ceylon deliveries during the same period also show expansion to the extent of over 3 million pounds, with the result that instead of having to face an excess stock of some 14½ million pounds, as at the beginning of this year, the total amount in warehouses at the 30th November was fully four million pounds short of the figures at the corresponding date last year. With the increasing demand, as evidenced by the large increase in the deliveries, and the diminishing stocks, the outlook for tea growers at the present moment would appear to be more promising than it has been at any time for nearly two years past, especially looking to the complete check which the low prices ruling in recent years has given to extensions of the area under cultivation.

MR. C. R. NEWTON AND THE NEW TEA FERMENT.

Mr. Bamber in "The Chemistry and Agriculture of Tea," says that the essential oil is considerably increased during the process of manufacture, Mr. Newton's contention is that during the process of the so-called fermentation of teas, which is really a process of oxidization, certain etherial flavouring substances are formed which give flavour and aroma to the tea, and that in many cases by the addition of a proper enzyme more of the cell contents are rendered soluble, thereby increasing the quality of the tea; undoubtedly, if a large excess of enzyme is added, or it is allowed to act for too long a time, there will be a loss of delicate flavour, through the over-oxidation and rendering insoluble of these delicate flavouring materials, the same as there would be by ordinary over-fermentation, but one can be guarded against as easily as the other, and it will, he anticipates, be found possible to give the light fermentation necessary to retain flavour, while at the same time maintaining the strength of the infusion.

The enzyme can be demonstrated in the tea leaf by crushing or cutting up a leaf and then adding a few drops of Tincture of Guaiacum (Guaiaci Resin. 1; Alcohol, 90 p.c. 5; digest seven days), when a blue colour will appear. It may be necessary in some cases to add a few drops of peroxide of hydrogen to intensify the reaction, or in extreme cases where there is a deficiency of enzyme and an excess of tannin to dissolve out some of the latter first with alcohol. If the pure article is required it can be obtained by dissolving out with water, the tannin is then absorbed with gelatin, and the enzyme precipitated by adding five volumes of alcohol.

The enzyme theory fully explains the process of green tea manufacture. and shows where we have gone wrong in India, and have often only produced teas that were green in name only, their colour being more often than not black. An oxidizing enzyme can only exert its colouring influence on the plant tannins when the cell walls are broken down, and air can gain access, therefore it is the essential factor of the manufacture of green teas that before any of the cells are broken all the enzymes shall be destroyed by heat. and as they perish at a temperature of about 170°F., it is only necessary to raise the leaf to that temperature, which can be done either by steaming it or in other ways.

There is no question, says Mr. Newton, of adding bacte or any of their products to the tea, but only an enzy extracted from living plants and which is analogous to t one already existing in the tea, and which, like it, is entire destroyed by the action of the heat during firing. Many the bacteria are highly beneficial and of great service to ma Should it have been found of use to employ them in t manufacture of tea, which it has not, he can see no objecti to it, as they can be easily divided as was done by Frankl with our "Secret Friends and Foes."

RIO COFFEE, 1900.

Before we touch upon the main subject of our prese remarks a few words should be said about Exchange, t influence of which upon the cost at which Brazilian coffee c be placed on consuming markets needs no explanation. T sterling value of Brazilian paper has risen 100 per ce In June, 1898, currency was quoted at 5¾d., its value June 30, 1901, was 11d.; in July 1900, it was injudicious pushed up by speculation to 14½d., but this fictitious ra could not be sustained, and a rapid decline naturally ensue The rate subsequently has oscillated continuously, but September, 1900, it has never fallen below 10d., the high rate during the current year of 1901 having been 13½ which was attained in May.

MOVEMENT IN 1900.

As an export centre for coffee Rio now yields preceden to Santos, which port has taken the lead for some years.

The movement in this article at the various shipping po during 1900 was as follows :—

PORTS.	Entries.	DEPARTURES.	
		To Foreign Ports.	Coastwis
	Bags.	Bags.	
Rio	2,846,539	2,671,143	223,140
Santos	6,518,168	5,849,114	2,962
Victoria	(Not stated.)	217,554	4,893
Bahia	(Not stated.)	186,658	...
Total ...	...	8,924,469	230,995
Grand total ...		9,155,464	

The local stocks on December 31, 1900, were reported be :—Rio, 218,632 bags; Santos, 1,246,078 bags; to 1,464,710 bags; while the total visible supply of the wo on that date was returned at 7,612,770 bags (477,810 tons

The value of the Rio coffee shipments during 1900 is stat at 6,201,313*l.*, and that of the Santos contribution 11,982,119*l.*, totalling 18,183,432*l.* The values of Victo and Bahia shipments have not been declared.

CROP, 1899-1900.

The statistics of the crop year, which ended on June 1900, record the following movement :-

PORT.	Entries. Bags.	Shipments. Bags.
Rio	... 3,531,147	3,503,583
Santos	... 5,711,751	5,742,503
Victoria ...	(Not specified.)	281,664
Bahia	(Not specified.)	174,721
Total ...		9,702,471

The Rio coffee exports during this season are valued at 5,473,335*l* and those from Santos at 9,066,266*l*., or together 14,539,601*l*.

The average price of each bag delivered, f.o.b., is given as 33s. 2d. at Rio and 31s. 9d. at Santos.

The local stocks on June 30, 1900, were returned as :—Rio, 151,747 bags ; Santos, 279,236 bags ; total 430.983 bags ; while the visible supply of the world was given as being at that time 343,000 tons (5,831,000 bags).

CROP, 1900-01.

The statistics of the last crop year, ended June 30, 1901. are :—

PORT.	Entries. Bags.	Shipments. Bags.
Rio	3,015,968	2,937,213
Santos	7,973,148	7,821,271
Victoria	(Not specified.)	207,735
Bahia	(Not specified.)	180,556
Total		11,146,775

The value of the Rio part of this crop is given as 5,077,792*l*., and that shipped from Santos is returned at 14,787,632*l*., the two ports thus totalling 19,865,424*l*.

The average value of each bag of Rio coffee shipped during this season is said to be 37s. 8d., and that of each Santos bag 37s. 10d., delivered f.o.b.

The local stocks on July 1, 1901, are put down officially as follows :—Rio, 162,055 bags ; Santos, 398,863 bags ; total 560,918 bags ; and the total visible supply of the world on the same date is stated as 405,000 tons (6,885,000 bags).

The heavy arrivals in July to September, 1899, produced the impression that the 1899-1900 crop would be exceptionally large and prices fell to the lowest level known up to that time, the price in New York being in September 5⅜c. (2 11/16d.) per lb., corresponding to 8 milreis per 32 lbs. at Rio for No. 7 grade. Opinion changed, however, and a reaction followed which sent prices up in the last three months of 1899, and the year 1900 opened with such apparently improved prospects that much speculative business was done at the comparatively high prices then ruling which were over 16 milreis per 32 lbs. in February.

At that time, however, the true position began to be known, that is that the crop then being delivered would prove no smaller but probably larger than the previous one, and that the succeeding crop for 1900-01 would be unusually abundant.

Prices then again fell, and continued on a downward course almost without reaction until in December the lowest figure of the year 1900 was reached, *viz*., 9$800 reis per 32 lbs. It is known that the heavy contracts entered into at the high quotations of the beginning of 1900 entailed disastrous results on many of the local merchants.

The year 1901 brought an aggravation of the misfortune, for prices have continued to drop, and since April they have scarcely been above 6$500 reis to 7 milreis per 32 lbs. This fall, however, was partly the consequence of the enhanced value of the currency, and prices on consuming markets did not again, during the season, quite touch the lowest level of any of the three preceding crop years, the lowest New York "spot" price recorded in this period being 6c. (3d.) per lb.

Since July 1, 1901, however, prices have continued on a diminishing scale, and any chance of an early recovery seems quite beyond the field of ordinary possibilities.

Consuming markets are well supplied and can act independently for a long time to come, while the crop now in course of delivery, being that for the season 1901-02, is confidently expected to surpass all record, no less than 12,000,000 bags being counted upon for shipment at Rio and Santos.

Coffee crop estimates, are, however, proverbially erratic. Of the early calculations of the Rio and Santos 1900-01 crop, one of the highest was that quoted in the report of this Consulate for 1899, which placed it at 9,250,000 bags, but even this, it will be remembered, was exceeded in the reality by more than 1,750,000 bags.

In any case it seems doubtful whether this crop will be equal to the last in weight, and quality generally, and, moreover, it appears likely that much of the fruit will remain unpicked both for want of the necessary working capital and by reason of the unremunerative results of marketing.

Perhaps nothing can be more instructive as to the position of coffee than a recapitulation of the prices, stocks, etc., quoted on shipping and consuming markets on the day on which this is written (August 30, 1901), in comparison with those which ruled on the same day last year. They are as follows :—

	Currency.		Quantity.	
	1901.	1900.	1901.	1900.
Rio and Santos—	Reis.	Reis.	Bags	Bags.
Prices per 10 kilos. on August 30	4$800	8$100	...	...
Entries, July 1 to August 30	...	...	3,308,192	2,108,152
Shipments, July 1 to August 30	...	...	2,581,233	1,674,568
Stocks on August 30 ...	...	...	1,316,897	918,128

OVER-PRODUCTION.

The calamitous condition into which the coffee industry has drifted is clearly attributable to the unnecessarily large production, a sequel of the very extensive planting which took place six years ago when prices were high, and credits for enterprise of all kinds extremely facile.

The world's consumption is now calculated at 14,500,000 bags per annum, and it was the custom to say that, to make up this quantity, 10,000,000 bags were required from Brazil. More recent calculations, however, favour the idea that no more than 8,500,000 to 9,000,000 bags are wanted from this country. But, however that may be, seeing that the world's production is 16,500,000 bags annually, and that the aggregate production of other countries has not expanded during the last 26 years, the excess in production in relation to consumption of 2,000,000 bags annually is attributed entirely to Brazil.

The realisation of this fact led to a project, strongly advocated at first in many quarters, aiming at the compulsory destruction of 20 per cent. of the yearly crops. Fortunately this anti-economic idea has now been generally condemned and more salutary methods of improving the situation are being earnestly ventilated.

COST OF PRODUCTION.

The cost of production, of course, varies according to the circumstances of each plantation, its situation, nature of soil, extension, yield per tree, etc.

Working expenses in São Paulo, for example, are considered to be, as a rule, 15 per cent. less than in Rio de Janeiro and Minas Geraes. Perhaps the average figure, including sacking and transit to shipping port, would be about 7 milreis per 32 lbs.

As the export value for the standard grade 7 is no more than this, and as the planter has still to pay the export duty of 9 to 11 per cent. *ad valorem*, it is evident that a considerable reduction in cost of production must be brought about if coffee cultivation is to continue as a paying industry.

To this end incessant claims have been made for reduction of export dues and transport tariffs, and they have not been left entirely unattended to.

The State of Minas Geraes, for example, has reduced its export tax from 11 to 9 per cent. *ad valorem*, and the freight tariffs on the Central, Leopoldina, and other railways have been reduced 25 per cent. for hulled, and 30 per cent. for unhulled coffee, while a maximum rate of 100 milreis per ton is to be charged irrespective of distance.

Field machinery and implements and all agricultural accessories also are now exempted from import duties, while favours have been extended to mortgagers to free them from foreclosure during the continuance of the crisis. Moreover, a more encouraging field for consumption in France has been opened by the reduction of the import duties into that country from 156 to 136 fr. per 100 kilos. All measures will, however, be ineffectual in warding off collapse in many cases, for the simple reason that many of the new estates have been acquired and developed by means of mortgage loans by persons who have not even the floating capital necessary for current working expenses, and who, during this period of restricted credit, will be quite unable to obtain the assistance necessary for this branch of expenditure.

Return of Exports of Coffee from Rio de Janeiro during the year 1900.

THE FRENCH IMPORT TARIFF.

In the British Chamber of Commerce (Paris) Circular f last month it was stated that the Chamber had not been able ascertain what the intentions of the French Government a as far as the British Colonies are concerned, though they h reason to believe that the Colonial Office is in correspondenc with the colonies that would be affected by the applicati of the maximum tariff, and with the French Governme with a view to seeing what arrangement can be entered into

We are glad to note, however, that Mr. J. J. Marcel h sent more definite news to the *Ceylon Observer*. He stat

* Bags of 60 kilos. or 132 lbs. each.

that the French Law of 24th February, 1900, imposing increased duties on "Denrées Coloniales," which should come into force next February, will again be suspended for a year, so that the duties during that time will remain as they are now and there will be no increase of the present duty on Ceylon tea. A bill to this effect is in preparation and will shortly be laid on the table of the Chamber of Deputies. It would be more satisfactory to know that this French bogie had been entirely exorcised, but the above tidings are, as far as they go, encouraging.

NOTES.

Calcutta Tea Exports. The total exports of tea from Calcutta to the United Kingdom, from the 1st April to the 3rd December, amounted to 121,085,495 lbs.

Calendars. Messrs. W. E. Smith & Co. have favoured us with two pretty little celluloid calendars, the one in pocket tablet form, and the other a combined book marker, paper cutter and inch-measure, a very handy article.

Tea in New York. During October, says the *American Grocer*, 73,120 packages of tea were passed by the appraiser of this port, and only seventy-six packages rejected, of which seventy-two packages were Green tea and four packages Oolong.

Brazilian Tea Plantation. We learn from the *Brazilian Review* that a tea plantation of considerable extension exists near Ouro Preto which might easily, it is claimed, produce 2,000 kilos. of different qualities of tea if skilled labour could be obtained.

Annam Tea. Tea from the Protectorate of Annam is coming into favour at Paris, where it is preferred to the Indian article. Planters in Annam rejoice and hope in time to rule the Paris market, their tea enjoying a customs drawback from being of French colonial origin.

Brazilian Coffee. Coffee receipts at primary ports in Brazil continue very heavy. "Don't be alarmed by sensational cable reports of extensive damage to the Santos crop of next season," says the *American Grocer* to American grocers. "There will be plenty of coffee if it was half destroyed."

Pepper in New York. The stock of black pepper in New York on November 1, as reported by Messrs. J. W. Phyfe & Co., was 13,999 bags and 5,017 cases Singapore, a total of 19,016 packages, against 23,368 bags at same date in 1900; deliveries in October were 6,387 bags Singapore pepper, 6,833 bags Sumatra pepper.

White Pepper. London reports state that supplies and stocks of the white description are small on all sides; the fear has gained ground that a serious shortage will be established in the early spring, which, it is believed, will be responsible for an important rise in the value of the article. There is even a rumour of the formation of a Syndicate similar to the one which handled Black Pepper some little while ago, but this is only a rumour.

Travancore Teas in London. Messrs. George White & Co., in their report of November 21, say: South India has recently been sending some very useful invoices, especially from Travancore, which met with good competition, the produce of the latter district being appreciated because of its characteristic coloury liquor.

Calcutta Tea Sales. At the Calcutta tea auction on Friday, the 6th instant, 17,000 packages were offered, against 17,600 for the corresponding sale of last season. There was a good demand for Pekoe Souchong kinds, which were about 3 pies dearer, while tippy Assam Broken Orange Pekoes received more attention than has been the case for some weeks past. Good medium teas were, if anything, rather weaker. There was some demand for the Colonies, but Bombay buyers were quiet.

Indian Tea Prospects. The crop and season telegrams, for the week ending with the 30th November last, report heavy rainfall in Bengal and parts of Orissa; light and general showers in Madras, Mysore, North-West Provinces, and Bombay; no rain fell in other parts of the country. Prospects are a little better, and prices generally are falling or stationary. But in Baroda, Central India, and parts of the Punjab the outlook is still gloomy, and in Guzerat the situation remains unchanged.

Messrs. Hoe & Co.'s 1902 Pocket Diary. We have received from Messrs. Hoe & Co., Madras, a copy of their 1902 Pocket Diary, containing just about as much useful and every-day information as is possible to be compressed into a book of its class. Besides the year's Diary space, there is a complete ready reckoner in the form of conversion of rupees into sterling; table of interest; and table of wages rates; also lists of Government Institutions and Officers, Business Houses, Postal and other information, etc., and the ever-useful calendar. The price of this neat, handy, and compact little pocket book is ridiculously low, and Messrs. Hoe & Co. are to be complimented on their publication.

Coffee in London. The Scare over. We have all along urged, says the *Produce Markets' Review* of November 16, that it was too early to prophesy as to the next crop, and that rain, which mostly comes in November, would entirely alter the position, and would very likely lead to a second flowering, and add materially to the prospects of another good crop, even if 2,000,000 or 3,000,000 bags less than the present one. The terminal market at once responded to this information by falling 2s 6d, but, with slightly smaller receipts, a steadier tone prevailed, and quotations close only about 1s below those of last week, though about 3s from the highest point reached. For actual coffee there is still not much demand, and at the auctions, which have been only of small extent, prices have shown little change.

A British "ad valorem" Tea Duty. The *Ceylon Observer*, writing of the British *ad valorem* Tea Duty, says:—"The importance of any movement affecting the tea-industry may sometimes be gauged by the chances it has of success in effecting any proposed change. Few causes have started under more unhappy auspices than that of Mr. Shand, for an *ad valorem* duty on tea in the United Kingdom; for it dates from the refusal of Ceylon to put up with such a duty in Australia, and Sir Michael Hicks-

Beach will only draw his reply from the way the strong tide of Ceylon feeling set, as regards the Australian experiment. Mr. Shand has made out his case as soundly as possible. but we cannot regard the case as a sound one for the present. Low country teas have begun to triumph of late and need no relief." Mr. Shand's letter is given on another page.

Ceylon Tea at Odessa.

Mr. Consul-General C. S. Smith, in his report, states that the tea trade during the past year was very bad in South Russia on account of the universal scarcity of money and the bad harvest. "Ceylon and Indian teas are far stronger than Chinese tea, so that if consumers took to their use only half the quantity would be required. Though the consumer may not be aware of it, Indian and Ceylon teas are already largely used for mixing with China teas. It is likely that Indian and Ceylon teas will gradually make their way in the Russian market, but at present, as they are only required for mixing, only particular kinds find a market. Planters who wish to send tea to Russia would do well to employ a regular exporting house for the purpose, and no doubt would recognise that uniformity of quality is much to be desired."

Ceylon Tea Exports.

The total export of Black Tea from 1st January to 2nd December thisyear :—

		lbs.
To United Kingdom is		93,596,160
Against same period	1900	101,292,051
To all other countries	1901	36,235,876
Do. do.	1900	30,918,596
Total shipments to date	1901	129,7423,06
Do. do.	1900	132,210,647

So that Black Tea shipments to London during this year are 7.785,891 lbs. below, and to other countries 5,317,280 lbs. above, those to same date last year; while altogether they show a net decrease of 2,468,611 lbs. The shipments to the United Kingdom during the current month are estimated by the Chamber of Commerce at 10 million lbs. The total export of Green Tea up to the same date this year is 697,360 lbs. The total, on which bounty has been paid this year, up to 30th November is 1,420,468 lbs.

Indian Teas in London.

The *Produce Markets' Review*, of November 16, says :—There is an improvement in the demand, and prices, on the whole, have shown a somewhat firmer tendency. A considerable quantity was again withdrawn from the public sales, as holders evidently were not disposed to accept the lower prices established last week. A large quantity of the withdrawals has, however, since been sold, and, in most cases, at an advance on the bids made at the auctions the market closing with a stronger tendency. The lower qualities, although much dearer than in the early part of the year, are about equal in value to those of the past few seasons, and there appears to be every prospect that present prices will be well maintained. A shortage in the season's production is practically certain, the deficiency being generally placed at 10,000,000 lbs., but as there was a large surplus stock on the arrival of the new crop, there is apparently no reason for any material rise in prices. At the public sales 43,193 packages were offered compared with 55,379 last week, and 19,780 were withdrawn. In the latter a fairly active trade has been transacted privately at prices showing an improvement on those bid in the auctions, and up to the present 36,937 packages have been printed for next week.

LETTERS TO THE EDITOR.

BONE-MEAL AS MANURE—No. I.

Sir,—In your issue of November 30th giving an accou of a General Meeting of the South Mysore Planters' Assoc tion, Mr. Crawford, the President, remarked *inter alia* :

"Dr. Lehmann's remarks (in the course of his lectur about bone-meal as a manure are worth bearing in mi He practically said that this manure was not worth the mon expended on it and planters could obtain a far better res from lime (air-slaked lime for preference) applied in quantit of one ton per acre. He also doubted the benefit deriv from green manuring in the Malnad, *i.e.* planting legumino between the rows and digging the same in." I am inclin to believe that Dr. Lehmann was not so sweeping in h condemnation of bone-meal as a manure, as your extrac from this speech would lead one to believe, but that, like h reference to leguminosæ, he restricted his remarks to t Malnad. If so restricted, Dr. Lehmann's opinion coincid with that of Dr. J. A. Voelcker, Consulting Chemist to t Royal Agricultural Society of England, who, in his "Repo on the Improvement of Indian Agriculture," says : "No lime works beneficially in many ways ; it not only acts itse as a plant food, but it makes clay land permeable to moistu and enables it to absorb potash, ammonia and other sal whilst, not least of all, its presence is required in the proce of nitrification, by which means nitrogenous matters in t soil are made available for the plants' use. Speaking gen rally, lime is more plentifully distributed in Indian soils th in English, that is, deficiencies of it are not so frequent met with. A noticeable exception, however, which I ha found, is in the laterite soil of parts of Southern India, su as the coffee growing districts of Coorg and Mysore, where have reason to believe, a more abundant supply of lime wou be decidedly beneficial."

The soil, we see from the above, starts with a deficien as regards lime, and has, in all probability, suffered still mo from the use of ill-chosen chemical manures. Without suf cient lime in the soil the very best manures are useles This every farmer knows.

In my lecture on Bone-meal as a Manure delivered la March in the hall of the Triplicane Literary Society I show the difference in results from the use of various manures harvests on the Horn Estate near Hamburg in Germany the years '93-'94 and '94-'95.

	Rye	Grain. lbs.	Stra lb
Lime alone	...	1,649	4,(
Lime + 600 lbs. bone-meal	...	3,225	6,3
The increase on 1$\frac{4}{5}$ acres = ...	...	1,576	2,3

I may here add the results obtained by an addition of kai

1 ton lime + 600 lbs. bone-meal ...	...	3,225 lbs. rye.
Do. do. + 800 lbs. kainit =	...	4,580 „ „
Increase ...		1,255

Without farm yard manure or lime, the results were

	Grain. lbs.	Straw. lbs.	To l
	1,014	2,907	3,9
With lime	1,649	4,065	5,7
With lime and bone-meal	3,225	6,375	7,6

Speaking of phosphoric acid Dr. Voelcker says :—"On t other hand, the somewhat lower amount of phosphoric ac

found in the laterite soil of Mysore, together with the greater demands by the coffee plant upon the mineral ingredients of the soil, may be the reason that bones are in those parts used extensively by the planters and are considered necessary. The benefit of their application may lie also in the fact that they supply lime and nitrogen as well as phosphoric acid."

If then, the soil be deficient in lime and phosphoric acid, can one possibly say that, bone which contains roughly 31 per cent. of lime and 23 per cent of phosphoric acid, is not worth the money paid for it. Of course, it is to be presumed that the soil is not wanting in lime, or, all the manures on the market would be useless. With the great amount of potash, lime, and phosphoric acid in the ash constituents of coffee it is evident *the* manure for coffee (always pre-supposing a sufficiency of lime) must be kainit or sulphate of potash and bone-meal. To strengthen this, I give below a copy of a report I have just received from the Superintendent of the Empress Botanical Gardens, Poona.

SIRUVALLUR, Yours faithfully,
7th December, 1901. JOHN KENNY.

[Report from the Superintendent.]

Empress Botanical Gardens.
POONA, *5th December*, 1901.

JOHN KENNY, Esq.,
Madras.

DEAR SIR,—In reply to your favour of the 28th November I beg to say that the bone-dust sweepings you gave me for trial were given to oranges and coffee plants.

Two rows of oranges which did not bear well, owing to the damp due to a water channel running alongside, bore an excellent crop of oranges when an application of the bone manure, about 5 lbs. to each tree was given. They gave from 100 to 200 oranges, while, before the application, they did not give half as many.

I can say that my coffee trees have improved decidedly. They were pale yellow for some years. But since I used your manure they have become quite healthy and shining green. The berries have generally improved in size. The number of clusters on each branch and the number of berries in each cluster, show an increase of 30 per cent.

I may add that I have full confidence in the excellent qualities of bone manure. but am sorry I cannot give it a thorough trial in the Gardens.

BONE-MEAL AS MANURE—No. II.

SIR,—Allow me to add to his former report the following lines received from Mr. P. S. Kanetkar, Superintendent, Empress Botanical Gardens, Poona, one of the smartest and most painstaking former pupils of Mr. Mollison, the present Director-General of Agriculture for India.

He says :—"I forgot to inform you in my letter of the other day that I was one of those in charge of experiments with making Gul (raw sugar) from sugarcane manured with different manures at the Experimental farm, Manjri near Poona. The Gul got from the bone-manured plot was the best of all, golden-yellow in colour with sparkling crystals and as firm as could be desired. It kept dry in the monsoon, when Gul made from poudrette and oil-cake manures generally gets pasty from the damp."

JOHN KENNY.

SIRUVALLUR,
11th December, 1901.

GENERAL ARTICLES.

BOIS IMMORTEL AND "INCIDENTAL INCREMENT."

That trees and plants of all descriptions require and obtain food in excess of the nutriment such as manures, etc., given to the soil by the cultivators, is generally recognised; but the extent and nature of this excess, known usually as the "Incidental Increment," can at present only be surmised, including, as it does, material from widely different sources, such, for example, as rain-water, decaying vegetable matters, and the decayed bodies of animals, insects, etc.; to mention a few of the contributors to plant nourishment.

Professor Carmody, the Government Analyst in Trinidad, experimenting in this direction, has analysed the flowers of the Bois Immortel (*Erythrina umbrosa* or *E. velutina*, of the Natural Order *Leguminasæ*), a tree growing to a height of 60 feet, and used as a shade for cacao plants. This tree annually sheds a luxuriant profusion of flowers, which he finds contain a high percentage of nitrogen, and, decaying rapidly, afford valuable nutriment to the surface soil.

The nitrogen which has been taken from the subsoil by the Bois Immortel is given back, through the medium of the flowers, in a readily assimilable form, for the immediate nourishment of the cacao trees, which flourish in its shade.

Professor Carmody finds an average of 6 per cent. of nitrogen in the flowers, but this comparatively high percentage drops to 4 per cent. by the end of five days, when the flowers are picked and dried. In the natural order of things the flowers would decay and nourish the ground before the five days had expired.

The following figures show the relationship between the nitrogen-content of the cacao bean and the Immortel flowers :—

	Nitrogen per acre.
250 cacao trees = 500 lbs. cured cacao, containing 2½ per cent. of nitrogen	= 12½ lbs.
50 Immortel trees = 500 lbs dry flowers, containing 4 per cent. of nitrogen	= 20 ,,

The following figures show the rapid loss of nitrogen that occurs in the dried flowers as mentioned above :—

	Fresh flowers.	Two days old.	Five days old.
Nitrogen per cent. ...	6·32	5·16	4·14

It should be pointed out that this apparently highly suitable shade tree is not unique, there being other trees shedding a profusion of flowers (with possibly as high a nitrogen-content), and just as suitable as a shade for the cacao, and which, when cut down, yield saleable products, such as timber and bark.

GUTTA-PERCHA FROM A CHINESE TREE.

Specimens of a peculiar Chinese plant, known as "Tu-chung," were forwarded to Kew more than ten years ago for examination, with the statement that the tree is cultivated for its bark, which is a most valued medicine. The plant was named *Eucommia ulmoides* by Prof. D. Oliver, and the chief interest attaching to it was the presence in the tissues of an elastic gum, resembling caoutchouc or gutta-percha. If the bark be broken across this appears in the form of innumerable silvery threads, and in a later examination Prof. F. E Weiss found the yield from the dry bark to be about 3 per cent. Since these preliminary investigations further material has been obtained as well as living specimens of the plant, which are at present growing in several botanic gardens in Paris and at Kew, and with these a much more satisfactory examination has been possible (*Kew Bulletin*, Nos. 172–174, p. 89).

The order of the plant is difficult to decide owing to its peculiarities, and while Oliver and Baillon agree in placing it among the *Trochodendraceæ*, it is referred to *Hamamelidaceæ* by Solereder. Wherever it is placed according to its morphological characters, however, the allied plants do not yield rubber or gutta-percha. The elastic gum produced by the plant is found to be of the nature of gutta-percha rather than caoutchouc, and the vessels containing it are much more similar to the cells which yield true gutta-percha from *Dichopsis*, than to the laticiferous vessels of the common rubber-yielding trees. It occurs in every part of the plant except the wood and the outer parenchymatous layer of the young roots. Some preliminary experiments to ascertain the yield and quality

of the gutta have been made by MM. Dybowski and Frow on material obtained from living plants in Paris. The plant which they had at disposal was only very young, and although the bark was found to be full of laticiferous vessels it was not considered advisable to remove any branches for examination. The dried leaves yielded 2·25 per cent. of substance soluble in toluene, which, considering that the fresh leaves contained 70 per cent. of moisture, is not a high return. The fruits, however, gave a much better result, as when undried, containing 7·4 per cent. of moisture, they yielded over 27 per cent. of substance solube in toluene. The product obtained was of brown colour, and behaved exactly like gutta-percha. When immersed in hot water it softened, and could then be stretched out into thin sheets, like gold-beater's skin, or moulded, while on cooling it again became quite hard. As gutta-percha it was stated by experts to be of good quality.

The propagation of the plant from seeds is very uncertain, as, apart from the difficulty of obtaining supplies, germination is slow and irregular. One sowing gave a single seedling after the lapse of six weeks, a second after five months, and others later. Cuttings, however, are found to give much better results, as they will strike at any season and give vigorous plants, though spring, when the branches are still leafless, seems to be the most favourable time for taking them. The plant has proved to be very hardy, for at Kew a specimen obtained in 1897 from Paris has grown successfully in the open without protection, and in Paris two unprotected plants have survived exposure through two winters to as low a temperature as 18° or 19° F.

Eucommia ulmoides may therefore prove of value as a source of gutta-percha, and the Jardin Colonial is already making experiments with the plant in Annam, Tonkin, and North Africa.

ART OF PREPARING TEA FOR USE.

A CANADIAN METHOD.

It is singular, to say the least, that nothing, is ever done by tea dealers, in this country to educate or enlighten their customers in the proper manner of preparing their tea for use, to study the character of the water, or to preserve its aromatic properties after purchasing. Good tea, like good wine, can be kept intact for years with considerable advantage to the dealer and consumer alike, and there is no valid reason why consumers of tea should not be as particular and fastidious as drinkers of wine. But to obtain a good cup of tea, in the first place the consumer should purchase only the best tea, it requiring much less of the finer grades to make good tea than of the common kinds, and will prove the most economical in the end. In the proper preparation of tea for use the quality of the infusion is much affected also by the character of the water as well as by the method of making or drawing it. Tea being an infusion and not a decoction like coffee, it should be brewed, not stewed, the chief object being to extract as much of the theine or refreshing principle as possible and as little of the tannin or astringent property as can be at the same time without either boiling or overdrawing it. Many tea drinkers who imagine erroneously that a very dark-coloured liquor indicates strength, boil the leaves; while others again spoil the infusion by first putting the leaves in boiling water. Some again place the leaves in cold water and then put the vessel on the fire to boil, prolonged infusion being another serious mistake. All of these improper methods produce the same evil results, *viz.*, that of extracting an increased amount of the tannin, thereby destroying the true colour and flavour of the tea by imparting a blackish colour and giving a bitter or astringent taste to the liquor. When tea has been once boiled or overdrawn, the increased quantity of tannin extracted can be readily detected by the extreme dark colour of the liquor as well as by its bitterly astringent flavour. Another reprehensible practice of some tea makers is that of adding fresh leaves into the teapot with those that have been already once drawn, as it cannot add to either the strength or flavour of the tea by putting more leaves in the teapot after the first drawing, for the simple reason that the tea water will not extract the theine from the dry leaves of the fresh tea. Only fresh boiling water will do this effectually, the water once used only increases the amount of tannin extracted, thereby darkening the colour and destroying the flavour, and merely adds to the quantity of leaves already in the vessel without at all affecting the active principle, theine. So that if be required to increase the quantity or strength of the infusion already in the pot, some fresh tea leaves must be drawn in a separate vessel and the liquor poured in that already made. the proper preparation of tea for use, therefore, the object sho be to extract as little of the tannin as possible and as much of theine and volatile oil as can be extracted without permitting infusion to boil or overdraw. To best obtain these most desira results, put the requisite quantity of tea leaves in a covered ch or earthenware pot—all tin and metal vessels should be avoide and pour in freshly boiling water that has been boiling for at le three minutes, and then allow the vessel to stand where it keep hot, without boiling, for from eight to ten minutes bef serving, according to the variety of tea used. There will b sparkle and aroma about tea made from fresh boiling water in t manner that it will not receive from the flat, hot water that been boiled too long or repeatedly. In the stated time, while tea is drawing only the refreshing and exhilarating propertie the theine and volatile oil—are extracted from the leaves, a lon infusion only dissolving and extracting the astringent and d terious principle—tanic acid—which impairs digestion and inju the nervous system, for which causes alone all boiled or overdra tea should be avoided. In moderate strength it requires about teaspoonful of good tea to a half-pint of boiling water and ordinary half teacupful of leaves to every quart of boiling wa the latter making a fairly strong infusion for five persons. Ch and Japan teas require from eight to ten minutes to draw thorou ly, the former requiring but little milk and sugar while Ja teas are more palatable without the addition of either. In Ceylon, and Java teas generally should not be allowed to d more than from five to seven minutes at the outside after the b ing water has been poured on, as prolonged infusion makes flavour of these varieties particularly mawkish and bitter, while addition of an extra quantity of both milk and sugar greatly proves their drinking qualities.—JOSEPH M. WALSH, in the *Ca dian Grocer*.

A TEA SWEETENER.

An article in the *Kew Bulletin* states that Mr. Cecil Gosli H. B. M. Consul at Asuncion, Paraguay, has sent to Kew s leaves of a plant which has lately been discovered in Paraguay Dr. Bertoni, an Italian botanist, and director of the Agricultu College there. This plant, which has probably been known to Indians for a hundred years or more, and whose secret has, as usu been so faithfully guarded by them, grows in the Highlands Amambai and near the source of the river Monday, not be found, it is said, further south than this. It is a modest sh growing side by side with the weeds and luxuriant grasses of t district, and only attains a height of a few inches. The leaves small and the flowers still more diminutive, and the Indians cal Caá-êhê, meaning sweet herb, because of its sweetness, a few lea being sufficient to sweeten a strong cup of tea or coffee, giv also a pleasant aromatic flavour. Its discoverer does not, howe believe that the Caá-êhê bears any relation to the saccharine p perties of sugar; and the experts at Kew have not succeeded identifying it with any plant in the Kew Herbarium. The K organ remarks that there is no doubt that the plant possesses v strongly the power of stimulating the sensation of sweetness, for smallest piece of a leaf causes a persistent sweetness in the mou

AN *AD VALOREM* DUTY FOR TEA IN THE UNITED KINGDOM.

Mr. C. Shand has addressed the following letter to the Hon. the Chancellor of the Exchequer :—

As the period is approaching when the programme of the Natio Ways and Means will be under your consideration, I have again honour of soliciting your attention to the question of the Imp Duty on Tea, which falls so inequitably on the cheap descriptio which are chiefly consumed by the bread-winning classes. In event of the War in South Africa being prolonged, and the exig cies of the Public Service precluding the possibility of y reducing the Duty, however desirous you may be of doing so venture to suggest that the injustice of its incidence would redressed by your substituting an equivalent *ad valorem* duty the place of the present rateable one. As the principle of *ad valo* duties is, as I think you will admit, the basis of all equitable taxati

whenever it can be applied, and is the one adopted in nearly every civilised country when it is desired to make those articles of imported and exported merchandise, which vary greatly in quality and value, contribute to Revenue. There is, I think, nothing unreasonable in my suggestion, especially as there would be neither difficulty nor trouble in assessing the value and levying the duty. You are aware that practically all the Tea imported into the United Kingdom is sold by the Importers (chiefly by auction) in bond, and that the duty is paid by the buyers when they wish to take delivery of their purchases. In their entries at the Custom House the buyers would assess the value at the prices they paid for the Tea, and calculate the duty to which it was liable. The Custom House clerks would check the valuation by simply inspecting the duty-payers' "bought-notes" or contracts. Thus little more trouble is involved in levying an *ad valorem* duty than in collecting the rateable one. I invite you kindly to compare the facility and simplicity of this method with the trouble entailed in levying the duty on Sugar, Tobacco, Spirits and other dutiable goods. The adoption of the suggestion will be doubtlessly opposed by all those who believe that expediency and not justice is the predominant principle that directs your actions.

RUBBER PLANTING IN BURMAH.

The Secretary of the Planters' Association of Ceylon has placed the official correspondence on this subject at the disposal of the Press. The chief letters are the following :—

THE HON'BLE THE COLONIAL SECRETARY, Colombo.

SIR,—I have the honour to enclose copies (under separate cover by post) of a memorial to the Secretary of State for the Colonies from the Planters' Association and others (in triplicate) duly signed on the subject of the experimental cultivation of Pará Rubber in Burmah with a view to prevent a continuance of Government competition with private enterprise. In asking that the said memorial may be forwarded by an early mail to London for submission to His Majesty's Government, I would add that it is trusted that His Excellency the Governor will be graciously pleased to commend the matter to favourable consideration.

Requesting an acknowledgment.

I am, Sir, your obedient servant,
(Signed) A. PHILIP,
Secretary to the Planters' Association of Ceylon.

KANDY, *September 5th*, 1901.

THE SECRETARY TO THE PLANTERS' ASSOCIATION OF CEYLON, Kandy.

SIR,—Referring to your letter of 5th September last, forwarding a memorial to the Secretary of State for the Colonies from the Planters' Association of Ceylon on the subject of the experimental cultivation of Pará Rubber in Burmah by the Government of India, I am directed to inform you that His Excellency the Governor has received a despatch from the Secretary of State intimating that although Mr. Secretary Chamberlain does not think that he would be justified in objecting, in the interests of Ceylon, to any encouragement which the Indian Government may think it wise to give to the development of a rubber industry in India, he submitted the memorial together with a copy of His Excellency the Governor's despatch forwarding it to the Secretary of State for India.

2. A reply has been received from the Indian Office stating that the Government of India have undertaken the experimental cultivation of rubber producing trees in Burmah with a view to developing the resources of that country and to the ultimate encouragement of private enterprise there, and that there does not appear to Lord George Hamilton to be any sufficient ground for making a representation to the Government of India on the subject.

I am, Sir, your obedient servant,
(Signed) A. G. CLAYTON,
for *Colonial Secretary.*

Colonial Secretary's Office,
COLOMBO, *December 4th*, 1901.

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

THE COFFEE TRADE.

In *La Geographie* (Paris) M. Lecombe gives figures showing his estimate of the annual coffee output from 1896 to 1900, inclusive, as follows: Total for the world, 864,000,000 kilograms, of which the Western Hemisphere furnished 747,000,000 kilograms, and Brazil alone 568,000,000 kilograms. From this it is reasoned that the price of coffee depends almost entirely upon the Brazilian output. This writer states that the annual consumption of coffee, on an average, is greatest in Denmark, 5·87 kilograms per inhabitant, and least in Russsia, five one-hundredths of a kilogram for each of its people. The averages of annual consumption for a number of other countries which are not coffee producers, for each individual resident thereof, are stated to be as follows, in kilograms: Norway, 4·63; Sweden, 4; United States, 3·95; Belgium, 3·85; Germany, 2·53; France, 1·82; Austria-Hungary, 1; Italy, 0·42; and England, 0·39. For some reason Holland, one of the greatest coffee-consuming countries, is not mentioned in this article: Comparative tables show that the consumption of coffee is increasing rapidly from year to year, but not to a greater degree than coffee production.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

Exchange.—Extremes during the week ending October 25th were $11\frac{5}{8}$d.—$11\frac{29}{32}$d. for 90 d/s Bank paper and $11\frac{11}{16}$d.—$11\frac{15}{16}$d, for private. The average Bank 90 d/s counter-drawing rate for the week comes out at $11\frac{3}{4}$d., the corresponding sight rate being $11\frac{11}{16}$d. against $11\frac{3}{4}$d. the average sight rate of the *Camara Syndical.*

Coffee.—Entries at Rio and Santos during the week ending October 25th were again large, being 522,102 bags as compared with 478,658 bags for the preceding week and 385,028 bags for the corres ponding week last year; the aggregate entries for the same periods were 7,517,362 and 5,087,275 respectively.

Embarques (shipments) were also very large, 520,735 bags against 414,646 the previous week and 250,970 the corresponding date last year.

Sales show a decrease of 44,000 bags on last week's figure, or 231,000 bags against 275,000 and 267,000 last year.

Stocks continue to increase and are now 1,973,420 bags or 57,024 bags larger than last week's and 470,432 bags more than that of last year same period.

CANADIAN TEA TROUBLES.

The following appears in the New York Tea, Coffee, and Sugar *Journal*, which quotes the Montreal *Herald* as its authority :

It will cost more to satisfy Canada's thirst during the next twelve months than it did during the year just past. This increase in expenditure for beverages will not be due to the fact that more alcoholic stuff is to be consumed—some people say that is never done to the limit—but because the price of tea has advanced and is still going up. The tea men all say when asked as to the condition of the tea market, 'Prices are firm.' This means teas have advanced from a cent-and-a-half to two-and-a-half cents a pound. An increase like this looks like a very small affair, but most men would find it very embarrassing to settle the increase for the whole of Canada. Last year the Dominion brewed twenty million pounds of tea. There will be as much consumed this year. Now an increase of two cents a pound in the price amounts to four hundred thousand dollars on a year's supply. General shortage in tea crops of India, Ceylon, Japan, and reductions in the production in China are the causes of the scarcity of tea, which will be more severely felt in London than elsewhere, as London is the greatest of tea towns. Half the crop of the world finds its way into the capital of England in the course of the year, and from there is distributed all over the world. In Japan this year a shortage of a million pounds in the crop is anticipated. Prices have already advanced there. India and Ceylon are suffering from over-production. The plantations of these two countries were extended so rapidly during the last few years that they produced more tea than the world wanted. With cheap labour and favourable climate

and soil, the planters were able to put a fine quality of green tea on the market so cheaply that China could not compete, and Chinese growers were driven from the market. This is shown by the export figures of Foo Chou, the port from which all the China greens come from. Last year 5.000,000 were sent from this port. So far this year, and the exporting season is almost over, 92,000 pounds only have been shipped. The Japanese teas are of higher quality, and were not affected to the same extent by the Indian and Ceylon invasion. The planters of these two countries, in spite of a splendid crop and the driving of China from the market, did not make money. So this year, before the planting period, they combined to curtail production. The area devoted to tea cultivation was materially reduced. Then the unexpected happened. This year's crop has been largely a failure. The reduced area given up to tea did not produce more than half a cup. Now the world's tea supply is away below what it should be. Montreal is the great tea town of Canada, and conditions all over the country can be judged pretty well by those here. Last year tea was very cheap, and everyone loaded up at the beginning of the season with enough to last a year. This year, with prices up, the trade will probably buy in smaller quantities, and watch for a break in the market. The quality of tea sold is likely to be inferior. Candians have fallen into the habit of buying teas at a special price. There are 25c. teas, 30c., 40c., and 50c., which are favourites with housekeepers, and they will not change their prices to accommodate any fluctuation in price in Japan. The wholesaler and the retailer are not going to sacrifice their profits, so a poorer quality of tea will be put up in the 25c., 30c., 40c., and 50c. packages this year. And everyone will be happy.

PRODUCE AND PLANTING.

Indian tea seems to be making some progress in France, if we may judge by the following paragraph, which is taken from the Sunday edition of the New York Herald, published in Paris on the 10th instant: "On Friday, from four to seven o'clock, an enjoyable reception was given at the Indian Tea Rooms, Faubourg Saint-Honore. Parisian society was fully represented, and the band of the Concerts Lamoureux added an additional charm by the perfect rendering of choice selections from their repertory. Among those present were: Comtesse de Montebello, Comtesse de Boisgelin, Comtesse du Bouzed, Marquise de Bryas, Comtesse Guchelu, Comtesse de Fontenaille, Comtesse Bobrinsky, Baronne de Nitray, Mme. Le Flaguais and a party of friends, and MM. Bernard and Labaye."

In the matter of the private sale of tea, some of the local Grocers' Associations do not seem disposed to accept the view of the Federation. At a meeting of the Northern Council of Grocers' Associations, held at Manchester, the Honorary Secretary announced that the Federation Secretary had forwarded a circular in regard to the private tea auctions. It was suggested in the communication that members of Associations should write forthwith to the firms with whom they were doing business, protesting against the secret tea auctions, and asking if they (the firms) supported these sales. Councillor R. B. Robinson thought it was not their business to approach the tea firms so long as the firms conducted their business on legitimate lines. It was going beyond their province to interfere in the way suggested in the circular. No action was taken on the matter. At a meeting of the Oxford Grocers' Association, the President remarked that he should not trouble whether the tea firms supported private tea auctions or not. He should buy where he could get his goods cheapest. At a meeting of the Dukinfield Association a member said the suggestion of the Federation was preposterous. It would be child's-play to ask a tea firm how they got their teas, and if he did it he should expect to be quickly told to go to the devil. He did not see how it affected them. His opinion was that it only affected the large firms. He moved that the matter should pass as read, and the motion was unanimously agreed to.

"Mr. William Mackenzie, Ceylon tea commissioner, was in Toronto a few days last week," says the *Canadian Grocer* of November 8. "After calling on the wholesale trade he was much impressed with the progress that was being made with Ceylon greens. He said they were making equally good progress in the United States."—*H. and C. Mail.*

DISTRICT ASSOCIATIONS.

WYNAAD.

Proceedings of a General Meeting held at Meppadi Cl Wednesday, 4th Desember, 1901. PRESENT:—Messrs. A bott, Atzenwiler, Behr, Carver, Day, Lance, Mackinl Mackenzie, Nicolls, Powell. Taylor, Trollope, Winterbotha Waddington, and G. Romilly (*Honorary Secretary*). M H. Atzenwiler (*in the chair*).

1. Proceedings of last meeting were taken as read.

2. **Tea Cess.**—The Honorary Secretary stated that all the T proprietors in the district had now contributed towards the Fore Market Fund. A petition to the Viceroy praying for the impo tion of an export tax on Indian tea to provide funds to be appl in promoting the consumption of such tea in countries outside United Kingdom, was signed by all the Tea proprietors present.

3. **Coffee Cess.**—Read correspondence between the Chairm U. P. A. S. I. and the Honorary Secretary. Read U. P. A. S Circulars Nos. 95, 97, 100.—Recorded.

4. **Tea theft.**—Read correspondence with the Inspector-Gene of Police. Mr. Waddington stated that energetic proceedings w at last being taken by the Police on his complaint of 12th Octob

5. **Mr. de Niceville's visit.**—Read U. P. A. S. I. Circular No. The Honorary Secretary was instructed to write and arrange itinerary for Mr. de Niceville in the Wynaad.

6. **H. M. the King's Coronation.**—Read U. P. A. S. I. Circul Nos. 98, 99, 101. It was resolved that in the opinion of this As ciation it was unnecesary to present an address, but that sanction should be accorded for our representation at the Coro tion ceremony, Mr. Hodgson's offer should be accepted.

7. **Annual Meeting.**—It was resolved to hold the Annual Meeti to pass the report and accounts for the current year on Wednesd the 8th January, 1902. The Honorary Secretary gave notice th he should then resign and not offer himself for re-election.

8. The following papers were laid on the table:—

U. P. A. S. I. Circular No. 92. French Import Tariff.
94. Assam Labour Trouble.
Indian Tea Association circulars.
Proceedings of Kanan Devan a
Coorg Planters' Associations.
Indian Gardening and Planting.
Planting Opinion.

A vote of thanks to the chair terminated the proceedings.

(Signed) H. ATZENWILER,
Chairman.
(,,) G. ROMILLY,
Honorary Secreta

SHEVAROY.

Proceedings of the quarterly General Meeting of the S. P. A held in the Victoria Rooms, on Monday, the 2nd Decembe 1901, at 1 p.m. PRESENT:—Messrs. W. J. Lechler, Larg Rev. J. M. Kempff, Messrs. Travers-Drapes, C. G. Lechle C. Rahm, W. Rahm, R. Gompertz, *Honorary Secretary.*

Read letter from the Hon'ble Mr. Acworth forwarded wit Secretary's Circular No. 98/01 proposing that the tea, coffee an indigo industries should be invited to unite in purchasing suitable casket and presenting a loyal address to the King-Emper on the occasion of his coronation.

Read also Secretary's Circulars Nos. 99/01 of 27th November an 101/01 of 30th November the first asking District Associations they would elect Mr. Hodgson to represent the U P. A. S. at the coronation; and the second forwarding a letter from th Chairman saying that he foresaw difficulties in carrying ou

Mr. Acworth's proposal as each industry would probably wish to elect its own representative. Forwarding also an alternative suggestion by Mr. Hodgson that the U. P. A. S. I. should subscribe £5[illegible] and that a subscription of Rs.1,000 should be raised among S. I. Planters with which a suitable casket might be purchased. to be presented by a planter selected by the District Associations.

Resolved that this Association thinks that the S. I. Planters could not have a better man than Mr. Hodgson to represent them at the coronation of His Majesty the King-Emperor and that he should be formally requested to do so.

Resolved that in the opinion of this Association the U. P. A. S. I. should present its own casket and address and that they are consequently in favour of Mr. Hodgson's proposal.

Read letter from Messrs. Willcocks & Co. asking for delivery instructions for the samples of manure promised.

Resolved that they be requested to deliver them free at Madras to any firm they may prefer, with instructions to advise the Honorary Secretary, S. P. A. (on their arrival in Madras). who will pay the rail charge from there on.

Read Circular No. 82 from the Secretary, I. T. A., inviting orders for Mr. H. Mann's pamphlet on the Tea Soils of Assam and Tea Manuring.

Resolved that two copies be ordered.

The Chairman's motion *re* the Proposed Coffee Cess was then put. *viz.*,

That the scheme suggested in para. 3 of the Chairman's letter of the 18th October be adopted; and that, if carried by a majority of at least ⅔ of all the coffee planters who vote on it, in all the District Associations, the Chairman be authorized to take immediate steps to carry it out as far as may be possible with reference to the present season's crop; during curers to exempt those who inform him that they have already subscribed, since the last Conference, to the extent of their voluntary subscriptions.

For.		*Against.*

1 (by proxy.)	Total ...	1
Total ... 8		

Carried by 8 to 1.

The following letters were read and recorded :—

Tahsildar's letter dated 1st November, 1901, stating that he has received no orders to hasten despatch of Camp day's notice.

Circular No. 91/01 from Secretary, U. P. A. S. I., dated 4th November, 1901, forwarding letter to the effect that reduced freight will be tried on coffee on Madras Railway for 12 months.

Circular No. 92/01 from Secretary, U. P. A. S. I., dated 5th November, 1901, stating that Bengal Chamber of Commerce thinks that as the matter of French import duties is receiving the careful attention of His Majesty's Government, a memorial at present would be superfluous.

Circular No 93/01 from Secretary, U. P. A S. I., dated 6th November, 1901, stating that Mr. deNiceville will visit South India early in January and will call on Secretary who will prepare itinerary, if necessary information be furnished.

Circular No. 94/01 from Secretary, U. P. A. S. I., dated 6th November, 1901, forwarding copy of letters from Indian Tea Association to Chairman, thanking S. I. Planters for their sympathy with their brethren in Assam.

Circular No. 95/01 from Secretary, U. P. A. S. I., forwarding correspondence between Secretary, U. C. G. Co, and Chairman, regarding latter's circular of 18th October.

Circular No. 96/01 from Secretary, U. P. A. S. I., stating that London Committee have drawn up a memorial to Viceroy about the Cess on Tea

Circular No. 97/01 from Secretary, U. P. A. S. I., forwarding copy of letter from the Secretary of the U. C. G. Co. to Chairman.

A number of books and papers received during the month were laid on the table.

ROBT. GOMPERTZ,
Honorary Secretary, S. P. A.

MARKET REPORT.

[*Per Mail advices of 22nd November* 1901.]

COFFEE.

The London Commercial Record says:—Public sales have again been held on only one occasion since our last, and the supplies offered have been very meagre. East India met with a fair demand and sold at full prices to some advance. Dumont Santos realised fully valuations. Transactions in other descriptions call for no comment. In the market for "futures" there have been fluctuations, reports of copious rains depressed prices, although subsequent cables said the moisture had come too late to materially benefit the crops. Yesterday March delivery Santos sold at 36s 9d to 36s 6d, May at 37s 7½d to 37s 4½d, and September at 38s 6d.

Auction supplies to-day embraced:—41 half-bales Mocha, 477 bags Costa Rica, 47 bags Mexican, 40 bags Salvador, 18 bags New Granada, 116 bags Ecuador, 698 bags Nyassaland, 5 bags Jamaica, 46 bags Nicaragua, 41 bags Colombian, 200 bags washed Rio, and 35 bags washed Santos. The sales were of small importance; they went off well and values remained unchanged.

London ...	... Santos ...	March delivery	... 36s 6d.
New York	... No. 7 Rio...	,,	... 6·70 cents.
Hamburg...	... Santos ...	,,	... 36¼ pf.
Havre ..	... Santos ...	,,	... 45½ francs.

Imports, Deliveries and Stock of Coffee in London are as follows :—

TEA.

INDIAN.—The quantity brought to auction was again moderate, the total for the week being 40,500 packages, compared with 41,000 packages in the previous period, and 39,000 packages last year.

Quality has been of a very useful description, with a limited offering of really high-class tea. The continued determination of importers to keep the weekly sales within reasonable limits has had a beneficial effect and caused a steady to harder tone throughout, excepting perhaps for commonest, which have scarcely maintained their position. With clean Pekoe Souchongs obtainable at about 5¼d per lb., there has been rather more general buying in these, but the anxiety to purchase manifested when the same class was fully ½d per lb. dearer has disappeared; the spurt was evanescent, had the temptation to realise been less strongly demonstrated it might have had a longer life. A little more attention has been directed to medium and fine, the fall below these tending to this and many of the better kinds have been beneficially affected, particularly in the case of fine Assam and Dooars Broken Pekoes, though Pekoes between 7d and 9d per lb. have met a disappointing enquiry and look very cheap. Some very fair Darjeelings for the time of year have been shown and received improved support, the best comparati prices being paid for export.

Present conditions are rather favourable to the good high grades, and as the best of the Ceylon crop has probably been de with for the time being, if common consuming kinds keep abo their current easy level, a firmer market may result for those abo them. In this connection, however, it is to be remembered that t coming Budget may later prove a disturbing factor, as the tra will doubtless be disposed to "hedge" a little by holding some l tea in stock, probabilities being altogether in favour of the Du not being decreased whatever may happen in the opposite directio

South India has recently been sending some very useful invoic especially from Travancore, which met with good competition, t produce of the latter district being appreciated because of characteristic coloury liquor.

For 31,800 packages on Estate Account 7¾d per lb. was secure contrasted with 7d per lb. for 32,800 packages, and 8¼d per lb. f 36,100 packages in the two preceding seasons.

CEYLON.—Catalogues comprised 19,600 packages opposed to 17,2 packages on the 12th instant, and 19,400 a twelve month ago.

Demand continues strong for price, a fractional advance bei occasionally paid for Pekoe Souchongs, few of which could bought under 5¾d per lb. There was also good biddings for choice and stand-out lots, but medium attracted diminished attention a in many instances went in favour of buyers. These descriptio are now to be purchased on such a basis as must cause them to freely into consumption, and they should therefore shortly bene by the low range established, especially in view of immedia smaller shipments from the Island. A pleasing future was t increased support afforded from the continent and other outsi quarters to flavoury Pekoes and Orange Pekoes.

The average is 7 5/8d per lb. On the 14th instant it was 7¾d p lb. and 7½d per pound at this time in 1900.

Telegrams from Colombo advise from that the 1st to 15th insta 3¼ million lbs. had been sent to the United Kingdom, and that t estimate for the current month had been reduced to 7¾ million lb whereas the actual quantity exported in November, 1900, w about 9½ million lbs.

JAVA.—Only 107 packages of direct import passed the hamm without quotable alteration in value.

Deliveries.—Clearances of all tea (on which duty has been pai from the London warehouses, as per official returns are, *viz.*:—

From 1st to 19th November, 1901 ...	...	12,092,027 lbs.
Do. do. 1900 ...	...	11,747,973 ,,

During the week the following have been printed for sale b public auction :—

	Sold. Pkgs.	Withdrawn. Pkgs.	Total offere Pkgs.

Total ...	46,782	13,832	60,614

Also 264 packages from second hands.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon and Java Tea Report, dated November 22nd, 1901, says :—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE

	Indian. Pkgs.	Ceylon. Pkgs.	Jav Pkg
1901-1902	689,925	574,102	33,0
1900-1901	711,360	621,412	26,6

41,536 *pkgs.* INDIAN
20,444 ,, CEYLON
601 ,, JAVA
} Total 62,581 packages were offered in public auctio this week.

Particulars of the distribution of Tea exports direct from Calcut to places outside the United Kingdom are given below from 1 January to the end of September.

Australasia shows a slight falling off, but there is a marke increase in the quantity sent to Indian ports, the bulk of which doubtless for Persia and the neighbouring parts of Asia; Turke also shows a slight increase. The Russian market is mainly su plied from London, but the increase referred to in the table belo serves to indicate the progress which British-grown tea is makin in that country.

It is remarkable that the total re-exports of *Indian* tea from t United Kingdom should have risen from 6,100,000 lbs. for the fir

nine months of 1900 to 9,645,000 lbs. in the corresponding period this year, various European markets now becoming important consumers of both Indian and Ceylon tea, the re-exports of the *latter* kind from Great Britain having advanced from 10¼ million lbs. to 13¼ millions during the same period.

INDIAN.—Another week of moderate offerings has had the effect of further steadying the market. Competition was more general, and all grades showed firmness, although no actual rise can be quoted. In spite of the efforts of the Regulating Committee, next week's offerings will again be somewhat heavy.

The official wire gives exports to U.K. for first half of November as 11,630,000 lbs. (including 1,370,000 lbs from Chittagong), against 9,950,000 lbs. same period 1900; making the total from 1st April to date 106,881,800 lbs., against 115,300,000 lbs. to same date last year. It must be borne in mind that the tea from Chittagong would, if sent from Calcutta, have probably left India considerably later, and that doubtless much of the large quantity recently shipped is caused by greatly accelerated despatch from the gardens.

Week's av. of New Season's tea sold on Garden Account 1901, 32,191 pkgs., av. 7·71d. 1900, 32,146 pkgs., av. 6·83d.

New Season's tea sold on Garden Account 1st June to date 1901, 506,103 pkgs., av. 8·18d. 1900, 574,915 pkgs., av. 7·82d.

CEYLON.—The slightly improved tone noticed last week was further accentuated, competition being more pronounced with a tendency to higher prices, especially for the lower grades, which were here and there slightly dearer Medium teas were occasionally irregularly cheaper. The export demand is becoming a very important factor in the market, and teas suitable for this Trade are generally well supported, and meet with increasing attention from shippers. Private telegraphic advice gives exports to U.K. for first half of November as 3,250,000 lbs., against 4,700,000 lbs. 1900, and estimates the total for the month as 7,750,000 lbs., against 9,250,000 lbs. last November. Average for week 7·63d., against 7·44d. same week, 1900.

Ceylon tea sold on Garden Account 1st January to date, 1,021,018 pkgs., av. 6·81d. 1900, 1,104,552 pkgs., av. 7·20d.

JAVA.—Of the few Javas brought forward, only 107 packages were of direct import.

COCOA.

The auctions on Tuesday were singularly quiet, only about 180 bags selling out of 1,390 bags catalogued. 74 bags Trinidad sold at 68s for middling red. Of 31 bags Grenada an odd lot sold at 64s. 20 bags Jamaica realised 58s to 62s 6d for fair to good. Of 690 bags Guayaquil about 70 bags sold—Caraquez at 66s. 218 bags African retired. Of 346 bags Ceylon a few bags sold at 54s 6d for brown and 41s 6d per cwt. for smalls. Private transactions embrace—100 bags Trinidad at 60s to 65s for weathered, and 68s to 72s for good to fine, 100 bags Grenada at 60s to 64s 6d, 100 bags Haiti at 53s, 40 bags African at 62s 6d for fine, 100 bags Ceylon at 61s for fair Estate, and some lots of Guayaquil at 63s to 66s for Caraquez, 66s to 71s for late Arriba, and 78s per cwt. for Summer ditto.

PEPPER.

BLACK.—The market is quiet and only small transactions are reported. Singapore on the spot has been done at 6d, and for arrival at 6$\frac{7}{32}$d to 6¼d January-March shipments.

The shipments of Black Pepper for the first half of November compare as follows:—

		1901.		1900.	
U.K.—Singapore	*nil*	30	*nil*	30	
„ Penang	30		30		
Continent		130		40	
U. S.		30		220	
Total tons ...		190		290	

At auction on Wednesday, of 140 bags Singapore catalogued 40 bags sold privately, the remainder being bought in at 6d. 56 bags light shelly Penang character sold at 5½d to 5¾d. 177 bags Aleppy bought in at 6d per lb, and 200 bags Lampong at same price.

WHITE is dearer and in demand; about 500 bags have been sold on the spot at 9$\frac{5}{16}$d for fair Singapore, at 9$\frac{3}{16}$d to 9$\frac{5}{16}$d for fair Siam, and at 8$\frac{13}{16}$d for fair Penang. For arrival about 100 tons have changed hands, *viz.*, Singapore January-March (s.) at 9½d to 9$\frac{9}{16}$d, Siam October-December at 9$\frac{3}{16}$d, and Penang January-March at 9$\frac{1}{32}$d to 9$\frac{3}{16}$d per lb.

The shipments of White Pepper for the first half of November compare as follows:—

		1901.		1900.	
U. K.—Singapore	110	140	130	200	
„ Penang	30		70		
Continent		70		100	
U. S.		...		...	
Total tons ...		210		300	

At public sale on the 20th instant, 50 bags Singapore sold—good 9$\frac{7}{8}$d, fair 9¾d per lb.

To-day Black Pepper was firm but not much business done. White firm and dearer. Penang spot sold at 8¼d to 8$\frac{5}{16}$d; 40 tons January-March shipment sold at 9¼d.

GINGER.

Firm, but less active than at the beginning of last week. At the spice auctions 76 cases *Cochin* were offered and bought in, medium cut at 75s. to 80s., and bold cut at 100s. Of 477 bags 180 sold, rough rather wormy *Calicut* at 45s. 6d., and fine bold bought in at 55s. *Japan*, partly limed, 54 bags offered and sold at 41s. Of 37 barrels *Jamaica* only 3 sold, middling washed at 60s.

COCHIN.—Auction supplies consisted of 76 cases 477 bags, of which 181 bags medium and small, very rough and lean limed Calicut, sold at 45s 6d per cwt. Privately little business has been done this week, but values are again higher, 52s to 52s 6d per cwt. changing hands for medium and small washed rough Cochin.

JAPAN firm, 54 bags rather lean dull limed selling at 44s per cwt.

JAMAICA very quiet. 37 barrels offered and 3 barrels sold at 60s per cwt. for good washed.

CINCHONA.

At auction on Tuesday the small supply of 1,782 packages was offered, the bulk of which again consisted of Calisaya. There was a good demand, principally for the United States, and everything was practically sold at the previous auction rates, the average unit being 1$\frac{5}{8}$d, against 1$\frac{3}{8}$d at the last Amsterdam auction.

The following table shows the quantities of bark offered and sold:—

	Packages offered.	Packages sold.
Calisaya cinchona (95 withdrawn) ...	1,007	912
East Indian cinchona	399	328
West Coast African cinchona ...	198	198
Ceylon cinchona	175	146
Cuprea cinchona	3	...
	1,782	1,584

The following figures show the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
The American and Italian factories	90,574
The Imperial quinine factory	35,482
Messrs. Howards & Sons	27,496
The Paris factory	15,900
The Brunswick factory	2,620
The Mannheim and Amsterdam factories	1,160
Druggists, etc.	37,471
Total quantity sold ...	210,703
Bought in or withdrawn ...	34,498
Total quantity offered ...	245,201

The following prices were paid:—

WEST COAST AFRICAN.—Fair quill, 6$\frac{3}{8}$d to 6$\frac{7}{8}$d; broken quill and chips, 6$\frac{3}{8}$d to 7$\frac{1}{8}$d per lb.

SOUTH AMERICAN.—Bolivian cultivated Calisaya, 6¾d to 8$\frac{7}{8}$d and rich, 9¼d to 10d per lb.

CEYLON.—Officinalis, renewed chips and shavings, 5⅓d to 6d; renewed Ledgeriana chips, 4¾d; Succirubra stem chips, 3¾d; and renewed, 6d.

EAST INDIAN.—Ledgeriana, stem chips, 4$\frac{5}{8}$d; hybrid, 4½d; and renewed, 3¼d. Succirubra, stem chips and shavings, 3¼d to 3$\frac{5}{8}$d; branch, 2¼d to 3¾d; fair to good root, 3⅛d to 4$\frac{5}{8}$d; renewed stem chips and shavings, 3⅛d to 3$\frac{7}{8}$d. per lb.

The shipments from Java for the first half of November amount to 365,000 Amsterdam lbs., against 535,000 Amsterdam lbs. last year. In the drug-auction 94 serons Crown bark offered, but nothing sold publicly, a bid of 6¾d being refused for fair bright Huanoco quill, 7d being wanted. For fair Loxa 1s 6d was rejected, 1s 7d being the price. From another catalogue 4 serons sound Huanoca sold at 6½d, and damaged at 6d per lb.

QUININE.

The market remains quiet, and though prices have advanced, little business is passing. B. and S. and or Brunswick spot quoted at 1s. 1⅜d., December delivery 1s. 1½d, March 1s. 1¾d., and May 1s. 2d.

The small shipments of bark from Java for the first half of November have imparted a steadier feeling to this market, but as there are few sellers at present prices, little business has been done. Good German sulphate in bulk has sold at from 1s. 1⅜d. to 1s. 1¼d. for December, 1s. 1½d. to 1s. 1¾d. for March, and 1s. 1⅞d. for May. The market closes quiet, with sellers at 1s. 1¼d. for prompt.

CARDAMOMS.

In fair demand at steady rates, fine being slightly dearer. following prices were paid :—Ceylon-Mysores : Medium round smooth, well bleached, picked, 3s. 1d.; medium to bold palish, 5d. to 2s. 7d.; small and medium ditto, 1s. 10d to 2s. 2d ; sm palish, 1s. 5d. to 1s. 9d.; medium to bold dull, 1s. 9d. (subje medium splits. 1s. 8d.; small splits, 1s. 5d.; brown splits pickings, 1s. 4d. to 1s. 5d.; small dull, 1s 3d. Mangalore charac small to medium brownish. 1s. 8d to 1s. 10d. per lb. Se brought unchanged rates, selling readily at from 2s. 2d. to 2s. per lb.

(AVERAGE FOR ALL INDIA 7·71d., NOVEMBER 22nd.)

SEASON REPORTS.

TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 3rd proximo. Season reports should be sent direct to the Printers, Messrs. Higginbotham & Co.

Munzerabad.

December 16th.— *Weather*—The late showers have left us, but left their trace in a very forward spike, and a small sprinkling of blossom, and also an unusual growth of weed. *Works*—Gathering is still in progress on several estates, a few have finished, and weeding and pruning are thereon being attended to. *Health*—on this side of Hassan, good. *Labour*—The paddy crop is now diverting many coolies, causing the labour-supply to be short.

Coorg.

Polli Betta, *18th December.*—*Weather*—Fine and chill for a few days It is quite cloudy to-day and may rain perhaps, the times are so much out of joint. Coffee looking fine. Gathering is still in progress, but crops are very small. Prospects for next season are very good. Paddy is being reaped in parts. *General Health*—Fair. *Labour*—as usual, very plentiful. *Interesting item*—Proposal to hold combined Volunteer Camp next year at Mysore.

NOTICE.

In consequence of the **Christmas Holidays** there will be no issue of the paper next week.

The Editor avails himself of this opportunity to wish all readers

A Very Happy Christmas

AND

A Prosperous New Year.

MATÉ AS IT IS TAKEN.

THAT maté is made from the Paraguayan tea, called yerba (herb) the majority of intelligent folk know, but the manner in which maté is drunk is a sealed book to but a very few. Maté is known and used among all classes of South Americans; though more especially by the middle and poorer classes in the cities, as maté taking is of late years losing ground somewhat among the more wealthy, whose tastes have become converted from good old maté amargo to the numberless high sounding beverages constantly introduced among them by the foreigner. But in the houses of the middle-class folk, and on the great Pampas that stretch and roll away west and south, peopled by almost every nationality under the sun, where hospitality is never absent, be it "ranchito" of adobe, or "Estancia" of the latest architecture, there maté holds full and absolute sway. The traveller about to set off for a journey will take maté with whomsoever may be present, until his horse arrives; or until he reluctantly arises and goes out to look to the final cinching up of his "rejada" before mounting. Even then probably he will be able to take just one more from the hand of the hostess as a farewell, brought out to him so that he may have his proper share while on the premises. The gaucho, the farm labourer, the dairyman, as they come in from their labours, go to the fire, and take maté; as you arrive at a ranch, and the news passes that someone is coming towards the place, the little kettle standing on the side of the hob, is pushed up against the hot coals, to be ready for maté. You are travelling; the day is hot perhaps—or it is cold—what matter which? any way you are tired, and so are your horses; you pull up by the seemingly never ending and uninteresting track, loosen the cinches, secure the animals, then while one with a handful of small sticks gathered near makes a fire, your companion produces the little kettle hanging just under the jaw of the "cargero" horse, and half filling it from a leather water-bag carried on the same useful animal, proceeds to heat it for maté. Fifteen minutes later, two remarkably refreshed men will cinch up and start off once more, the taste of maté in their mouths and less hunger and thirst in their stomachs. Maté is a great help to the traveller and the worker of the pampa. It is sustaining, while being of medicinal value. Maté is frequently used for indigestion, and kindred ailments, and taken on first rising, as indeed is a general custom, acts in precisely the same manner as hot water recommended to sufferers from dyspepsia.

The correct method of taking maté is not as we drink tea or coffee, from the cup, but is to take it somewhat after the style of cider with a straw. The yerba—a greenish yellow collection of finely and coarsely powdered leaf and sticks—is placed in the maté (a little chatty shaped gourd) and the "bombilla" inserted; this is a hollow spoon, or rather a tube having a perforated bulb on one end—in the shape of a spoon. The bulb end is pushed into the yerba to the bottom of the maté cup, then cold or luke-warm water is poured on to the yerba, and drawn out by sucking through the bombilla. This is repeated perhaps twice to draw all dust or fine powder off, and then the tea is ready. One person conducts the operation, and his or her duty lies in filling the little maté (the term maté applies equally to the cup used, and the actual prepared tea) with boiling water, and handing it in turn from right to left in the circle to whatever visitors may be present. The drinker sucks the whole lot up, fr quently being engaged in excited conversation all the tim much to the annoyance of the next man who is awaiting h turn, and so it passes on from one to the other. Even ma drinking among the gauchos demands that etiquette shall observed. To take your maté so that the last draw sha bring up the remaining liquid with a quick business lik rattle, is correct; even a short quick draw after, to mak sure, is permitted; but to draw with a rattling sou for the third time, is to become uncomfortably aware that many as are there present are inwardly compassionating th poor "estranjero" for his execrable manners. Anothe flagrant breach of etiquette is to wipe the mouthpiece of th bombilla before using it. The temptation in many cases almost irresistible; but, if you yielded to it, the man who ha taken it before you would consider your action a positiv insult to himself. The reader may judge for himself where the yearning to give it just one good wipe comes in, when h reflects that the older men almost invariably chew the filthi est of tobacco, and the majority go in for a wash more throug necessity than inclination about once in six months. An yet maté is agreeable, nay enjoyable to take. It fills u many a weary hour as shivering crouched in a soddene poncho with the rain beating down on him the traveller strive to keep alight his fire, and patiently waits for dawn: keeps the gaucho more contented while he waits for the pot "puchero" to cook, or the "assada" to roast over the coal when he knows he ought to be away after the flock whic "will" wander when the wind is fresh, or the rain is drivin Round the fire at night it helps conversation wonderfully between the dances in the rancho on Saturday nights, it handed round, and eagerly taken; the nurse in the sick roo finds it a sort of companion; and wherever on the Pampa a man's home is, there also is his maté, and his yerba ba Tea to us is a promoter of sociability; maté to them is tha and more besides; it is a companion and friend, and a confi dent in time of trouble, for as he draws and draws the warm grateful beverage slowly through the bombilla his trouble seem to lighten, and he thinks more clearly.

Tea or coffee could never quite usurp the place held b maté in the everyday life of the man of the pampa; the latte is known best, being extensively used by all lovers of goo eating in the towns; but tea as yet is a "something th English use." Tea does occasionally find its way into th ranchos, but it is taken with sugar only, and then throug the bombilla, instead of as a drink in cup and saucer. Ma is used in tea form sometimes, *viz.* with milk and sugar an infused; but that is only in place of morning coffee; then th gaucho or the labourer, takes it in a soup plate, and soak his hard-as-iron "galletta" (biscuit-bread) in it; or else it sometimes taken "dulce" (sweet) by putting a teaspoon sugar into the maté each time of serving; but that is onl a luxury, as is maté con leche (with milk) and only indulge in by women and children as a rule, when taking maté witho the company of men. Maté sells in Buenos Aires and th Provinces for about 1/1 per kilo., and is consequently with the reach of the poorest classes; so that it has become th national beverage, and the gaucho as he twangs on his guit the monotonous song of his life and the familiar objects arou him will sing "give me my mares and my flock that I ma always have a fat 'assada' and a maté, and I will be f ever happy."

UNITED STATES TEA STANDARDS.

Although Ceylon men like to buck about their Teas as the finest that the world can produce, they are not quite so happy when they find the American Customs authorities fixing a standard to fit Ceylon's own estimate of its teas. According to the *Times of Ceylon,* the following is a statement of the position.

AMERICAN GOVERNMENT STANDARD FOR INDIAN AND CEYLON TEAS.

	Value in London.	
	Indian.	Ceylon.
Well made, good bold Pekoe Souchong leaf; clean, ordinary plain liquor	5¾d.	6-6¼d.

AMERICAN GOVERNMENT STANDARD FOR CHINA TEAS.

Small fairly even (leaf broken Pekoe Souchong character) common liquor	—

Messrs. Forbes and Walker, in reporting on the standards, say :—"The standard for Indian and Ceylon teas is certainly a high one as regards the appearance of the leaf, and the fact cannot be questioned that a large quantity of Ceylon tea is exported annually, having a good marketable leaf, (though inferior to this) and drawing a liquor of equal quality, which should, in all fairness, be permitted to pass into America, but which would fail to do so if the standard of leaf is strictly enforced."

"The China standard, as regards liquor, is distinctly *inferior* to the other. The leaf is of a broken Pekoe Souchong nature, but in this respect is not inferior to that of India and Ceylon."

Our contemporary appears to think that this is not right, and that the Planting Associations and Chamber of Commerce should move. We are disposed to think that the more freely the American Customs admit Chinese rubbish, and shut out any but real *teas* from India and Ceylon, the sooner the last two will score a decisive victory over the first in the land of the Stars and Stripes.

CONTRA MAERCKER.

The efficiency of Phosphoric Acid in Bone-meal from the Experiments with Manures conducted by Professor Dr. Maercker *on the Experimented Farm at Halle, A. S.*

[Published by the German Union of Bone-meal Manufacturers. Translated by John Kenny.]

Almost a year has gone by since we found ourselves compelled, for the first time, to take up a position, in a publication of any size, with reference to the experiments in Bone-meal Manure carried out on the Experimental Farm at Halle by Dr. Maercker at the instance of a number of bone-meal manufacturers. We were forced to this on learning that Professor Maercker, by literary and other means, was endeavouring to prepare the way for the opinion that the utility of bone-meal as a manure has till now been far too highly prized—and he based this opinion on the experiments referred to above. To us this was a bolt from the blue. Professor Maereker had certainly no grounds to go upon for this remarkable behaviour, for the experiments on which he could base his decision, experiments on which he sent us a report on the 6th February, 1893, gave him no cause, but, on the contrary, stood in complete opposition to his later *dicta*.

Since Dr. Maercker has not been satisfied to spread his unfavourable reports in the narrow circle of his official acquaintance but has gone out of his way to spread as widely as possible renewed and more better attacks, we feel ourselves compelled to publish an epitome of the report of Professor Maercker on the manurial experiments referred to above. The contents of that report, vouched for, as correct, by a notary public, must convince every unprejudiced person how one-sided has been the manner in which Dr. Maercker went to work to destroy the opinion so long held and supported by practical experience that in bone-meal the farmer finds an excellent means of manuring.

That publication brought us letters from all sides agreeing with our view and laying particular stress on the actual use of the meal. One thing, however, that we might have expected, did not occur. Though we placed before the authorities on the subject an analysis of the very experiments made by the Doctor in the years 1891-92, no authoritative reply was made to the gentlemen who conducted the experiments. Instead of this, however, a treatise of Maercker's on the efficacy of bone-meal phosphoric acid appeared first in the *Deutsch. landw. Presse* and later on in pamphlet form. In this work, which quickly flooded the agricultural newspaper literature in the form of more or less apt extracts, Professor Maercker declined to enter upon a critique of our work, dismissing it with the following words :—"Since the interests of the bone-meal industry have been harmed by my experiments, parts of which have been included in the 'Annual Report of the Experimental Farm at Halle' and from that found their way into the literature of the country, I can well understand that the bone-meal manufacturers have been annoyed and given vent to their feelings in speech and writing. I have naturally not the slightest intention to enter into a discussion of statements that have their origin in these none too praiseworthy feelings." But immediately succeeding these statements come his experiments in a form quite new, with an addition of new figures from the first year's experiments, and of these only such as are meant to illustrate the inefficiency of the manure.

We consider it our duty to throw light on these publications. We should gladly have done so before this, but important changes in our industry took up all our time.

Before entering upon the consideration of the latest pronouncements of Maercker on bone-meal, it is perhaps advisable, in a few words, to throw some light upon the course of the development of the manurial experiments in question, as, owing to the small number of copies printed last year, few of our readers are acquainted with the process of Maercker's experiments.

Let Professor Maercker first speak for himself. In the *Magdeburg News* of the 9th May, 1894, he says :—"In the year 1891 representatives of the bone-meal manufacturers entered into negotiation with the author (Professor Maercker) to start trials at the Experimental Farm at Halle, A.S., to ascertain if bone-meal produced so trifling an effect on plant life as people were led to conclude from the experiments of Professor Wagner at Darmstadt, and the outcome of these negotiations was that the Union of Bone-meal manufacturers agreed to allow a considerable sum for the purpose. This was carried out with the express approval of the Directors of our Agricultural Central Union. The author willingly entered upon the task of solving the question, for he had great sympathy with the bone-meal industry which, from idigenous materials of little worth, produced an article of great value. He could conscientiously say he started the experiments without any sort of prejudice."

(*To be continued.*)

NOTES ABOUT COCOA, CHOCOLATE, ETC.

Probably little is known by planters in India about the preparation of the article known as "Cocoa" as sold upon the English market. The word "Cocoa" is a corruption of the Spanish word "Cacao," and had its origin in European markets. It is used to denote preparations of the Cacao bean in powder, sweetened or unsweetened. Such powders are seldom prepared in the countries where Cacao grows, the article known as chocolate being almost exclusively used in preference, except by Europeans who have become accustomed to the preparations of their own countries, for whom a certain quantity is imported. The word "Chocolate" is of Mexican origin, and covers preparations from the Cacao bean which solidify on cooling into cakes or bricks or other moulded forms. We have, therefore, two names which cover preparations made from Cacao beans, produced by the tree known as *Theobroma Cacao*, L.

Chocolate is made from the Cacao bean roasted and ground to a paste, which hardens on cooling. This may be made sweetened or unsweetened, and as much as 40 to 60 per cent. of sugar is added when made into confectionery, but less when intended to be used for making a beverage. The paste may be made either by hand on a flat piece of freestone, or it may be ground in mills constructed for the purpose. The chief hardening ingredient is the fatty matter the beans contain known as Cocoa fat and used largely in medical dispensaries.

Cocoa.—This is the name given to a product of the Cacao bean, the preparation of which is commenced in the same way as the manufacture of chocolate; in fact, Cocoa is nothing more and nothing less than "Chocolate" with the Cacao fat taken out, which prevents its solidifying into cakes.

The manufacture of "Cacao" or "Cocoa" Powder is an easy matter if provided with a proper press for the purpose. All operations in connection with Cacao preparations have, however, to be carried out at a temperature not less than 85 degrees Fahr. to keep the fat melted. Even at this temperature the fat will harden, but the manipulation generally increases the temperature sufficiently to keep the fat fluid. When the roasted bean has been ground into a fine fluid pasty mass, the fat may be taken out by placing it in thin layers in linen cloths, and placing these in tiers in a suitable press. For this work it is better that the temperature should be as high as 90 degrees Fahr., or over, as the melted fat will flow the more freely. The fat comes away readily, but contains Cacao red, the colouring matter of the bean, and some small portions of the solid matters of the paste. If the fat be at once filtered through animal charcoal in a water oven, it will on cooling be perfectly white and clean. The residue which remains behind in the cloths—or the "press cakes"—should now be removed. These are easily broken under slight pressure and may be rubbed through a fine guaze sieve, the resultant powder being the "Cocoa Powder" of commerce. This may be mixed with finely-powdered sugar, if desired, to 40 per cent. or 50 per cent. Brown Sugar is better for the purpose than white, as the latter alters the colour out of market form. These powders are subjected by some makers to excessive adulteration by the addition of starches and other cheaper material. In some cases alkalies are added for the purpose of saponifying any fat remaining in the powders. When so treated, the ring of froth seen round the edge of the breakfast cup, is nothing less than a soap froth formed by the union of the Cacao fat and the alkali employed, and the appearance of small globules of fat on the surface when prepared for consumption is considerable evidence of purity.

In a recent experiment in Trinidad Cacao beans were prepared with the following results, although our press and mill are by no means perfect for the purpose :—

From each pound of ground material or Cacao paste, 24 per cent. of fatty material was extracted by pressure, leaving 76 per cent. of dry powder.

Treating the same material by the Soxtlet process, 36·6 per cent. of fat was obtained, leaving 63·4 per cent. of powder.

The latter was probably not the whole fat content of the Cacao as it requires to be much more finely ground than is necessary for Chocolate or Cacao making to make sure of the extraction of the entire amount of fat.

The process adopted, however, showed the Cacao Powder or Cocoa Powder to contain 12·6 per cent. of Cacao fat, but this was not sufficient to render the beverage unpalatable greasy, and it makes an excellent cup for the breakfast table.

U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.

South Indian Green Teas.

Extract from proceedings of General Meeting of the India Tea Association (Calcutta) held December 3rd, 1901, Calcutta.

The Committee considered a report by their experts upon certain samples of green tea which had been submitted by Mr. Drummond Deane, of Stagbrook Tea Estate, Peermaad Travancore, in response to Circular No. 61 of 9th September. The report was to the effect that the samples were good types of green teas, which would be useful to show to Managers who required standards. They were, however, decidedly superior to most of the teas which had been previously examined, and were probably too good to fix as standards for a blend. If such teas could be easily made, the success of the industry was certain.

This report was noted by the Committee with much satisfaction ; and they decided to forward copies of it to Mr. Deane for information. A circular was also to be addressed to the members of the Association, giving the views of the expert upon the samples, and stating that the latter were available for the guidance of Managers.

In writing to the London Committee the foregoing facts were to be stated, and the question of blending green teas in Calcutta—which was raised in the Circular No. 61 of 9th September—was to be dealt with. The difficulty of carrying through any definite scheme of this description was the uncertainty in regard to funds. And the London Committee were to be asked if they had any proposals to advance which might be calculated to surmount this difficulty. Looking to the fact that special machinery was required for the manufacture of green tea, it was, the Committee thought, unlikely that Proprietors would care to engage in it unless the bounty could be definitely promised to them during the interval which must necessarily elapse before a good demand at remunerative prices could be created.

NOTES.

Cinchona. The auction to be held in Amsterdam on December 12 would consist of 7,551 bales and 275 cases, weighing 701,880 kilos., of Java bark. A supplementary catalogue was to be published.

German Quinine. The exports of "quinine, quinine-preparations, etc.," from Germany during the eight months ended August amounted to :—

	1901	1900	1899
Kilos.	136,900	120,800	150,900

Comparing Coffees. The Associação Commercial of Santos is exhibiting samples of coffee produced in various countries. These samples were sent to the State Government by the Brazilian Consuls in Havre and New York.

Proposed Coffee Bank. A bill was laid before the Bazilian Chamber of Deputies asking for the concession of a bank denominated "Banco de Cambio e Café." The transaction which the bank pretends to undertake will, says the *Brazilian Review*, consist in buying Coffee from the commissarios and ensaccadores in competition with exporters.

Alfalfa—six Tons per Acre. On a plantation near Campinas made in theexperiments have been culture of Alfalfa (Lucerne). Between September 1900, and, March, 1901, six crops were taken off, aggregating about six tons per acre. The *Brazilian Review* states that the Alfalfa is sold in S. Paulo at from 150$ to 200$ per ton.

A five-pointed Tea Leaf. A remarkable tea leaf has been brought under our notice to-day by the courtesy of a Colombo gentleman, says the *Colombo Observer* of the 13th instant. The leaf, which was brought in a basket of leaf in the Agras, is extraordinarily malformed and consists of five distinctly formed leaves all joined together on one stem. One wonders how such a freak occurred and one also wonders how it came to be in a basket of tea! Alas!—has some one returned to coarse plucking?

Calcutta Tea Market. Messrs. Andrew Yule & Co. reported on the 6th instant :—17,183 packages were offered, of which 16,130 were sold and 1,053 withdrawn or registered. Leaf teas under six annas were well competed for at an advance of about three pies, other grades being fairly steady at previous rates, Assams receiving rather more attention. The average price of Sale No. 24 works out 5 annas 6 pies per lb., against 4 annas 9 pies last year.

Brazil's Railway Transport. The Committee of Agriculture of S. João de Itatinga, in São Paulo State, bitterly complains of the unsatisfactory manner in which the transportation service is carried out by the Sorocabana and Ituana Railway. "We are but in the middle of the crop," says the Committee, "and already the different stations on that line are unable to receive further shipments; the depôts are crammed with coffee, which is left there to rot and perish." The Committee lodged a complaint with the Secretary of Agriculture and it is to be hoped that he will take energetic measures to ensure a better traffic.

London Tea Market. Weekly special telegram, dated 12th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the competition for Ceylon tea is general and well-distributed and that the market for medium liquoring Pekoes and Broken Pekoes is weak, while that for teas for price is dearer. The price of fair liquoring Ceylon Pekoe Souchong is 6d and the average price of Ceylon tea sold on garden account this week was 7½d (both same as last week). The average of the corresponding week last year was 7⅜d. Reuter reports that fine qualities of Ceylon tea are irregular, others firm. Fair Pekoe Souchongs are quoted at 6d and the average for the week is 7½d (both same as last week). 22,000 packages of Ceylon tea were offered for sale and 19,000 were disposed of; while of the 49,000 packages of Indian tea offered, 44,000 found purchasers, at an average of 7⅝d per lb. (⅛d higher than last week).

Bacteria in Plants. A recent Bulletin from the United States Department of Agriculture, is devoted to a paper, by Dr. Erwin F. Smith, on the cultural characters of Pseudomonas Hyacinthi, P. Campestris, P. Phaseoli, and P. Stewarti—four one-flagellate, yellow bacteria parasitic on plants. The first is the cause of a serious disease of Hyacinths; the second of a widely-distributed and destructive disease of Cabbages, known as brown-rot; the third of a disease of Beans, and the fourth is believed to be the cause of a serious disease of Sweet Corn. The bulletin also contains occasional references to Bacillus amylovorus, B. coli, and other bacterial organisms, which were used for comparison. The work described is of a purely technical nature, but will be valuable to those in experiment stations and elsewhere who are engaged in investigating the bacterial diseases of plants.

Effects of British Competition on Japan Tea. From a report supplied by Mr. Philip, Secretary of the Ceylon Thirty Committee, to the Press, it appears, says the *Englishman*, that exports of Japan tea will this year be the shortest on record for fifteen years. The reason for this is stated to be that the cost of production in Japan has steadily increased from year to year for the last decade, and the value of tea in America and Canada at points of distribution has not increased in proportion. This has led to a withdrawal of enterprise in the Japan tea industry to other more paying directions. The news disseminated by the Thirty Committee should prove encouraging to Indian and Ceylon planters as showing that rival tea producers are feeling the pinch of bad times and becoming disheartened. As other conntries reduce their production in the way noted, there will be the more room for the British-grown article.

Ginger in London. Ginger, which was the article "par excellence" for bull operations, has lost for the moment all interest except to those who, as holders of large quantities, are naturally keenly watching the movements of the article. An unbroken rise in value of about 50 per cent. is an abnormal event, and would, in our opinion, fully explain a sudden stop in the advance. Pur-

chasers of stocks naturally wish to realise their profits, and, to interpret their action as an indication of weakness, appears to be totally unjustifiable. But such is the character of the Ginger market ; at the least sign of a stop in the advance, a general desire to realise and to get out of one's holding prevails, with the result that a decline is sometimes created when, owing to the position of the article, a further rise ought to be possible. It is, we presume, the large precentage of outside speculators which is responsible for this element of weakness.

Coffee in London. Although one or two telegrams have been received which profess to confirm the previous reports of damage to the growing Santos crop, they have, says the *Produce Markets' Review* of 23rd November, hardly had any effect upon prices, which have fluctuated only to the extent of 1s, and close slightly under those of last week. Some small reduction in the daily receipts has been made the most of by speculators for a rise, but seeing that 9,000,000 bags have already been received and that there are still seven months to run of the present crop year, it is only natural to expect a decided falling off unless the estimates are to be still further increased. The demand continues very quiet, and with such a poor selection as there is offering, and with an uncertain position with regard to the Brazil market, an improvement can hardly be expected before the turn of the year. The few lots brought to auction have sold at fair prices, Colombian in particular being rather dearer. Mocha has been offered more freely, but holders are firm and prices generally dearer.

New Rubber. A new source of supply for rubber has been found out by M. Deiss, a French scientist at Saigon. The forests inland in that quarter abound with lianas—creeping and twining plants which grow to a large size. These lianas yield rubber out of the juice from cuttings in the bark (the usual mode of gathering) but not in paying quantities. The fact that the bark, apart from the juice, holds rubber, had long been known; but nothing had been done to turn this knowledge to profitable account. M. Deiss was struck by this, and sought for means to get at the stores of rubber in the bark. It is said that he has met with success. The bark is treated chemically, and undergoes sundry processes, including treatment by currents of hot and cold water alternately. The result is said to be the extraction of rubber of the best quality, which soon thickens and hardens. It took repeated experiments to show the right way to go to work. The outcome is that a syndicate of capitalists in France has undertaken to start, in Cochin China and Tonquin, works for turning out rubber from bark on the new system.

Vanilla in the Seychelles. A Seychelles correspondent writes us, under date of November 7, that the bulk of the vanilla-crop was being shipped that week per the mail steamer, s.s. *Melbourne*. Altogether she carries 21,267 kilos., 12,386 kilos. of which is for Marseilles and 8,881 kilos. for London. It is expected that the total output of vanilla from Seychelles for 1901 will equal 70,000 kilos. The prospects for next year are by no means good, and it is estimated that the exports during 1902 will not exceed 40,000 kilos. However, a great deal depends on the weather during the next three or four weeks. The exports from Ta during 1900 amounted to 162,636. lbs. (32,132*l.*), agai 130,113 lbs. (33,701*l.*) in 1899, and 92,137 lbs. (20,468*l.*) 1898. The exports from Mauritius during 1900 amoun to 4,552 kilos. (169,821r.), against 3,709 kilos. (133,94 in 1899 an increase in production and in value over 189 743 kilos. and 25,875r. respectively. Of the above quant 4,417 kilos. were shipped to the United Kingdom, agai 3,237 kilos. in 1899, while to France there was a falling of 353 kilos. in 1900.

Rubber in Zanzibar. Rubber is not at present cultiva to any great extent in the Zanzi islands, but it arrives here in considerable quantities on way to Europe, and from the frequency with which rub forests are reported to have been recently discovered in va ous districts on the mainland it appears possible that trade will still further develop in the near future. In Z zibar itself there is very little rubber, except what is gro for experimental purposes, but in the island of Pemba, es cially in the forests at its northern end, the creeper known *Landolphia Kirkii* grows fairly freely. It is found o scattered areas, in some places growing thickly, whilst others it is only occasionally met with or is altogether abse It does not attain to a very large size, but grows to a co siderable length, and the latex is clean and white. W respect to the rubber trees that have been planted expe mentally in the Government plantations. The Assam rubb *Ficus elastica*, is possibly the most vigorous, but the Cent American variety, *Castilloa elastica*, shows excellent prom and appears to be well suited to the climate ; of the oth the Pará and Ceará rubber trees grow rapidly, either fr seed or cuttings, but their yield has so far been small. T so-called guttapercha tree appears to be of doubtful econon value as the latex obtained from it loses its plastic charac after a few months and becomes friable.

Indian Teas in London. The better demand continues, sa the *Produce Markets' Review* November 23, and there was more animation in the biddi at the public sales. The lower qualities are firmer, a consequently there is not much to be obtained at the pric prevailing in the previous week. Importers show a fi attitude by withdrawing their teas from the auctions, but what way this is to improve the position it is difficult understand, as a large portion, at any rate, must come und the hammer later on. Supplies will probably for some ti prove ample to meet any reasonable increase in the consum tion and, it would appear, therefore, practically certain th holders are not likely to benefit, at present at any rate, refusing to accept the reasonable bids made by the trad For the medium teas the market is steady with an improv demand, the only change of importance in values being the tippy sorts with a poor infusion, which have sold irregular but on the whole easier prices. The finer descri tions are meeting with a less active demand and partly this account and the less desirable quality of many of t growths prices have been in favour of buyers. The pub sales comprised 46,470 packages, of which 30,422 were so at the time they were offered in auction, and of the 10,0 withdrawn a fair quantity has been sold at quite public s rates.

Nitrogen in Leguminosæ.

A few months ago it was noticed that a set of young plants of Cedar *(Cedrela odorata)* which had been planted in proximity to a large saman, were far in advance of others planted in the opened out of the range of its influence. This occurence was pointed out as an illustration of the accumulation of fertilizing elements by the *Leguminosæ,* in a paper prepared by one of the staff of the Imperial Department of Agriculture, Barbados, as showing how this class of plants are able to accumulate nitrogen by the aid of the bacteria present in the root nodules. At the time it was pointed out that the growth of the young cedars under the saman was not proved to be due solely to the supply of nitrogen, but might be due in some measure to the shade afforded by the long spreading branches. It was therefore determined to test this by destroying the tree *in situ*, thus depriving the plants of shade. The tree died rapidly after being "ringed" at the base of the stem, but the cedar plants not only did not suffer from want of shade, but appear to be growing more vigorously than at first, and have now distanced the remainder in a remarkable manner. The tallest young tree near the saman is 14 feet in height and the average of a dozen is over 10 feet. While the average of the remainder of the plot some 50 trees is only some 5 feet. There is therefore the strongest evidence that a large amount of nitrogen was accumulated by the saman tree *(Pithecolobium saman)* and that it was readily available to plants put out in the root area of the tree, but not beyond this point. The manurial value of the flowers, which would fall beyond the root area, has not been shown.

GENERAL ARTICLES.

INDIAN TEA ASSOCIATION (LONDON).

The following correspondence, which has taken place between the Association and the Colonial Office, will be read with interest :—

INDIAN TEA ASSOCIATION (LONDON),
14, St. Mary Axe, E.C.,
November 14, 1901.

To the Right Honourable the Secretary of State for the Colonies.

SIR,—I have the honour to invite your attention to the information received in this country with reference to the Australian Commonwealth Tariff Bill recently introduced at the House of Representatives.

My Committee understands that it is proposed to levy a duty of 2d. per lb. *plus* 20 per cent. *ad valorem*, in place of the fixed duties hitherto levied on all tea imported into Australia.

The effect of this change would be very detrimental to British-grown tea, whether from India or Ceylon, and would greatly tend to check a growing trade that has come into existence in recent years, to the mutual benefit both of the producing and the consuming countries.

My Committee is of opinion that an *ad valorem* duty must operate to the prejudice of the good teas of India and Ceylon, and stimulate a trade in the poorer growths of China, Java, and Japan, whereas a fixed duty would have the opposite effect, and rather encourage the trade in the better teas produced in British India.

Another very serious objection to putting an *ad valorem* duty on tea is that it is almost impossible to fix the value fairly; tea is an article which requires very highly skilled experts to determine its value, and in many cases these experts differ in their opinions as to the value; moreover the varying demand for teas of different grades causes a continual fluctuation of prices, which practically make a correct valuation of tea for duty impossible.

This threatened change in the fiscal policy would therefore be detrimental to the interests of India and Ceylon, and my Committee hopes that you will be good enough to use your influence to prevent this injury to British-grown teas.

I have the honour to be, Sir,
Your most obedient servant,
(Signed) ERNEST TYE,
Secretary.

COLONIAL OFFICE,
Downing Street, S W.,
November 23, 1901.

SIR,—I am directed by Mr. Secretary Chamberlain to acknowledge the receipt of your letter of the 14th instant respecting the duty levied under the New Australian tariff on tea imported into Australia, and in reply to request that you will inform the Indian Tea Association that similar representations on the subject have already been received from the Bengal Chamber of Commerce, and telegraphed to the Governor-General of Australia for the consideration of his Ministers.

2. The attention of the Association has doubtless been called to a Melbourne telegram which appeared in the *Times* of the 15th instant, stating that the composite duty on tea has been abolished in favour of a fixed duty, which is 3d. per lb. for tea in bulk and 4d. for tea in packets.

I am, Sir,
Your obedient servant,
(Signed) C. P. LUCAS.

INDIA-RUBBER IN NATAL.

ITS CULTIVATION AND PRODUCTION.

Mr. Anthony Wilkinson writes in the Natal *Agricultural Journal* :—

Some years ago I tried an experiment of planting an acre of "Manihot Glaziovii," or the Ceara rubber tree of South America. Mr. Medley Wood, curator of the Durban Botanic Gardens, was kind enough to furnish me with roots and cuttings of Ceara trees from trees he had growing in the Gardens, and wished me to try an experiment on a larger scale. I planted an acre of Manihot with Coffee plants between. The rubber trees grew well and seeded abundantly, and at four years old, when the trees got a good size, four to five inches in diameter, on scoring the bark to extract the rubber, although the rubber was of good quality and very elastic, the collecting or getting it was slow and costly. Accordingly, I came to the conclusion that the experiment would not pay, unless the trees could be tapped, and the juice collected in quantity, as is done in South America, and further, that Natal was not sufficiently tropical to make a good flow of sap. Coming to those conclusions, I cut the trees down, but still the trees come up again from the seeds every year, and grow luxuriantly five or six feet high in the first year, showing the climate to be suitable to their growth. Among my coffee I have a self-sown Ceara only three years old, and over 20 feet high. The red sandy soil of the coast such as that of the Berea, Durban, would be the most suitable. The seeds left to nature do not come up for a year or two. By some, filing is recommended, but this is a tedious process; tapping them with a small hammer until they crack serves as well, and is much quicker. The plan adopted to collect the rubber, with the Ceara rubber trees, is to strip off the thin outer bark, which is like brown paper, and expose the green bark. This inner bark is then scored across with a knife at an angle, and the milky juice or sap then exudes and dries on in an hour or two, and can be peeled off and wound up in balls, but the process is so slow with the coolie women employed at 6d a day, that I found it would cost about 5s per lb. for the labour of collecting, and the product

Messrs. Crosse & Blackwell, Ltd., who held by Special Warrant the appointment of "Purveyors to Her Majesty The Queen and Empress of India" from the year 1837 until the time of her death, have now had the honour of being appointed by Royal Warrant "Purveyors to The King."

would be worth only about 2s per lb. Now it strikes me very forcibly that if a cheaper way of extracting the rubber were adopted it would pay well. The rubber is there of good quality, but the question is how to get it out. My idea is this: To plant the trees in rows, 12 or more feet apart, like large hedges, and at two or three years old, when large enough, in the Spring or early Summer, when the sap was rising, to slash off the small branches and leaves, and crush them in a small steam sugar-mill, and let the juice run into a tank of water. The residue of branches and leaves would then be put into a hydraulic press, with steam outside, and pressed as long as the sap would flow. The rubber juice would coagulate in the water, and could be raked out and squeezed by hand into balls and dried By this method the trees would be pollared and dwarfed, and could be trimmed and cut once or twice a year, as found advisable. It would be necessary to keep the land well ploughed and scarified between the rows, for all would depend on the cultivation received. The rows, if in hilly land, would require to be run on the level, so as to cultivate cheaply with horses or mules. There are several other plants which would give good rubber if treated in this manner and well cultivated. The Beaumantia, a white flowering creeper of the order "Apocynaceæ," the Borneo rubber creeper, grows well here in Natal, and I have no doubt many native plants would be found to produce good rubber. If this plan of extracting rubber from the plant were found to answer, it would revolutionise the rubber trade in a few years, and rubber could be grown to any extent, like sugar. Moreover the supply of rubber, owing to the destruction of the trees, is decreasing, whilst the demand for the article, which is now being applied to so many different purposes, is steadily increasing, and therefore there is no fear of the market being over-stocked. India-rubber being so valuable an article, worth £200 to £300 a ton, there is a large margin for profit. For an energetic young man wanting something to do and to try a new industry, I would recommend it, but remember the old American sage's saying: "Be sure you are right; so go ahead." I feel pretty sure there is money in it.

COFFEE IN THE UNITED STATES.

Referring to the October Coffee Movement, of which a report appears in next column, the *American Grocer* remarks :—

It is a rule in Wall street that speculators should go with the tide rather than be influenced by facts, whether statistical or otherwise. That rule may be good for coffee speculators. At any rate, the market has been moving upward at a lively pace. Reports of crop damage continue, but when it is for the interest of "bulls" to create a higher market, it is certain that the worst possible phase will be put on the reports. With a half crop in Brazil in 1902-03, there will still be a total supply 4,000,000 to 5,000 bags ahead of a year's requirements.

Coffee advanced to $7\frac{1}{4}$c for No. 7 Rio, then reacted under reports that the drouth had been broken. Reports from Brazil vary, some claiming that the damage is not as great as reported, and that a 11,000,000 bag crop is certain. It is a bright man that can forecast a crop at blossoming time.

Naturally, the spot demand is affected by the speculation, and prices fluctuate more than for months past. The market closed with No. 7 Rio at $6\frac{3}{4}$c; No. 3 Rio, 9c; No. 5 Santos, 8c; No. 4 Santos, $8\frac{1}{2}$c.

P.S.—On Tuesday the market had a weak tendency, and prices old off slightly. Options clossed at a loss of 35 to 40 points.

THE ART OF SINGING.

BY SIMS REEVES.

"Remedies for the Throat."

"All kinds of lozenges for the voice are to be avoided; some do harm, others have no effect, and none do good. Sugar and water, or a little glycerine, gives relief when the throat is inclined to be dry; this applies to persons whose throats are affected by the weather. About a third of a teaspoonful of Condy's Fluid in a tumbler of water, if used as a gargle every morning, will clear the throat and brace up the uvula, which, in some singers, is so long that it interrupts the pure emission of the voice, and introduces a grating undertone, while it also tends to make a tremolo on the upper notes."—*The Idler*, February, 1900.

BRAZILIAN NOTES.

(From the *Brazilian Review.*)

RIO, *5th November*, 1901.—Extremes during the week end November 1st were $11\frac{3}{4}$d.—$11\frac{7}{8}$d. for 90d/s Bank paper and $11\frac{13}{16}$d $11\frac{15}{16}$d for private.

The average Bank 90d/s counter-drawing rate for the week cor out at $11\frac{49}{64}$d., the corresponding sight rate being $11\frac{45}{64}$d. agai $11\frac{49}{64}$d. the average sight rate of the *Camara Syndical.*

Coffee.—The total entries by the different S. Paulo Railways the crop to November 1st were as follows:—

	Past Jundiahy.	Per Sorocabana and others.	Total at S. Paulo.	Total at Santos.	Remain at S. Pau
1901/1902	4,407,451	910,796	5,318,247	5,266,949	51,29
1900/1901	3,285,761	727,500	4,013,261	4,047,808	*nil.*

Entries at Rio and Santos during the week ending November were 473,405 bags against 522,102 for the previous week a 242,393 for the corresponding period last year. Aggregate entr for the crop to date total 7,990,767 bags as compared with 5,329,6 for last crop.

Shipments (embarques) were 474.207 bags as compared w 520,735 the preceding week and 204,241 same date last year, whi sales figure at 176,000, 231,000 and 222,000 for the correspondi dates.

Stocks continue to increase being now 2,000,627 bags agai 1,973,420 last week and 1,558,281 last year.

OCTOBER COFFEE MOVEMENT IN THE U. S.

The present spuculative activity in coffee, accompanied by repo of heavy damage to the next crop, lends unusual interest to t statistical position of the article. The main features of t statement are the remarkable increase in deliveries; a lar increase in visible supply; heavy receipts at Rio and Santos; high prices; extensive trading in options.

In studying the figures presented, it will be well to keep in mi that new plantations are coming into bearing in Mexico, Cent America, and other countries, as well as in the San Paulo distr of Brazil; and these may offset a shortage in the Brazilian crop- natural result of two or three years of excessive bearing. The p sent visible supply is over 72 per cent. of the average annu deliveries for the past two years.

The following statement shows the September movement a general position of the article:

		Bags.	Bags.
Stocks, October 1, 1901—			
United States ...	...	1,611,585	
Europe ...	...	3,985,611—	5,597,196
Receipts during October—			
United States ...	...	982,469	
Europe ...	...	1,038,047—	2,020,516
Total supply, November 1	...	...	7,617,712
Less Stocks, November 1, 1901—			
United States ...	...	1,883,652	
Europe ...	...	4,023,013—	5,856,665
Deliveries, October—			
United States ...	...	760,402	
Europe ...	...	1,000,645—	1,761,047
Deliveries, October, 1900—			
United States ..	...	501,051	
Europe ...	...	839,008—	1,340,059
Increase as compared with October, 1900		...	420,988
Deliveries, September ..	...	...	1,398,401
Deliveries, August ...	...	...	1,21,4681
Deliveries, July ...	...	...	1,136,572
Total deliveries, four months		...	5,512,501
Total deliveries, four months, 1900		...	4,457,923
Increase 1901 over 1900		...	1,054,578

The above shows a gain of 23·6 per cent. in four months' deliver —an increase far beyond any legitimate advance in consumptio It is probably due to withdrawals of stock from licensed warehou

to further a "bull" speculation and to heavier invisible stocks, as 5½@6-cent coffee was a very attractive proposition.

The visible supply of the world on November 1 compares with previous periods, as follows:

	Bags.
November 1, 1901	10,576,665
October 1, 1901	9,821,196
Increase one month	755,469
August 1, 1901	5,817,759
Lowest in five years, June, 1896	2,444,949

During the trade year 1895-96, coffee sold on the spot in February, 1896, at 13 cents; in August, 1895, at 16¼ cents. The total Brazil crop that year was 5,746,000 bags, or less than one-half this year's production, while the visible supply on November 1 of this year is nearly five times more. It is evident that it will require a sweeping crop failure to warrant a rise in coffee to the level of 1895-96.

Receipts at Rio and Santos, July to October were 7,890,000 bags, against 5,274,000 bags for same time in 1900-01. During the four preceding seasons, an average of 51 per cent. of the crop came to Rio and Santos during the first four months. If this proposition holds good this year, it means total receipts exceeding 15.000,000 bags. If 60 per cent. of the crop has reached those ports, it means total receipts of 13,150,000 bags.

The sales on the Exchange during October reached 1,546,750 bags. The lowest price was 4·90 cents for October options; the highest, 7·55 cents for September. No. 7 Rio spot ranged from 5⅝ cents up to 7 cents. against 8⅛@8½ cents for same month last year.

In the United States, the deliveries in October consisted of 635,966 bags Brazil, or 83·6 per cent. of the total; all other sorts, 124,436 bags. This shows the preponderating influence of Brazil coffee on the market, fully two-thirds of which is Santos.

If the 1901-02 Brazil crop does not exceed 7,000,000 bags, there will be over 20,0000,000 bags to meet requirements of less than 16,000,000 bags. Speculation, however, oft-times ignores facts, and carries itself along on sentiment; and it may do so with the present movement.—*American Grocer.*

TEA DUTY REPEAL ASSOCIATION.

IN THE UNITED STATES.

A united effort is being made by leading grocery jobbers to secure the removal of the duty on tea. Mr. G. Waldo Smith is President of the organization; E. H. Sayre, of R.C. Williams & Co., E. D. Depew, of E. Depew & Co., and D. Schmidt, of J. H. Mohlman & Co., are Vice-Presidents; George F. Kerr, Secretary.

The follong cricular letter has been issued:

We, the undersigned, wholesale grocers, jobbers, and importers of tea, believing that the present war tax law, levying a tax of 10 cents a pound (about 75 to 80 per cent.) on tea is unjust and oppressive, hereby express our hearty approval of and co-operation with the movement inaugurated by the Tea Duty Repeal Association to bring about the repeal of this tax law through which the enormous sum of over $8,000,000 is collected annually from the tea trade. The purpose of the tax having been fulfilled (that of raising funds with which to aid in carrying on the Spanish-American war), we believe that the merchant and the consumer ought not longer to have to bear this unnecessary burden.

[This is signed by 46 jobbers.]

It is claimed by the officers of the Association that the duty has injured the tea trade in every conceivable way. It has reduced profits has cut down the sale of fine tea so that the business is tending almost exclusively toward the lower grades, and has increased the risk of bad debts by the amount of the duty without any compensating advantage. The Association invites the hearty co-operation of all interested to aid in removing the duty, which, they claim, at present is entirely unnecessary owing to the large surplus in the United States Treasury.

"The duty law," say the officers, "was passed by Congress as a war measure exclusively, and had no connection with the general tariff law. Its prompt removal, therefore, is a logical consequence of peace with Spain, and should not burden us a moment longer. We believe that our business will be interrupted every winter by discussion of repeal until the duty is removed, and therefore advocate putting an end to the trouble at once."

BRAZILIAN COFFEE.

CROPS AND PROSPECTS.

The "bulls" in coffee got the "bears" on the run on Thursday last, says the *American Grocer* of the 13th ultimo. Closing prices were 50 points higher than at the opening. Spot quotations advanced nearly as much. The trading in options that day reached 159,000 bags. This rise was engineered on further reliable reports of damage to the next crop. Cable advices from E. Johnston & Co. were as follows: "From information carefully gathered in all districts, Rio flowering is practically a failure. In some districts, owing to want of funds, low prices, labourers, and farmers abandoning lands. From appearances at present. new Rio crop estimated at about 2,500,000 bags maximum. Owing to trees in very bad condition. further flowering unlikely. In Santos, trees are exhausted from old crop and damage to new crop serious owing to drouth. It has rained a little recently, but not sufficient to be beneficial. Drouth continues. Unless there is conntinued rain very soon, the new Santos crop is estimated at about 4,500,000 bags.

With the next Brazil crop only 7,000,000 bags, there will be a total world's supply for that year of fully 20,000,000 bags to meet requirements of less than 16,000,000 bags. The great visible supply will offset a big shortage in crops and prevent an extreme rise in prices.

In commenting on E. Johnston & Co.'s estimate, one critic says: "It must not be forgotten that this same firm estimated the previous crop (1900-1901) at 8,500,000 to 9,000,000 bags, when it turned out 11,000,000 bags, and estimated the current Santos crop at 7,500,000 bags as late as August, while there is hardly any doubt that the current Santos crop is 9,500,000 bags or probably 10,000,000 bags. With 2,000,000 bags or more in Rio and Santos and consuming markets heavily supplied, all crop news must be taken with a grain of allowance, the more so, seeing that some of the most conservative houses have been estimating too low—even as much as 2,000,000 to 3,000,000 bags less than the outturn in the past six years."

RUBBER AND THE STATE IN BRAZIL.

The *Bulletin de la Société d'Etudes Coloniales* (Brussels) recently published the results of an official inquiry made under the direction of the Belgian ministry of foreign affairs as to the official measures taken in Brazil to foster its greater rubber industry. It was found that the general government of the republic has passed no laws relating to the industry. It is not regulated at all except so far as the legislature of the several states have adopted measures. Seventeen of the twenty states produce rubber, the climate being unfavourable to rubber culture only in the three southern states of Rio Grande do Sul, Santa Catharina, and Paraná. Most of the small Atlanic coast states in the rubber zone, though producing more or less caoutchouc, have made no attempt. as yet, to conserve their rubber resources or to encourage or regulate its production. These states include Rio de Janeiro, Minas Geraes, Espirito Santo, Parahyba Rio Grande do Norte, Sergipe. and Ceará. Most of the rubber states make the product contribute to the finances by imposing a tax on rubber exports, but the states above mentioned have not given even this attention to the industry except Minas Geraes, which collects an export duty of 4 per cent. *ad valorem*. In these seven states the first comer may harvest the crop wherever he may find it on the public domain.

On the other hand, the state of Pará from which by far the largest shipments are made, encourages the planting of caoutchouc by offering a premium of 1,000,000 reis, or over $500 for every 2,000 trees that are properly planted. This law, which has been in force only four years, is already stimulating the development of rubber plantations and its wisdom is being conclusively demonstrated. This large state, which embraces all the lower part of the Amazon and some of its mightiest tributaries, will not have to rely, in the coming years, upon supplies that grow wild in the forests; in fact, no source of rubber so freely tapped as that in Pará can be relied upon indefinitely to yield an unfailing supply. The days of exhaustion will come just as they have overtaken the rubber vines of West Africa, which have all been killed for many miles inland.

from the coast. The only way to supply the future demand will be to increase the quantity, and that can be done only by rubber planting, which, in a few decades, will revolutionize the business. The world now depends almost solely upon the wild sources of supply, but there will be a great deal of plantation rubber in the market before the century now beginning is very far advanced.

The State of São Paulo also offers a handsome premium for the development of rubber plantations, and both these states impose a comparatively heavy tax upon the exports of rubber with the wise intention of devoting a considerable part of the receipts to the conservation and encouragement of the industry. Matto Grosso, under the law of 1898, offers special facilities for the acquirement of a fixed quantity of rubber lands by those who discover them in the vast part of the public domain that is still unexplored. Amazonas and Bahia are not yet offering special inducements for rubber planting, but the land laws, adopted by these states in 1897, facilitate private ownership in rubber forests and this is a long step toward establishing the industry on a stable basis.

All these improvements in the status of the rubber industry of Brazil have been made within the past four years. They encourage the belief that this great source of wealth will come, more and more, to be managed scientifically in the interest of Brazil and of the world and to the great advantage of the investors of capital.

THE WYNAAD TEA COMPANY, LIMITED.

The following is from the Report of the Directors to be presented at the Seventh Annual Meeting of Shareholders, that was to be held at No. 7, Mincing Lane, at the Office of the Company, on Monday, the 2nd instant.

The Directors regret to have to report the loss of their esteemed colleague. Mr. Donald Andrew, who died in February, 1901. They thoroughly appreciated his valuable services during the short time he was in office. The vacancy created on the Board by his death has not yet been filled. The past season has only partially fulfilled the expectations of a year ago. The crops have very nearly reached the earlier estimates of both tea and coffee, but prices have proved extremely disappointing, and account for a deficiency in the year's results of about £1,900. The coffee crop, estimated roughly at 40 tons, has yielded about 36 tons, which sold for only £40 per ton against an average of £70 per ton in the four previous seasons. The tea crop, estimated at about 150,000 lbs., has reached 146,750 lbs., and was sold for an average of 5½d per lb. against 7½d per lb. the year before. The pepper crop, estimated at 18 tons, has actually turned out 20 tons, and has realised £187 over the estimate. The net proceeds of the three crops amount to £5,134 12s 5d, against an expenditure in India of £3,716 10s 2d. The Directors have again transferred a large proportion of the revenue from tea to capital account, representing the 410 acres not yet in full bearing. The result is consequently a loss of £1,290 14s 0d, carried to the debit of profit and loss, whilst £1,640 0s 9d have been debited to capital account. The tea and coffee trades have passed through a s crises during the past eighteen months, but both are now healthier condition, and are gradually returning to a more n state. The over-supply of tea from Ceylon and Assam is fi fresh outlets, whilst crops are reported to be somewhat sm more attention is being paid to the production of a better ar and prices have recovered fully 1d per lb. from the recent lo level. Prices of coffee have recovered considerably during the three months, and although the present Rio and Santos crops the largest on record, the reports about the Brazil crops of 1 1903 are extremely unfavourable, and point to a much higher l of prices for next year. The estimates for the current season based upon a tea crop of 190,000 lbs, a coffee crop of 20 tons, a pepper crop of 20 tons, and with the strictest economy in wor the estates, without sacrificing efficient cultivation, the Direc hope for better results. In making provision for the current ye up-keep, the Directors have found it necessary to issue the bal of the debentures—*viz.*, £2,000. and they have shown their c dence in the undertaking by subscibing for them in conjunc with Messrs. R. & J. Henderson.

PRODUCE AND PLANTING.

The tariff which has been thrust upon the trading commu of Australia may be good for a few colonial industries, but occasioning many pessimistic forebodings. As regards the dut produce its effect will be felt in other parts of the Empire, Indian and Ceylon tea-planters have already made representat with a view of getting the operation of the new duties postpo until they have had time to submit their views. Some cor pondence between the Indian Tea Association (London) and Colonial Office will be found in another column. In the meant the decision of the Australian Government, announced a fo tn since, to abolish some of the composite duties of the Federa ta by which tea becomes dutiable at 3d. and 4d. a pound inst 2d. and a 20 per cent. *ad valorem* duty, has gratified those handle the product in the Australian colony, and it may ser soothe the feelings of producers in India and Ceylon. Acco. to the regulations made under the provisions of the Fed Customs Act, tea which does not comply with the follow standard of strength and purity is to be deemed unfit for hu use: "The analysis to be made on the tea dried at a tempera of 212°F., and then powdered and totally exhausted with boi distilled water. Total aqueous tea extract, not less than 30 per c Total ash, not more than 8 per cent. Soluble ash, not less t 3 per cent."

As tea-growers are aware, the present American tax on te 10 cents a pound, and this was imposed as a Spanish-Ameri War measure. An organised attempt is now being made to ef its repeal as no longer necessary. A large number of the l wholesale grocers in the United States, who are of course dea

Agents for LEA & PERRINS' WORCESTERSHIRE SAUCE.

CELEBRATED OILMAN'S STORES.

[w. 1-10-98—t.f.o.]

in, and some of them importers of tea, have organised for the purpose of fighting for the removal of the tax. The organisation has styled itself the Tea Duty Repeal Association, and the following letter has been prepared, bearing important signatures, and sent out to the trade in general: "We, the undersigned, wholesale grocers, jobbers, and importers of tea, believing that the present war tax law, levying a tax of ten cents a pound (about 75 to 80 per cent.) on tea is unjust and oppressive, hereby express our hearty approval of and co-operation with the movement inaugurated by the Tea Duty Repeal Association to bring about the repeal of this tax law through which the enormous sum of over $8,000,000 is collected annually from the tea trade. The purpose of the tax having been fulfilled (that of raising funds with which to aid in carrying on the Spanish-American War) we believe that the merchant and the consumer ought not longer to have to bear this unnecessary burden." The letter then continues as follows: "We beg to inform you that we have organised the Tea Duty Repeal Association, comprising wholesale grocers and importers of tea, to take such action as may be necessary toward the removal of the present duty on tea. The duty has injured our tea departments in every conceivable way. It has reduced profits and cut down the sale of fine tea, so that the business is tending almost exclusively toward the lower grades, and has increased the risk of bad debts by the amount of the duty without any compensating advantage. We think the result will be the falling off in consumption in favour of coffee, to the general injury of the trade. As your interest in the article is identical with ours we invite your hearty co-operation and aid in removing the duty, which at present is entirely unnecessary, owing to the large surplus in the United States Treasury. The duty law was passed by Congress as a war measure exclusively, and had no connection with the general tariff law. Its prompt removal, therefore, is a logical consequence of peace with Spain, and should not burden us a moment longer. We believe that our business will be interrupted every Winter by discussion of repeal until the duty is removed, and therefore advocate putting an end to the trouble at once."

Major Sykes, who was, as is well known, engaged from 1897 to the beginning of this year on a mission arranged for the purpose of obtaining information with a view to the development of commerce between British India and the wild regions of Eastern Persia, read a paper before the Royal Geographical Society on Monday night. After describing the country and the efforts made to open up trade, Major Sykes pointed out that it remained for the tea-planters to take advantage of a route by which the sea is avoided, and as the indigo used in Persia is grown in Sind, both of these staple export should profit by the new route, while in a lesser degree there will be a demand for many sorts of British goods.

The Mexicans grow coffee, but they do not drink much of it, and as for tea, the rural Mexican scarcely knows what it is. They have their own fermented drinks, and very deadly they are. There are three beverages which in Mexico supersede wine in the taste of the common people, and convert thousands of fine men and women into wrecks. These are pulque, mescal, and aguardiente. Pulque is the favourite drink of the respectable class who are not satisfied with ordinary wine. It is regarded as an exquisite luxury. The Mexican writers generally glorify this concoction It is peculiar to the country, being the product of a magnificent plant of the aloe tribe, the Agave Mexicana, which is amazing in its sugary richness. A far more deadly drink is the famous mescal, another fermented extract of the amaryllidæ or aloe tribe of plants. For the rural Mexican this mescal is the most precious of all qotations. It is distilled from a very different species of the aloe—very different the ordinary pulque-producing agave. The mescal plant is a kind of century flowering giant cactus; that is to say, it shoots out a magnificent spike of bloom only after an interval of many years. —*H. & C. Mail.*

PERFECT DIGESTION

is the high road to health and can best be obtained by a regular use of the world-renowned extract of roots and barks known as

SEIGEL'S SYRUP

Mr. George Bath, Trefusis Villa, Windmill Road, New Brompton, Kent, writing on March 9th, 1901, says: "For twenty years I suffered all the horrors of chronic indigestion—fierce racking pains in the head, an awful sense of sinking in the stomach, fulness at the chest, sleeplessness, and extreme nervous depression. But now, thanks to Seigel's Syrup, I am in good health again, indeed I seem to be getting younger every day. Seigel's Syrup has added years of happiness to my life."

MARKET REPORT.

[*Per Mail advices of 29th November* 1901.]

COFFEE.

The London Commercial Record says:—With hardly any fresh arrivals the supplies at auction have been on a still smaller scale than during recent weeks, and the transactions in Costa Rica and Central American descriptions are too small to call for especial remark. There was a good demand for unwashed Santos which sold at full prices. Business in the market for "futures" has been on a reduced scale, and after falling 1s 6d on large receipts prices recovered and close rather dearer for the week. Yesterday's business was done in Santos December delivery at 36s 1½d to 36s, May at 37s 9d to 37s 7½d, and September at 39s to 38s 9d per cwt.

To-day the sales went off with fair demand at full rates. Supplies comprised 1,377 bags East India, 87 half-bales Mocha, 816 bags Costa Rica, 82 bags Mexican, and 59 bags Guatemala.

November 26...	6·45	6·45	6·55	6·65	6·75

TEA.

INDIAN.—Offerings were heavier, the total for the week been 48,800 packages, contrasted with 40,500 the previou and 46,900 in 1900.

There is no appreciable change to note in values, wh generally be quoted firm, with an occasional irregularit close in buyers' favour. Common to useful and fine to fi tinued to meet with the best enquiry, ordinary medium des barely maintaining their recent level, and there is no impr to report in the position of this class of Pekoe, which has an abnormally low basis for some time. Creamy Broke with tip sell freely.

Mail advices from Calcutta point to a total export to th Kingdom of about 152 million lbs., or a little more t generally estimated earlier in the season. October show covery in yield, and diminshed shipments to outside ports by the higher scale for common tea, has also tended to probable figures. The return to a more normal market w ever, doubtless have the effect of again diverting greate from London.

The usual, though none the less unfortunate, consequen spasmodic rise in common tea, which took place about the last month, has, we learn, been apparent in some sample manufacture seen in Calcutta, and this adds force to our in this connection in our earlier issues, when we urged gr to be induced by the improving situation to alter the s finer plucking, which was having such a beneficial effect.

For 38,300 packages on Estate Account 7⅝d per lb. was against 7⅛d per lb. for 36,600 packages and 8¼d per lb. f packages in the two preceding seasons.

The amount catalogued in November reached:—

1901.	1900.	1899.
184,100 pkgs.	182,300 pkgs.	205,700 pk

making 655,000 packages of the present crop brought to sal instant, opposed to 733,000 packages in the same months o

CEYLON.—A somewhat reduced quantity was placed b trade, *viz.*, 16,600 packages *versus* 19,600 packages on the before, and 19,200 packages a year since.

The principal demand was again for the lower grade were mostly a shade dearer, sweet Pekoe Souchongs bringi lb. Medium leafy sorts did not alter much in value, and a portion of suitable lots was taken for foreign quarters. Pekoes with coloury liquor were in request, but otherw went rather easier, while fine and finest attracted less a prices ruling unevenly and on the whole lower, partly owi falling off in quality of late arrivals.

The average is slightly over 7¾d per lb. On the 21st was 7⅝d per lb., and 7½d per lb. in 1900.

Totals for the month were:—

1901.	1900.	18
65,900 pkgs.	78,000 pkgs.	96,10
(Avge. 7¾d per lb.)	(Avge. 7⅜d per lb.)	(Avge. 8

JAVA.—About 1,200 packages of direct import passed th and met with good support, last quotations being fully m The undermentioned were printed in November:—

1901.	1900.	189
4,400 pkgs.	4,700 pkgs.	4,800 p
(Avge. 6¾d per lb.)	(Avge. 6½d per lb.)	(Avge. 7

} Total 67,121 packages were offered in public auction this week.

There has been considerable progress in the quantity of Indian nd Ceylon tea taken in North America during the last nine onths, as compared with the same period of 1900, the increase mounting to nearly 40%. Re-exports from this country have also aterially increased.

It is noteworthy that 1,276,868 lbs. of *all* tea were sent from merica to this country between 1st January and 27th November, ut there is reason to believe that much of this was China tea, hile a portion of the tea sent from Ceylon to China may possibly ave been for the Russian market, although the majority has oubtless gone to America.

INDIAN.—The week's auctions were somewhat heavy, comprising over 49,006 packages. The market was steady on Monday, but at the later sales in the week was less pronounced, and competition hardly as keen. ... generally showed practically no change on those ruling last week. Teas for price continued steady, although there was some little irregularity noticeable in medium grades, especially Broken Pekoes.

Week's av. of New Season's tea sold on Garden Account 1901, 38,381 pkgs., av. 7·58d. 1900, 36,883 pkgs., av. 7·03d.

New Season's tea sold on Garden Account 1st June to date 1901, 544,484 pkgs., av. 8·13d. 1900, 511,798 pkgs., av. 7·77d.

CEYLON.—With a moderate auction demand was good, and prices remained very firm, the tendency being, if anything, towards a rather dearer market. Teas for price were particularly steady, medium teas being less irregular than has lately been the case. 29,710 packages are printed for sale next week. Average for week 7·76d., against 7·59d. same week, 1900.

Ceylon tea sold on Garden Account 1st January to date, 1,037,303 pkgs., av. 6·82d. 1900, 1,123,494 pkgs., av. 7·21d.

JAVA.—The 1,200 packages brought forward were all of direct import. The teas, on the whole, sold with fair competition at generally steady prices. An invoice from "Goalpara" of 108 packages realized an average of $9\frac{3}{4}$d. per lb.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta $1/4\frac{7}{32}$. Colombo $1/4\frac{1}{4}$.

COCOA.

No auctions were held on Tuesday last. Privately business has been restricted, but no material alteration in values can be noted, except in the case of Guayaquil, which is easier; transactions include 100 bags Trinidad at 69s to 73s, 150 bags Ceylon at 59s up to 75s, according to quality, and about 500 bags Guayaquil—Machala at 64s per cwt.

PEPPER.

BLACK.—The market has been firm this week in all positions. On the spot sales of fair Singapore have been made at 6d to $6\frac{1}{16}$d, and January-March shipment at $6\frac{5}{16}$d, closing buyers at the price. In all about 100 tons sold.

At public auction on Wednesday 240 bags good heavy brown Alleppy, slightly mixed with stones, retired at $6\frac{1}{8}$d per lb.

WHITE has met an active demand and is dearer. About 250 to 300 tons have changed hands—up to $9\frac{7}{8}$d paid for Singapore January-March shipment, and $9\frac{7}{16}$d for Penang same shipment. On the spot the former description sold at $9\frac{1}{2}$d to $9\frac{5}{8}$d for fair to good fair, and Penang at 9d per lb.

GINGER.

COCHIN.—The market continues rather quiet, and for ordinary sorts holders have accepted a slight reduction on the best price obtainable, although good plump washed and cut kinds maintain the recent advance. At auction 8 cases 445 bags were offered, of which 162 bags sold:—plump small and medium dullish washed, wormy, 45s to 46s; bold cut limed retired at £6 per cwt. Privately a few sales have been made in medium and small washed rough at 52s per cwt.

JAPAN.—35 bags limed bought in at 45s per cwt., but subsequently partly sold at 44s; the quality was rather below standard.

JAMAICA.—84 barrels offered, and 10 baerels sold at 46s per cwt. for low middling brownish washed.

NICARAGUA.—8 bags hard dull rough realised 40s per cwt.

Quieter. At the spice auctions *Cochin*, 8 cases bold selected cut were bought in at 100s., and of 445 bags, 162 sold, washed, rough, slightly wormy, at 45s to 45s 6d. *Japan*, 35 bags limed offered, and 20 sold after the sales at 44s. *Nicaragua*, 8 bags fair offered and sold at 40s, and of 84 barrels *Jamaica* 10 sold; ordinary dullish at 46s, being cheaper.

AFRICA.—Forty-five shillings per cwt. is now asked for the small remaining stocks on the spot, although 40s per cwt. would be taken for some to arrive.

QUININE.

Very firm, and prices are rising, but business done is moderate. B. and S. and/or Brunswick spot quoted 1s $1\frac{1}{2}$d; December delivery, 1s $1\frac{1}{2}$d; March, 1s $1\frac{7}{8}$d; and May, 1s $2\frac{1}{8}$d.

Last week the market closed quiet with small sales of December delivery at 1s $1\frac{1}{4}$d, and March at 1s $1\frac{3}{4}$d per oz., but this week a slightly firmer feeling has been apparent with few sellers, the general desire being to wait the announcement of the bark shipments from Java for the month. If these should prove moderate,

Possibly some port... have gone to Russia, in which ...d large.

as is expected, it is quite possible values will improve. May delivery has sold in small quantites at 1s 2d. Market closes firm.

INDIA-RUBBER.

Small forced purchases by speculators covering their cheap sales caused prices to advance 1d per lb., and though the receipts at Pará continue very large—2,850 tons this month, against 2,200 tons last year—prices there are also higher.

There have been considerable sales of hard fine, spot and forward up to 3s 7¼d, soft ditto, spot 3s 5½d, forward 3s 5¼d, closing sellers ¼d below. Old import hard fine at 3s 7½d to 3s entrefine at 2d per lb. less.

Negroheads scarce and in demand. Scrappy middl 6½d to 2s 8d, Cameta 2s 1½d to 2s 2d, Island buyers 1s

There have been large sales of Peruvian, fine at 3s 7 2s 6d to 2s 7¾d; ball, fair to good 2s 5d to 2s 6d. mixe 2s 3d to 2s 4½d; slab in great demand and fair trade at 2

Sales of Mollendo, fine up to 3s 5d, entrefine 3s 3 5½d to 2s 6½d per lb.

(AVERAGE FOR ALL INDIA 7·58d., NOVEMBER 29th.)
